During 1957-58 there were several British raids on Jhansi Fort and the Rani repulsed every one of the attacks. Later when the fall of fort became imminent Jalkari bai and some generates convinced Laxmibai to escape quietly with the help of supporters. In a ploy to deceive the British, Jalkari bai dressed herself up like the Rani and took command of the army. The British found out the truth, but it was too late. The Rani had covered a considerable distance by then. Jalkaribai fought the British forces valiantly but was eventually forced to surrender. The British general, impressed by her loyalty, courage and fighting prowess treated her with respect and set her free.

13. Shakuntala Devi

Shakuntala Devi, the human computer - holds an undisputed place in the Guinness Book of Records for multiplying in 1980 two randomly chosen 13-digit numbers and giving the correct answer in 28 seconds.

Her abilities, defying common theories of human intelligence, have been the subject of much research. In 1977 she won a standing ovation from an audience of mathematicians when she extracted the 23rd root of a 201-digit number. That means she found the number that when multiplied by itself 23 times equaled the 201-digit number she was given. She solved it in 50 seconds flat. The day's most sophisticated computer, a Univac 1108, also did the deed - in 62 seconds - but only after days of programming, 13 thousand instructions and 5,000 data locations. No one has a plausible theory as to how she could have arrived at the answer, for the feat far exceeds the supposed limits of human intelligence. Shakuntala Devi attributes her mathematical wizardry to her friendship with **Lord Ganesha,** developed in her early childhood.

14. Sarojini Naidu

Sarojini Naidu, (1879-a freedom fighter and the first Indian woman as Governor of West Bengal after the partition. Sarojini Naidu was a poet, mother of four and the first President of the Indian National Congress. Widely known as the Nightingale of India, she was the younger sister of the renowned poet, actor and playwright, Harindranath Chattopadhyaya. Sarojinidevi was a great patriot, politician, orator and administrator. She had an integrated personality and could mesmerize audiences with her pure honesty and patriotism. She was a life-long freedom fighter, social worker, ideal housewife and poet.

She was born on February 13, 1879 in Hyderabad. Her father, Dr. Aghornath Chattopadhyaya, was the founder of Nizam College of Hyderabad and a scientist. Her mother, Mrs. Varasundari, was a Bengali poetess. Sarojinidevi inherited qualities from both her father and mother.

Young Sarojini was a very bright and proud girl. Her father aspired for her to become a mathematician or scientist, but she loved poetry from a very early age. Once she was working on an algebra problem, and when she couldn't find the solution she decided to take a break, and in the same book she wrote her first inspired poetry. She got so enthused by this that she wrote "The Lady of the Lake", a poem 1300 lines long. When her father saw that she was more interested in poetry than mathematics or science, he decided to encourage her. With her father's support, she wrote the play "Maher Muneer" in the Persian language. Dr. Chattopadhyaya distributed some copies among his friends and sent one copy to the Nawab of Hyderabad. Reading a beautiful play written by a young girl, the Nizam was very impressed. The college gave her a scholarship to study abroad. At the age of 16 she got admitted to King's College of England. There she met famous laureates of the time.

During her stay in England, Sarojini met Dr. Govind Naidu from southern India. After finishing her studies at the age of 19, she got married to him during the time when inter-caste marriages were not allowed. Her father was a progressive thinking person, and he did not care what others said. Her marriage was a very happy one.

Her major contribution was also in the field of poetry. Her poetry had beautiful words that could also be sung. Soon she got recognition as the "Bul Bule Hind" when her collection of poems was published in 1905 under the title "Golden Threshold". After that, she published two other collections of poems--"The Bird of Time" and "The Broken Wings". In 1918, " Feast of Youth" was published. Later, "The Magic Tree", "The Wizard Mask" and "A Treasury of Poems" were published. Mahashree Arvind, Rabindranath Tagore and Jawaharlal Nehru were among the thousands of admirers of her work. Her poems had English words, but an Indian soul.

One day she met Shree Gopal Krishna Gokhale. He said to her to use her poetry and her beautiful words to rejuvenate the spirit of Independence in the hearts of villagers. He asked her to use her talent to free Mother India.

Then in 1916, she met Mahatma Gandhi, and she totally directed her energy to the fight for freedom. She would roam around the country like a general of the army and pour enthusiasm among the hearts of Indians. The independence of India became the heart and soul of her work.

She was responsible for awakening the women of India. She brought them out of the kitchen. She traveled from state to state, city after city and asked for the rights of the women. She re-established self-esteem within the women of India.

15. Sarada Devi

Sri Sarada Devi was born in Bengal in 1853 to devout Brahmin parents. Her early years were marked by simplicity, charity, prayer, meditation and visionary gifts. At the age of six, she was betrothed to Sri Ramakrishna, but they lived apart until Sarada Devi was 18. It was he who initiated her into many spiritual disciplines, notably into the worship of the Divine Mother. Living a celibate life, they saw God in themselves and in each other. Sri Ramakrishna taught her the great mantras and instructed her in the method of spiritual guidance for others who would seek her help.

Immediately after her husband's death in 1886, Sri Sarada Devi began a pilgrimage through North India. For a time she lived at Vrindavan, where she attained the highest contentless consciousness called nirvikalpa samadhi, and where she began her

role as guru.

On her return, Sri Sarada Devi went to Kamarpukur, where she met with great hostility from the uncomprehending villagers. Having no money and strictly observing purdah, she was forced to dig the earth herself to cultivate a few vegetables. When Sri Ramakrishna's disciples heard of her plight, they invited her to Calcutta. There she became known as the Holy Mother and gave spiritual instruction and initiation to many people. She was noted for her maternal tenderness and hospitality, her gift of healing, and her willingness to suffer vicariously for her disciples' sins.

In 1909, Sri Sarada Devi moved into what is known as the Holy Mother's House in Calcutta, and lived there for the next 11 years with several other holy women. In 1919, she was stricken with black fever and, although in great pain, continued to strengthen her disciples and to give spiritual advice until her death on July 20, 1920.

The spiritual teachings of this great woman seer are a window on the beauty of her soul: "As clouds are blown away by the wind, the thirst for material pleasures will be driven away by the utterance of the Lord's name." "No one is a stranger, my child; this whole world is your own."

16. Bhagini Nivedita - A Proud, Generous, Momentous and Ardent Woman (1867-1911)

She great offering, giving her life for Mother India, was like a song of love, Love is blind for it sees no faults of the beloved, and Nivedita never found faults with India. Sister Niveditas childhood name was Margaret Elizabeth Noble.

She was born in Ireland on October 20, 1867 to parents Mary Isabel and Samuel Richmond Noble Her father was a preacher to whom religion meant service to the poor. This had an imprint on Nivedita. She was very intelligent and hard worker, loved music, art, and the natural sciences. After her education, she spent ten years in teaching, from 1884 to 1894. She had a gift of being able to impart knowledge and inspire her students She was a proud, generous, impulsive and ardent woman. By the age eight~eil she came to understand that religion did not mean belief in the doctrines; it meant search of Divine Light and Eternal Truth. She began to doubt the truth of the Christian doctrines. She started reading about Buddhism but only with partial success.

This was the time when she met a Hindu Monk, Swami Vivekanand visiting England in 1895. She attended all the lectures. In question-answer sessions, she was an active and enthusiastic participan!. The Swamiji's words that selfishness, ignorance, and greed were the evils which brought suffering to the world, pierced through her mind and heart and her life changed for ever. Swami Vivekanand was very much impressed and urged her to help the women of I,?dia in his plans. In response to the call of Swaini Vivekananda, Nivedita left England and arrived in Calcutta on January 28, 1898. Swamiji could envision her future role in the service of Mother India. He initiated her to be his disciple on March 25, 1898 and gave her name 'Nivedita', meaning one who is dedicated to God. She started to study Gita and practice meditation. This helped her to cast off her pride in English culture and became humble. Salvation for one self and the welfare of the world were two of the ideas she pledged herself to follow, For this, she lived a simpler pure, and holy life to realize God and humbly work for the welfare of the people.

By nature, she was optimist but there were times she felt disheartened in such situations. Swami Vivekananda's words 'Death for the cause is our goal, not success' inspired her She made India the object of love and worship When Swami Vivekananda passed away on July 4. 1902, she felt an added responsibility to India and its people. She realized that political independence of India is an essential first step towards

equality, progress and justice

She inspired the people in all walks of life through her lectures and writings She always believed that India could not be great and powerful unless there was unity. She emphasized this in every possible way and was never tired of speaking about it. Her hard work and lack of rest was having an adverse effect on her health She passed away on October 13, 1911.

17. Mother Mirra (1878- 1973)

The Mother, Mirra Alfassa, was born in Paris on the 21st of February 1878. Her mother was Egyptian and her father was Turkish. Both of them were perfect materialists. However, Mirra had divine visions from her childhood.

Outwardly, she was brought up as an atheist until she entered adulthood. In her early years, she had a good education in music (specially piano), painting, and higher mathematics. During this period she used to have spontaneous experiences including those of coming out of her body to discover inner realities, without understanding what they really meant. As she was growing up, she began to have such experiences more often. One day in the year 1912 the Mother had a first vision of the future: "the advent of universal harmony, the realization of human unity and the establishment of ideal society". Sri Aurobindo had already visualized these ideas in his writings. What a coincidence?

She met Sri Aurobindo on 20th March, 1914. He exactly resembled the man she used to see in her vision since 1904. She went back to Paris, Japan and other places and finally returned to Pondicherry in India where Sri Auribindo had established an Ashram, a celebrated spiritual centre. Now the question was as to the ways and means by which this great vision of whole-being, whole-knowledge and whole power could be attained for the whole society. Sri Aurobindo found, and this was Mother's discovery, that this could be done through the processes of Yoga, many of which were known, and many of which had to be rediscovered, created, built and perfected, so that they could meet the needs of modern man's upward evolution. This was the task Sri Aurobindo was engaged in since he came to Pondicherry.

The Mother also participated in this endeavor. The result was what is known as 'Integral Yoga' - developed jointly by Sri Aurobindo and the Mother. In integral yoga, the Divine Power in us uses all life as the means of our upward evolution and then every experience becomes a step on the path to perfection. In this whole process the Mother was Shakti in action. She accelerated this process with great vigor even after Sri Aurobindo left his mortal body on December 5, 1950. She continued to expand that vision through education and counseling of the seekers of inner peace. Under her direction, Pondicherry developed into a residential Ashram.

Her imprint can be seen in almost all aspects of Ashram routine. She worked relentlessly till she passed away on November 17, 1973.

Did you Know?

Dowry Didn't Evolve from India.

Where'd We Get This Zany Idea?
Hindus got it from the Europeans.

According to several sources, the present dowry practice in India can be traced only to the 19th century - likely because that is when Indians observed the full-fledged practice of dowry among the British rulers. Here are some excerpts from a wonderfully, enlightening book, The Marriage Bargain, Women and Dowries in European History.

"In France, the dowry was almost a universal institution, even among servants, laborers and tenant farmers, until the interwar era (1918-1939). Only the poorest urban industrial workers had no dowries, and as a result many of them did not marry at all. "For the great majority of the bourgeoisie (middle class) marriage is the greatest financial operation of their lives." Wrote an observer of the French scene in 1927.

"What was the status of the daughter whose birth ' filled a father's heart with fear' (Dante, Renaissance poet, 1265-1321 C. E. because of the large dowry which her marriage would require?"

(source: **The Marriage Bargain, Women and Dowries in European History.** By Marion A. Kaplan. Harrington Park Press. 28 East 22 Street, New York, 100010. USA and **Hinduism Today**).

The concept of **stri dhan** in which gifts --usually jewelry, including often a quarter pound of gold--was given to the bride by her family, in order to secure some personal wealth for her when she married. This jewelry remained her personal property throughout the marriage, providing some security in case of her husband's death or other calamity. **However, in approximately the 19th century, under the British rule, the loving practice of stri dhan was joined by the very much different concept of dowry.** Dowry became first an expected, then a demanded, offering given by the bride's family to the groom's family at the time of marriage. Whereas stri dhan is considered the property only of the woman, passed matrilineally, dowry is not.

Please refer to a forthcoming book **Dowry Murder: The Imperial Origins of a Cultural Crime - By Veena Talwar Oldenburg**. The author argues that 'these killings are neither about dowry nor reflective of an Indian culture or caste system that encourages violence against women. Rather, such killings can be traced directly to the influences of the British colonial era. In the pre-colonial period, dowry was an institution managed by women, for women, to enable them to establish their status and have recourse in an emergency. As a consequence of the massive economic and societal upheaval brought on by British rule, womens' entitlements to the precious resources obtained from land were erased and their control of the system diminished, ultimately resulting in a devaluing of their very lives.' More good things thanks to the Christian State.

(source: **Taming the predatory State of today - Rajeev Srinivasan - rediff.com**).

The book takes us on a journey into the colonial Punjab, Veena Oldenburg skillfully **follows the paper trail left by British bureaucrats to indict them for interpreting these crimes against women as the inherent defects of Hindu caste culture. The British, Oldenburg claims, publicized their "civilizing mission" and blamed the caste system in order to cover up the devastation their own agrarian policies had wrought on the Indian countryside.**

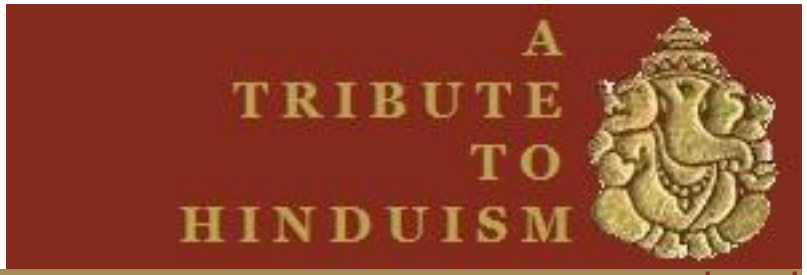
Indian Temples and 19th century British woman in India



Indian temples were a popular destination for British tourist, but escorts usually steered female sightseers away from the erotic art featured on some temple facades. One 19th century guide book advised women to tip local guides for not pointing out suggestive temple carvings.

Of the many nineteenth-century Indo-Western cultural confrontations, none was more troublesome than that of evangelical Christianity's challenge to indigenous religious beliefs and practices. The British conquest of most of the subcontinent had thrust aside the indigenous rulers and their pattern of rule, as well as an increasingly aggressive propagation of the Christian gospel by Western missionaries. The East India Company's initial policies toward Christian missionaries were at best ambivalent. Until pressure at home was created by the evangelical Christian interests, the British parliament eliminated these restrictions in the charter renewals of 1813 and 1833, opening British India to missionary endeavor.

While some Britons admired the achievements of Indian civilization, others, including the evangelical Charles Grant, believed that India was a backward place, stagnated by Hindu beliefs and practices. If Britain was obligated to uplift India, then surely Hinduism, which Grant conceived as the ultimate source of India's many social evils, must be undermined. As early as the 1830's Christian representatives were visiting towns in the remote corners of the countryside. As these endeavors became more widespread, so too did popular antipathy and antagonism.

It is generally accepted by most scholars on the subject that in many Asian countries political nationalism was preceded by religious awakenings that arose in response to Christian missionary activities.

Vishnu Bhikaji Gokhale, Arumuga Navalar, Dayanand Saraswati, were some of the earlier reformers and revivalists. Although given scant attention by Indian historians, their contribution and defense of Hinduism is remarkable. Vishnu Bhikaji Gokhale was not the first Marathi polemicist against the Christian missionaries, but he was one of the most colorful and widely known. Arumuga Navalar is regarded as the "father" of modern Tamil prose and a staunch defender of Shaivism against Christian missionary attacks. Dayanand Saraswati was an aggressive reformer, who directed his efforts against the missionary faiths, Islam and Christianity. Modern day revivalists and social worker, Mr. Pandurang Vaijnath Athavale, is well known for selfless work for the good of humanity.

Introduction
Vishnu Bhikaji Gokhale
Arumuga Navalar of Jaffna
Swami Dayanand Saraswati
Pandurang Vaijnath Athavale Shastri

Introduction

After reaching its maturity, Hindu civilization had to withstand the shock of two alien intrusions. The first of these, was the series of invasions by Islamic peoples from Central Asia that ended in the establishment of political control over almost all of India. The second shock was the coming of the European peoples as a part of the great wave of expansion that had begun late in the fifteenth century, and, as far as India was concerned, reached its height in the nineteenth century. The effect of Western intrusion was greater on the Indian society.

Vishnu Bhikaji Gokhale (1825-1871)

Vishnu Bhikaji Gokhale was born in 1825, the tenth child of a modestly placed Konkanastha (Chitpawan) Brahmin family residing in a village, Shiraval, near Mahad in the Thana (now Kolaba) district. His education appears to have consisted only of a few years in a village school along with some of study of the Vedas in preparation for his sacred thread ceremony. At the age of fourteen he worked at the customs office at Sangamseshvar Bandar, leading in a few months to appointment with pay at Thana in the Customs Department. The young Vishnu seemed safely on the path of the *laukika* (secular) brahmin, secure in "service". Yet this bureaucrat-in-becoming seems to have spent his own time engaged in religious exercises and disciplines, memorizing *stotras* and mingling with *sadhus.* His custom service postings were at several places in the Thana area - Vasai, Bhiwandi, and Kalyan - each of which was also in close proximity of Bombay.

It was while posted at Uran, a small port on the harbor opposite to Bombay, that Vishnu Gokhale sensed that other work awaited him. As he was drowsily emerging from sleep one morning, he heard what he took to be a divine voice calling: " *Are,* Vishnu. If you live in the company of beast, are you therefore one? Take a decision - who am I? Abandon service, go into the wilderness lost in philosophic meditation. Inspired, Vishnu resigned his appointment, retained but a loin cloth and a staff, and commenced several years of penance and meditation at the sacred hill of Saptashringiri near Nasik.

There, he had further visions giving him a mandate to propagate *dharma* throughout the land. In 1852 he moved first to Nasik and then on to Pandharpur. He stayed on at this great pilgrimage center for three years during which time he learned traditions of the **varkari panth,** studying Eknath's **Bhavartharamayana**. Subsequently the young ascetic, now known as Brahmachari Bawa or Vishnubawa Brahamachari, published his own book. **Bhavarthasindhu** (sea of devotion), which gave emphais to dyan or "special knowledge". *Dynan,* he explained could be found only in Vedic religion and realized through devotion *(bhakti)* as expressed by the saint-poets of Maharashtra. **Apparently,**

he also heard Christian missionaries at Pandarpur criticizing Hinduism and resolved that he would answer them.

In September 1856, Vishnubawa Brahmachari went to Bombay to step upon a wider stage. Having forsworn marriage, abandoned worldly employment, and absorbed the available teachings of regional and Sanskritic religious knowledge, Vishnubawa stood poised to combat the Christian missionaries and to defend *dharma.* Yet, his defense by no means excluded the possibility of, even the necessity for, that Hindu society and culture could themselves be reformed.

Christians had been proselytizing in Western Maharashtra since the days of the Portuguese conquests. (For more refer to chapter on **European Imperialism** and **FirstIndologists**). However, the nineteenth century saw the entry of a new element - the British and American Protestant missionaries fired with a zeal for bringing India to Christ and doing it rather quickly, too. Relying upon the sympathy of the Governor, Sir Evan Neapean, they ultimately established residence in the city. Initially utilizing the Serampore Press Marathi grammar, dictionary, and New Testament, these missionaries commenced a vigorous campaign of street preaching near Hindu temples in Bombay. **The American Congregationalist Gordon Hall, spoke in hostile tones about Hinduism. He called Hinduism, " a shapeless mass of cruelties."**

In 1829, Dr. John Wilson, a Scottish missionary arrived in Bombay along with his evangelical ambitions. In May 1830, public debates were inaugurated at Bombay. In the following year, **Morobhat Dandekar** debated with Wilson for six successive evenings. He published a tract setting forth his views, **Shri Hindudharmasthapana** (Foundations of Hindu Religion) which in turn called forth rebuttals published by Wilson.

Dandekar entered the fray with a new broadside against Christianity, **Upadesha Chandrika** (Moonlight of Admonition), which a missionary journalist in *Dnyanodaya* asserted even went so far as to use arguments of the "books of infidels like Voltaire and Tom Paine. Hindus were beginning to use the same technologies employed by their Christian antagonists. Now oral debates were being recorded and printed, and additional polemics were published.

In this context of over a quarter of a century of Christian-Hindu disputation and polemic, and with the intensification of missionary endeavors provoking greater apprehension and hostility among Hindus, Vishnubawa Brahmachari was not the first Maharashtrian Hindu to enter the lists against Hinduism's critics. Rather, he was the first to launch a widely recognized defence of Hindu *dharma*, using an effective style reinforced by an aggressive counterattack against Christian doctrines. Even his missionary opponents had to concede that he possessed "an agreeable manner, remarkable fluency and ease, a fine command of the Marathi language, (and) an air of sincerity and piety."

At the same time, Vishnubawa decried the fact that because Hindus were ignorant of their own religion, they consequently could not defend it against missionary critiques. Yet Vishnubawa recognized that Hindus had to go beyond denigrating other religions, turning instead to a clear exposition of what was essential in their own system of belief. Thus he began writing his magnum opus, a survey of what he called the ultimate kernel of Hindu faith. entitled the Light of Vedic Religion or **Vedoktadharmaprakasha**. This work opens quite simply: "Dharma mhange kay?" "what does dharma mean?"

Vishnubawa Brahmachari died in the Viththal Mandir at Bombay on Mahashivaratri, February 18, 1871.

To many of his large circle of admirers, Hindus, both Gujarati and Maharastrian and

some Parsis, he had triumphed and turned back the tide of conversion. He became a symbol of resistance to the criticism launched against Hinduism by evangelizing missionaries, and his considerations of what dharma truly means, he contributed to the objective survival of the ancestral faith. In his vigor, his polemics did defend dharma without foreclosing on the desirability or possibility of reform.

True to his given name, he remained Vishnu - the preserver.

Arumuga Navalar of Jaffna (1822-1879)

Arumuga Navalar is regarded as the "father" of modern Tamil prose and a staunch defender of Shaivism against Christian missionary attacks. Less known are his attempts to reform Shaivism itself. **He worked within the heritage of Shaiva scholars as he responded to the newer challenges of an intrusive Western Civilization.** A Hindu of Hindus, affectionately called the 'Champion Reformer of the Hindus', author of numerous treatises on Saiva Literature, was a pioneer prose writer and publisher of rare books of the Sangam Age.

Arumuga Pillai, Navalar's original name, belonged to a high-status caste known as Vellalas, a class that along with Brahmins had produced most of the Tamil literati for centuries, perhaps millennia. Born in 1822, he grew up in the Tamil regions of Sri Lanka. Because his father was a Tamil poet, Arumuga Pillai received a solid foundation in Tamil literature at an early age. Like many high-status boys of the second generation to live under British rule, he entered a Christian mission school to study English. Arumuga was twelve when he attended this school as a day student. He did so well that he was asked to stay on the Jaffna Wesleyan Mission School to teach English and Tamil. Peter Percival, the principal asked him to serve as his own Tamil pandit, to assist him in writing and editing hymns and translating the prayer book and Bible. Arumuga Pillai worked with Percival for eight years in his late teens and early twenties, when he wrestled seriously with the questions, What does it mean to be a Hindu?

Background

At the time of Arumuga Pillai's birth, Protestants from England and America, had established stations in nine villages on the Jaffna peninsula from whence they conducted vigorous campaigns to convert the Hindus and Muslims into Christians. The first significant Hindu opposition to these efforts emerged in 1828 when the teachers of the American Missionary Seminary at Batticotta (Vattukkottai) began to stress the Shaiva scripture Skanda Purana (Kanta Purana) in their school. The decision angered Jaffna Hindus, who doubted that in such a foreign setting the sacred quality of this Tamil story of Murugan, the warrior son of Shaiva, would be respected or that its esoteric meanings would receive a sympathetic hearing.

Christians had their portions translated from poetry into prose. The classes immediately

created a stir. Though they were voluntary, social pressures caused attendance to gradually dwindle until they were abandoned. From the Shaiva point of view, this act by Christian educators had pulled a text from sacred center (*akam)* of *dahrma* out into the darkness of the wilderness (*purappuram*), stripping it of its ritual context and laying it bare for profanation. Indeed this is what the educators had intended, as the end of the report said:

"Enough, however, was read to convince all who would reflect, that the book is filled with the most extravagant fictions, many of which are of an immoral tendency, (just as the Bible says,) "for the people will walk everyone in the name of his god."

Two long anti-Christian poems appeared around this time in Jaffna. They reflected an increasingly vocal opposition.

The Vellala poet, **Muttukumara Kavirajar** (1780-1851), wrote the "Kummi Song on Wisdom (jnanakkummi) and "Abolition of the Jesus Doctrine" (Yesumataparikaram). The timing of their publication suggests a connection with this opposition. The "Kummi Song on Wisdom," moreover attacked the Christian Bible and Christians just as the Christians had criticized the *Skanda Purana* and Shaivas. In Jaffna, the Christian assault on Shaivism intensified.

In September of 1842 over two hundred Hindu men of high status gathered at the monastery (matam) of the Shiva temple in Jaffna to discuss plans for establishing a Veda and Agama school to teach Shaivism. **They also agreed to purchase a printing press, if possible, in collaboration with "the white men of this place," and to publish tracts on the absurdities of the Christian religion, "which would effectually shut the mouths of the missionaries and stop their abuse."**

In October of 1842, when the Veda school opened Arumuga Pillai had been teaching Tamil and English at the Wesleyan Mission School and working with the British missionary Percival for a year. Sympathetic to the Christian arguments, he studied the Bible regularly, but while doing so began to have questions about it. Soon he turned away from it in favor of his own heritage. In 1848, he quit to devote himself fully to his own projects. He had studied in depth the Agamic literature forming the scriptural Sanskrit. He was now adept in the three literary languages of modern religious discourse in the Tamil world: Tamil, Sanskrit, and English. Not surprisingly, his reputation had been growing among local Shaivas as a man who knew more about obscure Agamic literature than anyone else.

The Veda and Agama school had not survived and a printing press was still a dream. In 1846 Arumuga Pillai began night and early morning classes in the primary and secondary literature of Shaivism. His students were a few of his friends, young Vellala, Brahman, and Chettiyar men. The classes were free and informal. Soon he crossed the Palk Strait and to Madras, his first trip to India. A Shaiva school was clearly on his mind. Struggling against Christians and some Hindu reformers as well as orthodox priests, he made a dramatic move at the end of 1847 to spread the "Splendor of Shiva" (Sivaprakasam) and disperse the "darkness" shared by Hindus and Christians. He believed that if the people knew the rudiments of Agamic Shaivism acted on them, they would strengthen dharma and weaken the Christians.

In 1849, He set out for Madras, with his colleague, Sadashiva Pillai, to purchase a printing press. While waiting for a press, Arumuga Navalar published two texts he had been editing from various copies. One was an important educational tool the Cudamani Nikantu, a sixteenth-century lexicon of 1,197 easily remembered verses giving approximately eleven

thousand words, in both their verse and prose forms. The other text, Saundaryalahari, a poem in praise of the goddess, was important for devotion, and was published with comments (urai). He had laid out the lines of his work he would continue for the rest of his life: writing, publishing, preaching, teaching and reform. He openly disputed with the claims and refuted the abuses of the Christians.

The Impact of Navalar

His literary production was amazing. Among his approximately ninety-seven Tamil publications, twenty-three were his own creations, eleven were his commentaries (urai), and forty were his editions of those works of grammar, literature, liturgy, and theology he thought Tamils should know. With his recovery, editing, and publishing of ancient works, Navalar, laid the foundations for the recovery of lost Tamil classics, a task his successors continued.

The religious revival among the Hindus in Sri Lanka was largely due to the pioneering efforts of Arumuga Navalar (1822-1879). This is not the place to narrate in detail the crucial and seminal role played by him in kindling a consciousness among the Tamils in Sri Lanka and South India about their spiritual heritage. In many ways Navalar could be compared to Dayananda Saraswathi (1824-1883) who founded the Arya Samaj in North India. **What Dayananda did for the Vedic religion in the North, Navalar accomplished for the Saiva-Agamic faith in South India and Sri Lanka.**

(For more refer to chapter on **European Imperialism** and **FirstIndologists**).

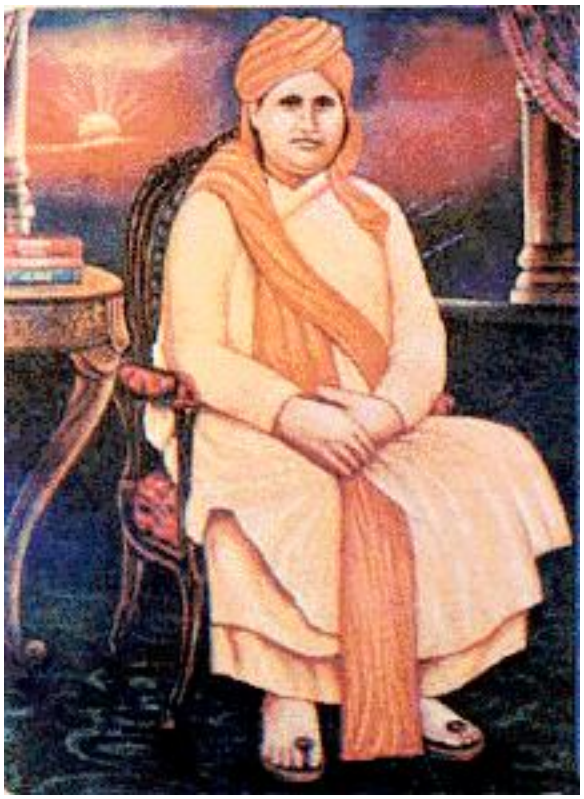
***

Arumugam Navalar, Great Saiva Revivalist of Jaffna, Sri Lanka, Honored on 181st Birthday

SRI LANKA, December 15, 2003: Tamils in several parts of the northeast observed the 181st birth anniversary of the Saiva-Tamil revivalist Sri Arumugam Navalar on Sunday. Sri Arumugan Navalar is chiefly remembered for his work to revive Saivism in Jaffna and South India. He is also considered one of the important pioneers of Tamil revival in the 19th century. Though Sri Arumugam Navalar's 181st birth anniversary falls on 18th December 2003 the Trincomalee District Young Men's Hindu Association organized his Guru Pooja on Sunday. The TDYMHA organized the event with the octogenarian Saivite activist Mr. P. Kandiah (Gandhi master). Attorney-at Law Mr. K. Sivapalan and Assistant Director of Education Mr. S.Vipunasekaram spoke of the services Navalar rendered to Saivism and Tamil language.

Many Tamils in South India and Sri Lanka are Saivaites. Sri Arumugam Navalar was born on 18th December 1822 in Nallur in Jaffnapeninsula at a time when several elite and middle class Tamils in Jaffna felt that Ceylon's British rulers were promoting Christianity and the English language at the expense of Saivisim and Tamil.

Navalar's original name was Arumugam. For his services rendered to Saivaism and Tamil language and culture, the head of the great Tamil monastery/temple complex in South India, Dharmapuram Aadheenam, conferred on him the title "Navalar" in recognition of his literary and debating skills. Since then he was known as



Arumugam Navalar. At the age of twelve he completed his Tamil education under the traditional, non-formal education "Guru-Shisya" mode of learning. He later joined Jaffna Methodist English School, currently known as Jaffna Central College for his English education when Rev Peter Percival was its Principal.

Navalar emerged the champion of the Saiva renaissance movement of the nineteenth century, both in Jaffna and South India. He published several ancient Sangam literary works, which were found in Palmyra (Ola) leaf manuscripts. He also wrote learned commentaries to ancient and medieval Tamil grammars Navalar was versatile writer, eloquent speaker and efficient debater. Navalar wrote several books on Saivaism such as Saiva Vina Vidai, which is a Saivite catechism. Navalar developed a prose style even laymen could understand. Arumugam Navalar established schools in several parts of Jaffna peninsula to propagate Saivaism.

Swami Dayanand Saraswati (1824-1883)

Rightly described as a human dynamo, Swami Dayananda shook the structure of established Hinduism to its foundations and infused into it new blood and fresh vigor. The founder of **Arya Samaj,** was a prophet with a difference. Dayanand is the father of both Renaissance (he brought to life world's supreme knowledge, the Vedas, with his slogan 'Back to Vedas) and Reformation.

Background: The Punjab, after centuries of Hindu rule followed by over five hundred years of Islamic dominance and half a century of Sikh control, contained three religions. Two of these converted, Islam and Sikhism while the third Hinduism, had neither the concepts nor the rituals necessary for conversion. In 1849, the British annexation of Punjab, introduced the aggressive conversion of faith of Christianity. In time, Christianity threatened each of the coexisting religions. Christian missionaries brought with them new forms of organization and techniques of proselytism. Proponents of each religious ideas sought to defend their beliefs and to discredit those of the opposing groups. It was a struggle of *mandan-khandan*, of disseminating one's "true" ideas and rejecting others "false" concepts. Exponents of Hinduism and Sikhism struggled to defend their religions in general and sectarian ideologies in particular against the missionary attempts to proclaim the superiority of Christianity.

Swami Dayanand Saraswati was born in Tankara, a small town on the Kathiawar peninsula of Gujarat in 1824. He ran away from home in search of his release from the cycle of rebirth and in the process became a sanyasi, taking the name of Dayanand Saraswati. He passionately advocated a return to the pristine purity of Vedic Hinduism, and denounced with intolerant indignation of the post-Vedic Hindu scriptures such as the Puranas. He also condemned idol worship and caste distinctions, advocated full equality for women, initiated a widespread educational campaign with special emphasis on female education, and launched a crusade against untouchability.

Rightly described as a human dynamo, Swami Dayananda shook the structure of established Hinduism to its foundations and infused into it new blood and fresh vigor.

For more on Dayanand Saraswati refer to chapter on **Quotes251_270**).

(source: **Religious Controversy in British India** - **Edited by W. Jones** Suny 1992) **Essays on Hinduism** - **By Karan Singh** 1993). (For more refer to chapter on **European Imperialism** and **FirstIndologists**).

Pandurang Vaijnath Athavale Shastri (1920-2003)

The inspiration and founder of Swadhyay Parivar and Swadhyay work is Rev. Pandurang Vaijnath Athavale affectionately known by millions of Swadhyayees as "Dada", a reverential common name for an elder brother.

Rev. Dada was born of Brahmin parents in the village of Roha near Bombay on October 19, 1920. His father and grandfather were great scholars of Vedic literatures. From childhood Dada was inclined towards Vedic scriptures as Geeta. He mastered many languages like Sanskrit, English and several local dialects. At very early age, he acquired a deep and clear understanding of scriptures, logic, grammer, Greek and European philosophy, Sanskrit and English literature, comparative religions, history and various social sciences.

In 1954, Rev. Dada was invited to attend the Second World Religion Congress held at Shimizu City near Tokyo, Japan. This was truly a historic event where religious leaders, philosophers and scholars from many nations had gathered to discuss the question of human happiness. People were concerned about the atomic power which destroyed Nagasaki and Hiroshima. Dada spoke on Vedic philosophy and asserted that Geeta was capable of resolving the dilemmas of man and the general welfare of mankind. He emphasised the necessity of religion in human life.

In 1956, he established a residential school of philosophy - "Tattva Jnana Vidhyapith". This institute was to give importance to nothing except God.

In 1958, Rev. Dada began devotional visits - "Bhaktiferi". This became one of the basic practices of Swadhyay participants. They travelled from door to door to meet people, and since that time Swadhyay has spread across 100,000 Indian villages and the world. It has

transformed the lives of over 20 million people.

When Pope Paul VI visited India in 1964, he requested a meeting with Dada to hold philosophical discussions.

In 1982, Rev. Dada was the honored chief guest speaker at the celebration of the 15th century saint, St. Nicholas's 500th birthday held in Trier, West Germany. To the delight of those in attendance , he spoke in a scholarly way of the affinity between the doctrines of the Upanishad and Geeta, with the views of Saint Nicholas regarding the theory of human knowledge, mysticism and God. Rev. Dada emphasised that the Hindu doctrine too is not only a view life, but also a way of life, much in common with Christian doctrine.

In 1986, at the meeting of world - religion leaders at 'Tirthraj Milan', India, German philosophers Rudolf Haubst and Helmut Pfeiffer dedicated their translation of Nicholas of Cusa's "Vision of God" to Dada.

The Awards and Prizes:

- Rev. Dada was given an award in 1987 by the National Wasteland Board of India for the extraordinary success in preserving soil and developing soil and planting forests.
- In 1988, Rev. Dada was also awarded the prestigious Mahatma Gandhi Prize, the first time in 14 years.
- Rev. Dada received the 'Lokmanya Tilak Sanman Paritoshik' Award in 1992 for selfless work for the good of humanity.
- In 1996, Dada received the Ramon Masaysay Prize in the Philippines for demonstrating an outstanding community leadership.
- And in 1997, Pandurang Shastri Athavale received the Templeton Prize for Progress in Religion. This prize is valued at $1.21 million, the world's largest monetary award.

For the last fifty years Dada has single handedly spearheaded a silent revolution, which aims at social and cultural transformation of man. While treading this path, he had to fight against the deep-rooted tradition, beliefs, rituals and negative thinking prevalent in the Indian society, some of which are inborn in human mind. His work has brought forth a revolution on five fronts.

Did You Know?

Kalaripayit - Danger and Divinity in an Old Indian Art?

Originating at least 2,000 years ago, India's Kalaripayit is perhaps the oldest martial art taught today. It is also the most potentially violent, because students advance from unarmed combat to the use of swords, sharpened flexible metal lashes, and peculiar three-bladed daggers.

And yet Kalaripayit is suffused with the divine. A trainee does honor to Hindu deities at every turn - touching the ground with the right hand in homage to the earth goddess; raising that hand to the brow to honor the gods of knowledge; touching right hand to left knee in reverence to Hanuman, the divine embodiment of physical prowess; and uplifting both hands to the shoulders to show respect for Garuda, representing strength. The training space is strewn with symbols -oil lamps, a mirror, flowers - to make the students mindful that the gods are with them.

(source : **Eastern Mysteries - Time Life series**. p 144-145)

Kalarippayat is said to be the world's original martial art. More than 2,000 years old, it was developed by warriors of the Cheras kingdom in Kerala. Training followed strict rituals and guidelines. From unarmed kicks and punches, kalarippayat warriors would graduate to sticks, swords, spears and daggers and study the marmas -- the 107 vital spots on the human body where a blow can kill. Training was conducted in secret, the lethal warriors unleashed as a surprise weapon against the enemies of Cheras. **Still, Chinese traders learned some of the mysterious body movements and took them home to provide the basis of their own martial arts. According to Terence Duke, martial arts went from India to China. Fighting without weapons was a specialty of the ancient Ksatreya warriors of India.**

(source: **The Boddhisattva Warriors: The Origin, Inner Philosophy, History and Symbolism of the Buddhist Martial Art Within India and China - Terence Duke** p.3 - 158-174 and 242).

(please refer to chapter on **India and China** for more information).

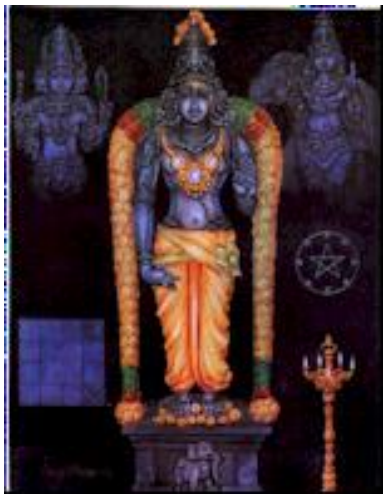
India - A Spiritual Giant

Lin Yutang, Chinese scholar, author of **Wisdom of China and India**, has said:

"India produced too much religion and China too little." A trickle of Indian religious spirit overflowed to China and inundated the whole of Eastern Asia. It would seem logical and appropriate that any one suffering from a deficiency of the religious spirit should turn to India rather than to any other country in the world."

It is apparent that only in India is religion still a living emotion. "

(source: **The Wisdom of China and India - By Lin Yutang** Random House September 1955 ASIN 0394607597 p. 3-4)



J. P. Couchoud has observed:

India has "man gone to the farthest limit of his religious faculty. Consequently, religious tales is one of India's richest traditions." in the book **Asiatic Mythology - J. Hackin** Crescent Books Place of Publication: New York p. 115).

(For more refer to chapter on **India and China**).

India's Fabulous legends:

It has long been recognized that India's tales of gods and goddesses are closely related to those of ancient Greece, Rome and the Nordic and Germanic peoples. So similar are they, indeed that even the days of the week, both in India and in the West, continue to be named after the same deities, who represented the same planets: Sun for Sunday, Moon for Monday, Mars for Tuesday, Mercury for Wednesday (Woden's day in Norse legend), Jupiter for Thursday (Thor's day in Scandinavia; **Brihaspati**, or **Jupiter's day in India**), Venus for Friday, and Saturn for Saturday.

While on a tour of the Parthenon, a guide will tell you that the Greek legends came from India.....

Democracy on Ashoka's Rock Edict

Ashoka, (273 BC - 232 BC) the most trusted son of Bindusara and the grandson of Chandragupta Maurya, was a brave soldier. He was the most famous of the Mauryan kings and was one of the greatest rulers of India. During his father's reign, he was the governor of Ujjain and Taxila. Having sidelined all claims to the throne from his brothers, Ashoka was coronated as an emperor. Ashoka extended the Maurya Empire to the whole of India except the deep south and the south-east, reaching out even into Central Asia. For propagation of Buddhism, he started inscribing edicts on rocks and pillars at places where people could easily read them. These pillars and rocks are still found in India, spreading their message of love and peace for the last two thousand years.

A ringing declaration of Mauryan Emperor, Ashoka at the conclusion of his first rock edict:

esahi vidhi ya iyam: dhammena palana, dhammena vidhane, dhammena sukhiyana, dhammena gotiti.

The word dhamma or dharma is usually translated ``law'' although it could also mean ``tradition'' or ``truth''. If we choose the common meaning, Ashoka's declaration becomes:

For this is my rule: government by the law, of the law; prosperity by the law, protection by the law.

This sounds like the invocation in Lincoln's Gettysburg address!

Cultural Unity of India

According to **Jawaharlal Nehru**: "Right from the beginning, culturally India has been one, because she had the same background, the same traditions, the same religions, the same heroes and heroines, the same old tales, the same learned language (Sanskrit), the village panchayats, the same ideology, and polity. To the average Indian the whole of India was a kind of **punya-bhumi** - a holy land - while the rest of the world was largely peopled by mlechchhas and barbarians. **Sankaracharya** chose the four corners of India for his ***maths,*** or the headquarters of his order of sanyasins, shows how he regarded India as a cultural unit. And the great success which met his campaign all over the country in a very short time also shows how intellectual and cultural currents traveled rapidly from one end of the country to another."

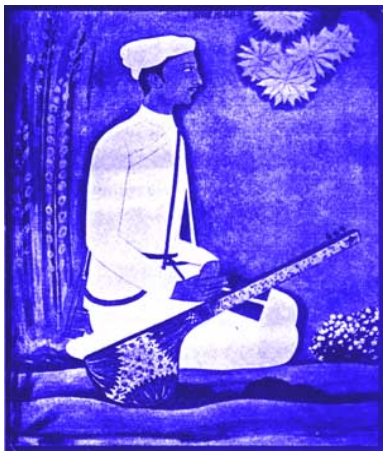
(source: **Glimpses of World History - By Jawaharlal Nehru** p. 129).

According to **Ronald B. Inden**: " The unity underlying the obvious diversity of India may be summed up in the word "Hinduism."

(source: **Imagining India - By Ronald B. Inden** p. 86)

Dr. Radhakrishnan: "In spite of the divisions, there is an inner cohesion among the Hindu society from the Himalayas to the Cape Comorin."

(source: **The Hindu View of Life - By Sir. Sarvepalli Radhakrishnan** p. 73-77*).*



Cultural unity seems far more enduring than any artificial geographic or political unity.

Girilal Jain, late editor of Times of India: " It is about time we recognize that we are not a nation in the European sense of the term, that is, we are not a fragment of a civilization claiming to be a nation on the basis of accidents of history which is what every major European nation is. We are a *people* primarily by virtue of the continuity and coherence of our civilization which has survived all shocks. And though inevitably weakened as a result of foreign invasions, conquests and rule for almost a whole millennium, it is once again ready to resume its march."

(source: **Hindu Phenomenon - By Girilal Jain** South Asia Books 1998 ISBN 8174760105 p. 21). For more refer to chapter on **Glimpses VIII**).

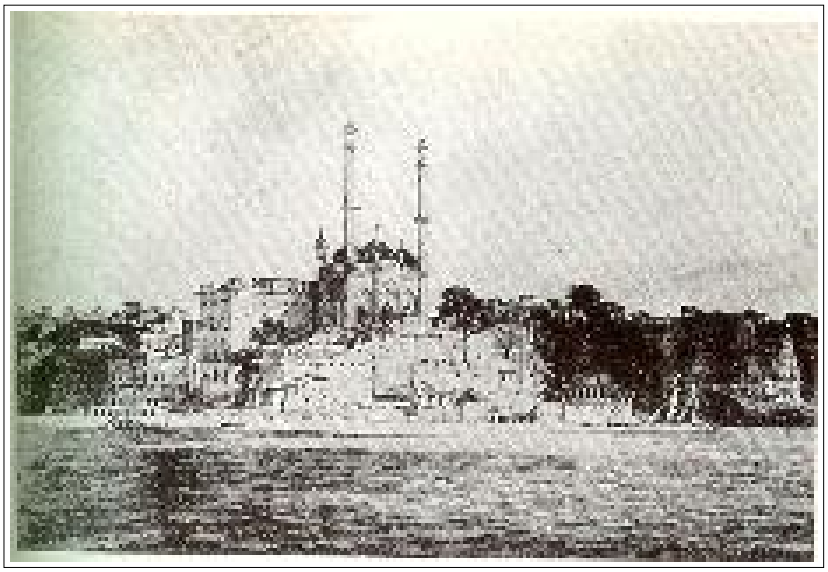
Tansen - One of Nine Jewels

Tansen is considered to be one of the greatest musicians that ever lived. He was the court musician of the famous Mogul Emperor Akbar (16th century). He was so highly valued in the court that he was called one of the "Nine Jewels" in his court *(navarathna)*.

The details of Tansen's life are incomplete. He was born in a Hindu community and had his musical training under the great Swami Haridas. He then went to the court of the Raja Ram Baghela, a great patron of the arts. From there he migrated to the court of Akbar. It is said that Tansen could work miracles with his singing. This is called *nada siddha* in Sanskrit. He is supposed to have acquired such supernatural abilities through the association with the saintly Swami Haridas. It is said that on occasion he could create rain by singing the monsoon rag *Megh Malhar*. It is also said that he could create fire by singing rag *Dipak*.



Many rag are ascribed to Tansen. Such rag as *Mian ki Malhar, Mian ki Todi* and *Darbari Kanada* are the most famous. Today his followers are refered to as *"Senia Gharana"*

Tansen, the court musician of Emperor Akbar, **once plunged the palace precincts in darkness by chanting a night raga, or melody, at Akbar's request, while the sun was still high in the sky.**

Aurangzeb's great mosque on Benaras Ghat:

In the eighteenth century, Aurangzeb's great mosque above Panchganga ghat dominated the Benaras waterfront. Built on the site of a vast Hindu temple it helped explain the dearth of pre-Islamic architecture in the sacred city. Yet Benaras remained a center of Hindu scholarship where the first Orientalists sought the keys to India's past.

(source: **India Discovered - By John Keay** HarperCollins ASIN 0002178591 May 1992 p. 32).

Babri Masjid - A Symbol of slavery ?

The disputed structure at Ayodhya was a "symbol of slavery" and an "insult to the nation" as it was known by the name of an "aggressor."

The example of Rhodesia (now Zimbabwe) which changed the names of buildings, cities and roads after gaining independence, shows that Rhodesians did this despite the fact that their erstwhile (White) rulers belonged to the same religion....

(For more refer to chapter on **Islamic Onslaught** and **Glimpses VIII**).

Christian Missionaries damaged Easter Island History

Missionaries did more damage to the Easter island's history than even the Peruvian slave traders, which carted off most of the island's population. Those who escaped by hiding in the island's many caves were "saved" by these missionaries, who proceeded to destroy all the islander's wooden sculptures, religious artifacts and most importantly, the **Rongo- Rongo tablets**, which contained a record of the lost language of the Rapa Nui. So few of these tablets remain that no one has been able to decipher them satisfactorily.

(For more refer to chapter on **India on Pacific Waves**).

Infamous British Jail or Kala Pani

Once the capital of the group of islands strewn in this part of the Bay of Bengal, it is home to the (in) famous Cellular Jail or the **Kala Pani,** now declared a National Monument.

In 1788 AD, the East India Company, in the process of consolidating their foothold in India, summoned the services of Lieutenant Archibald Blair of the Navy, handing him a crisp, short brief - to discover, survey and recommend available sites to which revolutionaries, seditionists and later, convicts could be deported. After a year of scouting in the Bay of Bengal, Lieutenant Blair found an island and named it Port Cornwallis (now Port Blair). He found yet another small island located on the eastern entrance of Port Blair and called it Ross Island.

In 1857, as more and more areas of India joined the rebellion against the East India Company, in what was the first Indian struggle for Independence, the British found it difficult to deal with the surging number of rebels. In an attempt to douse the blazing flames of nationalism, they thought it prudent to segregate them from the rest of the population. A committee was set up to survey and report on the establishment of a penal settlement in the Andaman Islands. Dr James Patterson Walker, an experienced jail superintendent, with four other European officers, 773 convicts, an Indian overseer Muttan Dass, two doctors - Nawab Khan and Karim Baksh - and a guard of 50 men left Calcutta on 4 March, 1858. This lot formed the first group of penal settlers in the Andamans.

Immediately upon arrival, Dr Walker put the convicts, still in chains and fetters, to work. Crude grass and bamboo barracks were constructed for the convicts and thick forests ordered to be cleared. Due to their restricted movement and falling trees, many convicts perished. About 86 convicts, recaptured while escaping, were executed by hanging within a single day and their bodies buried together with their iron fetters.

(source: **http://www.indiagov.org/perspec/sept99/ross.htm**)

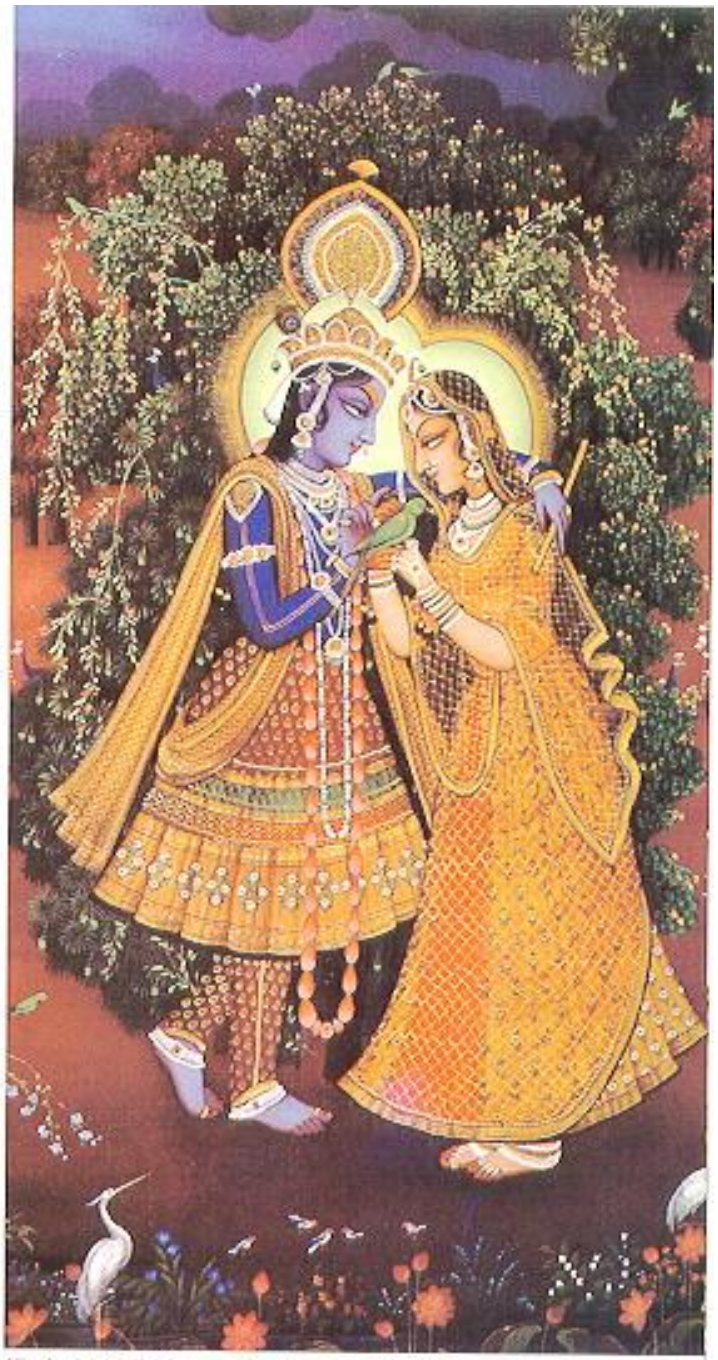
Veer Vinayak Damador Savarkar (1883–1966) Barrister, Indian patriot, revolutionary, hero of freedom struggle and author of **Six Glorious Epochs of Indian History**. In 1911 he was sentenced to life imprisonment on the Andaman Islands. This is the site where whippings used to take place, all under the supervision of the Anglo-Indian jailors, the room where Savarkar was locked up for so many years, the room where prisoners were hanged three at a time and the hole through which the bodies were removed outside of the prison wall to be cast into the sea, are all there. It was here that Savarkar was incarcerated along with thousands of freedom fighters, remains a symbol of indescribable colonial cruelty as also of freedom-loving humanity's undying spirit of resistance. After spending 16 years in Andamans, Savarkar was transferred to the Ratnagiri jail and then kept under a house arrest.

(For more information on please visit **Veer Savarkar** **Remembering Veer Savarkar** and **Veer Savarkar Vindicated: A reply to a Marxist Calumny - By J. D. Joglekar**). (For more refer to: **History of Andaman Cellular Jail**).

On 26th Feb 2003, Swatantrya Veer Savarkar's PunyaTeethi day, when his portrait was unveiled in Lok-Sabha.

Prime Minister **Indira Gandhi** said " Savarkar was a great figure of contemporary India and his name is by-word for daring and patriotism. He was cast in a mould of a classic revolutionary and countless people drew inspiration from him."

In 1970 she had released **a postal stamp recognizing the sacrifice and valor of Veer Savarkar** to the national struggle and she personally ordered a documentary to be made on his life. She also donated Rs 11,000 from her personal account to the Veer Savarkar Trust.



Please refer to **Swatantrya Veer Savarkar: The Eternal Hero - By Dhananjay Kheer** Sangam Books Ltd, London, 2nd Ed, 1988, 569 pages ISBN 086132 182 0

The Andaman Cellular Jail is a historic monument that symbolises British tyranny. It was here that the revolutionaries of 1857, the Wahabi Movement, the Moplah Uprising, the Gadar Party, the Lahore Conspiracy Case and Chittagong Revolt were dumped by the British, in the hope that cut off from the mainland, they would be dead and forgotten. "The 13x8 feet cells where we were put in solitary confinement," "had moss on the walls and insects crawling all over the floor. We were fed rotis with insects and boiled wild grass as *sabzi*. We were given stored rain water to drink and even that was rationed. When we went on a hunger strike they force-fed us through tubes, as a result of which many died." says 89-year-old veteran freedom fighter and revolutionary, Vishwanath Mathur.

(source: **Kala Pani old-boys Net Work** - For more refer to chapter on **Glimpses V**).

Nation, Secularism and Hinduism

Hindu deities Krishna and Radha are traditionally annointed with saffron

According to **Girilal Jain**, editor of **The Times of India**, says:

"The nation concept is the product of developments over centuries in Europe. It does not represent only the triumph of the province over the priest; it represents the triumph of an altogether new approach to life. Along with its twin brother, secularism, it represents the triumph of matter over spirit, and of reason over intellect which the Hindus call **buddhi**. **The nation is a new god. Millions and millions have been killed and maimed in the name of the nation.** This god could not have arisen without the help of its twin brother, secularism. A nation must by definition be secular because it can rise only on the corpse of religion.

Communism is an unnecessary ugly face of secularism, just as it is an unnecessary crude face of modern Western civilization as such, that is gross materialism unrelieved by the residue of Christianity in the shape of humanism." Nazism, Fascism and Communism have been expressions of the same Semitic spirit in the secular realm.

The concept of nation itself is, in fact, alien to the Hindu temperament and genius. Such a concept is essentially Semitic in character even if it arose in western Europe in the eighteenth century. The nation concept too emphasizes the exclusion of those who do not belong to the charmed circle (territorial or linguistic or ethnic) as much as it emphasizes the inclusion of those who fall within the circle. **By contrast, the essential spirit of Hinduism is 'inclusivist' and not 'exclusivisit' by definition.** In that sense the Hindu fight is anxious to renew themselves in the spirit of their civilization and the state and the political and intellectual class trapped in the debris in which the British managed to bury our people before they left."

(source: **Hindu Phenomenon - By Girilal Jain** South Asia Books 1998 ISBN 8174760105 p. 134-135).

Can Savitri be a Muslim name?

Certainly not in India. But Muslim Indonesians have plenty of **Savitris, Gayathris, Leelas,**

Pushpas and even Seetas among themselves. Indonesia adopted Islam as a faith but continued to hold on to the vestiges of **Hindu culture.** So you have Sukarnoputri for the current vice president. Bhasa Indonesia has umpteen number of Sanskrit words. Cultural aspects of Diwali and Holi are still observed by Indonesians. Pakistani Punjabis celebrate Basant Panchami and Lori. Bangladeshi women still sport bindi and sindoor and wear saris. In South India, *Kali poth* is Muslim equivalent for **Hindu manglasutra.** It symbolizes **suhaag**. History and cultural past cannot be disowned.Cultural pluralism broadens the vision, fosters creativity, increases tolerance and builds bridges with others.

(source: **http://www.islamicvoice.com/december.2000/viewpoint.htm#sav**).

Cultural Orphans of India? or Pakistan-Identity crisis?

In my opinion the division of the Indian sub-continent was the biggest blunder in the history of mankind.-- Exiled leader of Muttahida Quami Movement, Altaf Hussain.

Pakistan came into being on August 14, 1947 by order of the Governor-General of undivided India. A state was created overnight by government with the concurrence of political leaders. Well, nations are not invented like a machine, or a pharmaceutical cure for a disease. **Nations evolve over a large span of historical period in distinct geographical areas. They grow on a common soil and climate. They have a common heritage, culture and art, language and beliefs, racial affinity and shared social norms and traditions. They have a common identity.**

The Muslims came to India as conquerors from Afghanistan and central Asia and installed their kingdom as conquerors. Mohammad Ghori invaded India for its fabulous wealth. Babur came as a fortune seeker after losing his kingdom of Farghana in central Asia. These conquerors were joined by other Muslim adventurers and fortune seekers from Arab lands, central Asian countries, Turkey, Iran and remote corners of the Muslim world. The process of immigration from foreign Muslim lands continued for several centuries. The Muslim converts of India added to their numbers. As a class, the multinational, multiracial, multilingual group of Muslims in India always considered themselves conquerors, seldom as Indians. Even the royal blood of Muslim emperors and kings was diluted by marriages of convenience with Hindu princesses. The Muslim of India was a mixture of dozens of nationalities who, as immigrants, distinguished themselves as Muslims, seldom if ever, as Indians. The Muslims of India had no national identity like the later British rulers. When the British lost their empire they retreated to their homeland. The Muslims had nowhere to go when they lost their empire. No Muslim country offered them asylum. They had no homeland and no identifiable nationality except the natural one which they repudiated.

To escape from the perpetual rule of the Hindu majority in a democratic India they claimed the status of a separate "Muslim nation".... **The problem of identity and nationhood was never solved.** The consequences were soon visible on the ground in the ugly shape of tribalism, ethnicism, regionalism and provincialism, sectarian feuds, conflicts, murders, fratricide and language riots.

Easter Island and Indus Valley Seals

One of the puzzle that is quite fascinating is that on Easter Island, 2600 miles off the coast of Chile in the middle of the Pacific Ocean, un deciphered hieroglyphics have been found that match those of Mohenjadaro, the ancient Aryan city of Indus Valley region. This is not possible unless the Vedic Aryans had been there nearly 5,000 years ago.

(source: **Proof of Vedic Culture's Global Existence - By Stephen Knapp** World Relief Network October 2000 ISBN 0961741066 p. 253).

Characters similar to those on the Indus seals have also been found on tablets excavated from Easter Island. This discovery has presented a difficult problem for the pre-historian. It is not known if the two belong to a common source, if one provided the model for the other, or if the similarity is purely accidental due to in accuracies of drawing. If the Indus models traveled about 13,000 miles eastward, it seems strange that the characters should have remained unaltered, because figures generally do not remain identical during prolonged transmission. And, if the seals were actually made in the Indus Valley and taken to the Easter Island, what is the explanation for the difference in arrangement between the two groups of seals?

(source: **Indian and World Civilization - By D. P. Singhal** Michigan State Univ Pr November 1969 ASIN 0870131435 p. 4). (For more refer to chapter on **India on Pacific Waves**).

Veterinary science in Ancient India

Since animals were regarded as a part of the same cosmos as humans, it is not surprising that animal life was keenly protected and veterinary medicine was a distinct branch of science with its own hospitals and scholars. Numerous texts, especially of the postclassical period, **Visnudharmottara Mahapurana** for example, mention veterinary medicine. Megasthenes refers to the kind of treatment which was later to be incorporated in Palakapyamuni's **Hastya yur Veda** and similar treatises. **Salihotra** was the most eminent authority on horse breeding and hippiatry. **Juadudatta** gives a detailed account of the medical treatment of cows in his **Asva-Vaidyaka**.

(source: **Indian and World Civilization - By D. P. Singhal** Michigan State Univ Pr November 1969 ASIN 0870131435 p.187-188). For more refer to chapter on **Hindu Culture II**).

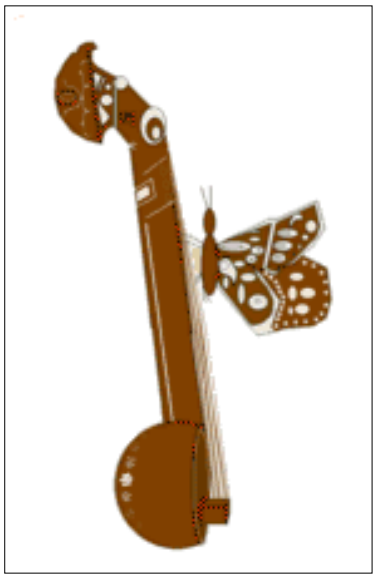
Alexander - scourge of Mankind?

According to an Indian scholar, **Radha Kumud Mookerji**, designating Alexander as the precursor of the recognized scourges of mankind, points out that this contact "was achieved at the cost of untold suffering inflicted upon India - massacre, rapine, and plunder on a scale till then without precedent in her annals, but repeated in the later days by more successful invaders like Sutlan Mahmud, Tamerlane, and Nadir Shah."



(source: **History and Culture of the Indian People - R. C. Majumdar** Publisher: Bhartiya Vidya Bhavan).

E. Badian, has said: "The story of Alexander the Great appears to us as an almost embarrassingly perfect illustration of the man who conquered the world, only to lose his soul. After fighting, scheming and murdering in pursuit of the secure tenure of absolute power, he found himself at last on a lonely pinnacle over an abyss, with no use for his power and security unattainable...Alexander illustrates with startling clarity the ultimate loneliness of supreme power."

(source: **Studies in Greek and Roman History - By E. Badian** p. 204).

Yehudi Menuhin on Indian classical music

"Indian classical music, compared with our Western music, is like a pure crystal. It forms a complete perfected world of its own, which any admixture could only debase. It has, quite logically and rightly, rejected those innovations which have led the development of Western music into the multiple channels which have enabled our art to absorb every influence under the sun. Freedom of development in Indian music is accorded the performer, the individual, who, within fixed limits, is free to improvise without any restraint imposed externally by other voices, whether concordance or discordant - but not to the basic style, which excludes polyphony and modulation."

(source: **Indian and Western Music - Yehudi Menuhin, Hemisphere**, April 1962, p. 5)

" While Western music speaks of the wonders of God's creation, Eastern music hints at the inner beauty of the Divine in man and in the world. **Indian music requires of its hearers something of that mood of divine discontent, of yearning for the infinite and impossible."**

Santiago - the Battle cry against Non-Christians

"Santiago" was the battle cry, and the name would often be shouted out by the soldiers in their massacre of the Indians. Santiago Matamoros, St. James the Slayer of Muslims, was the patron saint of the Christian armies of King Ferdinand and Queen Isabella when they crushed Granada, the last Muslim community that was left in Spain in 1492. The cry "Santiago" became a call for the heavenly power to purge the Earth of all non-Christians infidels, no matter if they were Muslims or Jews in Europe, Hindus or natives of the Americas.

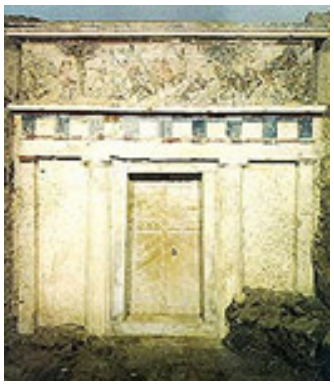
Sambhota and Tibet

Sambhota is the Sanskrit title meaning the good Bhotiya, or Tibetan. The Tibetans call their country Bodi from which is derived Bhota, by which name Indians called Tibet. The inhabitants of Bhota were thus known as Bhotias.

Indian Interest in Astronomy

A passage from the **Aitareya Brahmana**, which dates from about two thousand years before Copernicus and centuries before Hipporchus, illustrates Indian interest in astronomy:



"The sun never sets nor rises; when people think to themselves the sun is setting, he only changes about after reaching the end of the day, and makes night below and day to what is on the other side. Then when people think he rises in the morning, he only shifts himself about after reaching the end of the night, and makes day below and night to what is on the other side. In fact he never does set at all."

(source: **Indian and World Civilization - By D. P. Singhal** Michigan State Univ Pr November 1969 ASIN 0870131435 p. 397). For more refer to chapter on **Hindu Culture I**).

Vedic Macedonia

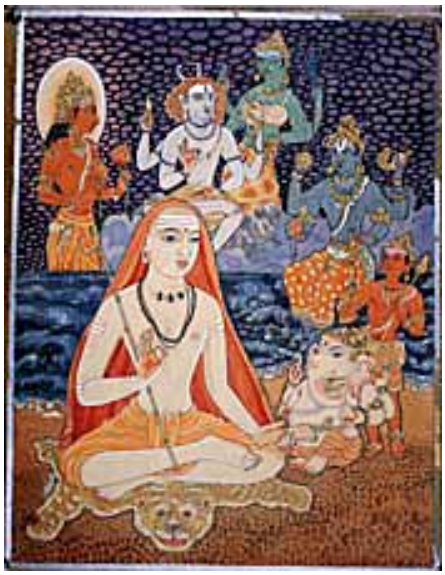
USA, Jan 14 (VNN) — In 1977, a royal tomb was found at Vergina, near Saloniaca, in Macedonia, Greece. All the evidence proves it to be the tomb of King Philip, the father of Alexander the Great. However, Western scholars were puzzled because of the many artifacts, within the tomb of an obvious Indian/Vedic nature. Because of these artifacts, some experts dated the tomb to a time after Alexander's. This theory is no longer being accepted. In Michael Wood's series, In the Footsteps of Alexander the Great, he presents 2 sculpted portraits of Alexander and Philip. Archeologists accept these sculpted portraits of Alexander, as the only ones made during his lifetime.

Philip's portrait is also recognized as being made in his lifetime. Where were these portraits found? They were found in the Macedonian tomb, discovered in 1977, thus confirming that the tomb is definitely from before Alexander's march to Asia.

The question is, **"Why does King Philip's tomb have so many Indian influences? How is it possible if the Greek and Indian cultures had no direct contact until Alexander's Asian campaigns?"**

The answer is simple.

Because Greek culture is an offshoot of Vedic culture, it is only logical that there would be strong Indian influences in Greek art, religion and culture. The tomb of King Philip is also more than proof of Greece's vedic past. It is a smoking gun exposing the extreme prejudice involved in the cover up of the world's ancient Vedic heritage. Though western scholars now admit the tomb to be Philip's, they are mute about the evidences proving Greece's Vedic heritage.Some of the items found in the tomb, include a large ceremonial gold sheild, decorated with Vedic Svastikas, a beautiful frescoe, still in full color, of a lion hunt. Clearly defined, in this frescoe, are boundry markers tied around trees. This is a recognized feature of Indian Royal hunting grounds and yet they are clearly seen in this 2300 year old Macedonian frescoe. A royal diadem was also found of the type worn by Asian Kings and Princes and gold solar emblems remeniscient of the Solar Dynasty (Surya Vamsha) were found in abundance.



How many important finds have gone unrecognized by the mainstream academic community, that has no will nor ability to recognize Vedic artifacts.

India in Greece

Many scholars have asserted that the Greeks borrowed heavily from India. According to Greek tradition, **Thales, Empedocles**, and others traveled to the East to study philosophy. The mystical resemblances and parallels at times are too close and too frequent to be purely coincidental. Features which are attributed to an Indian origin are much in character with Indian thought and alien to Greek attitudes.

Enfield says: "India was visited by Pythagoras, Anaxardes, Pyrrho, and others, who afterwards became eminent philosophers in Greece." There are authorities who suggest that Plato had found his way to the bank of the Ganges. (source:

E. Pococke has asserted that Greek civilization, not accepting its language, is a local variation of an Indian culture taken to Greece by early colonists from India. India in Greece.

(source: **India in Greece - By Edward Pococke** London. 1852)

James Princep author of **Essays on Indian Antiquities**. London, 1858, is recorded to have observed that **"Greek was nothing more than Sanskrit turned topsy-turvy."**

(source: **D.S. Mahalanbois, "A New Light on Plato" Modern Review,** August 1963, p. 142.)

Talking of Plato's mysticism, **Strutfield** says that "India, always the home of mystical devotion, probably contributed the major share."

(source: **Mysticism and Catholicism** p. 74.).

Hopkins says "Plato is full of **Samkhyan** thought worked out by him but taken from Pythagoras. Discussing the historical genesis of Greek antiquity,

J. P. Mayer observes: " Egyptian, Persian and Indian cultural influences were absorbed into the Greek world from very early times." (source: **Political Thought, The European Tradition,** p.7)

Sir William Jones has pointed out, "it is impossible to read Vedanta or the many fine compositions in illustration of it without believing that Pythagoras and Plato derived their sublime theories from the same fountain with the Indian sages."

(source: **Hindu Phenomenon - By Girilal Jain** South Asia Books 1998 ISBN 8174760105 p- 35-36)

H. T. Colebrooke, the great Orientalist, states significantly that "a greater degree of similarity exists between the Indian doctrine and that of the earlier than the late Greeks." He goes on to conclude that Greek philosophy, especially between Pythagoras and Plato, was indebted to Indian thought. (source: Royal Asiatic Transactions. I.)

A contemporary scholar of Western political thought, **John Bowle**, briefly but categorically declares that Plato was influenced by Indian ideals.

(source: **A New Outline of World History**. p. 91).

Western Science and Hinduism

The Western scientific background originates from the pre-Christian Greeks, who like the Hindus were accused of being **pagans**. Christianity had no real philosophy or science or intellectual culture of its own, but in due course of time it adapted the **pagan philosophies of the Greeks**, along with Greek medicine, science and other cultural forms. On the contrary, Indian culture has had its own tradition of rational philosophy much like the Greeks as we can see in the Upanishads, Sankhya, Nyaya Vaiseshika and the Buddhist schools combined with ethical and meditational disciplines." Thus Western science has more in common with the oriental religions and with Hindu and Buddhist than the Judeo-Christian tradition. The basis of Western science is to be found in the free inquiry of the Greeks. The Church has never been on the cutting edge of science -- on the contrary, it has been the one persecuting scientists. The list of those who earned the wrath of the Church reads like a Who's Who of Science: Copernicus, Bruno, Galileo, Descartes, Tycho Brahe, Newton, Halley, Darwin, Hubble, even Bertrand Russell.

Chinese learnt Indian mathematics

How well developed algebra was in India can be easily realized when it is compared with the work of Diophantus, who is looked upon as a fountainhead of Western mathematical thought. According to **Thomas Heath**,

"The Europeans were anticipated by the Hindus in the symbolic form of algebra, and Williams points out that the Chinese were familiar with Indian mathematics, and, in fact, continued to study it long after the period of intellectual intercourse between India and China had ceased."

Cecil Rhodes and World Domination

Is it an honor to hold a Rhodes Scholarship?

What was the intent of Cecil Rhodes? **It is world domination.** His biographer, Sarah Millin, wrote: "The government of the world was Rhodes' simple desire." His own Confession of Faith was written into his first will dated 1877 which states: "I contend that we are the finest race in the world and that the more of the world we inhabit the better it is for the human race." By the way, he was Caucasian. **His plan for world domination was to create: ". . so great a power as to hereafter render wars impossible."** One should note there is a difference between the concept of world peace and the concept of world domination. professor, Carroll Quigley, stated in 1949 - "The [Rhodes] **scholarships** were merely a facade to conceal the secret society, or, more accurately, they were to be one of the instruments by which members of the secret society could carry out Rhodes' purpose."

(source:http://www.rebsutherland.com/TheRhodesScholarship.htm
http://www.fwkc.com/encyclopedia/low/articles/r/r022000724f.html)

Cecil Rhodes dream was to see British possessions running from the Cape to Cairo. Traveling between Britain's Oxford University and the diamond mines of Kimberley, Rhodes gained by the age of thirty both a classics degree and one of the world's largest personal fortunes. Although his imperial ambitions were thwarted - his last words were reported to be : "So little done, so much to do." **"If there be a God," he once said, "I think what he would like me to do is to paint as much Africa British red as possible."**

(source: **Colonial Overlords: Time Frame Ad 1850-1900** - Time-Life Books. The Scramble for Africa ASIN 0809464667 Noon of the Raj. p. 94-96). For more refer to chapter on **European Imperialism**).

Ancient Rome and Indian jewels

Of the jewels, the Romans were specially fond of **beryls and pearls.** The two beryls mines that existed in South India at **Padiyur and Vaniyambadi** were a great source of wealth.

Sacred Thread Ceremony

This introduces the male child to a teacher (guru) in order to receive education, marking the entry of the child into the Brahmacharya Ashrama (period of studentship), the first of the four stages of life. This samskara is performed from the fifth to the eighth year of age, when the male child is invested with a sacred thread (consisting of three strands) to be worn around the neck and waist. The three symbolize the following three debts that the child repays during his adult life: debt to one's parents, debt to one's guru, and debt to God.

The sacred thread is intended to be a constant reminder of one's individual duties and obligations. At the time of marriage and as a part of the wedding ceremony, the bridegroom is invested with three more strands of the sacred thread, which symbolize three more debts that he repays to his spouse. Thus the six-stranded thread around the neck of a Hindu is a reminder of the six debts that he must repay during adulthood.

Yavana - The Greeks

Ancient Indians, it appears originally used the term Yavana for the Ionian-Greeks, but later for all foreigners from the West. Yavanapuri was the Greek city-state.

Mountain Worship

Situated on the borders of Macedon and Thessaly, the 9600 foot high Mount Olympus was as sacred for the Greeks as were the **Himalayas** for the Hindus. The Greeks believed that the summit of Olympus reached the upper air where Zeus had his throne surrounded by the other gods and goddesses of Greek mythology. The Canaanites also chose the mountain Saphon, as the abode of their pantheon, and Mount Sinai as the meeting-place of Moses and Jehovah.

The Art of Spelling

D. Bethune McCartee, a well-known American scholar, writes: "The art of spelling was invented neither by the Chinese or the Japanese. Its introduction into both these countries, (and, as we are convinced, in Corea as well), was the result of the labors of ...the early Buddhist missionaries. **In all the three countries...the system of spelling is most undoubtedly of Sanskrit origin."**

(source: cited in **W. E. Griffin, Corea - The Hermit Nation** p. 338).

Ancient India and Scandinavia?

Indian commerce and culture possibly traveled even further west than Rome to Scandinavia. This possibility is suggested by the second century inscriptions found at Junnar in western India which refer to the benefactions of two Yavanas, Irila and Cita, who have been interpreted as the **amber merchants** of Scandinavia. Kushan coins have been discovered in Gaul and Scandinavia. The excavations carried out in the mid-nineteen fifties on a small island called Lillion, or Helgo, in Lake Malaren, about 20 miles west of Stockholm, uncovered many foreign objects, including an exquisite bronze statue of the Buddha seated on a lotus throne.

Fairy-lore of India

Theodore Gomprez says:

"Practically the entire fairy-lore of the Occident is derived from India. No one disputes this assertion today, but no one as yet can give a completely clear account of the ways and means by which its journey was accomplished." (source: **Great Thinkers**, Volumes I-II translated by Laurie Magnus, Vol. IV, by G.G. Berry. London: 1901-1912 p. 95).

"It may also be a complete revelation to find that the fabulous Hindu mind is responsible for the genre of animal fables and many stories of the Arabian Nights type, in which Buddhist and non-Buddhist literature abounds."

(source: **The Wisdom of China and India - By Lin Yutang** p. 6).

H. G. Rawlinson writes: " Numerous European fairy stories, to be found in Grimm or Hans Andersen, including the magic mirror, the seven-leagued boots, Jack and the beanstalk, and the purse of Fortunatus, have been traced to Indian sources." In his article, "**India in European Literature and Thought**" in **The Legacy of India,** " Many of them are to be found in the Gesta Romanorum, the Decameron, and the Merchant of Venice, is found in the romance of Barlaam and Josaphat, which is too clearly the story of Buddha, who was changed into a Christian garb, and later canonized as a Christian saint as St. Josephat! And everyone of course knows the story of the Milkmaid who dreamt of her wedding and overthrew the milk pail, now to be recognized in its original form as the story of the Brahmin's Dream, included in the selections from the **Panchatantra**."

(source: **The Wisdom of China and India - By Lin Yutang** p. 6-7)

India has produced a vast, rich imaginative literature and philosophy, and that Indian culture is highly creative and in fact has enriched the world literature with the droll humor that we associate with the Arabian Nights.

Christ spend his youth in India?

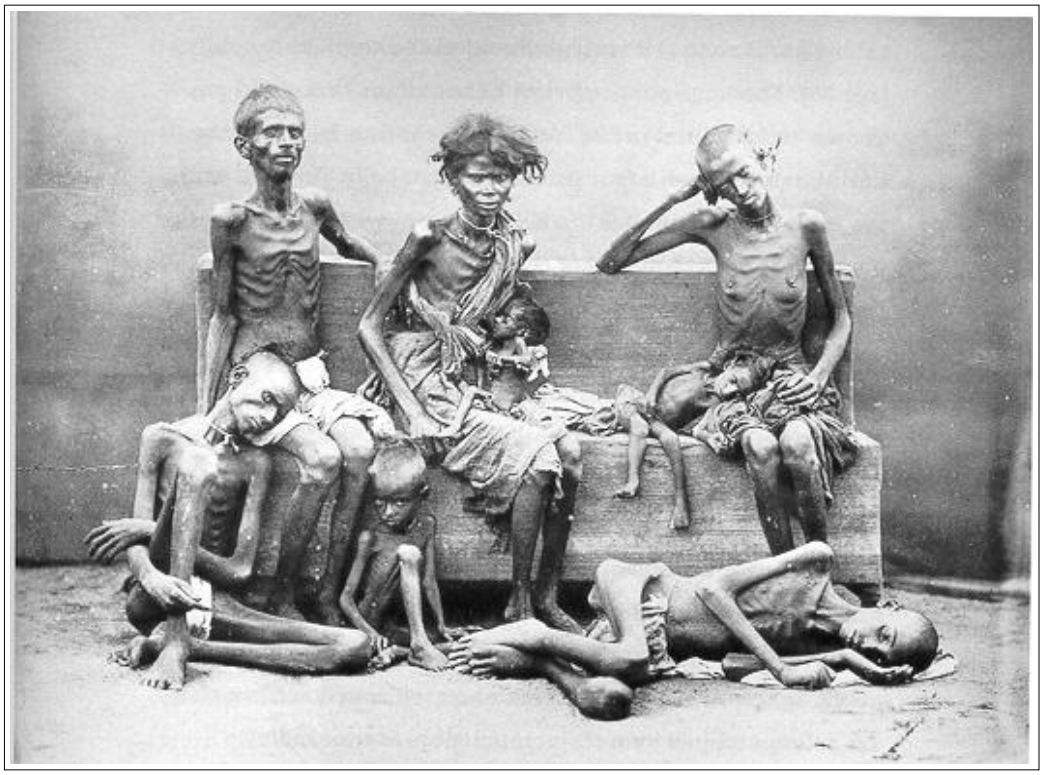
The celebration of the birthday of Christ might lose a little sheen if we seriously pursue the question, where did Jesus spend 18 years of his life, between the ages of 12 and 30? Both history and gospels, are completely silent about the life of Jesus before his 30th year.

A Chilean diplomat **Miguel Serrano** in his book, **The Serpent of Paradise: The Story of an Indian Pilgrimage** (1963) has written of his rich and varied experiences among yogis and sadhus of India. He was looking for great mystics who he believed were living in the Himalayas guarding a magical science.

During his sojourn in Kashmir, Serrano came across evidence to suggest that Jesus Christ had come to India and that the tomb of Yousa-Asaf in Srinagar was in fact the tomb of Jesus.

He quotes a legend, according to which he was in Kashmir, the original name for Kashmir, Ka means "the same as" or "equal to" and shir means Syria. Manuscripts in the Sharda language, which is derived from Sanskrit, seem to bear close relationship to the biblical story. According to this Kashmir legend, Jesus came to Kashmir and studied under holy men, who taught him mysterious practices. Later the legend says, Jesus returned to the Middle East and he then began to preach among the ignorant masses of Israel the mystical truths he had learned in Kashmir. To impress and to convert them he often used

the powers he had acquired through the practices of Yoga, and these were then referred to as miracles. Then in due course Jesus was crucified, but he did not die on the cross. Instead, he was removed by some Essenes brothers, restored to good health and sent back to Kashmir, where he lived with his masters until his death. There is yet another theory, which holds that the Jewish race originated in India centuries ago and some of them came back almost by instinct in search of their roots. This theory ties in with the legend of Jesus Christ also came to live in India at the age of about 13. This legend asserts Jesus spent 17 years in India, finally returning to the country of his birth to preach the doctrine of salvation and to assert that he was the Son of God.



(source: **India Post - By Vinod Dhawan**. vol. 6 December 29, 2000. p. 44). For more refer to **Did Jesus die in Kashmir - by Abu Abraham**). For more refer to chapter on **Hinduisms Influence**).

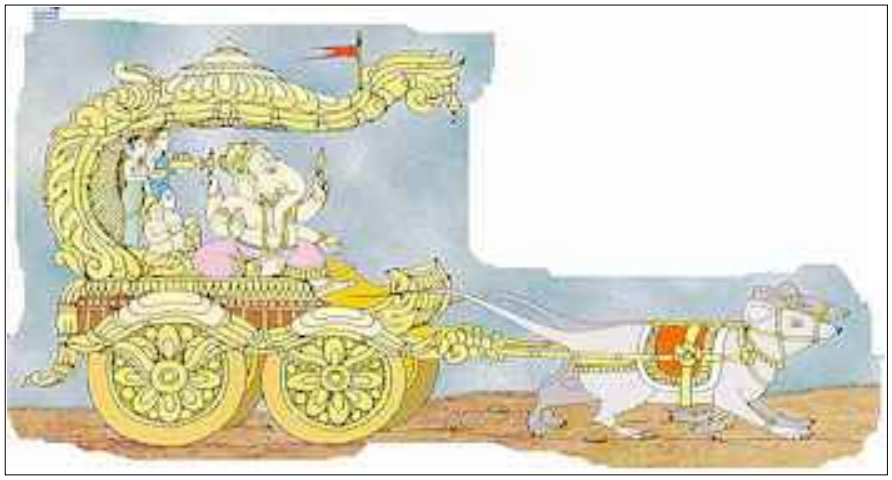
Lord Krishna's stamp in Japan

Did you know that just a couple of years ago **Japan issued a stamp showing Lord Krishna playing the flute,** yet curiously enough, secular India has not issued a stamp for Lord Krishna on Krishna Ashtami?

British "magnanimity" in India?

Madras Famine 1877-1878
Willoughby Hooper - Album print private collection.
(source: Indian Art - By Vidya Dehejia p. 399-402).

In the 18th and 19th centuries the synthetic dye had not been discovered, so all **blue dye** was derived from a certain crop which grew only in Bengal. However, this crop took out all the nitrogen from the ground, so that for the next two years nothing else could be grown. The British forced the farmers in Bengal to cultivate this.



After a year, **famine struck,** because there was no rice, all the fields had been turned to Neel cultivation. The farmers revolted, and thousands were killed ruthlessly. This went on for decades, so that no village had any rice or money. By the way, the farmers were not paid for the Neel. That was the start of the great Bengal Famine, in which millions died. But the British only cared for the Neel. Actually, this was the first time common people rose in revolt against the British. This torture ended only after synthetic dye was discovered around the middle or early 19th century.

Did you know that British India used to have signs saying: "Dogs and Indians not allowed" in public places? and Mahatma Gandhi was thrown out of a train in South Africa for traveling in the first class?

(For more refer to chapter on **European Imperialism**).

When Gods Make Their Move

Each Hindu God and Goddess has a chosen mount, called Vahana, on which He or She traverses, the universe. Lord Ganesha's mount is Mushika, a tiny mouse or shrew. He attests to the all-pervasiveness of the Elephant God and carries Ganesha's grace into every nook and cranny.

(source: **Hinduism Today**).

Faith makes India go around

Hindu shrines abound with legends of gods drinking milk, stories and mysteries. Here a few instances where faith has beaten science!

A stone **Nandi** (bull) in the famous **Tanjavur Pratheeshwara** temple in Tamil Nadu, is said to be growing bigger. In an effort to stop the Nandi from growing any further, the temple authorities tried hammering a nail into the Nandi's head. The idol is more than six feet high now.

In Thane district of Maharashtra, there is a temple devoted to **Kopineshwar (Shiva)**. The temple is around 150 years old. The Shiva

linga is believed to be growing. The Nandi that is traditionally placed in front of the Shiva Linga is also said to be moving towards it. It is believed that when the Linga touches the roof and the Nandi reaches the Linga, it will be the end of the 'Kaliyuga'.

In **Chuntporni-Jwalaji** in Himachal Pradesh there is a **'kundh',** which looks as if it is boiling, the priests and the locals even cook rice and kheer in the hot water. But when someone touches the water, it is found to be cold.

A **well near the seashore in Tiruchendur** has water, which is very sweet. According to a story, **Lord Karthikeya** threw his staff near the seashore to quench the thirst of his soldiers while in war with the asuras. These legends are unending. People have tried and failed to come up with logical conclusions to such wonders.

A neem tree in **Shirdi** under which **Sai Baba** used to sit, bears leaves that are sweet. Even the bark of the tree is supposedly sweet. It is believed that anybody who tastes even a small part of the tree is cured of all ailments or is cleansed of all sins.

Mass reconversions of Tribals

Thousands of Christian tribals reverted to their “natural” state of Hinduism in Chhattisgarh.

Most of the tribals said they were “disillusioned” with Christianity. “Mine was a Hindu family. But some 20 years ago the preachers came. They spoke of Christ and equality amongst all. They said they would educate us, feed us, clothe us and that no was would be any higher than the other,” said 50-year-old Manjuram of village Jamdohri. “Food flowed into our home like we had never ever dreamt before. In return we had only to visit Church every Sunday. My whole family converted. **But immediately after the conversion, the supplies stopped.** The priests diverted their attention from us to our neighbors,” Manjuram added.

“You regret that for a few freebies you gave up the religion, your God, the belief that our forefathers nurtured for centuries. Birsa Munda was one amongst us. He fought the British for the country. And I gave up my religion for a few kilos of rice. It’s like you have betrayed your ancestors, your own blood,” said Gandhi Bara of village Katkalu.

“So when the offer came from Kumarji (Judeo), I readily agreed,” he added. “I have returned to my roots now. I will paint my house white today. Kumarji has said he will supply the whitewash,” he added, explaining that in this belt a Christian house is painted with black charcoal and a Hindu house is painted white or blue.

Churchill hated Gandhi

New light has been shed on Churchill's racist arrogance by the recent release of certain British Intelligence records relating to the period. Some of the records made available have been used by British journalist turned historian **Patrick French,** extracts from whose readable book *Liberty or Death* have been published by newsmagazine **Outlook** in its August 25, 1997 cover story. Patrick writes of Churchill:

"His understanding of the country's social and religious structures was superficial. He had a broad, emotional Edwardian belief in the racial superiority of the pinkish-grey races and the need to maintain the British Empire". It was once suggested to him that he should meet "some prominent political activists who were then in London". Churchill's reply: **"I am quite satisfied with my views on India. I don't want them disturbed by any bloody Indian".**

Churchill blatantly employed racist arrogance, bluff, and the myth of British superiority, to stall Indian independence. To him, India only stood for the basis of British imperial power. He was hypocrite enough to stall Indian independence at a time when **his own agents in India were busily recruiting Indians for the armed forces. His hypocrisy allowed him to do all this despite the magnificent contribution of the Indian armed forces to the war effort, on several fronts. From a mere 350,000 at the outbreak of World War 2 in 1939, the number rose to well over 2,000,000 "bloody Indians".**

The orthodox Winston Churchill sneering at the **'naked fakir'** (Gandhi) and refusing to preside over the liquidation of the Empire. **He did not favor termination of India's colonial status. He refused to meet Gandhi when he was in London.**

Churchill's opinion of **Mahatma Gandhi** in 1930:

"It is alarming and also nauseating to see Mr. Gandhi, a seditious Middle Temple lawyer, now posing as a fakir of a type well known in the East, striding half-naked up the steps of the vice regal palace, while he is still organizing and conducting a defiant campaign of civil disobedience, to parley on equal terms with the representative of the King-Emperor."

(source: http://www.kamat.com/mmgandhi/churchill.htm).

***

Winston Churchill's scornful view of India and her religion: **"I hate Indians (read Hindus). They are beastly people with a beastly religion."**

Hinduism lies beyond History

Hinduism also lies beyond history. Other faiths, excluding some tribal and pagan paths, are rooted in events. They began on such and such a day, born with the birth of a prophet or the pronouncements of a founder. Thus they are defined, circumscribed, by history. Not Hinduism. She has no founder, no birthday to celebrate. Like Truth, she is eternal and unhistorical. Even if we compel Hinduism to admit of some immanence in history, she merely smiles and brushes aside the few thousand years that most of humanity takes as the crucial narrative. To the Hindu those few years are a pittance, and they too perish. While all known human history lies within a few hundred millennia, **Hinduism speaks of unspeakably vast epochs, of earthly yugas that last millions of years, of days and nights of Brahma that span billions, of a universe that lives and dies and lives again. Such is India's expansive reading of history. "**

(source: **Hinduism Today - December 1994** issue).

Charm of Indian Women

Author, **Elizabeth Cooper** (1915), admires the Indian woman for her innate sense of modesty, her womanliness, her love of home and children and her feminine qualities which to the Western mind may appear as a weakness, but, in fact, constitute her appealing charm. She emphasizes that "if the Western woman offers her gifts of modern education and intellectual advancement, her Eastern sister will not be her debtor if she, by example, presents in return the even more precious charms of obedience, modesty and loyalty which fundamentally are the priceless jewels in the Crown of world's womanhood".

(source: **Indian Perspective September' 98** issue).

India's Indigenous Systems of Medicine and Medicinal Plants

The medicinal plant Rauvolfia Serpentina, was pronounced **"Wonder drug of India"** all over the world in 1949 when the *British Heart Journal* reported that the plant is "Clinically effective in treating high blood pressure". This was reconfirmed few years later, when a Swiss researcher isolated reserpine from the plant root and established it as an antihypertensive and sedative. **In India, the plant was being used for more than 2000 years as antidepressant, sedative and in curing mental illness!** This is just one example. In Indian indigenous systems of medicine - Ayurveda, *Unani-tibbia, Siddha* and tribal remedies - more than 2500 medicinal plants are being used. In India, use of medicinal plants is referred to even in the earliest literature, *Rig Veda*. Ancient Ayurveda has elaborate description of the properties of various medicines; *Susruta Samhita* has comprehensive description of therapeutics and *Charaka Samhita* contains an unbelievable and

extensive Materia Medica of India. Indian medicines are mostly vegetatitve and are cheap, hardly harmful and are of minimum side-effects in comparison with allopathic medicines.

There is little question that centuries of colonization takes a toll, its tragic toll on a country's people, religions and languages, but one of the most lasting effects is the attack on its original healing arts. Both Muslim invasions in the 11th and 12th Centuries and later British colonization imposed their own medical beliefs to the point where both Indian folk medicine and Ayurvedic medicine were suppressed.

The **British Medical Journal** from the 1920s labeled the oldest healing system in the world as "unsupported metaphysical dogma". But despite being marginalised for decades, Ayurvedic medicine is the final victor. **It is unfortunate that during the British Raj, the Indian indigenous systems of medicine took a back seat. Derogatory terms like 'bazar (market) medicines' were used for Indian medicines.** The focus was shifted to allopathy - in learning, research, practice and promotion. The Indian systems were virtually looked down upon. But despite being marginalised for decades, Ayurvedic medicine is the final victor. Today, there is a global resurgence of interest in natural healing methods, and Ayurvedic medicine tops the list in terms of the West's latest "alternative" health fascination. Presently, the western world has woken up to the magic of Indian medicinal plants. India is a treasure house of medicinal plants due to the presence of bio-geographical regions varying from alpine, tropical to coastal, and thus is a leading exporter of medicinal plants and herbal formulations to Germany, U.K., France, Switzerland, U.S.A. and Japan, besides many other countries.

"Ayurveda is the best system of medicine for treating chronic conditions like bronchial asthma and diabetes and now many Russians are realising it," said Svetlana A. Mayskaya, president of the Medical Centre NAAMI-AYU, a Moscow-based nodal health agency. The radiation survivors, 50 men and 40 women, were treated at the Moscow centre by four Indian vaids from the Arya Vaidyashala in Kottakal, Kerala."

Columbus "Discovery" or American Indian Holocaust

1492 - Began the process of genocide of Native Americans. "The only good Indian is a dead Indian".

Today, in spite of 500 years of a genocidal colonization, there is an estimated 40 million Indigenous peoples in the Americas. In Guatemala, the Mayan peoples make up 60.3 percent of the population, and in Bolivia Indians comprise over 70 percent of the total population. Despite this, these Indigenous peoples lack any control over their own lands and comprise the most exploited and oppressed layers of the population; characteristics that are found also in other Indigenous populations in the settler states of the Americas. The "greatness" of European religions and cultures was brought to the Indigenous peoples, who in return shared the lands and after "accidentally" being introduced to European disease, simply died off and whose descendants now fill the urban ghettos as alcoholics and welfare recipients. Of course, a few "remnants" of Indian cultures was retained, and there are even a few "professional" Indian politicians running around.

Maha-Kumbh Mela - 2001

Bathing is a great blessing.

American author **Mark Twain,** who visited the Kumbh festival in the 1890s, wrote in a memoir: **"It is wonderful. The power of faith like that can make multitudes of the old and the weak and the young and the frail to enter without hesitation or complaint."**

BELIEVED to be the most ancient and the biggest holy congregation of humanity in the world, the Kumbh Mela in North India (held once in 12 years) is the greatest bathing festival. It is one of its kind with the world's huge assembly of people, symbolising India's unity. The Kumbh is held at the confluence of the Ganges and Yamuna rivers, and Hindu scriptures say this is one of four places on which the Gods spilt a drop of the elixir of immortality.

The timing of the pilgrimage, whose origins have been dated back to the Neolithic period, is dictated by planetary alignment. This year's event has special significance, with an alignment of planets that will not be repeated for another 144 years.

Some trace the origin of the Kumbha Mela to the Vedic age. Various legends are also part of its history.

According to story when the devas and the asuras churned the ocean, Dhanvantari (the divine leader) emerged holding in his hands an amrita Kumbha a pot of nectar that makes one immortal. For 12 days, a great struggle ensued between the devas and the asuras for the possession of the pot. The devas were alarmed at the prospects of the asuras attaining immortality by drinking the elixir. Ultimately, the devas succeeded. In the meantime, Jayanta (son of Indra, ruler of the heavens) managed to carry it away to the abode of mortals. Guru (Jupiter), Chandra (Moon) and Surya (Sun) were with him. On his way to the heavens, he had to fight with the asuras and kept the Kumbha at four places - Prayag (Allahabad), Hardwar, Nasik and Ujjain. The journey to heaven with the Amrita Kumbha took 12 days equivalent to 12 earthly years. That is why the (Poorna) Kumbha Mela is held in these four places once in every 12 years. Thus these four places became sacred and the devout came to believe that a dip in the waters earned them salvation.

The Maha Kumbh Mela, or Grand Pitcher Festival, takes place every 12 years and sees millions of devotees bathe in the Ganges **to purify themselves.** Kumbh Mela is certainly very ancient.

Jawaharlal Nehru has written in **The Discovery of India**, in my own city of Allahabad or Hardwar, I would go to the great bathing festivals, the Kumbh Mela, and see hundreds of thousands of people as their forebears had come for thousands of years from all over India, to bathe in the Ganges. I would remember descriptions of these festivals written thirteen hundred years ago by Chinese pilgrims and others and even then these melas'' were ancient and lost in an unknown antiquity. What was the tremendous faith, I wondered, what has drawn our people for so many generations to this famous river of India''.

Visiting the Kumbh Mela in 1954, Nehru confessed to having been fascinated by the sheer spectacle of a Maha Kumbh. He told the House: ``I was there in mela itself on the occasion and I can never forget that tremendous concourse of humanity, consisting of possibly 40 lakhs of people, on either side of the river. I have never seen anything like it in my life before either at the Kumbh Mela or in any other function in this country or anywhere else.''

Princes and peasants, seekers and scholars, mendicants and merchants, artist and artisans from all over India and abroad flock to Hardwar. The whole of India is represented here. Kumba Mela has also some scientific importance from the astronomical point of view. The Sun, Moon and Jupiter alfair a particular position every three years, when the Mela is held at Hardwar, Prayag, Ujjain and Nasik

At the recent Maha Kumbh Mela (the grand urn bathing festival), the six-week-long, the first in the new millennium began on Tuesday and about 70 million people are expected to participate over a 42-day period The Beatles' interest in yesteryears in Indian spirituality certainly had raised the the first crop of devotees. Demi Moore, Pierce Brosnan, Madonna, Sharon Stone and Richard Gere promise to make a splash. And Beatles' legend Paul McCartney as well, in addition to lesser known western devotees.

According to BBC, many foreign tourists mingled with the crowds and several more are expected. "It's the sheer scale of the whole thing that is so mind-boggling. **It's extraordinary to witness this sort of mass spiritual communion between so many people and the river,"** Briton Ross Anthony said.

It is the greatest show on earth," ? ``It is spiritual entertainment," explained an overseas broadcaster. ``You don't have to belong to any particular religion to watch Kumbh. The varied images from Kumbh attracts everyone from Boston to Benaras." -- the biggest spiritual event in the globe.

YOG MATA Keiko Aikawa emerged from her "samadhi" this afternoon, after spending three days buried in a mud pit. Amidst media frenzy, crashing barricades and chants of Om namah Shiva the Japanese Yog Mata emerged calmly from her pit and told her audience that she attained "samadhi" for world peace and goodwill of everyone.

(source: **Hindustan Times http://www.hindustantimes.com/nonfram/240101/detnat03.asp**)

"This is an experience I am going to tell my grandchildren about," said John Arnett, a schoolteacher from Cleveland, USA. Jim Clarke of Los Angeles first heard about the Kumbh six

months ago in Malaysia, where he teaches English. "I had been a hippie for a long time, but nothing could give me peace of mind, until I witnessed the Mahakumbh," he said, using the Hindi words that mean "Great Kumbh," as the gathering is also called. "Now, I am planning to settle in India to feed my hunger for peace and spiritualism," Clarke said.

Bishambhar Bhushan, poor and blind, traveled two days in a cramped train from his village of Dhanvani in central Madhya Pradesh state. Bhushan, 80, scooped up the cold river with his hands, and offered it to the heavens in a centuries-old gesture. **"I told Mother Ganga, take me across life, mother," he said, his eyelids twitching with excitement. "My life's ambition is fulfilled."**

Munenori Ikegami of Japan and the Kumbh Mela

Munenori Ikegami, saw a film on Kumbh four months back and tried to persuade the TV company where he was a cameraman to make a documentary on it. But his bosses were not impressed. He quit his job, packed his bags and came here for the Maha Kumbh. Munenori Ikegami of Japan does not regret his decision because the Kumbh mela is "huge...so vast, so big". "I've never seen such a big festival. Japan's biggest festival is Gion Maturi... Maturi means mela or festival. It is held in June-July in the old city of Kyoto, which is today Tokyo".

Asked if Gion Maturi is as big as the Kumbh, he shakes his head, "Oh, no. No way. I've been to the Millennium Festival in South Africa. The Aborigine Fest in Australia, on around this time, too is neither as big as this."So what is his plan after the fest? "I don't know, I lost my job. I'll have to get a job now. Then perhaps I'll make some money, plan making a film on Kumbh and come back for the next Maha Kumbh 12 years from now." That the next Maha Kumbh mela is so far away does not seem not to dissuade him. (PTI).

Evangelist zeal in India

Reinhard Bonnke, widely regarded as the world's foremost evangelist, has spoken openly about his mission. At a press conference in Kochi (Kerala), Bonnke boasted that in the twenty years that he was active in Africa, the Christian population rose from just 2 per cent to over 40 per cent. (This refers probably to the areas in which he was active, and not all of Africa.) He further stated: "Now India is on top of my agenda."

Yoga and Patanjali

Yoga is from the Sanskrit word 'Yug' meaning union {with the Divine}.
Yoga is a path that leads to liberation and union with God.

The word Yoga, literally meaning “yoke”, is issued to mean a system of spiritual practice of any kind, so it is possible to talk about Buddhist, Hindu or Jain yoga.
Secondly, Yoga is the name given to a particular, very ancient school of Hindu thought and practice, possibly dating back to the Vedas themselves.

It was most famously set out by the philosopher Patanjali.

Patanjali set forth an “eight-limbed” system of mystical training, intended to free the mind from the senses completely.

Patañjali

The eight limbs of Patanjali’s yoga include Dhyanayoga, which focuses on meditation. Rajayoga, which is concerned with contemplation of Brahman; and Hathayoga, which uses physical postures (called asanas) to unite the body with the mind and advance spiritual progress. Hathayoga, particularly, has become popular among Westerners, few of whom have become Hindu or Buddhist.

For more on yoga refer to chapter on **Yoga and Hindu Philosophy**.

Vikramshila: the World's largest ancient varsity

Is the world's largest ancient centre of learning, Vikramshila university, 47 km east of Bhagalpur in Bihar. King Dharmpala of the Pala dynasty, who ruled between 783 and 820 AD, founded Vikramshila university.

It used to hold open convocations, in which degrees were conferred on the students by the King himself. In size and sprawl, Vikramshila relegates the celebrated Nalanda University, one of the oldest universities of the world, to second place. **Hiuen Tsang,** a Chinese pilgrim who visited Nalanda in the first half of the 7th century, has mentioned about it in his travelogue.

Nalanda is spread over 80 acres, while the ninth century Vikramshila covers an area of 110 acres. It has 208 monasteries, each measuring 4.15 square metres. Besides, twelve underground cells with brick arches used for meditation, have also been found.
Since it's located at the bank of the Ganga, Vikramshila has a very good underground drainage system. Recently, a well was also excavated by the archaeologists of the Patna circle.

Ancient Fragrances

Distillation of scents, perfumes, fragrant liquids and ointments in India is 2,000-2,500 years ago show that the knowledge of chemistry was applied in ancient times. Perfumes and ointments were of two types: tirtha (liquids) and gandha (sluries of ointments).
People were sprinkled with aromatic oils on auspicious occasions, and fragrant ointments
based on sandalwood (native to India) were applied during ceremonial bathing.
Other common scents were derived from musk, jasmine, tamarind, camphor, spikenard, costus and macir. (Most of these words have their origin in Sanskrit)
Perfumes were exported widely, as recorded in 1st century CE travelogue by a Greek merchant.

Saying Grace before meals - is the most beautiful invocation according to **Joseph Campbell**:

"Brahman is the cosmic, universal, life consciousness energy of which we are all manifestations. Brahman is the the sacrifice. Brahman is the food that we are eating. Brahman is the consumer of the sacrifice. Brahman is the ladle that carries the sacrifice to the fire. Brahman is the process of the sacrifice. He who recognizes that all things are Brahman is on the way to realizing Brahman in himself."

The meaning of grace is that taking food into your system is like putting a libation into a sacrificial fire; the fire of your digestive apparatus consumes what you eat, so eating is the counterpart of a sacrifice.

Akbar, (1542-1605 A. D) the epitome of secularism?

'Akbar like all Mughal rulers had the holy Muslim title of GHAZI (Slayer of Kaffir - infidel). Like Timur Lane and Nader Shah, Akbar had a victory tower erected with the heads of the captured/surrendered army of Hemu after the second battle of Panipat. Later, Akbar again slaughtered more than 30,000 unarmed captive Hindu peasants after the fall of Chitod on February 24, 1568.

(source: **http://www.hindunet.org/hindu_history/modern/akbar_vs.htm** and The Cambridge History of India, Encyclopedia Britannica and other works based on **Akbar-nama by Abul Fazl**.

Life in the Moghul Zenana

Akbar, who cemented his political alliances by marrying women from the territories he conquered, is estimated to have had some 300 wives and to support a harem of 5,000 people. Women of the court lived apart from the public area of the palace compound. They dwell in lavishly decorated high-walled buildings enclosing pools and gardens and containing apartments for each of the noblewomen. Soldiers stood guard outside while armed females inside protected the women from intruders.

(source: **What Life Was Like in the Jewel of the Crown: British India AD 1600-1905 - By The Editors of Time-Life Books**. p. 20).

Akbar and the Sciences

The Moghuls neglected practical and secular learning, especially the sciences. **Throughout their long rule, no institutions was established comparable to modern university, although early India had world-famous centers of learning such as Taxila, Nalanda and Kanchi.** Neither the nobles nor the mullas were stirred into learning. **Nor did Akbar show any curiosity in European science and philosophy, although both Hindus and Muslims had made notable scientific contributions in the past. Akbar** was presented with printed books and a printing press, yet even the Indian classics were first printed by Europeans. It is therefore, not surprising that during the period of European struggle for power, India was in a state of unparalleled decline. Yet Akbar is considered great!

(source: **Indian and World Civilization - By D. P. Singhal** Michigan State Univ Pr November 1969 ASIN 0870131435 p 198).

8,000 women immolated themselves during Akbar's capture of Chittorgarh in 1568 (whereas this most enlightened among Muslim rulers also killed 30,000 non-combatants).

(source: **The Saffron Swastika - By Koenraad Elst** Voice of India ISBN 8185990697 p. 824-826).

Akbar re-christened Hindu holy cities (Prayag being the most notable), imposed the jaziya and pilgrimage tax, and even indulged in forcible conversions in the early part of his reign. Though he ultimately did seek a more neutral legitimation, at least by way of supplement, the state under him remained unmistakably Muslim. 70% of his nobility consisted of foreigner-Muslims. The Hindu representation was confined to the Rajputs, there being just four other Hindus in the upper echelons of the nobility. These were Birbal, Todar Mal, his son, and another Khatri.

Ahmedabad May have Name Change
Source: Madhya Pradesh Chronicle

AHMEDABAD, GUJARAT, January 8, 2001: Other major cities have reverted to their pre-colonial names, Bombay to Mumbai and Madras to Chennai. Now major Hindu organizations in Gujarat's city of Ahmedabad are pushing for a name change from Ahmedabad to Karnavati. **Karna Deva** was the name of a Hindu sovereign that defeated a tribal ruler in the 11th century and the city became known as **Karnavati**. Subsequently in the 1400's, a **Moslem** ruler named **Ahmed Shah** conquered the territory and the city was named after him.

Sudra priests of Lingaraja Temple

The Lingaraja temple in Bhubaneswar, built in the eleventh century, has two classes of priests: Brahmins and a class called **Badus, who are ranked as Sudras** and are said to be of tribal origin. Not only are Badus priests of this important temple; they also remain in the most intimate contact with the deity whose personal attendants they are. Only they are allowed to bathe the Lingaraja and adorn him and at festival time when the god, "represented by his *calanti pratima* (original symbols for the diety), leaves the temple only Badus may carry this movable image. Without them, it is said, the god 'cannot move one step..."

Ikonos satellite takes shots of Kumbh Mela

Space Imaging's Ikonos satellite has taken a detailed color photograph of the **largest human gathering in the world history at the Maha Kumbh mela,** the US company has announced.

The Ikonos image was collected the day before the most sacred and busiest bathing day on January 24, according to a Press release. The one-metre resolution image of the Maha Kumbh mela was collected by space imaging's Ikonos satellite, which travels four miles per-second in an orbit 423 miles above earth. The spectacular image is the first high-resolution satellite image ever taken of such an event. The image shows the sacred site at the confluence of the Ganges, Yamuna and Saraswati rivers, where millions of Hindu worshippers bath to wash away their sins and hasten the progress toward Nirvana, the company said in a Press release.

Indonesia banks on Lord Ganesha (see image on the left of rupiah)

Indonesia has the largest Muslim population in the world - but also has many Hindus - and saw fit to include our Lord Ganesha on its new 20,000 rupiah note.

Dalai Lama condemns religious conversions

The Dalai Lama has joined **Hindu leaders** in condemning the Muslim and Christian practice of conversion, stepping into one of the hottest religious controversies in South Asia. "I always believe it's safer and better and reasonable to keep one's own tradition or belief," the Dalai Lama told reporters during a break in the meetings. "To change it is not proper, it's much safer to follow one's own religion."

Secular Indians and their irrationality regarding Hindu organizations

Secular, progressive, cosmopolitan people have a problem with whatever the RSS says. Why? Now when the Gujarat earthquake, swayam sevaks are showing their real spirit and true nature? If Christian missionaries aided by the government and foreign funds do the same job, you will commend it. But why question this organization which is trying to do a humanitarian task? Because it is a Hindu organization? Does secular mean anti-Hindu in India? **Or is it that you convent-educated people feel that social work should be the sole prerogative of Christian missionaries which produce people attached more to the Vatican and the Pope, than to their country?**

(source: http://www.thenewspapertoday.com/mail/)

Sun as the symbol of Ultimate Power

The Sun has been regarded as the symbol of Ultimate Power, Energy and Splendor and hence became a primordial deity. In India, the most famous Sun temple was built at **Konark in Orissa.** In ancient Egypt too, the temple of **Sun god Ra was built at Karnak,** and coincidentally both sites with strikingly similar names, lie on the same latitude i.e. 20 degrees N. This is not a stray coincidence as there are many other such parallels.
The Ajanta, Ellora and Elephanta caves, the combined work of Hindu, Buddhist and Shaivite artisans, lie on the same parallel, 25 degrees N, as the ancient ruins of Yemenese Sun worshippers, Sudanese Nubin kingdom, and the **Aztec sites of Central America.**

Ishta Devata - One Personal God

There is only One. It was the poetic fancy of our imaginative ancestors that created many aspects to Divinity. Plus, we are permitted to pray to God as an ishta devata, or personal deity.

The idol, again, is only a representative object. It is a thing of beauty, created with reverence, before which to park the real focus point of worship: the flame. The flame represents Truth, burning away all ego, deceit and illusion, it stands for the pure energy or life force (heat) that keeps us and our world alive.

Lets turn to **Yajnavalkya,** rishis and lawgiver,

In the section called the **Ninth Brahmana**, a hapless soul called **Vidaghda Shakalya** asks, ‘‘How many gods are there, Yajnavalkya?’’ ‘‘As mentioned in the hymn of praise to the Vishve-devas, 303, and 3,003.’’ ‘‘Yes, but how many gods are there, Yajnavalkya?’’ ‘‘Thirty three.’’

‘‘Yes, but how many gods are there, Yajnavalkya?’’ ‘‘Yes, but how many gods are there, Yajnavalkya?’’

‘‘Three.’’ And so on, down to One.

In other words, the Creator is the One who gives and sustains life in all its forms and functions, the One God who has different names and attributes because of the many jobs that must be done to keep Creation ticking!

Grandfather Frost is a Vedic God?
http://www.indian-express.com/ie/daily/20010101/iin01058.html

MOSCOW, DECEMBER 30: A Russian scholar says red Russia's fairy tale Grandfather Frost, or Ded Moroz, is none other than **Varuna, the god of seas in Hindu stories.** In the year 2003, which marks the beginning of the astrological age ofAquarius, Grandfather Frost is expected to shed his dear-old-man mask and allow the people of the world to see him as he truly is Varuna, the supremeVedic god of water. Varuna was both the source of life and death, and was described in Vedic writings as holding the tree of life, an image reminiscent of Grandfather Frost standing next to a Christmas tree, says the ethnologist.

Ban on Bangles and Bindis

Hindu girls are forced to tuck their bangles and bindis into their school satchels before entering the premises of St. Mary's Convent to attend school. Individuals have protested against the ban, including the mother of a young girl who said her daughter was beaten for wearing the traditional Hindu women's attire to school. The state chief of one Hindu group, Subash Chouban, has called the prohibition, **"An act against Hinduism."** However, no action has been taken against the school about the allegations as many individuals fear their children's expulsion from the well-respected convent that has a good educational record. Also school management will not bend long enforced rules.

The Search for the River Saraswati

NEW DELHI, INDIA, November 13, 2000: Establishing the location of the Saraswati River alluded to in ancient Indian religious literature would authenticate its existence as a mighty Himalayan river. Over 160 Indus sites were nurtured by the Saraswati, far from the Indus River Valley. Now satellite photos and ground studies of clay, silt, sand and gravel deposits establish the course of the river from the Himalayan foothills to the Sind gulf. **This enormous river, over five miles across from shore to shore, changed its course four times always in a westerly direction.** Initially flowing from the Himalayas in a south-west direction about 4000 bce, the Saraswati disappeared sometime between 2000 bce and 1500 bce With the disappearance of the Saraswati River and the migration it caused, the Ganges and Indus River populations became the central focus towards the end of the early Vedic period.

Demise of Tulsi Plant Critical to Science and Religion

PATNA, INDIA: **Lord Vishnu's** beloved is now down to the path of obscurity. Falling victim to neglect and the coming up of concrete jungles all around the city, the plant species with the richest cultural heritage is vanishing from sight. Tulsi, the plant which once enjoyed a high position in the flora of Bihar now finds it hard to survive in the present socio-climatic condition of the state. Noted environmentalist Dr. R.N. Trivedi found only three species of this medicinal plant in Patna. Tulsi, meaning "matchless," earned the status of a living deity in Hindu pantheon and is considered a symbol of good luck. Researchers are of the opinion that the adoption of ornamental plants in kitchen gardens coupled with the decline in the **Ayurvedic system of medicine** as well as the lack of awareness in the preservation of flora resulted in the extinction of many species. The rise in the mosquito menace is also directly related to the loss of tulsi plants as it has been scientifically proven that tulsi has repellent properties. The departure of the Deity's form spells an irreparable loss in terms of science and religious heritage.

(source: **Hindustan Times,** November 23, 2000).

Insult to Hindu religious icons

Recently, Hindu religious icons have been marketed in the West on toilet seats, shoes and other places.

Arjan P. Daryanani, guest columnists writes:

"Foreigners who know what kind of cowards Hindus, are by nature are exploiting us for monetary gains. Why don't these toilet seat manufacturers, as good Christians, put pictures of Christ, Virgin Mary, St. Peter etc. on toilet seats? Would the Christian community be thrilled? Why don't they put a picture of the Kabba, or verses from the holy Koran on a toilet seat? I can bet you the whole of Islamic World will go on Jihad to wipe out, not only the factory that made the seat, but the sellers and entire families of the people involved."

Vibhakar Modi says: "Horrific insults to Hindu religious icons are becoming frequent." The belief that their god is the true god and savior goes to show how ignorant these people really are."

Samdura (ocean) and Aryan Invasion Theory

Although the correct translation of the Sanskrit term **samudra** is ocean, it was initially translated as "a body of water." Hence the references to ships in the **Rig Veda** and to the river **Saraswati** (and other ancient rivers) were **considered false and mythical by Western scholars.** If samudra had been translated correctly as ocean, the references to ships and the vast trade over water would have been considered real and not mythical, and would have also indicated that the Aryans were civilized people and not nomads. The idea of nomadic Aryans had been assumed by Western scholars to fit their idea of the Aryan invasion.

(For more refer to chapter on **Aryan Invasion Theory**).

Islam wiped out Buddhism in Afghanistan 1,400 years ago.

Islam wiped out Buddhism in Afghanistan 1,400 years ago. But the presence of ancient Buddhist statues from the smallest miniature to the 50 metre-high Buddhist carved into a cliff face in the town of Bamiyan have posed problems for the Taleban. Also, an exquisite one metre-high carving which is thought to be unique. Other works include Buddhist statues and bowls, and ancient Hindu pieces.

India's Nero

All through the autumn of 1876, while the vital kharif crop was withering in the fields of southern India, Lord Lytton had been absorbed in organizing the immense Imperial Assemblage in Delhi

Figure 1.2 The Poet as Viceroy: Lytton in Calcutta, 1877

to **proclaim Victoria Empress of India (Kaiser-I-Hind)**. As The Time's special correspondent described it,

" The Viceroy seemed to have made the tales of Arabian fiction true….nothing was too rich, nothing too costly." Lytton put on a spectacle," adds a biographer of Lord Salisbury (the secretary of State for India), " gaudy enough to impress the Orientals'….and furthermore a pageant which hid 'the nakedness of the sword on which we really rely." Its "climateric ceremonial" included a week-long feast for 68,000 officials, satraps and maharajahs: **the most colossal and expensive meal in world history.**

An English journalist later estimated that 100,000 of the Queen-Empress's subjects starved to death in Madras and Mysore in the course of Lytton's spectacular durbar.

In Madras city overwhelmed by 100,000 drought refugees, famished peasants dropped dead in front of the troops guarding pyramids of rice, while, "on any day and every day mothers might be seen in the streets…offering children for sale."

Thus, Lytton, became the personification of free market economics of British India - a mask for colonial genocide.

Blaming the Hindus but glorifying the Moghuls and the British rule?

Secularists/commies/missionaries/mullahs have used caste to flog the Hindus into feeling ashamed. They have used Hindus as a scapegoat to hide their own inadequacies. For too long Hindus, have suffered humiliation and taunts about the evils of caste system.

When Muslims were ruling India from 1000 AD to 1800 AD, they have been called the great Mughals. Akbar was Great. Babar was Great. Under the Mughal rules, the Brahmins who were slaves of Muslims were exploiting backward classes? How? They were not teaching to the lower castes. Why were the great Mughals who governed helpless to look after the interests of lower caste Hindus. The all powerful British could not stop the Brahmins from breaking the temples constructed by Dalits? Then how can they be called great? if they could not stop this casteism?

What were the Muslims doing while they governed India for 1000 years? Why did they not institute reforms for the lower castes? **Why is Akbar and Babar glorified as Great, when they did nothing for the lower castes of India?**

What were the so called **Enlightened British** doing, they had the White Man's burden. Why didn't they lift the lower castes up?? What stopped them from doing it for 200 years?

Korean memorial to Indian princess

In the northern Indian city of Ayodhya, a visiting Korean delegation has inaugurated a memorial to their royal ancestor, Queen Huh. More than a-hundred historians and government representatives, including the North Korean ambassador to India, unveiled the memorial on the west bank of the River Saryu.

Korean historians believe that Queen Huh was a princess of an ancient kingdom in Ayodhya.

She went to Korea some two-thousand years ago and started the Karak dynasty by marrying a local king, Suro.

Today, the historians say, Queen Huh's descendants number more than six-million, including the South Korean president - Kim Dae Jung.

Did you Know

Koh-i-noor - a lost property or a colonial swindle?

The most famous diamond in the world, the Kohinoor or Padshahnama, was found in the **Godawari River in South India some 4,000 years ago.** It was long reputed to give its owner the crown and rule of the world. At the same time, its possession was supposed to be a hazard to the life of the man who owned it. The curse did not apply if the owner was a woman.

At the time its recent history began in the 14th century, the Kohinoor weighed 186 carats and was clumsily cut. It had been owned for several hundred years by the Raja of Malwa (now in Madhya Pradesh). When the Moghuls conquered India in 1526, the stone was taken to the treasury at Delhi. It remained there until 1739, when the ruler of Persia, Nadir Shah, invaded India, took Delhi, seized the treasures of the Indian capital, and took the Mughal emperor Muhammad Shah prisoner. His systematic pillage of the city failed to uncover the huge stone, but then he was told by one of the harem women that the conquered Mogul emperor had hidden it inside his turban. Taking advantage of an Oriental custom, Nadir Shah invited his captive to a feast and suggested they exchange turbans. Retiring from the feast, he unrolled the turban and released the great gem. Seeing it he cried “Koh-i-Noor!” (Mountain of Light). He also took the fabulous Peacock Throne with him, was reportedly one of the most splendorous thrones ever made.

Nadir Shah returned to Persia with his trophy, but he was assassinated soon afterwards. His son and heir was overthrown by rebellion. Arrested, tortured, and blinded by his enemies, he refused to reveal the hiding place of the Kohinoor. When the king of Afghanistan came

to his rescue, the dying son of Nadir Shah, soaked in his own blood, handed him the Kohinoor.

The king took it back to Afghanistan. Years later his grandson Zaman was deposed, imprisoned, and blinded by his own brother but managed to hide the Kohinoor under the floor of his cell. Eventually he escaped with the gem and took refuge at Lahore. There he was received by Ranjit Singh, "Lion of the Punjab," who treated him with great respect but insisted that he give up the Kohinoor. Singh had the diamond set in an armlet and wore it. At his death in 1839 it went into the Lahore treasury. It was still there when the Punjab was annexed by the British.

In 1849 it was taken by the British East India Company as partial indemnity after the Sikh Wars and was presented to Queen Victoria. At the time, its value was estimated at $700,000. In 1851 Victoria decided to recut the Kohinoor. This undertaking required 38 days at a cost of $40,000 and the extraordinary stone was reduced to 108 carats. In 1911 a new crown was made for the coronation of Queen Mary with the KOH-I-NOOR as the center stone. In 1937, it was transferred to the crown of Queen Elizabeth (now Queen Mother) for her coronation. It is now on display with the British Crown Jewels in the Tower of London.

Today, the Kohinoor is still part of the British crown jewels and is on display in The Tower of London.

***

Kohinoor crown to adorn Queen Mother's coffin

The Kohinoor-embedded Crown of the Queen Mother will be placed on her coffin as a mark of tribute to her, the Palace sources said today.

The crown was made for her to wear at the coronation of her husband King George VI in 1937, though the controversial 105-carat oval cut Kohinoor diamond was brought from India in 1849. No male heir to the British throne has worn the Kohinoor following a superstition that it brings bad luck to any male who wears it.

India has made repeated demands for the return of the Kohinoor, saying it was taken away by subterfuge. Britain has, however, steadfastly refused to oblige. The 101-year old Queen Mother, who died on Saturday, had rarely worn that crown, which is on display at the Tower of London as a tourist attraction. The crown is normally kept along with others in a highly secured glass case.

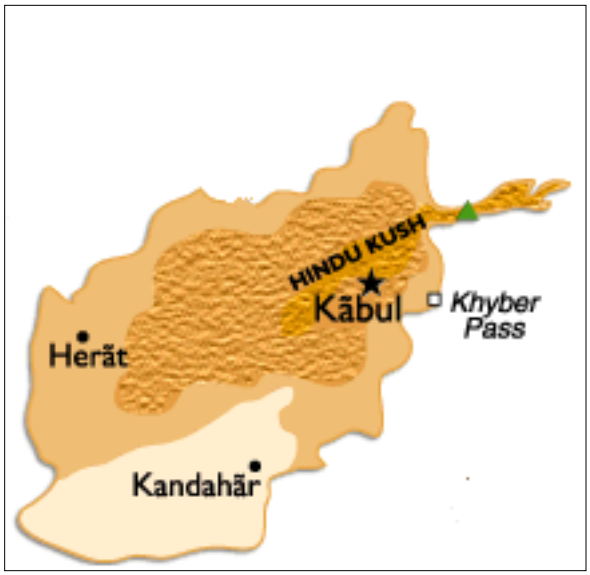
Bada (Big) Ganpati

Better known for its size than antiquity, this temple houses perhaps **the largest Ganesh idol in the world, measuring 25 ft. from crown to foot**. Created as a result of a dream to an Avantika (Ujjain) resident Shri Dadhich, it was built in 1875.

The idol has a most interesting configuration of ingredients: bricks, lime stone, masala made of gud, methi dana, soil collected from seven moksha puris: Ayodhya, Mathura, Maya, Kashi, Kanchi, Avantika, and Dwaraka, mud from stables of horse, elephant and cow, the powder of Pancharatna : heera, panna, moti, manek and pukhraj (diamond, emerald, pearl, ruby and topaz) and the holy water from all major places of pilgrimage. The metallic frame is of gold, silver, copper, brass and iron. Twice a year in the 'Bhadwa' and 'Magh' months 'chola' of pure ghee and 'Sindoor' is applied to Ganesh idol.



Idol is believed to be miraculous.

The Afghan Connection

Afghanistan is under intense turmoil today. Yet it enjoyed close ties with mainland India for millennia.

Afghanistan was part and parcel of the socio-religious-political ethos of India. Close cultural ties of Afghanistan and India go back to 4500 B.C. It enjoyed the cultural and trade relations with the Indus-Saraswati culture that flourished in the Indus valley. The deities of the Vedic culture like Apam Napat, Ahirbudhnya, Maruts and the lost recension, the Bashkala samhita of the Rg Veda can be linked to Afghanistan. The Arya-Dasa conflicts in the Rig Veda occured in the Seistan province of southern Afghanistan. The purs destroyed by Indra were the mounds or butts formed in the region due to the erosive action of Bad-i-sad-o-bist, ie. wind of 120 days.

Many tribes of Afghanistan today are traced back to the Vedic period. They participated in the famous **Ten kings war of the Rig Veda lore. The name of the nation itself is rooted in the ancient Indian literature.** The celebrated text of **Brhatsamhita by Varahamihira** (6th century A.D.) refers to a group of people named **avagana** along with Huns and Chinese (brhatsamhita 11.61) which in later period turned into Avagana and then to Afghan. The Afghan identity is closely associated with the Sanskrit origin. The Pakhtoons are the most dominating tribal group in Afghanistan. The oldest text of the world, the Rig Veda refers to the tribal enemies of the king Sudasa who had formed a federation against the king. The tribal federation against the king Sudasa included Pakhtha, Bhalanasa, Alinasa, Visani and Siva tribes.

Panini, the great grammarian was a Pathan by birth. His contribution to the Sankrta grammar is beyond comparison. Being a resident of the North-western Frontier Province, his unique grammar astadhyayi contains several references to the locations, tribes and geographical landmarks in the region. The roots of abhiras tribes can be traced to Afghanistan. They were defeated by Nakula as mentioned in the **Mahabharata**. (MHB Sabha 32.9-10). They participated in the Mahabharata War.

Language similarity between the Kafiri language in Northern Afghanistan and Sanskrit

Kafiri	Sanskrit
totta (father)	tata
istri (female)	stri
angura (finger)	anguli
basana (cloth)	vasana
asta (is)	asti

In the ancient period Afghanistan was closely linked with Indo-Aryan and Indo-Iranian civilization. Geographically Afghanistan lies at the center of two great civilizations, namely, the Indian and the Iranian. Both have influenced the cultural ethos of the region. Legend has it that the kingdom of Gandhaar was established by Taksha, grandson of Bharat of Ayodhya. Gandhaar's borders extended from Takshashila to Tashkent (corruption of 'Taksha Khand') in the present day Uzbekistan. In the later period, Mahabharat relates Gaandhaari as a princess of Gandhaar and her brother, Shakuni as a prince and later as Gandhaar's ruler.

The north Afghanistan lay on the famous ancient 'Silk Route.' The commercial activity and spread of Buddhism gave impetus to the closer interactions with the Indian civilization.

The word "Sthan" is actually a Sanskrit derivative that means place or land. There are a string of countries to the west of India with the suffix of "sthan," including Afghanisthan, Baluchisthan, Kurdisthan, Siwisthan, Arvasthan and Turgasthan (Turkey). Until the 10th century A.D. Hindu kings ruled over Afghanistan, and thereafter still in parts of it. As mentioned in **Albiruni's India**, Hindu kings continued to have their coronation in Kabul, although Kabul had passed out of their hands. India's interest in the West and Central Asian region isn't new either, with historic and cultural ties dating back centuries. At its peak during the 1800s, the sweep of the greater Indian empire extended from Kabul to Burma. Parts of Afghanistan were ruled by Indian kings and later the British, and even after **Afghanistan became a separate nation, it continued to regard India as "the mother country,"** according to **Monu Nalapat**, professor of geopolitics at the Manipal Academy of Higher Education in south India. The famous “Kabuliwala” story by Rabindranath Tagore is a symbol of India’s emotional and cultural ties with Afghanistan.

Entirely by Memory

Rig Veda is the oldest surviving religious record of the human race. Much before the printing press came into existence, Rig Veda was transmitted from one generation to another by word of mouth. Naturally, question would arise about interpolations and mutilations during this transmission. There is a true story, almost unbelievable, to answer this question of interpolations and mutilations in respect of Rig Veda.

In his book **India: What can it teach us?** **Friedrich Maximilian Müeller**, (1823-1900) German philologist and Orientalist. He repeatedly drew attention to the uniqueness of the Vedas and awakened interest in Indology among educated people. He writes:

"Entirely by Memory: This may sound startling**,** but-what will sound still more startling, and yet is a fact that can easily be ascertained by anybody who doubts it-at the present moment, **if every MS of the Rig Veda were lost, we should be able to recover the whole of it - from memory of the Srotriyas in India.** These native students learn the Veda by heart, and then they learn it from the mouth of their Guru, never from a MS, still less from my printed edition, - and after a time they teach it again to their pupils." I have had such students in my room at Oxford, who not only could repeat these hymns, but who repeated them with the proper accents (for the Vedic Sanskrit has accents like Greek), nay who, when looking through my printed edition of the Rig Veda, could point out a misprint without the slightest hesitation.

"Of course, **this learning by heart is carried on under a strict discipline;** it is, in fact, considered as a sacred duty. A native friend of mine, himself a very distinguished Vedic scholar, tells me that a boy, who is to be brought up as a student of the Rig-Veda, has to spend about eight years in the house of his teacher. He has to learn ten books: first, the hymns of the **Rig-Veda**; then a prose treatise on sacrifices, called the **Brahmana**; then the so-called Forest-book or **Aranyaka**; then the rules of domestic ceremonies; and lastly, six treatises on pronunciation, grammar, etymology, metre, astronomy, and ceremonial.

"These ten books, it has been calculated, contain nearly 30,000 lines, each line reckoned as thirty-two syllables. "A pupil studies every day, during the eight years of his theological apprenticeship, except on the holidays, which are called "non-reading days". There being 360 days in a lunar year, the eight years would give him 2,880 days. Deduct from this 384 holidays, and you get 2,496 working days during the eight years. If you divide the number of lines, 30,000, by the number of working days, you get about twelve lines to be learnt each day, though much time is taken up, for practicing and rehearsing what has been learnt before.

"Now this is the state of things at present, though I doubt whether it would last much longer and I always impress on my friends in India, and therefore impress on those who will soon be settled as Civil Servants in India, **the duty of trying to learn all that can still be learnt from these living libraries. Much ancient Sanskrit lore will be lost for ever when that of Srotriyas becomes extinct."**

Myths of the British Raj

There have been persistent attempts of Western scholars to argue that "India was not a country but a congeries of smaller states, and the Indians were not a nation but a conglomeration of peoples of diverse creeds and sects. Anybody familiar with the relevant situation will know that this attitude still forms the major undercurrent of Western scholarship on India. (refer to article: **Hindu Nationalism Clouds the Face of India - H. D. S. Greenway.** Even today the same attitude is alive and well, Mr. Greenway says in his article: "Secularists realize that a united India was a product of the British Empire. Before the British, Indians owed their allegiances to family, clan, religion, or princely state. It was the British who established a centralized administration, a common educational system, and countrywide transportation that gave the subcontinent a sense of belonging to one country).

Regarding countrywide transportation:

Amitav Ghosh author of several books, The Circle of Reason (1986), won France's top literary award, Prix Medici Estranger, and **The Glass Palace also makes fun of the claim that the British gave India the railways.**

"Thailand has railways and the British never colonized the country," he says. **"In 1885, when the British invaded Burma, the Burmese king was already building railways and telegraphs. These are things Indians could have done themselves."**

(source: **Travelling through time - interview with Amitav Ghosh**). Please refer to chapter on **History of Hinduism**

Note: The Konkan Railway, the first major railway project in India since Independence, has been a major success despite the difficult terrain and the logistics nightmares. As for the story about the Konkan Railway, it is an inspiration. In the face of obstacles, including extremely difficult terrain (many tunnels, bridges, etc) as well as the task of raising large amounts of money through a public bond issue, the railway was constructed on schedule and within budget. **It used to be said that Indians could never match the feats of the British engineers who built much of India's network; isn't it amazing that E. Sreedharan, the man who ran this Herculean effort, is a virtual unknown?**

(source: **Historicide: Censoring the past... and the present**. Refer to **Indian engineering skills go poetic and heroic in the Western Ghats**

Education:

" Every village had its schoolmaster, supported out of the public funds; in Bengal alone, before the coming of the British, there were some 80,000 native schools - one to every four hundred population. Instruction was given to him in the "Five Shastras" or sciences: grammar, arts and crafts, medicine, logic and philosophy. Finally the child was sent out into the world with the wise admonition that education came only one-fourth from the teacher, one-fourth from private study, one-fourth from one's fellows, and one-fourth from life."

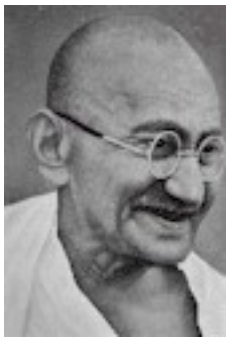
(source: **Story of Civilization: Our Oriental Heritage - By Will Durant** MJF Books.1935 p.556-557).

Christian missionaries and the British are also proud that they brought education to India, "but," counters **Sri Sri Ravi Shankar**, Founder of the Bangalore based Art of Living, an International Foundation. He recently addressed the UN Peace Summit on Aug 28. He is the only non-westerner to serve on the advisory board of Yale University's School of Divinity and is author of the book - **Hinduism and Christianity**:

"it is not true: there were for instance 125,000 medical institutions in Madras before the British came. Indians never lacked education, the Christians only brought British education to India, which in fact caused more damage to India by westernizing many of us."

Sir John Woodroffe, (1865-1936) the well known scholar, Advocate-General of Bengal and sometime Legal Member of the Government of India. Referring to the **Macaulay's Educational Minute of 1834** (for education refer to chapter on **Hindu Culture** and **First Indologists**) he wrote:

"To an Indian, self-conscious of the greatness of his country's civilization, it must be gall and wormwood to hear others speaking of the "education" and "civilization" of India. India who has taught some of the deepest truths which our race has known is to be 'educated.' She whose ancient civilization ranks with the greatest the world has known is to be civilized."



(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** Ganesh & Co. Publishers 1922 p.290).

European travelers and administrators bear testimony to the great veneration in which Hindus held learning and instruction. One of the earliest observation was made on the subject of indigenous education was by **Fra Paolino Da Bartolomeo**. Born in Austria, he spent 14 years in India (1776-1789). He wrote: "No people, perhaps, on earth have adhered as much to their ancient usage and customs as the Indians." and "temperance and education contribute, in an uncommon degree, to the bodily confirmation, and to the increase of these people."

Brigadier-General Alexander Walker who served in India between 1780-1810, says, that **"no people probably appreciate more justly the importance of instruction that the Hindus."**

The fact of wide-spread education - a school in every village - was uniformly noticed by most early observers. Even writing as late as 1820, **Abbe J. A. Dubois** says that "there are very few villages in which one or many public schools are not to be found...that the students learn in them all that is necessary to their ranks and wants...namely, reading, writing and accounts."

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 179-180 - refer to chapter on **Hindu Culture** and **Education in Ancient India** and **European Imperialism**).

In October 1931 **Mahatma Gandhi** made a statement at Chatham House, London, that created a furore in the English press. He said, "Today India is more illiterate than it was fifty or a hundred years ago, and so is Burma, because the British administrators, when they came to India, instead of taking hold of things as they were, began to root them out. They scratched the soil and left the root exposed and the beautiful tree perished". Mahatma Gandhi said, **"The beautiful tree of education was cut down by you British. Therefore today India is far more illiterate than it was 100 years ago."** We now learn, with almost a sense of disbelief, that a large part of the country did have a sustainable education system, as late as even the early years of the 19th century, and that this was systematically demolished over the next 50 years or so. The present education system is, in effect, a legacy of the colonial rule. This system has perpetuated the notion that traditional societies were seeped in ignorance, superstition and rituals for thousands of years and lived a life of abject poverty, which was caused by an extreme form of social discrimination and exploitative socio-political systems. So deep has this notion seeped into our collective consciousness that, it colours the belief of both, providers of education as well as of recipients and aspiring recipients in our society.

(source: http://www.indiatogether.org/education/opinions/btree.htm). (For more please refer to noted Gandhian, **Dharampal**'s book. **The Beautiful Tree**, (Biblia Impex, Delhi, 1983).

***

Sense of belonging: Hinduism has imparted to the whole of India a strong and stable cultural unity that has through the ages stood the shocks of political revolutions.

James Ramsey MacDonald (1866-1937) first Labor Party prime minister of Great Britain has said: **"India and Hinduism are organically related as body and soul."**

(source: **The Soul of India - By Satyavrata R Patel** p.208).

Political Unity of India since Ancient Times

The name Bharatvarsha has a deep historical significance, symbolizing, a fundamental unity. The term was associated not only with the geographical boundaries but also with the idea of universal monarchy. The term was associated not only with the geographical boundaries but also with the idea of universal monarchy. This name together with the sense of unity imparted by it "was ever present before the mind of the theologians, political philosophers and poets who spoke of the thousand Yojanas (Leagues) of land that stretches from the Himalayas to the sea as the proper domain of a single universal emperor".

This is what is stated in an inscription of **King Yasodharman of Mandasor, Successors of the Guptas in the North:**

"From the lands where the Brahmaputra flows,
from the flanks of the southern hills, thick with grove of palms,
from the snowy mountains whose peak the Ganga clasps,
and from the ocean of the West,
come vassals, bowing at his feet,
their pride brought low by his mighty arm,
and his palace court is a glitter,
with the bright jewels of their turban."

The rulers of medieval India also considered India as one geographical unit and sought to extend their sway over the whole of the land. **The song Vandematram embodies that sense of unity.**

There is also an under-current of religious unity among the various religious sects in the country. That is partly due to the overwhelming impact of Hinduism on the Indian mind which transcends any other single religion. This is mainly due to the comprehensive and all-embracing pervasiveness of Hinduism. Hinduism is not a mere form of religious approach or system. It is a "mosaic of almost all types and stages of religious aspiration and endeavor."

(source: **Ancient India - By V. D. Mahajan** p. 15).

The unifying effect of Hinduism and Sanskritic culture was great. Records dating from the early centuries indicate that shrines regarded sacred by all Hindus were located at widely separated points in all directions. Clearly, some concept of religious and cultural unity already existed. Long pilgrimages to such shrines created for many a connection with peoples in areas under different sovereignties. Then, too, the great body of Sanskritic literature provided a significant bond.

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 32).

According to **Jawaharlal Nehru**: "Right from the beginning, culturally India has been one, because she had the same background, the same traditions, the same religions, the same heroes and heroines, the same old tales, the same learned language (Sanskrit), the village panchayats, the same ideology, and polity. To the average Indian the whole of India was a kind of **punya-bhumi** - a holy land - while the rest of the world was largely peopled by mlechchhas and barbarians. **Sankaracharya** chose the four corners of India for his ***maths***, or the headquarters of his order of sanyasins, shows how he regarded India as a cultural unit. And the great success which met his campaign all over the country in a very short time also shows how intellectual and cultural currents traveled rapidly from one end of the country to another."

(source: **Glimpses of World History - By Jawaharlal Nehru** p. 129).

Dr. Radhakrishnan: "In spite of the divisions, there is an inner cohesion among the Hindu society from the Himalayas to the Cape Comorin."

(source: **The Hindu View of Life - By Sir. Sarvepalli Radhakrishnan** p. 73-77*).*

Girilal Jain, late editor of Times of India: " It is about time we recognize that we are not a nation in the European sense of the term, that is, we are not a fragment of a civilization claiming to be a nation on the basis of accidents of history which is what every major European nation is. We are a **people** primarily by virtue of the continuity and coherence of our civilization which has survived all shocks. And though inevitably weakened as a result of foreign invasions, conquests and rule for almost a whole millennium, it is once again ready to resume its march."

(source: **Hindu Phenomenon - By Girilal Jain** South Asia Books 1998 ISBN 8174760105 p. 21).

Guy Sorman visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France, says that the idea of a nation-state was an 18th century creation of the West. It is the cultural identity that has helped India stay together. The British did not do it for the love of India. It was here that the West started to colonize what was to become the Third World, a shameless process of systematic exploitation without any moral or religious justification.

(source: **The Genius of India - By Guy Sorman** (**Le Genie de l'Inde**) Macmillan India Ltd. 2001. ISBN 0333 93600 0 p. 197)

N. S. Rajaram: "It was claimed by the British, and faithfully repeated by the Leftist intellectuals, that the British unified India. This is completely false. **The unity of India, rooted in her ancient culture, is of untold antiquity.** It may have been divided at various times into smaller kingdoms, but the goal was always to be united under a 'Chakravartin' or a 'Samrat'. This unity was cultural though not always political. This cultural unity was seriously damaged during the Medieval period, when India was engaged in a struggle for survival — like what is happening in Kashmir today. Going back thousands of years, India had been united under a single ruler many times. The earliest recorded emperor of India was Bharata, the son of Shakuntala and Dushyanta, but there were several others. I give below some examples from the Aitareya Brahmana.

"With this great anointing of Indra, Dirghatamas Mamateya anointed Bharata Daushanti. Therefore, Bharata Daushanti went round the earth completely, conquering on every side and offered the horse in sacrifice.

"With this great anointing of Indra, Tura Kavasheya anointed Janamejaya Parikshita. Therefore Janamejaya Parikshita went round the earth completely, conquering on every side and offered the horse in sacrifice."

There are similar statements about Sudasa Paijavana anointed by Vasistha, Anga anointed by Udamaya Atreya, Durmukha Pancala anointed by Brihadukta and Atyarati Janampati anointed by Vasistha Satyahavya. Atyarati, though not born a king, became an emperor and went on conquer even the Uttara Kuru or the modern Sinkiang and Turkestan that lie north of Kashmir. There are others also mentioned in the *Shathapatha Brahmana* and also the *Mahabharata.* This shows that the unity of India is ancient. Also, the British did not rule over a unified India. They had treaties with the rulers of hereditary kingdoms like Mysore, Kashmir, Hyderabad and others that were more or less independent. The person who united all these was Sardar Patel, not the British. But this unification was possible only because India is culturally one. Pakistan, with no such identity or cultural unity, is falling apart.

(source: **Distortions in Indian History** http://www.voi.org/books/dist/ch2.htm#3

Sri Aurobindo has said: "In India at a very early time: **the spiritual and cultural unity was made complete** and became the very stuff of the life of all this great surge of humanity between the Himalayas and the two seas....Invasion and foreign rule, ...the enormous pressure of the Occident **have not been able to drive or crush the ancient soul out of the body her Vedic Rishis made for her."**

(source: **India's Rebirth - By Sri Aurobindo** Publisher: Mira Aditi ISBN 81-85137-27-7 p 158).

Sri Jayendra Saraswati - The Sankaracharya of Kanchi has said:

The British never created anything in India - they merely destroyed. Instead of uniting, they divided; so the question is meaningless. For five thousand years Hindus have chanted in their morning prayers:

"**Gange cha Yamunechaiva! Godavari! Sarasvati!**
Narmade! Sindhu! Kaveri! Jale asmin sannidhim kuru!"

"Hail! O ye Ganges, Jamuna, Godavari, Sarasvati, Narmada,
Sindhi and Kaveri, come and approach these waters."

There has been an explicit and clear geographical area that we have referred to as our land. Adi Sankara not only went to the four corners of this territory, he set up tens of shrines all over the Hindu land to be able to revive and revitalize Hinduism. It is absurd to think that India is a new idea.

(source: **Interview with Sri Jayendra Saraswati - by Rajeev Srinivasan** - India Abroad March 8'2002). For more refer to chapters on **European Imperialism** and **Glimpses VIII**).

Priceless Indian treasures that are part of the Queen's collection

Priceless Indian treasures that are part of the queen's collection that will not be returned to India can be seen at the largest exhibition of crown treasures to be launched next year.

Among the riches on display will be the famous **Shivaji's sword** and some of the possessions of **Guru Gobind Singh** and **Bird of Paradise** from the throne of Tipu Sultan. The British took away this priceless figure in gold and emeralds after the death of the legendary warrior king of Mysore. The palace is reportedly keen not to fuel such demands by showing too much that India might want back.

(source: **http://www.rediff.com/us/2001/nov/27uk.htm**). For refer to chapters on **Glimpses VIII** and **European Imperialism**).

Excellence of Vedic Culture

Huent Sung, a Chinese visitor to ancient India has noted in his travel account:

"The Kshatriyas and Brahmans are clean-handed, unostentatious, pure and simple in life and very frugal. They are pure of themselves and not from compulsion. With respect to the ordinary people although they are naturally light-minded yet they are upright and honorable. In money-matters they are without craft, and administering justice. They are considerate. They are not deceitful and treacherous in their conduct and are faithful to their oath and promises. In their rule of government there is remarkable rectitude. while in their behavior there is much gentleness."

(source: **Ancient India - By Dr. R. C. Majumdar** p. 454).

Saffron - A sacred symbol vulgarized?

Many of should decry the cynical misuse of the idea and spiritual associations of saffron by the Indian media. Saffron is a vibrant visual symbol for those who are nurtured in the Vedic tradition, and it evokes powerful associations of self-renunciation, purity, sacrificial dedication and moral dynamism.

It is in this sense, and not in any narrow communal sense, that saffron finds its rightful place on our national tricolour, as **Jawaharlal Nehru** noted while moving the resolution for its adoption as our flag in the **Constituent Assembly**. We have remained passive witnesses to the continued communal vulgarization of this **sacred symbol**. Alarmingly, the situation is already so confusing that many people today associate saffron with nothing more than communalism! I would urge the media to give no quarter to the **abuse of religious symbols like this**. As Confucius said, calling things by their right names is the bottom-line of public service. Using the word 'saffronisation' as a synonym for 'communalisation' is a frontal insult to the spiritual sentiments of a large section of the

people of this country and deserves to be denounced.

(source: **Swami Agnivesh** of Bandhua Mukti Morcha http://www.hindustantimes.com/nonfram/100901/detlet01.asp).

The Roman Empire - A Gangster State?

According to **Peter Beckman**, author of ' **A History of Pi**: " While Alexandria had become the world capital of thinkers, Rome was becoming the capital of thugs. Rome was not the first state of organized gangsterdom nor was it the last; but it was the only one that managed to bamboozle posterity into an almost universal admiration. Few rational men admire the Huns, the Nazis or the Soviets; but for centuries, schoolboys have been expected to read Julius Caesar's militaristic drivel. They have been led to believe that the Romans had attained an advanced level in the sciences, the arts, law, architecture, engineering and everything else.

It is my opinion that the alleged Roman achievements are largely a myth; and I feel it is time for this myth to be debunked a little. **What the Romans excelled in was bullying, bludgeoning, butchering and blood bath.** They enslaved peoples whose cultural level was far above their own. They not only ruthlessly vandalized their countries, but they also looted them, stealing their art treasures, abducting their scientists and copying their technical know-how, which the Romans' barren society was rarely able to improve on.

Then there is Roman engineering: The Roman roads, acqueducts, the Coliseums. Warfare, alas, has always been beneficial to engineering. In a healthy society, engineering design gets smarter and smarter; in gangster states, it gets bigger and bigger.

The architecture of the Coliseums and other places of Roman entertainment are difficult to judge without recalling what purpose they served. It was here that gladiators fought to the death; that prisoners of war, convicts and Christians were devoured by a many as 5,000 wild beasts at a time; and that victims were crucified or burned alive for the entertainment of Roman civilization. **When the Roman screamed for ever more blood, artificial lakes were dug and naval battles as many as 19,000 gladiators were staged until the water turned red with blood. The only Roman emperors who did not throw Christians to the lions were the Christian emperors. They (Christians) threw the pagans to the lions with the same gusto and for the same crime - having a different religion.**

Romans were not primitive savages, but were sophisticated killers. The Roman

contribution to sciences was mostly limited to butchering antiquity's greatest mathematicians, burning the Library of Alexandria. and it demonstrates an abysmal ignorance of sciences. **Pliny tells us that in India there is a species of men without mouths who subsist by smelling flowers.**

Yet most historians extol the achievements of Rome. "it accustomed the Western races to the idea of a world-state, and by pax romana....."

(source: **A History of Pi - by Peter Beckan** St. Martin's Press; ; 19th edition (August 1976) 0312381859 p. 55-59). For more refer to chapter on **India and Greece**).

Martand Surya Temple of Kashmir

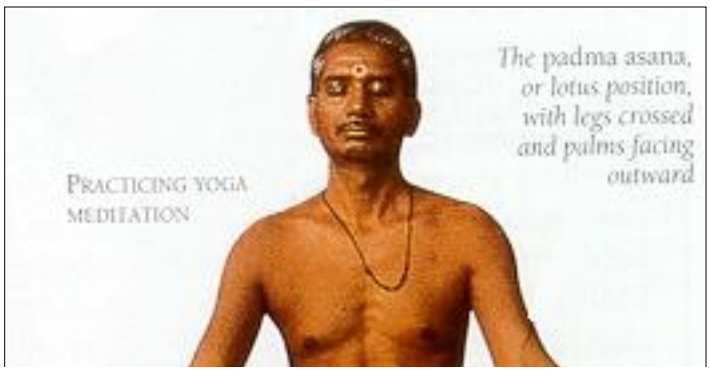
Perhaps the best-known early structure in Kashmir is the ruin of the Surya temple at Martand. Built within a large rectangular courtyard (220 by 140 feet), edged by a massive stone wall, the Sun Temple is situated on a high plateau with a magnificent view of distant snow-covered mountains. This majestic shrine was erected by the great Kashmiri king **Lalitaditya Maktapida**, who is recorded in the Kashmiri chronicle **Rajatarangini** as conquering most of Northern India. The riches gathered from this campaign embellished not only the Surya Temple but others in Kashmir, and later made them in turn objects of plunder.

(source: **Indian Art - By Roy C. Craven** p. 177)

The most memorable and beautiful work of Lalitaditya is the construction of spacious Martand temple which the emperor got built in honour of the Sungod (Bhaskar). It may be mentioned here that Lalitaditya was himself a Kshatriya of Surya dynasty. The style of the construction of the temple and the skill of the makers are rare in the history of the world. According to Stein, it is not possible to find and excavate cities, towns and the ruins belonging to the era of Lalitaditya. But from whatever material and ruins, found and excavated so far, one learns about the fame of their matter Lalitaditya. The remnants of the big Martand temple, which the emperor had built at the pilgrimage of the same name, is an example of unique building skill of ancient Hindus. These ruins, even in total disarray, receive praises for their design, beauty and art.

(source: **Translation of Rajtarangani - By Stein** Page 60). For more refer to chapter

on **Glimpses VIII**).



According to **Younghusband Martand has a very high place in the world's great architecutral designs.**

It is an example of not only the Kashmiri architectural skill but it has pride of having been set up at a fine spot which is prettier than the spots where Parthinan, Taj Mahal, St. Peters have been built. It can be considered either a representative of all such great buildings and monuments or a combination and sum total af all the qualities. It gives an insight into the greatness of the people of Kashmir. The ruins of the huge temple stand in a square field with snow capped mountains of the smiling valley as the background. In terms of beauty and strength and in grandeur it is next to Egypt and Greece. This temple has been built with strong and square limestones. The temple has received grandeur and beauty through the pillars of Greek pattern. It is now in ruins and there are many such ruins scattered in Kashmir. The very existence of this temple encourages man to carry out study of the skill and art of Kashmiris. Anyone bereft of the love of nature could not select such a special spot for the construction of the temple. A restless and destructive mind would have not been able to built such a spacious and praiseworthy temple.
(**Kashmir - By Younghusband** Page 201).

Is Yoga the Work of the devil?

Fundamentalist Christians in Georgia stopped the Toccoa-Stephens County Recreation Department from offering a Yoga class. Philip Lawrence, who headed the fight against the class, solicited help from a number of local church organizations. He claimed Yoga could lead to devil worship. Christian conservatives and other

rigid and dogmatic religious sects have some serious issues with Yoga. The *Yoga Sutras* offer a philosophy which includes the Yamas and Niyamas - suggestions for living. These suggestions encourage honesty, purity, devotion, chastity, non-violence and non-stealing. Many people who practice Yoga eventually find themselves embracing many of these ideals. Of course, according to Fundamentalist Christianity, good works will not get you into Heaven - only accepting Jesus Christ as Lord will do that. Hindu belief that a spark of the divine exists within every living being. Hindus also believe in an immortal soul. Fundamentalist Christians disagree completely with these ideas - according to their beliefs, seeing God in yourself creates a void which can be filled with very dangerous forces. In addition, there are many conservative interpretations of the Bible which assert that the soul is not immortal and can be destroyed.

As many as 20 million Americans practice yoga in pursuit of physical or mental fitness, with a little om along the way. According to **BBC News**, **"Madonna is a big fan. So is Sting. They are just two stars who are devoted practitioners to the discipline of yoga. An increasing number of people have taken up the ancient eastern health and fitness practice."**

(source: **Is yoga good for you? - BBC News**). Former Spice Girl Geri Halliwell is doing it on TV flashing her newly flat stomach, Madonna and Sting swear by it and ever more vigorous variations are crossing the Atlantic with enticing images of toned and fit 'yogis', Uma Thurman and Christy Turlington, but no one is sure just how American British yoga should be allowed to get.

(source: **Times of India**).

A few years ago the Pope issued a proclamation telling Catholics, particularly monks and priests, to avoid yogic practices and mixing Catholicism with Eastern traditions like the Hindu and Buddhist.

(source: **Hinduism: The Eternal Tradition (Sanatana Dharma) - By David Frawley** Voice of India. ISBN 81-85990-29-8 p. 233-234).

Kristin Davis gives youth yoga high marks. "Yoga has been around 5,000 years. It doesn't matter if actresses are doing it. People are responding to yoga on a deeper level. It's not a fad."

Actor-turned-Health Minister **Shatrughan Sinha** was today all praise for Yoga and said his practicing of the physical exercise for nearly two decades has kept him fit.

(source: **Outlookindia.com**). For more on yoga, please refer to chapter on **Yoga and Hindu Philosophy**).

Dhyana (meditation) = Jhana = Ch'an = Zen

According to **Dr. Ananda**

Coomaraswamy, late curator of the Boston Museum: " Japanese Buddhism on the ritualistic side elaborated the cult of Amida and the Western Paradise, and on the mystical side the practice of the Ch'an Buddhists of China, which had been established, ca. 527-536, by the Indian monk Boddhidharma, and derived in the last analysis from the Indian Yoga.

Dhyana (meditation) = Jhana = Ch'an = Zen. The external influence of Indian thought created a theology and forms of art resembling those of India; the more fundamentally stimulating influence of a method, acting inwardly, enabled the Japanese genius to realize itself in an attitude of aesthetic appreciation of natural beauty and an art which bear no evident resemblance to anything Indian.

(source: **History of Indian and Indonesian Art - By Ananda K. Coomaraswamy** Dover Pubns; ; Reprint edition (August 1985) ASIN 0486250059 p. 155).

The Japanese word Zen(na) (Chinese Ch'an(na); Sanskrit Dhyana) refers to the unity of mind which can be obtained through spiritual practice.

Oldest and largest group of Jews in India

Bene Israel, the oldest and largest group of Jews remaining in India. The Bene Israel claim to be descended from the Ten Lost Tribes of Israel. Jews trace their roots back two millennia - were always able to live freely as Jews in India. There are 4,500 in India today. Some 3,500 of them, including Ezekiel and Joseph, live in and around Bombay. There are also a few hundred Baghdadi Jews in Bombay and Calcutta, 70 in Cochin (once a flourishing Jewish center), and several hundred in Thane, a 400-year-old Jewish community about 40 km. from Bombay.

That history has been **untarnished** by antisemitism. " **The Hindus have traditionally been very tolerant of other religions**," says Ezekiel, who works at the Israeli consulate in Bombay and is very active in the Jewish community. Joseph, a businesswoman, nods in agreement, but adds that she did experience anti-semitism when she was growing up - **at the hands of Catholics**. Like many members of the Jewish community of Bombay, she attended a convent school because of its high standards and English-language instruction.

"The Jews in the school were constantly taunted," she recalls. "The nuns would say: 'You killed Christ.'"

Indeed, in a recent report, **UNESCO pointed out that out of 128 countries where Jews lived before Israel was created, only one, India, did not persecute them and**

allowed them to prosper and practice Judaism in peace.

Hindu Palace of Cairo, Egypt

"Walking in the suburbs of the famous city, I was pleasantly surprised to find a Hindu Palace in the elite suburb of Heliopolis. **From the outside, this mansion looks just like one of the fabulous Hindu temples of Orissa with the Garuda and other Hindu icons sculpted on its facade.** The **Palais Hindu** was completed in 1911. Since it is one of the protected monuments of the Egyptian Archaeological Department, there was no problem in walking into the grounds of the building and examining it at close quarters. This palace with beautiful sculptures of Hindu deities was vacant. It was known as the Hindu Palace for nearly 90 years.

An article was published in the **Egyptian Gazette** two decades ago, describing the history of the palace. The Belgian-born industrialist, **Baron-General Edouard-Louis-Joseph Empain** (1852-1929), belonging to one of the eminent aristocratic families of France, had extensive business interests in Indonesia. An eminent Egyptologist, after his retirement from his commercial career, he decided to settle down in Cairo. Ever since the interest shown by Napoleon 200 years ago, France has always been in the forefront when it comes to study of Egyptology. During the turn of the century, **Empain** became the adviser to the Egyptian Government on metropolis planning. He developed the suburbs of Cairo into magnificent plazas/gardens/and residential areas. For his own home, he chose Heliopolis — the best portion of the super-rich planned suburb. He decided to build a huge mansion, which was to be a copy of the Indonesian Hindu temples he had seen during his sojourn in that country. He obtained the best Indonesian artists and sculptors for its construction. In a matter of few years, the Hindu Palace became one of the magnificent buildings of Cairo." In the early 70s, Muslim fundamentalists, especially in Saudi Arabia, were enraged that, at the citadel of Muslim Cairo, there is a Hindu palace with the icons of Hinduism represented!

Servants for the Afterlife

In Ancient Egyptian burial it was important that the deceased had a workforce to carry out

their every day tasks in the underworld so they would not have to dirty their hands. Originally in high ranking Old Kingdom burials servants were buried with their masters. It is not known if these were sacrifices, or people honored with a resting place beside their King when they died. The Egyptians had as many as 2000 gods and goddesses. Some, such as Amun, were worshipped throughout the whole country, while others had only a local following. Often gods and goddesses were represented as part human and part animal. For example, Horus, the sky god, had the head of a hawk, and body of a human.

Annam Brahma - Food is God

The Upanishads state "Annam Brahma" - "Food is God," and therefore it must be given the highest veneration. Even today, in many Indian homes, be they meager or affluent, a symbolic offering of food is given to Brahma before every meal.

(For more refer to chapter on **Glimpses VIII**).

Russia's Fascination with Valmiki Ramayana Continues

Russia is perhaps the only European country where the Valmiki Ramayana, the story of Lord Rama written by the Hindu sage Valmiki, has sold tens of thousands of copies in Russian. More than a thousand people offered prayers and tributes to the Hindu God Ram in the first ever Ramnavami celebrations, at which Russian artists and writers who took Ram's story to the people were felicitated. The Jawaharlal Nehru Cultural Center (JNCC) at Moscow organized a function to honor those who are associated with translating and staging the Ramayana as a play in Russia. While eminent Indologist **Alexander Baranikov** first translated the Ramayana into Russian in 1948, Natalia Guseva, another prominent scholar on India, had written the script for a play based on the Indian epic that was staged in Moscow Children's Theatre in the Soviet Union for the first time in 1957. The Ramayana, popularly perceived as a tale of triumph of good over evil, is used extensively for inculcating noble values in Russian children, and has been staged in scores of cities many times over during the past five decades.

Prosperity of Ancient India

For well over a millennium and a half, the Indian subcontinent may have been the richest area in the world. As early as the first century A.D., a statesman in ancient Rome wrote in worried vein about the squandering of Roman wealth on Indian luxuries. In south India, large hoards of ancient Roman coins have been unearthed. The legend of the wealth of the "Indies" continued to grip Western minds. A few intrepid world travelers, Marco Polo among them, confirmed it with eyewitness accounts. The power of this legend caused Columbus in 1492 to take his dangerous journey westward across the Atlantic, seeking to re-establish direct contact with India. **As late as the eighteenth century, British observers were repeatedly struck by the material prosperity of the land they were beginning to conquer.**

The Gobind Deva Temple

The Gobind Deva temple in Vrindavan, Mathura, is indeed massive; its plinth is 105 to 117 feet. Its height today is about 55 feet. It is estimated that the original height was twice this, without which the mashaal (torch) could not have been possible to be seen either from Agra or from Delhi. The temple was built in 1590 by Maharaja Mansingh of Jaipur. Bharatvarsha. For the satisfaction of its desecraters, the celia, or the sanctum sanctorum, was destroyed. Fortunately, the idol of Sri Krishna or Gobind had been removed to Jaipur by the pujaris in anticipation of Aurangzeb's proposed visit in 1670; the emperor was already notorious as an iconoclast.

The roof of the truncated edifice was to be reserved for names. No sooner than the mehraab was constructed, as illustrated in the photograph copied from History of Indian and Eastern Architecture by **James Fergusson,** (John Murray; London), Aurangzeb inaugurated it by himself offering prayers. **Prof R Nath,** author of **History of Mughal Architecture** (Delhi, Abhinav 1985), introduces the subject of the Gobind Deva temple by quoting Aurangzeb's decree of April, 1669. It said, **"...eager to establish Islam, (Aurangzeb) issued orders to the governors of all the provinces to demolish the schools and temples of the infidels (Hindus) and with the utmost urgency put down the teaching and the public practice of the religion of these disbelievers."** The great temple of Gobind Deva fell a victim to iconoclastic vandalism within a year of the decree. Its inner sanctum and its superstructure were almost entirely destroyed. The main hall was also damaged. Sculpted figures on the dvarasakha were literally defaced." Almost two centuries later, the original idol remained at Jaipur, another set of deities was installed by the pujaris.

While Aurangzeb's ego might have been gratified, the desecration took with it what is described by Fergusson as one of the most elegant temples in India, and the only one, perhaps, from which an European architect might borrow a few hints. What **F S**

Grouse (a Bengal civil service official) had to say about this? "I should myself have thought that solemn or imposing was a more appropriate term than elegance for so massive a building and that the suggestions that might be derived from its study were many rather than few." A number of motives have been attributed to the invaders who desecrated temples, such as loot of treasure, subduing the populace by arousing dread, informing the area that a sultan had replaced the raja. There is, however, no other instance of a temple being desecrated because it defied the ego of a Mughal emperor.

Diamonds and Dam

Did you know that India was the world's only source of diamonds until 1896, according to the Gemological Institute of America. For more refer to chapter on **Hindu Culture1** and **Hindu Culture2**).

Earliest Dam

The earliest dam for irrigation was built in Saurashtra. According to Saka King Rudradaman I, a beautiful lake called Sudarshana was constructed on the hills of Raivataka in Chandragupta Maurya's time.

Christian missionaries and History of India

The Christian missionaries were interested in the history of India, although for a different purpose. They had no sympathy for Hinduism which, in their view, was "at best work of human folly and at worst the outcome of a diabolic inspiration." According to **Charles Grant**, "**the people of India lived in a degenerate condition because Hinduism was the source of dishonesty, purgery, selfishness, social divisions, sexual vices etc."** The Christians saw no future for the people of India unless they were converted to Christianity.

Like the Christian missionaries, the Utilitarian of England also had no sympathy for the purpose of India. **James Mill** was a Utilitarian. He wrote "**History of British India**" which was published in 1817. He divided Indian history into three periods - Hindu, Muslim and British. **He was critical of Indian culture which he called barbarous and anti-rational.** The 'History of British India' was prescribed as a textbook at the Haileybury College and other institutions where English officers were given military training before they were sent to India. The views of James Mill must have affected the minds of those officers against India.

(For more refer to the chapter on **European Imperialism** and **First Indologists**).

Lord Wellesley, Governor General from 1798-1805, whose policy was frankly annexationist, called **Indians, "vulgar, ignorant, rude, familiar, and stupid."**

Heroism of Prithiviraj Chauhan

Prithviraj Chauhan III was the last of the great Chauhan rulers of Ajmer who left a deep imprint in the sands of time and redefined the concept of valour in its noblest form. The legendary Prithviraj lived here and became a force to reckon with. His exploits are related with great wonder and sometimes disbelief. Few rulers of that time could match the charisma and heroism of this dynamic ruler.

Prithviraj was the son of **Someshwara** who died in 1179 A.D. The second Turkish attack was led by Mu'izzu'd-Din Muhammad (also known as Muhammad Ghuri), who conquered Sindh and Lahore in 1182. Soon after, he commenced his attack on the Rajput kingdoms. Prithviraj Chauhan successfully led the Rajputs against Ghuri at the first battle of Tarain in 1191 AD. However, at the second battle in 1192 AD, Prithviraj who became the last **Hindu ruler** was defeated and the kingdom of Delhi fell to Muhammad Ghuri.

Prithviraj Chauhan, king of Delhi, magnanimously let Ghuri off. Legend has it - and it is widely believed in India - that when Ghori eventually succeeded in defeating Prithviraj Chauhan at the Second Battle of Tarain in 1192, he blinded him and took him in chains to Afghanistan along with his friend, the poet **Chandravardai**.

Adhai – din- ka- Jhonpra - Its construction took two and a half days (Adhai-Din) to complete. It was originally a Sanskrit college, built within a temple. In 1193 A.D., Mohammad Ghauri conquered Ajmer and converted the building into a mosque by adding a seven arched wall in front of the pillared hall in just two-and-a-half days (adhai-din) and hence the name.

To this day, Prithviraj Chauhan is remembered by the Rajputs as a model of chivalry and courage, and is the hero of many folk ballads.

Decolonizing Indian Studies ?

An address at North Gujarat University, delivered by **Makarand Paranjpe** of the English department at **JNU. Astonishingly, here is an actual real-life JNU person writing about the need for 'Decolonizing Indian Studies: Attaining Swaraj'.**

He mentions, approvingly, that **Bhartrihari's Vakyapadiya, Panini's Asthadhyayi, and Bharata's Natyashastra have been introduced into the curriculum at JNU.** Amazing that such a thing could ever happen at that last bastion of neo-imperialist Marxist obscurantism, that white elephant devoted to Fabian Socialist-Stalinist ideas that have been thrown in the trash everywhere else. Says Paranjpe: "The point is that the day you

begin to take your own tradition seriously, you begin to get a strength, a grounding, a sense of belonging, a purpose, and an identity... you experience liberation, decolonization... [And] if you are serious about critiquing Indian traditions you first have to read them, you first have to engage with them. This, a lot of us are unable or unwilling to do. We are used to condemnation and repudiation, often mouthing the very words of those who tried systematically to destroy this civilization."

(source: **http://www.rediff.com/news/2001/may/16rajeev.htm**. Refer to chapters on **First Indologists**, **European Imperialism**, **Glimpses VIII**, **Glimpses IX** and **Glimpses X**).

Khakis are from India

While serving in the heat of India, **Sir Henry Lumsden** dyed his pajama bottoms **khaki (Hindi for 'dust')** so he can wear comfortable pants and still look presentable. Khaki is a closely twilled cloth of linen or cotton, dyed a dust color. The color caught on with troops worldwide. Today khakis have made it from World War II to civilian life.

A New Vocabulary

The British during their time in India incorporated into speech many Indian terms that, because of their familiarity and usefulness, made their way to England and beyond. A sampling of 900 words or so adopted from India include:

bandanna, bangle, bungalow, calico, cheroot, chintz, chit, chutney, cot, cummerbund, curry, cushy, dinghy, dungaree, gunny, jodhpurs, khaki, loot, musk, pajamas, pariah, punch, pundit, sandal, seersucker, shawl, shampoo, swastika, thug, tomtom, and veranda.

The Puranas

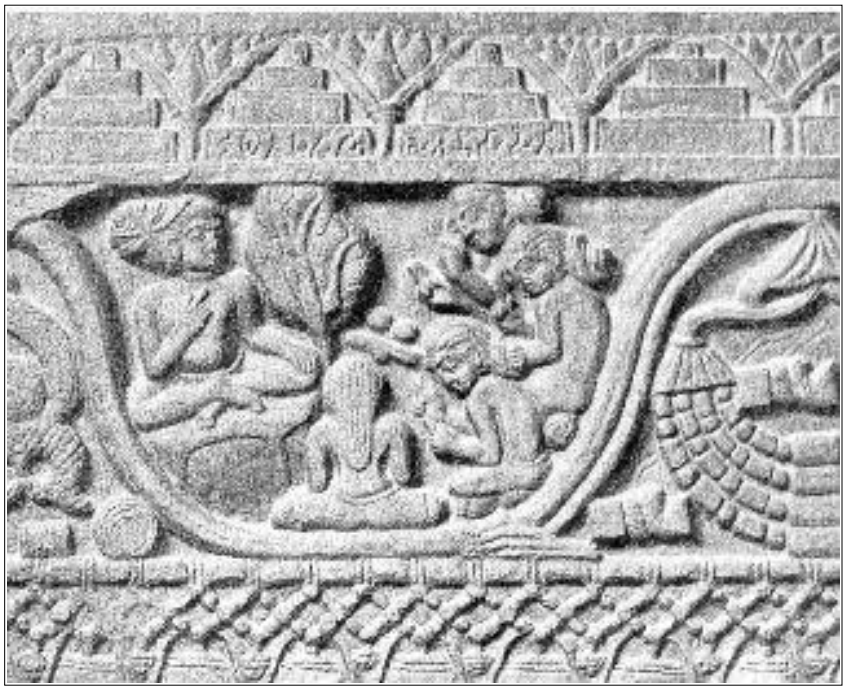
Partition, which the British wilfully and consciously left behind as a parting gift (remember the words of Churchill when he learnt of the chaos following Partition: 'At last, we've had the last word').

It is used to be the general opinion of Western scholars that the Puranas belonged to the

latest productions of Sanskrit literature and came into existence during the last thousand years. However, this view is not accepted today. The Poet **Bana** knew the Purana very well and he tells us that he attended a reading of the Vayu Purana in his native village. Kumarila Bhatt relies on the Puranas as a source of law. Shankara and Ramanuja referred to the Puranas as ancient and sacred text. Arab **Albernuei** was familiar with the Puranas and he gives us a list of the 18 Puranas. There is a lot of common between the Puranas and Latiavistara. The Puranas are 18 in number but all of them are not equally important for historical purposes. As a source of history, we depend largely on the Vishnu Puranas, Vayu Puranas, Matsya Puranas, Brahma Puranas and Bhavishya Puranas. The Puranas start with the rulers who trace their origin from the Sun and the Moon. They describe the various kings who ruled in the Madhyadesh. They give the names of the Puru kings of Hastinapur and the Ikshvaku King of Kosala. The give us details about Sisunaga Kings and Nanda Kings.

Dr. V. A. Smith has shown that the Vishnu Puranas is reliable as regards to the Mauryan dynasty and the Matsya Purana is reliable as regards to the Andhra and Saisunaga dynasties. the Vayu Purana describes the rule of the Guptas as it was under Chandragupta I. At the end of the list of kings certain Puranas give a series of dynasties of low and barbarian origin such as Abhiras, Gardabhas, Sakas, Yavanas, Tusaras, Hunas etc...

The Puranas can be used for the purpose of building up the history of ancient Indian geography. In them, we come across the names of very many cities which existed in their times. The distances between cities is mentioned as well as names of rivers and mountains.



There is a tendency among modern scholars to belittle the value of the information found in the Puranas. It has been suggested that the genealogies of the Puranas were invented by some fertile brains. However, there is nothing to support such a view. The Pauranikas profess to tell the truth and they had nothing to gain from kings and their descendents who were already dead and gone. **Most western scholars seem to suffer from the old prejudice against the Puranas dating from the time of Lord Macaulay. It is high time that the scholars give up their prejudices and give the Puranas a due place as a source of ancient Indian History.**

(source: **Ancient India - By V. D. Mahajan** p. 19-21).

Education in Ancient India

Education in India has always been regarded as one of the basic inputs in human resource development. In the ancient days, the *Gurukul* system of education was prevalent. The teacher was the *Guru* and the disciple was the *Sishya*. The disciples lived in the Guru's *aashram* during the course of their training and in turn offered their services to the ashram. This period of learning of, about 12 years, was considered as a great sacrifice or a penance. The Guru identified the capability of his Sishya and accordingly imparted knowledge. The sishyas learnt amidst the natural surroundings of the ashram, in open air, in close contact with nature. The Kings sent their Princes to Gurus for training on the art of using weaponry, *vedas*, music, art and physical forms of exercising & defence. At the end of their training, the disciples thanked their Gurus with a gift in the form of a *gurudakshina* - which literally means "offerings to the Guru".

One of the most popular cultural institutions in India which still follows the *Gurukul* system is *Shanthiniketan* near Calcutta which was established by the great teacher, artist, philosopher and literary laureate *Rabindranath Tagore*. *Kalakshetra* in Madras, established by the great dancer *Rukmini Arundale* too follows the Gurukul system. To-date, a teacher in India is regarded as a Guru, a master in his discipline.

One of the most ancient universities of India is in *Nalanda* near Patna. Founded in the 5th Century AD, this great seat of learning flourished until the 12th century AD. Gautam Buddha and Parsvanath Mahavir are believed to have visited Nalanda. The Chinese chronicler Huen Tsang spent many years here both as a student and as a teacher. *Nagarjuna*, the Buddhist Mahayana philosopher, *Dinnaga*, the logician and *Dharmapala*, the Brahmin scholar taught here. At one point of time about 2000 teachers and 10,000 students crowded the portals of Nalanda University. Besides religious texts, students in the ancient universities learnt about *Ayurveda* (Medicine), *Ganitha* (Mathematics), *Arthashastra* (Political science), *Jyothisha* (Astrology), *Vyakarna* (Grammar), *Shilpathana Vidya* (Art and Crafts), and *Adyatma Vidya* (Philosophy).

(source: http://www.geocities.com/tokyo/shrine/4287/education.htm - For more on education, please refer to chapter on **Education in Ancient India**).

Christians are also proud that they brought education to India, "but," counters **Sri Sri Ravi Shankar**, Founder of the Bangalore based Art of Living, an International Foundation. He recently addressed the UN Peace Summit on Aug 28. He is the only non-westerner to serve on the advisory board of Yale University's School of Divinity and is author of the book - **Hinduism and Christianity**:

"it is not true: there were for instance 125,000 medical institutions in Madras before the British came. Indians never lacked education, the Christians only brought British education to India, which in fact caused more damage to India by westernizing many of us."

Sri Aurobindo has commented on the state of education: "In India...we have been cut off by a mercenary and soulless education from all our ancient roots of culture and traditions..."

(source: **India's Rebirth - By Sri Aurobindo** Publisher: Mira Aditi ISBN 81-85137-27-7 p 65).

In the Round- table conference in 1931, **Mahatma Gandhi** in one of his speeches said, **"The beautiful tree of education was cut down by you British. Therefore today India is far more illiterate than it was 100 years ago."**

(For more refer to chapter on **European Imperialism**).

Gupta period - The Classical Age in India

According to (Marxists) historian **Romila Thapar**, the Gupta Age as the Classical Age of ancient India is true so far as the upper classes are concerned, amongst whom standards reached a peak never before attained. **Dr. D. N. Jha** has also concluded: " For upper classes, all periods in history have been golden: for the masses, none. The true golden age of the people does not lie in the past, but in the future.

In the light of what has been stated by **V. A. Smith, Dr. R. C. Majumdar, Dr. M.A. Mehendale, and Prof. R.N. Dandekar** in the support of the view that the Gupta period was the Golden Age of Indian history, the criticism of Romila Thapar and Dr. D.N. Jha does not seem to be convincing. (Both Thapar and Jha are known for their Marxist interpretation of Indian history). Moreover, Dr. Sriram Goel points out that main emphasis of the critics is on the point that prosperity and culture of the Guptas did not reach certain classes and certain areas.

According to Dr. Goyal, those critics have shown, the mentality of a drain inspector who concentrates merely on certain shortcomings in a system. They have tried to misinterpret and distort certain facts. Dr. Goyal points out that the benefits of progress does not reach all the regions in any country or society. Such a thing did not happen even in Athens in the Periclean Age. It did not happen in the Age of Elizabeth.

Prayer in US Schools Doesn't Mean Christian Prayer

A frequent proposal from the Christian Right in America is for a constitutional amendment

to allow voluntary prayer in public schools. Proponents will cite results from the Gallup poll, such as at "source," which show 78% of Americans support such an amendment. What they don't usually cite is the response to this question Gallup also posed: "Suppose spoken prayers were allowed in the local public schools. Do you believe that the prayers should be basically Christian, reflecting Christian beliefs and values, or should the prayers reflect all major religions, including Christianity?" 76% say the prayers should "reflect all major religions" and only 18% say basically Christianity. So if the amendment ever does pass -- a very unlikely scenario -- Hindu and Buddhist prayers would be just as eligible for the classroom as anything from Christianity.

(source: **http://www.hinduism-today.com/#3**).

Vijayanagar - the splendor

Of all the kingdoms of the south, Vijayanagar was the finest with the longest history. It was founded in 1336 and was visited by Italian **Nicolo Conti** who came in 1420; **Abdur-Razzaq of Herat**, in 1443; and **Paes**, a Portuguese, who visited the city in 1522. Abdur-Razzaq from central Asia wrote of a temple made of pure molten brass: "It was 15 feet high, and 30 feet high by 30 at its base." He goes into ecstasies over the city" "The city is such that eye has not seen nor ear heard of any place resembling it upon the whole earth."

Krishnadeva Raya

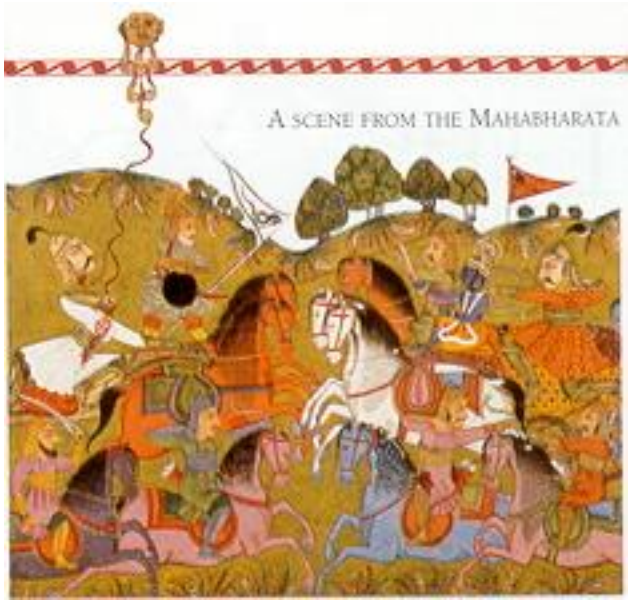
Paes, who came in 1522, describes it: **"The city of Vijayanagar, is as large as Rome and very beautiful to the sight."** He describes at length the wonders of the city, and the charms of its innumerable lakes and waterways and fruit gardens. It is the best-provided city in the world...for the sate of the city is not like that of other cities, which often fail of supplies and provisions, for in this everything abounds." He also describes the great ruler of Vijayanagar at the time of his visit. He was one of the great rulers of South Indian history, and his reputation as a great warrior, and as one who was chivalrous to his enemies, as a patron of literature, and a popular and generous king, still survives in the south. His name was **Krishna Deva Raya**, and he ruled from 1509-1529. "Great irrigation works were erected about 1400 to bring good water to the city. A whole river was dammed up and a big reservoir was made. From this the water went to the city in an aqueduct, 15 miles in length, often out of the solid rock.

Other descriptions of Vijayanagar: " The opulent palaces, the magnificent temples and the massive fortifications appear very natural among the rock formations, as if they have just grown out of these theatrical, barren, craggy surroundings. A foreigner said of the stones: ``they are piled one block on another in a manner most singular, that it seems as if they stood in the air, not connected with each other''.

" One of the finest is the **Hazara Rama** temple, an exquisite structure for private worship of the Vijayanagar kings. Standing within a walled enclosure, it exudes an air of elegant serenity either when the moonlight softly washes over the friezes, or when it glows in the sunlight. The herds and bands of elephants, horses, dancing girls and musicians, and scenes from the Ramayana come alive on the outer walls of the temple. The eye lingers

on the fine features of a musician, or the graceful limbs of a dancing girl or the noble prancing of a caparisoned steed. Inside, the four black polished pillars invite you to run your fingers over their smoothness. Their geometrical square blocks alternate with cylindrical shafts, all luxuriantly carved in tangible loveliness."

"The large stone chariot in the Vithala temple is a marvelous testimony to the skill of the stone carvers - its wheels can rotate on the axle. The carved pillars in the **Hall of Musical Pillars** resound like musical instruments. The Hampi ruins include the monolithic statues of Ugra Narasimha (Vishnu's incarnation of the man-lion creature), badly mutilated by the invading Moghul armies and Ganesa. The 22 ft. high statue of Narasimha had Lakshmi seated on his thigh - unfortunately it was hacked to pieces. The **Virupaksha temple** has beautiful gopurams, and on the way there is the King's Balance on which he was weighed against gold and diamonds which were then distributed to the people."



In a series of wars Rama Raja completely defeated the Bijapur ruler to inflict humiliating defeats on Golconda and Ahmadnagar. It seems Rama Raja had no larger purpose than to maintain a balance of power favourable to Vijayanagara. The five broken Bahamani kingdoms, did a combined crusade on Vijayanagara at Bannihatti in 1565 and in the battle of Rakshasa-Tangadi, Rama Raja was surrounded, taken prisoner and immediately executed and this brought an end to the Best Empire of the South. **It was thoroughly looted and left in ruins.**

Is India Civilized?

Is India Civilized: Essays on Indian Culture a book under this rather startling title was published some decades ago, by **Sir John Woodroffe**, the well known scholar and writer on Tantric philosophy. That well known dramatic critic, **Mr. William Archer**, leaving his safe natural sphere for fields in which his chief **claim to speak was a sublime and confident ignorance, assailed the whole life and culture of India and even lumped together all her greatest achievements, philosophy, religion, poetry, painting, sculpture, Upanishads, Mahabharata, Ramayana, in one wholesale condemnation as a repulsive mass of unspeakable barbarism.**

It is argued by many at the time that to reply to a critic of this kind was to break a butterfly, or it might be in this instance a bumble-bee, upon the wheel. What he has done is to collect together in his mind all the unfavorable comments he has read about India, eke them out with casual impressions of his own and advance this unwholesome and unsubstantial compound as his original production, although his one genuine and native contribution is the cherry cocksureness of his second-hand-opinions. The book is a journalistic fake, not an honest critical production.

Both materially and spiritually Europe has thrown herself repeatedly upon Asia, to conquer, assimilate and dominate. India, is the quintessence of the Asiatic way of being.

(source: **The Foundations of Indian Culture - By Aurobindo** p. 1-45).

For Europeans Only

In his **Discovery of India** (written in 1943), **Jawaharlal Nehru** recorded how humiliating he had found it always to see posted in railway carriages, in station waiting rooms, on park benches, and in other places the exasperating sign "For Europeans Only." He added:

"The idea of a master race is inherent in imperialism. There was no subterfuge about it; it was proclaimed in unambiguous language by those in authority. More powerful than words was the practice that accompanied them, and generation after generation, and year after year, India as a nation and Indians as individuals were subjected to insult, humiliation, and contemptuous treatment....The memory of it hurts, and what hurts still more is the fact that we submitted for so long to this degradation."

Nehru has remarked: **"In India every European, be he German, or Pole or Rumanian, is automatically a member of the ruling race. Railway carriages, station retiring rooms, benches in parks, etc. are marked 'For Europeans Only.' This is bad enough in South Africa or elsewhere, but to have to put up with it in one's own country is a humiliating and exasperating reminder of one's enslaved condition."**

Great Zimbabwe (Africa) and Eurocentrism

If it was great, it must have been white: If advanced science, art, or architecture is found in Africa or South America, then Phoenecians, Greeks, Celts, Vikings must be

invoked to explain their presence.

Alluding to the way in which the spectacular stone ruins of Great Zimbabawe (zimbabwe means "stone enclosure") were viewed as Phoenician creation, **M. Posnansky** (1982) refers to "the notion that what was advanced in Africa's past was the work of outside invaders, merchants or metal-workers, variously derived from Phoenicia, Israel, India and Indonesia." He adds that

"this was an idea that was extremely attractive to the White community that at no time amounted to even 10 per cent of the total population of Rhodesia. It served to justify their depreciation of the Black capabilities and past achievements and their occupation of more than half of the best agricultural land. The preservation of White civilization ultimately retarded the discovery of Black civilization and hampered the progress of archaeology."

About the 11th century AD the first stone building began, and this rapidly developed into a distinctive and impressive architectural style. Stone building reached its first peak in the city of Great Zimbabwe, which was built between the 11th and 15th centuries. Several attempts by people to argue for an early external origin for Great Zimbabwe. Archaeologists and historians believe that from the 13th to 15th centuries Great Zimbabwe was the capital for a large area in southern Africa. Throughout this region there are smaller but similar madzimbabwe. The site Great Zimbabwe covers over 1779 acres and comprises mainly stone wall enclosures and areas of hut remains. Because of the wealth of Zimbabwe and the importance of Sofala as a trading city, the Zimbabweans from 1000 AD onwards were exposed to **Indian,** Chinese, and Persian crafts and culture.

France's love affair with Shiva continues

Shiva, the Hindu god of destruction, continues to fascinate the French literary world that has already seen the publication of numerous books on him. Two more books on differing aspects of Shiva have joined the list. "Le religion de Shiva" (The religion of Shiva) has been written by renowned Sanskrit

scholar, N. Ramachandra Bhatt. Bhatt, who has exceptional understanding of the Sanskrit texts, has explored in depth ancient texts and through it studied history in a scientific line," says the preface of the book.

The second book, written by Catherine Clement, a renowned French writer and wife of a former French diplomat who had served in India, deals with Varanasi, a city closely related to Shiva. "Le religion de Shiva," translated into French by **French Sanskrit scholar Pierre-Sylvain Filliozat** and published by Editions Agamat, tries to explain Hinduism through the famed temple art of South India in the medieval ages. Bernard Bouanchaud, owner of Editions Agamat, an Indophile, says he fell in love with India during his first visit to the country over 30 years ago and since then he has been in regular contact with India and its philosophy, spirituality and religion.

Languages - survival of the fittest?

Sanskrit — never a mass language — is being used by fewer and fewer people. For centuries, it has turned into an ossified artefact used only by Hindu priests on duty or finance ministers showcasing their aesthetic prowess. By trying to impose Sanskrit on school and college syllabi, the government has made noises about resuscitating a dead language. While the immediate parallel to Sanskrit is Latin — used on occasions to show erudition — one must not forget the Israeli experiment of resurrecting Hebrew. While the task of making a new nation speak a forgotten tongue had more to do with the construction of a national identity rather than linguistic preservation, Hebrew today is alive and kicking.

Taj Mahal: A stable?

R P Anand, professor of international law at JNU, writes:

"In the 19th century, the Britishers had turned the Taj into a stable. It also wanted to take it apart to sell the marble..."

Diamonds of India

Hope Diamond

The "Great Blue Diamond", the Hope is also called the "cursed diamond" because it is said to have brought nothing to its possessors but tragedy. Nothing is further from the truth. A jewel trader, **Jean-Baptiste Tavernier, purchased it in India** and sold it in 1669 to Louis XIV, who had it cut into the heart shape, which reduced its weight from 112 to 68.8 carats. Later, the stone was stolen, and it came into the possession of the British banker Philip Pierre Hope in 1830. Via Sultan Abdul-Hamid, the Paris jeweler Pierre Cartier, and the newspaper magnate William McLean, the Hope diamond landed in the United States. In 1958, a diamond dealer Harry Winston donated it to the Smithsonian Institute where it is now on display. The stone was sent to the Institute by ordinary mail.

The Daryinoor

The Crown Jewels of Iran are considered to be the finest in the world-exceeding even those of the United Kingdom and Austria-Hungary. Along with the Noor-al-Ain, Precious Light, the Darya-I-Noor once formed the world's largest pink diamond, the Great Table. A centerpiece of the Crown Jewels of India, the Darya-I-Noor was brought to Iran by the great conqueror Nadir Shah where it became the most spectacular gem in the considerably imposing collection. Considered the sister of the Kohinoor, Mountain of Light, the Darya-I-Noor was reunited with its real sibling in 1959 when the Shah purchased the Precious Light diamond for a wedding tiara. Because of its legendary origins, its rank as one of the world's largest diamonds..

The Orlov

The Orlov diamond, originally called the Sun of the Sea, **once decorated a Hindu temple statue.** A French deserter stole it and sold it in Madras to a British sea captain, who in turn, sold it to a Jew who passed it on to a Persian. This man met Count Grigory Grigoryevich Orlov, a rejected lover of Catherine II the Great, who bought the Sun of the Sea for 400,000 rubles, a fabulous sum at the time. Although the Empress accepted the gift, her love was not reawakened. The Count died in an institution for the mentally ill. It may be a comfort to him that

the diamond now bears his name. It is now in the Kremlin, mounted on the imperial scepter.

The Shah of Persia

Nadir Shah of Delhi, India, owned this 99.52-carat, yellow, cushion shaped diamond in1739. It was believed that the diamond was presented to General V.D. Starosselky, a Russian military expert for his excellent command of the Persian army. The general brought the diamond to America. The diamond is mounted in a pendent brooch with 72 smaller diamonds. For a long time, this pendent was owned by Carl D. Lindstrom, a Los Angeles gems dealer. Harry Winston, a New York City gem dealer bought it in 1957.

The Pigott

Supposedly, this diamond weighed form 47 to 85.80 carat, it is a fine quality Indian diamond. Named after Baron George Pigott who **acquired it in 1775 from an Indian Prince**, this diamond changed hands several times, ending finally in the hands of Ali Pashas, ruler of Albania in 1818 for $150,000.

He carried it around in a small bag and seldom showed it to anyone. The Sultan of Turkey, over lord of Albania, became envious of Ali's popularity and sent his army to capture Ali. During the fighting, the 80-year-old Ali was fatally wounded, he ordered his captain to his side, gave him the diamond and asked him to smash it right there and then.

The Great Mogul

When found the Great Mogul Diamond weighed 787.50 carat in the rough. After it was cut into a rose cut diamond it weighed only 280 carats. T

he owner of the stone, Emperor Shah Jahan, who is also the builder of the Taj Mahal fired and fined the cutter $10,000 (the cutter's entire fortune) for doing such a poor job. The whereabouts of this diamond is unknown.

(source: **Diamonds of India - Hindustan Times).**

India has lost the great **Kohinoor Diamond, marble bath of Shah Jahan and the Amravati marbles.**

(For more refer to chapter on **European Imperialism**).

Persecution Forcing Hindus to Flee Pakistan

Religious persecution and violation of human rights are forcing Hindus in Pakistan to flee to India, a Pakistani migrants association said today. Each month groups of persecuted Hindus are coming to India in the hope of a better future, but they face a tough time due to the lack of a refugee policy in the country, the Visthapit Sangh said. There are 17,000 Hindu refugees who have yet to get Indian citizenship. Five thousand of them live in Jodhpur alone. Many of those who arrived in India as refugees in 1965 have also not received citizenship, convenor of the Sangh, Hindu Singh Sodha, told reporters. Others are scattered in Barmer, Jaisalmer, Jalore and Pali districts. He said the Centre should amend the Citizenship Act and fix a time limit for granting citizenships. He also said the government should review the rehabilitation policy prepared in 1978 for those living in camps after leaving Pakistan in 1965 and 1971.

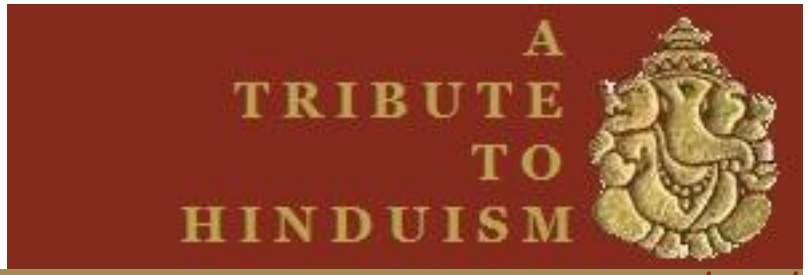
Did You Know?

Kaliyug - The Age of Kali

According to Vedic scriptures, we are now living in the kaliyuga, the age of Kali. We are given to using the term kaliyuga quite freely and frequently, not quite knowing its import or significance. In the cosmic timetable, kaliyuga is the last of the four yugas (ages) - satyayuga, tretayuga, dwaparyuga and kaliyuga - called chaturyuga. The duration of kaliyuga is said to be 432,000 years; of dvaparayuga 864,000 years; of tretayuga 1,296,000 and of satyayuga 17,280,000 years. Kaliyuga is so called because it is dominated by Kali, the embodiment of evil.

The abysmal low that human values would descend to in kaliyuga is vividly described in the twelfth canto of the Srimad Bhagavatam. The purana forecasts that in kaliyuga people will succumb to the rule of barbarians who will be steeped in adharma and untruth, and the yuga will be calamitous for the whole of mankind. All good human qualities and values will decay; might will be right; wealth will signify goodness; business will tantamount to cheating and fraud; people will live to eat and not eat to live; they will observe false dharma; rulers will be unrelenting thieves; humans will behave like animals; leaders will perpetuate rule by their children;

adultery will be rampant; adharmic persons will preach dharma; people will fight over trivialities; old and infirm parents will be abandoned as will old and dry cows; atheism will be widespread and people will mock those who utter the name of God.



In the Kalisantarana Upanishad it is stated, "To save oneself from the contamination of Kali there is no alternative but the chanting of the names of the Lord".It is said that spiritually inclined people in other yugas who seek liberation, pray to be born in kaliyuga to take advantage of this bright silver lining. Even though it is simple and easy, not many are able to follow this method because of the damning influence of Kali. The story goes that when Kali was once confronted by a sage and told that his days were numbered because people would be able to escape his scheming ways simply by remembering the Lord, shrewd Kali replied, "That is if I let them!".

Did You Know?

Sri Krishnaprem Vairagi (1898-1965) **was a Foreign Guru:**

It is rare to find a foreigner accepted as a guru by native Hindus. First of these was the man who became known as **Krishnaprem**. Born Ronald Nixon in 1898 in Cheltenham, UK, he studied classics and science at Cambridge and served as a fighter-pilot in World War I. He later came in contact with the Theosophical Society. He became the disciple of Yashoda Ma, and began to lead the very austere life of a Vaisnava vairagi (renunciant). He studied Sanskrit and Pali and wrote several book, appreciated by scholars and seekers alike. He died in 1965. Hundreds came to carry his body to the burial grounds.

He used to say **'I have won Him, my Krsna!'.**

The Soul:

" It is never born, nor does it die: after coming to be, it does not cease to be; it is without birth, eternal, imperishable and timeless; it is not destroyed with the destruction of the body."

- Lord Krishna from the Bhagavad Gita.

God:

"He is the One, the One alone. In Him all deities become one."

- declares the Artha Veda.

Incarnation:

"Whenever there is decline of righteousness and predominance of unrighteousness, I embody Myself. For the protection of the good and for the destruction of evil-doers and for the re-establishment of dharma (righteousness) I am born from age to age."

- Lord Krishna from the Bhagvad-Gita.

Liberation:

O Lord, liberate our souls
From the shadows of birth and death,
Not from our aspirations
of existence i.e. immortality.

— Yajurveda, 3.60

One reality:

" Tat twam asi" meaning "That thou art."

- from the Upanishads.

Sin:

"Even if thou art the worst of sinners, thou shalt cross the ocean of sin by the bark of wisdom."

- Lord Krishna from Bhagvad Gita.

Creation:

"None knoweth whence creation has arisen, and whether He has or has not produced it. He who surveys it in the highest heavens, he only knows, or perhaps he knows not."

- from the Hymn of Creation, Rig Veda.

Humanity

"To you, I declare this holy mystery,
there is nothing nobler than humanity"

Guhyam brahma tad idam vo bravini
Na manusat sresthataram hi kincit.

- Mahabharat XII, 300-20)

Life:

"Life is a bridge, enjoy while crossing but don't build a castle on it."
- Upanishads.

"Do good deeds with a sense of urgency, Before death's approaching rattle strangles the tongue.

What wondrous greatness this world possesses that yesterday a man was, and today he is not."
— From the Tirukural, 335-36

Happiness:

"In the finite there is no happiness. The Infinite alone is happiness."
- Upanishads

"That Light which is
residing in the Sun and
which illumines the whole world, and that which is in the moon and in the
fire - know that
Light to be Mine.
- Lord Krishna in Gita 12

River Ganges:

" The Ganges fell from Heaven and her fall was softened by the long locks of Lord Shiva."

Seeking God:

Who sees me in all things, and all things in me, he is never far from me, and I am never far from him."
Lord Krishna in Bhagavad Gita

The City of Benares:

Are there not many holy places on this earth?
Yet which of them would equal in the balance one speck of Kashi's dust?
Are there not many rivers running to the sea?
Yet whcih of them is like the River of Heaven in Kashi?
Are there not many fields of liberation on earth?
Yet not one equals the smallest part of the city never forsaken by Shiva
The Ganges, Shiva, and Kashi: Where this Trinity is watchful, no wonder here is found the grace tha leads one on to perfect blisss.
- Kashi Khanda

DA-DA-DA: datta, dayadhvam, damyata

Be Self Controlled!
Give!
Be Compassionate!

- Brihadaranyaka Upanishad (Chapter 5)

Faith and Belief

A man of faith, absorbed in faith, his senses controlled, attains knowledge, and, knowledge attained, quickly finds supreme peace. But the ignorant man, who is without faith, goes doubting to destruction. For the doubting self there is neither this world, nor the next, nor joy.
- Bhagavad Gita 4.39-40

"If men thought of God as much as they think of the world, who would not attain liberation (moksha)."
- Maitri Upanishad 6.24

Yugas:

One who lies down is Kali
One who awakes is Dvãpara
One who stands up becomes Tretã
And one who moves on realises the Satya Yuga.
Therefore move on!
- Aitareya Brãhmana

divine:

By divine, we mean the following --
Absolute (Eternal) Existence
Absolute Knowledge
Absolute Bliss
Absolute Freedom

Message from the Gita:

Whenever there is a decline in
Dharma,
And a rise in Adharma,
I incarnate Myself,
For the protection of the good,
For the destruction of the wicked.
For the establishment of Dharma,
I come into Being from age to age.
- Bhagavad Gita IV, 8

Karma:

It is karma that brings joy or sorrow
Willing or unwilling, we live by our karma.
Observe the potter shaping his pots:
Some break on the wheel,
Some crack after removal from the wheel,
Some spoil when wet, some when dry,
Some burst while being fired
Some after removal from the kiln,
Some shatter in use...
So some of us die in the womb
Some immediately after birth,
Some a fortnight later, some a month,
Some in youth, some in middle age, some in old.

Their karma determines it all.
This is the way of the world is -
So what is the point of grieving?
Swimmers dive,
then emerge from the water;
So creatures sink into
and emerge from the stream of life.

-The Mahabharata of Vyasa (The Eleventh book: The Women)

Gayatri Mantra:

OM BHOOR BHUVAHA SWAHA TAT SAVITUR VARENYAM BHARGO DEVASYA DHEEMAHI DHIYO YO NAHA PRACHODAYAAT

ॐ भूर्भुवः स्वः
तत्सवितुर्वरेण्यं
भर्गो देवस्य धीमहि
धियो योनः प्रचोदयात्।

"O God, Thou art the giver of life, the remover of pain and sorrow, the bestower of happiness; O Creator of the Universe, may we receive thy supreme, sin-destroying light; may Thou guide our intellect in the right direction." Gayatri Mantra is an adoration of the effulgence of the Sun

Moksha:

"Those who meditate on Me and Worship Me without any attachment to anything else, As Lord Krishna said in the Gita: " those I soon lift from the ocean of death".

Creation:

"Creation is only the projection into form of that which already exists... The atoms of the universe may be counted, but not so my manifestations; for eternally I create innumerable worlds." Srimad Bhagavatam, III.2, XI.10

" There is no existence for the unreal and the real can never be non-existent. The Seers of Truth know the nature and final ends of both. Know That to be indestructible by which all this is pervaded. No one is ever able to destroy that Immutable. These bodies are perishable; but the dwellers in these bodies are eternal, indestructible and impenetrable. Therefore fight, O descendant of Bharata.

He who considers this Self as a slayer or he who thinks that this Self is slain, neither of these knows the Truth. For It does not slay, nor is It slain. This Self is not born, nor does It die, nor after once having seen, does It go into non-being. This Self is unborn, eternal, changeless, ancient. It is never destroyed even when the body is destroyed. - From the Bhagavad Gita II.16-20

As milk is spontaneously changed into curd and water into ice, so Brahma modifies Itself in diverse ways, without the aid of instruments or external means of any kind whatever. Thus the spider spins its web out of its own substance, subtle beings take diverse forms, and the lotus grows from marsh to marsh without organs of locomotion. - From the Brahma Sutra II.1

The yon is fullness, this.
From fullness, fullness doth proceed.
Withdrawing fullness's fullness off,
E'en fullness then itself remains. - Brihadaranyaka Upanishad

God's definition:

" God sleeps in the rocks, proclaims the Hindu scriptures, "dreams in the plants, stirs toward wakefulness in the animals, and in mankind is awake to his own ego individuality."

Respect for Mother Earth:

"O Goddess Earth, the consort of Visnu,
you whose garments are the oceans and
whose ornaments are the hills and mountain ranges;
please forgive me as I walk on you this day."

****

" One who has attained mastery over his mind is indeed a greater conquerer than one who has vanquished a thousand enemies."
- Gautama Buddha

Nourishing Steps:

May God come and reside in our hearts;
May our body be the temple of God.
May He feed freely upon the harvest of our actions as the cows graze in the pasture.
May we reap the harvest of our life and dedicate all at His feet,
May we ever remain His true servants.
- Rig Veda 1.91.13

Four Yugas:

" One who lies down is Kali
One who awakes is Dvãpara
One who stands up becomes Tretã
And one who moves on realises the Satya Yuga.
Therefore move on!"
- Aitareya Brãhmana

Shanti Mantrams:

Swasti prajabya paripalayantam nyayena margena mahim mahisha goh brahmananasya subham bhavatu loka samasta sukhino bhavantu. sarve jana sukhino bhavantu.. Om Shanti Shanti Shanti."

" O God - Give the ruler of the Land Good Ideas and make him follow the path of truth. Let the pious animal - cow and pious human - brahmin (Cow is not selfish and a true brahmin is not selfish) live happily.. let all the living organisms in all lokas have a peaceful life. "

Brahma - By Ralph Waldo Emerson
http://www.it.cc.mn.us/literature/brahma.html

(source : Our Oriental Heritage - By Will Durant pg 415)

If the red slayer thinks he slays,
Or if the slain thinks he is slain,
They know not well the subtle ways
I keep, and pass, and turn again.

Far or forgot to me is near
Shadow and sunlight are the same
The vanished gods to me appear;
And one to me are shame and fame.

They reckon ill who leave me out;
When me they fly I am the wings;
I am the doubter and the doubt,
And I the hymn the Brahman sings.

Lord Krishna describes himself:

I am the conscience in the heart of all creatures
I am their beginning, their being, their end;
I am the mind of the senses,
I am the radiant sun among lights;
I am the song in sacred lore;
I am the king of deities;
I am the priest of great seers;
Of words, I am the eternal *OM*,
the prayer of sacrifices
I am the measure of what endures
I am the chief of divine sages,
leader of celestial musicians.
I am the recluse philosopher among saints.
I am the thunderbolt among weapons
among cattle, the Kamadhenu
I am the procreative god of love
I am the endless cosmic serpent,
the lord of all sea creatures;

I am the chief of the ancestral fathers.
I am gracious Siva among howling storms.
Of restraints, I am death,
Of measures, I am time.
I am the purifying wind.
I am the cleansing Ganga
Of sciences, I am the science of the self;
I am the dispute of orators.
I am victory and resolve,
the lucidity of lucid men.
I am the brilliance of fiery heroes.
I am the morality of ambitious men;
I am the silence of the mystery
I am the seed of all creatures
I am the death destroyer of all.

-- Shrimad Bhagavad Gita

Sacred River:

O Mother Ganga, may your water,
abundant blessing of this world,
treasure of Lord Shiva, playful Lord of all the earth,
essence of the scripture and
embodied goodness of the gods,
May your water, sublime wine of immortality,
Soothe our troubled souls.

One Reality:

Into the bosom of the one great sea
Flow streams that come from hills on every side
Their names are various as their springs,
And thus in every land do men bow down
To one great God, though known by many names.

- A South Indian folksong. (The Folks Songs of Southern India By Gover 1871 p. 165)

Vande Mataram!
(The song is composed for Real Audio 4.0 format.)
http://www.bjp.org/vande.htm

Sujalam , Sufalam, Malayj Sheetalam,	I bow to thee, Mother, richly-watered, richly-fruited, cool with the winds of the
Sasyashyamalam, Mataram !	south, dark with the crops of the
Shubhrajyotsna Pulakitayaminim,	harvests, the Mother! Her nights rejoicing in the glory of the
Pullakusumita Drumadal Shobhinim,	moonlight, her lands clothed beautifully with her trees in flowering
Suhasinim, Sumadhur Bhashinim,	bloom, sweet of laughter, sweet of speech,
Sukhadam, Vardam, Mataram !	the Mother, giver of boons, giver of bliss.

(Composed by Bankim Chanda Chatterji**)**

(The English translation of the stanza rendered by Sri Aurobindo)

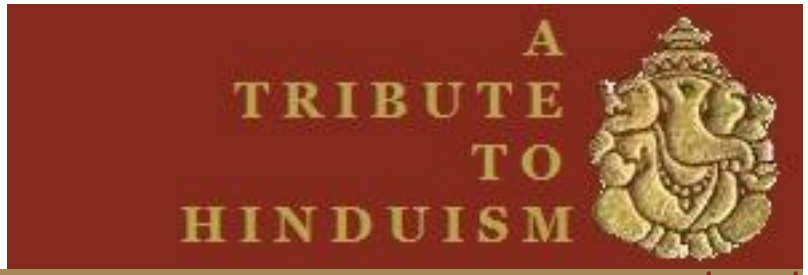
Did You Know?



475,000 Devotional Songs?

Purandaradas (1484-1564), the famous bhakti poet and musician, is credited with having composed 475,000 devotional songs. He also standardized **Carnatic** music for teaching and pioneered a system of notation still used today. The first raga, musical scale, is believed to be the Hindustani Bhairav, equivalent to the Carnatic Mayamalvagoula, which Purandaradasa instituted as the scale that singers begin their study with. This raga is said to have emanated from Lord Shiva.

Did You Know?

Cow Dung is antiseptic! Not only is it free from bacteria, it does a good job of killing it. India's cows produce more than 800 million tons of dung every year. Most is used as fertilizer and some to prepare **vibhuti,** holy ash. Dried dung is odorless, and produces a slow, even heat. Additionally, smoke from a dung fire keeps flies away and acts as a mosquito repellent. Packed on the outside walls of a house, cow dung acts as an insulator, keeping heat out in the summer and holding it inside in winter.

India Losing on Patents ?

Indraprasth, Dec 8 (UNI) - **After Neem, turmeric and jamun, now it is cow's urine, traditionally used for medicinal purposes in India, which has been patented in the United States as a distilled bio-enhancer.**

The government was aware of this fact and was considering the steps to be taken in this regard, official sources said here.

Cow's urine is a component of 'Panch Gawya,' a mixture of cow's milk, curd, ghee, urine and dung, used from ancient times as a component of food and medicine. It is also used in various ayurvedic medicines.

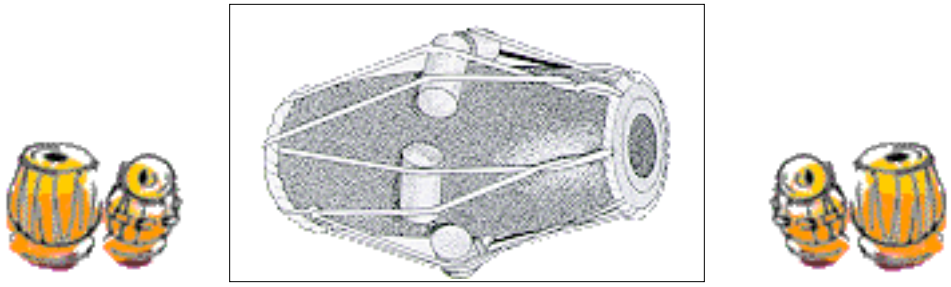
Though there was no separate strategy for popularizing use of Panch Gawya, it was being popularised as part of

the popularisation of the Indian System of Medicine and Health medicines, they said.

Now with the patenting of Cow's urine has confirmed the belief of naturopaths that it has got medicinal properties which enhances the life span. Former Prime Minister Morarji Desai was among the staunch supporters of cow' urine.

Earlier, the patenting of turmeric and neem in the US had created a furore in the country as people protested the patenting of traditional Indian knowledge abroad.

Recently, the **Jamun fruits that has been widely used in the Indian system for treatment of diabetes, has been patented in the US.**



(source: **Cow's urine patented in US as bio-enhancer - The Hindu** December 6' 02).

Holy cow!

A US patent has been granted to Indian scientists on the use of cow urine distillate as bio-enhancer. A combination of Indian traditional wisdom and modern science led to the unique US patent No 6,410,059 granted on June 25, 2002. The patent has been granted for a pharmaceutical composition containing an antibiotic and cow urine distillate in an amount effective to enhance the anti-microbial effects of antibiotic and anti fungal agents. The invention relates to a novel use of cow urine as activity enhancer and availability facilitator for bioactive molecules, including anti-infective and anti-cancer agents. The invention has direct implication in drastically reducing the dosage of antibiotics, drugs and anti-cancer agent while increasing the efficiency of absorption of bio-active molecules, thereby reducing the cost of treatment and also the side-effects due to toxicity. The use of cow urine is known for a long time in India. Gaw-mutra (cow's urine) has been described as a substance with innumerable therapeutic values in **Sushrita Samhita** and **Ashtanga Sangraha**. However, the biological activity of cow's urine was not tested scientifically.

Comments: Thanks for this Excellent Site. I am a Dutch man and already during my studies of Psychology I was never satisfied with the contemporary approach in the West. Always I had the feeling that there is such an immense amount of ancient knowledge in India. Books like 'the tao of physics' and 'Dancing wu li masters' opened a way for me. Later I started reading books on Buddhism and Hinduism, Advaita, Chatterji ' Wisdom of the Vedas' and so much more. And I know now that my feeling was correct. What we in the West have been taught at school and at the University, is so incomplete and incorrect at times. In short I am so happy with your site. It is a great portal to a much wider world view!

Comments: I am currently a student in the United States. This Internet publication has taught me much about my culture, my heritage, and my religion. I am extremely fascinated learning about Hinduism, the dominant religion of India that emphasizes dharma with its resulting ritual and social observances. Often with mystical contemplation and ascetic practices, Hinduism is an ancient religion like no other.

Location: Manahawkin, New Jersey U.S.A.
Comments: Thank you for A Tribute To Hinduism! The Dharma is reaching out to many Souls. Here in America, many are interested in the many Yogas of our religion. Of course, sadly, the Hindu connection is not always made when presenting the classic Yogas. Here at the Classical Yoga Hindu Academy, we join with all other Hindus in offering this profound religion. Jai Sanatana Dharma!

Comments: This website opens my eyes to the richness and vastness of Indian heritage and history. It teaches/taught me of things that contradicts the indoctrinations of Western civilization. It is so rich and diverse however it pains me to think of the perversions and brutality that such a spiritual culture, throughout centuries, had to endure. Thank you for a very insightful website.

Comments: This is the most excellent work on HINDUISM that I have ever seen on web. It is very informative/educative and I wish that the Governments in India (State and Central) include this in the education curriculum and educate every Indian about the "GLORY OF HINDUISM" instead of teaching things like "Aryans came to India and pushed Dravidians down south" which is just a myth. I wholeheartedly praise and appreciate the efforts put in to develop this site, which has come out "EXCELLENT". KEEP GOING.

Comments: This truly is a wonderful resource on Hinduism. I haven't been able to find many sites as comprehensive and easy to read as this one. You really have done your research, and I do appreciate your sharing this wealth of information with us. I also like the recommended books, images and links. While I was reading Glimpses I, it was upsetting to read about many Westerners' negative attitude towards Indians and Hindus. We can only pray for them, and hope that the ignorant will learn how to be tolerable of differences in others. It is through websites like this that people learn the actual truth, and not believe what they may hear from others. I bookmarked this website about a week ago, knowing that I would visit it frequently, because it really is a gem. Thank you very much. Jai Mata Di.

Comments: Great site. When I read "The Art of War". I wondered whether we had any written manuals on warfare and wanted to know more about our approach towards war. There was lot of information on that. I don't have words to describe your contribution. I am sure this whole site must be the result of lot of research. Hat 's off for that.

Comments: This is a brilliant site. I am a graphic designer in Durban, studying for my B Tech & my line of research is the design in Indian Culture. Would it be a problem if I used the information from this site for my research & my Exhibition. It would be great if I could speak directly to the person in charge of this site to explain further about my project & what I am planning to do. Who knows.... maybe I'll also be able to assist with the site.

Show in alphabetical order

321. **Srinivas Ramanujan** (1887-1920) is one of India's legendary intellectual heroes, hailed as one of the greatest Mathematician of India and compared to all time greats, Euler, Gauss and Jacobi, for natural genius, is an eternal source of inspiration, especially for the student of mathematics. Today's mathematicians --armed with supercomputers -- are still star-struck, and unable to solve many theorems the slate-scribbling mathematician, too poor for paper, erasing his errors with one elbow young man from India. Ramanujan spawned a zoo of mathematical creatures that delight, confound and humble his peers. They call them "beautiful," "humble," "transcendent," and marvel how he reduced very complex terrain to simple shapes. G H Hardy, brightest mathematician in England, later wrote: "A single look at them is enough to show that they could only be written down by a mathematician of the highest class. They must be true, for if they were not true, no one would have the imagination to invent them."

Ramanujan was a mathematician so great his name transcends jealousies, the one superlatively great mathematician whom India has produced in the last hundred years. "His leaps of intuition confound mathematicians even today, seven decades after his death. ..the brilliant, self-taught Indian mathematician whose work contains some of the most beautiful ideas in the history of science. His legacy has endured. His twenty-one major mathematical papers are still being plumbed for their secrets, and many of his ideas are used today in cosmology and computer science. His theorems are being applied in areas - polymer chemistry, computers, cancer research - scarcely imaginable during his lifetime. **His mathematical insights yet leave mathematicians baffled that anyone could divine them in the first place.**'

A mathematical genius who ascribed his brilliance to a personal relationship with a Hindu Goddess. He saw the divine in the dance of numbers.

The inexhaustible Ramanujan was an **observant Hindu**, adept at dream interpretation and astrology. His work was marked by bold leaps and gut feelings. Growing up he had learned to worship **Namagiri, the consort of the lion god Narasimha**. **Ramanujan believed that he existed to serve as Namagiri´s champion - Hindu Goddess of creativity. In real life Ramanujan told people that Namagiri visited him in his dreams and wrote equations on his tongue**.

Ramanujan could never explain to G H Hardy how he arrived at his deep insights in mathematical terms; **but he did say many of his discoveries came to him in dreams, from the goddess Namakkal, and that he had a morning ritual of awakening and writing them down.**

He was intensely religious. He often united mathematics and spirituality together. He felt, for example, that zero represented Absolute Reality, and that infinity represented the many manifestations of that Reality. Ramanujan felt that each mathematical discovery was a step closer to understanding the spiritual universe. He once told a friend, "An equation for me has no meaning unless it expresses a thought of God."

While growing up, he lived the life of a traditional Brahmin with his forehead shaved and wearing a topknot. He often prayed to his family Deity, the **Goddess Namagiri of Namakkal,** and followed Her advice. Namakkal is also called as "Namagiri". He pilgrimaged all over Tamil Nadu. He quoted the **Vedas,** interpreted dreams and was regarded by his friends to be a mystic. **Throughout his life, Ramanujan worshiped at the Sarangapani Vishnu temple in Kumbakonam.**

(source: **Ramanujan** and **Computing the Mathematical face of God**) (source: **Hit Play on Ramanujan** and **A Baffling Mind - By Iraja Sivadas - Hinduism Today** Oct/Nov/December 2003 p. 60 -62).

Mathematicians have mined his theorems ever since. They've figured out how to prove them. They've put them to use. Only recently, a lost bundle of his notebooks turned up in a Cambridge library. That set mathematics off on a whole new voyage of discovery. And where did all this unproven truth come from? Ramanujan was quick to tell us. He simply prayed to **Sarasvathi, the Goddess of Learning,** and she informed him. **The unsettling thing is, none of us can find any better way to explain the magnitude of his eerie brilliance.**

(source: http://www.uh.edu/engines/epi495.htm **- John H. Lienhard** and **The Man Who Knew Infinity: A Life of the Genius Ramanujan - by Robert Kanigel**).

He wasn't spiritually preoccupied, but he was steeped in the reality and beneficence of the **Deities, especially the Goddess Namagiri.** Math, of course, was his intellectual and spiritual touchstone. No one really knows how early in life Ramanujan awakened to the psychic visitations of Namagiri, much less how the interpenetration of his mind and the Goddess' worked.

(source: **Computing the Mathematical Face of God: S. Ramanujan**). (Unlike most other major religions, Hindu myth and theology contain ancient and deep mathematical threads, with particular accomplishments in Number Theory and a joyous spontaneity about huge numbers. An Indian stamp issued in 1962 to commemorate the 75th anniversary of Ramanujan's birth).

322. **Georges Ifrah** (?) French historian of Mathematics and author of the book, **The Universal History of Numbers**

"The Indian mind has always had for calculations and the handling of numbers an extraordinary inclination, ease and power, such as no other civilization in history ever possessed to the same degree. So much so that Indian culture regarded the science of numbers as the noblest of its arts...A thousand years ahead of Europeans, Indian savants knew that the zero and infinity were mutually inverse notions."

(source: **Histoire Universelle des Chiffres - By Georges Ifrah** Paris - Robert Laffont, 1994, volume 2. p. 3).

Claiming India to be the true birthplace of our numerals, Ifrah salutes the Indian researchers saying that the "...real inventors of this fundamental discovery, which is no less important than such feats as the mastery of fire, the development of agriculture, or the invention of the wheel, writing or the steam engine, were the mathematicians and astronomers of the Indian civilization: scholars who, unlike the Greeks, were concerned with practical applications

and who were motivated by a kind of passion for both numbers and numerical calculations."

He refers to 24 evidences from scriptures from India, whose dates range from 1150 BC until 458 BC. Of particular interest is the work by Indian mathematician **Bhaskaracharya** known as Bhaskara (1150 BC) where he makes a reference to zero and the place-value system were invented by the god **Brahma**. In other words, these notions were so well established in Indian thought and tradition that at this time they were considered to have always been used by humans, and thus to have constituted a **"revelation" of the divinities.**

"It was only after the eighth century BC, and doubtless due to the influence of the Indian Buddhist missionaries, that Chinese mathematicians introduced the use of zero in the form of a little circle or dot (signs that originated in India),...".

The early passion which Indian civilization had for high numbers was a significant factor contributing to the discovery of the place-value system, and not only offered the Indians the incentive to go beyond the "calculable" physical world, but also led to an understanding (much earlier than in our civilization) of the notion of mathematical infinity itself.

“The real inventors of [the numeral system], which is no less important than such feats as the mastery of fire, the development of agriculture, or the invention of the wheel, writing or the steam engine, were the mathematicians and astronomers of Indian civilization: scholars who, unlike the Greeks, were concerned with practical applications and who were motivated by a kind of passion for both numbers and numerical calculations.”

Sanskrit notation had an excellent conceptual quality. It was easy to use and moreover it facilitated the conception of the highest imaginable numbers. This is why it was so well suited to the most exuberant numerical or arithmetical-cosmogonic speculations of Indian culture."

"The Indian people were the only civilization to take the decisive step towards the perfection of numerical notation. We owe the discovery of modern numeration and the elaboration of the very foundations of written calculations to India alone."

"**It is clear how much we owe to this brilliant civilization, and not only in the field of arithmetic; by opening the way to the generalization of the concept of the number, the Indian scholars enabled the rapid development of mathematics and exact sciences. The discoveries of these men doubtless required much time and imagination, and above all a great ability for abstract thinking. These major discoveries took place within an environment which was at once mystical, philosophical, religious, cosmological, mythological and metaphysical."**

"In India, an aptitude for the study of numbers and arithmetical research was often combined with a surprising tendency towards **metaphysical abstractions;** in fact, the latter is so deeply ingrained in Indian thought and tradition that one meets it in all fields of study, from the most advanced mathematical ideas to disciplines completely unrelated to 'exact sciences.

In short, Indian science was born out of a mystical and religious culture and the etymology of the Sanskrit words used to describe numbers and the science of numbers bears witness to this fact. "

"Sanskrit means “complete”, “perfect” and “definitive”. In fact, this language is **extremely elaborate**, almost artificial, and is capable of describing **multiple levels of meditation, states of consciousness and psychic, spiritual and even intellectual processes.** As for vocabulary, its richness is considerable and highly diversified. Sanskrit has for centuries lent itself admirably to the diverse rules of prosody and versification. Thus we can see why poetry has played such a preponderant role in all of Indian culture and Sanskrit literature. "

(source: **The Universal History of Numbers - By Georges Ifrah** p 365 - 441). For more refer to chapter on

GlimpsesIX and Hindu Culture1).

323. **Sir Lepel Henry Griffin** (1840-1908) Knight Indian Civil Servant. President, East India Association and the diplomatic representative at Kabul of the Indian government. Author of several books including **The Rajas of the Punjab**; being the history of the principal states in the Punjab and their political relations with the British government and **The Great Republic**. At a a meeting of the East India Association held at the Westminister Palace Hotel, London in December, 1901, he reported as paying the following tribute to Indian morality:

"The **Hindu creed is monotheistic and of very high ethical value**; and when I look back on my life in India and the thousands of good friends I have left there among all classes of the native community, when I remember those honorable, industrious, orderly, law-abiding, sober, manly men, **I look over England and wonder whether there is anything in Christianity which can give a higher ethical creed than that which is now professed by the large majority of the people of India.** I do not see it in London society, I do not see it in the slums of the East End, I do not see it on the London Stock Exchange. I think that the morality of India will compare very favorably with the morality of any country in Western Europe."

(source: **India in Bondage: Her Right to Freedom - By Rev. Jabez T. Sunderland** p. 329 - 330).

324. **Dr. Radhakumud Mookerji** (1884 -1964) distinguished historian and author of several books including **Hindu civilization** (from the earliest times up to the establishment of Maurya empire), **Ancient Indian education**; Brahmanical and Buddhist and **Indian shipping: a history of the seaborne trade and maritime activity of the Indians from the earliest times**. He writes:

"The first point of distinction is that the Vedas and especially the primordial work known as the Rig Veda, represents not merely the dawn of culture, but also **its zenith. Indian thought is seen at its highest in the Rig Veda**. ...On the one hand it is the first book of India and also of mankind. At the same time it shows the highest point of human wisdom. We see in it the whole process of evolution from its beginning to the completion."

(source: **The Call of the Vedas - By A C Bose** p. 16).

"For full thirty centuries India stood out as the very heart of the old world and maintained her position as one of the foremost maritime countries. She had colonies in Pegu, in Cambodia, in Java in Sumatra, in Borneo and even in the countries of the Farther East as far as Japan. She had trading settlements in Southern China, in the Malayan Peninsula, in Arabia and in all the chief cities of Persia and all over the East Coast of Africa. She cultivated trade relations not only with the countries of Asia, but with the whole of the then known world, including the countries under the dominion of the Roman Empire, and both the East and West became the theatre of Indian commercial activity and gave scope of her naval energy and throbbing international life."

"We now know that many ports on both Eastern and Western Coast had navigational and trade links with almost all Continents of the world. There are many natural and technological reasons for this. **Apart from Mathematics and Astronomy, India had excellent manufacturing skills in textile, metal works and paints. India had abundant supply of Timber. Indian - built ships were superior as they were built of Teak which resists the effect of salt water and weather for a very long time."**

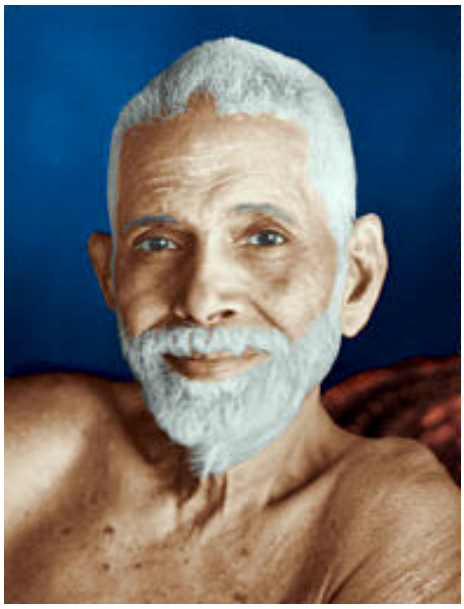
(source: **Indian Shipping: A History of the Sea-Borne Trade and Maritime Activity of the Indians From the Earliest Times - By R. K. Mookerjee** p. 4). For more refer to chapters **Seafaring in Ancient India** and **Suvarnabhumi**).

325. **Diana L. Eck** (?) Professor of Comparative Religion and Indian Studies in the Faculty of Arts and Sciences, and Member of the Faculty of Divinity, Harvard University. Her work on India includes the books **Banaras, City of Light** and **Darsan: Seeing the Divine Image in India.**

"Hinduism is an imaginative, an "image-making, religious tradition in which the sacred is seen as present in the visible world – the world we see in multiple images and deities, in sacred places, and in people. The notion of darsan call attention as students of **Hinduism, to the fact that India is a visual and visionary culture**, one in which the eyes have a prominent role in the apprehension of the sacred. For most ordinary Hindus, the notion of the divine as "invisible" would be foreign indeed. God is eminently visible, although human beings have not always had the refinement of sight to see. Furthermore, the divine is visible not only in temple and shrine, but also in the whole continuum of life – in nature, in people, in birth and growth and death. Although some Hindus, both philosophers and radical reformers, have always used the terms "nirguna"(qualityless) and nirakara (formless) to speak of the One Brahman. Yet the same tradition has simultaneously affirmed that Brahman is also saguna (with qualities) and that the multitude of "names and forms" of this world are the exuberant transformations of the One Brahman."

"India presents to the visitor an overwhelmingly visual impression. It is beautiful, colorful, sensuous. It is captivating and intriguing, repugnant and puzzling. It combines the intimacy and familiarity of English four o'clock tea with the dazzling foreignness of carpisoned elephants or vast crowds bathing in the Ganga during an eclipse. India's displays of multi-armed images, its processions and its pilgrimages, its beggars and its kings, its street life and markets, its diversity of people – all appear to the eye in a kaleidoscope of images. **Whatever Hindus affirm of the meaning of life, death, and suffering, they affirm with their eyes wide open.** Many westerners, for example, upon seeing Hindu rituals observances for the first time, are impressed with how **sensuous Hindu worship is. It is sensuous in that it makes full use of the senses – seeing, touching, smelling, tasting and hearing.** One "sees" the image of the deity (darsan). One "touches" it with one's hands (sparsa), and one also "touches" the limbs of one's own body to establish the presence of various deities (nyasa). One "hears" the sacred sound of the mantras (sravana). The ringing of bells, the offering of oil lamps, the presentation of flowers, the pouring of water and milk, the sipping of sanctified liquid offerings, the eating of consecrated foods- prasad – these are the basic constituents of Hindu worship, Puja." For all its famous otherworldliness, India is a culture that has also celebrated the life of this world and the realms of the senses.

(source: **Darsan - Seeing the Divine Image in India - By Diana L Eck** Anima Books. Page 10 - 12).



Benares: It antiquity has caught the imagination of many.
(source: Painting of Benares - By William Hodges - 1780 - Indian Art - By Vidya Dehejia p. 384).

She has written about the city of **Banaras**:

"It was an awesome city - captivating, challenging, and endlessly fascinating - Banaras raised some of the questions about the Hindu tradition which have interested me ever since - its complex mythological imagination, its prodigious display of divine images, its elaborate ritual traditions, and its understanding of the relation of life and death. It was Banaras that turned me to the study of India and the Hindu religious tradition."

"For over 2,500 years this city, also called Varanasi, has attracted pilgrims and seekers from all over India. Sages, such as the Buddha, Mahavira, and Shankara, have come here to teach. Young men have come to study the Vedas with the city's great pandits. Banaras is one of the oldest living cities of the world....It occupied its high bank overlooking the Ganges in the cradle days of Western civilization. **It antiquity has caught the imagination of many,** including Mark Twain. There are few great cities in the world which have converted the energy of an entire civilization into culture and have come to symbolize and embody that whole civilization in microcosm." "It sits above the earth as a "crossing place" (tirtha) between this world and the "far shore" of the transcendent Brahman."

(source: **Banaras: City of Light - By Diana L Eck** p. 3 - 5).

326. **Ramana Maharishi** of Arunachala (1870 -1950). A great saga, Kavyakanta Ganapathi Muni, called him Bhagavan or God for he regarded him as the incarnation of Skanda or Subramania, and named him Ramana, the sweet one, and Maharshi, the great saga. At the age of sixteen Ramana Maharshi left his home, his family, and all he knew. He felt drawn to Arunachula - a small mountain in Southern India. Here he lived for the rest of his life. His only possessions were a piece of cloth to cover himself, and a walking stick.

In his famous discussion of "The Holy Men of India, **Carl Jung** described Ramana Maharishi as **"the whitest spot on a white surface,"** less a unique phenomenon than the perfect "embodiment of spiritual India. In Ramana Maharishi Jung finds "purest India, the breadth of eternity, scorning and scorned by the world. Jung correctly recognized that Ramana Maharishi typifies the holy men of India who for centuries have drowned "the world of multiplicity in the All and All-Oness of Universal Being."

F. H. Humphreys, a British Officer of the Indian Police Service, who was an earnest student of religion, once visited Ramana Maharishi in 1911 in his Ashrama, when he was curious to learn about **siddhis** from the saint. Ramana said:

"Do not think too much of psychical phenomena...The phenomena we see are curious and surprising, but the most marvelous of all we do not realize, namely, the one illimitable force alone is responsible for all the phenomena we see and for the act of seeing them. Do not fix your attention on the changing things of life, death and phenomena. Do not think of even the actual act of seeing or perceiving them, but only of that which sees all these things - **That which is responsible for it all. It is inside yourself."**

In a letter to a leading friend in London, which was subsequently published in a leading journal in London, Mr. Humphreys wrote about Ramana: "On reaching the cave, we sat before him at his feet and said nothing. We sat thus for a long time and I felt lifted out of myself. For half an hour I looked into Maharishi's eyes, which never changed their expression of deep contemplation. I began to realize somewhat that the **body is the temple** of the Holy Ghost."

Ramana Maharishi's grace and compassion touched man and animal alike; his eloquent silence made a tremendous impact. But his silence was more eloquent than a thousand words spoken. **F. H. Humphreys**, the first European visitor to the Ramanashram penned his experience, of seeing Ramana Maharishi, to a friend in London. "For half an hour I looked into the Maharishi's eyes, which never changed their expression of deep contemplation. I could feel only that his body was not the man: it was the instrument of God." But Humphreys was neither the first nor the last to experience God in the form of Ramana Maharishi. **Paul Brunton**, who arrived at Tiruvannamalai more a sceptic than a believer records the impact of the eloquent silence of Maharishi: "Before those (eyes) of the Maharishi, I hesitate, puzzled and baffled ... I cannot turn my gaze away from him. I know only that a steady river of quietness seems to be flowing near me ... "

Ramana Maharishi believed in the philosophy of self-realization based on Advaita Vedanta. Sri Ramana's entire system is based on his own realization of Self. He wrote:

"When I came to realize who I am
What else is this identity of mine.
But then,
Oh Thou who standest as the towering Aruna Hill?"

(source: **The Sage of Arunachala - By Lakshmi Devnath** and **Great Indian Saints - By Pranab Bandyopadhyaya** p. 328 - 327 and **The Spirit of Modern India - Edited by Robert A McDermont and V. S. Naravane** p. 197).

327. **Robert Blackwill** (?) lecturer on international security at Harvard's Kennedy School of Government, former ambassador to India. Blackwill is the author and co-editor of numerous books and articles on U.S. foreign policy, including: America's Asian Alliances. Although he returned this summer, part of Blackwill's heart is clearly still in India. A huge map of "Mother India" adorns the cream-colored walls of his fastidious office in the Eisenhower Executive Office Building. The only item on his vast desktop -- besides precisely arranged wooden "in" and "out" boxes -- is a tiny figurine of **Ganesh, the Hindu elephant-headed god of wisdom and success.** In What India means to me, he says:

".....India's innumerable and distinctive dances, beginning with the classical. **The Vedas** and the **Upanishads**.

They mean so much more when I read them here: **"It is the ear of the ear, the mind of the mind, the speech of speech, the breath of breath, and the eye of the eye. When freed (from the senses) the wise, on departing from this world, become immortal."**

And, despite my continuing contemplations, I am not always able to follow **Krishna's wise words, "Be thou of even mind."**

But, my friends, these terrorist outrages against my country and against yours will not continue indefinitely. We know this from the **Ramayana**, and many other holy books. Good does triumph over evil, although it sometimes takes more time than we would like. Someone once said, "the most sublime purpose of religion is to teach how to know God." India has been working on that challenge from a variety of perspectives for several millennia. It has been my immense privilege during these two years to experience, and to profit from, these profound wellsprings of Indian spirituality.

I will return to India. How could it be otherwise? **Mother India has changed my life -- forever."**

(source: **What India Means to Me - By Ambassador Robert Blackwill** - usembassy.state.gov and **washingtonpost.com**).

328. **J A B Van Buitenen** (1928- 1979) says that the **Bhagavad Gita** is:

"The most important text for Hindu religion and a recent survey of that religion says that during the last thousand years the Gita's "popularity and authority" have been "unrivalled."

(source: **The Mahabharata - By J A B Van Buitenen** p. xxviii 1973).

329. **Shashi Tharoor** (1956 -) Under-Secretary-General for Public Information at the UN, author of six novels and two non-fiction books. Educated in India and London, describes himself as a **`believing Hindu'.** He has written:

" Every other religion lays down certain fixed dogmas and tries to force society to adopt them. It places before society only one coat which must fit Jack and John and Henry, all alike. If it does not fit John or Henry, he must go without a coat to cover his body. "

"The Hindus have discovered that the absolute can only be realized, or thought of, or stated through the relative, and the images, crosses, and crescents are simply so many symbols — so many pegs to hang spiritual ideas on. It is not that this help is necessary for everyone, but those that do not need it have no right to say that it is wrong. Nor is it compulsory in Hinduism .... The Hindus have their faults, but mark this, they are always for punishing their own bodies, and never for cutting the throats of their neighbors. If the Hindu fanatic burns himself on the pyre, he never lights the fire of Inquisition. "

"I am proud to belong to a religion which has taught the world both tolerance and universal acceptance. We believe not only in universal toleration, but we accept all religions as true. I am proud to belong to a country which has sheltered the persecuted and the refugees of all religions and all countries of the earth. I am proud to tell you that we have gathered in our bosom the purest remnant of the Israelites, who came to southern India and took refuge with us in the very year in which their holy temple was shattered to pieces by Roman tyranny. I am proud to belong to the religion which has sheltered and is still fostering the remnant of the grand Zoroastrian nation. I remember having repeated a hymn from my earliest boyhood, which is every day repeated by millions of human beings: "As the different streams having their sources in different places all mingle their water in the sea, so, O Lord, the different paths which men

take through different tendencies, various though they appear, crooked or straight, all lead to Thee." ....

Lord Krishna says: "Whosoever comes to Me, through whatsoever form, I reach him; all men are struggling through paths which in the end lead to me." (source: Bhagavad Gita).

***

The wonderful doctrine preached in the **Bhagavad Gita** says: "Whosoever comes to Me, through whatsoever form, I reach him; all men are struggling through paths which in the end lead to me."

(source: **ShashiTharoor.com**).

"The Rig Veda asserted that gravitation held the universe together 24 centuries before the apple fell on Newton's head. The Vedic civilization subscribed to the idea of a spherical earth at a time when everyone else, even the Greeks, assumed the earth was flat. By the Fifth Century A.D. Indians had calculated that the age of the earth was 4.3 billion years; as late as the 19th Century, English scientists believed the earth was a hundred million years old, and it is only in the late 20th Century that Western scientists have come to estimate the earth to be about 4.6 billion years old. **It was an Indian who first conceived of the zero, shunya; the concept of nothingness,** shunyata, integral to Hindu and Buddhist thinking, simply did not exist in the West. The **Vedanga Jyotisha**, written around 500 B.C., declares: **"Like the crest of a peacock, like the gem on the head of a snake, so is mathematics at the head of all knowledge." Our mathematicians were poets too!**

(source: **Why Indian science scores - The Hindu** - Sunday June 8 2003).

" **I am proud to claim adherence to a religion without an established church or priestly papacy**, a religion whose rituals and customs I am free to reject, a religion that does not oblige me to demonstrate my faith by any visible sign, by subsuming my identity in any collectivity, not even by a specific day or time or frequency of worship. **(There is no Hindu Pope, no Hindu Vatican, no Hindu catechism, not even a Hindu Sunday.) As a Hindu I am proud to subscribe to a creed that is free of the restrictive dogmas of holy writ that refuses to be shackled to the limitations of a single holy book."**

(source: **ShashiTharoor.com**).

330. **Alfred B. Ford** ( ) **aka Ambarish Das** grandson of Henry Ford (founder of the **Ford Motor**), and Trustee member of Ford Motor Company. He is involved in Ford's corporate charity work.

Throwing light on his personal association with India, Ford said he was attracted to Indian civilization after he studied **Hinduism** during his college days 30 years ago.

Soon after, **he converted to Hinduism and has traveled to India dozens of times.** He even married an Indian girl, Sharmila Bhattacharya, a doctor, who hails from Jaipur.

He joined Iskcon in 1975. He traveled to India for the first time that same year with Srila Prabhupada. **He was instrumental in the establishment of the first Hindu temple in Hawaii.** He also helped establish the Bhaktivedanta Cultural Center, which is a highly regarded tourist destination in Detroit. Alfred has made significant donations to Iskcon over the years which have assisted many ongoing projects and helped to build the Pushpa Samadhi Mandir of Srila Prabhupada. He is the founding chairman of the Iskcon Foundation, and campaign chairman of the Sri Mayapur Temple of Vedic Planetarium.

The **love for Hinduism** brought a great grandson of US automobile legend Henry Ford to the Russian capital to lobby for a Vedic cultural centre.

"If Moscow wants to be a world class capital, it has to open up to other cultures, particularly **ancient cultures like Vedic culture."**

Ford, during a visit to Moscow last week, said: **"For me the most important thing is to spread the Hindu knowledge about the soul. This is more important than any other knowledge and is my main priority".**

Russia has an estimated 90,000 Russian Hindus, sources at International Society for Krishna Consciousness (ISKCON) here claim. Addressing representatives of the Indian community in Russia, Ford lauded their efforts to build the cultural centre complex that would be named **"Glory of India".**

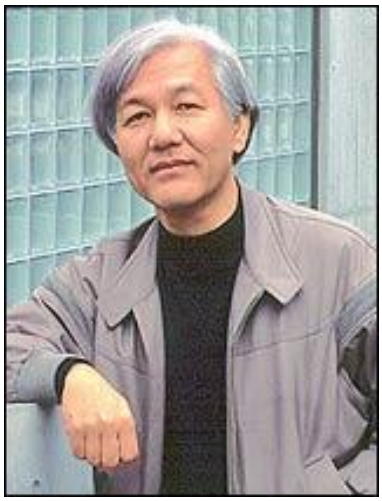
He has said: "My main activity is connected with propagandizing Indian culture throughout the world.' The Alfred Ford Foundation and the Indian community are financing construction of the center."

(source: **Alfred Ford lobbies for Vedic centre in Moscow - siliconindia.com** and **Indian Cultural Centre to be built in Moscow - russsiajournal.com** and **hindu.com** and **hindunet.com**).

331. **Arthur William Ryder** (1877-1938) Professor at Berkeley. **J Robert Oppenheimer** the nuclear physicist had studied Sanskrit with him at Berkeley in 1933. He has translated several books including, **Dandin's Dasha-kumara-charita : The ten princes**.

He wrote in his introduction to the **Gita**:

"Uncounted millions have drawn from it comfort and joy. In it they have found an end to perplexity, a clear, if difficult, road to salvation."



(source: **The Bhagavad Gita - translation by Arthur W Ryder** p. viii).

One of Kalidasa's long poems is the **Meghduta**, or **the Cloud Messenger.** A lover, made captive and separated from his beloved, asks a cloud, during the rainy season, to carry his message of desperate longing to her. To this poem and to Kalidasa, the American scholar, **Ryder**, has paid a splendid tribute. He refers to the two parts of the poem and says:

" The former half is a description of external nature, yet interwoven with human feelings; the latter half is a picture of human heart, yet the picture is framed in natural beauty. So exquisitely is the thing done that none can say which half is superior. Of those who read this perfect poem in the original text, some are moved by the one, some

by the other."

(source: **The Discovery of India - by Jawaharlal Nehru** pg 159).

332.**Takeo Kamiya** ( ) Japanese architect has spent about 20 years and all his savings traveling across India documenting the country's heritage buildings to enlighten Japan and the world about the "wonders of real India". He is a member of the Japan Architects Academy. Kamiya first visited India about 27 years ago and travelled across the country, like Hieun Tsang during the Golden Age of Guptas. When he was young, Japan was oriented only to the West and America. But he had a feeling that the world did not end there.

He says:

"The first place I visited was the Konark Sun Temple. I was shocked...awestruck at the site of the marvelous man-made wonder, "all my worries and complaints vanished then and there."

"That intense emotional experience made me come back again and again. It gave me the urge to travel and see as much as I could. It is after this that I concretized the idea of documenting my experiences in a book form,"

*Konark Sun Temple: A place of golden grandeur. One of India's great architectural marvels, this temple to the Sun God, Surya was conceived as a gigantic chariot with 12 pairs of wheels to carry the Sun on his daily journey across the sky. There are seven temples dedicated to the worship of Surya, the Sun in India. Konark is now a Unesco world heritage site. The world's finest Hindu Sun temple is also one of India's most innovative architectural masterpieces. (source: **Hinduism Today** Oct/Nov/December 2003).*

***

The result: **The Guide to the Architecture of the Indian Subcontinent**, a comprehensive classification and introduction of Indian architecture from north to the south. A complete guide, which has been a revelation for even several leading Indian architects.

"India had always fascinated me, though I had only little knowledge about the country where Buddha was born. There was hardly any literature available on Indian architecture while I was studying in the Tokyo Geijutsu Daigaku (Fine Arts faculty in Architecture). So I decided to travel to India to study about the country, its culture and heritage,"

(source: **Japanese guide to Indian wonders -** timesofindia.com). For more refer to chapter on **Hindu Art**).

333. **Bulent Ecevit** (1925 -) the then Turkish prime minister, was asked what had given him the courage to send Turkish troops to Cyprus (where they still remain). His answer: he was fortified by the **Bhagavad Gita** which taught that if one were morally right, one need not hesitate to fight injustice. Besides the Gita, Ecevit was also influenced by Nehru's Glimpses of World History.

Ecevit first learnt **Sanskrit** at the Ankara University. Later his love for poetry and philosophy led him to Rabindranath Tagore. He learnt Bengali to appreciate and later translate Tagore's writings, including some poems from Geetanjali. During his visit to India in early 2000, Ecevit fulfilled his dream of visiting Shantiniketan. **After the 1971 military crackdown by the left, the Upanishads, Gita, and Geetanjali were banned in Turkey.**

Turkish prime minister Bulent Ecevit's passage to India has far greater significance than that of an Indophile scholar-statesman realising his long cherished dream. **Mr Ecevit, had translated Tagore's Gitanjali and the Bhagavad Gita into Turkish.** Together with Delhi and Agra, he has included a visit to Shantniketan in his itinerary.

(source: **The Turk who loves the Gita - telegraphindia.com**).

334. **Leonard Bloomfield** (1887-1949) American linguist and author of **Language**, published in 1933) characterization of **Panini's Astadhyayi** (**The Eight Books**) writes:

"**as one of the greatest monuments of human intelligence is by no means an exaggeration; no one who has had even a small acquaintance with that most remarkable book could fail to agree.** In some four thousand sutras or aphorisms - some of them no more than a single syllable in length - Panini sums up the grammar not only of his own spoken language, but of that of the Vedic period as well. The work is the more remarkable when we consider that the author did not write it down but rather worked it all out of his head, as it were. Panini's disciples committed the work to memory and in turn passed it on in the same manner to their disciples; and though the Astadhayayi has long since been committed to writing, rote memorization of the work, with several of the more important commentaries, is still the approved method of studying grammar in India today, as indeed is true of most learning of the traditional culture."

While in the classical world scholars were dealing with language in a somewhat metaphysical way, the Indians were telling us what their language actually was, how it worked, and how it was put together. The methods and techniques for describing the structure of Sanskrit which we find in Panini have not been substantially bettered to this day in modern linguistic theory and practice. We today employ many devices in describing languages that were already known to Panini's first two commentators. The concept of "zero" which in mathematics is attributed to India, finds its place also in linguistics.

"It was in India, however, that there rose a body of knowledge which was destined to revolutionize European ideas about language. The Hindu grammar taught Europeans to analyze speech forms; when one compared the constituent parts, the resemblances, which hitherto had been vaguely recognized, could be set forth with certainty and precision."

(source: **Traditional India -** edited by **O. L. Chavarria-Aguilar** refer to chapter on **Grammar - By Leonard Bloomfield Hall -** Place of Publication: Englewood Cliffs, NJ Date of Publication: 1964 p. 109-113).

335. **Colonel Frank Smythe aka Francis Sydney Smythe** (1900-1949) military leader, explorer, mountaineer, writer, photographer. He describes experiencing the same feeling of loneliness and revelation in the **Bhyunder Ganga Valley**. Chronicle of the author's four months in the remote, difficult to reach Bhyundar Valley in the Himalayas, the spectacular Valley of Flowers. The credit for the popularising the Valley of Flowers generally goes to Frank S. Smythe and R.L. Holdsworth who incidentally reached this valley after a successful expedition of Mount Kamet in 1931.

"In my mountaineering wandering I have not seen a more beautiful valley than this ... this valley of peace and perfect beauty where the human spirit may find repose." Originally called the Bhiundhar Valley (after a village located in south-east **Badrinath**) it was renamed “The Valley of Flowers” by Frank Smythe.

*He writes in his book **Valley of Flowers**:*

“For the first time in my life I was able to think. I do not mean to think objectively or analytically, but rather to surrender thought to my surroundings. **This is a power of which we know little in the West but which is a basic of abstract thought in the East.** It is allowing the mind to receive rather than to seek impressions, and it is gained by expurgating extraneous thought. It is then that the Eternal speaks; that the mutations of the universe are apparent; the very atmosphere is filled with life and song; the hills are resolved from mere masses of snow, ice and rock into something living. **When this happens the human mind escapes from the bondage of its own feeble imaginings and becomes as one with its Creator.”**

(source: **Sacred Waters: A Pilgrimage up the Ganges River to the Source of Hindu Culture – Stephen Alter** p. 356).

336. **Abu’l Hasan al-Qifti** (?) Arab scholar and author of **Chronology of the Scholars**, speaks of Arab admiration for Indian place-value system and methods of calculation.

“Among those parts of their sciences which came to us, the numerical calculation….it is the swiftest and most complete method of calculation, the easiest to understand and the simplest to learn; it bears witness to the Indians’ piercing intellect, fine creativity and their superior understanding and inventive genius.”

(source: **The Universal History of Numbers - By Georges Ifrah** p. 530 - 531).

337. **Christian Fabre aka Swami Pranavananda Brahmendra Avadhuta** (1942 -) was born in the south of France. He grew up in a family with ties to the garment industry. Author of **Swami : PDG et Moine hindou**

He is a Hindu holy man, who has renounced the material world - yet he is also a business tycoon who employs thousands of people. He became a Hindu holy man, or sadhu, some years ago. Now he runs an ashram, or a hermitage for holy men, in the south-western state of Tamil Nadu, roughly 400 kilometres from Madras, the state capital.

He came to work in India in the 1970s, and fell in love with the place. **"I was so powerfully attracted to India's culture, faith and its people that I cannot bear the thought of going back to France,**" he says.

At the time, his house was opposite that of a Brahmin family. His first exposure to Hinduism came at their hands. A woman from that house introduced him to a Hindu sage, or swami.

Today, his company, Fashion International, has 35 factories which employ 60,000 people. The clothes they make are exported to Europe and beyond. And as his business boomed, Mr Fabre's faith grew stronger. He did not stop taking instruction from his teacher, or guru, and continued searching for answers to his questions. His guru eventually invited him to take up the sanyas - renounce all worldly attachments such as family and money, and focus on their search for enlightenment. Mr Fabre now lives in the ashram in the manner of the other sadhus in his holy order.

He also wears the sadhu's saffron robes to his business meetings.

For Mr Fabre, there is no opposition between his business interests and his life as a Hindu holy man. This industrialist holy man has been truly industrious - for the villagers living near his ashram, he has provided running water and improved public

hygiene facilities.

(source: **The French Hindu Holy businessman - BBC news.com**).

338. **Edward Gibbon** (1734 - 1794) English historian and scholar, the supreme historian of the Enlightenment, who is best-known as the author of the monumental author of **The Decline and Fall of the Roman Empire**

He admiringly describes the religious freedom in Hinduism:

"Thus the **Hindus have an extraordinary wide selection of beliefs and practices to choose from**: they can be monotheists, pantheists, polytheists, agnostics or even atheists. They may follow a strict or a loose standard of moral conduct, or they may choose instead an amoral emotionalism or mysticism. They may worship regularly at a temple or may not go there at all."

The ancient Romans also had a similar form of worship like the **Hindus** - "The policy of the emperors and the senate, as far as it concerned religion, was happily seconded by the enlightened, and by the habits of the superstitious, part of their subjects. The various modes of worship, which prevailed in the Roman world, were all considered by the people, as equally true; by the philosopher as equally false; and by the magistrate as equally useful. And thus toleration produced not only mutual indulgence, but even religious concord. "

(source: **The Decline and Fall of the Roman Empire - By Edward Gibbon** p.).

339. **Justice Manadagadde Rama Jois** (1931 -) Former Chief Justice of Punjab and Haryana High Court. A distinguished writer and historian, Justice M. Rama Jois has produced several authoritative books on Service Law, Habeas Corpus Law, Constitutional Law, etc., which are popular among the Law fraternity of India including students of Law. His most appreciated two-volume book **Legal and Constitutional History of India** is a textbook for Law Degree course. His another book **Seeds of Modem Public Law in Ancient Indian Jurisprudence** is also a much-valued contribution. A book authored by him **Eternal Values in Manu Smriti**, was released by former Chief Justice of India A.S. Anand. In this book valuable verses from "Manu Smriti" has been selected, which are still relevant to the society.

He has observed that: "In India, religious leaders have never exercised any control over the political authority. The ancient Indian constitutional law, the **Rajadharma**, did not recognise the authority of religious leaders to interfere with the political power of the king. Religious leaders had a purely advisory role, tendering opinion when it was sought or suo motu on matters of public interest. There used to be a process of consultation, not of confrontation.

"This is why no Hindu king has ever persecuted anyone on the ground of religion. Thus, it is Clear that in the Indian context, secularism meant respect for all religions as distinct from mere tolerance of other religions. **This respect is part and parcel of Hinduism, to which theocracy is unknown. In fact, they cannot co-exist any more than light and darkness."**

(source: **Conversion, fruit of intolerance - By Justice Manadagadde Rama Jois - indianexpress.com**).

340 **Beatrice Pitney Lamb** (1904 -) Author of several books including India: A World in Transition. She was Editor of the **United Nations News** for several years and has written and lectured extensively on Indian affairs. Beatrice Lamb first visited India in 1949 on an assignment for the Carnegie Endowment for International Peace. Mrs. Lamb saw the many-hued soul of India revealed through its people, living, working and worshipping.

She has noted:

"In addition to the still visible past glories of art and architecture, the wonderful ancient literature, and other cultural achievements of which educated Indians are justly proud, the Indian past includes another type of glory most tantalizing to the Indians of today - prolonged material prosperity. **For well over a millennium and a half, the Indian subcontinent may have been the richest area in the world.** As early as the first century A.D. a statesman in ancient Rome wrote in worried vein about the squandering of Roman wealth on Indian luxuries.....Although direct relations between Europe and India were cut off by the Arabs in the Middle Ages, the legend of the wealth of the "Indies" continued to grip Western minds. The power of this legend caused Columbus in 1492 to take his dangerous journey westward across the Atlantic, seeking to re-establish direct contact with India. As late as the 18th century, British observers were repeatedly struck by the material prosperity of the land they were beginning to conquer."

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 19 and 358).

"In India I have found great beauty of a kind far too rare in the United States. Instead of the hard, taut, anxious faces, so common in America, I have seen many there that were calm, open, untroubled, serene. I have seen dignity and grace of movement derived not from training but from inner peace and wholeness."

(source: **Why India? - By Beatrice Pitney Lamb**).

"Recently, increasing numbers of Westerners in revolt against what they have found to be the shallow, gadget-dominated, spiritually empty civilization of the West have turned to "Hinduism" in search of greater meaning or purpose in life. There is no doubt that the great Hindu tradition offers profound spiritual insights, as well as techniques for attaining self-realization, detachment, and even ecstasy."

***

"Recently, increasing numbers of Westerners in revolt against what they have found to be the **shallow, gadget-dominated, spiritually empty civilization of the West** have turned to **"Hinduism" in search of greater meaning or purpose in life. There is no doubt that the great Hindu tradition offers profound spiritual insights, as well as techniques for attaining self-realization, detachment, and even ecstasy."**

21. **Swami Vivekananda** (1863-1902) was the foremost disciple of Ramakrishna and a world spokesperson for Vedanta. India's first spiritual and cultural ambassador to the West, came to represent the religions of India at the World Parliament of Religions, held at Chicago in connection with the World's Fair (Columbian Exposition) of 1893. His Chicago speech is uniquely Vedantic. Jawaharlal Nehru refers to this universal dimension of Vivekananda in his Discovery of India. “Rooted in the past, and full of pride in India’s heritage, Vivekananda was yet modern in his approach to life’s problems, and was a kind of bridge between the past of India and her present.”

The cyclonic monk from India” that is how delegates to the Parliament of Religions at Chicago in 1894 described Ramakrishna’s great disciple, Vivekananda. **Romain Rolland**, in his admirable biography of this **“tamer of souls”** refers to Vivekananda’s dominating personality in these words: “a great voice is meant to fill the sky. The whole world is its sounding-box…..Men like Vivekanada are not meant to whisper. They can only proclaim. The sun cannot moderate its own rays. He was deeply conscious of his role. **To bring Vedanta out of its obscurity and present it in a rationally acceptable manner; to arouse among his countrymen an awareness of their own spiritual heritage and restore their self-confidence; to show that the deepest truths of Vedanta are universally valid, and that India’s mission is to communicate these truths to the whole world** – these were the goals he set before himself.

(source: **The Spirit of Modern India - Edited by Robert A McDermont and V. S. Naravane** p.6 - 7).

"From the high spiritual flights of the Vedanta philosophy, of which the latest discoveries of science seem like echoes, to the low ideas of idolatry with its multifarious mythology, the agnosticism of the Buddhists and the atheism of the Jains, each and all have a place in the Hindu's religion.

God is the ever-active providence, by whose power systems after systems are being evolved out of chaos, made to run for a time, and again destroyed.

This is what the Brahmin boy repeats every day:

"The sun and the moon, the Lord created like the suns and the moons of previous cycles." And this agrees with modern science.

(source: **Hinduism - By Swami Vivekananda** chapter: A Universal Religion p. 3)

Vivekananda said: "The Vedas teach that the soul is divine, only held in the bondage of matter; perfection will be reached when this bond will burst, and the word they use for it is, therefore, Mukti - freedom, freedom from the bonds of imperfection, freedom from death and misery."

The Lord has declared to the Hindu in His incarnation as Krishna:

"I am in every religion as the thread through a string of pearls. Wherever thou seest extraordinary holiness and extraordinary power raising and purifying humanity, know thou that I am there."

(source: **Swami Vivekananda Paper on Hinduism** http://www.itihaas.com/modern/vivek-speech3.html).

For him India was synonymous with the spirit of religion. He said "**If India is to die, religion will be wiped off the face of the earth."**

(source: **A Call To The Eternal - By Swami Ashokananda** p. 78).

Swami Vivekananda in his essay, **The Future of India**: "It is the same India which has withstood the shocks of centuries, of hundreds of foreign invasions, of hundreds of upheavals of manners and customs. It is the same land, which stands firmer than any rock in the world, with its undying vigour, indestructible life. Its life is of the same nature as the soul, without beginning and without end, immortal; and we are the children of such a country."

(source: **Hindutva is liberal - By A. B. Vajpayee - rediff.com**).

Swami Vivekananda said about the **Gita**, **"No better commentary on the Vedas has been written or can be written."**

(source: **Gita, An Antidote For All Ills - Times of India**). "Hinduism is the mother of all

religions"- so wrote Swami Vivekananda.

“This is the ancient land, where wisdom made its home before it went into any other country… Here is the same India whose soil has been trodden by the feet of the greatest sages that ever lived… Look back, therefore, as far as you can, drink deep of the eternal fountains that are behind, and after that look forward, march forward, and make India brighter, greater, much higher, than she ever was.”

"Say it with pride : we are Hindus", is what Swami Vivekananda taught his fellow Hindus.

(source: **Ayodhya and After - By Koenraad Elst**).

Swami Vivekananda called upon his people to ‘rise, awake and acquire’ and reminded them that **‘Hindu religion does not consist in struggles and attempts to believe a certain doctrine or dogma, but in realizing not in believing, but in being and becoming.’**

(source: **India Rediscovered - By Dr. Giriraj Shah** p. 31 Abhinav Publications New Delhi 1975).

Vivekananda said if you want to do anything in India, do it with the **re-establishment of dharma or its reawakening. In India the soil and the dharma (the upward aspiration) are one and the same, are body and soul.**

(source: **The Soul of India - By Satyavrata R Patel** p. 206).

"By what strange social alchemy has India subdued her conquerors, transforming them to her very self and substance..... ? Why is it that her conquerors have not been able to impose on her their language, their thoughts and
customs, except in superficial ways?"

(source: **The empire strikes back - By Suma Varghese** - Free Press Journal December 5 1997).

"If one religion is true, then all the others must also be true. **Thus the Hindu faith is as yours as much as mine."**

(source: http://www.geocities.com/hindusoc/special/hindintr.htm).

Vivekananda's philosophy was one of pride in the past. " Look back, therefore, as far as you can, drink deep of the eternal fountains that are behind, and after that, look forward, much forward, march forward and make India brighter, greater, much higher than she ever was... We must go to the root of this disease and cleanse the blood of all impurities.”

He had put immense faith in Hinduism:

"To my mind', our religion is truer than any other religion, **because it never**

conquered. Because it never shed blood, because its mouth always shed on all, words of blessing, of peace, words of love and sympathy. It is here and here alone that the ideals of toleration were first preached. **And it is here and here alone that toleration and sympathy become practical; it is theoretical in every other country; it is here and here alone, that the Hindu builds mosques for the Mohammedans and churches for the Christians."**

(source: **Secularization of India...? - by S. Balasundar** - Hindu voice).

Religion is the main theme of India. Swami Vivekananda wrote:

"Each nation, like each individual, has one theme in life, which is its center, the principal note round which every note comes to form harmony....if one nation attempts to throw off its vitality, the direction which has become its own through the transmission of centuries, the nation dies....if one nation's political power is its vitality, as in England, artistic life is another and so on. **In India religious life forms the center, the keynote of the whole music of life."**

(source: **Glimpses of Indian Culture - By Dr. Giriraj Shah** p. 27).

He proclaimed the non-dualistic "spirituality" of Vedanta as the metaphysical root and basis of universal tolerance and brotherhood, as well as of India's national identity. He said:

"India alone was to be, of all lands, **the land of toleration and of spirituality**…in that distant time the sage arose and declared, ekam sad vipra bahudha vadanti (He who exists is one; the sages call him variously). This is one of the most memorable sentences that was ever uttered, one of the grandest truths that was ever discovered. And for us Hindus this truth has been the very backbone of our national existence…our country has become the glorious land of religious toleration…The world is waiting for this grand idea of universal toleration….The other great idea that the world wants from us today….is that eternal ideal of the spiritual oneness of the whole universe…This is the dictate of Indian philosophy. This oneness is the rationale of all ethics and all spirituality."

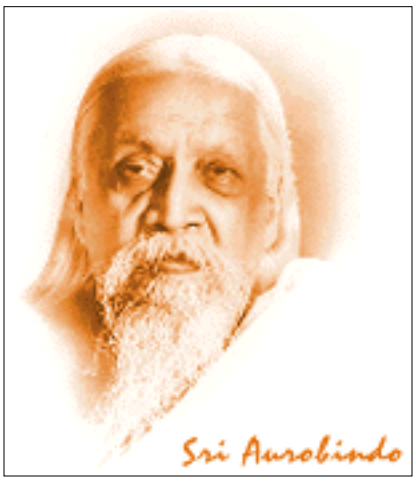
(source: **Vivekanada's Complete Works** III, 186ff).

22. **Adi Shakaracharya** (788-820) was undoubtedly **an immortal spiritual leader who, by his matchless speculative daring, grand practical idealism, remorseless logic and stern intellectualism** gave an interpretation of the mysteries of life whose influence is still great.

Sankara's philosophy is called **Kevaladvaita or absolute monism** which can be summed up thus. **The Supreme Spirit or the Brahman is alone real and the individual self is only the Supreme Self and no other. Brahman is supreme intelligence, devoid of attributes, form, changes or limitations. It is self-luminous and all pervading and is without a second. The empirical world is unreal, an illusion born of ignorance. The jiva continues in Samsara only as long as it retains attachment due to ignorance or Maya. If it casts off the veil of Maya through knowledge or Jnana it will realize its identity with the Brahman and get merged into it.**

(source: **Main Currents in Indian Culture - By S. Natarajan** p. 35 - 37).

He is considered one of the foremost of India's mystic philosophers and religious thinker who developed **Advaita Vedanta**, a system of philosophical thought within Hinduism. Adi Shankaracharya was born during the time when Buddhism held somewhat of a sway in India, and the philosophy of Buddhism had come to be interpreted as a denial of God. Moreover, Hinduism was divided into various sects and the ritualistic practice had taken a predominance over actual philosophical practice.



Adi Shankaracharya revived Sanatana Dharma. He effectively turned back the wave of Buddhism and Jainism and established Hinduism firmly in Bharat. His works on religion and philosophy pointed out the unique features of our ancient religion. Shankara, in his indisputable style, set out on a difficult mission and changed the outlook of the country and its people by revamping the vast hindu literature into simple easy to understand language.

The great genius of **Adi-Shankaracharya** led him to establish in the four corners of India, four principal seats of learning for propagating his teaching ; at a time when he had revived the understanding of the people and established the true and eternal fundamentals of Vedic wisdom.

(source: **Introduction to Shankara - About.com**).

This is what he thought of the **Bhagavad Gita**:

" From a clear knowledge of the Bhagavad-Gita all the goals of human existence become fulfilled. Bhagavad-Gita is the manifest quintessence of all the teachings of the Vedic scriptures."

23. **Sri Aurobindo** (1872-1950) most original philosopher of modern India. Education in England gave him a wide introduction to the culture of ancient, or mediaeval and of modern Europe. **He was described by Romain Rolland as ' the completest synthesis of the East and the West.'**

He was a brilliant scholar in Greek and Latin. He had learned French from his childhood in Manchester and studied for himself German and Italian sufficiently to study Goethe and Dante in the original tongues. He passed the Tripos in Cambridge in the first class and obtained record marks in Greek and Latin in the examination for the Indian Civil Service.

This is what **Aurobindo** said in his book, **India's Rebirth** (ISBN 2-902776-32-2) pg 139-140.

"Hinduism.....gave itself no name, because it set itself no sectarian limits; it claimed no universal adhesion, asserted no sole infallible dogma, set up no single narrow path or gate of salvation; it was less a creed or cult than a continuously enlarging tradition of the God ward endeavor of the human spirit. An immense many-sided and many staged provision for a spiritual self-building and self-finding, it had some right to speak of itself by the only name it knew, the eternal religion, Santana Dharma...."

" The people of India, even the "ignorant masses" are by centuries of training are nearer to the inner realities, than even the cultured elite anywhere else"

"The Gita is the greatest gospel of spiritual works ever yet given to the race." In his famous **Essays on the Gita**, Sri Aurobindo summed up the whole problem in these words:

We will use only soul-force and never destroy by war or any even defensive employment of physical violence ? Good, though until soul-force is effective, the Asuric force in men and nations tramples down, breaks, slaughters, burns, pollutes, as we see it doing today, but then at its ease and unhindered, and you have perhaps caused as much destruction of life by your abstinence as others by resort to violence. Strength founded on the Truth and the dharmic use of force are thus the Gita's answer to pacifism and non-violence. Rooted in the ancient Indian genius, this third way can only be practised by those who have risen above egoism, above asuric ambition or greed. **The Gita certainly does not advocate war ; what it advocates is the active and selfless defence of dharma. If sincerely followed, its teaching could have altered the course of human history. It can yet alter the course of Indian history."**

The Gita is, in Sri Aurobindo's words, "our chief national heritage, our hope for the future."

(source: **The Gita in Today's World - by Michel Danino** - bharatvani.org).

Aurobindo says in his book **Karmayogin**:

"Hinduism, which is the **most skeptical** and the most believing of all, the most skeptical because it has questioned and experimented the most, the most believing because it has the deepest experience and the most varied and positive spiritual knowledge, that wider Hinduism which is not a dogma or combination of dogmas but a law of life, which is not a social framework but the spirit of a past and future social evolution, which rejects nothing but insists on testing and experiencing everything and when tested and experienced, turning in to the soul's uses, in this Hinduism, we find the basis of future world religion. This Sanatana Dharma has many scriptures: The Veda, the Vedanta, the Gita, the Upanishads, the Darshanas, the Puranas, the Tantras:.....but its real, the most authoritative scripture is in the heart in which the Eternal has his dwelling."

Aurobindo in his book, **Letters**, Vol. II wrote:

"The Hindu religion appears....as a cathedral temple, half in ruins, noble in the mass, often fantastic in detail but always fantastic with a significance - crumbling or badly outworn in places, but a cathedral temple in which service is still done to the Unseen and its real presence can be felt by those who enter with the right spirit."

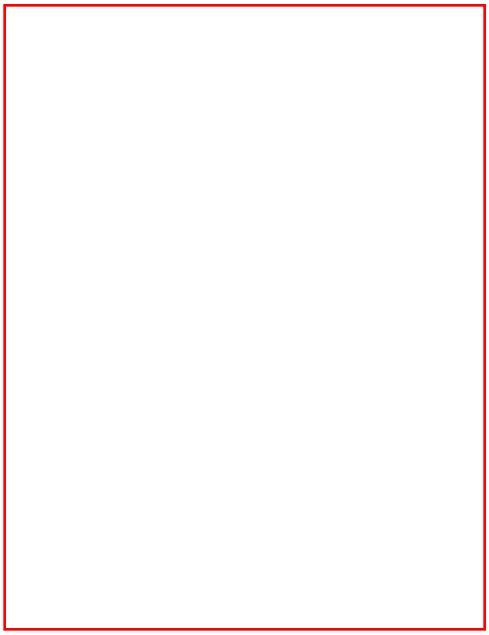
(source: **The Soul of India - By Satyavrata R Patel** p. 60-61).

"That which we call the Hindu religion is really the Eternal religion because it embraces all others."

(source: **The Wisdom of Hindu Gurus -Timothy Freke** pg 56).

In a brilliant speech, Aurobindo equated the Indian land with Sanatana Dharma or Hindu religion which is but another name for the yearning of the Divine or the quest of the Spirit. **He also said that in India religion and nationalism are one. India rises with religion, lives by it and will perish with it and to rise in religion is to raise India.**

(source: **The Soul of India - By Satyavrata R Patel** p. 206).



"India of the ages is not dead nor has she spoken her last creative word; she lives and has still something to do for herself and the human peoples."

(source: **India's Rebirth - By Sri Aurobindo** Publisher: Mira Aditi ISBN 81-85137-27-7 p. 158).

Aurobindo calls the commercial civilization of the West "monstrous and asuric (demonic)".

He pointed out: " ...the seers of ancient India had, in their experiments and efforts at spiritual training and the conquest of the body, perfected a discovery which in its importance to the future of human knowledge dwarfs the divinations of Newton and Galileo, even the discovery of the inductive and experimental method in Science was not more momentous..."

(source: **The Upanishads - By Sri Aurobindo** vol. 12 p. 6).

" Spirituality is indeed the master key of the Indian mind; the sense of the infinitive is native to it. India saw from the beginning, - and, even in her ages of reason and her age of increasing ignorance, she never lost hold of the insight, - that life cannot be rightly seen in the sole light, cannot be perfectly lived in the sole power of its externalities. She was alive to the greatness of material laws and forces; she had a keen eye for the importance of the physical sciences; she knew how to organize the arts of ordinary life. But she saw that the physical does not get its full sense until it stands in right relation to the supra-physical; she saw that the complexity of the universe could not be explained in the present terms of man or seen by his superficial sight, that there were other powers behind, other powers within man himself of which he is normally unaware, that he is conscious only of a small part of himself, that the invisible always surrounds the visible, the supra-sensible the sensible, even as infinity always surrounds the finite. She saw too that man has the power of exceeding himself, of becoming himself more entirely and profoundly than he is, - truths which have only recently begun to be seen in Europe and seem even now too great for its common intelligence.

She saw the myriad gods, and beyond God his own ineffable eternity; she saw that there were ranges of life beyond our present life, ranges of mind beyond our present mind and above these she saw the splendors of the spirit. **Then with that calm audacity of her intuition which knew no fear** or littleness and shrank from no act whether of spiritual or intellectual, ethical or vital courage, **she declared that there was none of these things which man could not attain if he trained his will and knowledge; he could conquer these ranges of mind, become the spirit, become a god, become one with God, become the ineffable Brahman."**

' India is the meeting place of the religions and among these Hinduism alone is by itself a vast and complex thing, not so much a religion as a great diversified and yet subtly unified mass of spiritual thought, realization and aspiration." "Metaphysical thinking will always no doubt be a strong element in her mentality, and it is to be hoped that she will never lose her great, her sovereign powers in that direction..."

(source: **The Renaissance in India - Shri Aurobindo** Arya Publishing House Calcutta. p. 10 - 55).

Maharshi Aurobindo points out, "Indian religion has always felt that since the minds, the temperaments and the intellectual affinities of men are unlimited in their variety, a perfect liberty of thought and of worship must be allowed to the individual in his approach to the Infinite."

(source: **Hindutva is liberal - By A. B. Vajpayee - rediff.com**).

He wrote this regarding Hindu culture:

"More high-reaching, subtle, many-sided, curious and profound than the Greek, more noble and humane than the Roman, more large and spiritual than the old Egyptian, more vast and original than any other Asiatic civilization, more intellectual than the European prior to the 18th century, possessing all that these had and more, it was the most powerful, self-possessed, stimulating and wide in influence of all past human cultures.

(source: **The Soul of India - By Satyavrata R Patel** p. contents).

Sri Aurobindo in a series of luminous essays called **A Defense of Indian Culture**, published in the **Arya**:

"Spirituality is the master key of the Indian mind. It is this dominant inclination of India which gives character to all the expressions of her culture. In fact, they have grown out of her inborn spiritual tendency of which her religion is a natural out flowering. The Indian mind has always realized that the Supreme is the Infinite and perceived that to the soul in Nature the Infinite must always present itself in an infinite variety of aspects. **The aggressive and quite illogical idea of a single religion for all mankind, a religion universal by the very force of its narrowness, one set of dogmas, one cult, one system of ceremonies, one ecclesiastical ordinance, one array of prohibitions and injunctions which all minds must accept on peril of persecution by men and spiritual rejection or eternal punishment by God, that grotesque creation of human unreason which has been the parent of so much intolerance, cruelty and obscurantism and aggressive fanaticism, has never been able to take firm hold of the Indian mentality."**

(source: **The Vision of India - By Sisirkumar Mitra** p. 53 - 54).

24. **Sir Sarvepalli Radhakrishnan** (1888-1975) was one of the most profound philosophers of this century, author and educationalist. **Radhakrishnan** was also a professor of Eastern Religions at Oxford and later became the second President of free India:

"Hinduism is not just a faith. It is the union of reason and intuition that cannot be defined but is only to be experienced. Evil and error are not ultimate. There is no Hell, for that means there is a place where God is not, and there are sins which exceed his love. "

"In the history of the world, Hinduism is the only religion, that exhibits a complete independence and freedom of the human mind, its full confidence in its own powers. Hinduism is freedom, especially the freedom in thinking about God."

"In the search for the supernatural, it is like traveling in space without a boundary or barrier."

(source: **Bhagavad Gita - By S. Radhakrishan** pg - 55).

" A large part of the world received its religious education from India." In spite of continuous struggle with theological baggage, India has held fast for centuries to the ideals of spirit."

(source: **Eastern Religions & Western Thought - By. Dr. S. Radhakrishnan** p. 116).

"Hinduism is wholly free from the strange obsession of some faiths that the acceptance of a particular religious metaphysics is necessary for salvation, and non-acceptance thereof is a heinous sin meriting eternal punishment in hell."

(source: **The Hindu View of Life - By S. Radhakrishnan** p. 28).

He noted that: "If the **Upanishads** help us to rise above the glamour of the fleshy life, it is because their authors, pure of soul, ever striving towards the divine, reveal to us their pictures of the splendors of the unseen. The Upanishads are respected not because they are a part of Sruti or revealed literature and so hold a reserved position but because they have inspired generations of Indians with vision and strength by their inexhaustible significance and spiritual power. Indian thought has constantly turned to these scriptures for fresh illumination and spiritual recovery or recommencement, and not in vain. The fire still burns bright on their altars. Their light is for the seeing eye and their message is for the seeker after truth."

(source: **The Principal Upanishads - By S. Radhakrishnan** London: Allen & Unwin/ New York: Humanities Press. 1953, p. 18-19).

"**Indian thought is an extraordinary mass of material which for detail and variety has hardly any equal in any other part of the world. There is hardly any height of spiritual insight or rational philosophy attained in the world** that has not its parallel in the vast stretch that lies between the early Vedic seers and the modern naiyAyikas."

(source: **Indian Philosophy, Volume I - By S. Radhakrishnan**).

"Hinduism has come to be a tapestry of the most variegated tissues and almost endless diversity of hues."

" Hinduism is therefore not a definite dogmatic creed, but a vast, complex, but subtly unified mass of spiritual thought and realization. Its tradition of the God ward endeavor of the human spirit has been continuously enlarging through the ages."

(source: **The Hindu View of Life - By S. Radhakrishnan** p. 8-9).

"The truth suggested in the Vedas are developed in the Upanishads. We find in the seers of the Upanishads, an utter fidelity to every layer and shade of truth as they saw it. They affirm that there is a central reality, the one without a second, who is all that is and beyond all that is."

'From the time of the Rg Veda till today, India has been the home of different religions and the **Indian genius** adopted a policy of live and let live towards them. **Indian religion never quite understood the idea of exclusive worship. Indian religious tradition admits all forms in which the single truth is**

reflected. Proselytism is discouraged. It is not God that is worshipped but the group or the authority that claims to speak in his name."

The attempts of the western powers to impose their culture on India through the Government and its educational institutions have stirred the huge inertia of the Indian people and ruffled the surface of Indian society, but deep down the immemorial tradition of India has not been greatly disturbed."

(source: **East and West: Some Reflections - By S. Radhakrishnan** p. 22 -42).

Hinduism according to him is not a religion, but a commonwealth of religions. “It is more a way of life than a form of thought….The theist and the atheist, the skeptic and the agnostic may all be Hindus if they accept the Hindu system of culture and life. **Hinduism insists not on religious conformity but on a spiritual and ethical outlook of life…Hinduism is not a sect but a fellowship of all who accept the law of right and earnestly seek for the truth.”**

(source: **The Hindu View of Life - By S. Radhakrishnan** p. 77).

"By what **strange social alchemy has India subdued her conquerors**, transforming them to her very self and substance..... ? Why is it that her conquerors have not been able to impose on her their language, their thoughts and customs, except in superficial ways?"

(source: **The empire strikes back - By Suma Varghese** - Free Press Journal December 5 1997).

"They (Ancient Hindus) measured the land, divided the year, mapped out the heaven, traced the course of sun and planets through the zodiacal belt, analyzed the constitution of matter, and studied the nature of birds and beasts, plants and seeds."

(source: **The Story of Oriental Philosophy - By L. Adams Beck** p. 10 - 13).

"The Gita appeals to us not only by its force of thought and majesty of vision, but also by its fervor of devotion and sweetness of spiritual emotion."

(source: **Indian Philosophy, Volume I - By S. Radhakrishnan**).

25. **Julius Robert Oppenheimer** (1904-1967) Scientist, philosopher, bohemian, and radical. A theoretical physicist and the Supervising Scientist for the Manhattan Project, the developer of the atomic bomb. Graduating from Harvard University, he traveled to Cambridge University to study at the Cavendish Laboratory.

Oppenheimer acquired a deeper knowledge of the **Bhagavad Gita** in 1933 when, as a young professor of physics, he studied Sanskrit with **Professor Arthur W Ryder** (1877-1938) at Berkeley.

The Gita, Oppenheimer excitedly wrote to his brother Frank Oppenheimer, was **"very easy and quite marvelous"**.

(source: **Robert Oppenheimer Letters and Recollections - By Alice K Smith and Charles Weiner** p. 165).

Later he called the Gita **"the most beautiful philosophical song existing in any known tongue."** He kept a well worn copy of it conveniently on hand on the bookshelf closest to his desk and often gave the book to friends as a present.

(source: **The Story of J Robert Oppenheimer - By Denise Royal** St. Martin's Press New York 1969 p. 54).

He continued to browse in it while directing the bomb laboratory. After President Franklin Roosevelt's death in 1945, Oppenheimer spoke at a memorial service at Los Alamos and he quoted a passage from the Gita. In later years, too, he would look back on the Bhagavad Gita as one of the most important influences in his life.

In 1963, **Christian Century** magazine (May 15, 1963 p. 647) asked Oppenheimer to list the ten books that "did most to shape your vocational attitude and your philosophy of life" It is significant that two of the ten works that Oppenheimer claimed as most influential were Indian (**The Bhagavad Gita and Bhartrihari's Satakatrayam**) and a third, **The Waste Land by T S Eliot**, alluded to the Hindu Scriptures, The Upanishads and The Bhagavad Gita and concluded with a Sanskrit incantation: Shantih, Shantih, Shantih."

He said:

"Access to the Vedas is the greatest privilege this century may claim over all previous centuries."

He wrote:

"The general notions about human understanding… which are illustrated by discoveries in atomic physics are not in the nature of things wholly unfamiliar, wholly unheard of or new. Even in our own culture they have a history, and in Buddhist and Hindu thought a more considerable and central place. What we shall find [in modern physics] is an exemplification, an encouragement, and a refinement of old wisdom."

In this context it is worth emphasizing that India's contribution of Buddhism to China (and

other countries of the region) is by no means insubstantial. These civilizations would hardly exist without the Indian contribution in all aspects of culture— from science and technology, the arts, philosophy and spirituality.

(source: **India as a Creative Civilization** - **By N. S. Rajaram**).

Oppenheimer described the thoughts that passed through his mind when he witnessed the first atomic test explosion.

" If the radiance of a thousand suns
Were to burst at once into the sky,
That would be like the splendor of the Mighty One...
I am become Death,
The shatterer of Worlds."

As the gigantic nuclear cloud mushroomed up to the stratosphere followed by a doomsday roar, Oppenheimer continued with the verses in which the Mighty One reveals Himself:

"Death am I, cause of destruction of the worlds, matured and set out to gather in the worlds there" - (**Bhagavad Gita XI 12-32**).

(source: **A Survey of Hinduism - By Klaus K. Klostermaier**. State University of New York Press. 1994. pg 109-110. **The Eye of Shiva: Eastern Mysticism And Science - By Amaury de Riencourt** p. 14). For more refer to chapter on **GlimpsesX**).

Then and there, Oppenheimer symbolized a most extraordinary conjunction - the juxtaposition of Western civilization's most terrifying scientific achievement with the most dazzling description of the mystical experience given to us by the Bhagavad Gita, India's greatest literary monument.

The Gita, Oppenheimer excitedly wrote to his brother Frank Oppenheimer, was "very easy and quite marvelous".

***

Oppenheimer's spontaneous conjunction of a Hindu mystical poem with a nuclear explosion was of great symbolic significance. Nowhere in Western literature could he have found an almost clinical description of mystical rapture that also fits the description of a nuclear explosion in the outer world.

(source: **The Eye of Shiva: Eastern Mysticism And Science - By Amaury de Riencourt** p. 14). For more refer to chapter on **GlimpsesX**).

"The general notions about human understanding...which are illustrated by discoveries in atomic physics are not in the nature of things wholly unfamiliar, wholly unheard of, or new. Even in our own culture, they have a history, and in Buddhist and **Hindu thought** a more considerable and central place. What we shall find is an exemplification, an encouragement, and a refinement of old wisdom."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p. 18).

Colonel James Tod with Pundit
(source: A Concise History of the Indian People - By H G Rawlinson p. 313).

26. **Colonel James Tod** (1782-1835) author of **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India**

"Where can we look for **sages like those whose systems of philosophy were prototypes of those of Greece**: to whose works Plato, Thales & Pythagoras were disciples? Where do I find astronomers whose knowledge of planetary systems yet excites wonder in Europe as well as the architects and sculptors whose works claim our admiration, and the musicians who could make the mind oscillate from joy to sorrow, from tears to smile with the change of modes and varied intonation?"

(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India - By James Tod** p. 608- 609).

27. **Sylvain Levi** (1863-1935) French scholar, Orientalist who wrote on Eastern religion, literature, and history. Levi was appointed a lecturer at the school of higher studies in Paris (1886), he taught Sanskrit at the Sorbonne (1889-94) and wrote his doctoral dissertation, **Le Théâtre indien** ("The Indian Theatre"). In **L'Inde et le monde** ("India and the World"), he discussed India's role among nations. He wrote :

"From Persia to the Chinese Sea, 'from the icy

regions of Siberia to the islands of Java and Borneo, from Oceania to Socotra, India has propagated her beliefs, her tales and her civilization."

"She has left indelible imprints on one fourth of the human race in the course of a long succession of centuries. She has the right to reclaim in universal history the rank that ignorance has refused her for a long time and to hold her place amongst the great nations summarizing and symbolizing the spirit of humanity."

(source: **Discovery of India - By Jawaharlal Nehru** p.200-210). Please refer to chapter on **Suvarnabhumi** and **Seafaring in Ancient India** for more on India's influence).

"The multiplicity of the manifestations of the Indian genius as well as their fundamental unity gives India the right to figure on the first rank in the history of civilized nations. **Her civilization, spontaneous and original, unrolls itself in a continuous time across at least thirty centuries, without interruption, without deviation.** Ceaselessly in contact with foreign elements which threatened to strangle her, she persevered victoriously in absorbing them, assimilating them and enriching herself with them. Thus she has seen the Greeks, the Scythians, the Afghans, the Mongols to pass before her eyes in succession and is regarding with indifference the Englishmen - confident to pursue under the accidence of the surface the normal course of her high destiny."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p. 377-378).

"The Mahabharata is not only the largest, but also the grandest of all epics, as it contains throughout a lively teaching of morals under a glorious garment of poetry."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 236).

28. **Georg Wilhelm Friedrich Hegel** (1887--1961) was a great German philosopher and a philosophical predecessor of the New England Transcendentalists. He wrote in his "lectures on the Philosophy of History." **Hegel** belongs to the period of "German idealism" in the decades following Kant. He wrote:

"India has always been an object of yearning, a realm of wonder, a world of magic."

"India is the land of dreams. India had always dreamt - more of the Bliss that is man's final goal. And this has helped India to be more creative in history than any other nation. Hence the effervescence of myths and legends, religious and philosophies, music, and dances and the different styles of architecture." [61]

"India has created a special momentum in world history as a country to be searched for."

(source: **A Survey of Hinduism** - **By Klaus K. Klostermaier**. pg 17).

He was the first to proclaim that, alongside Greece and Germany, India had produced the greatest and most profound philosophers. And the great Hegel himself, who understood India far more profoundly, was to remark in his work on **The Philosophy of History**:

"It strikes everyone in beginning to form an acquaintance with the treasures of Indian literature, that a land so rich in intellectual products and those of the profoundest order of thought..."

(source: **The Soul of India - By Amaury de Riencourt** p. 301).

"India as a land of Desire formed an essential element in general history. From the most ancient times downwards, all nations have directed their wishes and longings to gaining access to the treasures of this land of marvels, the most costly which the earth presents, treasures of nature - pearls, diamonds, perfumes, rose essences, lions, elephants, etc. - as also treasures of wisdom. The way by which these treasures have passed to the West has at all times been a matter of world historical importance bound up with the fate of nations."

(source: **Asia and Western Dominance - By K. M. Panikkar** p. 21).

Hegel, in his **Lectures on the Philosophy of History**, says that " Persia is the land of light, Greece the land of grace, **India the land of dream,** Rome the land of empire." It is true of all cultures that the greatest gift of life is the dream of a higher life.

(source: **Towards a New World - By Sir Sarvepalli Radhakrishnan** p-37 ISBN 81-222-0087-7).

Hegel characterized India as a land which had exerted its world-historical influence in a passive manner, by being sought: "Without being known too well, it has existed for millennia in the imagination of the Europeans as a wonderland. Its fame, which it has always had with regard to its treasures, both its natural ones, and in particular, its wisdom, has lured men there. "

(source: **India and Europe - By Wilhelm Halbfass** p. 2).

29. **Solange Lemaitre** author of several books, including **Le Mystère de la mort dans les religions d'Asie** and **Râmakrishna et la vitalité de l'hindouism** has observed:

"The civilization of India, at root purely religious, is only now becoming known in Europe; and as the mystery surrounding it is unveiled **it emerges as one of the highest achievement in the history of mankind.** By the very breadth of the outlook it affords on to the destiny of man the Vedic religion offers in abundance the spiritual experience that has inspired the Indian people since the dawn of their history. The vocation of India is to proclaim to the world the efficacy of religious experience."

There is more than a purely literal meaning to be found in the Vedas. This can be felt behind the poetic imagery of many hymns about the Creation and the Divine, in which certain lines sparkle like specks of gold in the opacity of their vein.

(source: **Hinduism - By Solange Lemaitre** p. 1-12).

30. **Alain Danielou** a.k.a **Shiv Sharan** (1907-1994), son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India, including **Virtue, Success, Pleasure, & Liberation : The Four Aims of Life in the Tradition of Ancient India.** He was perhaps the first European to boldly proclaim his Hinduness. He settled in India for fifteen years in the study of Sanskrit. He had a wide effect upon Europe's

understanding of Hinduism. Danielou had been sharply critical of the Western-educated Congress leadership which led the country to Independence from British rule in 1947.

Danielou said:

"The Hindu lives in eternity. He is profoundly aware of the relativity of space and time and of the illusory nature of the apparent world."

Hinduism is a religion without dogmas. Since its origin, Hindu society has been built on rational bases by sages who sought to comprehend man's nature and role in creation as a whole.

(source: **Virtue, Success, Pleasure, & Liberation : The Four Aims of Life in the Tradition of Ancient India** p. 9 and 154).

"Hinduism especially in its oldest, Shivaite form, never destroyed its past. It is the sum of human experience from the earliest times. Non-dogmatic, it allows every one to find his own way."

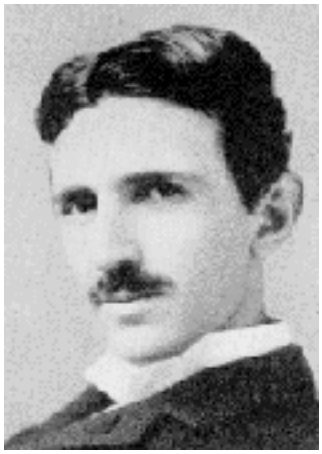
He also noted as early as 1947 that **"the Egyptian myth of Osiris seemed directly inspired from a Shivaite story of the Puranas and that at any rate, Egyptians of those times considered that Osiris had originally come from India mounted on a bull (Nandi), the traditional transport of Shiva."**

Ultimate reality being beyond man's understanding, the most contradictory theories or beliefs may be equally inadequate approaches to reality. Ecological (as we would say today), it sees man as part of a whole, where trees, animals, men and spirits should live in harmony and mutual respect, and it asks everyone to cooperate and not endanger the artwork of the creator.
It therefore opposes the destruction of nature, of species, the bastardization of races, the tendency of each one to do what he was not born for. It leaves every one free to find his own way of realization human and spiritual be it ascetic or erotic or both. It does not separate intellect and body, mind and matter, but sees the Universe as a living continuum. **"I believe any sensible man is unknowingly a Hindu and that the only hope for man lies in the abolition of the erratic, dogmatic, unphilosophical creeds people today call religions."**

31. **Erwin Schroedinger** (1887--1961) Austrian theoretical physicist, a Nobel prize-winner, on **Quantum Mechanics**, wished to see:

"Some blood transfusion from the East to the West" to save Western science from spiritual anemia."
Schroedinger explicitly affirmed his conviction that **Vedantic jnana** represented the only true view of reality- a view for which he was prepared even to offer Empirical proof.

(source: **A Short Introduction to Hinduism - By Klaus K. Klostermaier** p. 168).



"In all world," writes Schroedinger in his book **My View of the World** (chapter iv), "there is no kind of framework within which

we can find consciousness in the plural; this is simply something we construct because of the temporal plurality of individuals, but it is a false construction....The only solution to this conflict insofar as any is available to us at all lies in the **ancient wisdom of the Upanishad."**

(source: **My View of the World - By Erwin Schroedinger** chapter iv).

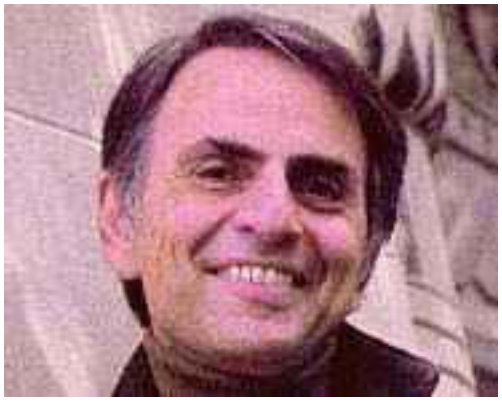
Regarding mystical insights, Schrodinger tells us: "The multiplicity is only apparent. This is the doctrine of the Upanishads. And not of the **Upanishads** only. The mystical experience of the union with God regularly leads to this view, unless strong prejudices stand in the West."

(source: **The Eye of Shiva: Eastern Mysticism and Science - By Amaury de Riencourt** p. 78).

32. **Nicola Tesla** (1856-1943) the Serbian-American inventor, electrical engineer, and scientist, used ancient Sanskrit terminology in his descriptions of natural phenomena.

As early as 1891 **Tesla** described the universe as a kinetic system filled with energy which could be harnessed at any location. His concepts during the following years were greatly influenced by the teachings of Swami Vivekananda. Swami Vivekananda was the first of a succession of eastern yogi's who brought Vedic philosophy and religion to the west. After meeting the Swami and after continued study of the Eastern view of the mechanisms driving the material world, Tesla began using the Sanskrit words **Akasha, Prana,** and the concept of aluminiferous ether to describe the source, existence and construction of matter.

(source: http://www.hinduism.fsnet.co.uk/namoma/life_swamiji/life_swamiji_tesla.htm).



33. **Alistair Shearer** affirms:

"The Hindu understanding of the universe has often been misunderstood as bizarre and primitive.
The Hindu imagery is in fact a sophisticated iconography conveying universal religious truths only now beginning to be understood in the West."

34. **Dr. Carl Sagan**, (1934-1996) famous astrophysicist, in his book, **Cosmos** says:

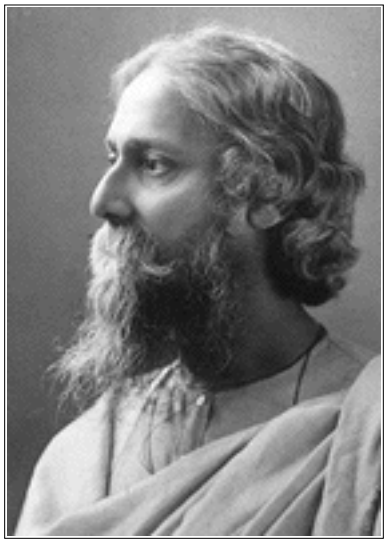
"The Hindu religion is the only one of the world's great faiths dedicated to the idea that the Cosmos itself undergoes an immense, indeed an infinite, number of deaths and rebirths. **It is the only religion in which the time scales correspond, to those of modern scientific cosmology.** Its cycles run from our ordinary day and night to a day and night of Brahma, 8.64 billion years long. Longer than the age of the Earth or the Sun and about half the time since the Big Bang. And there are much longer time scales still."

There is the deep and appealing notion that the universe is but the dream of the god who, after a Brahma years, dissolves himself into a dreamless sleep. The universe dissolves with him - until, after another Brahma century, he stirs, recomposes himself and begins again to dream the great cosmic dream.

Carl Sagan further says: " The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation **Nataraja, the Dance King.** In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."

These profound and lovely images are, I like to imagine, a kind of premonition of modern astronomical ideas."

Sagan continues, "A millennium before Europeans were wiling to divest themselves of the Biblical idea that the world was a few thousand years old, the Mayans were thinking of millions and the **Hindus billions"**



(source: **Cosmos - By Carl Sagan** p. 213-214).

In the episode entitled "The Edge of Forever" in the "Cosmos" television series, Carl Sagan visits India, and by way of introducing some of the bizarre ideas of modern physics, he acknowledges that of all the world's philosophies and religions those originating in India are remarkably consistent with contemporary scenarios of space, time and existence.

35. **Rabindranath Tagore**,(1861-1941) poet, author, philosopher, Nobel prize laureate. He described the Vedic hymns as:

"A poetic testament of a people's collective reaction to the wonder and awe of existence."

India harmonized rural life and urban life. She was no blind worshipper of urbanization like the west of today.

Tagore says well in his book, **Sadhana**:

"The civilization of ancient Greece was nurtured in the city walls. In fact, all the modern civilization have their cradles of brick and mortar, The walls leave their mark deep in the minds of men...Thus in India it was in the forests that our civilization had its birth, and it took a distinct character from this origin and environment. It was surrounded by the vast life of nature and had the closest and most constant intercourse with her varying aspects...His aim was not to acquire but to realize, to enlarge his consciousness by growing into his surroundings. the west seems to take pride in thinking that it is subduing Nature as if we are living in a hostile world where we have to wrest everything we want from an unwilling and alien arrangement of things. This sentiment is the product of the city wall habit and training of mind. But in India the point of view was different; it included the world with the man as one great truth. India put all her emphasis on the harmony that exists between the individual and the universal....The fundamental unity of creation was not simply a philosophical speculation for India; it was her life object to realize this great harmony in feeling and in action."

India chose her places of pilgrimages on the top of hills and mountains, by the side of the holy rivers, in the heart of forests and by the shores of the ocean, which along with the sky, is our nearest visible symbol of the vast, the boundless, the infinite and the sublime.

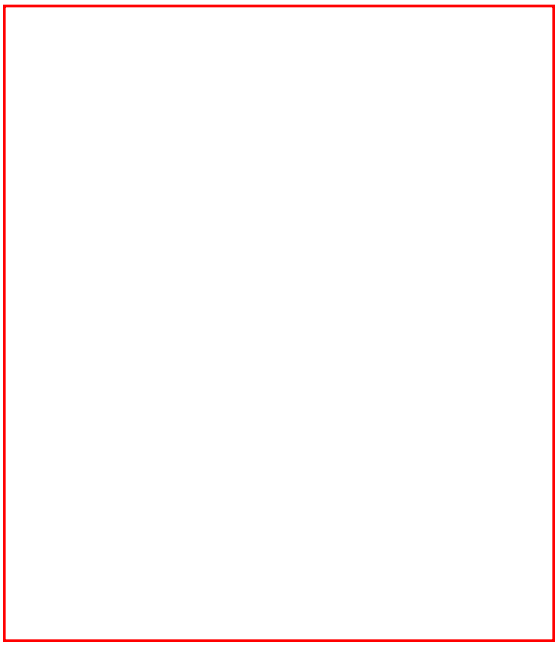
(source: **Indian Culture and the Modern Age - By Dewan Bahadur K. S. Ramaswami Sastri** Annamalai University. 1956 p. 32-33).

"India has all along been trying experiments in evolving a social unity within which all the different peoples could be held together, while fully enjoying the freedom of maintaining their differences. The tie has been as loose as possible, yet as close as circumstances permitted. This has produced something like a United States of a social federation, whose common name is **Hinduism."**

(source: **Hindutva is liberal - By A. B. Vajpayee - rediff.com**).

In religion his inspiration was derived from the Vedas and the Upanishads. **Tagore** pointed out that Indian civilization was a "forest civilization". The essential continuity of the culture was developed and preserved by families living in small communities close to nature. " The ancient Indians distrusted the pace and pomp of urbandom; they distrusted it strongly enough to resist central authority and conformism. He further predicted that: "India is destined to be the teacher of all lands."

Tagore said of the **quintessence of India's spiritual philosophy** was :



" Santam, Sivam and Advaitam (peace, goodness and Unity of all beings)." Rabindranath Tagore said that we Indians, can buy our true place in the world only with our inheritance, not with the inheritance of others.

Regarding the vitality of ancient India, Rabindranath Tagore has said: "To know my country one has to travel to that age, when she realized her soul and thus transcended her physical boundaries when she revealed her being in a radiant magnanimity which illumined the eastern horizon, making her recognized as their own by those in alien shores who were awakened into a surprise of life." He also said about the culture of Indonesia: **' I see India all around me.'** And in Indonesia, such words as 'sea' and 'ship' are recognizable for their Tamil roots.'

(Please refer to chapter on **Suvarnabhumi** - **Greater India**).

"The fundamental Unity of Creation was not simply a philosophical speculation for India: it was her life object to realize this great harmony in feeling and in action."

(source: **Our Heritage and Its Significance - By Shripad Rama Sharma** p. 56).

36. **T. S. Eliot** (1888-1965) American-English Harvard educated poet, playwright, and literary critic, a leader of the modernist movement in literature. **Eliot** was awarded the Nobel Prize for literature in 1948. He drew his intellectual sustenance from the Bhagavad Gita. He considered it to be the greatest philosophical poem after Dante's *Divine Comedy.* (source: Resinging the Gita).

Also, he kept a copy of The Twenty-eight Upanishads in his personal library for ready reference. (Among the books from Eliot's library now in the Hayward Bequest in King's College Library is Vasudev Lazman Sastri Phansikar's The Twenty-Eight Upanishads (Bombay: Tukaram Javaji, 1906). Inscribed on the fly-leaf is the following note: Thomas Eliot with C.R. Lanman's kindest regards and best wishes. Harvard College. May 6, 1912. At Harvard, Eliot studied Sanskrit and Pali for two years (1920-11), probably in order to acquaint himself with Indian philosophical texts in the original, for he later admitted that though he studied "the ancient Indian languages" and " read a little poetry," he was "chiefly interested at that time in philosophy."

As early as 1918, Eliot reviewed for The Egoist an obscure treatise on Indian philosophy called Brahmadarsanam or Intuition of the Absolute by Sri Ananda Acharya.

(source: **T. S. Eliot Vedanta and Buddhism - By P. S. Sri** p. 10-11 and 126).

Over and over again, whether in **The Wasteland, Four Quarters, Ash Wednesday** or **Murder in the Cathedral,** the influence of Indian philosophy and mysticism on him is clearly noticeable.

In his poem **'The Dry Salvages'** **Eliot reflects on Lord Krishna's meaning:**

> " I sometimes wonder if that is what **Krishna** meant-
> Among other things - or one way of putting the same thing:
> That the future is a faded song, a Royal Rose or a lavender spray
> Of wistful regret for those who are not yet here to regret."

He mentioned **"Time the destroyer"** (section 2), then summarized one of Krishna's points:

"And do not think of the fruit of action.
Fare forward...
So Krishna, as when he admonished Arjuna
On the field of battle,
Not fare well,
But fare forward voyagers (section 3).

He refers to the Gita's central doctrine of **nishkama karma,** 'selfless endeavor.' He also talks of the decomposition of modern civilization, the lack of conviction and direction, the confusion and meaninglessness of modern consciousness in his poem "The Wasteland."

As Prof. Philip R. Headings has remarked in his study of the poet, "No serious student of

Eliot's poetry can afford to ignore his early and continued interest in the **Bhagavad Gita."**

(source: **Dr. M. V. Kamath, The United States and India** (1776-1976), (The Embassy of India, Washington, D. C., 1976) p. 56).

Eliot familiarized himself with parts of the Vedas and the Upanishads in the course of his graduate studies and used this knowledge as background for certain poetic and dramatic situations in his work. **Of all the American writers who have drawn upon Indian sources T. S. Eliot was one who knew his sources first hand and not merely through translations by Western Orientalists.** The Indian tradition in poetry and philosophy was perceived by Eliot as a vital force in world culture and he appropriated whatever was suitable for his own themes and purposes. The theme of draught and sterility in the Waste Land seems to be inspired by the Vedic myth of Indra slaying Vritra who had held up the waters in the heavens. In the "What the Thunder Said" section of the Waste Land we have the following lines:

" Ganga was sunken and the limp leaves
Waited for rain, while the black clouds
Gathered far distant, over Himavant,
The jungle crouched, humped in silence.
Then spoke the thunder."

Then follows a sequential use of DA-Datta. What have we given?DA-Dayadhvam and DA-Damayata, which as he explains in the Notes are taken from **Brihadaranyaka Upanishad**. The last line has Shantih shantih shantih.

He says: "Two years spent in the study of Sanskrit under Charles Lanman, and a year in the mazes of Patanjali's metaphysics under the guidance of James Woods, left me in a state of enlightened mystification. **A good half of the effort of understanding what the Indian philosophers were after - and their subtleties make most of the great European philosophers look like schoolboys** - lay in trying to erase from my mind all the categories and kinds of distinction common to European philosophy was hardly better than an obstacle.

"In the literature of Asia is a great poetry. There is also profound wisdom and some very difficult metaphysics...Long ago I studied the ancient Indian languages, and while I was chiefly interested at that time in philosophy, I read little poetry too; and I know that my own poetry shows the influence of Indian thought and sensibility."

On the influence of influence of the Bhagavad Gita, he felt "very thankful for having had the opportunity to study the Bhagavad Gita and the religious and philosophical beliefs, so different from (my) own with which the Bhagavad Gita is informed."

(source: **India in the American Mind - By B. G. Gokhale** p. 120-21) **India and World Civilization By D. P. Singhal** Pan Macmillan Limited. 1993. Pg. 60-62).

37. **John Dobson**, scientist and a teacher. His theories in physics and cosmology boldly break new ground and significantly challenge the scientific orthodoxy. He was featured in the PBS television series "The Astronomers". **John Dobson** is perhaps best known for his work in the design and construction of telescopes, however, as most telescopes made today use what is known as a "Dobsonian" mount. He discusses the apparitional nature of the universe and why we are fooled into viewing it in a Newtonian-mechanistic way.

"Can we, by now, square science with religion? In particular, can we square relativity and quantum mechanics with **Swami Vivekananda's Advaita Vedanta**? Since there cannot be two worlds -- one for the scientists and one for the mystics -- it must be that their descriptions are of the same world but from different points of view. Can we, from the vantage point of the Swami's Advaita (non-dualism), see both points of view? Swami Vivekananda said that science and religion would meet and shake hands. Can we see things from his vantage point? Since the notion of maya or apparition as the first cause of our physics is central to the swami's Advaita, I have chosen as "The Equations of Maya". Can we find them in our physics? According to the philosophy of the Advaita Vedantins, as the swami himself has said, there cannot be two existences, only one. And maya is, as it were, a veil or screen through which that oneness (the Absolute) is seen as this Universe of plurality and change.

(source: **http://quanta-gaia.org/dobson/EquationsOfMaya.html#WhatIsMaya**).

38. **David Bohm** (1917-1992) a former associate of Einstein, was one of the world's greatest quantum mechanical physicists and philosophers. **David Bohm** explains his theory that there is something like life and mind enfolded in everything. Bohm was profoundly affected by his close contact with **J. Krishnamurti**.

"Yes, and Atman is from the side of meaning. You would say Atman is more like the meaning. But then what is meant would be Brahman, I suppose; the identity of consciousness and cosmos....This claims that the meaning and what is meant are ultimately one, which is the phrase 'Atman equals Brahman' of classical Hindu philosophy."

(source: http://www.ourworldharmony.com/kDavidBo.htm).

39. **Werner Karl Heisenberg** (1901-1976) German theoretical physicist was one of the leading scientists of the 20th century. **Heisenberg** is best known for his Uncertainty Principle and was awarded the Nobel Prize in physics.

"the startling parallelism between today's physics and the world-vision of eastern mysticism remarks, the increasing contribution of eastern scientists from India, China and Japan, among others, reinforces this conjunction. Physical science has now become planetary and draws into its fold an increasing number of non-westerners who find in its new vision of the universe many elements that are quick to note, one cannot always distinguish between statements made by eastern metaphysics based on mystical insight, and the pronouncements of modern physics based on observations, experiments and mathematical calculations. "

(source: **Hinduism Today** - December 2002).

"The scientific world view has ceased to be a scientific view in the true sense of the word." Werner Heisenberg went later in life to Rabindhranath Tagore's University in India called Shantiniketan (Abode of Peace) in a rural and natural setting evidently in search of what he missed in science, namely the certain principle which is Reality or Truth but which never known outside and therefore never spoken of but which is felt in the pure heart. It is the reflection of this which Heisenberg might have discerned in the spiritual writings of the poet.

(source: **The Bhagavad Gita: A Scripture for the Future** Translation and Commentary **By Sachindra K. Majumdar** Asian Humanities Press. 1991. p 33).

40 **Dr. Jean LeMee** born in France in 1931, Studied Sanskrit at Columbia University. Author of the **Hymns from the Rig Veda** says:

"Precious stones or durable materials - gold, silver, bronze, marble, onyx or granite - have been used by ancient people in an attempt to immortalize themselves. Not so however the ancient Vedic Aryans. They turned to what may seem the most volatile and insubstantial material of all - the spoken word ...The pyramids have been eroded by the desert wind, the marble broken by earthquakes, and the gold stolen by robbers, while the Veda is recited daily by an unbroken chain of generations, traveling like a great wave through the living substance of mind. .."

"The Rig Veda is a glorious song of praise to the Gods, the cosmic powers at work in Nature and in Man. Its hymns record the struggles, the battles, and victories, the wonder, the fears, the hopes, and the wisdom of the Ancient Path Makers.

Glory be to Them!"

(source: **Hymns from the Rig Veda - By Jean LeMee -** Illustrator **Ingbert Gruttner** ISBN: 0394493540 and ASIN 0224011812).

India's Glory

Albert Einstein said: We owe a lot to the Indians, who taught us how to count, without which no worthwhile scientific discovery could have been made.
Hu Shih, former Ambassador of China to USA said: India conquered and dominated China culturally for 20 centuries without ever having to send a single soldier across her border.
Alexander Duff, British historian of India: "Many advances in the sciences that we consider today to have been made in Europe were in fact made in India centuries ago

Sir William Hunter, said India," has even contributed to modern medical science by the discovery of various chemicals and by teaching you how to reform misshapen ears and noses. Even more it has done in mathematics, for algebra, geometry, astronomy, and the triumph of modern science -- mixed mathematics -- were all invented in India, just so much as the ten numerals, the very cornerstone of all present civilization, were discovered in India, and are in reality, Sanskrit words.
In philosophy we are even now head and shoulders above any other nation, as Schopenhauer, the great German philosopher, has confessed.
In Music, India gave to the world her system of notation, with the seven cardinal notes and the diatonic scale, all of which we enjoyed as early as 350 B.C., while it came to Europe only in the eleventh century.
In philology, our Sanskrit language is now universally acknowledged to be the foundation of all European languages, which, in fact, are nothing but jargonized Sanskrit.
`In literature, our epics and poems and dramas rank as high as those of any language; our Shakuntala was summarized by Germany's greatest poet, as `heaven and earth united'.... In manufacture, India was the first to make cotton and purple (dye), it was proficient in all works of jewelry, and the very word `sugar', as well as the article itself, is the product of India. Lastly she has invented the game of chess and the cards and the dice. So great, in fact, was the superiority of India in every respect that it drew to her borders the hungry cohorts of Europe, and thereby indirectly brought about the discovery of America."

Facts about India:
India never invaded any country in her last 10000 years of history.
India invented the Number System. Zero was invented by Aryabhatta.
An important Mathematics book prescribed by the New York State Education Department acknowledges the debt in the following words:

" The Western world owes a great deal to India for a simple invention. It was developed by an unknown Indian more than 1500 years ago. Without most of the great discoveries and inventions

(including computers) of western civilization would never have come about. This invention was the decimal system of numerals - nine digits and a zero. The science and technology of today (including the computers) could not have developed if we had only the Roman system of numerals. That system is too clumsy to be used as a scientific too. Today we take the decimal system for granted. We don't think about how brilliant the man who invented zero must have been. Yet without zero we could not assign a place value to the digits. That ancient mathematician, whoever, he was, deserves much honor."
Indians also made advances in other areas of mathematics. Very early in their history they developed a simple system of geometry. This system was used to plan outdoor sites for hindu religious ceremonies. Indians also added to our knowledge of even more complicated branches of mathematics such as trigonometry and calculus. They studied these branches of mathematics in order to apply them to astronomy."

The World's first university was established in Takshila in 700 BC. More than 10,500 students from all over the world studied more than 60 subjects. The University of Nalanda built in the 4th century CE was one of the greatest achievements of ancient India in the field of education. Sanskrit is the mother of all the European languages. Sanskrit is the most suitable language for the computer software - a report in Forbes magazine, July 1987.

Ayurveda is the earliest school of medicine known to humans. Charaka, the father of medicine consolidated Ayurveda 2500 years ago. Today Ayurveda is fast regaining its rightful place in our civilization.
Although modern images of India often show poverty and lack of development, India was the richest country on earth until the time of British in the early 17th Century. Christopher Columbus was attracted by her wealth.
The art of Navigation was born in the river Sindh 6000 years ago. The very word Navigation is derived from the Sanskrit word NAV Gatih. The word navy is also derived from Sanskrit `Nou'. Bhaskaracharya calculated the time taken by the earth to orbit the sun hundreds of years before the astronomer Smart. Time taken by earth to orbit the sun: (5th century) 365.258756484 days. The value of pi was first calculated by Budhayana, and he explained the concept of what is known as the Pythagorean Theorem. He discovered this in the 6th century long before the European mathematicians. Algebra, Trigonometry and Calculus came from India. Quadratic equations were propounded by Sridharacharya in the 11th century. The largest numbers the Greeks and the Romans used were 106 whereas Hindus used numbers as big as 1053 with specific names as early as 5000 BCE during the Vedic period. Even today, the largest used number is Tera: 1012.

According to the Gemological Institute of America, up until 1896, India was the only source for diamonds to the world. USA based IEEE proves what has been a century old suspicion in the world scientific community that the pioneer of wireless communication was Prof. Jagdeesh Bose and not Marconi.
The earliest reservoir and dam for irrigation was built in Saurashtra. According to Saka King Rudradaman I of 150 CE a beautiful lake aptly called 'Sudarshana' was constructed on the hills of Raivataka during Chandragupta Maurya's time.
Chess (Shataranja or AshtaPada) was invented in India.
Sushruta is the father of surgery. 2600 years ago he and health scientists of his time conducted complicated surgeries like cesareans, contracts, artificial legs, fractures, urinary stones and even

plastic surgery and brain surgery. Usage of anesthesia was well known in ancient India. Over 125 surgical equipment's were used. Deep knowledge of anatomy physiology, etiology, embryology, digestion, metabolism, genetics and immunity is also found in many texts.

When Europeans were only nomadic forest dwellers over 5000 years ago, Indians established Harappan culture in Sindhu Valley (Indus Valley Civilization) The place value system, the decimal system was developed in India in 100 BC.All of us who wear cotton cloth, enjoy taste of chicken, do yoga, seek peace of mind or tranquility through meditation, are indebted to India.

Iron Pillar -The forging of wrought iron seems to have reached its zenith in India in the first millennium AD. The earliest large forging is the iron pillar at New Delhi dated by inscription to the Gupta period of the 3rd c. AD at a height of over 7 m and weight of about 6 tons. The pillar is believed to have been made by forging together a series of disc-shaped iron blooms. Apart from the dimensions another remarkable aspect of the iron pillar is the absence of corrosion which has been linked to the composition, the high purity of the wrought iron and the phosphorus content and the distribution of slag. Town Planning and Great Baths of Indus Valley Urban planning is evident in the neat arrangement of the major buildings contained in the citadel, including the placement of a large granary and water tank or bath at right angles to one another. The lower city, which was tightly packed with residential units, was also constructed on a grid pattern consisting of a number of blocks separated by major cross streets. Baked-brick houses faced the street, and domestic life was centered around an enclosed courtyard.
The cities had an elaborate public drainage system, Sanitation was provided through an extensive system of covered drains running the length of the main streets and connected by chutes with most residences.

The statue of Nataraja (dance pose of Lord Shiva) is a well known example for the artistic, scientific and philosophical significance of Hinduism. The late scientist Carl Sagan, asserts that the dance of Nataraja signifies the cycle of evolution and destruction of the cosmic universe (Big Bang Theory). "It is the clearest image of the activity of God which any art or religion can boast of." Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but also the very essence of inorganic matter. For modern physicists, then, Shiva's dance is the dance of subatomic matter. Hundreds of years ago, Indian artist created visual images of dancing Shivas in a beautiful series of bronzes. Today, physicist have used the most advanced technology to portray the pattern of the cosmic dance. Thus, the metaphor of the cosmic dance unifies, ancient religious art and modern physics. Fables such as Panchantantra, Arabian nights,
Grammar: Panini's Sanskrit grammar, produced in about 300 B.C.E. is the shortest and the fullest grammar in the world. Ideas of natural selection, atomic polarity and evolution. This is what Manu said, perhaps 10,000 years before the birth of Christ:The first germ of life was developed by water and heat.

A date with history

http://www.deccanherald.com/deccanherald/mar07/pramod.htm

BY PRAMOD K NAYAR

DECCAN HERALD

Sunday, March 7, 1999

Ugadi, March 18, 1999, is special, even as India marches into the 52nd century of the grand old era of Kaliyuga. However, it also happens to be the anniversary of Aryabhatta`s discovery of 'pi` and the length of a solar year. PRAMOD K NAYAR looks back with interest at that point of history, centuries ago, when the early astronomers did some star-gazing.

IS the rest of the world behind time? Or is India ahead of its time? Whose time is it anyway? These questions are not, as they first appear, frivolous.

They arise out of a very unusual situation that occurs on the Ugadi day of March 18, 1999. For, on this day, India marches not into the 21st century but into the 52nd. Puzzled? Then read on.
This Ugadi we step into the 52nd century of Kaliyuga, which is calculated to have commenced with the Krishna Avatar, 5,100 years ago. On such a historical occasion, this article also celebrates another momentous year in India`s history: the anniversary of Aryabhatta`s 499 AD computation of pi as 3.1416 and the length of a solar year as 365.358 days.

The Arya Siddhanta of 499 AD is st ill in use! This Ugadi is therefore a significant date: the Hindu Nirayan calendar`s 52nd century and Aryabhatta`s way-ahead-of- his-times discovery.
As a paean to the world`s most ancient calendar, this piece looks at certain remarkable features of this calender system. Numerous thinkers and works contributed to making astronomy and the related sciences of astrology and cosmogony a near-accurate system. Among these figures are Varahamihira (490 AD) who set out the Bijakarana, and wrote the Pancha Siddhanta and Brihatsamita. Brahmagupta compiled the Sayan Meshasankramana. Munjala invented the 'Ayana` movement and determined one year as a 'kala`. Shatananda authored Bhasvatikarana and calculated the positions of the sun and the moon according to the constellations. Bhaskara (1114 AD) wrote the Udayantara. Ganeshdaivajna (1478 AD) compiled the Grihalagnava Garga.

However, it must be accepted that none of these developments occurred in hermetically sealed conditions. Indian astronomers were deeply influenced by thinkers from other civilisations, especially the Mesopotamian and the Yavana (Greek).

The earliest sources of the Hindu calendar system are texts dating from about 1000 BC.
This divided a solar year of 360 days into 12 lunar months of 27 (according to the Taittiriya

Samhita) or 28 (according to the Atharvaved, the fourth Veda).
The Jyotish Vedanga of 500 BC provided rules for calculating positions of the new and full moons amongst the 27 nakshatras and of the 'ayanas` which fall in cycles of five years, each of 366 days. In five solar years, there were 67 lunar months.

A year of 12 months would be retained, if the 31st and 62nd months were omitted from each cycle. This system was widely used in ancient India.
Examples are also found in the Jaina literature dating from this period. The Taittiriya Samhita constitutes the statements of nakshatras. These nakshatras each measure an area of 13 degrees 20`` of the ecliptic circle. The position of the sun at midnight was calculated from the nakshatra that culminated on the meridian at that time. The year was divided into three-thirds of four months, each heralded by a special religious rite - the 'chaturmasa`. Each of these periods was further divided into two parts (seasons).

Another interesting feature of the old system was the division of the two-year moieties: the 'uttarayana`, (northern course) when the sun rises further North every morning and the 'dakshinayana` (southern course) when it rises progressively further south.

After the influence of Greek and Mesopotamian astronomy, the nakshatras and a quarter of one made up one zodiac period or sign (30 degrees).
The names of the nakshatras are derived from the constellations on the horizon since those times have remained unchanged (Chaitra, Vaisakha, etc).

Eight types of planetary movements (describing their speeds of rotation) are also detailed in these works. It is amazing that in the absence of sophisticated instruments, our thinkers developed such advanced theoretical formulations.

Unlike contemporary science where 'simulation` of situations is available to validate a hypothesis, these ancient astronomers had only the crudest of implements (the water clock, circle and quadrant were extant in those times). This context of their epistemology is what makes their achievement so remarkable.

Later the revolution of the planet Jupiter was also used in Hindu astronomy. Jupiter`s synodic period brings it into conjunction with the sun every 398 days and 88 minutes. A year can be dated as a month of a 12-year cycle of Jupiter. This is extended to a unit of five cycles, or the 60-year cycle of Jupiter (Brihaspati chakra), and a 'century` of 60 years results.

From the 6th century AD, this new s ystem becomes evident.
These calculations reveal a ph enomenal development in ancient India cosmogony. These developments were significantly governed by certain principles (which, of course, varied over the ages). The 'Pitamaha` principle computed a year as 365 days and 21 1/2 ghatikas.

The 'Surya` principle analysed the movement of planets through constellations to draw up 'nadikas` (symbolic periods in days of the planet). On this principle, 584 4/11 days of Mercury (for instance) equalled 89 days and 2 hours. In the 'Romak` principle a year meant 365 days, 14 ghatikas and 18 palas. The ancient Indian calculation of time is easily superior to even present

nuclear time-keeping devices. The Hindu 'truth` is obtained when one divides a second (in the western system) with 33,750 equal parts!

The Hindu 'panchanga` system (analogously derived in its etymology from the 'fine limbs`) is any day more complicated than western calendars. In the Hindu panchanga, there are five basic elements in time division:

The vara (weekday) is the natural solar day (savana divasa) beginning at sunrise. This vara has numerous sub-divisions:
A sura (prativa pala) = 0.006 secs
60 prativa palas = 1 vipala = 0.4 secs
60 vipalas = 1 pala = 24 secs
60 palas = 1 ghatika = 24 min
60 ghatikas = 1 divasa
A further refinement was the division:
10 vipalas = 1 prana (4 secs)
6 pranas = 1 pala (24 secs)

The tithi is the moment of the new moon, or the point of time when the longitudes of the sun and moon are equal - 'amavasya`
(literally 'dwelling together`).
Tithi is the time occupied by the moon in increasing its distance from the sun by 12 degrees. The length of the tithi varies constantly. When the difference between longitudes is 180 degrees it is the 'purnima`.
Nakshatra: as we have seen above, is 13 degrees 20". The moon travels nearly one nakshatra daily.

Yoga: is the period of ti me when the joint motion in the longitude of the sun and the moon is increased by 13 degrees 20". Karana: is half the tithi, or the time during which the differences in longitude of the sun and moon are increased by six degrees. A solar year is the period of the earth`s rotation. This year has a three-fold system.

(a) The sidereal year when the earth makes one revolution round the sun. Standard length - 365 days, 6 hrs, 9 mins, 9.29 secs.

(b) The tropical year when the earth in its revolution passes from one equinox or tropic to the same again. Standard length - 365 days, 5 hrs, 48 mins, 45.37 secs.

(c) Anomalistic year when the earth moves from the apehilion to the perihilion or vice versa. Standard length - 365 days, 6 hrs, 13 mins, 48.61 secs.

Does the description appear too technical? It does. For what we have at hand is one of the most refined and accurate measurements of time.

The break-up of the day (or years) into such minute (excuse the pun) segments is truly astonishing and is unrivalled by any other system in the ancient world. It is perhaps a legacy of this accuracy

which many explain as the incredibly complex and technically perfect architecture of India`s old temples.

Surely the ancient system of mathematics had provided a base upon which future technology and engineering could be built?

From such smaller measurements of time in the Hindu system, one progresses to its computation of cosmic time. The length of
an ideal individual human life is 100 human years. Brahma`s (the Creator) has a day of 365 days or 'kalpas`.

A kalpa is simply one day of Brahm a`s life. The life of Brahma is 100 times 365 kalpas, forming a 'mahakalpa`. This makes
Brahma`s total lifespan to be 31,10,40,00,00,00,000 years! Man has now passed half the age of the Creator.

A kalpa is made of a 1,000 times four 'yugas`, or a 1,000 great yugas which are measured in years of gods. The great yuga is
equal to 12,000 years of gods and is divided into four yugas of unequal length separated by twilight. Finally one lunar year is a
day and night of the gods. Therefore one year of the gods equals 365 lunar years (Incidentally the lunar month is India`s contribution to the calendar system.

The term 'month` is derived from 'moon-eth`). The four yugas in descending order, starting from the present are:

Kaliyuga: Of 432,000 solar years
Dvaparayuga: Double the length of Kaliyuga, 864,000 years
Tretayuga: Triple the length of Kaliyuga, 12,96,000 years
Krutayuga: quadruple the length of Kaliyuga, 17,28,000 years.
A mahayuga is 10 times the length of the Kaliyuga, of 4,320,000 years.
(Heraclitus refers to a 'great year` of 10,800 years
and Berossos, the Babylonian astronomer, spoke of a 'cosmic year` of
432,000 years). The current Kaliyuga began on the
midnight of 17/18th Feb., Thursday, 3102 BC, according to these
calculations.

By comparison, the western Julian period of 7,980 year-cycle began on Tuesday, Jan 1, 4713 BC. The four yugas repeat themselves a 1,000 times on earth, which constitutes a mere one day for Brahma!

The 'Rig Veda` computes 10,800 metrical divisions of 40 syllables each, thus again giving a figure of 432,000. And then, of course, over time, various dynasties and kings evolved their own 'eras`. Though lacking any universal appeal or significance,
these divisions have continued to be of importance in India. A few of these Indian eras are: the Vikrama era, beginning 58 BC; the Saka era beginning 78 A D; the Gupta era beginning 320 A D;

and the Harsha era beginning 606 A D. The Vikrama and Saka eras are in use today too.

March 18, 1999, marking the start of the 52nd century, falls under the 'Shalivahana Saka`, 1921.

It must be noted that the Indian cosmogonic and astronomical systems, while developing independently of western systems, bear remarkable affinities with the latter. For instance, the calculation of the year in both systems are very similar. The Arya Siddhanta and Rajamriganka systems are in use even today.

And now, a quick look at the other major calendar systems of the world. England`s Stonehenge, dating back to 2000 BC, is perhaps the most famous.

Observations were made by lining up stones with a marker and watching for the appearance of the sun or moon against that point on the horizon that lay in the same straight line. Today more than 600 structures, perhaps contemporaneous with Stonehenge, have been discovered across Britain.

Hipparchus, the Rhodes astronomer of 150 BC, calculated the length of a tropical year as 365.242 days, and a lunation as 29.53058 days, both figures remarkably close to the present day calculation of 365.242199 days and 29.53059 days
respectively.
The Julian system of 7,980 year cycles was designed by the French scholar, Joseph Justus Scaliger (1540-1609). The Roman Republican calendar is supposed to have been introduced by the fifth Roman king, Tarquinius Priscius (616-579 BC). This mainly lunar calendar was 10 1/4 days short of a 365 1/4- day tropical year, thus necessitating the intercalation of a month (termed 'Mercedonius`, derived from 'merces`, meaning wages).The Jewish calendar, a highly complex system, is 'lunisolar`, where the years are solar and months lunar.

The calendar employs a lunar cycle of 19 years (thus paralleling the l9-year Metonic cycle devised by the Athenian astronomer, Meton, in 432 BC). The Jewish era today is dated from 3761 BC. The Islamic calendar is lunar, beginning with the approximate New Moon and dating from the emigration of Prophet Mohammed from Mecca to Madina in 622 AD.

The western Julian system, with its long history of monarchical revisions, owes much to Sosigenes (an Alexandrian astronomer).
Pope Gregory XIII refined it with the help of Christopher Clavius in 1582. This Gregorian calendar had a tropical year of 365.2422 days. Other ancient and sophisticated calendars are the Athenian, the Egyptian, the Incan, the Aztec and the Mayan. A discussion of these alternate systems will require long essays and is therefore being omitted here.

What emerges from the above details is the indisputable fact that ancient Indian cosmogony is extremely complex and advanced. As historians of this calendar system, such as SB Dikshit and CPS Menon have demonstrated, the Hindu calendar
predates any European equivalent. Its splitting of 'levels` of time into micro-units is perhaps equalled only by nuclear clocks (which are of very recent origin). Today as we step into our very own 52nd century, we ought to congratulate our ancient astronomers who devised this system, still valid - and validated - by centuries of subsequent calculations.

On Ugadi day, March 18, 1999, the anniversary of the seminal ancient text, the Arya Siddhanta, wishing everyone a Happy New Year, is this ancient system. This day we have literally trysted with destiny, a tryst predicted centuries ago. Or one might say on this Ugadi we have a "date" with history.

A day at Takshasila

By R. RAJAMANI

Date: 18-01-1998 :: Pg: 26 :: Col: a - The Hindu

(Taxila, stood on the banks of the river Vitasa in the northwest of the Indian subcontinent. Panini, the great Sanskrit grammarian, Charaka, the author of famous treatise on medicine, and Chanakya, writer of *Artha Shastra* -- these august names are assosiated with Taxila. Promising minds from far flung regions converged there to study the Vedas and all branches of secular knowledge)

R. RAJAMANI was at Taxila recently and the visit proved that it is the place school text books have portrayed - sentinel and a trade post at the foot of the Hindukush Himalayas. But what struck him most was the way this heritage site was preserved.

TAKSHASILA or Taxila, as the Greeks called it over 2,000 years ago, was at one of the entrances to the splendour that was India. Its antiquity is rooted both in mythological texts like the Ramayana and the other puranas, as well as in firm historical evidence relating to the post-Harappan and late Aryan period. It stood both like a sentinel and a trade post at the foot of the Hindukush Himalayas ranking in importance and access point to the invader of the subcontinent only next to Purushapura or Peshawar. It has seen so much of our ancient history that one considered it a privilege to visit the place recently, courtesy of Pakistani friends hosting a meeting this writer was attending.

Taxila is all that the school textbooks have told us about. It was an outlet westward for overland trade before the Mauryan Empire. But early records of trade and access to India through this outpost is found in records of the period before 530 B.C., when the Achaemenid emperor of Persia, Cyrus, crossed the Hindukush mountains. More lucid accounts are available from the fourth and third Century B.C. thanks to the Greeks, and mainly Herodotus. Buddhism and the Gandharas held sway over Taxila and this combination remained undisturbed for some time

inspite of the invasions by Persians and later the Greeks. Alexander's entry in 327 B.C., was through this town and the Greek influence was felt profoundly thereafter in town planning, buildings, religious places, the arts, dresses, martial training, coinage etc., of Taxila. Then followed the Mauryan reign which temporarily filled the vacuum created by Alexander's return. This was a golden period which saw the laying of a highway from Taxila to Pataliputra (which was to shine in later days as the Grand Trunk Road). But no border post can remain tranquil for long and Taxila took a heavy share of the repeated invasions and conquests by the Bactrian Greeks, the Shakas, the Kushans, the Sassanians, etc. It had its share of glory as the capital city of the Gandharas.

But political developments apart, it is the secular absorption of cultures in the various forms of art including the planning of human settlements and in house building as well as in being a crucible for international overland trading that Taxila became well-known. The connections with Greece, Iran and Afghanistan on the West and the rest of the subcontinent to the East extending right upto Pataliputra saw the burgeoning of trade in Taxila which steadily became heavily urbanised. It was the collection point from various parts of various handicrafts and commodities. Precious stones like turquoise and lapis lazuli came from the West and silk from China via Central Asia. Scholarship came from the Buddhist monks and their viharas, stupas and monasteries.

This then was the Taxila we set out to see after over 20 centuries. The excavations carried out in the earlier part of this century are well preserved. The township is a marvel of the concepts of human settlements incorporating wide roads for chariots to pass, individual houses with masonry walls, places for worship and common meetings etc. The undulating terrain and the magnificent backdrop of the hills combined to make one feel that there was a definite concept of the beauty on the whole while planning the individual areas. There were individual house plots having their own religious area and small stupas. One of them had three small doorways, each carved in a different style. The influences of Persian, Greek, Buddhist and Hindu origin were seen. Even the legendary double-headed eagle of Western origin was observed in one of the enclosures. Truly, it was and hopefully is, a confluence of cultures which has rubbed off on the whole of this subcontinent for eons.

The visit to the Buddhist stupa and monastery site was equally pleasing and rewarding. Access was not as smooth as in the case of the township excavations but the walk to and fro was made joyous by seeing hundreds of schoolchildren from schools in Pakistan coming to see this bit of ancient history. We had an able guide who was quite accurate and interesting in the accounts he gave us. It was heartwarming to see that this heritage is treated with respect and preserved as well

as it can be, in the circumstances. The preservation is of the same quality as one noticed in other ruins in India like Lothal.

At the Buddhist stupa site, the stupas were covered by overlays of mud and grass but the entrances and base showed evidence of the stucco embellishments. In the monastery area, one could not help noticing the incipient spiritual vibrations noticed in most places where holy men and women have lived, studied, meditated and laid to rest. There was tranquillity in our minds as we walked around silently and retreated to the unheard yet vivid strains of buddham saranam and sangam saranam gacchami.

The visit to the Taxila museum was the highlight. The rich treasures from the excavations dating to the different periods of history have been faithfully collected, stored and preserved. Specimens of Gandhara art with Greco-Persian influence abound here. Stone and stucco images of the Buddha, intricate pieces of jewellery with embedded stones of precious quality, Aramaic inscriptions, the utensils and implements of the era, images showing the way men wore robes or women wore their lovely tresses - these and more treasures gave an authentic and exhilarating peep into the past. The pleasing ambience of the setting of the museum among stately trees and the allowances to solitude, uninterrupted by the unwanted or raucous attention of vendors and tourist operators, ensured that we carried back to our hotel the most pleasant of memories of our combined legacy.

WHAT IS DHARMA

http://www.sol.com.au/kor/index.html

What is Dharma? Why is it relevant to us, in the modern world? Why did the sages of old, of every civilization, insist that Dharma is the only TRUE path to fulfilment?

Dharma is a cosmic principle that is difficult, if not impossible, to define. Our Dharma is our true place in the cosmic process: in time, in space, in awareness, in thought, deed and desire. The eternal principle of Dharma determines the harmonious functions of the cosmic machine. In order that we fulfil our role in the divine play we must behave within our Dharma. That is, we ought to do the right thing, at the right time, In the right way, and for the right reason. By this we attain balance. To establish balance within ourselves ensures our own welfare and the welfare of society. And opens the path prepared for us by the divine.

Dharma is an Eastern term whose Western equivalents might include morality, ethics, virtue, righteousness and purity. Sadly, most of those terms are distinctly unfashionable in our modern culture. Yet it is Dharma by which the seeker of truth can evolve to gnosis.

In India the deity Sri Vishnu is believed to have taken more than 9 incarnations (avatars) on this earth to defend the righteous (i.e. those living within Dharma) against the demonic forces (adharma).

As the warrior-prince Sri Rama (c. 6000 BC), Lord Vishnu, rescued the Goddess Sri Sita from the immoral intentions of Ravana, the 10-headed demon King of Lanka. Ravana was a violent, materialistic and egotistical conqueror who despised the will of heaven.

The pure and innocent Rama fought a mighty battle against the demon king and his army of darkness, finally slaying him with a single silver arrow. Rama's army of bears and monkeys, whose weapons were little more than rocks and tree trunks, rejoiced for their beloved Sita had been reclaimed and the Divine Order restored.

This legend of Rama, the Ramayana, teaches that a person who defends dharma is destined to vanquish evil and ignorance. Indeed, the entire cosmos comes to their aid as is shown by the allegiance of the bears, monkeys and other aspects of nature. Fundamental to the defence of Dharma is the sanctity of woman, in this case Sita, who is a Goddess; the Divine Feminine incarnate. Ravana's death from a single silver arrow demonstrated the cosmic power of Rama's dharmic purity.

Sri Krishna (c. 4000 BC) also incarnated to destroy demons opposed to Dharma. Unlike in the age of Rama, impurity (adharma) was not exclusive to the demonic races alone but had begun to enter

into the minds of men. Krishna's life culminated in the Mahabharata war which was a single, momentous battle between two royal families involving the deaths of over 2 million warriors on a battlefield called Kurukshetra (now north of New Delhi). The entire battle pivoted around a divine woman called Draupadi.

The Kaurava family (the bad guys) had insulted her chastity in the royal court after cheating the Pandava family (good guys) in a game of dice. By threatening a woman's chastity the Kauravas had sunk to the lowest level of 'adharma'. Thus the egotistical and hate-filled Kauravas threatened the ancient essence of Indian civilisation.

Krishna guided the Pandavas to victory on the battlefield of Kurukshetra, often by miraculous intervention, so that Draupadi was avenged and Dharma restored.

Unlike Rama, Krishna did not adhere to an external code of Dharma. Rather, he saw to the essence of each situation and acted in such a way as to manifest the greatest divine good.

Despite many modern interpretations of Krishna, he was not a womaniser ‹ the ancient (and more authentic) scriptures show that he was completely innocent of lust and greed. Thus Krishna, as the essence of purity, was the master of yogic spirituality, the essence of dharma.

Today Kurukshetra is the battlefield of the human mind. The Mahabharata war is the struggle between our sublime aspirations (truth, beauty and awareness) and our gross desires (security, sensation and power). As individuals we merely choose sides. When we choose as the Pandavas, we choose Dharma and its fruit of spiritual evolution. The entire cosmos (Sri Krishna) guides us through the battle of life and we ultimately defend the sanctity of Draupadi, the divine feminine, fountain of truth within us. Choose the Kauravas and we are destined for defeat for we elect to move against the divine order. Dharma itself will destroy us and the ultimate prize of spiritual awareness becomes forfeit.

These legends illustrate both the heavenly and earthly importance of Dharma. The Mahabharata is very much older than the famous works of classical Greece (in fact it is longer than Homer's Iliad and Odyssey combined); even its origin is mystical, having been written by the sage Viyasa who perceived the entire story in the state of meditation ‹ thousands of years before it occurred.

When Moses brought down the 10 commandments from Mt. Sinai he taught the Israelites that Dharma was the divine law by which they (who loved truth) aspired could free themselves from their Egyptian slave masters (the base desires) and reach the promised land (spiritual liberation).

Although Mohammed led his followers into a bloody and terrible war to defend the law of Islam (Dharma) from the child-murdering and mysoginistic idolaters, he described that physical war as the 'lesser jihad'.The 'greater Jihad' is the infinitely more difficult war which the seekers fight within themselves for moral purification, death of the ego and victory over desire, attachment and conditioning.

Shakespeare's morality plays were all lessons in the cosmic supremacy of Dharma over human folly. Thus Hamlet's vacillation between his princely duty and his frivolous irresolution led to the death of Ophelia (loss of the divine feminine) and his own extinction ‹ the tragedy was that by procrastinating his Dharma he forfeited his destiny to true fulfilment as king (truth). Whereas Henry V, by immediately taking to his Dharma as a fair king, won not only a miraculous, victory

(the Battle of Agincourt in which the English were outnumbered 25 to 1) over the arrogant French (human ego) but also the fair French princess (sublime beauty and truth).

Christ taught us that forgiveness frees us from our own petty ego (and its qualities such as pride, vengeance, aggression, grudge bearing) so that we can stay on the path of Dharma. Christ's message is encapsulated in statements such as 'He who looks at a woman with lust has already committed adultery' ‹ in other words an external morality or ethic is insufficient, for true Dharma is purity of heart and mind.

So Why is Dharma so absent from the consciousness of the Western mind?

A significant share of the blame falls upon mainstream Christian doctrine. As more light is thrown upon the gnostic (mystic) Christian sects and their so-called heretical scriptures such as the Nag Hammadi library and the Dead Sea Scrolls, we see that Christ did in fact confirm the then popular ideas of Karma, reincarnation, self-realisation and the Divine Feminine (Holy Ghost/Mother Mary) as reality.

The church's erasure of the principle of karma reduces our feeling of direct responsibility for our life, our circumstances and our personal spirituality. It actually encourages immediate gratification and sensationalism. Cancelling the principle of reincarnation in preference for a single-life doctrine also encourages irresponsible action since we can supposedly atone for any bad actions by last minute conversion.

Worse, it blinds us to the idea of spiritual evolution through many lives through observance of Dharma. Paul was neither a saint nor an apostle, in fact many of the gnostic accounts describe him as an enemy of Christ's true teachings. His ideas of 'blind faith' and 'conversion' in order to enter heaven after death negates possibility of sustained experience of heaven while in the physical body. The cancellation of mysticism is furthered by the doctrine of 'original sin' in which human beings are said to be fundamentally flawed and therefore unable to perfect themselves let alone be worthy of the divine and its experience.

Finally, it is Christian false doctrine that denigrates women beginning with Eve's temptation and ending with the misogynist Paul. It is no wonder that the Holy Ghost/Divine Feminine is not understood in the Christian West since the patriarchal churches have virtually edited it out of existence.

Now the Christian West is comprised mainly of individuals with little real sense of connection to the cosmic order and so their mundane religion today has little bearing on spirituality. Nor does spirituality and its experience depend on their behaviour. Rather than living according to Dharma that pervades their life people are mentally enslaved to Church Doctrine and its empty promise of salvation. Whether or not we are Christians, the churches unauthorised cancellation of these principles has separated the Western awareness from its spiritual roots. Hence the poverty of Dharma in the West today rests considerably upon the shoulders of the Protestant and Catholic churches who have propagated their subtly Anti-Christian doctrines for over 1000 years.

When the Western Europeans colonised the New World the Amer-Indians there were stupefied by the whites' lack of relationship to the land and the gods, and also by the incredible credence given to material possessions. There was an AmerIndian prophecy predicting the coming of whites: Apparently if the whiteman came bearing the symbol of a circle the Age of Truth would begin. If

they came bearing a cross it would signal the end of the world. Apparently the Amerindian's were forewarned of the followers of Paul who came literally with a Bible in one hand and a gun in the other. While the gun may have murdered Indians, the Paulian distortion of the Bible murdered an entire spiritual culture.

The modern Churches of today continue that tradition by paying token respect to Christ while passively encouraging the culture of materialism, dogmatic dependence and superficiality to which He was so obviously opposed.

'True spirituality can enlighten science
so that it serves rather than enslaves'

Institutionalised religions and their inherently fake theologies are not the only culprit. While the Vatican and others like it may have cut the living heart out of religious experience, they still pay lip-service to the memory of morality.

Modern society has a new religion which has supplanted irrational faith. It continues to undermine Dharma with its narrow but self-glorifying creed of 'rationalism'. This new faith is 'science'.

When Newton 'explained' that the universe was little more than a giant piece of clockwork and when Descartes 'proved' that the human being was simply a complex machine devoid of divine inspiration, the age of rationality began.

The irrational ideas of spiritual experience (which so far can't be measured) and Divine Will (which is beyond intellect) were discarded in favour of reason and logic. The industrial revolution taught man that his science and technology could dominate Nature, whose laws, until then, he honoured and respected.

Metaphysics was discredited as illogical. Religion, mythology and many other aspects of the universal Dharma were explained away as 'coping mechanisms' designed to maintain 'psychological homeo-stasis' in a 'hostile environment'.

'Science' and the religion of 'rationality' became the pre-eminent cultural shaping force. Since, the scientists said, God doesn't exist, neither does 'goodness' nor 'badness', 'right' or 'wrong'. Moral instinct, wisdom and conscience (Dharma) were discouraged as illogical. The spiritual glue which holds a civilisation on a cohesive and Dharmic path was scientifically removed and replaced with the materialistic ethos called 'technological advancement', 'consumerism' and 'permissiveness'.

A society which could have looked to the beacon of spiritual experience and used its guiding light of Dharma to the betterment of all now scrambles blindly after the dollar in a lifestyle appropriately called the 'rat-race'. No wonder, then, that Western culture can create a sense of disintegration in so many of us.

However to simply blame science or the dead religions is unrealistic, for, I feel, they actually represent forces operating within us. Could science and rationality be symptoms of our own ego and intellect which has developed without relationship to the Whole? So much so that it dominates our awareness and convinces us to forget the innate dharma within us? Not unlike spoilt children who try to dominate their wiser parents with their own petty desires.

Do religious institutions represent the conditionings and fears within us? They exist only because we want to be told what to do, what is right and wrong, true and false. Our mind screams for something comprehensible to cling to rather than embark on the painful journey of self-awareness which ends not in dogma but in 'Gnosis' that will put an end to ego and mind as we join the divine intelligence.

True spirituality can enlighten science so that it serves rather than enslaves, and it can resurrect the spirit of universal religion that exists within us all.

The tenth avatar of Lord Vishnu is 'Kalki'. His name means "pure" and the prophets say he will ride a white horse at the end of this millennium to destroy the enemies of Dharma forever. St John's revelation foretells "The Rider" whose name is 'faithful and true'. He too will ride a white horse and avenge the true saints. Many other ancient cultures prophesy the coming of an awesome being who will bless the upholders of the Cosmic Order (Dharma) and wreak vengeance on the negative forces and their sympathisers. As the world teeters on the brink of ecological and cultural collapse, it seems that the salvation of humanity, indeed the world, lies in the path of balance and awareness called Dharma. The ancient prophecies remind us of the urgency with which we must choose our final path.

Our common sense, the ancient Scriptures, the prophets, the signs of Mother Earth and now the scientists themselves all promise that the path of 'adharma' will end in catastrophe, judgement and apocalypse.

To resurrect our civilisation from this imminent course requires the awakening of the essence of Dharma within us. Our culture does not teach us divine law, let alone the means to realise it. So we must look within to our true being, the Spirit, the source of living Dharma. The Spirit is made known by the process of self-realisation which occurs in the infinite space between two thoughts -ie. meditation. By true meditation the spontaneous and innate dharma can be awakened and made manifest in each of us.

The collective salvation of our civilisation requires the inner transformation of every individual from the ignorance of materialism and individualism to the Gnosis of collective spiritual awareness. The genuine seekers of truth will receive the spiritual awakening not by psychedelic drugs nor by occult practices. Nor shall they have to abandon society to join some spiritual aristocracy of monks, priests or hermits. Those who seek the truth with the depth of their heart shall have it awakened in them spontaneously and silently by the strength of their pure desire. They only need to recognise that it will manifest not in thought, image or philosophy but in the silent space between two thoughts. In this space inspires the breath and will of the Divine, the fountain of Dharma.

THE MYSTERIES OF ANGKOR WAT- FORGOTTEN WONDER!
http://pharos.bu.edu/Egypt/Wonders/Forgotten/angkor.html

Located in Northwestern Cambodia, Angkor, the Capital of the Ancient Khmer Empire was possibly founded around the Ninth Century AD by King Jayavarman II. However, the city reached its peak glory in the 12th Century under Kings uryavarman II and Jayavarman VII. The most beautiful and most famous monument in the city, Angkor Wat, lies about one kilometer south of the Royal town of Angkor Thom which was founded by Jayavarman VII.

The Temple of Angkor Wat was dedicated to the Hindu God Vishnu by King Suryavarman II, who reigned between 1131 and 1150 AD. The Temple was constructed over a period of 30 years, and illustrates some of the most beautiful examples of Khmer and Hindu art. Covering an area of about 81 hectares, the complex consists of five towers, which are presently shown on the Cambodian national flag. These towers are believed to represent the five peaks of Mount Meru, the Home of Gods and Center of the Hindu Universe. Angkor Wat features the longest continuous bas-relief in the world, which runs along the outer gallery walls, narrating stories from Hindu Mythology.
With the decline of the Ancient Khmer Empire, Angkor Wat was turned into a preservation. In 1992, the UNESCO World Heritage Committee declared the monument, and the whole city of Angkor, a World Heritage Site.

http://www.geocities.com/TimesSquare/1848/angkor.html

Angkor Wat, one of the most beautiful and mysterious historical sites in the world. Located over 192 miles to the North-West of Cambodia's capital Phnom Penh, Angkor has been "protected" from tourism, and the customs and the cultures of the people living there have not changed much. However, intense internal warfare for over fifty years has impacted on the people and to an extent on the physical structure of the temples at Angkor.

For many years, Angkor Wat was totally isolated from the Western World. Large, thick jungles covers the area, and it is located in the center of Cambodia. The French colonialists were the first westerners to get exposed to Angkor. They heard rumors from the local population about "temples built by gods or by giants." Most of the colonialists referred these rumors to folk tales, but some believed that there really was a "lost city of a Cambodian empire", which had once been powerful and wealthy. The history of Angkor Wat dates back to the kingdom of Funan. This kingdom was established by an Indian Brahmin, and in AD200, the country was peacefully settled by Indian traders. Four hundred years later, the kingdom had become a prosperous trading region. As the area was located on the Pilgrim rout between China and India, Hinduism and Chinese Buddhism was adopted by the new settlers. The Indian and Chinese influence can still be felt in Cambodia, and the temples of Angkor Wat closely resembles Hindu and Buddhist temples that can be found in Northern India and in Nepal. In the end of AD600, the Funan Empire lost much of its power to the kingdom of Chenla. The capital of this new empire, Sambor, was located about 40 miles to the Southeast of Angkor. During this time, beautiful sculptures and carvings in sand-stone was popular. In AD750, a king with a reputation of being a war-like person, who was able to expand the Chenla kingdom. However, trade with India stopped, and the Indonesian Empire raised to power.

In AD800, the kingdom of Kambuja was established, and king Jayavarman I took control over the kingdom. He built several capitals near Angkor Wat, were responsible for many social changes, and was able to size land to the North and to the East. In AD889, a nephew of Jayavaram became the new emperor, andhe was able to bring peace and unity to the Khmer Kingdom. In AD944, Jayavarman V established many Mahayana Buddhist temples near Angkor, and moved the court to Yasodharapura, at Angkor. Cultures prospered, and so didthe Khmer empire. In AD1000, Suryavarman, a young man who may have come fromthe Malayan provinces of the empire, ascends the throne of Kambuja. He wouldbecome the king of Kambuja for over 50 years. He is responsible for theplanning and foundations of the city of Angkor. In AD1051, UdayadityavarmanII succeed Suryavarman, and continued to build the city of Angkor, andrestored many of the temples. Angkor was now both a sacred temple city andthe center of a vast irrigation system.

Massive expansion of the city continued throughout the next 200 years, and ambitious building programs expanded the city. Many temples were built. The temples are spread out over about 40 miles around the village of Siem Reap. Temples and similar structures to the temples that can be found in the city of Angkor are common sights in Thailand, Laos, Vietnam and in China. Perhaps the most famous temple, **Angkor Wat, is a temple dedicated to the Hindu god Vishnu was built during this period. Angkor Wat is the highest achievement of Khmer temple architecture, and is today the "flagship" of the temples at Angkor**. The temple is a huge pyramid structure. The compound at Angkor Wat covers an area of 1,500 by 1,300 m (4,920 by 4,265 ft) and is surrounded by a vast moat 180 m (590 ft) wide. Along the causeway leading to the enormous entrance gate are balustrades shaped as giant serpents, which are believed to represent emblems of cosmic fertility. The temple consists of a towering complex of terraces and small buildings that are arranged in a series of three diminishing stories and surmounted by five towers. The roofed and unroofed structures are covered with bands of finely carved stone sculptures. The walls are covered with carved reliefs that illustrate Hindu mythology, principally scenes relating to the god Vishnu, to whom the temple was dedicated. The "mass of bas-relief carving is of the highest quality and the most beautifully executed in Angkor." All the temple mountains of Angkor were filled with three-dimensional images and every inch of the walls are covered by sculptures.

In the beginning of AD1200, the Angkor and the Khmer empire started to decline. When jayavarman VII died, the Thai Empire in the West emerged as a major power in the region. The Thai capital was moved to Ayudhya, near Angkor, and obviously threatened the Cambodian kingdom. In AD1389 the Thais attacked Angkor, and the city fell into the hands of the Thais. The 15th-century conquest of the Khmer kingdom by the Thais resulted (1431) in the final abandonment of Angkor. The city was deserted and the capital was moved to Eastward to the region of the present capital Phnom Penh.

The splendour that was Angkor
http://www.hinduonline.com/daily/980719/09/09190071.htm

Date: 19-07-1998 :: Pg: 26 :: Col: a
Angkor art, that ranged from grandiose works in sandstone to intricate bronzes, would have been lost in the depths of Cambodia's jungles had it not been for the publication of a Frenchman's illustrated diaries ... And then, the world discovered the splendor of an empire. S. RANGARAJAN on an exhibition in Washington that highlighted the rise and fall of a civilisation.

THE culture of India has been one of the world's most powerful civilising forces. Countries of the Far East, including China, Korea, Japan, Tibet and Mongolia one much of what is best in their own cultures to the inspiration of ideas imported from India... But the members of that circle of civilisations beyond Burma scattered around the Gulf of Siam and the Java Sea, virtually owe their very existence to the creative influence of Indian ideas. No conquest or invasion, no forced conversion imposed them. They were adopted because the people saw they were good and that they could use them." (Philip Rawson - The Art of South-east Asia, published in 1967).

The National Gallery of Art in Washington D.C. in an exhibition entitled ``Sculpture of Angkor and Ancient Cambodia: Millennium of Glory" captured the splendour that was Angkor and the wonder of India that made this historical legacy possible. In a period much before the sixth Century and one that continued for more than a 1, 000 years, Cambodian artists produced works of art glorifying many aspects of their culture belonging to both the Buddhist and Hindu religious traditions.

The sculpture ranged from grandiose and monumental works in sandstone representing goods, mythical guardians and legendary creatures to bronzes used for religious rituals and royal and aristocratic ceremonies.

Most of the exhibits were from the fabulous collections of the National Museum of Cambodia, Phnom Penh, and the Musse National des Arts Asiatiques -Guimet in Paris, which together possesses most of the world's richest Khmer art and are largely responsible for the discovery of Cambodia's cultural heritage.

How did this synthesis of civilizations come about? The clue is given by Philip Rawson when he says: ``The small colonies of Indian traders, who settled at points of vantage along the sea routes into the islands and around the coast of Indochina, merely imported with them their code of living, their conceptions of law and kingship, their rich literature and highly evolved philosophy of life. They intermarried with prominent local families: and dynasties evolved capable of organising extensive kingdoms within which their populations could live ordered and fruitful lives."

A brief chronology of Indian and Cambodian historical features will highlight the unfolding of this great Asian cultural drama.
INDIA: First century A.D.: Indian culture spreads throughout Southeast Asia;decoration of the portals of the great stupa at Sanchi; 78 Saka era begins;2nd century: Amaravati stupa Buddhist reliefs, classical phase; 4th century:
320: Gupta period begins; 5th century: Image of Teaching Buddha at Sarnath;6th century: c. 550: Chalukya dynasty (until 750); Elephanta cave; 7thcentury: Height of Pallava dynasty (600-850); Height of Ellora art; 8thcentury: Pala dynasty in Bihar and Bengal; 10th century: Chola Empire; 11thcentury: c. 1000: Khandariya Mahadeva temple at Khajuraho; 1025: Chola raid on Srivijaya; 12th century: 1193: Sultanate of Delhi; 14th century:Vijayanagara Empire.
CAMBODIAN: Pre-Angkor period from early in the Christian era until the end of the 8th century that saw the rule of Rudravarman (514-539) and Bhavavarman I (c. 550) and the construction of Bhavapura as capital of Bhavavarman followed by the kingdoms of Isanavarman I (c. 616-635) and Bhavavarman II (635-656). This was the period as mentioned above that the Chalukya dynasty ruled in India for two centuries from c. 550 and also saw the magnificence of the Pallavas.

The Angkor dynasty was founded by Jayavarman II after his return from ``Java" c. 790 and proclaimed himself universal king. He founded the cult of god-king or devaraja with the significant event of the installation of devaraja in 802 A.D. on Phnom Kulen (Mahendraparvata) by the Brahman Sivakaivalya, (``Khmer royal names are Sanskrit compounds that end in the word varman, meaning `shield'. Jayavarman is therefore the king `protected by jaya (victory), and Isanavarman the king `protected by Isana (a name for Siva)', etc.) - From ``Ancient Cambodia: A Historical Glimpse by Albert Le Bonheur.

Jayavarman II was succeeded through the centuries by rulers whose names and deeds (Indravarman II with a capital at Harihaaralaya; Yasovarman, who established a capital at Yashodharaprua and built an island temple at Indrataka and constructed the Bakheng temple- mountain; Harsavarman I; Rajendravarman II, under whose rule the construction of the Royal palace at Angkor began and was consecrated by the Brahmin priest Yajnavaraha in 967 setting in motion the Banteay Srei style of architecture; Udayadityavarman II, whose reign saw the coming of the Baphuon temple mountain and the unique art culture that has been associated with Baphuon) reveal a panoramic picture and sound of the clanging of metals, the rolling of stones and the chanting of hymns in praise of Visnu and Siva.

It was in the first half of the 12th century, during the rule of Suryavarman II (1113-at least 1143) that the temple mountain of Angkor Vat, one of the largest religious structures in the world, was built. Famous for its intricate bas-reliefs depicting stories from the two great Indian epics, Ramayana and Mahabaratha, the colossal work marked the apogee of Khmer architecture.
It is acknowledged that the last great emperor of Angkor was Jayavarman VII (1181-1218?), who built more monuments than any other Khmer ruler, as if to go with great hubris in a burst of fame and renown. The huge temple of the Bayon that he erected in the centre of the royal city of Angkor Thom gave its name to the style of the period. Jayavarman VII made Mahayana Buddhism as the state religion.

The next two centuries saw the revival of Hinduism as the state religion by Jayavarman VIII (1243-1295), increasing Thai raids on Angkor, the growing importance of Theravada Buddhism in Cambodia and the abandonment of Angkor and the location of the capital in Srei Santhor region to the south. It was becoming obvious that the Khmer empire was becoming a weakened power by alien onslaughts.
Slowly but steadily the breathtaking Angkor art was getting out of the sight of the world under the dense foliage of Cambodian forests until the publication in 1863 of the illustrated travel diaries of Henri Mauhot, a French naturalist and explorer, who had gone to South-east Asia in the late 1850's and succumbed to fever there in 1861.
Mesmerised by what he saw at the temple of Angkor Vat, Mouhot in lyrical descriptions said: ``At the sight of this temple, one feels one's spirit crushed, one's imagination surpassed. One looks, one admires, and, seized with respect, one is silent. For where are the words to praise a work of art that may not have its equal anywhere on the globe? ... What genius this Michalangelo of the East had, that he was capable of concaving such a work." (Le Tour du Monde, 2-1863-299).

The outpouring of words were hyperbolic but his accounts of the lost city and the historical treasures that were swallowed by trees and mountains, fired the imagination of scholars and archaeologists to rediscover Angkor.Cambodia which had become a French protectorate in 1863 lured artists, writers and tourists to the ancient sites. In the beginning of this century, the newly founded Ecole franchised'Extreme-Orient undertook the Herculean task of clearing and restoration of the monuments. Early explorers brought some works of sculpture to Paris, where they finally became the nucleus of the collections of Khmer art in the Musee national des Arts asiatiques-Guimet.
In 1918, the National Museum of Cambodia was founded in Phnom Penh to store and exhibit the pieces that had to be removed from the monuments to prevent theft and vandalism.

The restoration of the works of Angkor art, chronicling and cataloguing them in a historical sequence and throwing light on their grandeur is a fascinating story of the pioneering study done by French savants in this domain. Retracing of the genealogy of the Cambodian kings, an understanding of their religious affiliations and an aesthetic appreciation of the divine works of art that were produced during their periods of rule was done by Indologists and Sanskrit masters and colonial administrators in a painstaking and arduous process involving decades of dedication. The key to their success lay in decoding histories written on blackened stone.

The critical epigraphic scholarship so essential in this exercise was set in motion by an eminent Indologist from Leiden, Hendrik Kern, who had no problem in deciphering the Sanskrit-based characters of the ancient Cambodian texts and stone inscriptions, which were related to those used in southern India.

Kern's works which were translated in 1879 in French and appeared in the Annales d'Extreme Orient had a tremendous impact in France and produced in its wake a team of French Sanskritists headed by Auguste Barth and Abel Bergaigne. In a long-term project, Barth and Bergaigne produced an outline of Cambodian history, emphasising the lineage of the rulers. Helping them on the Khmer portion of the epigraphy was Etienne Aymonier, a French administrator with an admirable knowledge of the language. His voluminous work published as Le Cambodge (1900- 1904) is the classic reference on unravelling the evolution of Cambodian texts. Two types of characters were used from ancient India in the Cambodian inscriptions, the south Indian Chalukya-Pallava and the north Indian Nagari writing. ``On the evidence of the inscriptions, the first was more widely used from the early days until the middle of the ninth century. The second appears only in a few Sanskrit inscriptions; it had no real influence on the Cambodian calligraphic tradition. The south Indian type, which actually played a historical part, was known and used across all the former territory of Khmer." (Khmer Epigraphy - Saveros Pou).

In understanding the religions of ancient Cambodia, a phenemonal contribution has been made by Kamaleswar Bhattacharya in ``Les religions brahmaniques dans l'ancien Cambodge, d'apres l' epigraphie et l' iconographie (1961)." Bhattacharya was inspired and influenced by the great philologist-cum-historian, George Coedes, who in 1906, at the age of 20, published a long Sanskrit inscription from Cambodia and who over the next 60 years translated hundreds of complex Sanskrit and Khmer texts with wide-ranging significance and bearing.
``According to the Sanskrit epigraphy, iconography, and Chinese dynastic histories, Hinduism and Buddhism existed side by side in Cambodia during the fifth and sixth centuries. The main religion seems to have been Sivaism, one of the two major branches of Hinduism, but the other branch, Visnuism, also had adherents in the royal family." ``The grammatical work of Panini, the greatest grammarian of antuiquity, was highly prized in Cambodia, particularly among Sivaites. An Indian tradition held that it was Siva himself who had revealed the secrets of grammar to Panini." (The religions of ancient Cambodia, Bhattacharya.)

If Jayavarman II, the founder of the Angkor dynasty in 802, was an adherent of Sivaism and had a lingam installed with all the correct rituals in Phnom Kulen by a Brahmin well-versed in appropriate texts, ``his son and successor, Jayavarman III was a Visnuite," according to Bhattacharya, and the founder of Angkor Vat, King Suryavarman II (1113-1145?), believed in Visnuism, thus indicating that the faith in the two branches of Hinduism varied from ruler to ruler and that a sycretism existed not only between Sivaism and Visnuism, but between Sivaism and Buddhism, before the country embraced the Theravada form of Buddhism in the 14th century. The National Gallery of Art in a beautifully prepared pamphelt on Cambodian art by scholars on Khmer sculpture had outlined the broad contours in its development and the changes that were noticed from time to time over the centuries. Since virtually all Khmer art was religious, a background of the philosophical moorings of the people and their rulers is essential to an understanding of their divine stone carvings and the temple towns of Angkor and Angkor Vat that astound the beholder by their sheer size and proportion.

In turn hieratic and majestic, Khmer sculpture reflected the profound spirituality of the ancient Cambodian people, as well as their mastery of stone carrying and bronze casting. It is one of the misfortunes of history that few records survive to date the sculptures, and nothing is known about the artists who created these marvels. Thus the evolution of Khmer sculpture is traced by relying on a comparative study of architectural advancements over periods of time and a scrutiny of minute details, such as headdress styles, draperies and jewelry.
Pre-Angor art is distinguished from later Khmer art by its greater degree of realism, particularly in the anatomical proportions and the delicate modelling of the body. Almond-shaped eyes and long, thin are the other chief characteristics of works of this age. Also early Khmer statues were generally worked out from a single block of fine-grained sandstone and to ensure the stability of these thin, multi-armed figures, the artisans left elements of the block un carved to serve as support. Another device that served as a prop was an horseshoe-shaped arch that surrounded the body to reinforce the arms. These attribtues slowly disappeared in the ninth century.

After the establishment of the Angkor monarchy, as if to assert their power and supremacy, the Cambodian Kings constructed imposing temples and encouraged creation of sculpture images devoted to the divinities they wished to pay homage. The art of the ninth and 10th centuries stressed the divine nature of the figures by giving the statues a more imposing stance and making their features more simplified.

Some statues were erected on pedestals in sanctuaries exclusively meant for workship by the King and the priests. Others were placed in surrounding galleries where ordinary pilgrims made their prayer offerings. The 10th century Bakheng style, named after a major temple, was noted for male and female draperies that presented a unique type of narrow, vertical pleats, finely carved in relief all over the garments. The third quarter of the 10th century saw the marvel of Banteay Srei. Famous for its elegant pink sandstone and graceful decorations, the small Shiva temple of Banteay Srei was built around 967 with each doorway and each wall of the several gates and sanctuaries comprising the temple complex adorned with finely detailed relief sculpture.

The National Gallery exhibition included two carved pediments of Banteay Srei with scenes from Hindu mythology. One of them depicted two demon brothers fighting for the possession of a nymph sent by the gods to incite their rivalry and provoke a fatal fight to put an end to their crimes. It is the style of the 12th century Angkor Vat (within an enclosure of 1700by 1500 yards) that is uniquely epoch-making in the annals of Khmer art. The approaches to the vast stone complex with shrine pinnacles resembling sprouting shoots conjure visions of an illusion. Philip Rawson says that Angkor Vat is the crowning work of Khmer architecture, carrying to their high point all the features of earlier styles. But Rawson could not help noting ``the ultimate foundations of the style remain what they always were, securely Indian, reminiscent of the late Pallava and Chola art in south-eastern India."

Specially pertinent to this period is the image of Buddha seated on the mythological, multi-headed serpent or naga. The Buddha, deep in his meditation, does into see a storm coming. To protect him Mucilinda, the kind of serpents, spreads his heads in a hood over the Buddha while coiling underneath him to form his throne. Angkor Vat's new emphasis on ornamentation is seen in the decorative carving of the serpent's heads and the finely incised headdress of the Buddha.

The reign of Jayavarman VII, from late 12th century to early 13th century,proclaimed the reaching of the pinnacle with the construction of the Bayon temple. Many images of Bodhisattva Avalokiteswara (compassionate lord)
belong to this era, underlining the prevalent atmosphere of compassion and serenity. The trumpet and the glory of Angkor had lasted long and the decline was so on to set in with frequent attacks by neighbours in the late 13th and 14thecenturies. With the fall of the Khmer empire, the temples of Angkor were abandoned to the jungles until they came to the notice of the world of learning for restoration and preservation from the third quarter of the last century.

It was the misfortune of Angkor to suffer a second eclipse in 1970's due to a bloody and bitter civil was that was on the verge of wiping out an entire civilisation. When a semblance of political stability was reached and the burst of machine-gun fire and detonating mines stopped, work to save Angkor started with a few surviving conservators who had escaped the holocaust. India was the first to respond to the call for international help and the story of how the Archaeological Survey of India (ASI) rose to the occasion is well described by C. M. Bhandari, former Ambassador of India to Cambodia,in hi shook ``Saving Angkor".

In the face of intense international competition, the ASI was assigned thetask of restoration of Angkor Vat because (a) 11the better placement of the Indians to understand and respect the cultural heritage of Angkar .....(b)the competence of the ASI in handling the work since they had undertakensimilar restoration works in India for many decades."
On April 25, 1986 India and Cambodia exchanged letters to formalise the Restoration Agreement for Angkor Vat.

With a civil war raging in the surrounding areas of Angkor, the security situation was perilous. With all educated and trained civilians brutally murdered in the ``killings fields", unskilled labour had to be taught the lessons of the specialised work of conservation. There was no electricity, no communication with the outside world and the health facilities were nil. It was under these extreme conditions that the 15 to 18 ASI experts worked seven to eight months at a stretch for seven continuous years from December1986 to save the Angkor Vat.

Highlights of ASI's restoration work at Angkor Vat included the SamudraManthan gallery, entrance porches, libraries and moat embankment and southwest corner pavilion of the third enclosure and chemical treatment. With the successful completion of its assignment by the ASI, history had made a complete circle. What the Indian genius had helped to found over a period of ten centuries from the fourth to the fourteenth in Cambodia, it was able to restore when the structure was about to crumble. The Cambodian exhibition held by the National Gallery of Art in Washington was, in a manner of speaking, a celebration of the peace accords, international cooperation for the restoration of the Khmer art and to emphasise the hope that all is not yet lost with the world.

The Mystic Poets of Maharashtra

http://www.sol.com.au/kor/9_03.htm

There was a resplendent galaxy of poet saints in Maharashtra from the 13th to the 17th Century, from Jnandev (1275-'96) down to Turkaram (1608-'90). Altogether this was a time of great national vitality, covering the Maratha struggle for independence of the Moghul Empire and its final achievement under Shivaji. On the whole, however, the poet-saints showed no concern with such matters.

They were a strong, rugged, outspoken dynasty drawn from all social classes. Jnandev was a Brahmin, but there were also Namdev, a tailor; Gora, a potter; Savanta, a gardener; Chokha, a sweeper; and Tukaram, a tradesman. There were women too among them: Jnandev's sister Muktabai, Namdev's servant Jani, Chokha's wife Soyara. Their outstanding quality is a beautiful fusing of bhakti (devotion) with Jnana (knowledge). They worshipped and merged into Oneness with the God they worshipped. This is especially prominent in Tukaram. He declares for instance, "When I meditate on the Lord of Pandhari the body becomes transformed together with the mind. Where is there room for speech then? My I-ness is become Hari (God). With the mind merging in Divine Conciousness all creation looks divine. Tukaram says: 'how shall I put it? All at once I became lost in God-conciousness." And again, "The glory of the bhaktas is known only to themselves. It is hard for others to understand. In order to increase the happiness of love in this world they display duality without actually dividing. This is understood only by those who have experienced Unity through faith."

Jnandev with his sister Muktabai and his two brothers, all four of them poet-saints, had an unhappy childhood. Their father, after living the life of an ascetic, returned to married life, and on that account the orthodox Brahmins ostracised the whole family. They were orphaned young and their genius blazed forth while still in their teens. Jnandev, the greatest of them, is better known as Jnaneshwara, the 'Lord of Wisdom'. His great work, the Jnaneshwari is a monumental verse commentary on the Bhagavad Gita. Apart from this there are also his Anubhavamrita or 'Elixir of Experience'. Having himself attained this elixir, he says,

"The distinction between liberated, aspirant and bound subsists only so long as this Elixir of Experience is unknown to one. The enjoyer and the enjoyed, the seer and the seen, are merged in the non-dual, which is indivisible. The devotee has become God, the Goal has become God, the Goal has become the path; this indeed is solitude in the universe.'

This magnificent achievement was completed by the age of 22, when he declared that his life's work was finished and ceremoniously entered into samadhi in a specially prepared crypt, having given instruction that it was to be bricked up. This was in the village of Alandi in Poona district.

There is a beautiful atmosphere of sanctity and serenity there. It contains a tree under which an unending chain of recitation of the Jnaneshwari has gone until the present day. Jnaneshwara has remained a perrenial fount of inspiration for Maharashtra. He was at once the foundation and crown of this amazing dynasty.

Namdev, who arose next, described the three brothers as manifestations of Para-Brahmin and spoke of them as shining suns. In his youth he had been a thief and murderer, until one day, hearing a young mother explain to her fatherless child that they had to live in penury because his father had been killed, he realised with sudden horror that it was he who was the killer, and with a violent revulsion of feeling he rushed to the nearby temple to take his own life. He was prevented, however, and he devoted the rest of his life to penance and worship. He wrote in Hindi as well as Marathi (two sister languages both derived from sanskrit, as are most of those of North India), and it is interesting to note that some of his Hindi songs are included in the Granth Sahib, the scripture of the Sikhs, which their founder, Guru Nanak, partly wrote and partly compiled.

While he was still a simple devotee of God in the form of Vithoba it was Jnaneshwara's sister Muktabai who awoke him to deeper understanding. when he met her she astonished him:

What if you have become a devotee of the Lord?
The Inner Refuge is beyond your ken;
Never have you turned your gaze Spiritward!
What use is your godly talk till then?
Your Self you have never found;
I-ness has you in its iron grip.
Yet, unmindful of your own failure,
You question us about our roots.

She also wrote for him: **"All form is forever permeated with formlessness.**
Shape it has none, but enveloped in Maya
The devotee does with form endow
The all-pervading Boundless That within."

Such was the celestial group of which one, the sweeper Chokha proclaimed: 'God neither has form nor is without form.' Another, the servant-girl Janabai, felt that she 'ate God, drank God, slept on God and carried on all her activities with God.' Namdev died in 1350. He desired his ashes to be buried under the doorstep to the main entrance of the temple of Vitobha at Pandharpur so that all devotees who went there might bless him with their holy feet.

The next great saint of this galaxy was Eknath (1533-'99). He taught that bhakti and jnana are like flower and fruit, inconcievable in seperation. He carried on the tradition of Jnaneshwar and Namdev. The text of the Jnashwari had become corrupted, so he re-edited it, and his recension has remained current to the present day. He was both scholar and poet, and his verse exposition of chapter XI of the Bhagavata is as illuminating and as popular as the Jnaneshwari. His copious and varied compositions (including folk-songs called 'Bharudas') have enriched Marathi literature with their unique quality.

Eknath had a contemporary, Father Stephens, an English Jesuit from Oxford, living in Goa who composed a Christa Purana in Marathi distinctly reminiscent of Eknath's Bhagavata. There are

many sayings that bring out the pure advaitic understanding of Eknath. "My body is Pandhari" (a place of pilgrimage) he says, and Atma is Vitthala (God) therein." And again: "When I bathe in the river the water is liquid consciousness!" He was famed for his never-ending patience as well as for his tolerance and compassion. He was carrying holy water for his worship but gave it to a thirsty donkey. On the anniversary of his ancestors he called an untouchable for food and gave him the consecrated dishes prepared for the Brahmins.

The next great figure in this dynasty, Tukaram, (1608-'50) was a peasant trader by profession but ranks as the crown of Maratha sainthood after Jnaneshwara. The woman poet Bahinabai speaks of him as the steeple or pinnacle of the edifice whose foundation Jnaneshwara had laid. Rameshwar, a contemporary disciple, declaired that " in jnana, bhakti and vairagya (dispassion) there was no one to match Tukaram". Even today his songs sway our emotions as they did his contemporaries.

The secret lies in the rustic simplicity and utter frankness on self-revelationin his songs together with their profound understanding and ardent devotion. He had not an easy life. He could not get up any interest in trade, with the result that he and his family often went hungry,and his wife developed into a scold, as well as she might. The local Brahmins declared that, being of low caste, he had no right to compose poems and ordered him to throw them into the river flowing through the town. Obediently he did so, but the waters washed them ashore undamaged. Abashed by this, his critics allowed them to be kept. He rose above body-conciousness while still in the body. In a well known poem he declares; "I witnessed with my own eyes my bodily death. That was indeed a unique sacrament!" He started (like his prototype Namdev) as an ordinary devotee of God as Vitthala but attained transcendent experience "I went to see God and there stood transfigured into God'" he says.

He is one of those rare saints who have disappeared bodily at the end of life. Since there was no body to entomb there is no shrine to him to which pilgrims can repair. Instead they go to the spot on the river bank where his poems were washed ashore. There is a beautiful atmosphere there. Apart from this fraternity of saints centred around Pandharpur, there were two other contemporaries of Tukaram who were eminent Marathi poet-saints. One of them was a Muslim faqir , Sheikh Muhammed, whose tomb at Ahmednagar became a place of pilgrimage for Muslims and Hindus alike. The other was Samartha Ramdas, the powerful inspirer of Shivaji, whose shrine is at Sajjangad in Satara District.

Sheikh Muhammed is chiefly remembered today for his Yoga-sangrama, a long allegory in songs describing the spiritual struggle as a 'battle of yoga'. He confesses: "I do not know refined speech. Cultured pandits may laugh at my uncouth expression. But look into the core and understand my soul." Like Kabir he understood the basic unanimity of the religions and he could have said with Kabir: " Ram and Rahim, Ishwar and Allah are all the same." He regarded all sadhus as the same and not other than the Absolute, whatever their external forms or religions. "The peel of the jackfruit is rough and prickly but the pulp inside is sweet. The shell of the coconut is hard and rough, but the milk and kernel inside are delicious." He also said: "There is no difference between Paramatma (universal spirit) and saint. They are essentially the same although they appear different." Tukaram said in almost the same words: "All saints are the same. They appear different only in externals, just as milk is all the same though it comes from cows of different colour."

Samartha Ramdas also said the same: "Sadhus look different, but, merged in Self, they are all

manifestations of the One Real." What distinguished him from the Pandharpur group of saints was that, unlike them, he was interested in the national life also. He became the Guru of Shivaji and inspired the freedom struggle against Aurangzeb. His Das-Bodha is a Marathi classic of rare merit. Though composed in the ovi metre, it has the terseness and forthrightness of vigorous prose. Its pragmatism is impregnated with the highest spiritual values. It inculcates Vedanta in practical terms of work-a-day life. Its code of enlightened conduct covers all social classes and applies to both ruler and ruled.

The message and mission of Ramdas were summed up in the meaningful phrase 'Maharashtra Dharma'. His work contained that mixture of realism and intuition which are so characteristic of Maharashtra through the ages. In fact his Das-Bodha with Tukaram's Gatha or Book of Songs and the Jnaneshwari can be looked upon as the 'Triple Veda' of Maharashtra down to this day. Their appeal is both to the head and heart. They are couched in a form which some might consider more like rythmical prose than verse. But they are all alike embodiments of Satyam-Sivam-Sundaram - 'Truth, Purity, Beauty'. The truth must be experienced, and these had experienced it and could indicate it for others to experience.

Discordant Concord XXI

http://www.investindia.com/newsite/religion/articles.htm#DISCORDANT

If the influence of Vaishnavism outside India has not been noticeable, the predominant reason may be just ignorance. This may be attributed in turn to the absence of any tradition of studying the history and evolution of the Eastern religions, with particular reference to their links with other ancient civilizations. The Christian impact on India, after some initial hesitations, became muscular (according to a phrase used by one of the missionaries in defense of the propagation of the faith) rather than understanding; and any research into the historical origins of the world religions was discouraged. This tradition has been changed. Only in last few decades, when. historical .and anthropological research has ceased to be guided by bias in favour of the established churches of Christendom.

Naturally, it has been possible in this changed atmosphere, with the ecumenical spirit inspiring the search, to find a surprising number of instances of contacts or parallel developments in thought. In appraising the mass of evidence, which has thus been collected, one has to be careful to weed out pseudo from genuine research. Chauvinistic claims, based on purely etymological variations, which might have been derived or twisted to suit particular purposes, will have to be sifted and rejected. Accidental similarities cannot be treated as instances of one religion borrowing from another. With these qualifications, however, it can be said that contacts between the east and the west were not less numerous in the past and were, perhaps, even greater than they are at present.

From Pythagoras, who believed in the transmigration of souls, apparently because of his contacts with religious teachers from the east. Pindar, who believed in metempsychosis, Plato, who could not have been ignorant of Karma, through Klaxons, the Indian sage, who accompanied Alexander, Apollonius of Tyana, who came to Taxila to study under the Brahmins, Clement of Alexandria, the early Christian teachers of the second century A.D., who refers to Buddhists and Brahmins in his work and Plotimus, who went to Persia to meet the Brahmins, the Contacts between India and Greek thinkers seem to have been continuous.

Parallels have also been found between the Biblical account of the creation of man by God in his own image and the creation of woman out of man(Genesis I :27) and the statements in the Hindu scriptures in the Hindu scriptures that God became man and created woman (Brihadaranyaka Upanishad(1:3 and 1:4) and Brahma as God divided himself into svayambhu Manu(man) and Satarupi(Woman)(the Bhagavata purana). There is a further parallel between the temptation of Adam and Eve, Who ate of the apple(Genesis III) and the references to two birds "beautiful of wing, inseparable friends, dwelling together in the same tree (the universe) of whom one(the individual being) eats the fruit of action, while the other (universal being) looks on and Svetesvatara Upanishad(4:6). The Indian scriptures, far from being in conflict with Western

thought, seem very often to contain the same or parallel ideas as in Biblical literature. The ascent of man in the Books of Enoch is said to match a similar account in the Kausitaki Upanishad and even the concepts of the kingdom of God and the son of man have been discovered in the Rig Veda.

There are those, who go much further and claim Jesus himself for India. Incredible accounts of his travels and studies in India, before and after the brief period of his ministry in Israel and crucifixion have been presented in two books: the Russian traveller Nicholas Notovich's 'Unknown life of Christ', published in 1895, and the German scholar Faber-Kaiser's more recent book entitled Jesus died in Kashmir'. The first book, based on certain scrolls in the lamassery at Hemis in Ladakh near the Tibetan border, claims that Jesus stayed with the Brahmins and studied the Indian religions, during the period of about sixteen years in his life, of which there are no The second book supports Ahmadiya sect in Islam that Jesus did not die on the Cross, but came to India and died near Rozabal not far from Srinagar in Kashmir.

The orthodox churches of Christendom do not accept these fancifully reconstructed accounts of the life of Christ; and they may be right. The evidence is flimsy and the authentic tradition of several centuries to the contrary cannot be ignored. But one need not reject in the more recent theory, following the discovery of the Dead Sea scrolls between 1947 and 1956 that the Essenes, the upright men who lived in this area, were probably influenced by the Buddhists and themselves influenced by the early Jewish-Christian community in Israel.

Hilgenfeld, who tried to identify the Essenes, before the recent discoveries near the Dead Sea, thought in fact they were Buddhists tae(theraputta) were either an Indian community or were influenced by the Indian, they could transmit some of this influence to Christianity. In particular, the word of God or the Indian 'Vak' into the Logos, could have been their major contribution to the Christian religion.

The similarities between the legends and mythologies of Buddhism and early Christianity are too many and too striking for these possibilities to be ruled out. The royal birth of the Buddha and of Jesus through one of the royal tribes of Judah, the prophecies about their births, the feeding of many and the miracles of walking over the waters, and the parallels between Devadatta and judas, who were opposed to or betrayed entirely to accident. as a further and outstanding illustration of these early contacts with Buddhism, the young Buddha, Josaphat, is also venerated as one of the minor saints of the catholic church, along with his companion Barlaam. Josaphat by himself is venerated also in the Greek and Georgian churches.

If Christianity thus owes something to Buddhism it may owe as much or even more to Mithraism, with its central figure Mithra being closely allied to the sun. Renan says with considerable justification that if Christianity had failed, the whole of Europe could have become Mithraist, as this was the most popular of the so called Pagan religions in the Roman empire.

As it is, Christianity has drawn liberally on Mithraism which it has replaced. It has borrowed the date of Christmas from the birthday of Mithra. The concepts of Mithra and Christ as mediators

between God and man, the belief in the presence of Mithra for blessing all events in everyday life, like the presence of Christ during mass and the ideas of baptism and redemption are instances of similarities in there religions. There is even a precedent for Christ's last supper in Mithra's feast with Sol Helios(The Sun) before his own ascent to heaven.

One can add quite substantially to his list of parallels between the eastern religions and Christianity. But it is not necessary to do so, as no one, not even those who are controlling the churches and orthodox establishments, may now be inclined to advance or sustain the claim that the higher religions grew and developed independently, without any contacts as between themselves.

In this setting, in an environment, which is much less hostile, it will now be possible to look for the hidden though not direct influence of Vaishnavism on Christianity. We shall be devoting the next two installments, therefore to the discovery of the concordant rather than the discordant elements, in the light of recent research.

"A wise man should learn good behaviour, good words and good acts from every side, as a gleaner collects grains of corn from the field abandoned by the reapers. Virtue is preserved by truthfulness: learning by application: beauty by cleansing the body: high behaviour is not good fortune , cannot command respect. A king or a man who envies another's wealth, beauty, might, high lineage, happiness, good behaviour is essential to man. Intoxication of wealth is much more to be censured than wine: for a man intoxicated with prosperity can never be brought to his senses unless and until he meets with a fall." - Vidura Needhi.

Jaipur

JAIPUR'S BRILLANCE AND THE JANTAR MANTAR

Raja Sawai Jai Singh II's or " The One-And-A-Quarter"
(Source: India-Rajasthan by Knopp Guides pg 132-141)

Spreading Fame

Raja Jai Singh II (1693-1743), was given the title of "Sawai", meaning "The One-and-a-Quarter", by Emperor Aurangzeb for his intelligence. Ever since, the rulers of Jaipur have flown two flags, one full and one quarter-sized, to symbolize this tile.

The Building of Jaipur - In the 1720's Raja Sawai Jai Singh II, realizing that his kingdom had outgrown its old capital at Amber, began to dream of a new city which would someday be the capital of a unified Rajaputana - a great, flourishing center of commerce, the arts, and religion. He started work on building Jaipur in 1727. The city turned out to be an astonishing well-planned one, based on the ancient Hindu treatise on architecture, the ***Shilpa Shastra.***

The town planner was a talented, young scholar and engineer, Vidyadhar Bhattacharya, whose family had been invited to settle in Jaipur from the distant state of Bengal by Raja Man Singh I.

Jaipur was built on a grid system. Its main streets, 119 feet wide were intersected at right angles by secondary streets, 60 feet wide, which were further criss-crossed by lanes and bylanes, 30 feet and 15 feet wide respectively. The streets were lined with fine buildings of uniform design and shaded by trees. In the middle of the main road run an aqueduct, and there were wells for drinking water at regular intervals, many of which are still used today. The city was divided into nine rectangular sectors (representing the nine

divisions of the universe). Different streets were allotted for different professions such as potters, weavers, dyers, jewelers, and bakers.

Louis Rousselet, the well-known 19th century French traveler, wrote, "The town is built in a style of unusual magnificence....I doubt whether at the time it was built there were many cities in Europe which could compare with it."

The 19th century English bishop, **Heber**, wrote that it was comparable to the Kremlin in Moscow. Raja Sawai Jai Sing II named the new city after himself (fortuitously Jaipur also means "City of Victory").

"... THE GOOD PEOPLE OF AMERICA BUILDED THEIR TOWNS AFTER THIS PATTERN, BUT KNOWING NOTHING OF JEY SINGH, THEY TOOK ALL THE CREDIT THEMSELVES."

Wrote RUDYARD KIPLING, *LETTERS OF MARQUE, 1899*

Raja Sawai Jai Singh II's observatory prompted the Portuguese Viceroy in Goa to send an emissary to Jaipur in 1729 to study it. Later, as its fame spread, French and German scholars, astronomers, and priests also came here. Through his Portuguese friend, Padre Manuel de Figueredo, Raja Sawai Jai Singh II procured the latest astronomical texts and instruments from Europe. Using his huge masonry instruments, he was able to detect errors in the well-known astronomical tables of Pere de la Hire, who like other European astronomers, used only standard-sized brass instruments. Raja Sawai Jai Singh II's eclectic collection of astronomical instruments and manuscripts from all over the then known world are displayed at Jantar Mantar and the City Palace Museum. The astrolabe, is a kind of celestial map engraved on a 7 foot wide metal disc. He called it the Raj Yantra, and wrote two volumes on the principles and utility of the device, which became one of his proudest possessions.

*****

Janatar Mantar

The Jaipur astronomical observatory built by Raja Sawai Jai Singh II in 1827 is am amazing monument. Jantar Mantar (the name roughly translates as "The Formula of Instruments") was one of five observatories he built in northern India. Its instruments, which look like giant, abstract, futuristic sculptures, are actually highly sophisticated devices that could, among other things, mark time accurate to one second.

The first observatory was built in Delhi. The second and more sophisticated one is Jaipur. In addition, three smaller ones, in Varanasi, Ujjain, and Mathura, were built to supplement the observations

made in Jaipur. (The Mathura one has since been destroyed.)

In Pursuit of Astronomy

Jantar Mantar

Raja Sawai Jai singh II eagerly devored every known work on the subject written by Indian, Arab, and Greek astronomers and even went to the extent of having Ptolemy's *Almagest* and Newton's *Principia* specially translated into Sanskrit for him. He greatly admired the work done by the Turkish royal astronomer, Ulugh Beg, who had built an observatory in Samarkand in the 15th century, which had produced the most accurated astronomical reading to date. In the introduction to his own comprehensive treatise, he wrote that since nobody had one any significant work in the field since Ulugh Beg, he would undertake the daunting task himself. He sent out his emissaries to collect all the most advanced astronomical instruments that were being used by 18th century Europeans and Islamic astronomers. During the course of his studies he discovered the inaccuracies in the existing astronomical tables of the time. In the tables of the French astronomers, Pere de la Hire, for example, he was able to detect a discrepancy of half a degree in the placement of the moon and planets. He was outspoken in his criticism and once wrote:

" Ptolemy is a bat…the demonstrations of Euclid are imperfect sketch of the inaccuracies in the existing tables were all a result of mechanical limitations of the instruments used at the time – they were too small in size to be accurate, and their moving parts made them unreliable. His solution therefore, was to build gigantic instruments from stone, masonry, and marble instead of conventional brass ones.

Samrat Yantra

His great Samrat Yantra, for example, is basically a sundial, except that it is a massive 89 feet high and 148 feet wide. As a result, when the sun moves across the sky it casts a shadow on the finely calibrated quadrants on either side, which moves at a precise and measurable 0.08 inch every second. It was designed to measure local time as well as such things as zenith distances, meridian pass time as well as such declination of the stards with remarkable precision. Interestingly, the Samrat Yantra at each of his five observatories varies slightly in shape in order to ensure that the hypotenuse of its great triangle is

aligned perfectly with the axis of the earth and the flanking quadrants are perfectly parallel to the Equator.

Other Instruments

In all, Raja Sawai Jai Singh II invented fifteen different instruments, all of them based on his principle of accuracy through gigantic size. They ranged from Ram Yantra , which determines the azimuths and altitudes of various heavenly bodies, to Misra Yantra, which, among other things, tells the time at four different foreign observatories. The instruments are in such a good condition that, surprisingly, they are still used today. Samrat Yantra, for instance, is consulted every year on the full moon night of *Guru Purnima*, along with the ancient Sanskrit texts, to predict the onset of the monsoon. One of the instruments on display at Jantar Mantar and the City Palace Museum is a telescope, indicating just how aware the Raja was of the latest technology of his time.

Mathematics and the Spiritual Dimension

http://www.gosai.com/chaitanya/saranagati/html/vishnu_mjs/math/math_1.html

Archimedes and Pythagoras

A common belief among ancient cultures was that the laws of numbers have not only a practical meaning, but also a mystical or religious one. This belief was prevalent amongst the Pythagoreans. Prior to 500 B.C. E., Pythagoras, the great Greek pioneer in the teaching of mathematics, formed an exclusive club of young men to whom he imparted his superior mathematical knowledge. Each member was required to take an oath never to reveal this knowledge to an outsider. Pythagoras acquired many faithful disciples to whom he preached about the immortality of the soul and insisted on a life of renunciation. At the heart of the Pythagorean world view was a unity of religious principles and mathematical propositions.

In the third century B.C. E. another great Greek mathematician, Archimedes, contributed considerably to the field of mathematics. A quote attributed to Archimedes reads, "There are things which seem incredible to most men who have not studied mathematics." Yet according to Plutarch, Archimedes considered "mechanical work and every art concerned with the necessities of life an ignoble and inferior form of labor, and therefore exerted his best efforts only in seeking knowledge of those things in which the good and the beautiful were not mixed with the necessary." As did Plato, Archimedes scorned practical mathematics, although he became very expert at it.

The Abacus: A mechanical counting device

The Greeks, however, encountered a major problem. The Greek alphabet, which had proved so useful in so many ways, proved to be a great hindrance in the art of calculating. Although Greek astronomers and astrologers used a sexagesimal place notation and a zero, the advantages of this usage were not fully appreciated and did not spread beyond their calculations. The Egyptians had no difficulty in representing large numbers, but the absence of any place value for their symbols so complicated their system that, for example, 23 symbols were needed to represent the number 986. Even the Romans, who succeeded the Greeks as masters of the Mediterranean world, and who are known as a nation of conquerors, could not conquer the art of calculating. This was a chore left to an abacus worked by a slave. No real progress in the art of calculating nor in science was made until help came from the East.

Shulba Sutra

In the valley of the Indus River of India, the world's oldest civilization had developed its own system of mathematics. The Vedic Shulba Sutras (fifth to eighth century B.C.E.), meaning "codes

of the rope," show that the earliest geometrical and mathematical investigations among the Indians arose from certain requirements of their religious rituals. When the poetic vision of the Vedic seers was externalized in symbols, rituals requiring altars and precise measurement became manifest, providing a means to the attainment of the unmanifest world of consciousness. "Shulba Sutras" is the name given to those portions or supplements of the Kalpasutras, which deal with the measurement and construction of the different altars or arenas for religious rites. The word shulba refers to the ropes used to make these measurements.

> **Math cannot take the mystery out of life without doing away with life itself, for it is life's mystery, its unpredictability-the fact that it is dynamic, not static-that makes it alive and worth living.**

Although Vedic mathematicians are known primarily for their computational genius in arithmetic and algebra, the basis and inspiration for the whole of Indian mathematics is geometry. Evidence of geometrical drawing instruments from as early as 2500 B.C.E. has been found in the Indus Valley. [1] The beginnings of algebra can be traced to the constructional geometry of the Vedic priests, which are preserved in the Shulba Sutras. Exact measurements, orientations, and different geometrical shapes for the altars and arenas used for the religious functions (yajnas), which occupy an important part of the Vedic religious culture, are described in the Shulba Sutras. Many of these calculations employ the geometrical formula known as the Pythagorean theorem.

This theorem (c. 540 B.C.E.), equating the square of the hypotenuse of a right angle triangle with the sum of the squares of the other two sides, was utilized in the earliest Shulba Sutra (the Baudhayana) prior to the eighth century B.C.E. Thus, widespread use of this famous mathematical theorem in India several centuries before its being popularized by Pythagoras has been documented. The exact wording of the theorem as presented in the Sulba Sutras is: "The diagonal chord of the rectangle makes both the squares that the horizontal and vertical sides make separately." [2] The proof of this fundamentally important theorem is well known from Euclid's time until the present for its excessively tedious and cumbersome nature; yet the Vedas present five different extremely simple proofs for this theorem. One historian, Needham, has stated, "Future research on the history of science and technology in Asia will in fact reveal that the achievements of these peoples contribute far more in all pre-Renaissance periods to the development of world science than has yet been realized." [3]

The Shulba Sutras have preserved only that part of Vedic mathematics which was used for constructing the altars and for computing the calendar to regulate the performance of religious rituals. After the Shulba Sutra period, the main developments in Vedic mathematics arose from needs in the field of astronomy. The Jyotisha, science of the luminaries, utilizes all branches of mathematics.

The need to determine the right time for their religious rituals gave the first impetus for astronomical observations. With this desire in mind, the priests would spend night after night watching the advance of the moon through the circle of the nakshatras (lunar mansions), and day after day the alternate progress of the sun towards the north and the south. However, the priests were interested in mathematical rules only as far as they were of practical use. These truths were therefore expressed in the simplest and most practical manner. Elaborate proofs were not presented, nor were they desired.

Evolution of Arabic (Roman) Numerals from India:

A close investigation of the Vedic system of mathematics shows that it was much more advanced than the mathematical systems of the civilizations of the Nile or the Euphrates. The Vedic mathematicians had developed the decimal system of tens, hundreds, thousands, etc. where the remainder from one column of numbers is carried over to the next. The advantage of this system of nine number signs and a zero is that it allows for calculations to be easily made. Further, it has been said that the introduction of zero, or sunya as the Indians called it, in an operational sense as a definite part of a number system, marks one of the most important developments in the entire history of mathematics. The earliest preserved examples of the number system which is still in use today are found on several stone columns erected in India by **King Ashoka** in about 250 B.C.E. [4] Similar inscriptions are found in caves near Poona (100 B.C.E.) and Nasik (200 C.E.). [5] These earliest Indian numerals appear in a script called *brahmi*.

After 700 C.E. another notation, called by the name "Indian numerals," which is said to have evolved from the brahmi numerals, assumed common usage, spreading to Arabia and from there around the world. When Arabic numerals (the name they had then become known by) came into common use throughout the Arabian empire, which extended from India to Spain, Europeans called them "Arabic notations," because they received them from the Arabians. However, the Arabians themselves called them "Indian figures" (Al-Arqan-Al-Hindu) and mathematics itself was called "the Indian art" (hindisat)

Evolution of "Arabic numerals" from Brahmi (250 B.C.E.) to the 16th century.

Mastery of this new mathematics allowed the Muslim mathematicians of Baghdad to fully utilize the geometrical treatises of **Euclid** and **Archimedes**. Trigonometry flourished there along with astronomy and geography. Later in history, Carl Friedrich **Gauss**, the "prince of mathematics," was said to have lamented that **Archimedes** in the third century B.C.E. had failed to foresee the Indian system of numeration; how much more advanced science would have been.
Prior to these revolutionary discoveries, other world civilizations-the Egyptians, the Babylonians, the Romans, and the Chinese-all used independent symbols for each row of counting beads on the abacus, each requiring its own set of multiplication or addition tables. So cumbersome were these systems that mathematics was virtually at a standstill. The new number system from the Indus Valley led a revolution in mathematics by setting it free. By 500 C.E. mathematicians of India had solved problems that baffled the world's greatest scholars of all time. **Aryabhatta**, an astronomer mathematician who flourished at the beginning of the 6th century, introduced sines and versed sines-a great improvement over the clumsy half-cords of Ptolemy.

A. L. Basham, foremost authority on ancient India, writes in ***The Wonder That Was India,***

Medieval Indian mathematicians, such as Brahmagupta (seventh century), Mahavira (ninth century), and Bhaskara (twelfth century), made several discoveries which in Europe were not known until the Renaissance or later. They understood the import of positive and negative quantities, evolved sound systems of extracting square and cube roots, and could solve quadratic and certain types of indeterminate equations." Mahavira's most noteworthy contribution is his treatment of fractions for the first time and his rule for dividing one fraction by another, which did not appear in Europe until the 16th century.

Equations and Symbols:

B.B. Dutta writes: "The use of symbols-letters of the alphabet to denote unknowns, and equations are the foundations of the science of algebra. The Hindus were the first to make systematic use of the letters of the alphabet to denote unknowns. They were also the first to classify and make a detailed study of equations. Thus they may be said to have given birth to the modern science of algebra." [7] The great Indian mathematician **Bhaskaracharya** (1150 C.E.) produced extensive treatises on both plane and spherical trigonometry and algebra, and his works contain remarkable solutions of problems which were not discovered in Europe until the seventeenth and eighteenth centuries. He preceded **Newton** by over 500 years in the discovery of the principles of differential calculus. **A.L. Basham** writes further, "The mathematical implications of zero (sunya) and infinity, never more than vaguely realized by classical authorities, were fully understood in medieval India. Earlier mathematicians had taught that X/0 = X, but Bhaskara proved the contrary. He also established mathematically what had been recognized in Indian theology at least a millennium earlier: that infinity, however divided, remains infinite, represented by the equation oo /X = oo." In the 14th century, **Madhava**, isolated in South India, developed a power series for the arc tangent function, apparently without the use of calculus, allowing the calculation of pi to any number of decimal places (since arctan 1 = pi/4). Whether he accomplished this by inventing a system as good as calculus or without the aid of calculus; either way it is astonishing.

Spiritually advanced cultures were not ignorant of the principles of mathematics, but they saw no necessity to explore those principles beyond that which was helpful in the advancement of God realization.

By the fifteenth century C.E. use of the new mathematical concepts from India had spread all over Europe to Britain, France, Germany, and Italy, among others. **A.L. Basham** states also that

> The debt of the Western world to India in this respect [the field of mathematics] cannot be overestimated. Most of the great discoveries and inventions of which Europe is so proud would have been impossible without a developed system of mathematics, and this in turn would have been impossible if Europe had been shackled by the unwieldy system of Roman numerals. The unknown man who devised the new system was, from the world's point of view, after the Buddha, the most important son of India. His achievement, though easily taken for granted, was the work of an analytical mind of the first order, and he deserves much more honor than he has so far received.

Unfortunately, Eurocentrism has effectively concealed from the common man the fact that we owe much in the way of mathematics to ancient India. Reflection on this may cause modern man to consider more seriously the spiritual preoccupation of ancient India. The *rishis* (seers) were not men lacking in practical knowledge of the world, dwelling only in the realm of imagination. They were well developed in secular knowledge, yet only insofar as they felt it was necessary within a world view in which consciousness was held as primary.

In ancient India, mathematics served as a bridge between understanding material reality and the spiritual conception. Vedic mathematics differs profoundly from Greek mathematics in that knowledge for its own sake (for its aesthetic satisfaction) did not appeal to the Indian mind. The

mathematics of the Vedas lacks the cold, clear, geometric precision of the West; rather, it is cloaked in the poetic language which so distinguishes the East. Vedic mathematicians strongly felt that every discipline must have a purpose, and believed that the ultimate goal of life was to achieve self-realization and love of God and thereby be released from the cycle of birth and death. Those practices which furthered this end either directly or indirectly were practiced most rigorously. Outside of the religio-astronomical sphere, only the problems of day to day life (such as purchasing and bartering) interested the Indian mathematicians.

Poetry in Math:
One of the foremost exponents of Vedic math, the late **Bharati Krishna Tirtha Maharaja**, author of *Vedic Mathematics*, has offered a glimpse into the sophistication of Vedic math. Drawing from the *Atharva-veda*, Tirtha Maharaja points to many *sutras* (codes) or aphorisms which appear to apply to every branch of mathematics: arithmetic, algebra, geometry (plane and solid), trigonometry (plane and spherical), conics (geometrical and analytical), astronomy, calculus (differential and integral), etc.

Utilizing the techniques derived from these sutras, calculations can be done with incredible ease and simplicity in one's head in a fraction of the time required by modern means. Calculations normally requiring as many as a hundred steps can be done by the Vedic method in one single simple step. For instance the conversion of the fraction 1/29 to its equivalent recurring decimal notation normally involves 28 steps. Utilizing the Vedic method it can be calculated in one simple step. (see the next section for examples of how to utilize Vedic *sutras*)

In order to illustrate how secular and spiritual life were intertwined in Vedic India, Tirtha Maharaja has demonstrated that mathematical formulas and laws were often taught within the context of spiritual expression (mantra). Thus while learning spiritual lessons, one could also learn mathematical rules.

Tirtha Maharaja has pointed out that Vedic mathematicians prefer to use the devanagari letters of Sanskrit to represent the various numbers in their numerical notations rather than the numbers themselves, especially where large numbers are concerned. This made it much easier for the students of this math in their recording of the arguments and the appropriate conclusions.

Tirtha Maharaja states, "In order to help the pupil to memorize the material studied and assimilated, they made it a general rule of practice to write even the most technical and abstruse textbooks in sutras or in verse (which is so much easier-even for the children-to memorize). And this is why we find not only theological, philosophical, medical, astronomical, and other such treatises, but even huge dictionaries in Sanskrit verse! So from this standpoint, they used verse, sutras and codes for lightening the burden and facilitating the work (by versifying scientific and even mathematical material in a readily assimilable form)!" [8] The code used is as follows:

The Sanskrit consonants

ka, ta, pa, and ya all denote 1;
kha, tha, pha, and ra all represent 2;
ga, da, ba, and la all stand for 3;
Gha, dha, bha, and va all represent 4;

gna, na, ma, and sa all represent 5;
ca, ta, and sa all stand for 6;
cha, tha, and sa all denote 7;
ja, da, and ha all represent 8;
jha and dha stand for 9; and
ka means zero.

Vowels make no difference and it is left to the author to select a particular consonant or vowel at each step. This great latitude allows one to bring about additional meanings of his own choice. For example kapa, tapa, papa, and yapa all mean 11. By a particular choice of consonants and vowels one can compose a poetic hymn with double or triple meanings. Here is an actual sutra of spiritual content, as well as secular mathematical significance

gopi bhagya madhuvrata
srngiso dadhi sandhiga
khala jivita khatava
gala hala rasandara

While this verse is a type of petition to Krishna, when learning it one can also learn the value of pi/10 (i.e. the ratio of the circumference of a circle to its diameter divided by 10) to 32 decimal places. It has a self-contained master-key for extending the evaluation to any number of decimal places.

The translation is as follows:

> O Lord anointed with the yogurt of the milkmaids' worship (Krishna), O savior of the fallen, O master of Shiva, please protect me.

At the same time, by application of the consonant code given above, this verse directly yields the decimal equivalent of pi divided by 10: pi/10 = 0.31415926535897932384626433832792. Thus, while offering mantric praise to Godhead in devotion, by this method one can also add to memory significant secular truths.

This is the real gist of the Vedic world view regarding the culture of knowledge: while culturing transcendental knowledge, one can also come to understand the intricacies of the phenomenal world. By the process of knowing the absolute truth, all relative truths also become known. In modern society today it is often contended that never the twain shall meet: science and religion are at odds. This erroneous conclusion is based on little understanding of either discipline. Science is the smaller circle within the larger circle of religion.

We should never lose sight of our spiritual goals. We should never succumb to the shortsightedness of attempting to exploit the inherent power in the principles of mathematics or any of the natural sciences for ungodly purposes. Our reasoning faculty is but a gracious gift of Godhead intended for divine purposes, and not those of our own design.

The Incorruptibility of the Ganges

The Ganges is 2525 kilometers long. Along its course, 27 major towns dump 902 million liters of sewage into it each day. Added to this are all those human bodies consigned to this holy river, called the Ganga by the Indians. Despite this heavy burden of pollutants, the Ganges has for millennia been regarded as incorruptible. How can this be?

Several foreigners have recorded the effects of this river's "magical" cleansing properties:

1. Ganges water does not putrefy, even after long periods of storage. River water begins to putrefy when lack of oxygen promotes the growth of anaerobic bacteria, which produce the tell-tale smell of stale water.
2. British physician, C.E. Nelson, observed that Ganga water taken from the Hooghly---one of its dirtiest mouths---by ships returning to England remained fresh throughout the voyage.
3. In 1896, the British physician E. Hanbury Hankin reported in the French journal Annales de l'Institut Pasteur that cholera microbes died within three hours in Ganga water, but continued to thrive in distilled water even after 48 hours.
4. A French scientist, Monsieur Herelle, was amazed to find "that only a few feet below the bodies of persons floating in the Ganga who had died of dysentery and cholera, where one would expect millions of germs,there were no germs at all.

More recently, D.S. Bhargava, an Indian environmental engineer measured the Ganges' remarkable self-cleansing properties:

"Bhargava's calculations, taken from an exhaustive three-year study of the Ganga, show that it is able to reduce BOD [biochemical oxygen demand] levels much faster than in other rivers."

Quantitatively, the Ganges seems to clean up suspended wastes 15 to 20 times faster than other rivers. (Kalshian, Rakesh; "Ganges Has Magical Cleaning Properties," Geographic, 66:5, April 1994.) From **Science Frontiers #94, JUL-AUG 1994.** © 1997 William R. Corliss

articles on hinduism

INFLUENTIAL HINDU RELIGIOUS PERSONALITIES OF THE CENTURY.

By Unknown contributor

1. **BHAGWAN RAMANA MAHARISHI 1879 -1950**

Venkataraman was born on December 30, 1879 near Trichi in Tamil Nadu. His father was a pleader in the town. He had his early education in Dindugal, and later in Madurai. When Ramanar was sixteen, an elderly relative narrated to him about the glories of Tiruvannamalai. From that day onwards Ramanar was fascinated and dwelled on Tiruvannamali (holy Light Mountain) and its presiding deity, Arunachala.

At the age of eighteen, he left his house without telling any one for Tiruvannamali with just three rupees. Once he reached the temple, he was thrilled and ecstatic and, threw away all his clothes, and entered the mandapam only in a small piece of loincloth. For the next several decades he sat in deep meditation in the basement of the temple with little food. Urchins used to throw stones at him. Snakes and venomous spiders mutilated his body - his body was covered with ulcers and pus. But nothing deterred Ramanar from his deep mediation. For the next twenty years or more, Ramanar lived in the many caves of the holy hills of Tiruvannamali - infested with wild beasts.

It was many decades later that his devotees built a small ashram for him to live. Ramanar made no distinction of caste, color or creed. He was very fond of animals, and had many of them with him. He believed in the Adwait philosophy with its aim as self-realization. He wrote several books on self - inquiry and "who am I'.

At the age of seventy-one he fell victim to Cancer, and allowed the illness to run its course. He attained Mahasamdhi on 14th April 1950. Hundreds of people converged at Thiruvannamali saw a bright light
shooting from the hills towards the sky as the Maha rishi attained his samadhi.

SRI AROBINDO GHOSH 1872- 1950

Arobindo was born on August 15, 1872 in Calcutta. His parents were highly westernized and sent Arobindo to England for higher education. Returning to India, he joined the Baroda College as a professor. Here,
he jumped in to politics, secretly planned an armed struggle to achieve complete independence as the final goal of the Indian freedom struggle. He was jailed for his political activities. It was in jail that he started to practice Pranayam- a form of yoga- and study of Upanishadas, which led vast horizons of spiritual awakening and new realizations. After his release from jail, due to a divine

command he went to the former French colony of Pondicherry in 1910. In 1926, he withdrew himself in to a solitary room and cut himself from the outer world. It is believed that it was during this period that he attained many Yogic and Siddhic powers. It was during this time - November 23, 1926, and the day Sathya Sai Baba was born - that Arobindo was reported to have seen a huge ball of bright light racing from the sky towards the earth.

Arobindo developed new understanding and an idea of the supermind. He wrote " The supermind is in its very essence a truth consciousness, a consciousness always free from the ignorance which is the foundation of our present natural or evolutionary existence and from which nature in us is trying to arrive at self knowledge and world knowledge and a right consciousness and the right use of our existence in this world.

Arobindo met the 'Mother' - a French lady - who would become his spiritual companion. Together they founded the Arobindo Ashram in Pondicherry. The Master laid aside his mortal body on December 9th1950.

YOGAR SWAMI 1872-1964

It is a pity that Eelam Tamils -especially Jaffna Tamils- neither understood nor utilized the immense spiritual potencies of Yogar swami. He was born in 1872. His parents were from the historic town of
Maviddapuram. To date no one knows his childhood name He had his early education at St. Patrick College in Jaffna, where he was known as John. After his secondary education, his father - who ran a business in Maskeliya- took his son to help him with his business. Finding that his young son was not at all interested with his work , he sent him back to Columbuthurai. After some time he joined as clerk at the Iranamadu tank scheme in Killinochi. In 1897, when Swami Vivekananda visited Jaffna, Yogar swami participated in the religious procession.

It is said that Yogar swami's baptism in to the religious life began when he met his guru Chellapa swami opposite the famous Nallur temple. Chellapa swami lived on the streets and ate with dogs, and was considered as a psychotic by most of Jaffna people - what a shame that Jaffna Tamils again missed to identify a great saint.

Yogar swami established his ashram in Columbuthurai. It is believed that he belonged to the Kailasa Paramparai (the order begins with Thiumular, Rishi, Kadi Swami (1804-1891), and Chellapa Swami
(1840-1915), Yogar swami, and Subramanya swami (American born, the present head, who has his ashram in Kauai, Hawaii).

Yogar swamy was a highly evolved spiritual soul. He was omnipotent, omniscience and omnipresence. When the Tamils complained to him about the 1958 riots, he is believed to have said, " what is this beating? Wait for 1983." Though outwardly he appeared to be tough - he was famous for scolding and chasing people out of his ashram- inwardly he was loving and caring for his devotees. He wrote several books in Tamil, the famous one being the ' Natchintanai '.

Yogar Swami left his mortal body in 1964 after having being ill for some time.

PARAMAHAMSA YOGANANADA 1893- 1952

Mukunda Lal Gosh was born January 5, 1893 in Gorakapur to a well -to-do-Bengali parents. He had his education at the Serampore College in Calcutta. At the age of seventeen, he met and became the disciple of a great Yoga master, Yukteswar (Yukteswar's guru was another famous god man, Yogavatar Lahiri Mahasaya. Lahiri's guru was the famous Babji -known as the deathless guru, and estimated to be more than 1000 years
old. There have been many sightings of Babaji, especially at the famous Kumbha Mela festivals. The next festival will take place in Allhabad in 2001).

In 1920, Yogananda established the Self- Realization society to disseminate worldwide the ancient science and philosophy of Yoga. He practiced and preached the 'Kirya" Yoga. In the early twenties, he met the deathless guru, Babaji - Yogananda met him only twice- who personally requested Yogananda to go to west and spread the 'Kiriya' Yoga. He established the Self -Realization church in Los angles in 1924.
Some of his western devotees included horticulturist Luther Burbank and poet Edwin Markham.

Yogananda was the author of several books, the famous one being the ' Autobiography of a Yogi'. He entered Mahasamadhi on March 7th, 1952 in Los Angles. It is said that even twenty days after his death - no embalming was done- his body showed no sign of decay.

BHAKTIVEDANTA SWAMI PRABHUPADA 1896- 1977

The founder of the Hare Rama Hare Krishna movement was born as Abhay Charan De on September 1, 1896 in Calcutta in an aristocratic Bengali merchant family. Even as small child, Abhay, was enamored with the Ratha-Yatra festival of Lord Jaganatha, held yearly in Calcutta.

Abhay had his education in Calcutta. In the class one year ahead of Abhay was a spirited nationalist, Subaha Chandrabose - who would later become the leader of the Indian National army, calling for an armed struggle to throw out the British. Abhay was attracted to the Indian freedom movement and was aligned with Mahatma Gandhi 's party for some time. He was married while still at college. He then obtained a job as a phamarceutical salesman.

His life changed when he met his guru, Bhaktisiddnta Saraswathi in 1922, who asked Abhay to spread the Krshna consciousness. There were constant misunderstandings between him and his wife over his religious life style. He continued to maintain his wife and his children. The final break up came at the age of fifty-six he found out that his wife of more than thirty years had exchanged his beloved Bhagwad Gita book for a few evening biscuits. In 1950, he moved to Vrndavana- place where Krishna was supposed to have played with the Gopis'. He published three volumes of Bhagavata Purana.

At the age of seventy, he arrived in New York (1965) on a cold day with one suitcase, an umbrella, and a supply of dry cereal, and penniless, to fulfill his guru's wish - to broadcast Vedic knowledge in English in the west. Initially he attracted the hippies and the drug addicts who were

wandering the Hyde Park. A year later, with greatest difficulty he established the International society for Krishna Consciousness (ISKCON). He taught them simple songs of Lord Krishna. Slowly the his movement attracted a large number of followers. To day, The Hare Rama Hare Krishna movement could be found all over the world with more than 350 missions.

After a few years in the west, He moved back to Virindavan .He gave up his mortal body on November 14, 1977.

SR CHANDRASEKHARENDRA SARASWATHI SWAMI OF KANCHI 1894 -1994

Swaminathan was born on May20, 1894 in Villipuram in Tamil Nadu to a pious Kannada Brahmana family. He had his early education at the American mission school in Tindivanam. He had his upanayanam in 1905.
In February of 1907, one of his cousins was installed as the 67th head of the Kanchi Mut (established by Adi Sankara). This 67th chief died a few days after assuming duties and Swaminathan was then appointed as the 68th head at the tender age of thirteen.

He was very well versed in all the Hindu scriptures. He walked the length and breadth of India -like his guru, Adi Sankara- and until his death never once used the modern transportation. He took a keen interest in the social well being of the poor. Unlike the present head, he never got involved in the ' Hindu ' politics.

A small made man, with luminous eyes and wisdom of a guru, he lived simply, commanding respect from not only Hindus, but also from people belonging to other religions. His life spanned the greater part of the twentieth century. He lived for 100 years and attained Mahasamadhi on January 8, 1994.

SRI SWAMI SIVANANDA 1887- 1963

Sivananda was born on the 8th September, 1887 in Tamil Nandu. After having graduated as a Medical doctor, he went to Malaysia to practice. He was the editor of a health journal and wrote extensively on health problems. Returning to India after some time, he gave up his lucrative medical practice, and took a life of renunciation to qualify him for ministering to the soul of man. He settled down at Rishikesh in Himalayas in 1924, practicing intense austerities and shone as a great sage.

In 1932 he started the Sivanandashram. In 1936 he started the Divine Life society. In 1950 he visited Ceylon. He is the author of over 300 books and has disciples all over the world. On July 14, 1963 he attained mahasamadhi.

SWAMI CHINMAYANANDA 1916 - 1993

Balakrishna Menon was born on May 8, 1916 in a noble aristocratic Malayalee family in Ernakulam, Kerala. At the age of five, he lost his mother, and his father re- married. In 1940, he joined the Lucknow University where he studied English literature and Law. Following this, he joined the Indian independence movement, spending several months in the prison. After the

independence, he joined the editorial staff of the National Herald paper. Menon soon discovered the 'emptiness' of the so-called good life he had while in Delhi- expensive clothes, late night parties and fancy goods.

Disillusioned with life, he traveled to Rishikesh in 1947 and met Swami Sivananda of Divine life society. In 1949, he became a monk under its order, assuming the name, Swami Chinmayananda. For the next eight years on the advise of his guru, he would study GNANA YOGA under Sri Swami Tapovan - a strict disciplinarian and a demanding teacher -in the high Himalayas in Uttrakashi. After this he traveled the length and breadth of India wandering as an enunciate, living as a beggar.

In 1951, with the blessings of Swami Tapovan, he started his mission to bring the rich and forgotten Vedantic philosophy to every corner of the world. His primary aim was "To convert Hindus to Hinduism". For the next forty-two years he traveled around the globe, facing many difficulties to achieve his mission. He never stayed in one place for more than a week. His mission motto was' Give maximum happiness to the maximum people for the maximum time". Giving special attention to the children, he established the Bal Vihar classes.

To day, the mission sponsors sixty-two schools in India, and Bal Vihar Sunday schools in every major metropolis in US. Swami Chinmayananda left his bodily form in San Diego on August3, 1993.

SRI NARYANA GURU 1854 - 1928

Narayana Guru was a social reformer, who transformed the fabric of the Kerala society. He is credited for the enviable position of Kerala in the field of social development.

He was born on August 20, 1854 in the suburbs of Thirvnanathapuram in an' Ezhavas ' family. Kerala at that time had the worst caste system in the whole of South India. Even Swami Vivekananda described Kerala as a lunatic asylum of class bigotry. Nambudiris were the dominant section of the Brahmins. Non Brahmins ranged from most untouchables to the least touchable. Ezhavas acted as a buffer group between the touchable and the untouchables. Malayalee Brahmins practiced the most heinous crime of keeping woman of a certain section of the Hindu community as concubines without having the obligation of a responsible husband or father.

He had his early education at Karungapally. He married his uncle's daughter in 1882- she would die after some years. His quest for absolute truth began at this stage, and wondered for many years doing penance in caves. He had the privilege of meeting both Rabindranath Tagore and Mahatma Gandhi.

Sri Narayana Guru fought hard to end the heinous cast system in Kerala. He fought against the widely practiced animal sacrifice. He preached that consumption of liquor was evil. He fought for the entry of all men and women in to the Hindu temples.
Naryana Guru attained Maha Samhadi on September 20, 1928.

SRI SATHYA SAI BABA 1926 -

Sathyanaryana Raju was born in Puttarpathi in Andra Pradesh on November 23, 1926. It is said that when the boy was born, the musical instruments in the room started to play on its own, and a cobra was found under the bed. Even at a child, Sathya was supposed to have performed many miracles, which surprised the poor villagers. At the age of fourteen, he renounced his family, saying that he does not belong to them any more, and he has come to serve the people.

Since then, Sathya Sai Baba had lived among his devotees. He moved to his present abode- Prashanthi Nilayam- in 1950. Year by year his devotees grew in number, and today he has followers from all faiths, and from every single country on this earth. Even his ardent critics - this included some of India's top scientists- have become his followers. He is believed to have performed thousands of witnessed and not witnessed miracles - including giving life those who were presumed to be dead, curing incurable illnesses, and appearing in person to help his devotees all over the world.

Today, the once small village of Putarpathi has his own airport and a super specialty hospital- where some of the India's top rated doctors work voluntarily for the benefit of the poor patients. Sathya Sai Baba has predicted several things to happen in the future. Some of them are: 1) He will live until ninety-six years of age- he will celebrate his 75th birthday next year.
2) Muslims will be the last one to accept his divinity -eight years before he leaves this world.
3) His previous incarnation was Shridi Sai baba - a great saint who lived in the early part of this century in Maharastra. He will take his third and final incarnation - Prema Sai - eight years after he leaves his present body. Prema Sai will be born in a village near Mysore in karnataka.

Sai Baba's teachings revolve around peace to all, and ' love all, serve all'.

Glory that was Kalinga
Arun Kumar Panda
http://www.organiser.org/09apr2000/deal.html

Kalinga is mentioned in the ancient scriptures as Kalinga the Braves (Kalinga Sahasikha). This is evident right from the famous Kalinga War to the victory of Emperor Kharavela from North to South and from the martial arts of Bhoumakar and Soma Dynasty rulers. Similar evidence is also gathered from the military expeditions of achievements of Ananta Verma, Brajahasta, Devendra Verma and Kamarnaba Deb regarding the bravery of the Kalinga warriors.

During the 3rd century B.C. the Greek ambassador Megasthenes in his tour of India had mentioned about the military strength of the Kalinga army of about one lakh which consisted of 60 thousand soldiers, 1700 horses and thousands of elephants. Kalinga was also powerful in the naval force. The vast military strength of Kalinga was the cause of jealousy for the Magadha empire. According to the historians the Magadha Emperor Ashoka invaded Kalinga in 261 B.C. Nearly one lakh soldiers lost their lives in the Kalinga War and one and half lakh soldiers were captured.

During Ashoka's invasion the capital of Kalinga was Toshali near Dhauli. The vast wealth, military power and the maritime activities of the Kalinga was the cause of jealousy for the Magadha empire. Though both Emperor Chandragupta Maurya and Bindusar wanted to conquer Kalinga, neither ventured a war with Kalinga.

The Kalinga war was the first and last war of Ashoka where he himself declared that the conquest through dharma was the real conquest than the conquest through violence. The terrible killings and bloodshed in the war converted him from Chandasoka to Dharmasoka and led Ashoka to become a Buddhist.

After the death of Ashoka, the Great Kharavela became the emperor of Kalinga. He was the monarch of the Chedi Dynasty. The inscription found in the Elephant Caves of Khandagiri and Udaigiri mountains near Bhubaneswar describes in detail the reign of Emperor Kharavela.

Towards the end of the 1st century B.C. there was a sharp decline in the Kalinga kingdom and no remarkable achievements was noticed. This period is known as the Dark Age of Kalinga.

Kharavela adopted Jainism and spread Jainism not only in Kalinga but also in the conquered kingdoms. But after the death of Kharavela Kalinga was converted into a weak empire which lasted about 300 years. During this period rulers of Mathars, Basistha, and Bigraha dynasty ruled Kalinga.

After this, there came the golden period of Kalinga. From 5th century AD to 8th Century AD the emperors of Saila Bhaba dynasty ruled over Kalinga. Like Kharavela, King Sailendra also reorganised the Kalinga army and converted it into a valourous army.

During Sailendra's reign, the business through sea-route reached its height. The merchants of Kalinga went to Sri Lanka and many islands of South-East Asia and established business empire there.

During the rule of the Mathar king Vijayavardhana Kalinga witnessed tremendous progress in the field of education and economic developments. The famous Panchatantra was written by Pundit Vishnu Sharma, a courtier of his time.

After Sailendra occupied the throne, the progress and developments gained momentum. As a result of which the brave Oriya merchants sailed from Dantapur port of Kalinga (now Palur) and from the Mahanadi Coast to Java, Sumatra, Bali, Borneo islands and established cultural kingdoms there.

Indonesia being a Muslim dominated country and Islam being the principal religion the effect of Hinduism and the Ramayana was prevalent. The former Presidents Sukarno and Suharto, and the present vice-President Megawati, although having Sanskrit names, are all Muslims by religion. Ramayana Festival is the national festival of Indonesia and its airline company is named as Garuda Air-ways. A tribe named Kling is settled in the Bali islands. It is understood that the Kling tribe is the immigrants of Kalinga.

The tradition of boat worship and boat sailing on the fullmoon day of Kartik throughout Orissa awakens the memory of brave Kalinga merchants sailing to the distant islands. Each year the famous Baliyatra celebration is held for seven days starting from Kartik Purnima on the Baliyatra field near the famous Barabati fort, Cuttack. According to the historians the Baliyatra is celebrated to commemorate the sailing expedition of the brave Kalinga merchants.

The people of Indian origin in the whole of South-East Asia are known as "Kunsun" (inhabitants of Kalinga). According to the famous historian R.C. Majumdar, the Hindus of Kalinga and the Muslims of Gujarat spread the Indian culture first in Java and then in the west of South-East Asia. The people of Java and Bali Islands have high regards for Indian epics and they recite the slokas and mantras the way we Indians do. The use of the word Jaganath is seen in their slokas and many Sanskrit words are also used in their languages.

The Chinese ambassador Huan Tsang had visited Kalinga in the 7th century AD Huan Tsang's travel-account shows that during that period the Kalinga kingdom was divided into three parts namely Udra, Kangoda and Kalinga. Also during that period Buddhism spread far and wide. The universities at Puspagiri Vihar, Udaigiri and Dhaulgiri were established to teach Buddhism.

Kalinga came under the Bhouma dynasty kings after the reign of King Sailendra. Kalinga was given the name Utkal by Bhouma Dynasty king Sibarkar Deb in 8th century A.D. In 1055 AD the Soma Dynasty monarch of South Koshala took the reign of Utkal. Biraja Khetra (Jajpur) was the capital of Bhouma royal dynasty and later it was shifted to Suvarnapur. Soma dynasty monarch Jajatikeshari again established the capital of his kingdom in Jajpur (Jajati Nagar). The territory of Utkal again expanded during the reign of Maharaja Jajati. His reign witnessed the establishment of Lingaraj temple and many Shiva temples in Ekramakhetra. He recovered and restored Sri

Jagannath relics stolen by Raktabahu and at the same time performed Ashvamedha ceremony in Jajatinagar.

The Ganga dynasty ruled Utkal after the fall of Soma dynasty. Ananta Vardhan Chodaganga Deb had ruled Utkal for about 70 years from 1078 AD to 1147 AD. The famous Jagannath Temple was built during his reign. The other two monarchs of the Ganga dynasty who had proved their calibre in administration were Anangabhima Dev-III and Narasingha Deb-I. Anangabhima Deb did not accept the Moghul supremacy and for this he was attacked by Banga Nawab, which he won at last. It was during his period that the construction of the famous Jagannath Temple at Puri (in 1230AD) was completed. It was during the period of Narasingh Deb-I (1236-1264 AD) the military power of Utkal reached its zenith and its territory expanded further.

After the fall of the Ganga dynasty, the Sun dynasty King, Kapilendra Deb ruled Utkal. His fame spread far and wide in the 15th century and he was regarded as the greatest conqueror next to Kharavela. After the death of Kapilendra Deb in 1446 Gajapati Purusottam Deb and Prataprudra Deb ascended the throne of Utkal. During his reign Sri Chaitanya Deb came from Bengal and settled in Puri and this resulted in the wide spread of Vaishnab cult in Utkal. After the demise of Prataprudra Deb, the last king of Sun dynasty, Utkal lost its glory and grandeur in military power. A Muslim ruler from Bengal gained control over Utkal in 1568 AD after imprisoning Mukunda Dev.

From Gajapati regime to British rule in 1803 in Orissa, the people of forest, urban and rural areas reorganised themselves in martial skills to encounter the plunders. During this period Orissa came under the rule of the Afghan, the Moghul and the Marathas. Instead of giving them a good administration they oppressed and looted the people of Orissa. Many revolts raised their head against these oppression.

The sculptural and artistic skill of Konark, Puri and Lingaraj temple of Bhubaneswar, Jayadev's Gitagovinda, Samant Chandra Sekhar’s astro-physics gave recognisation to Orissa in the whole world.

It is only in the Jagannath cult where equality, friendship and secularism prevails. Sikhs, Jains and Buddhists also worship Lord Jagannath as their Supreme God. The car festival of Sri Jagannath is celebrated through out the world by the Krishna devotees.

Orissa was declared a separate State on April 1, 1936, by uniting the scattered areas of Orissa under the British rule. Some Oriya-speaking areas remained with Bengal, Bihar, Madras and Madhya Pradesh. Those Oriya leaders who had strived hard for the unification of Oriya-speaking areas and for the development of Oriya language are paid homage on April 1 every year on the eve of Orissa day celebration.

A TRIBUTE TO HINDUISM

articles on hinduism

Ayurveda -By Karla Cook
STAR-LEDGER - Tuesday, August 4th 1998

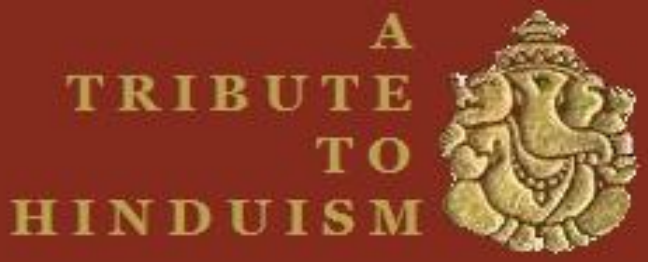
It's an approach to medicine that, like other Asian medical systems, looks at the individual, addresses diet, lifestyle and spirit, and strives for balance in each person, It focuses on prevention, and sees, many illnesses not as a collection of symptoms but as imbalances within the body, mind or spirit that, once balance is restored, eats disease at its root.
It's called ayurveda - a 3,000- to 5,000-year-old holistic healthcare system trickling westward from India with its emigrants, as did Chinese medicine with workers who came to build the railroads here early this century. And while it's not widely available in New Jersey, some people are seeding it out as word about it spreads as the alternative medicine of the moment.

One such person is Marie Pizarro-Ferrante, 40, of Belleville. She had experienced some health problems eiidometriosis and lupus - but a difficult pregnancy with lingering side effects from medication and hospital procedures pushed her from self-administered, alternative health care into the office of a Western-trained and ayurvedicary trained physician. "I'm able to live a normal life because of him," says Pizarro-Ferrante, who now takes her 4-year-old daughter Mariah to Scott Gerson for ayurvedic care, though she depends on a pediatrician for immunizations and other Western health care needs.Westerners find ayurveda through any number of philosophical, New Age or alternative lifestyle venues. Maharishi Mahesh Yogi touts it, along with his mind-focusing Transcendental Meditation. Dr. Deepak Chopra, the Harvard-trained endocrinologist, reinvigorated interest in ayurveda by preaching his blend of Western medicine, meditation, diet and exercise in public appearances and various books.

Gerson came to it after becoming interested in Eastern philosophy and spiritual issues while growing up in Sayreville. He liked the healing aspects of it, went to India, mastered Sanskrit and graduated from an ayurvedic university there. After returning to the United States with a bachelor's degree in ayurvedic medicine and surgery, he graduated from New York's Mount Sinai medical school and completed his residency in internal medicine. He's passionate about ayurveda and its potential. He calls his practice a ministry.

"I was not interested in getting the medical degree at first," says Gerson, who, to his knowledge, is the only Westerner to hold joint degrees. "But it was pointed out to me by a very wise advisor that, for at least the next 50 years, in order to best propagate ayurveda out of India, it would be best to couple it with the prevailing medical training of the west. In that way, I could create the reliability and confidence that people will need to enjoy ayurveda.

"There is a need to demystify the central concepts of ayurveda and put them into terms that the Western mind can understand." At Gerson's New York office, patients are likely to receive pulse,



tongue and a urine diagnosis in the ayurvedic tradition. If necessary, they undergo X-ray, EKG, stress tests and other conventional medical diagnostic tests." Ayurvedic medicine does not compete with or replace modem medicine, but rather completes it," says Gerson, who attends and participates in both conventional and ayurvedic medical conferences, and is conducting pioneering scientific research on medicinal properties of herbs used for ayurveda. His practice is pulling in many people with stress or chronic disease - disorders for which Western medicine has no answers. In Ferrante's case, Gerson spent about an hour with her for the first appointment, interviewing her about her lifestyle, diet and problems. In subsequent visits, she began an herbal regimen to control the lupus and, at one point, underwent panchakarma (deep tissue massage and other cleansing techniques).

John Platt, 50, of Bloomsbury, says he lives a healthy lifestyle, but Gerson has helped him with occasional minor problems - bursitis and a shoulder ailment. "He is excellent with pharmaceuticals and herbology," says Platt. "He knows when I should take a pharmaceutical and when I can replace it with an herb, and when not to nix one with the other." And, says Platt, Gerson knows how to mitigate the side effects of drugs and how to rid the body of to3dns through panchakanna. Most practitioners of ayurveda feel that, ideally, it works as a complement to Western medicine. Western (allopathic)

What are the elements of ayurveda?
Doshas: There are three basic constitutions, vata, pitta and kapha, in the body. When they are out of balance, it can cause disorders or disease in the body.
Diet: The foods you eat help to keep the body balanced, or could create an imbalance. Some foods work better for vatas, some for pittas and some for kaphas.
Lifestyle: Ayurveda, khich means the knowledge of life, offers many conimon-sense suggestions on quality-of-life issues - not eating unless you're hungry, sleeping when you're tired, staying warrn and out of drafts if you have the flu, regular exercise and meditation.
Herbal medicines: Usually, these are a combination of dried and powdered herbs taken in capsule or brewed into a tea, and used to enhance everything from relaxation to liver function. They also are used in "panchakarma," a blend of massage, sweating and purging for detoxifying the body. The herbs are classified as dietary supplements and are sold without prescription in the United States.

There's also the mystical, spiritual side of ayurveda, which sees all intelligence and wisdom as flowing from one source.

Sikh-Hindu Similarity

http://hinduism.about.com/religion

Hindus are conditioned to regard Sikhism, Buddhism and Jainism as *panths* or sects. Says celebrated columnist **Varsha Bhosle**, **"Hinduism is a generic name given to all the faiths which have roots in India and believe in *Parmatma* (God), *Prarthana* (prayer), *Punerjanma* (reincarnation), *Purushartha* (Karma) and *Prani Daya* (kindness to all living beings)."** Sikhism believes in all of these.

Bhosle cites the speech of one of the greatest modern Sikh leaders, Master Tara Singh, at a meeting in Bombay on August 19, 1964, who declared:

"Sikhs and Hindus are not separate. Sikhs will survive only if Hindus survive. Sikhs are part and parcel of the Hindu Society. Guru Govind Singhji brought in Gurumukhi the wisdom and philosophy from our scriptures and Puranas. Are we going to give up this heritage?"

Unlike Hindus, Sikhs do not worship idols. But, argues Bhosle, few people understand that Hinduism is monotheistic as well as catholic. Sikhs worship the Granth Sahib and pictures of the Gurus - she questions - aren't they icons?

Bhosle further cites some stanzas from the Gurus and the *Guru Granth Saheb* to drive home the Hindu-Sikh affinity:

- *Taha hum adhik tapasya sadhi*
  Mahakal kalika aradhi
  ~ Guru Govind Singh
  (There I worshipped and did penance to seek Kali.)
- *Ram katha jug jug atal*
  Sab koi bhakhat net Suragbas Raghuver kara
  Sagri puri samet Jo en Katha sune aur gaave
  Dukh pap tah nikat na aave
  ~ Guru Govind Singh
  (The story of Ram is immortal and everyone should read it. Ram went to heaven along with the whole city. Whoever listens to or sings His story, will be free of sin and sorrow.)
- *Kahaiya Hinduan daro na ab tum*
  Im likho pathon dil sain Guru Nanak ki gadi par
  Ab hain Tegh Bahadur Unko jo Muhummadi kar lihoon
  To ham hain sab sadar Arya Dharma rakhak pragatiyo hain
  ~ Guru Tegh Bahadur
  (Hindus, do not fear, Guru Tegh Bahadur is Guru Nanak's successor. If Muslims bother

you, I'll take care of them. For I am the protector of Hinduism.)

- *Tin te sun Siri Tegh Bahadur*
  Dharam nibaahan bikhe Bahadur Uttar bhaniyo, dharam hum Hindu
  Atipriya ko kin karen nikandu Lok parlok ubhaya sukhani
  Aan napahant yahi samani Mat mileen murakh mat loi
  Ise tayage pramar soi Hindu dharam rakhe jag mahin
  Tumre kare bin se it nahin
  ~ Guru Tegh Bahadur's reply to Aurangzeb's ordering him to embrace Islam.
  (In response, Shri Tegh Bahadur says, My religion is Hindu and how can I abandon what is so dear to me? This religion helps you in this world and that, and only a fool would abandon it. God himself is the protector of this religion and no one can destroy it.)
- *Sakal jagat main Khalsa Panth gaje*
  Jage dharam Hindu sakal bhand bhaje
  ~ Guru Govind Singh
  (The Khalsa sect will roar around the world. Hinduism will awaken, its enemies will flee.)

Sumer Singh Chauhan in his essay on the common heritage of the Sikhs and Hindus - *Divide & Conquer* - states:

"Many scholars have stated that the Granth contains specific references to Hindu gods such as Rama and Krishna. The gurudwaras, or Sikh temples, have always been decorated with pictures of Hindu devas and devis. The first desecration of these pictures was in 1906 at Harmandir, and this was the first action taken by separatist Sikhs. Other gurudwaras also had them removed as recently as 1984, this occurred after the attack on the Golden Temple. This was not an attack on religion but was justified for reasons of national security.

"Thakur Das, the author of Sikh Hindu Hain (Hosiarpur, 1899), Bhai Randhir Singh of Punjabi University, Patiala, Hari Ram Gupta author of History of the Sikhs (Lahore, 1944), Sardar Jimiyat Singh Gill, founder of the Shiromani Sikh Society of Toronto, Joseph Davy Cunningham, author of A History of the Sikhs from the Origin of the Nation to the Battles of the Sutlej (Calcutta, 1849), to name a few have all stated that the Dasma Granth was an authentic part of the Granth. If the Guru Granth Sahib were to be examined, there is no difference between Hinduism and Sikhism because the Granth is based on the Hindu scriptures and beliefs.

"An authority on modern Sikhism, Dr. Gopal Singh, indicated in his translation of Shri Guru Granth Sahib that the worship of Rama and Krishna is found in the Granth. It should also be remembered that the Tenth Guru had designated the word of the Granth as the final word of authority binding on all Sikhs. In this the Granth functions as the Guru for all Sikhs. This makes the significance of the Tenth Guru, in two traditions, stand out. It was Bhai Mani Singh who compiled the Dasma Granth. On June 24th, 1734, under the orders of Zakaria Khan, Bhai Mani Singh was executed for not embracing Islam.

"Guru Arjun, who compiled the Granth Sahib, writes in the fifth Granth 'O God you are as great as you adopted the form of Vamana [fifth incarnation of Vishnu], you are also Ram Chandra [seventh incarnation of Vishnu] but you have no form or outline'.

"Reference is made to the avatars of Vishnu in the Granth Sahib. The Dasma Granth deals with all the avatars beginning on page 169. Volume two of the Dasma Granth is exclusively based on Krishna. It is accepted that Guru Gobind Singh was a staunch believer in Durga Mata (Mother Goddess). In the entire Guru Granth Sahib, the Vedas are respected and referred to as sacred. Guru Gobind Singh states that the Vedas originated from Brahma and the path of the Vedas is the only path for the people to follow. Sikhism heavily bases itself on Karma yoga (the science of actions) and states that if an individual acts only on good deeds, selfless acts with a pure devotion to God, they can achieve the ultimate state of existence."

India - The Immortal

" There was a time when at the sound of the march of big Greek battalions, the earth trembled. Vanished from the face of the earth, with not even a tale left behind to tell, gone is that ancient land of the Greeks.

There was a time when Roman Eagle floated over everything worth having in the world; everywhere Rome's power was felt and pressed on the head of humanity; the earth trembled at the name of Rome. But the Capitoline Hill is a mass of ruins, the spider weaves its web where Ceasars ruled.

There have been other nations equally glorious that have come and gone….
But we live, and if Manu came back today he would not be bewildered, and would not find himself in a foreign land. The same laws adjusted and thought out through thousands and thousands of years, customs, the outcome of the acumen of ages and the experiences of centuries, that seem to be eternal. It is the same India, which has withstood the shocks of centuries, of hundred foreign invasions. It is the same land, which stands firmer than any rock in the world, with its undying vigor, indestructible life. Its life is the same nature as the soul, without beginning and without end, immortal; and we are the children of such a country."
(source: '**Complete Works of Swami Vivekananda**')

Stanley Wolpert says:

"Indic civilization has endured for more than 4,000 years as an empire of ideas rather than territorial boundaries. Often nebulous and self defeating, conflicted and fragmented, the rambling bullock-cart continent called India is at once the oldest and most sorrowful as well as the happiest and most beautiful civilization on earth. Her very weakness at times has been her greatest strength, since for sheer endurance India is unique. Bowing low before the onslaught of armies and elements, India has survived every invasion, every natural disaster, every mortal disease and epidemic, the double helix of her genetic code transmitting its unmistakable imprint down four millennia to no less than three-quarters of a billion modern bearers. Indians have demonstrated greater cultural stamina than any other people on earth. Old as she is, India continues to grow and flourish, transmuting her ancient forms into innovative modernity, adapting her past to suit the present, overcoming Death itself by creating such ingenious concepts as reincarnation, yet welcoming individual extinction as the ultimate goal of Salvation through "Release" – *Moksha.*

Indic Civilization has enriched every art and science known to us. Thanks to India, we reckon from zero to ten with misnamed "Arabic" numerals and use a decimal system without which our modern computer age would hardly be possible. Ancient Indians were the first humans to spin and

weave cotton into cloth that continues to provide our most comfortable summer attire. Indians taught us to domesticate and eat chicken, to play chess, to gamble with dice, to love mangoes, and elephants, to stand on our heads (yoga) for good health, and to believe in the coexistence of contradiction, and to appreciate the beauty and universal possibility of nonviolence. India is the birthplace of Hinduism as well as Buddhism, motherland of Sikhs and Jains, the abode of more rishis, sadhus, mahatmas, and maharishis than any place on earth.

India pulsates, vibrates, scintillates with such a plethora of human, animal, botanical, insect, and divine life that no camera or recording device, no canvas, pen, or cassette can fully capture the rich design of daily "ordinary" existence."

Frenchman who made India a passion in West

By AFP

http://www.rediff.com/news/2000/jul/19france.htm

Indian and French scholars are working to revive the memory of Alain Danielou, who singlehandedly popularised Indian music, culture and religion in his native France and large parts of the Western world.

A fresh flurry of activity is focusing on the works of the Breton, who translated the Indian love text, the *Kamasutra*, helped promote the poems and novels of Nobel laureate Rabindranath Tagore and made Indian classical music universally popular at a time when it was unknown elsewhere.

Born into a patrician family in 1907, Danielou's circle of close friends in his bohemian youth included poets Jean Cocteau and Max Jacob, the famed actor Jean Marais and composers like Stravinsky. But his life was to change in 1935 when he and his companion Raymond Burnier, a scion of the family that owned the Swiss chocolate and dairy products empire Nestle, decided to travel to India from France by car.

It heralded for Danielou the start of a lifelong love affair with India, a country he described in his last interview before his death in 1994 as "my real homeland."

Upon his wishes, Danielou, who spent 15 years in the holy town of Benares studying Hinduism and Sanskrit and took the name of Shiva Saran (the protege of the Hindu god Shiva), was cremated in Hindu fashion.

Dilip Padgaonkar, editor of *The Times of India* newspaper, told AFP he was in talks with Danielou's heir Jacques Cloarec for an exhibition of photographs taken by Danielou of ancient Indian sculptures.

"The time and the circumstance for Danielou to re-emerge is extraordinarily opportune and comes amid a renewal of interest in India among young French people," Padgaonkar said.

"Danielou has done more than anybody else to promote India in France with the possible exception of Andre Malraux," he said, referring to the acclaimed writer and former French culture minister. "He straddled the eastern and western worlds with equal ease."

Samuel Berthet, a French scholar in Shantiniketan, the university town set up by Tagore in eastern India, said Danielou's volumes on India were being translated into three Indian languages -- Hindi, Bengali and Tamil.

"We are also planning to exhibit a musical instrument, called the 'semantic musical', developed by Danielou along on the lines of classical instruments of ancient India and Greece, in India by the end of this year," he said. "It is somewhat like an organ."

Danielou was one of the first Westerners to visit India's famed erotic temples in the village of Khajuraho. His stunning photographs of the ancient temple complex launched the site internationally. "The first-ever photo exhibition at New York's Metropolitan Museum were those of Khajuraho taken by Danielou," Berthet said.

Danielou took some 7,000 photographs of ancient and medieval Hindu temples from obscure places in central and eastern India and the desert state of Rajasthan, in the first such exercise of its kind. In the 1950s, he made recordings for UNESCO of classical Indian singers such as the Dagar brothers, paving the way for this musical genre's popularity the world over, and published several volumes on India.

Renowned Indologist Romila Thapar said Danielou had helped secure the future international success of Indian musicians such as sitar maestro Ravi Shankar. "He set the tone for the Beatles' discovery of Ravi Shankar," she said. "He was a cultural go-between who managed to evoke a lot of interest in Indian culture in the West at a popular level."

Padgaonkar said there was a political reason for the revival of interest in Danielou in India, which is currently ruled by the Bharatiya Janata Party-dominated National Democratic Alliance.

Danielou had been sharply critical of the Congress which led the country to Independence from British rule in 1947. Padgaonkar said although Danielou enjoyed a warm friendship with India's first prime minister Jawaharlal Nehru, he was extremely critical of the Western-educated Congress leadership.

"This anti-Congress tirade is music for them," Padgaonkar said, referring to the ruling Hindu nationalists.

Myths surrounding Vasco da Gama

By Claude Alvares

Publication: The Free Press Journal
Date: October 25, 1997
www.hvk.org

Those of us who did our schooling in the fifties and sixties may recall being taught that we were discovered in 1498 by a Portuguese adventurer named Vasco da Gama.

The history book I recall was written by a Jesuit historian who had come to India as a Christian missionary; it succeeded in conveying the idea that we here in our part of the world began to exist only after (and perhaps because) Europe discovered us and gave us significance. For this singular act off creation, Vasco da Gama was made an Admiral by a grateful Portuguese crown.

However, as Sanjay Subrahmanyam points out in his new and scholarly book titled 'The Career and Legend of Vasco da Gama' (Cambridge University Press, 1997) the European "myth-building enterprise around Gama" has been so successful that even a recent title by the National Council for Educational Research and Training (NCERT) on the man - that too, in Hindi - actually accepts and propagates many of the Eurocentric myths surrounding him.

Earlier histories were restricted in their reach and influence to specific cities like Mumbai. But the NCERT text has helped disseminate these very same myths across the entire subcontinent, with corresponding large scale damage to children's minds. Such myths have helped fuel the present controversy regarding whether or not we should participate in the celebrations to mark the arrival of Vasco da Gama outside Kozhikode (earlier Calicut) 500 years ago.

Subrahmanyam is no doubt a first-rate scholar who obviously finds a great deal of pleasure in his work. But he concedes his book carries no new radical interpretation, no new facts, no major revision on Vasco or his journey. It is based instead on a "careful sifting of a mass of tangled materials....."

Subrahmanyam does not have the astonishing abilities or flair of Sardar K. N. Panikkar, for instance, or even the latter's mature sense of history which Asia and Western Dominance manifests. Though the latter book was written more than forty years ago, there is not much to fault it. It remains one of the classics of history.

Some tantalising questions that remained are however answered. For instance, Subrahmanyam provides sufficient evidence to positively confirm
that Vasco da Gama did visit Goa - a controversy that continues to rage off and on in Goa even today. He also does a fairly conclusive job of
demolishing the myth of the Muslim pilot Ibn Majid who is alleged to have shown Vasco the route from the East coast of Africa to Calicut.

Decidedly, Subrahmanyam has not produced an hagiography. In fact, the fresh reporting of gory details associated with the adventurer - he would
take captives, chop off their limbs and string them in pieces on the masts of his ships to intimidate others - have considerably upset the Portuguese who wish such descriptions are better interred with Vasco's bones and not brought up for periodic airing, certainly not in the 500th year!

Vasco da Gama's first sea voyage round the Cape of Good Hope to India was not the result of some grand human inventiveness or due to any inherent Portuguese genius. On the contrary, our adventurer was unable to provide a demonstration of even elementary civilisational endowments on his arrival at Kozhikode.

This is not because he had left them behind in Portugal but because these were in short supply within Portugal itself. The tawdry gifts he brought
with him in his caravela were those of a pauper civilisation and the Samudri Raja of Camorin and his advisers looked at them in scorn. In these
circumstances, it was necessary to create a legend and invent a myth.

Portugal did this consistently over the past five centuries. As the myth expanded, not only Vasco, but Portugal too improved its prospects. Today,
Portugal is all too keen to exploit the quincentennial for a glorious reassertion of its place within the European Community which has kept it at
the margins for centuries. Subrahmanyam reconstructs this myth in great detail and with considerable finesse.

The Portuguese for themselves have never doubted they could have done with a better hero. Even today - 500 years later - Vasco continues to give the Portuguese a headache for they must explain how his arrogance, tactlessness and plain barbarism were not also traits of the society that sent him. It is difficult even in the best of circumstances to view his personality with any kind of affection. Unlike heroes (or heroines) he evokes neither awe nor admiration, but pure consternation.

But despite all this, he remains a Portuguese hero, probably the only real hero modern Portugal ever had and through him her only claim to recognition of worth in the European community.

An NRI historian lodged in Europe dependent upon Western bosses and grants from Portuguese foundations - would be anxious to respect such
sensitivities. The question left to ponder is whether, for these reasons, Subrahmanyam has carried forward the myths associated with Vasco, or worse, added some of his own.

Subrahmanyam has not hazarded an opinion of what he thinks of the subject of his study, the bizarre chain of consequences he unleashed and the political context of these new developments.

In the end we come across a view of Vasco da Gama that is embarrassingly close to that acceptable to official European history.

This version argues that it is not really necessary to adjudicate the past (which is best forgotten). We should dwell instead on the more positive
outcomes, like the introduction of potatoes, tomatoes, cassava and chillies; as if our adventurer set out from Portugal with the seeds of
these in his pocket and as if Europe had created them. They are actually the contributions of the peasants of South America. The bone of contention is whether an Indian should not feel ashamed to write history as Europeans wish to see it today; to turn a blind eye to the brutal exercise of power and substitute in its place an apolitical sequence of events, however elaborately detailed.

Curiously, we read no discussion of the Treaty of Tordesilhas: the insouciant division by the Pope of the globe into two parts, one for Spain,
the other for Portugal and the unilateral, overnight declaration of ownership over unknown lands and peoples.

Neither is there, any allusion to Europe's pathological drive to power, its demented urge to intervene and impose itself on the lives of others.
Instead, we are introduced in minute detail to the petty preoccupations and intrigues of the kings and courts of Portugal and Spain and to the titles of Vasco or his newly acquired properties or the religious order to which he belonged.

The mentality which Vasco carried with him then and which he continues to symbolise even now has not been discarded: it is all too readily apparent in unrepentant Portugal's refusal to apologise for the imposition of this arrogance, arbitrariness and violence, the disruption of local cultures, and her stubbornness in upholding his "heroism".

Here again a comparison of Subrahmanyam's work with Sardar Panikkar's is instructive: Panikkar generated a new paradigm in historical writing,
inaugurating and placing history written with an Asian perspective on an exalted plane as an equally valid - and rival - body of knowledge.

Panikkar advised us that if we are to live by myths (since man does not live by facts alone), then it is far better we used our own myths rather
than ones borrowed from others. Subrahmanyam's myth - Europe's as well- suggests Vasco can be understood without engaging what he and the Europe he represented stood for. Such a proposal is not only an affront to history;
I suspect it is self-serving as well. - TWN

A TRIBUTE TO HINDUISM

articles on hinduism

Temples are not enough!

Balamurali K Ambati and Jayakrishna Ambati with Ambati M Rao and Gomathi S Rao

http://www.rediff.com/news/2000/jan/20us4.htm

Recently, His Holiness the Shankaracharya of Kanchipuram chided Indian-Americans for the exuberant proliferation of temples in the US while neglecting the decrepitude of temples in India. Indeed, there may be more temples per Hindu in America than in India.

He bemoaned that many Hindu temples in America are principally ostentatious vehicles for flaunting the wealth of their rich benefactors rather than hallowed ground for community worship. Sadly, this charge is largely correct. Many temples here have lost their sense of purpose and direction; worse yet, some came into being for the wrong reasons.

The *raison d'etre* of a temple should be to provide a place for spiritual realization and worship. Temples can also serve as centers of community gathering, relief for the downtrodden, and development of youth.

The commitment that a community invests in a temple should be to preserve and transmit cultural values and ideals, not just the erection of yet another edifice. By any measure, a great number of our temples in America fall short.

There is a deep-seated malaise, a crisis of the spirit, which besets many Indian households. Perhaps it is symptomatic of the larger American cultural malaise as well. Our community has made great strides in the professional and academic arenas; materially, Indian-Americans have the highest median income of any ethnic group. Clearly, we have succeeded in large part in achieving the 'American Dream.'

Yet many first-generation Indians feel that their successes are for naught if they do not pass on their culture to the next generation, or so they say in the lip service they give at the ethnic conventions that are even more numerous than new temples. Many Indians lament that their children are so Americanized; perhaps some try to atone for their guilt by building temples.

But this quest for redemption is based on a false premise and therefore turns into a quixotic

pursuit. Temples per se do not guarantee cultural transmission; stone and marble are merely vessels and not the culture itself. No matter the majesty of the architecture, making our cultural ideals a reality and keeping our heritage alive requires people with the skill and determination to teach.

Culture and heritage is kept alive by parents and community leaders taking the time to tell, to show, and to explain to the next generation the meaning, the significance, and the essence of our traditions. That is the point that our community's army of temple builders is blind to, the key element that in its absence brings down all the rhetoric, chest-thumping, and spending sprees of would-be temple builders like a house of cards.

An even more disturbing phenomenon is that of temples being used for personal advancement. Many individuals seem to build temples only to have their names listed as benefactors or office-bearers. Only a warped psyche and a diseased spirit would seek to curry divine favor through self-aggrandizement. Why else have plaques displaying the names of the donors?

Further, in some unfortunate situations, temple management staff have treated the temple as their private fiefdoms. Witness the pathos of the nation's first temple in its largest metropolis: a president, unencumbered by elections, wedded to perennial power locked in legal combat with a shadow board of trustees bent on her ouster. This internecine conflict is neither the first nor will it be the last. It is a tragedy when temple affairs become the subject of court proceedings, but it is inevitable when egos take precedence over purpose.

Most Indian temples are also conspicuous in their absence in community outreach and uplift. How many temples feed the hungry or serve the poor? How many temples offer programs to enrich children's education, academic or spiritual? How many temple leaders teach what the meanings of the different rituals and services are, or discuss the many religious texts and scriptures with ordinary people? Too often, our temples are grossly underachieving.

We must realize that religion alone cannot bind our community together in this country in this millennium.

While we would be delighted to see the myriad temples flourish, it is more likely that many of them will shrink to hollow shells of their current state within a couple of generations. Current temples were built by first-generation immigrants who have done well.

The continued migration of educated Indians to this country is far from certain. While today's America is the shining economic star, it is foolish to think it will be so forever. The current computer influx will soon ebb. As economic parity draws closer, fewer professionals will migrate, and while the economic pilgrimage will continue, how many newer immigrants have the wealth to sustain the temples? Many of these temples may suffer the fate of the silkworm which dies of its wealth.

Is this too pessimistic a prophecy? Consider the following. The sustenance of temples depends on youth. Increasingly, it seems that one of the fruits of assimilation is loss of identity. How many of our teenagers and young adults attend religious services, let alone become committed to temple proliferation and management? Even many of those who do have a spiritual inclination have an intellectual rather than a religious attraction. Just go to any temple and witness the dearth of youngsters participating in any puja.

Despite the high-sounding claims of combining the best of both worlds, most are woefully ignorant of and oblivious to traditional religious services and teachings. What is more, they could not care less. Whether this is good or bad is for the reader to decide. But the root cause is that our community did not emphasize traditional ways in the home. Too many parents did not teach their kids their native language, did not insist that they remain vegetarian, did not explain the meaning of the Mahabharata, Ramayana, etc. Even an armada of temples cannot reclaim those lost battles.

As a faith, Hinduism is not dogmatic, but rather vague and indeed amorphous. We possess neither the bond of persecutory fear nor the glue of zealous fervor that binds other religious groups.

What to do? Education and guidance about our culture and heritage must begin at the home; by trying to offload that responsibility onto temples, Indian-Americans breach a sacred trust. The temple can serve to foster spiritual growth and development.

But to view temples as one's legacy to posterity is a sad testament on the state of our community affairs.

If we are to successfully pass the baton in the relay race that is life, it will be through *vidyalayams*, and not *devalayalams*.

Temples are not merely places to congregate and worship; academic achievement has classically fallen within the purview of temples. In ancient times, they were also havens of scholarship from which emanated grand literary, dramatic, and philosophical work.

Modern exercises in excessive opulence betray the ideal of a temple as a fountainhead of the sublime. We advocate not the creation of elitist enclaves, but rather the establishment of institutions of excellence that preserve and perpetuate our collective heritage, foster excellence in professional arenas, and nurture spiritual growth. Our culture is not solely the province of religious institutions; such a parochial worldview is in sharp dissonance with the traditional role of temples in nurturing knowledge and learning.

In the half century that Indians have been in America in substantial numbers, there is not a single college or university, or even to our knowledge, a high school to our name. By stark contrast, American Jews have built 2 medical schools and a phalanx of colleges, universities, schools, and hospitals. Catholics and Muslims have also been very active in these areas.

Educational institutions are a powerful engine to promote cultural values and transmit heritage. They can provide an environment devoted to educational excellence in a landscape littered with academic decadence. Ensconcing our culture in a cocoon of temples insulates our community; harnessing our heritage to educationally-oriented institutions can energize it. Surely, our community can channel enough financial and managerial capital to accomplish such an endeavor. The potential rewards would be enormous.

Long unmindful of the folly of abdicating culture at home, the first generation has turned to the wrongheaded approach of constructing temples to restore their birthright. But the *punya* attained by building temples is outweighed by the *paapa* of abandoning them. In many towns in India so many temples go untended that people are eagerly solicited by monetary considerations to take care of abandoned temples!

Do we really want our legacy to be scores of missionless and abandoned monuments? It behooves us to try to refocus the purpose of our temples and to rededicate ourselves to building institutions that will be fonts of dynamism for years to come.

The Ambati family has conducted the Educational Excellence Program for more than a decade for middle and high school students. More than a dozen of these students have become National Merit Scholars. These free classes are conducted every Saturday at the Swaminarayan Temple in Flushing, New York. For more information call 718 464-9391.

Hinduism and the Vedas: misconceptions

T.R. ANANDAN

http://www.indiaserver.com/hindu/stories/13050903.htm

AN OPEN letter, published in a newspaper, even if ostensibly addressed to a particular individual is in effect addressed to all readers of the paper and is perhaps intended to be so. Thus an open letter addressed to Mr. Bangaru Laxman in two parts by Ms. Gail Omvedt published in this paper on October 10 & 11, could be construed as aimed at a wider readership than the individual to whom it is addressed.

For a practising Hindu, considering the Vedas, the Upanishads and the epics as the most sacred scriptures of Hindus in general and this writer in particular, any comments in poor taste on those would be a deep hurt of the religious sentiments. It is therefore necessary that certain points germane to the subject be discussed in detail. Judging from the comments made, it could be inferred that the author's knowledge of Vedas, acquired after a cursory reading of its translation, is sparse and inadequate to comment on a subject which has deep spiritual and cosmic importance. The tone and tenor are palpably unrestrained and hostile.

Palpable ignorance

In the practice of religion and its tenets Hindus never considered other religions as inferior nor held any as hostile. If anything, it is the Semitic religions which consider those outside their fold as infidels or unworthy of God's sympathy or even as sinners. The writer in the article had raised the question ``why is there so much fixation on the Vedas.'' The question betrays a palpable ignorance of the Hindu religion, its scriptures and its practice. Even a schoolboy would proclaim the Vedas as the sacred scripture of the Hindu religion in much the same way as the Bible is for Christians and the Quran for Muslims.

India is a country of continental size inhabited by a huge population of over 100 crores professing several faiths, chief ones being Hinduism, Christianity, Islam, Buddhism, Jainism, Sikhism and Zoroastrianism. The present culture of the country largely relates to the respective religions and the predominant one belonging to the Hindu religion has absorbed during the course of the past two millennia certain ideas from other religions. This is principally due to the close intermixing of members of other religions at social level. Then there are variations from region to region mainly due to local practices, thinking and interpretation of religious tenets by different thinkers. But just as a thread holds together several flowers in a garland, the core of the culture of Hinduism remains intact and is manifest in all regions with local variations.

There have recently been some questions posed as to the basis of calling Hinduism as a religion and whom all it encompassed in the social setup. Religion in the strict sense of the term would

mean the practice of a definite system or form of faith and worship, distinctly different from other systems with codes of conduct, do's and don'ts for the followers and even procedures for settling civil and criminal issues arising from social interactions. Barring Hinduism, all the rest believe in one book, one prophet and one God. These have emerged in India as a result of spiritual evolution and certain conflicts in the prevailing system. Even before the advent of the Semitic religions, two distinct streams of thought different from the prevailing one had taken shape after being propounded by thinkers like Gouthama Buddha and Mahavira. Before the formation of these there were no specific religions in the strict sense of the term and the people followed what was called the `Vedic path' and called it `Vedic religion.'

Horizonal spread of the practice had given a certain pan-India character to the system. Only after the formation of new indigenous religions and introduction of the Semitic religions what remained of the population came to be called the Hindus and their religion, essentially the Vedic religion, got specifically identified as Hinduism. In fact, Hindu religious text do not refer the religion as Hinduism but as Sanatana Dharma - Universal path as distinct from others having names after the prophets who propounded them. While the Hindus consider their country - Bharath - as holy land in much the same way as Christians hold Jerusalem and Bethlehem and Muslims Mecca, and their religion identified as Indian, they do not consider others professing Hinduism elsewhere as not equals. At a certain point of history, Hinduism was very much in vogue even in distant countries such as Indonesia and Bali, and the inhabitants were considered as Hindus.

Irreconcilable differences

The conflict between Hindus and the followers of other Semitic religions occurs not because the latter profess foreign religions but because of irreconcilable differences in certain tenets of the two religions, repudiating important beliefs of Hinduism and even ridiculing some of what Hindu religion emphasises. For example, in Hinduism the country, Bharath, is considered as a form of the goddess which is vehemently rejected by another religion. Similarly Hinduism places emphasis on idol worship whereas other religions do not approve of it. The differences in religious beliefs are not extended to other spheres such as nativity and belonging as suggested by the author.

Americans consider Bethlehem and Jerusalem as their holy land and that does not make them less patriotic Americans. But the point is that while holding Bethlehem and Jerusalem as their holy land, Americans do have their own individual American culture which they hold dear to their heart. Even racial differences are passionately maintained. The apartheid i.e. considering American negroes as less American though they were in that country for centuries, professing the same religion is an example in point. So if the followers of the Semitic religions while considering Bethlehem, Jerusalem and Mecca as their holy land are asked to adopt Indian culture as in the case of Americans that should not be confused with patriotism.

The Indian culture does not mean Hindu culture or worshipping Hindu Gods. Identification of a religion with a particular section of the earth's geography is different from identification of the culture of the particular section of the earth's geography. Asking to respect the culture of their land does not by any stretch of imagination amount to suspecting one's patriotism to his or her country as stated in the article.

The Hindus believe Rama and Krishna as avatars (incarnations) of God on earth (God taking

earthly life for specific purposes) and as such consider them as Gods and worshipped. No true Hindu will ever take objection to considering Rama and Krishna as divine. For example, disciples of Sri Sai Baba consider him as incarnation of God. If someone other than a Hindu should have objection in considering Rama and Krishna as divine it should be due to ignorance of Hindu religious texts and beliefs. None including the Hindus would consider Jesus Christ or Prophet Mohammed as mere social or historical personalities but only as supremely divine.

Composite philosophy

Hinduism as stated earlier is considered as a religion only in the context of indigenous and Semitic religions of identifiable groupings; otherwise it is what had existed from time immemorial and continues to exist to the present. The Vedic and the later Upanishadic teachings have only imparted distinct character and philosophic thought and prescribed specific result-oriented rituals for various purposes, temporal and spiritual. It's a composite philosophy of various schools of thought, which had taken shape at various times of history. To say that Shaivism or Vishnavism does not form part of this composite philosophical conglomerate would be to betray ignorance of the evolution of Hindu religiosity and spirituality through the years. It contains even such streams as narcissism, nihilism and agnosticism advocated by some savants. If one does not take to the study of Hindu philosophy and its spiritual content in all its different aspects and schools and their birth at various points of time no idea could be got about the depth and width of its magnitude and the way it held sway over various sections of its practitioners over thousands of years of history even after invasion by foreigners and introduction of their religions even up to the present time.

Mere study of the history or geography of this country or sociology or anthropology of the inhabitants over the past thousands of years would not yield knowledge to appreciate the greatness of Hinduism and its influence on the vast masses who had taken to the following of its various systems and their intricate nuances.

The birth of several indigenous religions and the respectful place offered to Semitic religions in the country on their arrival are themselves proof of the catholicity of the original religionists of this country and the value they attached to different religions, indigenous and foreign.

To understand the greatness of Hindu scriptures, one should understand the basic and fundamental point of what a mantra is. It is a garland of letters composed in such a way as to acquire for one chanting the same, power from the cosmic realm. Such power can be put to use for achieving mundane objectives or spiritual advancement. Basically, the Vedas and other scriptures are mantras for chanting for various applications. The Vedas are for the conduct of various yagnas (Vedic sacrifices) for propitiating the devatas. They also cause purification of the mind and rapid spiritual advancement. In the Hindu pantheon, everything is looked upon as a form of God (Supreme Power).

The Hindu scriptures are all mantras for propitiating devatas. For what purpose such propitiation is put to is for the person who uses them to decide. In the normal context, they are chanted to acquire higher states of spirituality by cleansing the person of all bad qualities. If one looks upon the Vedas with the above basic knowledge, the purpose of the Vedas and other scriptures becomes clear.

Mischievous insinuation

The writer again questions the ``need to claim that Aryans originated in India". It is a mischievous insinuation that the claim that the Aryans originated in India itself started ``from 1930s after the Dalit movements throughout India claimed an identity as original inhabitants". There is as yet no hard evidence to say that Aryans had indeed come to India from outside. The most recent view of historians and researchers is that the Aryans were original inhabitants of India. In a scholarly article ``Are the Vedic Aryans aliens to India?" Dr. M. Gopalakrishna Sharma of Hyderabad has stated that the theory of alienism of Vedic Aryans is cooked up by some European savants. States he: ``by the concoction of this theory they achieved tremendous success, beyond their hope which served the double purpose as with two birds with one shot. The first one is to create suspicion in the Indian mind about their own nativity, and the second one is to inject a strong and permanent feeling of natural distrust and dispute caused by the various racial genesis." Dr. Sharma further says ``and another factor, to be accounted here is that if at all the theory of alienism of Vedic Aryans is taken for granted as correct, why did they not mention at least the name of their motherland anywhere in the Vedic literature or in other ancient scriptures?"

In the light of overwhelming opinion of experts the statement of Ms. Omvedt, the author of the article that ``however that they came from outside is hardly challenged by any objective scholars" betrays total lack of even a rudimentary exposure to the findings of researchers as stated above. The author has spewed ridicule and contempt in describing the Vedas of which only a translation has been read by her according to her own statement. Considering the Vedas as holy is questioned on the ground that they contain verses about ``success in war," ``cattle stealing," ``lovemaking," etc. Since chapter and verse have not been quoted but a sweeping statement is made it is not possible to discuss the rationale or context of anything contained in the said verses or the Vedas as a whole. All that one could say is that the statements made about the Vedas are positively blasphemous and scurrilous to the extent of causing deep hurt to the religious sentiments of the Hindus who consider them as the holiest of scriptures.

A punishable offence

The author apparently does not know that hurting the religious sentiments of anyone is a punishable offence in this country. Take for example the statements ``some of the hymns are positively pornographic", ``actually the Vedas can be fun (including the Atharva Veda with its fascinating spells for winning lovers, preventing child birth and so on)..." etc. The Hindus do not go into the literal meaning of the scriptures of other religions but revere them as sacred in much the same way that their own scriptures are held sacred. The author might have read reports of a fatwa issued by a Muslim country for making certain references to the prophet considered as blasphemous in a novel by a writer. The Hindus do not go to such extents, nay, even invoking legal provisions for making disparaging statements about its scriptures but would feel sorry for a person for not adequately equipping himself/herself about the depth of the wisdom contained in the scriptures before making sweeping remarks.

It is felt that a conscious attempt is on to drive a wedge between the so-called upper castes and the lower castes and the Dalits and to establish that the latter is despised by the former - to wean them away from the mainstream Hindu religion. Some recent writings by some authors had even tried to establish the tribals as not belonging to Hindu religion and had justified their conversion to other religions. If one suspects that the attempts could be to make a ``harvest of faith" by conversions of the Dalits one could not be faulted.

Caste hierarchy

Existence of caste hierarchy and social ostracism, based on caste in the Hindu religion, is a development which has taken place during several millennia due to the dynamics of social change, play of vested interests, deep economic disparity, illiteracy and superstition and a woeful absence of adequate leadership in spiritual, religious and social milieu.

Even in the Twentieth century, one of the most developed countries of the world, America, had practised racism in its worst form. As for India, serious attempts are on at governmental and social levels to obliterate caste differences and these will soon be a thing of the past. It can be asserted that neither the Vedas nor other Hindu scriptures lend any authority for creation or perpetuation of castes in the present hierarchical form. Any objective study of them would prove this.

Dr. APJ Abdul Kalaam's speech

in Hyderabad makes interesting reading;
Quote: I have THREE visions for India.

In 3000 years of our history people from all over the world have come and invaded us, captured our lands, conquered our minds. From Alexander onwards. The Greeks, the Turks, the Moguls, the Portuguese, the British, the French, the Dutch, all of them came and looted us, took over what was ours. Yet we have not done this to any other nation. We have not conquered anyone. We have not grabbed their land, their culture, their history and tried to enforce our way of life on them. Why? Because we respect the freedom of others.

That is why my first vision is that of FREEDOM. I believe that India got its first vision of this in 1857, when we started the war of independence. It is this freedom that we must protect and nurture and build on. If we are not free, no one will respect us. My second vision for India is DEVELOPMENT.

For fifty years we have been a developing nation. It is time we see ourselves as a developed nation. We are among top 5 nations of the world in terms of GDP. We have 10 percent growth rate in most areas. Our poverty levels are falling. Our achievements are being globally recognized today. Yet we lack the self-confidence to see ourselves as a developed nation, self- reliant and self-assured. Isn't this incorrect? I have a THIRD vision. India must stand up to the world. Because I believe that unless India stands up to the world, no one will respect us. Only strength respects strength. We must be strong not only as a military power but also as an economic power. Both must go hand-in-hand. My good fortune was to have worked with three great minds. Dr. Vikram Sarabhai of the Dept. of space, Professor Satish Dhawan, who succeeded him and Dr. Brahm Prakash, father of nuclear material. I was lucky to have worked with all three of them closely and consider this the great opportunity of my life. I see four milestones in my career:

ONE: Twenty years I spent in ISRO. I was given the opportunity to be the project director for India's first satellite launch vehicle, SLV3. The one that launched Rohini. These years played a very important role in my life of Scientist. TWO: After my ISRO years, I joined DRDO and got a chance to be the part of India's guided missile

program. It was my second bliss when Agni met its mission requirements in 1994.
THREE: The Dept. of Atomic Energy and DRDO had this tremendous partnership in the recent nuclear tests, on May 11 and 13. This was the third bliss. The joy of participating with my team in these nuclear tests and proving to the world that India can make it, that we are no longer a developing nation but one of them. It made me feel very proud as an Indian. The fact that we have now developed for Agni a re-entry structure, for which we have developed this new material. A Very light material called carbon-carbon. FOUR: One day an orthopedic surgeon from Nizam Institute of Medical Sciences visited my laboratory. He lifted the material and found it so light that he took me to his hospital and showed me his patients. There were these little girls and boys with heavy metallic calipers weighing over three Kg. each, dragging their feet around. He said to me: Please remove the pain of my patients. In three weeks, we made these Floor reaction Orthosis 300 gram calipers and took them to the orthopedic center. The children didn't believe their eyes. From dragging around a three kg. load on their legs, they could now move around! Their parents had tears in their eyes.

That was my fourth bliss!

Why is the Media here so negative?
Why are we in India so embarrassed to recognize our own strengths, our achievements? We are such a great nation.
We have so many amazing success stories but we refuse to acknowledge them.
Why?
We are the first in milk production.
We are number one in Remote sensing satellites.
We are the second largest producer of wheat.
We are the second largest producer of rice.

Look at Dr. Sudarshan; he has transferred the tribal village into a self-sustaining, self-driving unit. There are millions of such achievements but our media is only obsessed in the bad news and failures and disasters. I was in Tel Aviv once and I was reading the Israeli newspaper.
It was the day after a lot of attacks and bombardments and deaths had taken place. The Hamas had struck. But the front page of the newspaper had the picture of a Jewish gentleman who in five years had transformed his desert land into an orchid and a granary. It was this inspiring picture that everyone woke up to. The gory details of killings, bombardments, deaths, were inside in the newspaper, buried among other news. In India we only read about death, sickness, terrorism, crime. Why are we so NEGATIVE? Another question: Why are we, as a nation so obsessed with foreign things? We want foreign TVs, We want foreign shirts. We want foreign technology. Why this obsession with everything imported. Do we not realize that self-respect comes with self-reliance? I was in Hyderabad giving this lecture, when a 14-year-old girl asked me for my autograph. I asked her what her goal in life is: She replied: I want to live in a developed India. For her, you and I will have to build this developed India. You must proclaim. India is not an under-developed nation; it is a highly developed nation.
Do you have 10 minutes? Allow me to come back with vengeance. Got 10 minutes for your country? If yes, then read; otherwise, choice is yours.

YOU say that our government is inefficient.
YOU say that our laws are too old.
YOU say that the municipality does not pick up the garbage.
YOU say that the phones don't work, the railways are a joke, the airline is the worst in the world, mails never reach their destination. YOU say that our country has been fed to the dogs and is the absolute pits. YOU say, say and say. What do YOU do about it? Take a person on his way to Singapore.
Give him a name - YOURS.
Give him a face - YOURS.

YOU walk out of the airport and you are at your International best. In Singapore you don't throw cigarette butts on the roads or eat in the stores. YOU are as proud of their Underground Links as they are. You pay $5 (approx. Rs.60) to drive through Orchard Road (equivalent of Mahim Causeway or Pedder Road) between 5 PM and 8 PM. YOU comeback to the parking lot to punch your parking ticket if you have over stayed in a restaurant or a shopping mall irrespective of your status identity. In Singapore you don't say anything, DO YOU? YOU wouldn't dare to eat in public during Ramadan, in Dubai. YOU would not dare to go out without your head covered in Jeddah. YOU would not dare to buy an employee of the telephone exchange in London at 10 pounds (Rs.650) a month to, "see to it that my STD and ISD calls are billed to someone else." YOU would not dare to speed beyond 55 mph (88 kmph) in Washington and then tell the traffic cop, "Jaanta hai sala main kaun hoon (Do you know who I am?). I am so and so's son. Take your two bucks and get lost." YOU wouldn't chuck an empty coconut shell anywhere other than the garbage pail on the beaches in Australia and New Zealand. Why don't YOU spit Paan on the streets of Tokyo? Why don't YOU use examination jockeys or buy fake certificates in Boston? We are still talking of the same YOU. YOU who can respect and conform to a foreign system in other countries but cannot in your own. You who will throw papers and cigarettes on the road the moment you touch Indian ground. If you can be an involved and appreciative citizen in an alien country why cannot you be the same here in India. Once in an interview, the famous Ex-municipal commissioner of Bombay Mr.Tinaikar had a point to make. "Rich people's dogs are walked on the streets to leave their affluent droppings all over the place," he said. "And then the same people turn around to criticize and blame the authorities for inefficiency and dirty pavements. What do they expect the officers to do? Go down with a broom everytime their dog feels the pressure in his bowels? In America every dog owner has to clean up after his pet has done the job. Same in Japan. Will the Indian citizen do that here?" He's right. We go to the polls to choose a government and after that forfeit all responsibility. We sit back wanting to be pampered and expect the government to do everything for us whilst our contribution is totally negative. We expect the government to clean up but we are not going to stop chucking garbage all over the place nor are we going to stop to pick a up a stray piece of paper and throw it in the bin. We expect the railways to provide clean bathrooms but we are not going to learn the proper use of bathrooms. We want Indian Airlines and Air India to provide the best of food and toiletries but we are not going to stop pilfering at the least opportunity. This applies even to the staff who is known

not to pass on the service to the public. When it comes to burning social issues like those related to women, dowry, girl child and others, we make loud drawing room protestations and continue to do the reverse at home. Our excuse?

"It's the whole system which has to change, how will it matter if I alone forego my sons' rights to a dowry." So who's going to change the system?
What does a system consist of? Very conveniently for us it consists of our neighbors, other households, other cities, other communities and the
government. But definitely not me and YOU. When it comes to us actually making a positive contribution to the system we lock ourselves along with our families into a safe cocoon and look into the distance at countries far away and wait for a Mr. Clean to come along & work miracles for us with a majestic sweep of his hand. Or we leave the country and run away. Like lazy cowards hounded by our fears we run to America to bask in their glory and praise their system. When New York becomes insecure we run to England. When England experiences unemployment, we take the next flight out to the Gulf. When the Gulf is war struck, we demand to be rescued and brought home by the Indian government. Everybody is out to abuse and rape the country. Nobody thinks of feeding the system. Our conscience is mortgaged to money.
2nd Portion of the speech has been on the net for a long time.

In the footsteps of Ram

Sethukarai: Myth, mystery and magic in the land of the Ramayana

By GITA ARAVAMUDAN

http://www.the-week.com/23mar16/life12.htm

Along Tamil Nadu's east coast lies a stretch of land known as Sethukarai or the bank of the bridge. Travelling through this 70-km-long coastal stretch between Ramanathapuram and Rameswaram is almost like walking through the pages of the Ramayana. Along the Sethukarai, myth and history combine seamlessly to give legend new dimensions through its ancient shrines, mystic bathing spots and majestic temples, which attract thousands of pilgrims.

My journey began at the huge Tirupullani temple, 10 km from Ramanathapuram. It is a Vaishnavite temple; its antiquity is authenticated in the songs of the Alwars, poet-saints of Tamil Nadu who lived between the 7th and 9th centuries. The ancient Tamil Sangam work Akanaanooru also refers to it.

According to legend, Pullaranyam (grass forest) was a marshy land full of the sacred dharba grass. Under a peepul tree here, Vishnu appeared before Pula Maharishi in the form of Adi Jagannatha and told him he would be reborn as Ram to cleanse the land of evil. Many years later, when Ram arrived here in search of Sita, he came upon a seemingly impassable barrier: the ocean. Tired, Ram lay down on a bed of dharba and sank into deep meditation for three days. Adi Jagannatha reappeared and blessed him. Inspired by this, Ram requested Varuna, the sea god, to make a path for him.

The Tirupullani temple has a mysterious grandeur about it. Thousands of childless couples do nagaprathishta (installing statues of the snake god) at the peepul grove where Adi Jagannatha is supposed to have first appeared. They also flock to the temple to drink the payasam (sweet dish), which is believed to have the same magical properties as the one which Ram's father, King Dasaratha, gave his barren wives. The most striking shrine in this huge temple is the one with the exquisitely carved figure of Ram lying on a bed of dharba.

Adi Sethu, the primary sacred bathing spot along this coast, lies about 3 km from here. Ram is believed to have bathed here before starting work on the bridge and again on his return. Legend also says Ram and Sita paused over the temple while returning in the pushpaka vimanam (aerial chariot).

Devipatnam is another little coastal town close to Ramanathapuram linked by the legend of Ram. Just off the coast, and 1 km into the sea, is an unusual shrine of navagrahas, which are nine huge ancient stones representing celestial bodies sacred to Hindus. They are supposed to have been installed by Ram when he prayed to Shiva and Ganesha before embarking on his expedition to Lanka. Until recently, this rather unique shrine could only be reached by boat or by wading through the water. Now a small walkway connects it to the shore.

Along the coast to Rameswaram are many other small shrines. On a remote beach near Ramanathapuram, an ancient and meditative Hanuman stands in a dilapidated shrine gazing at the placid bay. The priest here said that the waters of the bay never rise beyond a certain point even during a cyclone.

Closer to Ramanathapuram, right on the highway, is a recently-built small temple called Midhakum Parai (floating stone). The priest here demonstrated the property of the stone that Ram is believed to have used to build his bridge. In a big vessel, a huge chunk of coral floats on water while another piece, which the priest throws in, sinks to the bottom.

Legend says Neela, the architect monkey who built the bridge, was cursed in his youth by a sage for throwing his things into the water: nothing Neela threw into water would ever sink again. The curse proved to be a boon. Bits of the floating stone were brought to this spot a couple of years ago and enshrined in the temple. Sadly, the priest dispelled some of the magic when he offered to sell me a piece. "There is plenty where it comes from," he said nonchalantly when asked what would happen if he sold off such a valuable thing.

But it is at Dhanushkodi, a point 18 km from Rameswaram, that all the elements of myth, legend and fact combine to form a truly mysterious amalgam. At this point the Bay of Bengal meets the Indian Ocean. Hanuman took his famous leap from here to Lanka. And it is the point from which the monkey army built the bridge to Lanka. It is called Dhanushkodi because at the request of Ravana's brother Vibheeshana, Ram broke off the bridge with his bow.

The most intriguing element here is the ancient underwater sandbank known as Adam's Bridge, which connects India to Sri Lanka. Geological evidence shows that an isthmus, which, according to temple records was breached by a violent storm in 1480, once bridged the gap. Some new pictures taken by a NASA satellite show this "bridge" in all its glory. The 30-km-long connection, which stretches across the Palk Strait, is actually a narrow and shallow ridge of sand and rocks connecting Mannar Island in Sri Lanka to Pamban Island in India. The Sri Lankan archaeology department has said the connection could be two million years old.

But is it natural or manmade? A cyclone, which devastated the area in 1964, has compounded the confusion by washing away many ancient landmarks in the area. In fact, today Dhanushkodi is almost inaccessible.
About 8 km from here stands the Kodandaramaswamy temple-the only one which survived the havoc. It was here that the final chapter of the Ramayana was played out. When Vibheeshana surrendered before Ram and asked his forgiveness, Ram crowned him king of Lanka at this place. Close by is another little temple known as Gandhamadhana Parvadham. Devotees believe this rocktop temple enshrines the footprints of Ram.
My final destination was the Ramanathar temple at Rameswaram, which contains a lingam believed to have been made by Sita out of sand. According to legend, Ram came here to wash away his sins and perform a puja to Shiva after killing Ravana who was a Brahmin. Ram asked Hanuman to bring him a lingam from Mount Kailash at an auspicious time. When he did not return, Sita quickly made a lingam and Ram installed it.

When Hanuman returned, Ram told him he could remove the other lingam if he wished and replace it with the one he had brought. Hanuman tried in vain to dislodge it with his tail. Even today, the lingam bears marks believed to be left by Hanuman's tail. Finally, when he gave up, Ram installed the one Hanuman brought beside the main lingam.

Temple records show that Parakrama Bahu, the king of Ceylon, constructed the sanctum sanctorum in the 12th century. Over the years, the temple expanded into its present size. There are 22 tanks within the temple, each with its own legend. A little further away is the Jatayu theertham (bathing spot), where the bird Jatayu fell fighting Ravana. Another important bathing spot is the Jatta theertham where Ram washed his hair before he commenced his prayers. And so the legend of Ram lives on in this ancient coastal region: intriguing, mysterious and magical.

India's Gift to the World
By Robert Arnett - author of the book India Unveiled

India's spiritual heritage is legendary. Throughout the millenniums, India has been blessed with more masters (rishis) - persons who during their lives on earth have merged their souls with God - than any other country in the world. There are many well-documented stories of their miracles.

The famous master Trailanga Swami, who lived in Banaras during the late 19th century, displayed miraculous powers that cannot be dismissed as myth. Until recently, there were living witnesses to his amazing feats. Many persons witnessed him drink the most deadly poison with no ill effects. thousands of people saw him levitating in a sitting position on the surface of the Ganges for days at a time. He would even disappear under the waves for long periods, finally to reappear unharmed. Though Trilanga seldom ate, he weighed over 300 pounds. The yogi never wore any clothing and was arrested by the police for his nudity on several occasions, and locked in a cell. Each time, even with posted guards, he unexplainably escaped and could be seen walking on the prison roof, his cell still locked. The police had no clue as to how he did it.

For over 2,300 years, travelers from the most powerful countries on earth have come to India in search of her priceless spiritual wisdom. When Alexander the Great returned to Persia after his unsuccessful invasion of India, the most valueld treasure that he brought back was not gold, jewels, silks or spices - but his guru (spiritual teacher), the yogi Kalyana, callled "Kalanos" by the Greeks.

On a designated day in Susa, Persia, the sage Kalanos gave up his aged body by entering a funeral pyre in view of the entire Macedonian army. The soldiers were amazed that the yogi had no fear of pain or death and never once moved from his position as he was being consumed by flames. Kalanos embraced many of his close companions before leaving for his cremation but refrained from bidding farewell to Alexander, to whom simply remarked: " I shall see you later in Babylon." Alexander died a year later in Babylon. The Indian guru's prophecy was his way of saying that he would be with Alexander both in life and death.

When the Chinese traveler Hiuen Tsang attended a huge religious gathering, the Kumbha Mela, in Allahabad in 544 A.D., he recounts that Harsha, king of Northern India, gave away the entire wealth of his royal treasury to monks and pilgrims attending the event. When Hiuen Tsang prepared to return to China, he declined Harsha's offerings of jewels and gold. Understanding that his spiritual development was more valuable than worldly wealth, he accepted, instead, 657 religious manuscripts. Likewise, through the science of yoga, India has given the West a far more valuable gift than all the material wealth or technology the West could give in return. Even today, India offers great inspiration to those persons who are seeking a oneness with God, and through yoga anyone can find the direction he or she needs to succeed.

That is India's gift to the World

Bamiyan Buddhas fall prey to Taliban's lust for power
By *Claude Arpi*
http://www.rediff.com/news/2001/mar/12spec.htm

In 1965, André Malraux, the French philosopher, author and minister for culture, told an audience at Benares Hindu University about a conversation he had had with Jawaharlal Nehru. The French writer had asked the Indian prime minister, "What, according to you, is the reason Buddhism was lost to India, after India had given Buddhism to the world?" Nehru did not have an immediate answer, but later said he thought India had gradually made Buddha into one its gods and this had led to the disappearance of Buddhism from India.

Today, though, it is an accepted historical fact that the main cause for the disappearance of Buddhism in the sub-continent is the destruction of the great *viharas* by the Muslim invaders. The fact that Buddhist life was concentrated in these great centres of learning made it an easy prey for the hordes coming in from Afghanistan and Central Asia. The decline of Buddhism had nothing to do with the 'deification' of Buddha; this, in fact, indirectly bequeathed humanity with some of the most marvellous art pieces that Malraux loved so much.

The historian R C Majumdar quite rightly wrote: "Individuals, or even small sects, directly or indirectly professing the religion, might be found in the country for centuries to come and may be said to exist even now, but Buddhism as a force in society vanished from India since 1200 AD never to return."

A Tibetan monk, Dharmasvamin, who visited Nalanda in 1235 AD leaves us a very sad picture of the plains of Bihar where the Buddha had earlier propagated his message of compassion and non-violence. He saw only destruction at Nalanda and could not recover a single manuscript from the once-rich library. Finally, he met an old monk in his nineties who could teach him some Sanskrit. Dharmasvamin studied for some time with the old monk and, on hearing that the Muslim troops were approaching again, he carried his old master on his shoulders to safety until the raiders had gone. It is this enduring image that symbolises the end of an era.

One would have thought the barbarian destruction of the remnants of a rich culture could not happen again in this new millennium. But, for the past couple of weeks, we have seen similar events occurring all over again in Afghanistan, where the Taleban mullahs have decreed that all "idols of the infidels" should disappear. The most famous amongst these 'false gods' are the giant statues of the Buddha in Bamiyan, in central Afghanistan.

"Now that we are destroying false idols, the world has made a drama out of it. The Muslims in the world, particularly the Afghan Muslims, should use their common sense," declared Taleban chief Mulla Muhammad Omar. He tried to prove his common sense by saying: "I would like to ask you

-- do you prefer to be called statue-destroyers or statue-sellers?" Ordinary human beings would find it difficult to see the logic of the fanatic Afghan leader.

Afghanistan was not always like that.

I remember with nostalgia when, as a young student, I was travelling in Afghanistan. At that time, all the backpackers knew the Afghans were 'cool guys.' Yes, they were Muslims -- in fact, we could see them going on Friday to the exquisite blue mosques of Herat or Mazar-il-Charief -- but never before a cup of light green tea was poured from their ever-smoking samovars.

I also remember being told in Kabul that the 'coolest' place in this extraordinarily peaceful country was one day away by bus from the capital. All those who have visited Afghanistan will remember their colourful buses. I could not stop clicking the unbelievably detailed kitsch frescos decorating the Afghan vehicles. But these buses only had a few seats and most of the travellers -- including sheep, chickens and human beings -- had to sit on a sort of wooden platform. If you were not happy with this arrangement or were uncomfortable, you always had the choice to climb on to the roof and negotiate with your fellow travellers for a seat on some stuffed bags.

One day, I decided to take the plunge and, after a difficult journey, verging on torture for French buttocks, I reached Bamiyan at sunset. It was magical. At the end of the valley stood two unbelievable statues of the Buddha. Though some fanatics had disfigured them, the Buddhas's bodies were so majestic, the proportions so perfect, that it seemed to me a mirage after the nightmarish bus journey.

The next day I visited the site of the statues and I climbed to that head of the Buddha by way of several stairs and galleries. There were still hundreds of caves where, once upon a time, *bikhshus* had meditated on the great suffering of this world and the way to alleviate it.

Today, 30 years later, Bamiyan reamains -- thanks to the statues -- the most stunning and peaceful place I have ever seen. And, today, those statues do not exist anymore! It was reported on March 8 that, using 'large amounts of explosives,' the Taleban militia had managed to destroy the top parts of the statues.

One question comes to mind, "Why this senseless destruction?" Can a religion which is supposed to take its followers to God, direct them to destroy something which, in a way, represents the pinnacle of humanity's art and genius?

A few years ago, I was working on a book on the *Karma Of Tibet* and, in this connection, I nterviewed a respected Tibetan lama. He was explaining to me what he and his fellow countrymen had to go through in Tibet during the Cultural Revolution and he kept repeating, "Why this destruction? Why this destruction?" His question remains unanswered till today.

Another image comes to my mind: teenaged Red Guards sent by Mao Zedong entering in the house of Lui Shaoqi, the President of the People's Republic of China and destroying every single art object after having insulted and beaten him. And all this for what? Because a leader (Mao) wanted to remain in power and could not accept another direction for Red China. In the process, several million Chinese and Tibetans died, a generation was traumatised forever.

In many ways, the events in China between 1966 and 1976 are similar to what is happening in

Afghanistan today. The triggering of the Great Proletarian Cultural Revolution by Mao had nothing to do with the proletariat. Yet Mao, after the catastrophic Great Leap Forward, had to re-establish his supremacy over Lui Shaoqi and Deng Xiaoping, his rivals in the politburo. To achieve his political goals, he realised that the most convenient (and efficient) way was to use a mad ideology and the most extreme elements. His wife, Jiang Qing, and her colleagues (the Gang of Four) were promoted as cultural tsars. They had only one motto: to wipe out a thousand year old culture and replace it by a 'proletarian' one.

Today, according to some reports, Afghanistan is witnessing a power struggle between the more moderate factions -- which would be happy to hand over Osama bin Laden, resume contact with the rest of the world and eventually start rebuilding Afghanistan -- and Omar's faction which, like Mao 35 years ago, unleashed terror to stick to power. It was recently reported that a fight broke out between the different factions during a meeting to decide on bin Laden's fate.

One should not forget that, when the Taleban took over the Bamiyan valley from the Northern Alliance in 1997, they had threatened to destroy the statues. Later, the same Mullah Omar vowed to safeguard them. Today, he has destroyed them.

One must also keep in mind Bamiyan's strategic location; it controls the way to the north. Located on the east-west road along the central mountain range which divides the country, the valley is of extreme strategic importance, which explains why, every spring, the Northern Alliance forces try to regain control of the valley.

Symbolically, having destroyed the Buddhas as well as statues of the saints of the local Islamic sects (as reported in the Russian press), the extremists led by Omar can restate their supremacy by thwarting every possibility of opening negotiations with the West.

Some commentators wrote that, because the Taleban leadership had not been accepted by the international community, they had no alternative but to destroy the statues to attract the world's attention (In much the same way, Vaijaylakshmi Pandit had declared in the UN in November, 1950, that communist China was forced to invade Tibet because the Western powers did not accept them in the UN). This is nothing if not nonsense. It is probably the other way around: because a section of the Talebans want to reintegrate into the international community that the extremists have acted swiftly to stop them.

But, like in China, extremist views cannot last for long. The reasonable elements are bound to return. After Mao's death, for example, Deng returned to power with his theory, "It does not matter if a cat is white or black as long as it catches mice." However, for the Afghan nation and for humanity as a whole, something will be lost for ever.

Was this necessary?

PS: We should not forget that the Taleban is a creation of the Western powers, particulary the CIA, which, at the end of the eighties, promoted and armed the militia for its own selfish reasons.

Claude Arpi is author of The Fate Of Tibet (HarAnand), which has also been translated into French.

Manu Smriti

(contributed by **Prof. G.C.ASNANI, MSc., Ph.D. (United Nations Service, Retd**.)

Selections from Hindu Scriptures, Series No.1, "SMRITIS"

IN India, particularly **after Independence in 1947, the younger generation of Hindus has been ignorant and indifferent about the teachings of Hindu religion.** There has also been **persistent effort from some quarters to speak ill of Hindu religion.** This has had the natural effect of younger generation developing indifference towards and even **ridicule of Hindu religion** in India**.** The Constitution of India encourages non-Hindu youngsters to be given education about the teachings of their respective religions in the Govt**.**- aided educational institution of India**,** but Hindu youngsters cannot be given such education about Hindu religion in Govt**.**-aided educational institutions**.**

Outside India, the **Christian missionaries** have consistently worked for over three centuries to **paint Hindu religion as demonic barbarism.** These missionaries collect huge amounts of money and recruit large number of persons from outside India **to remove Hinduism from the surface of the earth.** This type of propaganda against Hinduism has affected and is affecting the political policies of foreign governments towards India**.**

By now, we have also become familiar with Taliban Movement in Afghanistan and Pakistan. It correctly represents Islam without any hide-and-seek game. Government-aided Madrasas in India become factories for Talibanism inside India, for destruction of Hinduism.

It is time that **we Hindus assert ourselves** and place the basic teachings of Hinduism before the whole world**,** for the people to read for themselves and come to their own conclusions directly without interference from those who have been profiting by hurling abuses at Hinduism**.** This is the **first in the series** of publications which we propose to publish**.**

We are sure that a **better knowledge about Hinduism** inside India will strengthen the Hindu society**,** give it the self- confidence to understand**,** practise and propagate the noble teachings of Hinduism**;** this shall be for the benefit of the whole world which is being engulfed by inter-religious warfare under various pretexts**. Religion is essentially a matter of self-discipline, self-culture, enriching of one's inner self, realisation of divinity which lies dormant in every living being and the manifestation of this divinity in our daily conduct of life.** Religion cannot be used and should not be used as a weapon in our hands and mouths to conquer and subjugate others**,** to win political power and destroy other religious communities**;** that would be barbarism and not religion**.** Religion should bring peace**,** tranquility and happiness to everyone on this earth**.**

In this first book of the series, we are presenting Selections from some of the Smritis like Manu Smriti and Vasistha Smriti, and Smritis of Yagnavalkya, Apastamba, Gautama, and Baudhayana. In this collection, we have taken help from the following publications :

a) Sacred Books of the East, edited by Max Muller, published by Motilal Banarsidass, Vols. 1 to 50.

b) Publications of Bhandarkar Oriental Research Institute, Pune. **Smritis are the Rules of conduct** framed by Rishis at various stages of history of the Hindu Society. While there is some apparent diversity in these rules, it is not difficult to trace the underlying unity of **self-discipline** and the object of **welfare of the society.** With this underlying unity, there have been changes in rules from time to time, and **no one would be right in picking up a sentence here and there and making much noise about it.** We should look at the underlying structural basis of the Smritis. It may not be out of place to mention here that the **Constitution of India framed by Independent India in 1948 has had 75 Amendments upto the year 1995.** If in the course of less than half a century, the law makers of India have found it necessary to have Amendments at the rate of **more than one Amendment per year,** some changes in the rules of conduct suggested by Rishis into the sacred books of the Hindu society, **over a period of several hundred centuries,** should not be a cause of complaint by any rational reasoning. And then there is also the **Grand Principle of Freedom of thought, belief and action** given to every Hindu by the Hindu Scriptures:

"For choosing your course of conduct at any time and place, keep in view the instructions given first in Sruti(Vedas), then in Smritis, Itihaas(History of great personalties) and finally you act according to your conscience." **(Manu Smriti, II, 6)**

This Grand Principle of Freedom given to an individual by the Hindu religion will, in course of time, form the basis for ending inter-religious and intra-religious conflicts. I have great pleasure in acknowledging the help given in this Collection, Compilation and Computer typesetting by Shri N. Madhavan, Shri Sudhindra Mujumdar and Shri Sanjay Chakane, without whose constant support, it would not have been possible at all to bring out this booklet. All of us have worked together with a common objective of rendering a little service to the Hindu Society, and our ***Sanatana Hindu Dharma***. May the message be transmitted further and further.

There has been too much public criticism against Manu Smriti, which criticism is not based on sound reasoning and thoughtful study. Before criticising Manu Smriti, we should consider the following points:

i) Manu Smriti was compiled several thousand years back during which interval, social, economic and political conditions have changed in Hindu society. If Indian Constitution has required more than one Amendment per year, how many Amendments would be necessary in Hindu Constitution compiled several thousand years back?

ii) There were no printing presses and standard reference editions several thousand years back. Naturally, the current edition of Manu Smriti has suffered from many interpolations for which Maha Rishi Manu cannot be held responsible and for which criticism of Maha Rishi Manu will not be justified.

iii) Further, as has been seen the practice of Hindu religion, there is enormous, almost complete freedom for an individual to believe or to disbelieve any dogma, to accept or to discard any instruction written in any book, and to use one's own intelligence and conscience before adopting any course of action. This is the beauty of Hindu religion.

vi) Maha Rishi Manu himself says that if there is anything in his Smriti which is not acceptable to the conscience of any person, that person should reject it and act according to his/her own conscience. Then, where is any reasonable ground for criticising Maha Rishi Manu? Rather, he deserves our respect for his giving us instructions to reject what is against our conscience even in his Manu Smriti.

Which other religious scripture in the world outside Hindu religion and its branches gives such freedom?

MALIGNING HINDUISM

(i) Communalism:

Proselytizing religious like Christianity and Islam are rabid communal religions which have created and continue to create inter-religious and inter-communal warfare. While indulging in activities of such perpetual inter-communal warfare, any resistance from Hindu society in India is termed by them as "Communalism! Communalism!". It is like a thief shouting "Thief, Thief" and getting away!

(ii) Caste System:

These proselytizing religions also accuse and nearly abuse Manusmriti for caste system. The underlying spirit behind Hindu religion codified by Maharishi Manu is that **Religion is essentially a matter of self-discipline, self-culture, enriching of one's inner self, realisation of divinity which lies dormant in every living being irrespective of creed, colour or caste and the manifestation of this divinity in our daily conduct of life.** Anything found in Manusmriti contradicting this spirit is a later interpolation and manipulation for which we cannot blame Maharishi Manu. We can easily identify such manipulations. If somebody does not care to find out this truth, then also the great Maharishi Manu has clearly stated in his Manusmriti, which statement fortunately remains inside Manusmriti till today, that if there is any statement in Manusmriti which is contrary to your conscience, please reject it outright and follow your own conscience. Then, where is the justification for decrying Maharishi Manu as is customary for critics of Hinduism? Maharishi Manu tells you to follow your conscience inspite of whatever is written in this or that Book. Our salutations to this Maharishi Manu for this freedom! Anti-Hindu fanatics call Hindus as "MANU-VADIS". Have they cared to read and understand Manusmriti, or they are just parroting what anti-Hindu missionaries have taught them to repeat and repeat? "Above every Book, follow your conscience" is the watchword of great Maharishi Manu; hundreds of salutations to Maharishi Manu who gave this freedom of thought, belief and action**.**

Superiority by Birth or by Conduct ?

Also, Maharishi Manu made it clear that superiority is not by birth but by Conduct. This Principle was further emphasized later by Maharishi Veda Vyasa in Mahabharata; relevant extract from

Mahabharata Vana Parva, Section 179 is also given below. (Unfortunately, some selfish politicians in India are now taking a retrograde steps by giving superior positions not on merit but by birth caste-certificates).

CASTE IS BY CONDUCT, NOT BY BIRTH

* The Seniority of Brahmanas is from Sacred Knowledge, that of Kshatriyas from valour, that of Vaisyas from wealth in grain, but that of Sudras is from age alone. **(II, 155)**

* A man is not therefore considered Venerable just because his head is gray; him who, though young in age, has learned the Veda, the Gods consider to be Venerable. **(II, 156)**

* As an elephant made of wood, as an antelope made of leather, such is an unlearned Brahmana; those three have nothing but the names of their kind. **(II, 157)**

* Just as a eunuch is unproductive with women, as a cow with cow is unprolific, and as a gift made to an ignorant man yields no reward, likewise is a Brahmana worthless, who does not know the ***Richas*** (Vedic Verses). **(II, 158)**

NON - IMPORTANCE OF CASTE

* He who possesses faith may receive pure learning even from a man of lower caste, the highest law even from the lowest, and an excellent wife even from a base family. **(II, 238)**

* Even from poison, nectar may be taken; even from a child, good advice; even from a foe, a lesson in good conduct; and even from an impure substance gold. **(II, 239)**

* Excellent wives, learning, the knowledge of Law, the rules of purity, good advice, and various arts may be acquired from anybody. **(II, 240)**

POSITION OF WOMEN

* Women must be honoured and adorned by their fathers, brothers, husbands and brothers-in-law, who desire their own welfare. **(III, 55)**

* Where women are honoured, there the gods are pleased; but where they are not honoured, no Sacred rite yields rewards. **(III, 56)**

* Where the female relations live in grief, the family soon wholly perishes; but that family where they are not unhappy ever prospers. **(III, 57)**

* The houses on which female relations, not being duly honoured, pronounce a curse, perish completely as if destroyed by magic. **(III, 58)**

* Hence men who seek their own welfare, should always honour women on holidays and festivals with gifts of ornaments, clothes, and dainty food. **(III, 59)**

IS EVERY BRAHMAN TO BE ADORED ?

* Manu has declared that those Brahmanas who are thieves, outcasts, eunuchs, or atheists are unworthy to partake of oblations offered to gods and ancestors. **(III, 150)**

KILLING OF ANIMALS

* He who injures harmless creatures from a wish to give himself pleasure, never finds happiness, neither living nor dead. **(V, 45)**

* He who permits the slaughter of an animal, he who cuts it up, he who kills it, he who buys or sells meat, he who cooks it, he who serves it up, and he who eats it, must all be considered as the slayers of the animal. **(V, 51)**

* There is no greater sinner than that man who, though not worshipping the gods or the manes seeks to increase the bulk of his own flesh by the flesh of other beings. **(V, 52)**

Rig Veda Samhita

(contributed by **Prof. G.C.ASNANI, MSc., Ph.D. (United Nations Service, Retd**)

Rig Veda is the oldest surviving religious record of the human race. Much before the printing press came into existence, Rig Veda was transmitted from one generation to another by word of mouth. Naturally, question would arise about interpolations and mutilations during this transmission.

There is a true story, almost unbelievable, to answer this question of interpolations and mutilations in respect of Rig Veda. In his book "**India ¾ What can it teach us?"** (**1882,** Second Indian Edition published in 1961 by Munshi Ram Manohar Lal, Nai Sarak, Delhi-6), **Max Muller writes :-**

"Entirely by Memory :- This may sound startling, but-what will sound still more startling, and yet **is a fact that can easily be ascertained by anybody** who doubts it-at the present moment, **if every MS. of the Rig-Veda were lost, we should be able to recover the whole of it- from the memory of the Srotriyas in India.** These native students learn the Veda by heart, and then they learn it from the mouth of their Guru, never from a MS., still less from my printed edition, - and after a time they teach it again to their pupils.

"**I have had such students in my room at Oxford,** who not only could repeat these hymns, but who repeated them with the proper accents (for the Vedic Sanskrit has accents like Greek), nay **who, when looking through my printed edition of the Rig-Veda, could point out a misprint without the slightest hesitation.**

"I can tell you more. There are hardly any various readings in our MSS. of the Rig-Veda, but various schools in India have their own readings of certain passages, and they hand down those readings with great care. So, instead of collating MSS., as we do in Greek and Latin, I have asked some friends of mine to collate those Vedic students, who carry their own Rig-Veda in their memory, and to let me have the various readings from these living authorities.

"**Here then we are not dealing with theories, but with facts,** which anybody may verify. The whole of the Rig-Veda, and a great deal more, still exists at the present moment in the oral tradition of a number of scholars who, if they liked, could write down every letter, and every accent, exactly as we find them in our old MSS.

"Of course, **this learning by heart is carried on under a strict discipline;** it is, in fact, considered as a sacred duty. A native friend of mine, himself a very distinguished Vedic scholar, tells me that a boy, who is to be brought up as a student of the Rig-Veda, has to spend about eight years in the house of his teacher. He has to learn ten books: first, the hymns of the

Rig-Veda; then a prose treatise on sacrifices, called the Brahmana; then the so-called Forest-book or Aranyaka; then the rules of domestic ceremonies; and lastly, six treatises on pronunciation, grammar, etymology, metre, astronomy, and ceremonial. "These ten books, it has been calculated, contain nearly 30,000 lines, each line reckoned as thirty-two syllables.

"A pupil studies every day, during the eight years of his theological apprenticeship, except on the holidays, which are called "non-reading days". There being 360 days in a lunar year, the eight years would give him 2,880 days. Deduct from this 384 holidays, and you get 2,496 working days during the eight years. If you divide the number of lines, 30,000, by the number of working days, you get about twelve lines to be learnt each day, though much time is taken up, for practising and rehearsing what has been learnt before. "**Now this is the state of things at present, though I doubt whether it would last much longer** and I always impress on my friends in India, and therefore impress on those who will soon be settled as Civil Servants in India, the duty of trying to learn all that **can still be learnt from those living libraries. Much ancient Sanskrit lore will be lost for ever when that race of Srotriyas becomes extinct".**

Generally, Srotriyas are Brahmins by birth and by caste. **Profession used to be by birth generally and caste was by profession. Also, caste implied certain discipline and code of conduct. The higher the caste, the greater was the discipline required. Through professional status, each caste used to have its own status in society in ancient times. Now that status by birth has lost its validity. Gradually, Hindu society is losing caste-consciousness and also related status by virtue of birth.**

Intermingling of castes in Hindu society and hence irrelevance of caste-status by birth had been recognised in India even some 5,000 - 8,000 years back from today. The date of the Mahabharata is placed some 3,000 - 6,000 years before Christ i.e. 5,000 - 8,000 years back from today. In Mahabharata, the eldest brother amongst the five Pandavas,

Yudhisthira, was asked by Yaksha to give correct answer to his question, if the former wanted his brothers back to life. Yaksha's question was, "**Is caste-status by birth or by conduct ?**" Yudhisthira's answer was on the following lines: "In ancient times, there was purity of blood and hence caste, profession and status, by birth. Subsequently, intermingling of blood has taken place by intercaste marriages to such an extent that caste, profession and status by birth have no meaning now. **One's caste and status are by one's conduct and not by birth.** A Brahmin's conduct is characterised by truthfulness, charity, forgiveness, nobleness, benevolence, observance of appropriate rites and mercy. If these qualities are not present in one who is born in a Brahmin family, then he is not a Brahmin. If, on the other hand, these qualities are present in one who is born in a Sudra family, then he is a Brahmin". (**Ref : Mahabharata, Vana Parva, Section 179**).

Caste and Social Status by birth have no religious support in Hinduism now. **It is the conduct, not birth, which should command respect, according to the principles of Hindu religion.** This idea is emphasised in "**Manusmriti**" also. This meant discipline of body, mind and intellect, from childhood onwards, generation after generation, **for more than 200 generations** among a class of Hindus who preserved this Vedic heritage for us up to the present century. **Is this a joke? Can we even comprehend what all this means?** Caste system produced and preserved this sacred and brilliant tradition of professional specialization. Undoubtedly, over many past centuries, there have crept in, aberrations of the caste system in the

Hindu Society and interpolations in some Hindu Scriptures, but aberrations are not to be found in the basic principle of caste system. We must respect and accept what is right and unequivocally reject what is wrong.

Again, it must be emphasized that it is Hindu society itself which has been fighting against the aberrations of caste-system, and Hindu society itself has largely eliminated the same. **What have non-Hindu critics of caste system contributed? They have mostly contributed abuses on Hinduism and attempted to destroy Hinduism itself, without recognizing its merits,** saying that Hinduism has caste system.

No human community ever existed in the past, nor does it exist now which does not have caste system in one form or the other. Let non-Hindu critics talk anything claiming casteless and classless society of their own religions. We know a little of every religious community making such claims. Information Technology has thrown light on the goings on inside every non-Hindu community. **Sitting in glass houses, let no one throw stones at Hindu community.**

Is Hinduism other-worldly ?

At many places, Rig-Veda Samhita reflects the attitudes, aspirations, and prayers of Hindus living their normal life. That is the Hindu view of life. In Hindu view of life, there are four objectives of a successful human life :-

1. **Dharma :** Righteousness. 2. **Artha :** Wealth; prosperity. 3. **Kama :** Fulfilment of normal worldly desires. 4. **Moksha :** Liberation from worldly desire; attainment of enlightenment; God-realization; Self-realization. The life of an ideal Hindu is divided into four stages, each for a period of a quarter century:

1. **Brahamacharya :** Unmarried Studentship.

2. **Grihasta :** Married householder's life.

3. **Vanaprasta :** Living in a forest as a recluse, along with one's spouse.

4. **Sanyasa :** Renunication of all family conn-ections, and moving from place to place as an ascetic. (This type of Sanyasa appears to have got introduced at a later stage in the History of Hinduism. Most ancient Rishis were living in the forests along with their spouses).

There are several variations, particularly of the last two stages ¾ Vanaprasta and Sanyasa. Normally, Vanaprasta and Sanyasa stages of life have to be embraced by a person after going through the stage of Grihasta. As such, **the teachings of a recluse were firmly rooted in his experiences, aspirations and prayers as a house-holder,** a citizen who had actively participated in the life of society in various capacities including even having functioned as the ruler of an empire. This class of men and women had passed through the battlefield of life, had tasted all pleasures and pains of life and then taken to solitary contemplative life. Their teachings and compositions in prose or poetry, bear **a stamp of wisdom** born out of real experience of life and then deep contemplation.

The composition of hymns of the Rig-Veda was done by Hindu recluses, ascetics, Rishis and Sages rooted in the realities of life inside the society. **Vedic hymns were not composed by cowherd boys and shepherds while they were grazing their flocks of cattle, cows and**

sheep in the grass fields. The **hymns are couched in chaste Sanskrit of their times,** observing **strict rules of grammar and metre.** Some scholars have deciphered these Vedic hymns as **capsules** containing**,** in cryptic form**, formulae** of various branches of **mathematics,** astronomy**,** chemistry and other **sciences.** The hymns of these Vedas appeared before ancient sages of the Hindu race after their prolonged period of strict discipline**,** austerity and deep contemplation**.** The ideas locked inside these Vedic hymns are supposed to be divine revelations to these Sages**,** Rishis of yore**.** The names of the **407 Rig-Vedic Sages or Rishis (men as well as women)** who composed particular Hymns or to whom the same were revealed**,** are faithfully recorded in the original texts**.**

For the same reason**,** feelings and aspirations expressed in the vedic hymns are regarded as divinely approved and consistent with the Laws of Nature**;** the observance of these Laws in one's life will bring the fulfilment of the four religiously sanctioned objectives of human life**,** viz**.** Dharma**,** Artha**,** Kama**,** Moksha**.** Hymns are classified as "**SHRUTI**" ¾ the "**Heard**" ones-as heard by the Rishis**,** the Sages**,** in state of deep contemplation**,** and transmitted for the good of society**.** For example**,** the desire for material prosperity**,** good health and honoured long life of 100 years so often seen in Vedic hymns is not to be regarded as unworthy of an elevated person**;** such aspirations are consistent with the Laws of Nature and should be respected**.** Genuine renunciation will come and a pilgrim on the path of religious life will make solid**,** substantial and sound progress when**,** through experience accompanied by thoughtful analysis and contemplation**,** he feels an inner urge for retiring from the pursuit of worldly pleasures**.** Otherwise**, pre-mature renunciation with worldly ambitions still lurking in the mind of a religious pilgrim will result in downright hypocrisy,** that will bring blockades in the pilgrim's progress on the path of God-realization**.** Not only an individual himself but also his family**,** community and his country will come to grief when the noble principles of renunciation and selflessness are proclaimed on the public platforms or exhibited through one's dress but an under-current of selfishness and narrow-minded worldly aspirations are dragging the man or the woman in the opposite direction**.** We have to get our desires for worldly pleasures and possessions washed out clear before we walk on the path of renunciation**.**

In rare exceptional cases**,** skipping the householder's stage of life and going straight into the life of sanyas is permitted but not encouraged**.**

4. <u>Worship of God in many forms</u> :

The reading of the hymns of Rig-Veda Samhita will show that a Hindu has inherited the following view of worship of God **:- A Hindu believes in one and only one God, but he does not believe in one and only one form of manifestation of God. A Hindu sees and adores God in a hundred, thousand and many more forms.** He sees and worships God in everything**,** particularly where there is manifestation of life**,** energy**,** beauty**,** strength and valour. He worships the Sun**,** the Moon**,** the Earth**,** the Sky**,** the Rivers**,** the Stars**,** the Days**,** the Nights**,** the Forests**,** the Animals**,** the Plants and what not**,** as manifestations of one and only one God**.**

This has been sometimes mis-understood and even mis-construed that Hindus do not believe in one God but in many Gods**;** this is wrong and misleading**.** It must be emphasised that **Hindus believe in one and only one God,** but having manifestations in millions of forms**,** shapes and even in abstract qualities and emotions**.** For example**,** a mother's love for a child is a manifestation of God Himself**;** devotion of a chaste wife to her husband in the face of

difficulties and dangers is the manifestation of divinity in a woman; art of exquisite dance and music during worship of God is a manifestation of divinity. The Sun, the Moon, the Stars, the Rivers, the Ocean, the Rocks, the Trees, everything is worshipped by a Hindu as a manifestation of God. A Hindu accepts Omnipresence of God and does not deny His presence anywhere. God is also Omniscient; hence He sees the sincerity of Worship of a devotee in whichever form the devotee worships Him.

Hinduism does not recognise existence of anything outside God, anything without God; even Satan does not exist outside God. There cannot be God **and** a Satan outside God.

Einstein's Equation $E = mc^2$

expresses that mass is made up of energy. How many shapes and forms of mass do we see? solids, liquids, gases, yellow, red, green, heavy, light, etc. These are all manifestations of **one and the same energy;** so also are **infinite number of forms of one and the same God.**

Einstein and other scientists penetrated through **diverse forms of mass** and brought us into the realm of **one energy.** Still **space-time continuum** remained separately. The Sages of the Vedas had penetrated deeper than the realm of **energy, space and time.** They had discovered the deeper realm of **ONE REALITY** with quality of **Consciousness, Spacelessness, Timelessness** and **Blissfulness,** in which the entire universe exists, although having the appearance of vast diversity, multiplicity and opposites. The path traversed by the Rishis, the Sages, the Mystics was not one of modern physics, but one of deep contemplation and experience. This experience of blissfulness at the bottom of everything seen in Nature is expressed through their Hymns given in the Vedas. Many of them, at various times and places, have declared **: "I have seen THAT".** Some have gone further and declared **"I AM THAT".**

Descriptions given by different Rishis at different times and at different places are tallying, one with the other. This confirms the objectivity of these subjective experiences. We cannot just dismiss these away as fictions of mind. We must face and acknowledge the Truth and give credit where it is due. This is the wonderful treasure we have all inherited as members of this blessed human race on this Earth. Let us appreciate it, live it and spread joy and blissfulness all around.

A Hindu does not confine limitless God within the walls of a temple or a church. A Hindu does not accept the authority of any person on the earth-in the past, at present or at any future instant of time-as the sole exclusice authority and mouth-piece of God. **A Hindu is free to think, to feel, to believe, to disbelieve.**

Even in respect of religious Scriptures, a Hindu is supposed to listen to and contemplate on what is written in the **Shruti** (Vedas), **Smritis** (Coded laws of life), **Itihas** (History of great men), but **finally he should follow the dictates of his own conscience. This is the freedom given to a Hindu by the very Scriptures which he is to follow. This is the uniqueness, the broadminded open-ness of Hinduism. That is why Hindu religion has survived and shall survive as long as human race survives on this sacred Mother Earth.**

How many of the Scriptures of other religions of the world give this freedom to their followers **?**

5. <u>Worship of NATURE</u> : A Hindu is particularly fond of worshipping **NATURE.** At the time of daybreak, the twilight of the Dawn sends a Hindu into raptures of ecstacy. What a beauty**!**

What a grandeur! The Sages who composed the hymns to the Dawn seem to be swimming and dancing in the river of ecstatic joy. You see this, you feel this, when you read the Hymns addressed to the Dawn. The compiler of this collection has exihibited his weakness for this grandeur by giving a large number of verses under "Dawn". So also his weakness for Clouds, Winds and Rain; he is a meteorologist who has enjoyed the sight and lessons learnt from viewing the clouds in the sky.

The Sun evokes a feeling of joy, strength, valour and heroism. The moon is the personification of sheer beauty. The rivers nourish the land. The rains are a nectar poured from the heaven. Clouds are the Chariots of Wind god. Words fail to correctly convey the joy and feelings expressed by the Hindu Rishis and Sages when they saw the wonders of Nature, the wonders of **LIFE.** They had a joyful, healthy and positive outlook on life. The reading and repeated recitation of these hymns will pump life, strength and courage into any one who cares to read and/or recite the same. These constitute the **precious heritage bequeathed by the Hindu Rishis and Sages to the whole human race for the good of the whole human society on this earth.**

The Hymns give energy and power which should also be handled with suitable care and discipline. Just as nuclear energy or the nuclear fission material should be handled and used with appropriate restrictions and discipline, so should the Vedic Hymns be.

6. Samhitas and Upanishads :

There have been some variations in nomenclature about what constitutes a Veda, e.g. Veda Samhitas, Brahmanas, Aranyakas, Upanishads, etc. are sometimes all taken together to constitute a Veda. However, it is generally accepted that **Samhita is the principal component** while other components are specialised treatises to elaborate specific ideas which are contained in the Samhitas; e.g. Brahmanas give ritualistic procedures for worship (yajna, sacrifice); Upanishads elucidate the philosophical ideas contained in the Samhitas. During the last two centuries, the Vedas have been introduced to the western world particularly through the medium of German and English languages. In the western world, the Upanishads have received maximum acceptance and appreciation. However, it may be stated that the **philosophy expounded in the Upanishadas is contained in the inspired, revealed, mystic poetry of the Samhita.** One may even venture to suggest an analogy that Samhitas are the milk; taken to the forest, this milk ferments and turns to form curd (Yoghurt); the Rishis churned the curds and separated butter from the buttermilk. The

milk, the curds, the butter as well as the buttermilk are beneficial for the body system of the society. For convenience and with some sort of justification, the Upanishads may be considered as the butter. For brevity, however, we shall refer to the Rig-Veda Samhita as Rig-Veda.

7. Positive Attitude towards Human Birth on the Earth.

Reading of Rig Veda gives a very clear impression of a **buoyant, vigorous and joyful attitude towards life on this earth.** The Hindu Society appreciated, enjoyed and aspired for a full life of 100 years, lived with righteousness, honour, prosperity and austerity. The same impression is carried through Valmiki's Ramayana as well as Mahabharata.

When we come to Hindu literature of later times, we find a marked tilt towards attitude of pessimism, negativism. Aspiration for honour and prosperity came to be regarded as a sort of undesirable worldly weaknesses and inferiority of mind. The spirit of strength and valour started declining, giving place to a sort of disgust with life, ready and even anxious to quit this earth, harping on miseries on the earth, transitoriness of worldly things, praying to God never to give us another birth on this earth, etc. Political history of later times also shows marked socio-political deterioration. The country which was once buoyant and bold, became weak, meek and miserable; consequently, the Hindus started getting beatings from many sides; their prayers also started showing attitude of helplessness and disgust for life.

When we do not value and respect the beauties and bounties so abundantly given to us by **NATURE,** from sunrise to sunset and during the night, and also from season to season, year after year, how can we expect to be happy on this Earth? Let us respect and appreciate elements of **NATURE,** the very manifestations of God in a hundred thousand forms, as did our ancient Sages who sang the **songs of Rig-Veda, filled with ecstacy and adoration, bursting with energy and enthusiasm for life,** and aspiring to fill the whole surface of the earth and space around us, with vigour and joyfulness, health and prosperity, long life and desire to live and be born again and again on this Sacred Mother Earth. To regain the lost glory and vigour, prosperity and happiness, to fulfil our destined role of spreading real joy and spirituality in the whole human race, let us sing with the Rishis of Rig Veda :

"Tell me, amongst so many immortal divinities of the universe, who is the Self-radiant, and whose glory we should meditate on? And after having lived a full life, who will deliver us back to this living world so that **we may be born again** to see a father and a mother?" **(1.24.1)** "The supreme God, the foremost adorable, whose auspicious name we meditate on, will deliver us back to this world so that **we may be born again** to see a father and a mother". **(1.24.2)**

The selections are made from **Rig Veda Samhita.** These are based mostly on **13** volumes **published by Veda Pratishthana, New Delhi,** on behalf of Narendra Mohan Foundation, Pusa Road, New Delhi, India.

Temple of excellence

By Avenues team
The Pioneer - September 3, 2000
http://www.hvk.org/hvk/

Banaras Hindu University (BHU) was founded in 1916 by the great nationalist leader Pandit Madan Mohan Malviya with the co-operation of great stalwarts of Indian history such as Dr Annie Besant who dreamt of BHU as the great University of India.

BHU was created under the Parliamentary legislation - BHU Act 1915, with a view to promote higher learning, and the creative and innovative instincts of students by providing them with quality academic education.

BHU, set up in the holy city of Banaras played a pivotal role during the Independence Movement. Today , it has
evolved as a great centre for teaching.

It boasts of having nurtured several prominent freedom fighters and builders of modern India.

It also has the distinction of contributing in terms of its academic excellence in the progress of the country.

The University comprises of three institutes, 14 faculties, 124 departments, four interdisciplinary centres and three constituent schools, offering scores of subjects pertaining to varied branches of humanities, social sciences, sciences, technology, medicine, fine arts and performing arts.

It boasts of six centres of advanced studies, 10 departments under the special assistance programme and a large number of specialised research centres.

Four degree college of the city are affiliated to the University.

The University also has a renown and sacred Vishwanath Temple that is revered as the spiritual centre of the University.

BHU also has a sprawling campus of 2,700 acres in the district of Mirzapur 90 km away from Varanasi, known as the Barkachha Campus. At present, the campus has a Krishi Vigyan Kendra (KVK) of the Institute of Agriculture, a Guest House, a post-graduate hostel, a cow shed and a large number of agricultural research farms. Demonstrations are given by scientists and technologists.

Technical know-how, hybrid seeds, plant protection chemicals, fertilisers etc are provided by the

Indian Council for Agricultural Research, New Delhi. Students of the Institute of Agriculture, BHU periodically visit the KVK Centre for training.

The Barkachha Campus boasts of sylvan surroundings that include hilly ranges, water falls, streams, springs and greenery.

BHU is one of the first few universities in the country to have established the academic Staff College in the later part of 1987.

The academic Staff College has been engaged in multifarous activities relating to the professional development of the academic staff.

It provides the requisite exposure to the university and college teachers to enable them develop their interests in their respective fields of specialisations by conducting orientation and refresher courses. BHU also has within its campus three constituent schools aimed at offering value and culture based education at the primary, secondary and senior secondary levels.

The faculty of visual arts at BHU is one of the leading institutions of fine arts in India. The faculty encourages on optimum interaction with the centres of art all over the country, it organises art fairs and exhibitions with an aim to encourage talents and get students their due recognition..

The Faculty of Science comprises of 13 departments covering almost all branches in modern science. Two vocational courses, Industrial Microbiology and Electronics Instrumentation and Maintainance have been introduced recently at the under-graduate level.

The School of Biotechnology possess a Bio-informatics User Centre. The Department of Chemistry has been conducting research in frontier areas of subjects like nuclear and radio chemistry, organo-metallic chemistry and biosensors. The Department of Geography offers a highly specialised course in satellite imagery interpretation. The Department of Statistics has two major research projects sponsored by the Rockfeller Foundation. the Department of Botany along with that of Statistics, have introduced self-financed courses in population studies and environmental sciences. The Faculty of Sanskrit Vidya Dharam Vijnan imparts ancient learning in traditional as well as modern aspects.

The main objective of the Faculty is to preserve and develop the ancient and traditional treasure of knowledge. It consists of eight departments and has a publication wing of its own.

The Institute of Medical Sciences is the only tertiary medical institute of its kind in India which imparts education in all the disciplines of modern medicine and Ayurveda at the under graduate and the post-graduate levels.

The main campus is spread over an area of 1,300 acres and is bestowed with buildings that are architectural delights and verdant surroundings.

There is an air field at the campus as well, started for military training and flying during World War II. The campus also possess a museum, the Bharat Kala Bhavan which is a veritable treasure of rare collections. The university consists of about 15,000 students and 2,000 teaching and nearly 5,000 non-teaching staff.

Quite true to its motto which says: The end of all knowledge is the attainment of immortality,

BHU has not only striven to promote higher learning and quality academic research it has at the same time emphasised on building the character of the youth by making religion and ethics a part of the education process.

A TRIBUTE TO HINDUISM

articles on hinduism

A real life hero, not figment of a poet's imagination - **By Saroj Bala**
Publication: The Tribune
Date: October 12, 2003

The story of Shri Ram's life was first narrated by Maharishi Valmiki in The Ramayana, written after he was crowned as the king of Ayodhya. **Valmiki was a great astronomer because he made sequential astronomical references on important dates related to the life of Shri Ram indicating the location of planets vis- a-vis zodiac constellations and the other visible stars (nakshatras). A similar position of planets and nakshatras vis-a-vis zodiac constellations has not been repeated in thousands of years. By entering the precise details of the planetary configuration of the important events in the life of Shri Ram, as given in the Valmiki Ramayana, in the software named Planetarium corresponding exact dates of these events according to English calendar can be known.**

Pushkar Bhatnagar, of the Indian Revenue Service, had acquired Planetarium from the USA. It is used to predict the solar/ lunar eclipses and distance and location of other planets from the earth by the scientists and astronomers. He entered the relevant details about the planetary positions vis-a-vis zodiac constellations narrated by Valmiki and obtained convincing results, thus almost determining the important dates starting from the birth of Shri Ram to the date of his coming back to Ayodhya after 14 years of exile.

Valmiki has recorded in Bal Kaand Sarga 19 and shloka 8 and 9 (1/18/8,9) that Shri Ram was born on the ninth tithi of Chaitra month when the position of different planets vis-a-vis zodiac constellations and nakshatras (visible stars) was as under :- 1 Sun in Aries ii) Saturn in Libra iii) Jupiter in Cancer iv) Venus in Pisces v) Mars in Capricorn vi) Lunar month of Chaitra vii) Ninth day after no moon viii) Lagna as Cancer (Cancer was rising in the east) ix) Moon on the Punarvasu (Gemini constellation & Pollux star) x) Day time (around noon)

This data was fed into the Planetarium software. The results indicated that this was exactly the location of planets/stars vis-a-vis zodiac constellations on January10, noon time in the year 5114 BC. As per the Indian calendar, it was the ninth day of Shukla Paksha in Chaitra month and the time was around 12 to 1 noontime. This is exactly the time and date when Ram Navmi is celebrated all over India till date.

Shri Ram was born in Ayodhya: This fact can be ascertained from several books written by Indian and foreign authors before and after the birth of Christ e.g. Valmiki Ramayana, Tulsi Ramayana, Kalidasa's Raghuvansam, Bodh and Jain literature etc. These books have narrated in great detail the location, the rich architecture and the beauty of Ayodhya which

had many palaces and temples built all over the vast kingdom. Ayodhya was located over the banks of Saryu River with Ganga and Panchal Pradesh on one side and Mithila on the other side. Normally 7,000 years is a very long period during which earthquakes, storms, floods and foreign invasions change the course of rivers, destroy towns and buildings and alter the territories. Therefore, the task of unearthing facts is monumental. The present Ayodhya is shrunken in size and the rivers have changed their course about 40 km north/south.

Shri Ram went out of Ayodhya in his childhood (13th year as per Valmiki Ramayana with Rishi Vishwamitra who lived in Tapovan (Sidhhashram) and from there he went to Mithila, the kingdom of King Janaka. Here, he married Sita after breaking the Shiv dhanusha. Researchers have gone along the route adopted by Shri Ram as narrated in Valmiki Ramayana and found 23 places which have memorials existing even as on date to commemorate the events related to his life.

These include Shringi Ashram, Ramghat, Tadka Van, Sidhhashram, Gautamashram, Janakpur (now in Nepal) and Sita Kund etc. **Memorials are built for great human beings and not for fictitious characters.**

Date of exile of Shri Ram: In Valmiki Ramayana it is mentioned in Ayodhya Kand (2/4/18) that Dashratha wanted to make Shri Ram the king because Sun, Mars and Rahu had surrounded his nakshatra and normally under such planetary configuration the king dies/or becomes a victim of conspiracies. The zodiac sign of king Dashratha was Pisces and his nakshatra was Rewati. This planetary configuration was prevailing on the January 5, 5089 BC. It was on this day that Shri Ram had to leave Ayodhya for living in the forests for 14 years. He was 25 years old at that time (5114-5089) and there are several shlokas in the Valmiki Ramayana which indicate that Shri Ram was 25 years old when he left Ayodhya for 14 years of exile.

Valmiki Ramayana refers to the solar eclipse at the time of war with Khardushan in latter half of 13th year of Shri Ram's living in forests. Valmiki has also mentioned that it was Amavasya that day and planet Mars was in the middle. When this data was entered, the computer software indicated that there was a solar eclipse on October 7, 5077 BC (Amavasya day) which could be seen from Panchvati. On that date, the planetary configuration was the same as has been described by Valmiki i.e. Mars was in the middle, on one side were Venus and Mercury and on the other side were Sun and Saturn. On the basis of planetary configurations described in various other chapters, the date on which Ravana was killed works out to December 4, 5076 BC. Shri Ram completed 14 years of exile on January 2, 5075 BC. That day was also Navami of Shukla Paksha in Chaitra month. Thus, Shri Ram had come back to Ayodhya when he was 39 years old (5114-5075).

Ram Avtar, who had done research on places visited by Shri Ram during 14 years of exile and sequentially moved to the places stated as visited by Shri Ram in the Valmiki Ramayana, started from Ayodhya and went right upto Rameshwaram. He found **195 places which still have the memorials connected to the events narrated in the Ramayana relating to the life of Shri Ram and Sita.** These places include: Tamsa Tal (Mandah), Shringverpur (Singraur), Bhardwaj Ashram (situated near Allahabad), Atri Ashram, Markandeya Ashram (Markundi), Chitrakoot, Parnakuti (on banks of Godavari), Panchvati, Sita Sarovar, Ram Kund in Triambakeshwar near Nasik, Shabari Ashram, Kishkindha (village Annagorai), Dhanushkoti and Rameshwar temple.

Recently, the Sri Lankan government had expressed a desire to develop Sita Vatika as a tourist spot. Sri Lankans believe that this was Ashok Vatika where Ravana had kept Sita as a prisoner (that was year 5076 BC). An American company engaged in exploring the oceans had put pictures on the Internet of a curved bridge, the ruins of which are lying submerged in Gulf of Mannar between Rameshwaram and Sri Lanka. The age of the stones used has been estimated at 17 million years, though the period of the construction of the bridge has still not been estimated.

Indian history has recorded that Shri Ram belonged to the Surya Vansh and was the 64th ruler of this dynasty. The names and other relevant particulars of previous 63 kings are listed on in Ayodhya Ka Itihas written about 80 years back by Rai Bahadur Sita Ram and the ancestors of Shri Ram have been traced out as under: Shri Ram, S/o King Dashratha, S/o King Aja, S/o King Raghu, S/o King Dilip and so on ——-)

From Kashmir to Kanyakumari and from Bengal to Gujarat, everywhere people believe in the reality of Shri Ram's existence, particularly in the tribal areas of Himachal, Rajasthan, Madhya Pradesh and the North-East. Most of the festivals celebrated in these tribal areas revolve around the events in the life of Shri Ram and Shri Krishna.

During Ram Rajya, the evils of caste system based on birth were non-existent. Valmiki is stated to be a Shudra. Sita lived with him as his adopted daughter after she was banished from Ayodhya and Shri Ram's children Luv and Kush grew in his ashram as his disciples. Valmiki was, perhaps, the first great astronomer and that his study of planetary configurations has stood the test of time. Even the latest computer software corroborated his astronomical calculations, proving that he did not commit any error. Shabari is stated to be belonging to Bheel tribe and the army of Shri Ram, which succeeded in defeating Ravana was also formed by various tribals from Central and South India. Facts, events and other relevant details relating to the life of Shri Ram are the common heritage of all the Indians.

The Tradition of Lamps in India

By Chitra Balasubramaniam

http://www.indiagov.org/perspec/nov99/lamps.htm

Lamps are an integral part of Indian culture. They weave their, own magic irrespective of whether they are in the, form of a mere candle or the traditional oil filled wick lamp. The poetic beauty of the flickering flame cannot be described in words.

The origins of the lamp clan probably be traced back to the time fire was discovered. fire holds an irreplaceable place in man's life. In India, it came to, be associated closely with the Hindu religion and form of worship. Therefore, it is but natural that the objects in which ceremonial fire - was lit or kept also ,aroused feelings of reverence. These objects were, therefore, considered equally important and were made with the utmost care. In the beginning, natural substances such as stones, shells, tree7products etc., must have been used. These paved the way to their present beautiful shapes, with craftsmen giving "the, lamps more depth and meaning.

We find in India a gamut of beautiful lamps made of all sorts of material - clay, terracotta, porcelain, brass, bronze, silver and at times even dough. There is literature on lamp making. Norms exist regarding its size, lighting and measurements. Festivals of lamps are celebrated and rituals are prescribed for their worship. Even dances center around lamps.

Most importantly, there are different types of lamps used for different purposes. The lamp is considered a woman and is symbolic of Goddess Lakshmi (goddess of wealth) and is referred to as Deepalakshmi.

The earthen lamp or "mitti ka diya is the most common, easily available and seen lamp. Made on the potter's wheel from clay, thousands of these are turned out every year for use by people. A good diya has to be soaked in water before use. The single diva is the most common lamp. However, the potter often lets his imagination run riot to churn out different types of diyas. Some are just attractive domes with openings to hold the lamp so that only the slight flickering can be seen while the dome protects it from wind. Some are a bunch of five diyas - one in the middle, surrounded by four others.

Porcelain lamps shaped like diyas are also made these days, as are the ones in terracotta and clay. Designer diyas hold a place of their own. They come in all sizes. The diya is held atop an elephant or a bankura (horse); there are hanging lamps in the shape of pigeons or birds wherein the chain is hooked onto the bird's beak and the body of the bird houses the place for filling oil or wax.

The place of pride is taken by lamps made of various metals. Lamps in olden times were made of commonly available metals including gold and other precious metals and stones. The tradition

continues in the temples, where exquisitely made lamps can be seen. Temples in South India have an amazing diversity of lamps. Gujarat also has its own repertoire of lamps. Some temples have niches in the walls where lamps can be placed. Others have rows of brass lamps placed on the exteriors Many of them also have huge lamps at the entrance. The lamp is in the form of a huge pillar, carved intricately. Plates at equal intervals hold the oil and the beaks of the wicks. The circumference of the plates is the widest at the bottom and gets progressively smaller as one moves up. The top is decorated with a lion or a peacock. The base has figures from Hindu mythology. Such pillar lamps or deepstambbas are mostly cast in bronze.

Different lamps are made for different purposes. An aarti deepa, used at the time of prayer, is different from the one used to light the sanctum sanctorum. The aarti deepa usually has a handle attached to it for holding it.

The arrangement of the lamps is also artistic and varies according to place and occasion. These are either placed in circles or in rows.

Lamps thus play an important role in everyday life in India. Lighting a lamp near a Tulsi plant is a ritual followed by people almost all over the country. Diwali, essentially a Festival of Lights, is all about lamps lighting up life and chasing away darkness. Lighting a lamp in a house is believed to bring prosperity, plenty and abundance to the family. Electricity has not been able to replace the traditional and emotional significance of a humble lamp in the lives of the people of India.

PROUD OF ITS CALLING -RSS

By Victor Banerjee

http://www.telegraphindia.com/editoria.htm#head3

Seventy five years ago, to this Bijoya Dashami day, the Rashtriya Swayamsevak Sangh was formed. Today, its relevance, in a society that is still caste-ridden and consumed by the subliminal brainwash of multinational commerce and globalization, is questioned by everyone that suffers under the hilarious delusion that Nehru and Gandhi were responsible for making Hindus "secular".

Distinguished editors write caveats that are always full of insight and well researched. Although by definition a caveat is a caution or warning that the notifier be given a hearing, yet it usually helps stall rather than alter a situation. Laid back individuals like myself who love to read newspapers over scrambled eggs and percolated coffee at breakfast and review it during a paid-for lunch at work, seldom act beyond discussing it while stirring the soup to cool it. In the evening, lulled by the callousness of another day of sameness, we cast the issue upon a stack in a proscribed corner of our homes, for consignment to the *kabariwalla* at the end of the month.

Eminent columnists can justly claim to know more about and have greater insights into all the problems that our societies confront. But they are not the sole proprietors of commonness. The knock at K.S. Sudarshan of the RSS and the simplistic interpretation of what the man said makes you wonder if columnists address the same people as Sudarshan does everyday. In other words, those who, in the name of a ludicrous "democracy", are conned to put a stamp on a cow or lantern or bicycle or rose to elect goons and hoodlums to Parliament, to the utter disgrace and disgust of the rest of the nation. As for the sop we continually offer missionaries, it would take no major journalistic scoop to unveil some of the detestable activities of modern-day Christian missionaries, in the name of Jesus who, given half a chance, would probably cast them out of his temple.

My cop out with such political incorrectness, like yours, is that some of my best friends are Christian or Muslim. Ask them sincerely, and they too will endorse the hypocrisies of today's evangelism and mismanagement of church properties and funds. Our leaders and the press, paranoid about the foot-in-mouth disease, are forever on the defensive: shameful of our pantheistic heathenism and caught on the self-righteous backfoot. Bollywood, for the moment, desists from depicting all Christians as deeply religious alcoholics and all Muslims as secular saviours of the community.

There is no such pussyfooting in China, England or in the United States when it comes to defending the faith in their countries. It is not considered prejudice, nor bias. However, the West

also has the proprietorship in a specific definition of "human rights" that the eastern bloc, Africa and Asia are fast learning to incorporate into their ethos if they want their bogies attached to the economic gravy train: our only priority. One never needs to condemn a faith but nor should one shy away from pointing a finger at an individual who uses it for the wrong ends or whose means of achieving an end are honestly questionable. I have publicly condemned our politicians' *rath yatra*s and their pathetic disacknowledgment of any responsibility for the destruction of the Babri Masjid, for the same reason. I also think Mulayam Singh's shooting down of unarmed rowdies was a horrific example of how little we value life.

If one flips through the pages of **Madhavrao Golwalkar's (Guru*ji*'s) *Bunch of Thoughts***, the RSS handbook so to speak, one might be pleasantly surprised to discover that most of the work is simple commonsense and morally upright. Something you can safely hand to your children. Golwalkar's book is not, and the RSS ideologies are not, nearly as inflammable and fundamentalist as is popularly dished out by respectable intellectuals to an impressionable public which has also been taught to believe that Gandhi and Nehru and other imports and clones from the British educational system are the ones responsible for making us xenophobic Hindus "secular".

Every Hindu, Christian, Muslim and Buddhist who lives below the poverty line and at the mercy of floods, droughts and cyclones will tell you that the RSS is more sinned against than sinning. I know from personal experience in Orissa and Uttarkashi that while governments were still sleeping, tucked under the warmth of ill-gotten wealth and sycophantic worship from acolytes, the RSS was out in a matter of hours, if not minutes, with organized rescue operations. Even when the fashion of "relief work" has moved on to newer calamities, the RSS continues its work silently. Every international agency, whose Christmas cards we charitably purchase and distribute, will vouch for the fact that the RSS does more work in devastated parts of India than any government agency, from Arunachal to Dwarka and Kashmir to Kanya Kumari.

Today the RSS is cursed. It is responsible for the Babri Masjid and *Hindutva* and every other item on the Bharatiya Janata Party's "covert" agenda. Anyone, who has known the RSS, will tell you that it never needed the BJP to give it muscle. On the contrary, the members of the RSS are the ones who lent *their* muscle to the BJP, when the party came begging for it in pursuance of its "nationalistic" ideals and an *akhand Bharat.* Atal Behari Vajpayee was an RSS member first and a Jan Sangh man later. Just because he writes and speaks Urdu, as most of his generation do, a language quaintly associated with Muslims to the sad cultural detriment of the Hindu Hindi-speaking belt, Vajpayee is given the stamp of approval for being a liberal and not a fundamentalist Hindu. Claims he can justly endorse in spite of his longstanding allegiance to the RSS that we consider a plague.

Shyamaprasad Mookerjee and Vallabhbhai Patel are fondly referred to as "great nationalists" that Sudarshan has no business identifying with because they had nothing in common with what is preached now. Shyamaprasad was a close friend of the family and I know different. The fact is if Patel had toed the line then and not spouted much more than Sudarshan dares utter today, Nehru would not have become prime minister. Perhaps Sudarshan should have referred to Veer Savarkar who led the Hindu Mahasabha and was the first to define the Sepoy Mutiny of 1857 as a "war of Independence" but was also manipulatively shunned by those aspiring to govern a partitioned India. He was later prosecuted by the Congress and tried for Gandhi's murder, for his was a "cult

of violence", like Aurobindo Ghosh's and Subhas Chandra Bose's. To get Savarkar and the rest of the accused, the government extended the "Bombay Public Security Measures Act" (yesteryear's TADA), with retrospective effect, to cover Delhi, before constituting the special court. That the partition of India killed more people and caused more bloodshed than the tragic holocaust in Europe is something seldom talked about or remembered, even though its ramifications shed innocent blood to this day.

So what about our favourite whipping boy, Nathuram Godse? A small quote is bound to leave you thinking. After his retirement, **Justice Khosla,** who presided over the appeals after the high court had passed its sentence, wrote the following: "The highlight of the appeal before us was the discourse delivered by Nathuram Godse in his defence. (He made no appeal against his conviction under Section 302 nor against the death sentence.) The audience was visibly and audibly moved. There was a deep silence when he ceased speaking. Many women were in tears and men coughing and searching for their handkerchiefs. I have no doubt that had the audience of that day been constituted into a jury and entrusted with the task of deciding Godse's appeal, they would have brought in a verdict of *"not guilty"* by an overwhelming majority."

The history of the 20th century will soon be researched and history books revised and it won't need the BJP or the RSS to do it. A century later our great grandchildren shall have a better perspective on what is happening in India today. They shall judge us fairly and squarely. God knows we must try and develop a greater understanding amongst the peoples who constitute "the wonderful mosaic that is India", if we expect to receive a pat on our dead backs for having moved the country forward and made the right choices.

Yes, we can all get hot under our collars and argue over this piece like the seculars we profess to be. We can call ourselves nothing else for fear of its colour sticking to us. Eventually, we shall collapse on our steaming sofas with a Rooh Afza on-the-rocks to nostalgically contemplate Balmoral's reaction to Diana's affairs and Charles' greying temples or ruminate over a ubiquitous cigar and a night in the Lincoln Bedroom.

Let us stop throwing stones at the Missionaries of Charity one day and the RSS the next, when we don't lift a finger ourselves to serve humanity. Donating money is easy, giving time a whole different ball game. **Wheareas the RSS may stick in your throat every time you mention it, find an alternative for all the good work it does.** Try and create an army of disciplined selfless social workers, like it has, in a world where the ladies of the "Time & Talents Club", the "Spastics Society", the "Friends of the Trees", the "World Wildlife Fund" and the "Calcutta Foundation" flounder for support and membership even though they are embryonically connected to all the moneybags that buy and sell India's future every day.

I know I am sticking my neck out by writing to remove some of the misgivings that we nurture about the RSS, but as Nathuram said to the jailer before he was hung, and I quote, "I must have a cup of coffee before I swing". So it's on to breakfast and today's headlines. Death tolls? Mere statistics; our nation's caveat? Ignore it.

And, by the way, for those who might be interested, I am not, nor was I ever, a member of the RSS.

Indian Chess: From Origin To Fame

By K. R. Banerjee

http://www.newsindia-times.com/sports05.htm

It is believed that the game of Chess originated in India about 500 A.D. and was popularly known as "Chaturanga". Literally, "Chaturanga" in Sanskrit, is a combination word of "Chatur" meaning four and "Anga" meaning parts or divisions representing "Ratha, Gaja, Turaga, Padadi" (Chariots, Elephants, Horses, Foot troopers or Infantry etc.), which were the four divisions of the Army of Indian Kings. From India "Chaturanga" moved East to countries like China along with Buddhism before it traveled West to Persia (Iran) where it was called "Chatrang". From there, through Arabs, who called it "Shatrang" it entered Western Europe via Spain by 9th or 10th century. The details of its transformation to the modern Chess are not known. In olden days mainly the elite in India played Chess.

The Nomenclature and some of the rules of movement such as for Pawn and King's special Knight move and Pawns' promotion rules of Indian "Chaturanga" seem to have been retained in medieval Chess played in various countries especially of the East.

The modern Chess spread to India during the past 60 or 70 years. Until then, the people in the villages and the towns played the traditional Indian Chess. The nomenclature and rules might have varied slightly from one part of India to the other because of the different languages spoken in different parts of the country.

Chess Board: The Board is the same as in Modern Chess. In modern game the Chessboard is placed in a manner such that, the right hand corner is white. In Indian chess there is no such rule and the board can be placed in any way.

Placement of Pieces: In modern Chess the White Queen has to be placed in White Square and the Black Queen needs to be placed in Black square i.e., both the Queens face each other and both the Kings also face each other. In Indian Chess the White King and White Queen can be placed either on d1 or e1 and the Black Queen faces White King and black King faces White Queen. The rest of the pieces are placed as in modern Chess.

Movement Rules: Rules of movement of Queen, Rook, Knight and Bishop are identical with those of modern chess. The King has the privilege of one knight movement i.e., the King can move once like a knight before it is forced to move under check. This privilege will be lost even when the King is under check. However, if the King moves on its own, the King retains this privilege. In another variation of this rule, the King loses this privilege if it is checked even once, though it may not move.

Castling: The Kingside and Queenside castlings of modern Chess are totally absent in the Indian Chess. The special privilege of the King to make one movement of Knight is used for castling on King's side resulting in " King Indian Defense'.

The two-step initial movement of a pawn is totally absent in Indian Chess i.e., the Pawn always moves only one step in Indian Chess. Consequently "En Passant" is also totally absent.

Promotion of Pawn: When the Pawn reaches 8th or 1st rank it can get promoted only into the corresponding piece e.g. Pawn reaching a8 or h8 or a1 or h1 can become only a Rook etc. Pawn reaching d8 or e8 or d1 or e1 can become a Queen. But the number of pieces on the board at any time cannot exceed the original number i.e. two Rooks, two Knights, two Bishops and one Queen. Also if the white Bishop is live, pawn cannot be promoted to get another white Bishop and similarly one cannot have two black Bishops. Pawn reaching 8th or 1st rank remains there immovable till a corresponding piece is killed and the pawn is converted into that piece. Pawn in d or e files are, therefore, more valuable than Pawns in other files. The rest of the rules are as in modern Chess.

A King left with only Pawns cannot be checked. The implication of this rule is that the weaker party with only King and Pawns can dodge defeat by not moving Pawns and moving only the King. The stronger party has to completely restrict the movement of the King, force the pawns to be moved and when a pawn gets promoted try immediately to mate the weaker King.

When a King is left with only one piece that piece is called "Mastu" and that single piece cannot be killed. So the single piece goes on attacking and killing opponent's pieces with immunity. This is a situation, which has to be avoided by stronger party. If the single piece happens to be Queen or Rook, the weaker party becomes all too powerful. " Single-piece situation" with Queen or Rook has to be avoided at all costs. So pawns in d or e or a and h files reaching 8th or 1st ranks have to be stopped by blocking their advance and forced into c or f or b or g files by sacrificing a piece if necessary and blocking King's movement before hand.

The Indian game also has two basic variants called " Maddat mari" and "Mara Mari. In the former version any piece having a support cannot be killed and therefore the game can take days to complete. In second version a piece can be killed even if it has support like in modern chess.

Conclusion: The development in Indian game is slow because of the absence of two-step initial movement for Pawns. The development into traditional King Indian defense is also slow compared to modern Kingside or queenside castling.

In modern game the stronger party becomes even stronger and therefore the weaker party resigns without fighting to the end. In Indian Chess the end game rules give the weaker party many privileges to fight back and even win against the stronger party and it is a "Dharma Yudham"(or righteous battle). It definitely needs more mental skills to win or defend in Indian chess.

The prohibition on checking the King if it is left only with the Pawns and the "Mastu" situation are worth examining quite seriously by research minded chess players for future modification and incorporation in modern chess.

DISTORTED HINDU CULTURE VS. RELIGION

Dr. Krish Bastola from UK.

There has been a confusion, in the general people, about Hindu culture and religion. The Hindu culture (in fact, a distorted Hindu culture) is generally regarded as Hindu religion. This idea is prevalent, in both the Indian community, as well as the Europeans. We have also seen neo Hindus, many of whom call themselves Vedantist, wearing sari and dhoti. Culture is defined, in the oxford dictionary as the custom and civilization of a particular group of people. Religion is defined as belief and worship of a superhuman controlling power, specially a God or gods. The Hindu religion can be divided into two parts, one the philosophical and the second spiritual. The philosophical part influence more upon the common people where as the spiritual part influences more on the ascetic people.

Hindu religion has generally been seen as one, which advocates, caste as per birth, untouchability, sati, disdainful look at others as mlechha, self imposed superiority, cocoonification of the society, by creating a myth that crossing the seas, would make their member impure, worshiping many gods (said to be polytheistic) of different shapes (multiple limbs) and forms, and worshipers of animals, including cow and worshipers of idol. It is also said, not to support charity work. Dowry is regarded as part and parcel of Indian culture. We will discuss about these later. Those who have read the higher scriptures and are impressed by them, like to detach themselves from the 'problems' associated with the above list and call themselves Vedantist, as mentioned above. While on the one end, we have some Hindus, who have read the scriptures and think that the philosophy and spirituality it entails, is the highest of the high, and are proud of it, on the other end, they at times come, face to face, with the members of other religious groups, who consider the Hindu religion, not more than a culture. This concept of Hinduism being a culture, rather than a religion, is especially prevalent, in the hungry Christian Missionaries. It is clear from the above fact that the disparity is simply because of a communication gap.

CULTURE IN GENERAL

Culture is nothing, but an agreement, by majority of its members, to follow certain pattern, in the form of social standards, which in essence could be right or wrong. Because it is agreed upon, by the majority of people, it tends to stick to itself, unmodified, and goes on, from generation to generation. This does not happen, in just any society, it happens in intellectual groups like the scientific community, as well. If you take a new theory to the scientific community, and if it is against the norm of their scientific belief, then they will more likely reject it. The new theory will be accepted only after 10 years or even more. Culture changes according to the new knowledge available. Culture is affected by the following factors

1. Prevalent philosophy and spirituality.

2. The prevalent knowledge especially of science and technology.

3. Prevalent customs- As handed down by previous generation, which has not been challenged, because its members, rightly or wrongly, believe that it is the right thing to do, hence follow without questioning. It thinks that it is good for the society at large and tries to resist any new ideas.

4. Imposition a. From within- while some members of the culture may know that, what they are practising is wrong, but do continue to practice it, because it suits them. Some of the members, may add to the culture to benefit themselves. b. From without- in this the culture is imposed, from other

culture, by means of worldly power. In case of India the imposition of Islamic and Lord Macaulay's western culture are good examples.

When the factors affecting the culture changes, the culture has to change. Culture is often affected by, what I would call a madness of purity. When a culture gets refined to a certain extent, its members think that it is the best and its members great. This feeling of greatness is also seen in the form of the members believing themselves to be pure and descendents of great people or god. The madness of purity, could extend into its own people, with some members in the culture, thinking that they are better or purer than the others, or their group is purer than other group in the society.

EXTERNAL INFLUENCES IN INDIA
A. Islamic influence-

Ever since the Afghani Muslim King invaded India in the early part of the second millennium; Islam has had a tremendous influence over the Hindu culture, to the extent that it deprived Hindus of their past. As taught by their religion, and as recorded by Muslim historians, the devout Muslims tried to do away with the practices of Hindus and tried to convert them to Islam. In this process, while many Hindu temples were ransacked and destroyed and those who did not agree to convert, were killed or shunted out in the form of slaves. Those who agreed to convert became second class Muslims, with the Arabs being the first class. Sadly they also destroyed the educational institutions and burnt thousands of precious books. This later act has resulted in a virtual cut-off of the present with the past, leading to great difficulty in understanding the pre Muslim Hindu culture. The other problem is that we do not know much about the progress in science and technology that Indian had achieved, before the invasion. It is surprising to have the copies of books by the great Aryabhata and few others. It can perhaps safely be said that Islam had some influence on Sikhism.

B. European influence

During the British raj, Lord Macaulay introduced British education, which was specifically designed to denigrate Hindu culture and make the Hindus pro British. When the British arrived, the Hindu culture was already in a distorted form. Lord McCauley's programme was very successful. Because the Indian civil service was made glamorous, and a sort of gold standard, the Hindus went crazily after this materialistic gain and did not bother to study their past. The most obvious example of change, is the change of dress of Hindus from dhoti to trousers. While the Indians learnt about liberty from the colleges and perhaps that helped in the liberation of India, the education system created a group of Intellectuals, who refused to study their own culture and philosophy. Because the language of study and communication was English, the Hindus forgot about Sanskrit. While it is said that this language unified Indians, in the fight against the British, I wonder, what happened to the unifying effect of Sanskrit, specially from the point of view that Adi Sankara, used that language, to argue the cause of Hinduism, with the religious teachers, from Kathmandu and Kashmir in the north, to the tip of India, in the south. It has to be mentioned here that Hindus did have a system of civil disobedience against the rulers who were not giving them their rights. They did not need to rely on the teachings of the west. The dowry system is regarded as an import to India from Europe, during the Raj.

HINDU RELIGION-

It is difficult to define Hinduism or a Hindu. But it is safe to say that who ever believes in the authority of the Vedas and worships the Hindu deities, is a Hindu. This means that any teaching, which is against the teaching of Vedas, is not Hindu teaching and therefore not Hinduism. Any teaching, which does not believe in God, can be regarded as a philosophy and not a religion, because the very definition of religion, as stated above, says that religion means belief in God. Some atheistic Indian philosophies are only philosophies and not religion.

Taking subjects from the list of impressions given above, I will try to explain about them to show their reality-

UNTOUCHABLITY-Hinduism says that God lives in every human being, in the form of atman (soul) and

not only that, in animals as well. In fact the whole creation is an extension and emanation of God and God is present in every living thing. A gnani sees the same soul in man, woman and animal. There is no difference between these for a gnani, because they are all divine. Of course Hinduism strives to produce gnani. Because a divine being cannot be untouchable, a person who believes in untouchability can never be gnani. From this, it is clear that in the eyes of a Hindu, there should be nothing called untouchablility, Whichever book teaches against this is not teaching Hinduism. There are only 4 vernas described in Hinduism the 5th 'varna' (untouchables) is not Hinduism.

EDUCATION OF WOMEN According to Ashvalayana Grihya sutras, wives have to recite Vedic verses along with their husbands. Vedic text mentions a female rishi Visvara. Panini mentions Kathi, Kalapi, and Bahvici as intellectuals. So whichever book says women do not have access to Vedas is not teaching Hinduism. During the Vedic period there was equality of sexes.

Hinduism says that women also have to strive for salvation i.e. mokcha. Mimamsa Sutra (chapter 6, Pada 1) says that women are entitled to the performance of Vedic Rituals, even independently of men, and to the best of their ability, because they also have a desire to attain salvation, just like men.' There are four paths of salvation i.e. the path of karma, gnana, bhakti, and finally the path of yoga. In order to acquire gnana, one has to study books or get knowledge by other means. From this point of view alone, there should be no restriction to the education for woman. These women did not have any restriction to education. In the Upanishads we find the great women intellectuals like Gargi and Maitrey debating with the famous Yagyavalkya. We have Tamil saint-poetess Auvaiyaar, whose aphorisms (Aatichchuvadi) initiate Tamil lessons for children at the earliest stages The poetess Aandal of Tamil Nadu, who was one of the intellectual of her time, who among others, wrote "Tiruppaavai", which is sung at every Vaishnava temple in TN. The great intellectual Bharati, a women, was the JUDGE when Adi Sankaracharya debated philosophy with Mishra. So any book which claims that women should not have access to the scriptures is against the Vedic practice, as well as the reality and hence not Hinduism. Hindu society is the only society in the world which can show women intellectuals like the ones mentioned above. Other religions only show, dedicated but not intellectual women, as women did not have the opportunity to be teachers or indeed have access to higher knowledge. In fact the British parliament passed a resolution in 1543, not allowing ordinary women to read the Bible. Even in this modern era the catholic Church refuses to give recognition to their ability.

VARNA/CASTE - Caste is the word created by Portuguese missionaries, in the 16th century, to describe the Hindu society and denigrate it. It has nothing to do with varna, which divides society into 4 functional classes, which constitute the 'colours' in the spectrum of society.

It is difficult to imagine a world without class. People are divided according to money or property they have or according to what they do, like doctors, lawyers, engineer, minors etc or by other parameters. In the modern society education is given priority and who ever attains higher education, is given more respect. In fact society has always believed in that concept. The varna system is similar. It is designed to give knowledge the most importance. It is not surprising that knowledge of spirit is given more importance because, the religion believes that spiritual salvation is the ultimate human goal. It has to be noted here that when I am talking about importance, I am talking about importance in normal circumstances. In exceptional circumstance a sudra doing a physical work may be more important than the learned one, like the digger in Mahabharata. Time is the most important factor. At times same action of a person may be important, while at other time it may not be so.

A brahmin means that he is able to think rationally and hence is able to teach what he has learned, including religion. Since, he is the one, who knows and teaches spirituality and since spiritual salvation is given the first priority, it is no wonder that brahmins were given highest respect.This is only so long as he does that function. If he fails to do that then he looses the respect. People in any society, in the past, have tended to follow the training and profession handed down to them, by their parents, like the black smiths, goldsmiths etc. The influence is so strong that despite access to free knowledge nowadays, we can still find doctors children opting to become doctors. Because the siblings of brahmin, kchhetriya, vaishya and sudra opted for their fathers profession, it was taken for granted by the distorted Hindu society that the sons would become what the father had become and were said to be of that cast. This is simply an assumption, and the distorted Hindu society got so carried away that it automatically took

the son of a brahmin, as a brahmin and son of a kchhetriya, as a kchhetriya and so on. Though in its undistorted form, especially in Mahabharata, a son of a brahmin was called brahminputra and not a brahmin. Krishna himself gives several reasons why Arjun was a kchhetriya. Though birth was one of the factors, and we cannot ignore genetic and environmental influences, it alone, did not make him a kchhetriya. It is foolish to think that a son of a brahmin, will think rationally, without qualifying and if that happens then it is a distorted Hindu culture and not real Hindu culture. The varna of a person almost entirely depends on training and circumstances. A brahmin's son or daughter does not entirely become a brahmin just by birth; he or she has to go through training to become one. According to the training received, the person becomes a member of whatever varna (like the being a member of a group of doctors, layers etc.) varna changes according to training. We can site several examples. Narad rhishi was a son of a maidservant, which essentially means that he was a sudra but he became a brahmin. Similarly Biswamitra became a brahmin from the so-called sudra. The Nanda kings were sudras, they became kchhetriyas later. Parsuraam became a kchhetriya by action. Karna was socially a sudputra but by his training and action he was a kchhetriya. More over these varnas are emotions and qualities which are expressed in different forms in different circumstances by the same individual We are all made up of the 3 gunas the satwa (brahmin) the rajak (kchhetriya), the tamas (sudra) or mixture of these forming vaishya. Because of aptitude and training, one of these gunas are exhibited and the person is identified accordingly. A single person becomes a brahmin when he imparts knowledge, he becomes a worrier when he defends, he becomes a vaishya when he is dealing with money and sudra at other times when he is doing a laborious work. Say for example the brahmin acharyas acted as a kchhetriya during mahabharata war. They showed their rajas guna there.

It is not right to equate social class determined by economics, to varna, which is determined by action and training, rather than financial status. In a society governed by economics there are two categories of people, one is the governing group and the other is the working (governed) group. The governing group, which is the privileged one, forms the higher class and the working group, which do not have the privilege and the money, but help the governing class attain privileges, forms the lower class. Since the governing class does not want to come into contact with the working class directly, because of various reasons, a group of people come in the middle, to make contacts, between the above mentioned two groups and transmit messages, akin to pimps in the sex industry. This group constitutes the middle class. So the functioning of an economic society in practice should give only 3 classes. When a society promulgates 4 class of people, then its reason should not be taken as economic. Rather this curious misfit should be studied deeply to understand it.

The distorted caste system of India, fitted into the concept of, class struggle and exploitation, of the communist philosophy, whose followers were heavily influenced by, the European Karl Marks and along with it, the propaganda of the non existent, Aryan invasion of India. The later in an interesting way, fitted more into the concept of divide and rule, which became an effective armamentarium used by the British to rule the vast and diverse land of India, despite the Indian followers of Karl Marx, believing that the cast system, was because of social exploitation of the Dravidians by the invading and victorious Aryans. The enigmatic 4 classes instead of 3, as discussed earlier, was somehow explained. It was suggested that the Aryans of central Asia already had brahmin, kchhatrias and vaishya and they got sudras from the Dravidians. It is difficult to imagine the central Asian society being developed and victorious without labourers. Varna system of Hinduism has nothing to do with class struggle, as its origin. It is wrong to say that brahmans were rich and they were the exploiters. The fact is that many brahmins were living in poverty right from the Mahavharata period (Guru Drona). Prof Elst makes it clear when he says 'They assumed that the Brahmins commanded the same authority and power as the Christian clergy did in their own time in Europe. The reality is that the Brahmins in India never commanded the authority and power of the Christian clergy. They controlled neither the economy nor the army, both of which the clergy did in Medieval Europe'.

EQUALITY- I am yet to see a society, which is equal in every respect. If the communists tried to create that sort of society, they created some people, who were more equal then others, effectively creating an unequal society. There are always people who have privilege while others simply don't. The members of soviet politburo, who have power and privileges, like the tycoon in the west, is nowhere equal to the labourer in the cold Siberia, who is not different from homeless vagabond in the capitalist west. Giving a word comrade and feeling contented that we are all equal, simply defies intellect. If every human being

was equal then what is the use of education to be somebody in the society? What is the use of hard labour we do to make ourselves trained in certain fields? What is the point in competing to be better than others? If everybody was equal then surely there would be no stimulus for education and training to be exceptional. There would be no concept of respect because respect comes out of being exceptional. People work hard to be doctors layers and engineers partly to be respected. If they are seen as no more then labourer than what is the point in going through all that training? Mao tried to do just that during his cultural revolution and failed miserably. It is clear from above that it will only lead to social malaise.

Equality under law has two expects, one is the equality in proving people guilty, the other is giving equal punishment. The modern society follows equality in proving people guilty, it does not always follow equality in punishing people. A person who is learned or who is supposed to have protected but did the opposite will almost certainly get worse sentence than other. Hindu society believes the same principle as exemplified by Yudhisthira's decision to punish the brahman the most when he commits the same crime, as the uneducated sudra. People expect good conduct from learned people, if they do not show that they get worse punishment. When we talk in terms of equability in training we must talk in terms of equality in basic training and not advanced training. Say for example a doctor cannot demand an equal treatment to compete in postgraduate engineering training nor the reverse. When I say basic training I mean equality in basic education. When the education branches, there is nothing called equal opportunity for every one in general term as shown above. Equal opportunity means the opportunity available to all people irrespective of class, race, sex etc after certain basic criteria are met. Those who are outside the criteria cannot claim for equality of opportunity in that particular field.

IMPORTANCE OF VARNA- The Verna divides people, in a society into 4 broad categories. It only attempts, to divide people into certain categories, sharing some common ethos, establishing an identity, like division of students into several houses, in school, which gives them their added identity. In the class we also find students in different groups, like group A, B, C etc according to their achievements in the class. If a society in a school can be comfortable, with that classification, why cant the general society? I am sure the reds would not suggest, even with their jaundiced views, this is exploitation. Identity is very important, that's why the African Americans, are searching for theirs. Some of the Indian natives, who believed they were made civilised, by the Europeans, unlike proud Hindus who refuse to be called natives, who believe that they were already civilised in the past, are getting a jolt in the west, and are looking for their identities. A person with a lost identity is not very healthy to the society. Being in a group creates a bond between the members of that group, which leads to stability in society. Intermingling of people of that group, makes understanding easier and the bondage stronger, at the same time each group compliments other group as part of a spectrum- in fact that is the meaning of varna. There is no society in the world, which has not got different groups of people, according to function for example, the western society also has, the teaching group, the defender group, the business group and the labourer group. What Hinduism has simply done, is recognised those groups and emphasised their function, in the form of duty, so that they do not deviate from that duty. It is something like the fact that members of the diverse animal kingdom were always there along with their unique characteristics, it is only the scientist, who came and divided them, into different species and genus and other groups, according to their characteristics, so that the animal kingdom could be understood properly. I don't see any harm in doing that. I think the Hindus should deeply study this concept of varna.

The teaching, which says that one becomes of certain cast by birth, is not what Hinduism teaches.

SOCIAL (CHARITY) WORK- It has been said, by the propaganda machine of the missionaries that Hinduism does not support charity work, and that only they do. This is a myth, because niskaam karma, which essentially means, charity work is not only recognised as a good work, but one of the very works to attain salvation. Considering whether Hindu society ever had that principle, one can look at the writings of the Chinese traveller, Hsuan Sang, who says that there was a lot of charitable work in ancient India. The charitable work by the Hindus, in India, are plenty but are not seen, because, unlike the likes of mother Teresa, these, not so fortunate Hindu charity workers, do not have excess to the media. Since the Internet has given the privilege of a voice, the pious activities of Hindus, will not remain unnoticed all the time.

Whereas, with the renaissance of Hindu society to the undistorted Hindu society, gives privilege to the born Hindu sudra, to train and become a brahmin, the converted Indian Muslim always remains a second class Muslim, because he has to be born, as an Arab, to be a first class Muslim and because of the modified Catholic religion made, not so long ago, by the Pope, by his infallible power of Vatican authority, the converted sudra always remains a Vatican sudra.

ACCESS TO TRAINING- While Manu smrity denied born Sudras as well as women access to higher training, we all know from the above examples that Narad, and Karna did have excess to education and training in the past. Yes Hinduism gives excess to training to all people if they want to. The fact that many of the poets in India came from the humble class does say something.

SATI- The Vedas don't mentioned about it. It did however come as a part of Hindu culture. It is a sacrifice made by a woman for her dead husband. There are several expect of sati-

1. A sacrifice 2. A suicide 3. Form of suicide. 4. Social gold standard 5. Direct compulsion 6. ? Male sati. Let us discuss about them.

Talking about sacrifice, we also think in terms of soldiers sacrificing their lives for the sake of the nation, and the Islamic Jihadists sacrificing their lives for the sake of God (Allah). We have also come across, glorified and romanticised stories, of Romeo and Juliet, Hir Ranja and others who sacrificed their lives, for the sake of their respective loved ones. It seems that when we are looking at sacrifice only, then anybody who wants to sacrifice what ever they have, cannot be said to be bad. The cause of sati seems to be love and devotion to husband and spiritual gain. While sati is definitely a suicide, does it fall in the category of right to suicide? There is a hot discussion in the west, about euthanasia, in which a person having an incurable disease is allowed to die, with the help of a doctor. This is a painless suicide by a patient, who has incurable disease and does not want to live any longer. Other form of suicide is, when pious people feel that it is time for them to go to the spiritual world and fast onto death. Since the later two types of suicides, are not violent, they do not generate so much of mass hysteria as sati does. Looking at the mode of suicide, we see that fire has always been very important to the Hindus. It seems to be a connector or a medium between the materialistic world and the spiritual world. In a religious sacrifice butter and rice are thrown into the fire, which constitutes a Homa. In sati the woman throws herself into the fire. This in a way could constitute Homa and may have certain spiritual benefits. The act however looks very violent and scary. The indirect compulsion manifests, when this practice is regarded as a gold standard, of a pure society, and those who don't attain that standard are at risk of being frowned upon. It should not be a social standard because, as stated above, that creates an invisible compulsion to reach that gold standard, which many may not wish to. If a woman is directly pressurised, to do that, then it is totally unacceptable and has to be condemned. The other thing to look at is, is the sati in the right state of mind to decide what she is doing is right, when her husband has just died? Even though the act of Sati may have some spiritual benefits; because of the violent nature of the action, it cannot be accepted as a gold standard in a society, simply because, there are other far less violent and less painful actions which will give, equal or even more, spiritual benefits and one also should not forget the fact that the two souls are two entities, with their own karmas, and don't unit even after a combined death, however the depth of love. She could express her love and devotion to her departed husband, by doing special pujas or other pious activities to further the spiritual journey of her husband.

When we are talking about sacrifice, what about a male sati? A sacrifice by man for a woman. We have some instances where males have sacrificed for females e.g. king Edward of UK abdicated his throne for the sake of his love for Edwina. We also have love stories like Romeo and Juliet and others in which males have sacrificed their lives for females. These deaths have been glamorised and in a strange way have been accepted.

MLECHHA- In the past the distorted Hindu culture, regarded people outside India, as mlechha- meaning dirty. There are instances, when the Indian priests refused to teach the British people, how to learn Sanskrit and the local king had to order them to teach. Hindus regarded, crossing the seas, would make them impure and who ever crossed the seas and came back, had to go through a process of

purification. This is all a part of madness of purity and cocoonification, which Manu, mistakenly proposed. In fact he has recommended his people to live in certain areas, even of India. This is against the principle of Basudhaiba Kutumbakam, which means world is a family. It can therefore safely be said that this teaching of Manu was against Hinduism.

The culture becomes part of a civilisation which thinks that their civilisation is the best and are proud of it. However every refined culture, had this sort of feeling, for example the Japanese and the Europeans, which in its turn, is basically due to lack of communication and a rather disinterest in learning about other cultures. In fact as recently as 30-40 years ago this was seen in the UK, when the local whites did not wish to learn about the Muslim people and their culture because of arrogance, which made intercultural understanding difficult. Some of them now say, that it was their mistake, not to learn from the other culture.

CHILD MARRIAGE- The practice in ancient India was swayambara, which essentially meant that the women selected her husband of her choice. This, in its turn, meant that she showed liking for the opposite sex, making her a grown up woman. There seems to be no room for child marriage. It seems that child marriage started as a compulsion in the Hindu society and followed as a culture thenceforth. It has perhaps rightly been suggested, that this custom started, during the Muslim invasion, when it was fraught upon by families to have an unmarried adult woman in the house, less she be sexually abused. Since this child marriage does not involve the concept of swayambara this is not according to Hinduism hence anti Hindu.

ANIMAL WORSHIP (RESPECT)- While looking at it straightforward, it seems rather strange and even dumb, but it behoves a great philosophy inside. Greatness of Hinduism relies amongst others, on the fact that it teaches us to respect. A civilisation cannot develop without the concept of respect. The simple social phenomenon is, the more we bow to respect, without arrogance, the more we are called gentle, wise and civilised. It is the wise people who create civilisation. Arrogance and hatred lead to war and hence is not part of a great civilisation. There is absolutely no harm, in respecting any thing or any body, but there is a great danger to the society, if we disregard animals calling them beasts, specially when the present civilisation, recognising the potential of monkeys, and have started asking for special rights for them. Before I go any further, I would like to say that there are two forms of puja that Hindus do; one is that, we do it, to show respect, which the Hindus are duty bound to do and don't ask for favours and the other is puja, in which, we ask for favours from the higher soul which we adore and have an awe of (Please read the article Is Hinduism a polytheist religion?). While respect is a mark of civilisation, Hinduism not only limits that respect to humans, its greatness goes even further, to show respect to the animal as well as the plant kingdom. Looking at it from the above point of view, this Hindu civilisation looks very much advanced, wise and caring While an insensitive and uncivilised person, may not see the deeper side of this phenomena, a sensitive and civilised person, who goes deeper than the superficial layer, can easily discern the depth of the philosophy. If the beholder cannot see the beauty, it is not the fault of beauty. One of the animals we show our respect, by doing puja, is the cow.

Why do the Hindus specially respect the cow? They respect the cow because it gives milk and its products, which is necessary for our existence. It’s mowing sounds exactly like the sound of Om. The sound of Om is extremely important to the Hindus because the Om is the ultimate mantra and through it the universe emanates. The cows dung has been used to clean the floors of the house without any ill effect. Its urine has medicinal value. Its hide is used in many ways. It is like a mother who always gives. The reason why we don't eat beef is simply out of respect towards this motherly figure, as a mark of civilisation. It is something like the western people not eating dogs flesh. While we know the importance of dog in the modern family and how it is almost regarded as a member of the family, giving rise to huge problems during divorce, Hinduism has always respected it’s quality and respected it in the form of puja. It has to be clearly said here that these animals are shown respect for as a part of a duty of members of a civilised society, but are not done to achieve anything-material.

WORSHIP OF MANY GODS WITH SEVERAL LIMBS-Hinduism has becomes defensive in two issues, one is the caste system and the associated untouchability, as discussed above, and the other is that, it is identified as a polytheistic religion, like the Greek and the Roman religion, which in the past were thoroughly denigrated and conquered by Christianity. Since Hinduism is regarded as polytheistic, by the

Abrahaminic faiths, it is not studied deeply and hence not taken seriously. It rather erroneously is believed to be inferior, by being polytheistic, and hence inviting a compulsion, in the eyes of the missionaries of the Semitic faith, for a change akin to the Greek and Roman beliefs. The sense of past victory gives them further impetus.

Because of the many gods (deities) in Hinduism, it has been taken for granted that Hinduism is a polytheist religion. Hinduism is not that simple nor is Christianity. As suggested in my article 'Is Hinduism a polytheist religion?' Hinduism is a monotheist polydeitic religion, where as Christianity is monotheist bideitic religion. The study of Hindu monotheism is unparallel in any other religion. To regard Hinduism, as the Greek and Roman polytheism, is a big mistake, which underscores the need, for a deep study of this great religion.

The Hindus believe and worship the all-powerful and infinite God, who is the 'creator' (emanator), sustainer and destroyer of, everything in this universe, including evil, hence truly omnipotent. This should be enough to reveal the monotheist part of Hinduism.

Every human being is after material or spiritual gain. A person may be lucky enough to progress and get materialistic gain, (not spiritual) and may rely on themselves for further progress and decry external help, majority of the people in the world are however not so lucky. People need help for both material and spiritual gain. This leads them to seek help from somebody, who has the power. Help is so important in people's lives that even Muslims have been going away from their rigid beliefs and coming to take both material and spiritual help from some Hindu gurus, who have been bestowed with spiritual powers and it is also well known that Christians, both in India and in the west, have been taking the help of Hindu Astrologers for material gains, even though decried by their religious institutions. Deities (gods) have that power to change our lives. People pray to these deities because they have an adoration for the deity and have a feeling of awe about it. While Christianity has 2 deities (Jesus Christ and the Holy Ghost), Hinduism has many. This is because many of these deities lived in Satya yuga and others attained power through the techniques of yoga and meditation which is only available in Hinduism. This simply gives Hindus the chance to choose their deity according to their temperament.

People seem to be surprised by many hands of these deities, because we human beings normally have only 2 hands. It is very important to note that they are not bare hands, in the sense that each hand is carrying something. These objects, which they carry, have some meanings. There are two ways to look at it; one is that these hands are symbolic in nature, while the other is it being, real spiritual anatomy. While we know an expert surgeon can modify an anatomy of a person, so much that he effectively creates a new organ (e.g. sex change operation) it is not surprising that these deities, who have supernatural powers, and who can change our destiny, being able to extend their spiritual anatomy, to create new limbs. Not understanding the depth of message it contains and labelling it devil worship, is simply ignorance, hence darkness. People can only be enlightened, for that matter get out of darkness, as we have been taught in our school days, by proper study of the matter or through yoga and meditation, which is available only in Hinduism.

DEITY WORSHIP VIA IDOL/ICON- The statue of Jesus Christ is said to be icon and the statue of deities in the eastern religions are said to be idols. While the Christendom believes and dislikes, the eastern religion worshiping idols, they themselves worship statues. In fact Muslim worship the stone in Kaba. The stone building of Kaba has got so much religious importance to the Muslims. Almost all people worship deities or the invisible via the statues or figures made from non-living matter. There is no point in denigrating just Hindus for that. It is better we understand why we all do that.

As suggested in my article, 'Image worship: right or wrong?', visual stimulus is very important for us. It is said to be better, if one is deaf rather than blind. If we see figure of someone that we know, it makes us appreciate the whole personality of that being represented by that statue or figure. In Hinduism there are 3 ways in which we worship the deity via the statue or the figure.

1. We worship the deity via the statue which has got shakti (power) embedded in it which, could be natural e.g. Pashupatinath temple in Kathmandu, or shakti impregnated by Gurus who have shakti.2. We make a special call (abahana), during the puja, to the deity to come to the statue and then we pray

to the deity.3. The statue acts as a powerful and symbolic representation of the deity concerned. (Please read the article Image worship: right or wrong?) While Christianity uses the 3rd method for its prayers, Hinduism uses all 3.

DOWRY- It has become apparent now that this was imported by the Indians from the Europeans rather than being endogenous to India.

WHO WINS? - As we have noted above, society is very much influenced by the development of science and technology as well as other branches of knowledge. Science progresses in A+B+C fashion, it does not progress in geometrical progression. For it to progress it needs communication between minds, for which freedom of expression is essential, otherwise one will reach the fate of Galileo, in the hand s of Catholic church. Once this is provided, other thing it needs is, eccentricity of thought i.e. people, who want to change the prevalent rule, rather than follow it. Once these two forces are provided, along with the means of communication, then discoveries are the norm rather than exception. This is what is happening, all around us, every day. A society, which asks its people to follow strict social rules and not to transgress them, will not develop, where as the cultures which allows, free thought and expression, always wins. Whichever society, which facilitates change, wins. The distorted Hindu society, following Manu, opted for status quo with purity, as a theme and gave importance to moral codes and going further, even limited international travel, creating followers rather that eccentric inventors. Looking at the history of India, the inventors seem to be concentrated in the first millennium, despite the above factor, which perhaps loudly says that one cannot stop geniuses, and not much in the second, because of subjugation. In the second millennium the number of European inventors is far more than Indian. This is because of several factors coming into play, including; 1.The Indian discoveries were transmitted to Europe, via the Arabs, during the first millennium, forming a good base for further progress in Europe. 2. When Europe was enjoying the discovery of Guttenberg's printing press, which increased the number of thinkers and increased communication between them, the Indians had their books burned and were under subjugation, effectively making it a dark age. In addition, in that period, there was a rise in free thought in Europe, specially with the French revolution, which triggered a process of eccentric thoughts, challenging the orthodox beliefs and the society went against the dogmatic church, which in its turn facilitated invention and progress, as per A+B+C... A culture or a society needs a stimulus. Like the European culture received a jolt from the Protestants and the French revolution, the distorted Hindu culture got the intellectual jolt from the British raj. When the Hindus got the jolt, they were under the British. As second class citizens, they could not produce ‘Hindu’ scientists, of their own because they were taught in western methods, consequently they could not learn about the Indian philosophy, science and technology, including Vedic mathematics. Yes, this mathematics is so easy that if there were no computers, this science of mathematics would have made the life of student of maths, so easy. Sadly despite the so-called Indian independence, the Indian science and technology of the past, has still remained unread. It is even hopeless, when people from the west sincerely ask the Indians to do research, on the ancient Indians scientific achievements, like the Pushpak Biman, and the Indians don’t.

Indian people eat with their hands. It is said that it is European culture, to eat by knife and fork and it is Indian culture, to eat by hand. Many Indians may not know, but the fact is that the British used to eat with hand, before 16th century, essentially meaning that before that century, the culture of Britain and India was the same, as far as method of eating was concerned. The only difference is that while Indian faithfully followed its culture without question, the British culture opted for a change. Everybody knows how the cultures all over the world, including the British culture, has been changed over the last 200 years, with the development of science and technology. Since culture just represents patterns of human activities, now the number of activities have increased so much that even culture is divided into many branches, like the culture of travelling, the culture of reading, the culture of eating, playing etc. And these cultures change so much.

Dress -- The suit has become an international standard. It is not that the British made the dress overnight; the present suit is the end result, of so many changes in the dress of the British. This can be appreciated if one visits the museums. This is because they followed the concept of change. While India did not change its common dress, dhoti, for the last 5000 years and suddenly changed to trousers and shirt during the Raj, without much thought and continued post independence. It is true that despite

Ambedkar being educated in USA, hence being moulded by the American civilisation, he did not have the power to influence the constitution of India. Indians regarded USA, as uncultured as opposed to the British, who were regarded as cultured and the latter's constitution was followed, instead of the American. While America was regarded as uncultured, just 50 years back, now the Indians are following the Americans and it is not surprising that now the Indians want to change the constitution of India. The only reason USA is the world leader, and the centre of philosophy, is because it followed the concept of change in every sphere of life. If it had resisted the change it would not have been what it is today.

The world has started to recognise the fact that Indians are intelligent people. This is evidenced by the success of Indians in the west, especially in the USA where Indians are competing, almost neck to neck, with the Jews. Why did not these intelligent people produce more scientists like the other groups of people? I think the answer is that they did not have a suitable environment, to show their talent, because of subjugation before independence and political misadventures, pseudo intellectualism and emotional decision making, in the not so free India, post independence. It is important to note that the Indians who were called natives in the past, after coming to the suitable competitive environment of the west, have come a long way to prove, and be part of, the cream of the western countries, in some ways. It is not surprising, that the ancestors of these intelligent people could produce such great civilisation. On the other extreme, it is rather surprising that some western scientists, especially in Scotland, want to do research on, inferiority in intelligence, of naturally tanned people, compared to white people.

MANU'S LAWS- It is difficult to say, who Manu was historically. What is however important is, his book or at least the book identified by his name, contains things, which go along with the teachings of the Vedas, as well as against it. It is difficult to assume that a leaned figure like him, could agree to things which are are against the teaching of the Vedas. He seems to be regarded as an authority, in sociology and religion. Some of the passages of the book, give reference to other authorities, which clearly shows that he was not a divine figure. Like all authority figures, he has made mistakes, if not in writing them himself, agreeing to the rules. It has been said that some passages in the book have been added during the Islamic rule. This is open to research. This is the first time; perhaps in the history of India that hard working Indians have got billions of dollars. I am sure some of this will go to research of Indian history.

His book had an everlasting and powerful influence over the Hindu culture. It has been followed without question. Why did it have such a powerful effect continuously since a long time? Hindus have basically been divided into ascetics, who are in search of God, who did not have a cast out of birth and accepted that all are equal and who tried without much success, to change the society, and others who lived a family life, who enjoyed the social privilege given to them by the Manus laws, and who did not want to change their ways and the law. While freedom of expression given by the religious philosophy was used to give rise to different sects (schools of thoughts) which concentrated on spirituality, the society at large, did not utilize that freedom, hence did not change much, but rather followed what was handed to them and asked others to follow. While some followed the laws, thinking it to be right, other were more concerned about purity who made further changes to the law making it further strict.

WHERE MANU WENT WRONG-His teaching of untouchability, varna according to birth, confinement of women to house not allowing them and the born sudras, to study higher scriptures, advocating his people to live only in certain areas of India and disrespect to foreigners, was distinctly against the values of Hinduism.

What Manusmrity did was, to create followers with rigid laws, giving them the concept of purity. Hindus adhered to it and cocooned themselves both physically and metaphorically. This went against inventions, which needs people to come out of the cocoon and think differently. In Europe people came out of their own cocoon, in the second millennium and thought differently; that is why we have so many scientist in the west. It is said that India has changed more in the last 5 years, than in the last 5000 years. Yes India has actually become freer only after it recently opened its gates. Because of this second jolt, India is in a confused state, at times, not knowing how to deal with the young generation.

PURITY-It is a very relative term and hard to define. Pure gold could be an impurity when you are trying to eat with the hand, which has got gold dust. You have to wash the hand before you can eat. Purity is something, which is useful to us at that moment of time. We know that after we eat, the food goes

through a chemical reaction in our alimentary tract and it comes out as stool. This we regard as dirty, because it has a bad smell and the rest. Where as the honey produced by the bee, goes through the same process and comes out, but it is called pure because of its taste and other value.

Man cleans his skin and thinks that he is pure. He simply cannot be pure because he has what he considers impure faeces in his rectum just 2 inches from his anal skin. So if a Manu's brahmins body, for that matter anybody's body, is laden with faeces, he has to be impure. If he says that he is pure and the untouchable is impure and should not touch him, on that account, is simply wrong. The Manu's brahmin touches his faeces everyday and after simple washing of his hands he becomes pure. He on the other hand, if touches an untouchable, has to do a process to purify himself. This is illogical and nothing but madness of purity and not Hindu at all.

WHAT TO DO WITH CULTURE-A culture should be no bar to change. A culture that resists change and cocoonifies itself cannot develop. A culture should produce new editions, to follow, all the time. USA is producing a different culture, every decade. The old culture has to be put in museums and libraries, with respect. It should be respected, because by doing so, we are respecting our forefathers. Secondly, it will be available for later research, leading us to understand our past generations and learn from theirs as well as our mistakes and correct them; effectively constituting a process of audit.

WHAT TO DO WITH MANU SMRITY- Now the Hindus have come out of the cocoon, they have to think rationally. They have to take the authoritative books like the Vedas, the Upanishads and the Gita, compare their teachings with that of Manu smrity and see the difference, in their teachings. If Manu's teaching is against those books, then they have to be excluded from Hindu religion. In fact Hindu religion considers, individual to act according to his own dharma, determined by his own circumstances, therefore the rigid rules of Manu which is for population at large should be done with. While it is clear from the above discussion, is that, Manu was not a divine figure and that he has gone beyond the teachings of Hinduism, his prescription of result, both positive and negative, as per action, cannot be trusted to be divinely sanctioned; therefore have no importance. In fact his teachings has given the untouchables so much of problems, which led these innocent souls, to live a secluded and a measurable life, over the centuries. It has done enormous damage to the cause of Hinduism, in terms of society and religion. In fact, in this cruel world, the identity of Hinduism has been the Manus laws, rather than the Vedic and the upanishadic philosophy. It is only, some great thinkers in the west, including professors, lawyers and doctors, who went beyond Manu, to study the Vedas and the Upanishads and realised this great religions, true spirit and converted to Hinduism.

MODERN CULTURE-Over the last 200 years there has been three factors, which has had, and is having the greatest impact on every culture- 1. Tremendous progress in science and technology- which gives both knowledge and better amenities, including better communication tools for tele and travel. 2. Education of women-- giving rise to change of the accepted role of them, in every culture. Women's education has had a huge impact, in the change of cultures, of the world, in which the laws had to be re written. People are now, only gradually realising, the power of women. Some intellectual men are openly saying that they want to be a woman, in their next life. Sex is given so much of importance, woman are in demand. Religions like Christianity and Islam, which did not advocate education of woman, are having a tough time, because women are asking for their rights, including the right to lead the religious masses. Though it is called post feminist period, I would still call it a transitional period. Women power is yet to be seen. When its power is fully manifest, men will have to work harder otherwise their suicide rates will be much higher.3. Freedom of thought and expression- this has given a huge impetus to research. While in its traditional form i.e. newspapers, magazines and journals, one may not be able to express ones views at times because of big brotherly attitude of some, Internet on the other hand has provided the most effective tool for expression and propagation of views. This will lead to explosion of inventions and true interpretation of facts, both historical and others.

Now the concept is more of a global culture - a youth in the USA may be affected by the same Internet culture, as a Japanese or for that matter an Indian. The science and technology has helped to create a global culture. Global effect of stock market crash in one part of the world is another factor. The chicken tikka mashala has become the most popular food in the UK. This shows that the culture is exchanging and learning from one another. In practice, however, the most important factor guiding the present

civilisation, seems to be finance. Yes this is a finance-governed civilisation. By this I mean, money associated with patent rights, which gives rise to the craze for research and the importance given to countries with totalitarian regimes, with huge resources, but less then good human rights record.

The things which may not be known to the general people, about Hinduism in the west, are the following-

1. It does not support slavery like the Semitic religions.
2. It believes in the all-powerful, timeless and infinite God, the creator, sustainer and destroyer of this universe (its monotheist part).
3. There is not only the pathway of belief and bhakti in Hinduism, for attaining salvation, as in the Semitic religions, but other pathways as well, like the pathway of yoga, the pathway of knowledge and the pathway of karma. As is clear from the above statement, people have more choice of pathways to salvation in Hinduism, and people are free to choose any one of the pathways, according to their affinity and temperament. It has been erroneously believed that to attain salvation, in Hinduism, one has to leave his/her family. Rather, as mentioned above, people can remain with their families and attain salvation by doing niskaam karma, which basically means karma dedicated to the cause of general people and not to one self.4. Belief does not play a major role in Hinduism. The followers are encouraged to use logics and the technique of yoga and meditation, to recognise the truth, rather than take things according to belief and follow the dogma.5. It is the only religion in which, for attaining material or spiritual gain, there are several deities to choose from, according to the temperament of the person. These deities at times in effect become like a very close companion, which is very much needed in the present time.6. It is the only religion, which provides paranormal evidence to assess the reality, by the person him/herself, in the form of yoga and meditation. Yes it is the only religion that gives us a chance to feel God IN THIS LIFE. People don't have to wait for after life, like in the Semitic religions, to have that access.7. It is the only religion, which prays for, not only peace in the human society but peace in vegetation and the space as well.8. It is the only religion that respects the animal and plant kingdom for their qualities.9. It is the only religion, which recognises the importance of ecological balance and identifies, respects and protects individual beings, which play part in that balance.10. It is the only religion, which says the Truth (God) is one, but people call and pray to it by many names. This ever so inclusive philosophy, which contributes to peaceful coexistence, in the world, is very much lacking in the Semitic religions. One only needs to ask the Jews, who have been peacefully living in India, since centuries. The above statement is wrongly interpreted, as all religions are the same. This is not what it means. It simply means that all religions are, attempting to reach the same God, by calling it by different names but the attempts are not the same or even similar. Some of the methods, used by some religions, are simply abhorrent. 11. It is the only religion, whose time, since creation of the universe matches the scientific view in terms of billions of years. 12. It is the only religion that has brought forward women intellectual like Gargi, Maitry and others. 13. It does not confine the sex of the omnipotent God, who can create asexual to hermaphrodite beings, to male. It is difficult go fathom, a God with penis and testes without a complimentary vagina, even in a spiritual sense. Hinduism understands God, the omnipotent, to be male, female, hermaphrodite and asexual at the same time. 14. Hinduism is the only religion that does not treat God, something like a pop idol star, believing it to be untouched by evil and not the creator of evil. Hinduism believes that everything in existence, is created by God, including evil, and also the fact that any evil, that comes in contact with God, automatically becomes pure. 15. Hinduism is the only religion that teaches us not to use extremely destructive weapons like Dibyastras, akin to Atomic bombs. It gives respect, to person, who doesn't use it despite provocation, and denigrates who uses it carelessly. 16. Hinduism is the only religion, which talks about relative difference in time at different places, similar to theory of relativity. 17. Hinduism is the only religion, which does not condemn people of other faiths, to everlasting hell. Hinduism says that every body is the creation of God and cannot understand Him condemning His own creation, in the other faiths, to everlasting hell and still continue creating people in those faiths, many of whom have no idea that the Semitic faiths exist. Hinduism is the only religion, which says, if people of other faith do niskaam karma, then they too will attain salvation. 18. Hinduism is the only religion, which does not only rely on prayer for material gain. It is the only religion, which has got the technique of Homa, to achieve many worldly necessities. 19. Hinduism is the only religion which gives us the glimpse of the future, make people aware of danger and prescribe remedies in the form of astrology. 20. Hinduism is the only

religion, which teaches us the holistic method of treatment of disease, in the form of ayurveda. 21. Hinduism is the only religion, which does not condemn its people, to everlasting hell, but gives chance for people to learn from their mistakes and still continue their further progress towards divinity. It gives us the profound concept of karma and reincarnation. 22. Hinduism is the only religion that does not, even logically, blame God for human misery. 23. Hinduism is the only religion, which provides astronomical data of more than 10.000 years ago. 24. Hinduism is the only religion, whose God is ALL POWERFUL, hence truly omnipotent, because everything in this universe, even evil, is his creation. 25. Hinduism is the only religion, whose God does not have any enemy, like the Devil or the Satan. There is no concept of hostility and hatred in the divine. Since insecurity is inherent in hostility, there is no concept of insecurity in Hinduism (there is no concept of attack of the believers of God, from devil or Satan). 26. Hinduism is the religion, which does not recognise certain race (e.g. Arabs) to be a first class member or the chosen people (Jews) like in some Semitic religions. Hinduism believes that world is a family (Basudhaiba Kutumbakam). 27.Hinduism is the only religion which gives, civilised rules governing war and the treatment of prisoners of war. 28. Hinduism is the only religion, which has great similarities, with the modern civilisation and can contribute spirituality and philosophy to it, for the latter's further progress.

Because of the above factors, I am extremely proud to be a Hindu.

To call the religion, which supports the above mentioned great ideals, devil worship, is simply ignorance, which demands a deep study of this great religion, and also demands us, not to comment about something, which is not known, merely on impression, which in its turn, is taught to us in schools, during our childhood days The only difference between a Hindu and a non-Hindu, is that, the later has not had a chance, to read the Hindu scriptures. Where as, I understand, the things I use for my day to day living (tooth paste to dress), as well as my education, has been given to me by the west and I have respect for the west, I am very proud to be a Hindu, because I feel, as my ancestors did in the first Millennium, I can give the west, what my forefathers taught and practiced, as stated above and help the west or the world in general, attain world peace, understand the cosmos better, realise supernatural forces in this life through yoga and meditation, help respect the animal kingdom and the other players of the balance of ecology, decipher the encrypted knowledge in the Vedas including astronomy and mathematics and finally delineate the origin of mankind and its future course. I am sure, if I could do this, it will earn a great deal of respect, for, not only the people of my kind, which it will certainly do because the social law says one who gives is always respected by the receiver, but also for people of all races through the philosophy of Basudhaiba Kutumbakam.

Is Hinduism a Polytheist religion?
By Shree Krishna Bastola -
Editorial for 4-12-2000
http://www.hinduunity.com/editorial.html

Traditional belief in the west is that the Semitic religions (Christianity, Islam and Zudeism) are the monotheist religions and the eastern religions including Hinduism and Buddhism are polytheist.
Oxford dictionary defines polytheism as, belief in or worship of, more than one god (please note that god is spelt with a small g). It also defines god as, "a superhuman being regarded and worshipped as having power over nature and human affairs" and the example it gives is "Mars was the Roman god of war". Monotheism on the other hand is defined as," the doctrine that there is only one God" (please notice that it has a capital G) and that it defines God as "the creator and the ruler of the universe in Christian Jewish and Muslim teaching". Please notice that there is no mention of Hinduism here.

The dictionary is 1995 edition and not 1930. The oldest book in the world ,Rig Veda, says that "there is one God but people call it by different names". While Adi Sankaracharya says that ekoh bramha dutia naasti which means there is one God and no second God. God is generally regarded as Omnipotent , Omniscient, Omnipresent, Timeless (no beginning or end) and Creator of the universe. The ancient Hindu seers agree to that; in addition they also tried to discus why God created the universe, coming to the conclusion that God is incomprehensible .From the above discussion it is very clear that Hindus have not yet been able to apprise their belief to the west or the west is deliberately suppressing the truth. I would not like to discuss it further because I believe truth will win satyameba jayate. In fact I would say the study of God in Hinduism is unparalleled in any other religion.

The dictionary defines monotheism as 'belief in one God' whereas polytheism is defined as 'a belief in many gods'. The ancient Greeks and the Romans had gods for various activities. They regarded one of those gods as greater than others, but they did not have what we understand now by God. Concepts of monotheism and polytheism arose when Christianity came as an alternative religion to the Greeks and the Romans, whose religion was rightly called polytheistic. Now when you come across a religion which has got both God the supreme being and various other gods (deities) i.e. Hinduism, it doesn't fit into either category so easily. To understand Hinduism..... Let us delve into human feeling and relations and how they progress from a lower level of friendship to the highest level of Moksha.

Assume that two people (souls) meet. This meeting, if goes positive, will lead to friendship or if

negative, will lead to hostility. Lets talk about the positive side here and say that they liked one another and the bond developed into friendship. If this friendship becomes deeper it become love. When love becomes deeper and respect is added to it , it becomes adoration. When adoration becomes deep and awe is added to it becomes a prayer (puja) in which the lower soul asks for favors from the higher soul. When love increases further the person continuously thinks about the higher soul and concentrates on the higher soul, this is called meditation. When meditation is very deep, various channels are open and it will lead to samadhi and then to final Moksha if God pleases.

Hindus know that every human being is the manifestation of God. Some Hindus say that Hindus pray to gods because they are the manifestation of God and that ultimately they are praying to God. A gnani can do that but for average people that would mean thet one person should pray to other, because all people are manifestation of God. This doesn't and should not happen. As I pointed out in the previous paragraph, there is certain criteria for that which has to be met before one prays or does puja.It is not essential to pray to God only. The above thought seems to stem from the fact that only God should be prayed (as some religion claim), which as we shall see later is not the case.

Before we talk about gods in Hinduism let us try to understand a little bit of Hindu culture and what praying is:

Hindu culture has always visualised living and non living things into those that have beneficial effect , which are called divine qualities and those that are harmful to us , which are called devilish qualities. Any thing that has divine quality is praised and respected to the extent of deifying it e.g. Cow (We do not eat beef because of respect of this animal, which has such divine qualities , contrast that with Muslims not eating pork which is out of devilish (negative) thoughts, that it is dirty), and Soma rasa. When a person says and does namaskar he is saying 'I salute the divine qualities in you'. This is also what we do when we are doing puja. The idea in puja or prayer is to praise the deity , along with Namaskar, so that the deity becomes happy and grants what the prayer wants.

Let us try to understand what god (deity) is in Hinduism and why they are so many of them:

The various gods are known as deities in Hinduism. These deities have done something good for the mankind when they were here in previous ages, now they live in their abodes. They were many of them because they lived in what we called satya yuga which is the age when beings were in exalted state, by virtue of their exaltation they had spiritual powers. Their action were divine in nature and were awe inspiring. Because of the exalted age they were many of them , that is why we have so many deities each deity has his or hers own temperament . There is nothing wrong with them being so many .Neither you have to know about all of them nor you have to pray to all of them. You can pick and choose any deity which suits your temperament. It is soothing to know that we had so many souls who did good work. Compare that with present age of Kali in which we are all in a debilitated state and have no spiritual power and have to struggle a lot to attain such power. They (deities) have the power to change people's karma (you will know that many Gurus who are sidhas do have the capability to change the peoples karma to some extent, so it is not surprising that the deities who lived in satya yuga to posses power to modify peoples karma).

It has to be clearly understood here that these deities are mere elevated souls they do not have the power to create the universe and they do not have the others powers of God e.g. omnipotence , omniscience etc. Therefore these gods (deities) are in no way equal to the God (permeshwore). It has been erroneously written 'Gods' instead of 'gods' while writing about Hinduism by many Hindu and non Hindu writers. God is singular, because there is only one God. It cannot be pleural.

Lets take an example of Lord Ganesha and see the status that he has:

When one goes through the puranas one will find that Ganesh has done a lot of good work for the people with his spiritual powers He has killed several demons, who were giving lot of trouble to the people at that time, creating a sense of awe in the people. He also is brilliant and he showed his brilliance (divine quality) to his father Siva and got the boon that he should be prayed first in a puja. He is also easily pleased . That's why he is so popular. Since he was of satya yuga he had spiritual power by which he could change our Karma. It is important to remember that he is not a God but a god (deity).

Since Hinduism have the distinctly monotheistic component and it also has many deities it should be called MONOTHEISTIC POLYDEITIC religion.

Let us see what Christianity and Islam really are:

In Christianity, there is Holy Trinity, in which there is God , Jesus Christ and the Holy Spirit. It has been a problem in Christianity that people are mostly praying to Jesus and forgetting God. Here you'll find that the God in Christianity has the power to create the universe and is omnipotent , omniscient etc. but Jesus Christ and Holy Spirit do not have that power, but have created a sense or awe, and are therefore prayed , so they should be called gods or deities. So as per the above discussions Christianity should be called MONOTHEISTIC BIDEITIC religion. Now the colonial power is gone things should be defined as per logic and truth rather that force and arrogance.

One can wonder, why Jesus is more popular then God. I think one of the reason is people can identify themselves with Jesus, the man, and hence have developed a special bond with him. It is something like the appearance of a person from minority community in the TV who can be identified as a role model for the people of that community. This is why I say there is nothing wrong with worshiping deity despite some religions not allowing it. In Islam, there is a sura (Al-ahxab 33:56) in Koran in which Allah says "Allah and his angels are praying on the prophet, o believers pray on him(Mohammed) and send him utmost greetings" by which Islam should be called MONOTHEISTIC MONODEITIC religion, but because other Koranic passages which specifically dictates that only Allah is worthy of praying, the prayer of Mohammed either did not start or died in course of time. It should be noted here that while Muslim follow and live according to the rules of Koran to be near God and the Christians talk of quiet contemplation for the monks to be near God, the Hindus talk about deep meditation and realisation of the spirit (truth) when they are living at present and not only after death.. One can easily understand which is the greater form of worship as specified in passage dealing with progress of human relations, from low to high.

Is praying to a deity (god) a bad practice?

I don't think so. As human beings we are in need of things and therefore we ask for favors .This is a natural human reaction. We go to the person who has got the capacity to do things for us, to ask something (various lobbying groups). Similarly people go to church or temple to ask the deities to do us favors. It is amazing to see people bonded with their deities. This gives them a sense of security, peace and a feeling of someone with you, if nothing else. This itself is the very thing we need in this age because many people do not trust anybody, have nobody to rely on and feel so insecure, loosing their mental peace. In Hinduism you have many deities with various temperaments and nature, so you have the luxury of choosing and bonding with the deity which suits your nature. You don't have to know all of them and pray to all of them. While Christians worship two deities we worship several. Gita says that people can worship the deity they like; in fact the lord will enhance bond between the two. It also says that those who go to the deities abode after death will have to return while those who go to the permeshwors abode do not have to. It must be stated clearly that praying to the God is higher form of worship then praying to the deities (gods). One should strive for the former because that is the ultimate goal. I would again say that it is not essential to pray to God; people can pray their deity and be happy.

Pagans celebrate as numbers soar

http://news.bbc.co.uk/hi/english/uk/newsid_500000/500484.stm

As the UK becomes awash with ghosts, ghouls, tricks and treats on Halloween night, thousands of pagans will be celebrating a far more ancient festival.

The pre-Christian festival of Samhain, which falls on 31 October, is the biggest event on the pagan calendar.

Paganism, which embraces a variety of groups including druids, witches and followers of the Viking god Odin, is one of the fastest growing religions in the UK.

At Samhain - pronounced "sow-en" - pagans remember their dead and look to the future.

A study in 1997 suggested there were 100,000 practising pagans in the UK, an increase of 95,000 since 1990.

The Pagan Federation says it is currently getting 100 inquiries a month from potential new recruits.

It continues to grow despite widespread prejudice - often fuelled by the tabloid newspapers - and the mistaken belief of many that paganism equates to black magic and even Satanism.

Central to pagan beliefs respect for nature, the existence of both male and female gods and empowering individuals to fulfil their potential.

Kate West, vice president of the Pagan Federation and a practising witch, told BBC News Online Samhain markrf the end of their year and the beginning of a new period.

'Remember our dead'

It is the Celtic equivalent of New Year's Eve, and is regarded as "a time of positive celebration to be enjoyed".

She said: "It is when the veil between the worlds of the living and the dead is at its thinnest and we remember our dead."

Ms West said the way pagans celebrated Samhain varied from group to group, but a feast was central to most events.

But it might also involve singing, dancing and chanting around a bonfire.

She said: "We gather together and look into the future to see what is coming in the year ahead,

perhaps with tarot cards, but we also celebrate what has past.

"We celebrate the lives of loved ones and their achievements."

Fully clothed

She said the festival fell at "a time of plenty" and feasts developed in ancient times as pagans prepared for the winter.

They would use up excess grain and other food and slaughter old animals - not as sacrifices, but because they were not expected to survive the winter.

But unlike the May Day celebration of Beltane, their fertility festival, when some pagans shed their clothes, celebrations on Sunday night will be fully clothes: the UK weather is just not conducive to such behaviour, said Ms West.

She believes paganism is becoming more popular as people seek more freedom in their beliefs.

She said: "Spiritually, people want more than the paternalistic 'I will tell you what to think and what to do' attitude.

"As a race we are maturing. We want to make our own decisions about our own morality. We don't believe in indoctrination."

A dip into spiritualism

Author: Pooja Bedi
Publication: Mid-Day
Date: August 17, 2003
URL: http://www.mid-day.com/smd/go/2003/august/61266.htm

It is virtually impossible to recount in words the

experience of a lifetime. I wonder what led me there. I tend to see a spiritual dimension in every thing that touches my life and I wonder if my anchoring Denise Johnson's documentary film on the **Kumbh Mela**, titled Vision of Faith, was part of a greater universal master plan, a calling, or was it just the opportunist in me that jumped at the thought of an organised holy dip that would absolve me of all my past sins?

Whilst I do believe that organised religions have so much to offer us, I also accept that we are ultimately responsible for our own souls. And this sounded too easy. Jump in, you're forgiven. Jump out. I mulled over it till I realised it couldn't hurt. Best case scenario, I get a clean, fresh, new spiritual start. Worst case scenario, I come back with a cold and am still left with the daunting task of undoing all my bad karma with good karma. In both scenarios, I come back with money in the bank.

So there I was, at 4 am, at the tank in **Trimbakeshwar**, waiting to film the first group of 'akhadas'.

There had been much infighting as to who should have priority to bathe at certain times and dates, and the 10 Shaivite Akhadas had come to an agreement. Accordingly, we were handed neatly printed time tables by the police with a meticulous schedule of details.

The first group scheduled at 4.15 am comprised three akhadas. The Juna Akhada, which has the highest number of sadhus and mahants and over 50,000 naga (naked) babas all over the country, the Avahan Akhada, and the Panch Agni Akhada, which is the only Brahmin Akhada. The trio is referred to as big brother, middle brother and small brother.

As the time neared, there was growing excitement. The beautiful carved stone corridors were packed with police, officials and press.

The Kushavaratah (tank) was resplendent in the moonlight. The tranquil waters of the Godavari, albeit muddy, beckoned with a mysterious luminosity. In the distance we heard the beating of the drums and chanting, and as they got closer, a reverent hush descended over all those gathered.

And then it happened. Thousands of naga babas, sadhus dressed in orange, and their mahants burst into the courtyard, amidst loud trumpets, brandishing swords and their silver Chaddi Mubaraks which are associated with their akhada, chanting Har Har Mahadev, and swarmed the four sides of the holy water.

It was an electrifying, unparalleled moment. The magnificence of this visual, the colour, the intensity of their religious fervour and the soaring energy they exuded made my hair stand on end. It left me speechless and spellbound.

The senior most mahant entered with the Bhala. Each Akhada has its own Bhala, which is given its own Bhala name and is carried in an unusual and particular style. It is considered the “real God”.

In keeping with tradition, puja of the Bhala and deity, is followed by the puja of the Acharya Mahamandaleshwar or the Mahamandaleshwar. Once the prayers were over, the president gave the signal. With cries and roars, thousands leapt into the holy waters. I was mesmerised watching them.

Some swam while others waded and dipped. The Naga babas walked about unabashedly. Maybe it was the religious zeal they came cloaked with, but nothing about their stark “in your face” nudity seemed to bother or unduly excite anyone. This country is amazing. One can really get away with so much in the name of religion.

I must add that there was extreme order in the disorder. Through all the noise, commotion and apparent pandemonium, there was heavy and effective policing. Shrill police whistles kept the steady stream of devout bathers in constant motion, ensuring everyone got in and out in due time.

They even helped escort and hold the old and infirm while they took a dip.
And then all was calm once again. The three akhadas headed to the Trimbakeshwar temple for further prayers and their offerings in the Kushavartah were cleaned out to make way for the next akhada grouping.

The Niranjani Akhada, known as the most learned akhada with the maximum number of Sanskrit scholars, bathed next with the Sagar Anand Akhada.

I was told that this is the first time that groups one and two have bathed separately. Previously, all five akhadas bathed together.

Group two arrived in pretty much the same style. This time it was enthralling too, but the impact that the first group had on us was hard to beat. And then I spotted “Dukanji”. I had the pleasure of meeting this curious, rather entertaining individual earlier in the day.

He’s in the Guinness Book of World Records and the Limca Book of Records for his moustache dance, where he balances 10 candles on his moustache and dances with it. He also swallows live snakes and pulls them back out by their tails.

It was actually hard to miss him in the sea of devotees. He had on a two feet tall circular hat, and came in robed and wielding a sword that appeared to be 2 ft wide and 6 ft long with a curved tip. He proceeded to strike a theatrical pose at the corner while the prayers were performed.

He then strode around reveling in all the attention, and finally entered the waters with his oversized weapon and swam/waded around the tank with the sword sticking out of the waters like the fin of a shark.

He emerged and headed straight for the press stand and struck fearsome and dramatic poses for the benefit of the amused photographers. His theatrics had us all in peals of laughter. All said and done, he did create an impact, adding to the bizarre visuals that confronted us, and was extremely memorable.

Procession three comprised the Mahanirvani Akhada which, apart from their tribal development programmess, has an emphasis on education, culture, medication for the poor, and has various schools of Sanskrit all over India. They were the first to introduce the post of Mahamandaleshwari for women. They bathed together with the Atal Akhada which is known to be the oldest akhada. This group came in late and there was quite a stir when their tardiness was made known on the public loudspeaker.

As they gathered around the water, the announcer kept reminding them their dipping time was up and they should head to Trimbakeshwar temple as it was time for their puja. They stood around the tank, restless and relatively silent, and we were wondering whether they would dip or not, when they got the signal and jumped in. It was a lovely sight to watch them dip as dawn broke.

It was now 6 am and our timetable showed a two-hour bathing break.

However, I was told that this time was allotted to the rival three Vaishavite Akhadas, who would probably not show up, as they preferred to bathe at the Ramkund in Nasik.

A quick cup of tea later we returned to film the Bada Udasin Akhada. It is believed that the history of this akhada is timeless and that its creation dates back to the birth of the universe. Srichand Bhagwan is the founder who revived this akhada which has established over 50 temples of Vedas all over the world. Arunji, the editor of a Nasik daily, poetically summed it up for me, “Devotion, ‘bhakti’, was born in Gujarat, grew up in Maharashtra and matured in north India. That is why maximum number of sadhus are in north India and most of those who are sanyasis belong to this akhada.”

As they swarmed the place and readied for a dip, a couple of them struck up a conversation with me. On hearing that they were bhakts of Guru Nanak’s lineage I informed them that I was his 18th descendant, and they laughed and retorted, “Then you should join our akhada and dip with us”.

Everyone was most thrilled and insisted I dip.

I had prepared myself to jump in after we had finished filming the last akhada, but this caught me completely off guard. I did a quick visual scan. Most of them had gotten out of the water and there were no naked babas at my end. With due respect to them, the thought of being surrounded by naked men in water didn’t quite hit the right spiritual notes for me.

I entered the cold water and when I was waist deep I let my legs give way below me and allowed the experience to take over. As I sank to the floor bottom, I felt this incredible energy envelope me. I was weightless, cocooned, safe and loved. I was in a limbo, suddenly painfully aware of my little life riddled with mortal fears and desires and human shortcomings and yet it seemed banal to

ask for forgiveness. I was overwhelmed and humbled by the magnitude of what surrounded me. It seemed to last an eternity and I walked out elated, exhilarated, happy, and light.

Only to be told I had done it all wrong. I had to dip three times. A dip for each: the past, present and future. Ah well! At least I had settled my past accounts.

I watched the Naya Udasin Akhada in a haze, in a state of suspended bliss. I only remember being told that it was pre-determined in 1932 as to which side of the water they would perform their prayers.

The grand finale was the Nirmal Akhada, which is the youngest and richest akhada. It predominantly comprises Sikhs and Punjabis, and even allows Grihasthis (married sadhus) into their akhada.

It has been an indelible and heady trip… a complete riot and synergy of colour, sound, emotion, thoughts and visuals. I confess that I seem to have returned with my conscious and subconscious profoundly altered.

To quote Marianne Williamson: love is what we were born with. Fear is what we learned here. The spiritual journey is the relinquishment — or unlearning — of fear and the acceptance of love back into our hearts.
The magic of the Kumbh Mela turned me, a spectator, into a believer. I was meant to have been there. It was my awakening.

(PS): I could not resist. After the last akhada finished dipping I grabbed the opportunity and jumped in again for the appropriate three quick dips. Twelve years is a very long time to wait.

Ganga
in Indian Mythology & Sculpture

By PRABHAKAR BEGDE

http://www.tourindia.com/htm/homepage.htm May 2001

We hold rivers in great reverence. The rivers are female divinities, food and life bestowing mothers. As such, they are prominent among the popular divinities represented in the works of art of the classical period.

The most holy of rivers, the best known and most honoured, is the Ganga or Ganges. She is personified as Goddess Ganga. The river rises from an ice bed, 13,800 feet above the sea level in the Garhwal Himalayas.

There are various legends associated with Ganga's descent from heaven to earth in the epics and *Puranas* such as the *Mahabharta, Devi Bhagavata* and the *Bhagawata Purana* etc.

According to the *Bhagavata Purana*, Ganga had its origin during the incarnation of Vishnu as Vamana. When Vamana measured the three worlds in three steps, the nails of his left feet were raised high. They caused a pore on the upper side of the universe. Ganga, starting from the finger of Vishnu's feet, fell in heaven and is therefore called *Vishnupadi*.

Taming of the Ganga by mythical figure Bhagiratha is beautifully depicted in the famous Besnagar sculpture, now in the Museum of Fine Arts, Boston. This sculpture belonging to the Gupta period is of about 500 A.D., from lintel of a temple at Besnagar. Here Ganga stands gracefully on the back of a *makara* whose mouth is held open by a small male figure who is depicted as taming the monster, symbolizing the taming of the Ganga by Bhagiratha. As always, she is portrayed as a beautiful maiden with lower half of her body resembling flowing water which reflects the myth that formerly the Ganga was a celestial river. The story of Ganga's descent to the plains should be viewed in this context.

Ganga is often identified with Parvati, consort of Lord Shiva, or one of the other forms of mother goddess like Annapurna, goddess of food and plenty. Ganga's form varies according to local tradition. Thus in South India she is represented as mermaid, swimming in water with folded hands, wearing a crown, and bearing on her forehead the *Saiva* mark in sacred ashes. In Bengal she is depicted as a woman, coloured white (denoting her cleansing and purifying qualities), crowned and seated on her *vahana*, a *makara*. In her right hand she holds a lotus, in her left a lute.

Ganga has always remained a symbol of purity and holiness. Even the remembrance of her name purifies devotees, a look at the river and a bath in her waters assure sanctity. According to legend,

the waters of Ganga flow into every river in India at a certain time each year; these streams then assume the great holiness of Ganga herself and the power to purify pilgrims.

The story of Goddess Ganga is one of the most important themes in Indian mythology which has inspired the artists and sculptors. The doorway of every temple in India is guarded by an anthropomorphic representation of river Ganga. In the South, Ganga usually appears on the both jambs, but in the North, Ganga is represented on one jamb and Yamuna on the other. On these portals Ganga is represented as a damsel holding a water vessel and standing on her mount, the tortoise. These celestial guardians are seen most frequently on sanctuaries dedicated to Siva. They are also often present in shrines to other deities and even appear in the Vakataka caves at Ajanta.

One of the most beautiful representations of Ganga and Yamuna flanking a doorway is from a Gupta temple in Dah Parvatiya in Assam. Indian museums have several such representations of Ganga and Yamuna personified on door jambs. Each river goddess is shown on her mount and is accompanied by attendants, one of whom raises a parasol over her head. The swans that flutter above, with garlands of lotuses or lilies in their beaks, suggest the cool fragrance of an aquatic environment.

Ganga has been represented in art and sculpture in various forms. She is seen as the celestial stream and as the triple stream, as a damsel, pride incarnate, who rushes down on Siva's head, and as the river mother feeding the children of the soil with her water of plenty.

At Elephanta, Ganga is seen on the locks of Siva Gangadhara, at Paattadakal she is depicted as a mermaid dancing on the locks of Siva which swirl as he performs the virile *tandava* dance. A beautiful sculpture of Sena period shows Ganga standing by the wish fulfilling tree, which is a symbol of heaven, with a pitcher in her hand, indicating prosperity through abundance of water.

Ganga acquired many names indicating her various incarnations, the geographical regions through which she flowed and personages with whom she was associated. These are: Visnupadi (flowing from the foot of Vishnu), Haimavati (flowing on Himavan's lap, daughter of Himavan), Alaknanda (from the 'locks of Siva'), Bhadra-soma (blessed drink), Abharaganga or Akasaganga (the celestal Ganga), Devabhuti (heaven born), Mandakini (gently flowing, the milky way), Bhagirathi or Bhagirathasuta (from Bhagirtha), Patalaganga and many more.

LORD Ganesha,Vinayaka also known as Vighneswara the important deity riding a mouse - has become one of the commonest mnemonics for anything associated with Hinduism. This not only suggests the importance of Ganesha, but also shows how popular and pervasive this deity is in the minds of the masses.

The Lord of Success

The son of Shiva and Parvati, Ganesha has an elephantine countenance with a curved trunk and big ears, and a huge pot-bellied body of a human being. He

is the Lord of success and destroyer of evils and obstacles. He is also worshipped as the god of education, knowledge, wisdom and wealth. In fact, Ganesha is one of the five prime Hindu deities (Brahma, Vishnu, Shiva and Durga being the other four) whose idolatry is glorified as the panchayatana puja.

Ganesh Chaturthi

The devotees of Ganesha are known as 'Ganapatyas', and the festival to celebrate and glorify him is called Ganesh Chaturthi.

Significance of the Ganesha Form

Ganesha's head symbolizes the Atman or the soul, which is the ultimate supreme reality of human existence, and his human body signifies Maya or the earthly existence of human beings. The elephant head denotes wisdom and its trunk represents Om, the sound symbol of cosmic reality. In his upper right hand Ganesha holds a goad, which helps him propel mankind forward on the eternal path and remove obstacles from the way. The noose in Ganesha's left hand is a gentle implement to capture all difficulties.

The broken tusk that Ganesha holds like a pen in his lower right hand is a symbol of sacrifice, which he broke for writing the Mahabharata. The rosary in his other hand suggests that the pursuit of knowledge should be continuous. The laddoo (sweet) he holds in his trunk indicates that one must discover the sweetness of the Atman. His fan-like ears convey that he is all ears to our petition. The snake that runs round his waist represents energy in all forms. And he is humble enough to ride the lowest of creatures, a mouse.

How Ganesha Got His Head

The story of the birth of this zoomorphic deity, as depicted in the Shiva Purana, goes like this: Once goddess Parvati, while bathing, created a boy out of the dirt of her body and assigned him the task of guarding the entrance to her bathroom. When Shiva, her husband returned, he was surprised to find a stranger denying him access, and struck off the boy's head in rage. Parvati broke down in utter grief and to soothe her, Shiva sent out his squad (gana) to fetch the head of any sleeping being who was facing the north. The company found a sleeping elephant and brought back its severed head, which was then attached to the body of the boy. Shiva restored its life and made him the leader (pati) of his troops. Hence his name 'Ganapati'. Shiva also bestowed a boon that people would worship him and invoke his name before undertaking any venture.

However, there's another less popular story of his origin, found in the

Brahma Vaivarta Purana: Shiva asked Parvati to observe the punyaka vrata for a year to appease Vishnu in order to have a son. When a son was born to her, all the gods and goddesses assembled to rejoice on its birth. Lord Shani, the son of Surya (Sun-God), was also present but he refused to look at the infant. Perturbed at this behaviour, Parvati asked him the reason, and Shani replied that his looking at baby would harm the newborn. However, on Parvati's insistence when Shani eyed the baby, the child's head was severed instantly. All the gods started to bemoan, whereupon Vishnu hurried to the bank of river Pushpabhadra and brought back the head of a young elephant, and joined it to the baby's body, thus reviving it.

Ganesha, the Destroyer of Pride

Ganesha is also the destroyer of vanity, selfishness and pride. He is the personification of material universe in all its various magnificent manifestations. "**All Hindus worship Ganesha regardless of their sectarian belief,"**

Myths & Tales: Curse of the Moon

Don't See the Moon on Ganesh Chaturthi Night!

It is said that anyone who looks at the moon on the night of the Ganesh Chaturthi will be falsely accused. If someone inadvertently sees the moon on this night, he/she may remedy the situation by listening to (or reciting) the story of the syamantaka jewel found in the Puranas.
Briefly, Satrajit, who secured a jewel syamantaka from Surya, did not part with it even when Krishna the Lord of Dvaraka, asked for it saying it would be safe with him. Prasena, the brother of Satrajit went out hunting wearing the jewel but was killed by a lion. Jambavan of the Ramayana fame killed the lion and gave it to his son to play with. When Prasena did not return, Satrajit falsely accused Krishna of killing Prasena for the sake of the jewel. Krishna, in order to remove the stain on his reputation, set out in search of the jewel and found it in Jambavan's cave, with his child. Jambavan attacked Krishna thinking him to be an intruder who had come to take away the jewel. They fought each other for 28 days, when Jambavan, his whole body terribly weakened from the hammering of Krishna's fists, finally recognized Him as Lord Rama.

As a repentance for his having fought Krishna, Jambavan gave Krishna the jewel and also his daughter Jambavati in marriage. Krishna returned to Dvaraka with Jambavati and the jewel, and returned it to Satrajit, who in turn repented for his false accusation. He promptly offered to give Krishna the jewel and his daughter Satyabhama in marriage. Krishna accepted Satyabhama as his wife but did not accept the jewel.
This festival is celebrated in the month of avani on chaturthi (4th) day

which comes after the new moon. It is celebrated all over India. People celebrate this day in a variety of ways. For anything to go well, we pray Lord Vinayaka. He is the first to be worshipped whenever we start anything. He relieves us from all our difficulties. He solves our problems.

Lord Vinayaka has got an elephant face and human body. He is worshipped by many names like Vinayaka, Ganesha, Pillayar, Vigneshwara, Gajanana, Ganapathy, Mooshika Vahanaa, Modhaga priya etc. He rides on an animal called mooshika(a large kind of rat).

In our houses we celebrate this pooja in a grand manner. We decorate the floor with kolams using rice flour. On that day we buy a new Vinayaka idol(made of clay). We also buy a decorated umbrella to place behind the idol. On a wooden plank, plantain leaf is placed and raw rice is spread over it. We place the idol on this and decorate with flowers and perform pooja.

Vinayaka likes a dish called mothagam(kozhukkattai). So different varieties of kozhukkattai are prepared and offered to the lord on this day. It is the special item on this day.

On the next day, punar pooja is done. This is the pooja which acts as an ending to the festival. After this we remove the idol from its place. On the next day after punar pooja, we immerse the idol in water in the sea, well or pond.

In cities like Mumbai, Chennai etc. large Ganesha idols (a bout 6 ft) are placed in common places and pooja is performed in a very grand manner. People all around worship the lord. Prasadams (Dish offered to the lord) are distributed to the people. After the pooja is over, the idol is taken in a grand procession and immersed in the sea.

For this pooja, different flowers are used. Erukkampoo(calotropis), thumbaip oo(white small flowers and arugampul(a type of grass) is very special for the lord. Different varieties of fruits are also offered.

All About Lord Ganesha
contributed by M P Bhattathiry

All about lord Ganesha

Ganesha is revered as the son of the Universal parents Shiva and Parvati, and is always honored first in most worship services and rituals. Ganesha is also known as Ganapati, Vigneswara, Vinayaka, Gajamukha and Ainkaran.

The huge size of Ganapati represents the Universe (Cosmos), and his curled trunk, the symbol OM. The elephant's head is said to represent superior intellect while the snake around his waist cosmic energy. His broken tusk is symbolic of knowledge, as it is believed that it is with this tusk that he wrote down the Mahabharata, in the capacity of a scribe, when it was recited by the sage Vyasa. The mouse - mooshikam, his mount is said to symbolize the equal importance of the biggest and smallest of creatures, in the eyes of the infinity of creation Bhraman.

Ganesha is believed to have been the scribe who wrote down the text of the Indian epic Mahabharatam as it was recited by the sage Vyasa.

The Ganesa Pancharatnam of Aadi Sankaracharya in sanskrit salutes Ganapati. The tamil works of Tirumoolar and Avvaiyaar (of the 1st millennium CE), also bear hymns saluting Ganesha. So do the Tiruppugazh hymns of Arunagirinathar of the 1st half of the 2nd millennium CE. Several of the sanskrit kritis of the Karnatic Music composer Mutthuswamy Deekshitar salute Ganapati shrines all over Tamilnadu.

Several small temples dedicated to Ganapati adorn all towns and villages of south India. Most of these are modern temples. There are several shrines to Ganesha in all Saivite temples all over south India. Ganesha is taken out at the head of all processions in festivals celebrated in the Saivite temples of Tamilnadu.

Vinayaka Chaturti is a festival celebrated in honor of Ganesha, and it is celebrated as a community festival in the state of Maharashtra, where Vinayak is held in great reverence, especially in the 8 Ashta Vinayak temples in the vicinity of Pune and in the Siddhi Vinayak temple in Mumbai.

Perhaps the most ancient of Ganapati shrines in India, is the well known Karpaka Vinayakar temple in the town of Pillaiarpatti near Karaikkudi in Tamilnadu. This temple with a rock cut shrine, bearing a collossal form of Vinayakar, is over 1600 years old.

The Ucchi Pillaiyaar temple, on top of a hill defining Tiruchirappalli's (Tamilnadu) skyline, enshrines Ganapati, who is said to have been instrumental in enshrining Ranganathar at Srirangam nearby.

Ganesh Chaturthi In Maharashtra, Ganesh Chaturthi is the most popular festival. Ganesh, the elephant faced deity is the son of Shiva and Parvati and the lord of all auspicious beginnings. He is the remover of all obstacles and is to be propitiated before any other deity. Colossal images of Ganesh are built and carried all round the city before they are finally submerged in water. The city of Mumbai remains in a feverish pitch of excitement throughout this period.

---

32 forms of Ganesha As with the 64 forms of Shiva, 32 forms of Ganapati are recognized in the Agamic scriptures.

1. Baala Ganapati - Red colored image of a four armed Ganesha

2. Dharuna Vinayakar: Red colored image of an eight armed Ganesha

3. Bhakti Vinayakar: Grey colored image of four armed Ganesha

4. Veera Vinayakar: Red colored image of 16 armed Ganapati

5. Shakti Ganapati: Red colored image of 4 armed Ganapati, seated with his consort to his left.

6. Dwija Vinayakar: White colored image of four faced Ganesha with 4 arms.

7. Siddhi Vinayakar: Golden colored image of four armed Ganapati.

8. Ucchishta Ganapati: Blue colored image of six armed Ganapati with his consort.

9. Vigna Vinayakar: Gold colored image of eight armed Ganapati

10. Kshipra Ganapati: Red colored image of four armed Ganesha bearing a ratna kumbham.

11. Heramba Vinayakar: Black colored image of ten armed Ganesha with five faces, seated on a lion.

12. Lakshmi Vinayakar: White colored image of eight armed Ganesha with two consorts.

13. Makara Vinayakar: Red colored image of Ganesha with a third eye, 10 arms, bearing a ratna kumbham, with his consort.

14. Vijaya Vinayakar: Red colored image of 4 armed Ganesha on the mooshika mount.

15. Nritta Vinayakar: Gold colored image of Ganesha in a dance posture.

16. Urdhva Vinayakar: Gold colored image of six armed Ganesha with his consort.

17. Ekakshara Vinayakar: Red colored image of Ganesha with a third eye, seated on a lotus.

18. Vara Vinayakar: Red colored image of 4 armed Vinayaka with a third eye.

19. Dhryakshara Vinayaka: Gold colored image of four armed Vinayakar, decorated with Chaamara ear rings.

20. Kshipraprasaada Vinayakar: Red colored image of six armed Ganapati.

21. Haridra Vinayakar: Yellow colored image of four armed Ganapati.

22. Ekadhanta Vinayakar: Blue colored image of four armed Ganapati.

23. Srishti Vinayakar: Red colored image of four armed Ganapati seated on his mooshika mount.

24. Utthanda Vinayakar: Red colored image of 10 armed Ganesha with his consort to his left.

25. Ranamochana Vinayaka: Crystal image of four armed Vinayakar.

26. Dundi Vinayakar: Four armed image of Ganesha bearing a tusk, a garland, an axe and a gem studded vessel.

27. Dwimukha Vinayakar: Red colored image of Ganesha with two faces and four arms.

28. Trimukha Vinayakar: Red colored image of Ganesha with three faces and six arms seated on a golden lotus.

29. Simha Vinayakar: White colored image of Ganesha with eight arms (with an arm bearing a lions face).

30. Yoga Vinayakar: Red colored image of Ganesha in the posture of a yogi.

31. Durga Vinayakar: Red colored image of Ganesha with eight arms.

32. Sankatahara Vinayakar: Red colored image of four armed Ganesha clothed in blue, seated on a lotus peetham with his consort to his left.

Ashta Vinayak

Ganesh Chaturti is celebrated with an extra measure of grandeur in the state of Maharashtra. The Siddhi Vinayak temple in Mumbai is visited by hundreds of thousands of devotees throughout the year.

Also in Maharashtra are eight temples dedicated to Ganesha, related to various episodes from the puranas and other legends - and these deities are collectively known as Ashta Vinayak.

Moregaon enshrines Ganapati as Mayureshwar (Moresh) or the peacock rider, who slew the demon Sindhu in response to pleas from the Gods.

Mahaganapati at Ranjangaon is believed to have come to the aid of Shiva in destroying the citadels of the demon Tripurasura.

Mahad enrhsines Varadvinayak (the bestower of boons), in commemoration of a legend related to Rukmangada.

Chintamani Vinayak relates to the legend of Kapila Muni and the Chintamani gem that he had obtained from Shiva.

Girijaatmaja Vinayaka is enshrined on Lenyadri Parvat, and is believed to be a manifestation of Ganapati as an infant.

Vigneshwara at Ozar is regarded as the slayer of the demon Vignaasura.

Ballal Vinayak at Pali, is associated with a legend where Ganapati is said to have come to

the aid of a young lad, who was a fervent devotee of Ganapati.

Siddhi Vinayak at Siddhatek is said to have come to the aid of Mahavishnu as he was engaged in a long battle with the demons Madhu and Kaitabha.

---

108 names of Lord Ganesha

Akhuratha : One who has Mouse as His Charioteer

Alampata : Ever Eternal Lord

Amit :Incomparable Lord

Anantachidrupamayam :Infinite and Consciousness Personified

Avaneesh :Lord of the whole World

Avighna :Remover of Obstacles

Balaganapati : Beloved and Lovable Child

Bhalchandra : Moon-Crested Lord

Bheema :Huge and Gigantic

Bhupati :Lord of the Gods

Bhuvanpati :God of the Gods

Buddhinath :God of Wisdom

Buddhipriya : Knowledge Bestower

Buddhividhata : God of Knowledge

Chaturbhuj : One who has Four Arms

Devadeva : Lord! of All Lords

Devantakanashakarin : Destroyer of Evils and Asuras

Devavrata : One who accepts all Penances

Devendrashika : Protector of All Gods

Dharmik : One who gives Charity

Dhoomravarna :Smoke-Hued Lord

Durja : Invincible Lord

Dvaimatura : One who has two Mothers

Ekaakshara : He of the Single Syllable

Ekadanta : Single-Tusked Lord

Ekadrishta : Single-Tusked Lord

Eshanputra : Lord Shiva's Son

Gadadhara : One who has The Mace as His Weapon

Gajakarna : One who has Eyes like an Elephant

Gajanana : Elephant-Faced Lord

Gajananeti : Elephant-Faced Lord

Gajavakra : Trunk of The Elephant

Gajavaktra : One who has Mouth like an Elephant

Ganadhakshya : Lord of All Ganas (Gods)

Ganadhyakshina : Leader of All The Celestial Bodies

Ganapati : Lord of All Ganas (Gods)

Gaurisuta : The Son of Gauri (Parvati)

Gunina : One who is The Master of All Virtues

Haridra : One who is Golden Coloured

Heramba : Mother's Beloved Son

Kapila : Yellowish-Brown Coloured

Kaveesha : Master of Poets

Krti : Lord of Music

Kripalu : Merciful Lord

Krishapingaksha : Yellowish-Brown Eyed

Kshamakaram : The Place of Forgiveness

Kshipra : One who is easy to Appease

Lambakarna : Large-Eared Lord

Lambodara : The Huge Bellied Lord

Mahabala : Enormously Strong Lord

Mahaganapati : Omnipotent and Supreme Lord

Maheshwaram : Lord of The Universe

Mangalamurti : All Auspicious Lord

Manomay : Winner of Hearts

Mrityuanjaya : Conqueror of Death

Mundakarama : Abode of Happiness

Muktidaya : Bestower of Eternal Bliss

Musikvahana : One who has Mouse as His Charioteer

Nadapratithishta :One who Appreciates and Loves Music

Namasthetu : Vanquisher of All Evils and Vices and Sins

Nandana : Lord Shiva's Son

Nideeshwaram : Giver of Wealth and Treasures

Omkara :One who has the Form Of OM

Pitambara :One who has Yellow-Coloured Body

Pramoda :Lord of All Abodes

Prathameshwara :First Among All

Purush : The Omnipotent Personality

Rakta : One who has Red-Coloured Body

Rudrapriya :Beloved Of Lord Shiva

Sarvadevatman :Acceptor of All Celestial Offerings

Sarvasiddhanta : Bestower of Skills and Wisdom

Sarvatman :Protector of The Universe

Shambhavi : The Son of Parvati

Shashivarnam : One who has a Moon like Complexion

Shoorpakarna :Large-Eared Lord

Shuban :All Auspicious Lord

Shubhagunakanan : One who is The Master of All Virtues

Shweta : One who is as Pure as the White Colour

Siddhidhata : Bestower of Success and Accomplishments

Siddhipriya : Bestower of Wishes and Boons

Siddhivinayaka : Bestower of Success

Skandapurvaja : Elder Brother of Skand (Lord Kartik)

Sumukha : Auspicious Face

Sureshwaram :Lord of All Lords

Swaroop : Lover of Beauty

Tarun : Ageless

Uddanda : Nemesis of Evils and Vices

Umaputra : The Son of Goddess Uma (Parvati)

Vakratunda : Curved Trunk Lord

Varaganapati : Bestower of Boons

Varaprada : Granter of Wishes and Boons

Varadavinayaka : Bestower of Success

Veeraganapati : Heroic Lord

Vidyavaridhi : God of Wisdom

Vighnahara : Remover of Obstacles

Vignaharta : Demolisher of Obstacles

Vighnaraja : Lord of All Hindrances

Vighnarajendra : Lord of All Obstacles

Vighnavinashanaya : Destroyer of All Obstacles and Impediments

Vigneshwara: Lord of All Obstacles

Vikat : Huge and Gigantic

Vinayaka : Lord of All

Vishwamukha : Master of The Universe

Vishwaraja : King of The World

Yagnakaya : Acceptor of All Sacred and Sacrificial Offerings

Yashaskaram :Bestower of Fame and Fortune

Yashvasin : Beloved and Ever Popular Lord

Yogadhipa : The Lord of Meditation

The Story of lord Ganesha's birth

Ganesha the elephant faced God is one of the most popularly worshipped forms of divinity - as a remover of obstacles and the embodiment of good luck, in the Indian system of beliefs and practices.

Ganesha is regarded as the son of Shiva and Parvati (Shakti), the Universal parents, and the brother of Skanda.

Legend has it that Parvati, created a beautiful boy from the dirt of her body, treated him as her son, and gave him the responsibility of guarding her home. Shiva, upon returning home was affronted by this lad, hitherto unknown to him. The lad, true to his word to his mother, refused to let Shiva into his own home.

An enraged Shiva sent his Bhuta Gana attendants to scare the lad and to obtain entry into his own home. The lad single handedly defeated the Bhuta Ganas in battle. A clash of egos followed, as Shiva sent several of the Gods, to fight against Ganesha and an equally enraged Parvati sent several of her attendants to fight them. In the resultant fight, the valorous lad's head was chopped off by Nandi deva, and the lad lay lifeless.

Parvati's grief knew no bounds, and Shiva sought to assuage her, by promising to bring the boy to life. Alas, his head could not be found in the battlefield. A quick fix was sought, and it was decided that the first available head would be used to bring the boy to life. Accordingly, the boy was fitted with the head of an elephant and brought back to life.

Even this did not placate Parvati, who sought that this boy (who successfully created obstacles to his father's mission) now fitted with the head of an elephant, should be regarded by one and all, as the remover of obstacles, and should be offered worship first, before any form of worship was offered to any other manifestation of divinity.

This boon granted, Ganesha, the lord of the attendants of Parvati, came to be regarded as Vigneshwara the remover of obstacles.

Where there's no will to reform, there's extinction
By Varsha Bhosle
http://www.rediff.com/news/2002/nov/23varsha.htm

Project Saffron Dollar and The Campaign to Stop Funding Hate has been an eye-opener. Say what you like but I can't help feeling admiration for the single-mindedness with which the cabal of pinkos+Christians+Muslims relentlessly attacks Hindu activism. And that's how it should be: identify the enemy and attack, attack, attack till it exists no more. At this point of time, I'm certain that, sooner or later, this coterie will succeed in making Hindus a minority in India: If not the total obliteration of Hinduism, that has always been their aim. And I, for one, wish them luck.

Wish them luck...? Decidedly! Over the last four months, I've come to the conclusion that Hindus really aren't worth the trouble, and I have reasons to think so. From August 12 to September 9, I did a 5-part series on Towards Balkanisation, listing the various fronts on which Hinduism is under attack, and the various dramatis personae in that war -- including IDRF and the anti-Hindu cabal. However, compared to what I typically receive, the mail for all five parts was so scant that I finally had to inquire whether something was wrong with the mail server (nope). And what mail I got was mainly the abusive sort from pinkos and, especially, Catholics. The Great Hindu Readership had either tired of the topic or wasn't moved by it: One memorable message said, "nice article" -- as if I'd talked about the menu in some restaurant...

Then, I wrote on Dalits, attacked "upper caste" Hindus, and picked on Brahmins. And guess what, I received an unprecedented amount of email -- far more than the base of the MORI survey. Of those who wrote in, only 10 or so were non-Hindu; almost 85 per cent declared themselves Brahmin, of which, every second mail was from the brain-dead type -- the ones who:

- gave that same old asinine explanation about caste not being a Hindu problem since the form that exists isn't endorsed by the scriptures: "The Vedic varna was based on occupation and not birth. Some people chose to be warriors" etc;
- took umbrage at the reference to the Shankaracharya of Kanchi: "You seem to thrive in this country by writing wrong stories without facts and live on a moments' glory of clappings all around -- if you are a born Hindu -- there is One watching and He will sue you";
- whitewashed Hindus' rotten deeds by attacking other religions: "There is even a code of conduct for these slaves, eg, in Jewish religious books any person who gives shelter to a runaway slave has to face death. In Islam a person can have sex with or rape a slave girl...

On the other hand we do not find any such barbarity in Hindu religion";

- deemed me a "secularist": "I think you are just one of those bitchy hypocrites who wants to make a name for herself whipping up sentiments of people who can't think for themselves";
- defended their own ilk by abusing others: "The atrocities and acts of violence that you list have been carried out by Thakurs, Jats and other upper castes like Kshatriyas. However, none of these castes get a mention in your article. But the word Bram or Brahmin? It has the privilege of appearing six times in your article";
- slammed reservations: "I am an engineer and have seen the people who got lower marks but still got admissions to the college on the basis of their caste";
- denied that casteism exists: "It is a horrible custom and it is vanishing fast. Once it was the rule in all of India, and now it is exception. There were no 'dry latterines' in the places I lived and that usually were pretty low middle class localities";
- believed Hinduism is defined by the priestly class: "If a person like Shankaracharya (who has studied Hindu scriptures), says something on Hinduism, that is the true Hinduism";
- took a bovine to be holy: "And yeah Cow is not God damn animal, it's God blessed animal who serves the society like mother. If infant's mother dies cow's milk is the only substitute for the milk."

In short, half of the educated Hindus, also prosperous enough to access the Net, are living in a state of blessed self-delusion, with no interest in understanding the dire straits that Hinduism is in; with not a sliver of sensitivity to grasp the pathos of the Broken People; with no integrity whatsoever to look within themselves and at their own kind as they look upon others; with no intellect to appreciate the non-dogmatic characteristic of Hinduism -- the very antithesis of Semitic religions. Should such people last...?

The more I ponder, the more convinced I am that everything that made Hinduism survive centuries of aggression is waning fast. Where there's no will to learn, to reform and to adapt, there is extinction -- and no species has escaped that law of nature. "All things being equal" is a neat springboard for scientific speculation, but in the real world, things are never equal: Problems, arms, methods, attacks, assailants -- all change, and radically, within a decade. What helped Hindus survive in 1600 ain't gonna work in 2010 -- and that doesn't penetrate the thick skulls of these self-satisfied, self-deluding "upper caste" dorks.

One such novel attack is Project Saffron Dollar. Its result: Sun Microsystems stated that all donations to the IDRF have been placed on hold pending a directive from the IRS; Cisco has terminated all matching donations to the IDRF; and Intel has promised to "see that they do not commit the same mistake." And what are the IDRF's sins...? According to **Biju Mathews & Co:**

- Funnelling millions of dollars every year to be used by "violent, sectarian Hindu supremacist orgs."
- "The IDRF has funded numerous relief efforts in response to natural disasters, communal violence, and other social crises. However, the distributive mechanisms utilised by the IDRF have consistently discriminated against Muslims and other minorities in India."
- "The IDRF's relief efforts are frequently divisive and have supported the further communalisation of Indian society."

- "In recent times, the organisation has raised funds for Bangladeshi Hindu victims of communal violence, Kashmiri Hindu victims of terrorism, and relief efforts following the September 11 attacks in the US."
- "In contrast, to date, IDRF has not announced any relief for the victims of communal riots in Gujarat in February and March 2002."

If you read Chapter 4: Funding Hate of the "report," you quickly realise that the only aim of the campaign is to halt the funding of the Vanvasi Kalyan Ashram, Vanvasi Kalyan Parishad, Vivekananda Kendra, Vanvasi Seva Sangh, Sewa Bharati, and Ekal Vidyalays -- ALL being educational institutions set up for the upliftment of Dalits and Adivasis. Those whom the vultures target...

Secondly, despite a long list of footnotes, almost all directing one to news reports from -- ha-ha! -- *The Indian Express, The Hindu, Outlook* and Human Rights Watch, there is not even a semblance of proof that any of these institutions are responsible for spreading communal hatred or indulging in communal violence. Was IDRF money used to pay the rioters in Gujarat or to finance any violent activity perpetrated by Hindu terrorists...? Not a word. Did students of Ekal Vidyalay commit murder...? Not a line. Only suggestions, insinuations and more insinuations! And yet, the chapter concludes with, "The documentation presented leads us to a simple and single conclusion -- the IDRF does fund hate."

Let's look at Biju Mathews -- promptly given so much space by Rediff's Josy Joseph. (Question: Why hasn't Joseph investigated Evangelical groups that collect money in the name of charity and spend it on printing tracts to convert Hindus...?)

Mathews is a fixed feature in pinkodom, often writing for puke-sheets like "Rethinking Marxism" and with a presence on every pinko website. So of course, the garden variety Hindu "secularist" has accepted him as an atheist/secularist with nothing but the good of oppressed humanity in his noble heart...

The Federation of Indian American Christian Organisations of Northern America has demanded a probe by the US Congress into IDRF and also asked the IRS to blacklist it and withdraw its tax exemption status. Meaning, World Vision, Southern Baptist, Seventh Day Adventists, and hundreds of other Christian missionary groups which seek to obliterate Hinduism from India can keep funding their nefarious activities here -- but IDRF can do nothing to offset it.

And guess who's the prime sponsor of the report: **Teesta and Javed Anand's Sabrang Communications**, of course! Take a look at their India-Pakistan friendship forum's logo on the Aman page: Observe the relative scaling of the two countries. Note the drawing of India -- with the State of Jammu & Kashmir lopped off. Not pushing towards Balkanisation...?

US corporations routinely match donations by their employees to all sorts of organisations, as long as these are registered as non-profit in the US. Such organisations include churches, temples, mosques, universities, etc. In fact, Guidestar lists 850,000 non-profits in the US, including

Evangelical organisations, and groups with links to outfits many would consider objectionable. Examples of non-profits in the US, donations to which are matched by US corporations:

- India Rural Evangelical Fellowship Inc, Park Ridge, IL -- dedicated to bringing Jesus to the illiterate masses of rural India.
- Quentin Road Ministries, Lake Zurich, IL -- "Our goal is to spread the good news of Jesus Christ to the world."
- Andhra Adventists Association, Hyattsville, MD -- "Adventist."

According to "Cisco Systems Foundation Awards Grants to Hometown Charities," the company has given grants to, amongst others, Catholic Charities Euclid Girls' Home, Jewish Vocational Services, and St Vincent de Paul Society of San Mateo County. Then, "Who Serves Sunday Dinner" at the Catholic Charities, Diocese of Santa Rosa? "Hewlett Packard Employees, Of Course!" So what's with the bar on funding a charity of and for Hindus...?

According to a report in europemedia.net, a survey taken after 9/11 found that "After the attacks, well over $120m (€136.7m) was raised online in individual contributions." Which prompted AOL, Cisco and Yahoo to launch an e-philanthropy portal called Network for Good. Are we to believe that Americans donated some of that money to Islamic charities post-9/11...?

According to Mathews, IDRF has raised funds for Bangladeshi Hindu victims of Muslim violence, Kashmiri Hindu victims of Islamic terrorism, and relief efforts following the Islamic terrorist attacks in the US. Er... what's evil about that? Does raising money for the victims of Islamist crimes amount to spreading hatred...?

In which case, why don't these dorks ask for a ban on all *madarsas* (which also receive foreign funds) for spreading hatred? Why aren't all "minority institutions" banned for spreading hatred? Just because Hindus are a majority, anything Hindus do for Hindus is tantamount to spreading hatred...? And what about the Islamists going around killing Hindus???

Such is the current attack -- one devoid of reason, bereft of honour and lacking in morality. But I still wish it succeeds! **For, if "upper caste" Hindus refuse to recognise their own perversions, they continue to shove Dalits and Adivasis into the rich and waiting arms of the missionaries. Such Hindus themselves accelerate not only the diminishing of Hinduism, but also the borders of India as we now know it. *Jaisa karo waisa bharo*...**

Towards Balkanisation, V: Adivasis

http://www.rediff.com/news/2002/sep/09varsha.htm

Towards Balkanisation, Part I
Towards Balkanisation, Part II
Towards Balkanisation, III: Missionaries
Towards Balkanisation, IV: Catholics

On Friday, September 6, The All India Christian Council accused the National Commission for Minorities of adopting "double standards," demanded that it ban the RSS' Ghar Wapsi programme in tribal areas, and slammed Vice-Chairman Tarlochan Singh for demanding that missionaries halt their conversion activities amongst Sikhs. According to the council, "tribals belonging to Christian and other faiths are being forcibly converted into a militant brand of religion followed by organisations such as VHP. The move is designed to divide the tribals along religious communal lines and to create friction amongst them. In Gujarat, this directly led to large-scale violence against Muslims in tribal areas."

It's amusing to see how the council gets a bee up its duct when the converted tribals revert to their original way -- which way is debated not only by evangelists, but also brainwashed Hindus. The missionary panic is palpable; why else would they allege that Christian tribals are forcibly converted to Hindutva? Thing is, Hindutva reconverts the converted to Hinduism -- and that's why it is Enemy No.1 globally.

On Wednesday, September 4, *The Indian Express* published a report from Amritsar, in which the VHP's Ashok Singhal was quoted as saying, "Godhra happened on February 27 and the next day, 50 lakh Hindus were on the streets. We were successful in our experiment of raising Hindu consciousness, which will be repeated all over the country now." The report added, "Singhal also spoke glowingly of how whole villages had been 'emptied of Islam,' and how whole communities of Muslims had been dispatched to refugee camps."

Now, there are few people I loathe more than Ashok Singhal and Praveen Togadia. Therefore, the question of defending them does not arise. Nevertheless, I did find it extremely strange that not

PTI nor UNI nor IANS -- in fact, not a single independent news agency that hovers around these worthies for their quotable quotes provided reports against which I could verify the *Express* dispatch. Stranger still, the Chandigarh-based *Tribune* reported that Singhal "exhorted Hindus to unite to strengthen the roots of Hinduism," expressed dismay over the "discrimination" meted out to Hindus, and declared that "for the first time that the tolerance level among the Hindus had breached." No mention of "successful experiment" -- as in "Hindutva laboratory."

The Hindi *Amar Ujala*, a Delhi-based paper, had just one complex sentence on Gujarat, which had Singhal saying that after the Godhra incident, lakhs of Hindus united and nearly 4,000 villages were emptied of Muslims, and that for the first time, Muslims instead of Hindus had to go to refugee camps. No mention of "successful experiment" -- as in "Hindutva laboratory."

On Thursday, September 5, *The Hindu* and *The Pioneer* reported the Congress' demand for Singhal's arrest for his confession about the "experiment" -- which both newspapers attributed to "reports," ie, the *Express.* And then, the paper that's been conducting a witch-hunt against the BJP waited two more days before publishing an editorial based on its own report about the (unverifiable) "successful experiment." Something stinks big time...

I've no doubt that Singhal spewed his wishful, macho garbage against Muslims. But "Hindutva laboratory" isn't something these Einsteins could organise even if they wanted to. For, to accomplish that, malevolence ain't enough -- to work on that scale, one also needs intellect. Which some pinkos and missionaries do posses, and thus make legions of Hindu "secularists" swallow the "animism" shit and express shock at the tribal uprising in Gujarat.

Hindus -- not the don't-know-my-ass-from-my-mouth type -- do not accept the view that tribals are non-Hindus; and that Christians, Muslims and Hindus have an equal right to offer their religion to them, as then NCM chairman Tahir Mahmood claimed (*Hindustan Times*, Jan 28, 1999). Mahmood also cited census reports to support his claim: "Appendix C to the census report of 1991 gives details of Sects/Beliefs/Religions clubbed with another religion. According to this annexure, no tribal community has been clubbed with the followers of the Hindu religion in the report."

Whether Adivasis are Hindus or not has always been a question of great controversy.

The Niyogi Commission's *Report of the Christian Missionaries Enquiry Committee MP, Nagpur, 1956* (Vol I, Part I, Chapter I) states, "The Missionaries have throughout claimed that they are not Hindus. A continuous attempt has been made by these organisations to foster a sense of separateness amongst the Tribes from the rest of the Hindus. Speaking about the separation of the aborigines from the mass of the Indian population **Gandhiji** remarked:

'**We were strangers to this sort of classification -- animists -- aborigines, etc, but we have learnt it from the English rulers.**' To the question put by Dr Chesterman whether Gandhiji's objection applied to areas like the Kond hills where the aboriginal races were animists, the unhesitating reply was, '**Yes, it does apply, because I know that in spite of being described as animists these tribes have from times immemorial been absorbed in Hinduism. They are,**

like the indigenous medicine, of the soil, and their roots lie deep there'." (I wonder what our Gandhivadis have to say now.)

Whatever the Adivasis may have been originally, there's no doubt that they were gradually absorbed into the Hindu fold -- just like the pagans of Saudi Arabia and northern Africa were into Islam, but only many, many centuries earlier. So does that give Hindus poaching rights over Arabs...? The Niyogi Report states, "Where a tribe has insensibly been converted into a caste, it preserved its original name and customs, but modified its animistic practices more and more in the direction of orthodox Hinduism. Numerous examples of this process are to be found all over India and it has been at work for centuries."

Besides, what's the difference between Hindu forms of worship and the Adivasis' "animism" anyway? Don't Hindus worship trees on Vat Savitri, snakes on Nag Panchami, and cows everyday? In 1891, **J A Baines**, the Census Commissioner, considered as futile the distinction between tribals who were "Hinduised" and those that followed a tribal form of religion because, "every stratum of Indian society is more or less saturated with Animistic Conceptions but little raised above those which predominate in the early state of religious development."

Tell me, how many Hindu Gods and Goddesses can you name...? Even if you believe that each God is a mere form of the One Reality, how many forms of, say, Durga, can you name? Have you heard of Zanai? Well, She's a Bhosle *daivat,* and the tribals of that area of Satara district, too, worship Her. **Ms B Nivedita**, of the Vivekananda Kendra at Kanyakumari, writes, "The missionaries called the Gods and Goddesses of these [*north eastern tribal*] communities 'spirits'... First introducing and then popularising the use of 'spirits' for the *Devi-Devata* of these communities, the missionaries started their campaign for conversion. The people were told, 'You do not have God. You worship only spirits. What you have is only primitive ideas of religion and a bundle of superstitions. If you want to be saved then follow the Only True God'."

But why did the 1991 census make the anti-Hindu distinction...? Really, you shouldn't ask stupid questions when you jolly well know the will of a political class and bureaucracy steeped in Fabian socialism and manipulated by frankly-Red historians. Till 1901, all communities -- like *nagarvasi, gramvasi, vanavasi* -- were listed as Hindus. But in 1901, the census officers were directed by the British government to mention the religion of Adivasis as "animism."

Thing is, the census officers kept complaining that it was nearly impossible for them to decide who was an animist and who was a Hindu, since all worshipped God in many forms. Thus, in one census, a community was "animist" and in the next it was Hindu, or vice versa. Finally, the government directed the officers to enter the name of a community as the name of its religion. *Voilà*: the religion of the Santhals became "Santhal," that of the Nagas became "Naga," and so on. After that, deriding each "religion" became easier for missionaries following the policy of Divide & Convert.

But, no matter what manipulations followed, the British just couldn't distinguish between Hinduism and "animism." In the census of 1901, **Sir Herbert Risley** observed that

"Hinduism itself was animism more or less transformed by philosophy," and that no sharp line of demarcation could be drawn between them as the one melted away into the other (*The People of*

India, 2nd edition). In 1931, the census commissioner, **Dr J H Hutton**, admitted that the line between Hinduism and tribal religion was difficult to draw and the inclusion of tribals within the Hindu fold was easy (Census of India, 1931, India Report, Vol I, Part I). The deputy commissioner of Amravati, Mr Stent, sent a note to the census officer saying that the educated Indian officers maintained that Gonds, Korkus, Bhils, Gowaris and Banjaras were Hindus, and that he himself conceded that when members of these tribes settled in a Hindu village they became Hindus. He commented on the tendency of Hinduism to absorb the religion of other people, and also pointed out that the aboriginals returned themselves as Hindus... (Census Report, Central Provinces and Berar, 1931, Volume XII, Part I).

Then why did the British persist with the scheme? The Niyogi Report states, "It is not easy to find any sound reason for isolating the tribal people from the Hindus in view of the repeated admissions made that the animistic or tribal religion was hardly distinguishable from the Hindu religion. The mystery is solved when we come to examine the Missionary activities within these tribal areas." Those activities form a book, bits of which I'll give you some time.

How missionaries lull stupid Hindus can be seen from the census of 1941: That year, for the first time, heads were counted community-wise instead of on the basis of religion. That is, a tribal was classified merely as one who belonged to a scheduled tribe despite his being a Christian. Result, the all-India figures for Christians were shown as 6,040,665 -- which was less by 256,098 than the figure recorded in 1931. However, the Census Commissioner of India, Mr Yeats, made a note where he disclosed that about 1/20th of the total tribal population were Christian. Meaning, there was actually an increase of 3,474,128 persons among the Christian community during 1931-41.

But let's return to where we started -- Gujarat and its tribals. Davinder Kumar wrote in *Outlook* of July 1: "Of all the disturbing facts that have emerged from the post-mortem of the communal carnage in Gujarat, the most baffling and alarming is the large-scale participation of Dalits and tribals in the rioting... Even more shocking: tribals, who have little in common with mainstream Hinduism, brandished weapons, looted and killed as they violently avenged the 'attack on Hindus'."

From **Rajdeep Sardesai, to Barbara Crossette,** to Our Special Correspondent -- everybody needed smelling salts at this revelation. Quite natural. After all, what would those whose lineage has no bond with Hinduism except for, if at all, the occasional *phuljhadi* at Diwali, know about a Hindu memory...?

Identity is the result of the interactions among an array of phenomena that gather around a responsive core and induce its expression. Since the interactions are diverse, the relations that emerge, too, are diverse and thus prone to change. An individual is not just a biological entity; he also carries a memory imprint which, among others, accommodates the body's mental and spiritual needs against the external forces that protect or threaten his survival. The Adivasi or Vanvasi or tribal was and is a Hindu. And as a Hindu, he did not require "successful experiment" to rise in unprecedented anger at the unprecedented provocation of 58 Hindus -- men, women and children -- locked into a bogie and set on fire.

On the night of January 7, 1993, four women, three men and two girls were locked in a room, doused with kerosene, and set on fire. When the news of the Radhabai Chawl massacre spread, including how the attackers stood around shouting "Allah-o-Akbar," Bombay burned. When 68

Hindus suffer the same fate, why wouldn't Gujarat burn...? Did you really expect the Dalits and Adivasis of Gujarat to be as brainwashed by our "eminent historians" as you are?

The right or wrong of the Gujarat riots is not at debate here. I'm talking "Hindutva laboratory" and "animists." Neither exists. What does is vile human character -- as displayed by the Muslims in their unprovoked massacre, by the Hindus in their brutal retort, and by the Christians in their unceasing efforts to destroy Hinduism. Fact is, as long as "secularists" keep pinning Hindutva and condoning Islam and Christianity, there will be more Gujarats.

Towards Balkanisation, IV: Catholics

http://www.rediff.com/news/2002/sep/02varsha.htm

Towards Balkanisation, Part I
Towards Balkanisation, Part II
Towards Balkanisation, III: Missionaries

In May, the UK-based Market & Opinion Research International published a poll which indicated that 61% Kashmiris wanted to remain Indian citizens while 6% wished to be Pakis. Although Lord Eric Reginald Avebury, the man behind the poll, has been known for his strongly pro-Pak tilt, Pakistan still called it India's "PR ploy" - which is a perfectly understandable reaction from the US's newly annexed territory. But, what would you call those Indian citizens who took umbrage at these findings...?

Take a look at these snatches: "Unfortunately, the unpublished fact was that only 9% of the people in Srinagar thought so, while 13% preferred a Pakistani citizenship. The happier figures came from Jammu... Many questions remain about the survey, including the one as to who financed it. Mori does not do things for free. Their interest at all times, it makes clear, are commercial... Interestingly, there is no record if Mori ever conducted a similar survey in PoK... [*MORI's Indian partner*] has reason to keep that matter confidential. The report sent by PTI and used by the India media patriotically, has larger dimensions than the ones published."

The question that pops up is: even if 80% of Srinagar*vasis* want to go with Pakistan, why is the non-publishing of that statistic "unfortunate"? Are we to understand that the people of a tiny part of Jammu & Kashmir must control the destiny of the entire State...? As my friend Subhash Kak put it: "Would it be right for the entire State of Michigan to be granted independence if the African-Americans of the greater Detroit region should agitate for it? Or, should just Detroit be granted independence if the African-Americans of the city start a violent campaign for it? Would it be appropriate for the US to grant independence to Miami, or allow it to become a part of a greater Cuba, just because it has a Hispanic majority?" Would any country in the world allow such a scenario to be translated into reality...?

Nope, the writer casting suspicion on MORI is not a pinko but an entity just as foul: John Dayal, national secretary of the All India Catholic Union and national convener of the United Christian Forum for Human Rights. Dayal's essay on the MORI survey is available on the website of the All India Christian Council and -- of course -- those of "dalitstan" and "khalistan." Such, then, is the role of the Catholic Church in India...

In truth, I'd have tackled a different subject this week -- but for the abusive messages from Catholic readers, who wanted it known that the Adventists, or Protestants, or Baptists, or Mormons, or whatever, are the bad guys. Which is quite hilarious. For, why would it matter to a Hindu which sect of Christianity was implicated in the latest act of poaching when ALL of them do it on a regular basis -- and Catholics, since before the others arrived?? In fact, John Dayal and his Catholic cohorts are the worst act I've ever seen! Far worse than the Muslim Board, which enters my crosshair only when its dicta on legal issues goes contrary to the Constitution. But Christian activists are a different breed - they aggressively seek to weaken Hindu society in terms of numbers as well as space.

Still, the emails went on and on about "the percentage of Christians in India still remains 2.5-3% of the Indian population" and why an 85% majority shouldn't be worried about conversion... I ask you, what's this "majority"?? Today, my mother, brother and I occupy a 3-bedroom apartment. Tomorrow, if Martians took over two bedrooms while one of them shared the single room left to us, we'd be a majority in that reduced space -- an artificially compressed majority. Once upon a time, Hindus were a majority in a far larger Hindustan. Therefore, today's "85%" not only means shit, but should also be an impetus to ensure that this space does not shrink any further. So stuff that "majority" argument where the sun doesn't shine.

Christian leaders in India have always gotten away with a lot: While Bukhari & Co get showered with scathing editorials for far less nonsense, various Bishops and Reverends don't get even a fleeting mention. Possibly because most writers come from Christian schools. Take, for instance, the July 2000 ruckus between the National Commission on Minorities and the Catholic leadership: The NCM had investigated relevant cases and affirmed that the attacks on Christians in UP and Haryana were isolated incidents, with commission member John Joseph saying that Christian militants, too, were active in Kerala, Andhra Pradesh, Bihar and the North-East.

Was that, is that, a lie? Or even an exaggeration? Yet, the Catholic Bishops Conference of India and the All India Catholic Congress demanded Joseph's expulsion for having "deliberately derogating Christian churches and threatening them." Truth is the one thing that our "secularists" cannot face. Hence, no op-eds.

The Parivar-atrocities-on-Christians bit, I thought, had worn thin by now. That is, before I read last week's mail on raped nuns. I don't get it: Did the "secularists" and Christian fundamentalists renounce newspapers after the initial reports on the rapes at Jhabua...?

- Investigations by the police -- controlled by the Congress government of MP -- revealed that all the 24 rapists of Jhabua were Bhils, 12 of them were Christian, and none was associated with the Parivar.
- While Jhabua was a half-truth, Jhajjar was a total lie. One newspaper, on the authority of our favourite Catholic propagandist, reported that nuns in Haryana had been raped by you-know-who. But investigations by another newspaper revealed that a mahila mandal had

shouted at them for interfering in local politics - and that is all. There was no case for the police.

- So also, the nun of Baripada, Orissa. Forget about signs of rape, the doctors couldn't find signs even of struggle -- the marks on her body were reported to be "superficial and self-inflicted." And guess what -- the police were told that all the clothes she'd been wearing were burnt immediately after the assault. How convenient.

Nevertheless, all these cases were circulated at the international level by the Church and thugs of the Sabrang/Sahmat variety. As were the bomb blasts that rocked AP, Goa and Karnataka: The Sangh Parivar was promptly pronounced guilty by the media, till the Bangalore police -- controlled by the Congress government of Karnataka -- found it to be the handiwork of the ISI-backed Deendar Anjuman.

It's plain as pike why pinkos and Christians have been taking these fabrications to town since 1998: "With the BJP in power, Hindu extremists are able to assert themselves more stridently than ever... For years, the VHP has been organizing 'reconversion' camps. That campaign has lately been stepped up in MP, which has a large, partly Christian, tribal community" (*Asiaweek*, October 30, 1998). For the missionaries and the pinkos, it was essential then -- just as it's crucial now -- to totally discredit any Hindu agency that works towards getting people back into the Hindu fold. Hence the attack on the IDRF at the Congressional Committee on International Religious Freedom. (BTW, do read Ramesh Rao's article on the conspiracy against the IDRF for details on fund distribution.)

Now for some Q&A that should shed more light on my stand:

Reader James: *"Do you actually think this is a laudable goal, to ensure that people do not attempt to stray from the groups into which they were born? To presume that all choices made by people in difficult circumstances are ipso facto the product of coercion?"*

I'm not against conversion *per se*. If people absorb and thus prefer another religion, by all means, let them convert. My objection is to the deceptions missionaries use to attract the poor of Third World countries: Bribery is not OK. As Yvette Rosser writes, "Many unethical methods have been used to 'save the souls' of these simple rural folk. One tactic is to throw a stone statue of the God Hanuman in a pond along with a wooden crucifix. The Adivasis are told that the Christian God is more powerful because he floats to the top and Hanuman sinks to the bottom." All those who've reconverted say the same things -- we were promised free education and jobs if we converted, but we followed the old way all along. What sort of "soul-saving" is this? Worse still, missionaries don't tend the flock forever: It's just a numbers game -- as in "Go 1 million."

"On a higher level, it is too bad that you seem to feel like Hinduism is not robust enough to survive the minor -- indeed 'trivial' -- challenges it now faces from Christianity. It has managed to survive thousands of years, despite VASTLY more concerted historical efforts by Islamic and Buddhist attempts to proselytize Hindus."

Hinduism's surviving the past is no guarantee that it can withstand the present (there were no pinkos then). For centuries, Pakistan and Bangladesh were a part of India; only in the last century, that changed. What's the guarantee that a "Christistan" won't be carved out over the next 50 years...? Technology, reach, market, ethics -- everything has undergone a quantum change. A new

age requires a different thought -- for Hindus, one VASTLY different from simply wishing troubles away. Why would I passively watch the way of my forefathers become a minority religion in the land of my forefathers?

Reader Soumya: *"Which individual does not want social equality, religious, social and economic freedoms? If the other Hindus would unite to help them obtain what should have been provided to them in the first place, the missionaries would take their business elsewhere. No sense in blasting the missionaries if we cannot clean up our own back yard first."*

I agree -- we should clean up our backyard first. However, when some of us begin to do that by opening schools and hospitals for and giving jobs to Dalits and Adivasis, the "secularists" raise Cain over "Hindutva laboratory." What else are "secularists" but pawns in the hands of pinkos and evangelists?

Secondly, is social equality granted to Christian converts? If so, why did John Dayal oppose the Census 2001 form with: "A Scheduled caste, or Dalit, Indian citizen is being forced to chose only between the Hindu, Sikh and Buddhist faiths, and is not allowed to claim that he belongs to the Muslim, Christian, animist, indigenous, agnostic, or no-faith categories." **If conversion to Christianity certifies social equality, why would there be a "Dalit Christian"?** As for guaranteeing economic freedom, don't make me laugh.

"Along with opening schools and giving jobs to the people (which is very commendable and should be supported), the Sangh Parivar has been known to promote Hindu pride by encouraging intolerance towards non-Hindus, and denigration of their religion. There is a big difference between promoting pride in Hinduism by educating children and raising people's awareness of the religion."

Your opinion has been formed by "facts" reported by the left-leaning media. "Secularist" opinions, I reject. And anti-Hindutva "reports," I verify. How many urban people have personal knowledge about this promotion of hatred? Why are the findings in the vernacular press different from those in the English counterpart? Instead of giving in to prejudice, it's better you ponder the cause and effect of such reports.

However, I must clarify: Since January 1, 2000 -- the day after Vajpayee, Advani & Co released Masood Azhar to the Pakis -- my support for the Sangh Parivar is entirely issue-based. The Parivar is suffused in some awful evils -- but "Hindutva laboratory," I'm afraid, is straight out of Antonio Gramsci. To wit: "Members and front organizations must continually embarrass, discredit and degrade our critics. When obstructionists become too irritating, label them as fascist, or Nazi or anti-Semitic... The association will, after enough repetition, become 'fact' in the public mind."

Alexander Solzhenitzyn, after his stint in the gulag, realised, "To destroy a people, you must first sever their roots." And Hinduism is the lifeblood of India.

Towards Balkanisation, III: Missionaries
By Varsha Bhosle
http://www.rediff.com/news/2002/aug/26varsha.htm

On Wednesday, Tarlochan Singh, vice-chairman of the National Commission for Minorities, wrote to the presidents of the Catholic Bishops Council of India and the National Council of Churches in India, citing incidents in Punjab, Bhilai and Jharkhand where "Christian missionaries fully supported with medical teams have been going around in many villages alluring poor Sikh families to adopt Christianity." Directing the Christian leaders "to desist from this activity" he wrote, "I have been approached by a large number of Sikh organisations to take up this matter. I request you to... adopt a policy not to make further attempts of converting Sikhs through any means."

It's good to know the NCM supports a group that's opposing the Church's nefarious activity; and comforting that it's the Sikhs who are rejecting conversion. After all, if the pinkos' schemes succeed, the remaining Hindus -- as per Sikhism's foundation charter and Hindu "tradition" (read, cowardice) -- can once again fall at Sikh feet for protection.

Christians fanatically evangelize. Muslims aren't into conversion anymore but want Islam to rule all polities, and we know what that entails. Ditto, the Communists with their creed. Ask a Gay his thoughts on the "curing" of nascent homosexuals via psychotherapy, and he, too, will flare up in anger. But the Hindu is the *only* species that not only watches benignly as his own kind diminishes, but also blocks those who resist conversion...

As my friend Amberish Diwanji once put it: "If one converts because doing so accords him respect and gives him a sense of identity and belonging, where is there the question of forcible conversion. If one chooses to follow the faith of those who have helped and are helping him the most, as opposed to those who torment him, can he be faulted? If there are Hindus who are worried by conversions, they should try and redeem Hinduism, go out and serve the tribals and Dalits and the poor. Make the lowest believe that Hinduism too provides balm for the soul, for a poor has little else to ask for."

That was in 1996. And Amberish didn't question the "respect" and "sense of belonging" that "Dalit Christians" and "Dalit Muslims" feel. A minor oversight?

But observe the change of tune by "secularists" now: "There is a boy, orphaned since the age of five, who is housed, fed and schooled here just outside New Delhi, free of charge... The school is

part of a network of social service organizations that cater to indigenous people and 'dalits,' or those on the lowest rungs of the Hindu caste ladder... Across remote villages, it dispatches so-called barefoot doctors armed with first-aid kits and drugs to combat dysentery. It sets up orphanages for the abandoned and hostels for children who must travel long distances to go to school" (*The New York Times*, May 13). Actually, this article, "Hindu Right Goes To School To Build A Nation," written by a Bong, is one bashing the RSS for serving the tribals and Dalits and the poor...

But let's get back to the Sikhs, who've learnt from at least one part of their history: After the second Anglo Sikh war, the British exiled the boy Duleep Singh to Fatehgarh, in the care of a British guardian. Unlike previous British rulers, Lord Dalhousie wished to transform India, towards which end he promoted and supported the work of Christian missionaries: Fatehgarh just happened to be a mission. John Login and his wife, who had taken on the parental role in the boy's life, just happened to be devout Christians. Duleep was encouraged to have two English boys as his closest friends, one of whom just happened to be the son of a missionary. The textbooks he was given just happened to be full of Christian messages. His servant, Bhajan Lal, just happened to be a Christian convert. And Bhajan Lal just happened to read from the Bible to the boy every night. Duleep Singh was, in fact, totally dependent on the goodwill of his prisoners and limited to living in the centre of Christian missionary activity.

What happened next? Exactly what can be expected when missionaries shower the weak with their mercies: The last Sikh ruler of the kingdom of Maharaja Ranjit Singh was surreptitiously converted to Christianity, dispatched to England and resettled near Cambridge, thereby minimising all chances of his becoming a rallying point for the people of Punjab. Next, "A facade of a ceremony was arranged in which the young prince was made to present the famous Koh-i-Noor to Queen Victoria and 13 most valuable relics pertaining to Maharaja Ranjit Singh to the Prince of Wales. The remaining jewellery in the Toshkhana of the Maharaja was either taken over by the British officials or auctioned to public thus putting to an end the glory and grandeur of the mighty empire of a mighty ruler of Punjab" (*The Tribune*, April 8, 2001).

We know that the exit of British rule did not mean the exit of Christian evangelism - that remains a clear and present danger: "India also has vast areas of more unreached groups - people with no access to the Gospel - than any other country. One such area is the Punjab - home of the Sikhs... Today there is much opportunity for Christian outreach." So says the Maranatha Gospel Mission based in Bhilai. The same Bhilai that Tarlochan Singh mentioned.

Last week, a Christian dork wrote me, "Adivasis are being re-converted from funds that come in from NRIs and others... but, aren't they doing exactly what the Christians are doing? But, you seem to justify what the RSS does by saying that the Christians did it... what a hypocrite!"

Actually, I never have justified the RSS's actions by saddling them with those of the missionaries. Read my lips: I support reconversion and the dissemination of Hindu awareness because I want Hindus to remain Hindu, Jains to remain Jain, Buddhists to remain Buddhist, and Sikhs to remain Sikh. Secondly, because a blunderbuss is no match for a daisy-cutter, the RSS must use the same weapons that missionaries use. So, more power to its fund raising. Where's the hypocrisy in that?! Regardless of it not being a zero-sum game, I don't see why I shouldn't root for Hinduism. **Unlike the "secularists," I'm not ashamed of being a Hindu!**

But we all know the reasons for the "secular" anger, right? The synchronized "action alerts" of pinko groups worldwide; the constant slamming of "Hindu nationalists" by the "liberal" media -- again, worldwide; the appearance of Kanwal-Rekhi-with-a-Christian-wife before the US Commission on International Religious Freedom; Father Prakash's deposition against the funding of "Hindu terrorists"... **It's because the Sangh Parivar has been checking the tide of conversion:**

- "A Hindu organisation has re-converted 37 Adivasis who converted to Christianity, back to Hinduism, at a one-day Vishwa Hindu Sammelan held at Peth, the tribal dominant tehsil town in Nashik district. The sammelan, organised by a recently formed Hindu organisation, Dharmaraksha Samiti, was attended by over 9,000 delegates from all over Maharashtra and neighbouring states." (*UNI*, January 6, 1999)
- "The first-ever mass reconversion drive organised by the VHP in West Bengal took place in Malda district today as the Marxist government of the state watched helplessly. Amidst fanfare, 500 tribal Christians and 50 Muslims embraced Hinduism as priests chanted mantras and performed the *paraavartan yajna*." (*rediff.com*, March 25, 1999)
- In July 2000, seven families, belonging to the Mising community, were reconverted to Hinduism in Majuli. "The Satradhikar also said that originally 300 families had been converted to Christianity and it was likely that many of them would reconvert to their original religion." (*The Asian Age*, July 10, 2000)
- In February 2001, over 1,300 tribals were reconverted to Hinduism. The reconversion was co-sponsored by the VHP, and was named *Sanatan Ghar Vapsi*. "Rituals of reconversion began with recitation of hymns by members of 270 families who had earlier adopted Christianity." (*The Tribune*, February 13, 2001)
- "Hundreds of families who converted to Christianity over 100 years ago and were settled by the British in Haryana villages by giving them land are now shedding their Christian identity in a bid to join the mainstream of rural Haryana. Their younger generation has completely discarded Christian names and reverted to Hindu names... [*Joseph*] was also honest enough to admit that most of them continued to be Christians because they got preference for admissions to Christian educational institutions and jobs in mission hospitals and schools." (*The Tribune*, January 25)
- In April, over 20 Christian tribals near Malda re-converted to Hinduism on Baisakhi. "With this, the total number of conversions of the tribesmen to Hinduism from Christianity and other religions in Malda district stood at some 300. The ceremony was conducted at the VHP's Buddhikamach Chitrakut." (*The Tribune*, April 23)

In truth, I do not fear Islam -- for its attacks are open, direct and can be fended off with a bit of spine. But Christian evangelists are another can of worms altogether: Not only do they get unlimited financial and political support from the fundamentalists in the US and Europe, including the Vatican, but they also attack with stealth, cunning and persistence.

Take, for instance, the case of the Haryana constables: The state recruited 1,600 police constables in 1995, which recruitment was then challenged in the high court. Subsequently, in 2000, the Supreme Court ruled against the recruitment procedure and hence their services were terminated. Nevertheless, in August 2001, the vice-president of the Haryana Police Employees Union ("Union," "NGO," "academic," "professor," "documentary maker" usually indicate

you-know-what) announced, "If all 1,600 dismissed Haryana police constables were not taken back into service, all of them, who are Hindus, will adopt Christianity..." But that wasn't all; the sentence ended with: "...and in this regard they are in regular contact with Christian missionary people."

The British politician did not invent the policy of Divide & Rule, nor did the pinkos -- it was handed down to them by the Church. The 1954-instituted Niyogi Commission, while investigating the charge that Christian missionaries had instigated the movement for an independent State, noted in *The Report of the Christian Missionaries Enquiry Committee MP, Nagpur, 1956*:

- On the integration of the States, Missionaries became afraid of losing their influence. So they started an agitation, playing on the religious feelings of the primitive Christian converts, representing the Madhya Pradesh government as consisting of infidels... Some of the articles published in Missionary papers... were hardly distinguishable from the writings in Muslim papers advocating Pakistan before the 15th of August 1947.
- The demand for Adiwasisthan was accentuated along with the one for Pakistan in 1938. The Muslim League is reported to have donated Rs 1 lakh for propaganda work. With the advent of political independence in India, the agitation for Adiwasisthan was intensified, with a view to forming a sort of corridor joining East Bengal with Hyderabad, which could be used for a pincer movement against India in the event of a war between India and Pakistan.
- This attempt of the Adiwasis initiated by the Christian section thereof is a feature which is common to the developments in Burma, Assam and Indo-China among the Karens, Nagas and Amboynes... But the idea of change of religion as bringing about change of nationality appears to have originated in the Missionary circles... Thus while the Census officer isolates certain sections of the people from the main bodies, the Missionaries, by converting them, give them a separate nationality so that they may demand a separate State for themselves.

Nothing has really changed in India between now and then: The ethos of the politicians is about the same, so is that of the people, and Godse was a villain even then. Even so, the six members of the Niyogi Commission were not harangued and abused as "Hindu fundamentalists." The difference lies only in the media: Then, opinion makers aired the facts -- and not the leftist versions thereof.

Update: The day after I submitted this column, *The Hindu* reported that 250 villagers were baptised on Saturday by pastors of the Seventh Day Adventist Church at its South Tamil Conference in Madurai. The villagers were asked to affirm their commitment to Christianity and "to donate one-tenth of their monthly earnings for missionary work. Enquiries show that the villagers, mostly below the poverty line, had been brought for baptism with promises of 'economic emancipation.' During 2001, the Seventh Day Adventist Church here had converted 1,500 Hindus... **According to an organiser of the baptism, the president of Seventh Day Adventist Church, India, DR Watts, a Canadian, had set a 'tough target' for the pastors, titled 'Go 1 million.' The website, 'maranatha.org,' reveals the activities carried out by this congregation throughout the country... where thousands of Hindus were converted."**

No religion, no ideology, no government can guarantee anybody's "economic emancipation." If this is not a deceit only to diminish the strength of Hinduism, what is? Get

out your checkbooks, guys; we can do better than one-tenth.

Towards Balkanisation, Part I

http://www.rediff.com/news/2002/aug/12varsha.htm

On August 2, the Supreme Court heard Solicitor General Harish Salve read out a 1992 question paper set for West Bengal's higher secondary Hindi examination under the auspices of its Communist government. Students were asked to write an essay on one of the following:

- National unity and integrity are false political slogans.
- In Hindustan, there is no place for Hindu and Hindi.
- Five-year plans are a sham.
- Statistics on national development are a fraud.
- Democracy is a conspiracy.
- National revolution is the only way for progress.

The students were also given a choice to précis the passage: "New Delhi is a heartless administrative seat, on which sit not elected representatives of people, but anti-social poisonous snakes coming out of the caste jungle. Progress has been destroyed by tradition, education by the English medium, religion by political secularism, human beings by greed, idealism by dirty consumerism..."

Or, expanding upon: "Red Flag in Red Fort is the demand of Hindustan."

Next came a question in the mathematics paper for the 1999-2000 annual examination for Class VI students in a higher secondary school: "Three friends, Pervez, Atal and Bill went on a picnic. Pervez bought 750 grams of meat at Rs 120 a kg; Atal bought other food for Rs 75, and Bill gave some money to Atal and Pervez, so that their expenditure was equal. How much money did Atal and Pervez receive from Bill?"

At which point, Justice M B Shah got the gist of it and asked Mr Salve "not to read any more."

Of course the papers are hilariously blatant examples of leftist indoctrination, variations of which are being hammered into Indian children since the prime ministership of Jawaharlal Nehru, he of *Glimpses of World History.* However, more hilarious and blatant are the comments in *The Telegraph's* report:

- Salve *dramatically* brought out a question paper...
- Justice Shah stopped the court room *drama*...
- Salve also attached *BJP propaganda material* against this question...

When the scribe -- or the copy editor -- couldn't avoid reporting material damaging to his ideological masters, he ensured that readers at least got the impression that the Solicitor General of India is no more than a loud actor, one carrying a Hindutva party card. No matter that the "propaganda" Mr Salve "attached" to his argument was: "Marxists, who have reached ideological bankruptcy, are now targeting young students through education in West Bengal. They are making an attempt to sow poisonous seeds, reflective of their low thinking, into the consciousness of the children in Burdwan district of West Bengal."

But even more comical is the impetus for Mr Salve's sins: The court is hearing a public interest litigation filed by social activist Aruna Roy, columnist B G Verghese and sociologist Meena Tyabji, challenging the revised national curriculum -- which is "saffron" and "impinges on the country's secular character," hahahahahaha...

And how reasonable was the pinko attack? Well, when their counsel repeatedly made disparaging references to Hindu castes and scriptures, the Bench shot him down with: "Do not abuse any caste, do not abuse the word 'Brahmin' as it has a wider meaning... How can India live without the Vedas and the Upanishads which are the essence of the spiritual heritage of the country? If you look at it with a coloured approach, it is coloured." Thank god for the Supreme Court.

"Islam and Christianity are the only religions which treated man with honour and equality," is an extract from a textbook for Class V in West Bengal. From the books written by our "eminent" historians, we learn that Veer Savarkar, Khudi Ram Bose and Hardayal were terrorists; Bengal's disparate revolutionaries, bound by their devotion to Ma Kali, were terrorists; Aurangzeb was a "*zinda pir*"; in ancient India, "people ate beef but did not take pork on any considerable scale"; Chhatrapati Shivaji's victories were a mere "growth of Maratha national sentiment"; Jats were "plunderers"; the martyrdom of Guru Tegh Bahadur "was due to the intrigues of some members of his family"; and Alauddin's attack on Chittor to get Padmini is a "popular legend."

Fortunately, my school curriculum was regulated by, what was known as, Senior Cambridge (yup, a thorough Macaulite). So I can discern why Prof Amartya Sen sees nothing wrong in "Red Flag in Red Fort is the demand of Hindustan," even as he claims an "organised attempt [*is*] on to distort history." **Or why Prof Irfan Habib is silent about "In Hindustan, there is no place for Hindu,"** even as he states that the Sangh Parivar wants to "present facts in such a fashion as to inculcate 'pride in the nation' which in turn is the India of their narrow imagination."

"India of their narrow imagination"? Not too long ago, Pakistani columnist Irfan Hussain wrote in the *Dawn*: "Recently, a very perceptive and learned Indian reader wrote me a long e-mail in which... he argued that over time, large groupings of disparate nationalities like India would break up into their component parts which would then be more vibrant entities, freed from the stifling stranglehold of the centre." Need we wonder about the ideological moorings of this Indian reader...? Especially in the light of "National unity and integrity are false political slogans"?

Did you, for instance, know that the thesis of a Sikh homeland -- propagated as "Khalistan" in the 1980s -- was propounded for the first time by the Communists in the 1940s, had its roots in the Soviets' *Thesis of Nationalities,* and was drafted by CPI-M's Harkishan Singh Surjeet...? Though the final draft of the Sikh homeland thesis was published in the name of senior leader Gangadhar Adhikari on behalf of the CPI in 1944 (the Punjabi translation was done by CPI's Avtar Singh Malhotra in 1946), Surjeet is the one to whom we owe the concept of Khalistan.

The creation of political instability is a key feature of the Left's politics. They neither believe in parliamentary democracy nor do they accept the existence of one Indian nationality -- their views on nationality inclining towards the balkanisation of the Indian state. During the 1940s, the CPI supported the Muslim League's demand for Pakistan and Gangadhar Adhikari became the self-styled spokesman of the League. The pinkos held that the country must concede the Muslims' "right to self-determination accompanied by the right of autonomous state of existence" -- prompting Khwaja Ahmed Abbas, himself a leftist, to say, "India was killed by the CPI, which provided the Muslim separatists with an ideological basis for the irrational and anti-national demand for Pakistan."

Even after Independence, the 1951 Madurai congress of the CPI, and the third party congress in 1953, endorsed the "right of nationalities and their right to self-determination." That spirit of balkanisation still exists in their concept of Indian nationality -- and is the mooring of the "learned Indian reader" who dreams of an India shattering into tiny pieces. Hindutva at least has an imagination of India; Communism wishes its annihilation.

Which is why India is touted as a "multilingual, multinational and multiracial subcontinent, and it was

merged into a single state under British rule by the British bayonet." Which is why *Adivasis* are "animists." Which is why "if India had a golden age before the coming of the Muslims, it was a Buddhist age." Which is why there's nothing like a Hindu period in Indian history. Which is why Ramakrishna Missions are attacked by the CPI-M's goons. Which is why a separate identity is legitimised as a "sub-nationality." Which is why the demand for the UCC is condemned as an attack on the existence of minorities...

Bottom-line: Should India's 85 per cent majority get a sense of pride in its Hindu identity, the Red blocks would swiftly come tumbling down.

Nevertheless, I must admit that pinkos think laterally. While the few proud Hindus who still exist in India are busy defending their religion in their own backyard, the leftists have embarked on an attack to weaken Hinduism's roots abroad -- among whites! Wow, I didn't even know about the threat of Hinduism entering mainstream America. **Ace pinko Vijay Prashad** brought it to my notice with his article, "Suburban Whites and Pogroms in India," in *Z Magazine*.

Overtly, this piece acts as a warning to whites to stop funding the Sangh Parivar for its supposed pogroms against minorities in India, and is the usual spit-and-bile trash pinkos regularly churn out. Normally, like the other 15-per-week of this genre, I'd have junked the piece after a scan. But this got my attention with its anti-Hinduism undercurrent -- one that subtly ridicules whites for being attracted to or being conned towards Hinduism. Thus:

- what do we do about the romantic entry of suburban whites into Hinduism
- "Asia" functions as an alibi for a politics to transcend the condition of the suburb
- Are "curiosity" and "respect" sufficient grounds for the entry of the suburban white into the theocratic fascism
- Those so-called "Hindu values" that would not accept the child's desire to live as a human being in a complex world
- The legacy and persistence of racism provides respect to any artifact or institution of color that is worn or frequented by whites
- Many came, mainly white women, who study various aspects of Hinduism and are... otherwise respected scholars of Indology. Eager for cash, they disregarded the role they played for Hindutva
- those whites who become Hindus in this day and age

Ok, let's take the funding of Hindutva pogroms. Prashad says, millions of dollars "finance right-wing activity in the subcontinent. This long-distance theocratic fascism was part of the destruction of the mosque at Ayodhya in 1992, the anti-Christian riots in Gujarat... in the state-engineered pogrom against Muslims in Gujarat." **Kanwal Rekhi claims, "recipients of their money are out to destroy minorities and their places of worship." Robert Hathaway adds, "monies so raised are used to promote religious bigotry."**

Yes, ok, we got all that. But could you please tell us, into what do the millions of dollars actually go? Have you heard of Uzi firings in Gujarat, or RDX blasts in Ayodhya, or Dara Singh's using Stingers? Do the worthies of the RSS zip around in private jets? No, na? Then where have these millions disappeared?? To make accusations as grave as these stick, they must be supported by evidence about the other end of the saffron-dollar channel. But there's none forthcoming! Except stuff like "Hindutva-style cruelty devastates the landscape" -- the kind of garbage spewed by a mediocre "secular" columnist.

In December 1999, **Thomson and Thomson (ie, Prashad and Biju Mathew) penned an "exposé" in *Himal* about saffron dollars.** In it, they claimed to have begun a "study of the Hindu Right in the US several years ago." They vilified the Indian Development and Relief Fund, they slammed the Vanvasi Kalyan Kendra, the Keshava Seva Samithi and the Hindu Heritage Endowment, all with the typical polemics against Hindutva. Point is, after the "several years" plus two years, they still can't offer a shred

of evidence on monies funding Hindu terrorism...

But we all know what the desperation is all about, don't we? It's the dreaded "A" and "D" words -- Adivasis and Dalits, groups which are being guided *back* to the Hindu stream by the Parivar. For instance, in January 1999, the Vishwa Hindu Sammelan re-converted 37 Adivasis from Christianity; in January 2002, 2 lakh Adivasis vowed to save Hinduism at a rally organised by Sewa Bharati at Jhabua. That's where the bulk of these dollars go: to educate the tribals and Dalits and make them aware of being constituents of Hindu society.

And that's what worries the pinkos, Rekhi-with-a-Christian-wife, Father Prakash *et al* -- an integrated Hindu populace. No wonder Arundhati Roy moans, "How else can you explain why Dalits in Gujarat, who have been despised, oppressed and treated worse than refuse by the upper castes for thousands of years, have joined hands with their oppressors..." (By the way, what "thousands" of years? But novelists earn via fiction. And bad novelists, via bad fiction.)

Since decades, Christian missionaries and Islamists have been pumping money into India. And what did that get Hindus...? Expulsion from Mizoram; massacres in Meghalaya; harassment in Nagaland; reduction to a minority status in J&K, as well as in many districts of Assam, West Bengal, Bihar and Kerala; and subversive madarssas in every nook and cranny of the country. Do pinkos protest about any of this? Any testimonies before the US Commission on International Religious Freedom...?

Why would they?! Unlike the RSS' Adivasi programmes, those of Islamists and Christian fundamentalists take pinkos towards their ultimate goal -- the balkanisation of India.

Towards Balkanisation, Part I

Responding to my previous essay, a furious "secularist" from West Bengal wrote, "nowhere did we come across the stuff you mentioned in the books. And neither do they appear today. If they [*Left Front*] had really called Khudiram Bose a terrorist they would have lost half of their seats in the assembly. I am sure like all air-headed media persons of present genre, you have either done scant research or very 'selective' research. And why sully Dr Amartya Sen's name? Has he endorsed that question paper that you mentioned?"

If this were a lone case, I may have ignored it. 'Twas not. You see, in the dorks' world view, not only are the distortions by our "eminent" historians God's Own Truth, but anybody who denudes these eminences, too, is an air-head, a liar and a bigot. So let me expand on what I had only fleetingly mentioned, in the misguided belief that "received wisdom" hadn't yet made the uncritical Bong an unparalled ignoramus.

Once upon a time, a group of school teachers from West Bengal sent Arun Shourie a circular relating to textbooks. Dated April 28, 1989, it was issued by the West Bengal Secondary Board, and carried the reference number "Syl/89/1." It said, "All the West Bengal Government recognised secondary school Headmasters are being informed that in History textbooks recommended by this Board for Class IX, the following amendments to the chapter on the medieval period have been decided after due discussions and review by experts. The authors and publishers of Class IX History textbooks are being requested to incorporate the amendments if books published by them have these *aushuddho* [errors] in all subsequent editions..."

Mr Shourie, in his serialised exposé on what can aptly be called pinko history, listed some 40 such amendments. I reproduce but two:

- *Bharatvarsher Itihash*, by Dr Narendranath Bhattacharya, page 89:
  Aushuddho -- "Sultan Mahmud used force for widespread murder, loot, destruction and conversion."
  Shuddho -- "There was widespread loot and destruction by Mahmud."
  (That is, no reference to massacres and forcible conversions.)
- *Itihasher Kahini*, by Nalini Bhushan Dasgupta, page 132:

Aushuddho -- "According to Todd, the purpose behind Allauddin's Chittor expedition was to secure Rana Rattan Singh's beautiful wife, Padmini."
Shuddho -- Delete.
(The British army officer and historian, Col James Todd, in his celebrated book, *The Annals and Antiquities of Rajasthan*, wrote about Allauddin's obsession with Padmini. However, to sustain the fiction of its being a "popular legend," such references, of course, had to be deleted.)

The disturbed teachers also furnished Mr Shourie with extracts from the textbook for Class V, *Bharut Kahini*, by G C Rowchoudhury. One of these was: "Islam and Christianity are the only religions which treated man with honour and equality..." Notice that not a single "eminent" historian has ever sued Mr Shourie for publishing these "lies."

The textbook for Class XII -- *Modern India* by Bipan Chandra -- assessed the entire National Movement and its leaders thus: "The speeches and writings of some of the militant nationalists had a strong religious and Hindu tinge. They emphasised ancient Indian culture to the exclusion of medieval Indian culture... They tried to abandon elements of composite culture. For example, Tilak's propagation of the Shivaji and Ganapati festivals, Aurobindo Ghose's semi-mystical concept of India as mother and nationalism as a religion, THE TERRORISTS' OATHS BEFORE GODDESS KALI, and the initiation of the Anti-Partition agitation with dips in the Ganga could hardly appeal to the Muslims."

Reader Subir is obviously ignorant of the connection between Bankim*babu's Anandmath*, Vande Mataram, the oaths taken before Ma Kali by Bengal's freedom fighters, and Khudiram Bose. Maybe that's because in the widely used textbook, *Sabhyatar Itihash* by Dr Atul Chandra Ray, Bankim Chandra is not mentioned at all. Also, in this pinko treatment of Indian history, Swami Vivekananda gets one line while Karl Marx gets forty-two...

Subir, in his eagerness to defend "secular" education, also says, "If they had really called Khudiram Bose a terrorist they would have lost half of their seats in the assembly." Hahahahahaha... talk about naïve. Here's what the CPI-M's Sudhir Ray said on March 30, 1993, during a debate in the Rajya Sabha on the SAARC Convention (Suppression of Terrorism) Bill: "Therefore, this Bill should be passed. At the same time, I also support Shri George Fernandes that there are two types of terrorism. Shri Khudi Ram and Shri Bhagat Singh were also terrorists..."

You'd think that George, too, had called Khudiram a terrorist. In fact, what George had said was: "I would say that there are two types to terrorism, one is international level terrorism and other is national level terrorism. In our country, terrorism does not mean merely whatever is happening in Kashmir and Punjab but, for instance, it also includes as to how terrorising treatment is being meted out by the Government..." That is, terrorism by the State.

Actually, the 1989 board directive ordering distortions of history was hardly a first. In 1982, the NCERT had issued a similar one on the rewriting of textbooks. Among its stipulations: "Characterisation of the medieval period as a time of conflict between Hindu and Muslims is forbidden." Thus, according to Bipan Chandra's *Modern India*, "To declare Akbar or Aurangzeb a 'foreigner' and Pratap or Shivaji a 'national' hero was to project into past history the communal outlook of 20th century India."

The hatred that pinkos and "secularists" have for Chhatrapati Shivaji is quite understandable - considering that Aurangzeb could never defeat the Hindupad Patshahi established by the Maratha and advance south of Golconda. Andhra Pradesh, Tamil Nadu, Kerala and southern Karnataka have a lot to thank Shivaji for. However, the NCERT's Social Studies textbook for Class IX stated that Aurangzeb's empire extended all over Bharat and Afghanistan except Kerala and the northern hill regions of UP, Nepal, Bihar and Assam! [*The Deccan Chronicle*. June 22, 2000]

Chapter 91 of Jawaharlal Nehru's *Glimpses of World History* states, "So adventurers rose all over India, adventurers who were native to the soil... Each man or group played his or its own hand and was prepared to send all the others to the devil... there were frantic attempts to carve out kingdoms and get rich quickly, and to plunder..." The title of the chapter? "The Sikhs and the Marathas" -- in which, Shivaji is "a gallant captain, an ideal guerilla leader and adventurer"!

"Adventurer," according to the Merriam-Webster, is a soldier of fortune; "one who engages in risky commercial enterprises for profit"; "one who seeks unmerited wealth or position especially by playing on the credulity or prejudice of others." Yup, this tome is the fountainhead of every distortion present in our textbooks.

Thus, Prof Nalini Taneja of Delhi University, in her article "In the Name of History: Examples from Hindutva-inspired school textbooks" -- one faithfully propagated by organisations like secularindia.com, dalitstan.org, mughalstan.com, tamil.net -- slams the present government for restoring dignity to mediaeval Hindu rulers with, "Shivaji and Rana Pratap were fighters for national liberation. All the 'Hindu' kings who fought for their kingdoms against the Moghuls are presented as such... In the text books from Maharashtra, the medieval history of Maharashtra begins and ends with Shivaji. All other historical figures exist only in reference to him."

And lo and behold, the CPI-M's mouthpiece, *Ganashakti*, says in its own article, "Education BJP style: Saffronisation of Books," that "The medieval history of Maharashtra begins and ends with Shivaji. The text book of the fourth standard has 19 chapters and 75 pages exclusively on Shivaji. All other historic figures exist only in reference to him." Wow, that's some coincidental similarity of thought and expression between objective professors and the Communist party...

Just last year, pinkos raised a stink over the NCERT's deleting of certain offensive and unauthenticated assertions from history books. Among them:

- On page 21 of *Modern India*, the textbook for Class VII written by Arjun and Indira Dev: "The Jats, after establishing a state in Bharatpur, conducted plundering raids in the region around Delhi. They also participated in the court intrigues."
- In Satish Chandra's *Medieval India* for Class XI: Guru Tegh Bahadur "in association with one Hafiz Adam... had resorted to plunder and rapine, laying waste the whole province of the Punjab."

What are the results of such "education," you may ask. Well, apart from the ignorance radiating from "secularist" readers, such a curriculum becomes a breeding ground for dweebs of the foulest kind. Like one Anand Vivek Taneja, "a student of History of Ramjas College, Delhi University," who has recently been elevated to commentator status by *tehelka.com* and *The Hindu*. Among his pearls of wisdom about the Scindias: "They looked like a bunch of robber baron scumbags. Which isn't far from the truth, because the Scindias were originally plain Shindes, Maratha musclemen

who led the 18th century marauding hordes that terrified the hell out of the rest of India. The Marathas were no 'freedom fighters' that later historiography makes them out to be, but a bunch of unpleasant rampaging freebooters with more than the standard freebooter disregard for life and property. In classic robber baron style, they got themselves forts, and pandits, and became consecrated kings... Jerks."

This, about the dynasty of Ranoji Shinde, who seized the fortress of Gwalior, the notorious prison of the Mughals, in 1738. This, about the house of Mahadji Shinde, who defeated the army of the Honourable East India Company, forced it to accept the Treaty of Sabli, took control of Delhi, and secured Mughal recognition of Maratha overlordship. This, about the single most formidable Hindu power which made a successful attempt for the supremacy of the subcontinent. This, about the empire that covered practically all of central and northern India -- extending from Thanjavur (Tamil Nadu) to Attock (Pakistan). This, about the only empire whose rallying call was "*Hindvi swarajya, swadharma, go-brahman pratipaalan*" (Hindu self-rule, spiritual and social duty, protection of cows and Brahmins).

I won't be surprised if this obnoxious maggot -- I say this with force because his article contains a certain reference to the late Rajmata that is nothing less that libelous, so much so that *rediff* will not allow me to repeat it here; check out the paragraph preceding the one I've quoted -- turns out to be a relative of Nalini Taneja.

And, finally, why did I sully Dr Amartya Sen's name? Had he endorsed the question paper that I (and the Solicitor General of India) mentioned? Well... on Friday, the good professor released a report on the findings of the Pratichi Trust, which was established with his Nobel prize money, and whose major focus is the elementary education in India. Among the issues Dr Sen emphasised at the release: "The overarching need is to overcome the rigid barriers of class division," the need for parent-teacher committees, and greater responsibility shown by the teachers' unions.

In short, more pinko bilge. Not a single word about the Communists' intellectual fascism, not a word about the authenticity of historical data in the pinko curriculum (oh there are many quotes on "saffronisation" of history). Not a word even in the report by the Trust that the Leftist economist set up to investigate and improve upon facets of education...

"Scant research"? *Moi*...?

A 3,000-year-old way to eat

The Ayurvedic philosophy comes to Legal Sea Foods' table

http://www.boston.com/dailyglobe2/163/food/A_3_000_year_old_way_to_eat+.shtml

The spices are intoxicating, the flavors seductive, but that's not really the point. Or at least not the whole point..

For the next few weeks, Legal Sea Foods is exploring the very personal connections between certain spices and ingredients and good health in mind and body.

The philosophy is Ayurvedic science, a 3,000-year-old set of beliefs designed to balance mind, body, and soul. In Ayurvedic practice, each individual has one of three "doshas," and certain foods and spices are prescribed to keep energy up and balanced. Special menus at all 26 Legals - from Boston to Florida - include South Indian dishes such as shrimp and scallop tanjore in a spicy sauce designed to aid digestion; fish roasted in banana leaves that has been marinated in dill to lower cholesterol, and Mysore seafood rasam, a hot and sour soup with tomatoes, shrimp, and cod. The lentils in the soup are supposed to enhance stamina. One of the desserts is cardamom rice pudding; the spice cleanses the mouth and is thought to refresh the mind.

Bringing in these dishes was not a simple matter of devising recipes and typing up a menu. In a project more than a year in the planning, cookbook author and Salem resident Nina Simonds flew to India, met with U. K. Krishna, an Ayurvedic doctor and authority at a clinic in Mysore, collaborated with chef Suresh Vaidyanathan of the Bombay Oberoi Hotels, and consulted with organic spice farmers in Kerala.

After months of e-mail conversations among Simonds, who has been living in London; Vaidyanathan in India; and Legal's executive chef, Richard Vellante, in Boston, the team arrived here about 10 days ago. In a whirlwind four days, the chefs trained Vellante and the chefs from all the Legal properties up and down the East Coast. After cooking, roasting spices, tasting, and discussing the menu, it was rolled out first at receptions and then in the restaurants.

On the first day, more people ordered from the Indian menu than from the regular menu at the Park Plaza Legal, Simonds says.

To Vellante, who's accustomed to thinking of serving 70,000 diners a week, the Indian chefs' approach to cooking and eating was a revelation. "It clearly is very foreign," Vellante says. "They're really like chemists" in the way they roast spices and then mix them together to create very specific flavors and sensations.

Vellante tells of eating with Vaidyanathan and chef Babu Raj Sajipa. "We were having a pickle that I, at first, didn't find very appealing. Then when the Indian chefs mixed a very small amount with rice, I began to realize how the mixture should taste and why the proportions were chosen."

The Ayurvedic methods are "a very scientific approach to cooking," Vaidyanathan says. "You have to understand the chemistry of each spice and also understand your own body." Different spices and foods match not only personality types but ages, he says. Tailoring foods to each person is a way to promote good health.

If that sounds a little too scientific, the combinations of spices and fresh seafood make for wonderful flavors beyond the matching. At a reception this week, a rice dish, or biryani, was studded with fat chunks of saffron-flavored lobster, promoting digestion, yes, but also delicious. Shrimp and scallops had been rubbed with "chettindam," a 12-spice mixture, before being grilled tandoori-style. And steamed asparagus, bathed with cardamom-scented butter, probably did cleanse the breath and refresh the mind, as well as tasting great.

Vellante says that the Ayurvedic philosophy goes far beyond spices and preparing food. "They approach their meals in a very regimented way," he says. The diner should allow enough time to concentrate on the food. "Everything must stop. Americans rush, rush, but they don't set aside the time." It's not just a matter of time, however. Simonds stresses that there's not only much appreciation for food and the act of eating in the Ayurvedic philosophy, but also joy in the flavors and beauty of it.

Krishna, who advised the chefs on Ayurvedic properties, is both the chief consulting physician of the Indus Valley Ayurvedic Center and the assistant director of the Institute of Oriental Traditional Medicine in Toyko. Vaidyanathan has just finished 10 months researching the dishes of Southern India, going to villages to cook with elderly women. "To learn the food of a region, you must know the people," he says. He understands why people eat a certain way and how it helps them maintain good health in a particular climate and location.

Vaidyanathan is putting together a reference work on his findings and teaches in the Oberoi Centre for Learning and Development. Babu Raj Sajipa, who cooks at the Oberoi Hotel in Bangalore, also trains chefs in South Indian cooking and has worked with Vaidyanathan on the research project.

Their American venture didn't end with Boston. After presentations at the French Culinary Institute in New York, at a Smithsonian Institute-sponsored event in Washington, and food demonstrations in New York state and New Jersey, the Indian chefs, Krishna, Vellante, and Simonds, along with Legal's Roger Berkowitz, will cook at the company's Florida locations.

The challenge of putting these menus into place in all the restaurants was immense, Vellante says, but worth it as a way to understand another culture. It's the most ambitious project that Legal has undertaken, Simonds says, and fits in with Berkowitz's interest in alternative medicine. Simonds' next book, "Moonbeams, Dumplings and Dragonboats" (Harcourt), which she co-authored with Children's Museum official Leslie Swartz, will come out in the fall.

In this approach, there's always more to explore. Vaidyanathan is looking into what direction a diner should face for maximum benefit from the food.

"It's a little like feng shui," he says, the Chinese system of arranging a room for comfort and well-being. Maybe after three weeks of Southern Indian flavors and health-giving spices, the staff will move all the chairs and tables around.

The Goddess in Hinduism (excerpts)

By Joseph Campbell

(source :A Joseph Campbell Companion: Reflections on the Art of Living -edited by Diane K. Osbon pg 216-218)

" The goddess alone knew of the all-moving, secret world energy which has helped the gods to victory; it was the power within them, of which they were unaware. They believed that they were strong in themselves, but without this force, or against it, they could not so much as harm a blade of grass. The goddess knew of the universal force, which the Vedic priests called ***Brahman*** *and which Hindus call* ***sakti****, for sakti, i.e. energy, is the essence and name of the Great Goddess herself, hence she could explain the mysterious being to the Gods, she could teach them its secret - for it was her own secret."* **- Heinrich Zimmer.**

In Hinduism, all power, sakti, is female. So, the female represents the totality of the power, and the male is imaged as the agent of the female. In that sense, the power that a female feels from the male - the animus, in Jungian terms - is a specification of the female power, a mode of application of the power.

Every being has a twofold aspect, reveals a friendly and a menacing face. All gods have a charming and a hideous form, according to how one approaches them; but the Great Goddess is the energy of the world, taking form in all things. All friendly and menacing faces are facets of her essence. What seems a duality in the individual god, is an infinite multiplicity in her total being.....She is the mute security of life in itself; from the ashes of burned forests she raises

eager fresh flowers whose decay is pregnant with new life, a new life which all around it sees only life in its transitions and transformations with no shadow of death, just as we ourselves, when we sink our teeth into a ripe fruit, or draw a living plant from the garden are without awareness of death.

Whatever you do, in waking or sleeping, consciously or involuntarily in the cycle of your flesh to the accompanying music of your soul; whatever you do as your body builds and destroys, absorbs and excretes, breathes and procreates, or bestows joy infringing on the limits of rage and pain - all this is a mere gesture of the Great Mother, ***jaganmayi*** *(consisting of all worlds and being), who unremittingly does likewise with her world body in endless thousands of forms.....To see the twofold, embracing and devouring, nature of the goddess, to see repose in catastrophe, security in decay, is to know her and to be saved....She is the perfect figuration of life's joyous lures and pitiless destruction: the two poles charged with the extremist tension, yet forever merging. - Henrich Zimmer.*

Also, in Hinduism, the sun is female and the moon is male; he is born of her, dies into her, and is born of her again every month. Shiva, this great power, is the moon god. Parvati, his consort, is the sun power. And although the worship in the masculine-oriented action systems in India is directly to Shiva, it's to the goddess Kali, that the worship finally goes. So that, actually, in India, Kali is the great divinity.

.....the Hindu goddess Kali...is shown standing on the prostrate form of the god Shiva, her spouse. She brandishes the sword of death, i.e., spiritual discipline. The blood-dripping human head tells the devotee that "he that loseth his life for her sake shall find it." The gestures of "fear not" and "bestowing boon" teach that she protects her children, that the pairs of opposites of the universal agony are not what they seem, and that for one centered in eternity the phantasmagoria of temporal "goods" and "evil" is but a reflex of the mind-as the goddess, herself, though apparently trampling down the god, is actually his blissful dream.

The Goddess
gives birth to forms
and kills forms.

articles on hinduism

Hinduism
By Joseph Campbell

I imagine that when one thinks of Indian philosophy the first thought is of yoga. The great classical text of yoga is that of the sage Patanjali: the Yoga Sutras, "Thread or Guiding Thread to Yoga." At the opening of this amazing work, we find the following definition-and I want to start with this, because it is a very important point:

"Yoga is the intentional stopping of the spontaneous activity of the mind stuff." Now it was the idea in ancient Oriental psychology that within the gross matter of the brain, within the grey matter, there is a very subtle substance, which is in continuous activity, taking the shapes of whatever we behold. This subtle matter is in a state of continuous activity, like the rippling of waves on a stirred pool. And when you shut your eyes, the mind stuff continues to operate that way. If you should try to make it stop, you would find the process very difficult. Just try this some time. Take into your mind an image-somebody that you care for, some image that you would care to contemplate-and try to hold this image still in your mind. You will find that you are immediately thinking of other images , associated with the first; for the mind continues spontaneously to move. Yoga is the intentional stopping of this spontaneous activity of the mind stuff. It is an intentional bringing to rest of this continuous action. But why should one wish to do this?

A favorite simile used in Indian discussions of this subject is that of the surface of a pond with its waves in action-a wind blowing over the pond and the waves moving. if you look at the surface of a pond moving in this way you will see the many reflections-many broken forms; nothing will be perfect, nothing complete; you will have only broken images before you. Butif the wind dies down and the waters become perfectly still and clear, suddenly the whole perspective shifts and you are not seeing a lot of broken images, reflecting things round about. You are looking down through the clear water to the lovely sandy bottom, and perhaps you will see fish in the water.

The whole perspective changes and you behold, not a multitude of broken images, but a single, still, unmoving image. This is the idea of yoga. The notion is that what we see when we look around, like this, are the broken images of a perfect form. And what is that form? It is the form of a divine reality, which appears to us only in broken images when our mind stuff is in action. Or, to state the case another way: we are all, as we sit here and stand here, the broken images, the broken reflections, of a single divine perfection; but all that we ever see when we look around with our mind stuff in its usual state of spontaneous activity, is the broken rainbow-reflection of this perfect image of divine light. Let us now open our eyes, let the waters stir again, let the waves come into action-and we shall know that all these flashing sights before us are reflections, broken

images, of that one divine radiance, which we have experienced.

And it will now be delightful to see them moving in this way; for we are no longer at a loss to know what they are. we shall have seen the source; we shall know that the source is within all of these broken reflections-including ourselves; and there will come a wonderful experience of a harmonious system: all things inflecting in various ways this one perfection. This is the realization that underlies the whole thought and sociology and action of traditional India. Now since we are all broken reflections of that image, that image is present within us. However, it is impossible to describe it in terms of its broken reflections. How would you possibly describe its form to someone who had not seen the complete image itself? It cannot be described in terms of its fragments.

The first principle of Indian thought, therefore, is that the ultimate reality is beyond description. It is something that can be experienced only by bringing the mind to a stop; and once experienced, it cannot be described to anyone in terms of the forms of this world. The truth, the ultimate truth, that is to say, is transcendent. it goes past, transcends, all speech all images, anything that can possibly be said. But, as we have just seen, it is not only transcendent, it is also immanent, within all things, Everything in the world, therefore, is to be regarded as its manifestation. There is an important difference her between the Indian and the Western ideas.

In the Biblical tradition, God creates man, but man cannot say that he is divine in the same sense that the Creator is, whereas in Hinduism all things are incarnations of that power. There has been no "Fall." Man is not cut off from the divine. He requires only to bring the spontaneous activity of his mind stuff to a state of stillness and he will experience that divine principle within him which is the very essence of his existence. And this essence within is identical in all of us. We are, as it were, sparks from a single fire; and we are all fire. There is therefore an eternal revelation of the truth all around us, all the time, and we require only the proper focus of the eyes to experience this.

Now let me give you a couple of basic terms: The divine principle within each of us is called åtman. Åtman simply means "the self." And this "true self" is the same in all. However, each conceives of himself as being a special independent person, and this concept of oneself as an independent entity is called "ego," aham; also, aham-kara, "making the noise `I' ." "Making the noise `I' " is what we do when we set ourselves against each other. The name given to åtman when it is experienced, not only within, but also in the world, is brahman; and brahman simply means "divine power."

Brahman, the divinity immanent in the world, and åtman, the divinity immanent inyourself, are the same divinity; and so the great experience in Indian thought-indeed, the fundamental illuminating principle throughout theOrient-is this realization that all of these beings that seem so various are one. Now this realization that though we are many we are also one, is a magical realization. And what is the magic that transforms the one into the many? it is called måyå. Måyå means the force that builds forth form. And this måyåh as three effects. The first one is to cut off our vision of the perfect unity of the immanent world power. This is called the "obscuring effect" of måyå. The second is, to project all of these broken reflection that we see around us; and this is

called the "projecting effect" of måyå. But måyå holds the possibility of a third effect also; for by contemplating all of these forms with the feeling that they are one, and by going around with the thought in your mind that you are in essence one with all these beings, you may come to realize that this is true.

Måyå thus can reveal, through the manifold, the one; and this is called the "revealing effect" of måyå.I have said that it is impossible to talk about brahman-åtman. The goal of Indian religion, the goal of Indian philosophy, is to point people's minds toward the realization of this truth and then to let them suddenly have the experience in their own minds.

The images of Indian mythology and religion that we see on the beautiful Indian temples are called, in our language," gods." But they are not gods in the same way that the god of the Old Testament is a god. The god of the Old Testament is conceived to be the ultimate truth. There is said to be nothing beyond this god. But the Indian gods are only pointing toward truth; because it is impossible, according to the Indian view, to speak about truth or to picture truth, to personify truth. The personifications, the images, the forms, are only clues, merely guides. And now, to give you a notion of how some of these deities are pictured:
There are three very important deities in Indian worship, and they are Vishnu, Shiva, and Kålæ. Vishnu is pictured as the divine dreamer of the world dream. Vishnu sleeps on a great serpent, whose name is Ananta, which means "Endless." The serpent floats on the universal ocean, called the Milky Ocean. But this Milky Ocean and the Serpent and the sleeping God: these are all the same thing. They are three inflections of the same thing,, and that thing can be thought of also as the subtle substance that the wind of the mind stirs into action when the universe of all these shifting forms is brought into being. Vishnu, the God, sleeps, and the activity of his mind stuff creates dreams, and we are all his dream: the world is Vishnu's dream. And just as, in your dreams, all the images that you behold and all the people who appear are really manifestations of your own dreaming power, so are we all manifestations of Vishnu's dreaming power. We are no more independent entities than the dream figures in our own dreams.

Hence, we are all one in Vishnu: manifestations, inflections, of this dreaming power of Vishnu; broken images of himself rippling on the spontaneously active surface of his subtle mind stuff. Moreover, this sleeping god's divine dream of the universe is pictured in Indian art as a great lotus plant growing from his navel. The idea is that the dream unfolds like a glorious flower, and that this flower is the energy-or, as the Indians say. the shakti or goddess-of the god. I hope that some of you are recalling the counterparts of some of these images in the Biblical tradition. The waters that are stirred into action when creation takes place are comparable to those of the first verse of the Bible, where it is said that the wind or breath of god blew, or brooded, over the waters.

This metaphor represents the miracle of creation, bringing the world into being as a multiplicity out of the stillness of an unstirred sleep. And the bride of the divine being, coming forth in the Indian myth from the navel of a dreaming god, is drawn in the Biblical myth from the rib of a dreaming man. What was originally one has become two. And how delightful it is to see such an image-reflection of an aspect of one's own being-which was not present to consciousness before, and yet was there, nevertheless! So it is with Vishnu's dream. The god becomes aware of his own power and is delighted by the charms of his own power, as represented in the presence derived from him: the presence of his own dream, which is the universe. Thus, the universe is the

dream-bride, or dream-goddess, of God.

Another image that appears frequently in Indian art is that of the god Shiva dancing. Shiva has four arms in this manifestation, and he is dancing on a prostrate dwarf. His first right hand holds a drum; and this drum beats; and that beat is the beat of time, which sends a ripple of movement over the face of eternity. The tick of time, then, is the creating principle, and this first right hand , therefore, is the hand of creation. It is bringing forth the world-dance just by beating the drum. But on the other side of the god, one of his two left hands holds a flame: the flame of illumination ,which destroys the illusion of the world. This, then, is the hand of destruction. But destruction so conceived is rather paradoxical; because what w all want, surely, is to know the truth, even though full knowledge may come only with the dissolution-or stilling-of the activity of the world. And so, whereas we have a deluding creation in the one hand, we have an illuminating destruction in this other, and between the two, flows the enigma of the universe.

The second right hand of the god Shiva is held palm outward in a posture known as abhåya, which means, "don't be afraid." Nothing terrible is happening. Forms are breaking, your own form is breaking, death comes; yet nothing is happening. The eternal principle, which never was born, never will die: it is in all things: it is in you now. You are a wave on the surface of the ocean. When the wave is gone, is the water gone? Has anything happened? Nothing has happened. It is a play, a game, a dance. The second left hand of the god Shiva is held out before him in what is called the elephant posture. It is a posture suggesting the forehead and trunk of an elephant, and this is the teaching hand. For the elephant is likened to the teacher: where the elephant has walked, all animals can follow. It is a huge animal and where it has gone ahead, breaking down the forest, the other beasts can easily follow. This elephant or teaching hand points to the left foot, which is lifted; and that lift signifies release. Meanwhile, however, the right foot is driving down into the back of the dwarf, whose name is "Ignorance." This foot is driving souls into ignorance-that is to say, into the world, into creation, into this life that we are leading. But the other foot is lifted, yielding release. And so here is the god Shiva's image: one foot driving souls into life and the other releasing them, in a cycle of birth-into-ignorance and return-to-truth: Birth and illumination, One hand controls creation, another destruction, while a third is saying, "Don't be afraid; nothing is happening!" and a fourth, "Look at the cycle down there, and realize that your ego (aham) is but a wave rippling on the ocean of eternity, while your true self (åtman), what you really are, is the water, which endures."

A third figure commonly seen in Indian religious art is the goddess Kålæ. For if you wish to personify divinity (according to Indian thought), it is no less proper to picture a mother than to picture a father. Why, indeed, should one attribute sex to a divine being who is transcendent; that is tosay, beyond all attributes? If beyond description, why attribute sex? So it is optional: you may decide for yourself whether you prefer to think of the divine principle as a mother or a s a father, as a dreamer , or as a dancer. Any image will do, so long as it will help you to collect the main principles of this realization and hold them in your mind. God as the mother is pictured in a very strange way. She gives birth to beings but then eats them; and so, she is a terrifying, frightening mother, represented with a great tongue hanging out to lick up the blood of her slaughtered victims. She is a horrendous thing. And this may give you a notion of the realistic seriousness of Indian imagery. Life is not all goodness, it is also frightful. So that, if we are going to assign to the creator only the qualities of benevolence, how shall we account for these other aspects of

existence? Indian thought does not trouble itself as greatly as Western with the problem of evil; because there is no evil, really.

Forms come into being, forms go out of being. Of course they do; for time passes! And how do the forms go out? Some comfortably, some uncomfortably; but they all go. It is this passage and fluency of time that is the great thing: and if you realize that it is all divine, whether going or coming, there is then nothing to fear. The goddess, therefore, is depicted as a frightful consumer of all beings a s well as the mother of beings. She is the sow that eats her farrow, consuming her own children. Her upper right hand is in the posture of abhåya, " do not fear! "; the lower is outstretched in a boon-bestowing posture; the upper left hand holds a swordand the lower left a head, which the goddess has just cut off. She is the deliverer of both life and death. Horrendous yet fascinating, she is the very image of the dual nature of life. These deities, these supreme beings, are held before the mind as objects of contemplation because they suggest the mysteries of this created world. It hurts the dwarf to be tread upon; and the dancer himself hurts his feet, dancing. But anyone with the power of creativity, the power to live, is not afraid of life's hurt. Therefore, if our consciousness is saying aham all the time, saying, "I, I, I am hurt, I and my friends are hurt, I and the principles I care for are being hurt, we're not getting on, the world's going to pot!".....if we begin thinking that way, we are out of touch with the creative principle and dynamics of the world, and we are already, from the standpoint of Indian thought, dead things.

The notion of the universe, then (for I want to move on, now, from the god, down to the universe itself); the notion of the universe in Indian thought is that it is a great organism, manifesting this divine dance, or this divine dream, in a harmonious, magnificent display. And every one of us is apart of that organism. Every one of us has a role to play in it. In their sacred books the Indians commonly represent this cosmic organism as a Great Man, with each class of humanity compared to a part. Now, in the old agrarian societies-societies of the sort fundamental to Oriental culture-there were primarily four classes of human beings: four social strata. The most important of these in India was the brahmin or priestly class, whose function it was to know the divine revelation, to know the truth and how to teach the truth, how to instruct the community and its governors in the way of truth.

The Brahmins are compared to the head of thereat Being; and the second class-that of the rulers, or Kshatriya-to the arms and chest. It is the function of the ruling class to administer the truth that the Brahmins teach, maintaining the society in the way of the cosmic order. And then we come to the merchant and land-owning class, who represent the middle of the Great Man: his trunk and viscera. These, the Vashiya, constitute, so to say, the backbone and guts of the social order.

They are the community that we call the Middle Class. And finally, the members of the fourth class, the Shudra, the workers and craftsmen, are compared to the feet of the composite being. The notion is that everybody has a fixed and proper function, just as the different organs of the body have, and that by performing his functions, each keeps the divine society in harmonious health. Suppose the moon were to say one morning, "I'd like to be the sun." Or suppose the sun one day were to think, "I'd like to get up a little later this morning," The whole universe would go out of gear. The Indian idea of the social order is that all of us are just as tightly fixed to our ways and laws of life as the sun and moon. Furthermore, when one reads the old law books-the Book of Manu, for example -one sees how, in ancient India, the life rules became more and more

demanding as one proceeded up the social scale. The rules for the Brahmin are minute to a degree that can hardly be imagined; but the restrictions become less and less demanding as one goes down the scale to the Shudra level. For the notion is that there is a particular morality, or virtue, appropriate to each class, in accordance with its functions in the organism of the Great Man. For example, the morality proper to the worker, The Shudra, was simply to do as told. By doing as he was told he lost his sense of ego, and so was introduced to the great religious principle and experience of egolessness. He learned this on the simplest, crudest level.

And then, it was thought, after this experience of egolessness had been assimilated on the obvious level of physical service, he would have gained a spiritual character rendering him eligible to be promoted, in his next life, to the merchant or land-owning, Vaishya class. For here the duties were more severe; but, also, the honors considerably greater, so that there was a greater temptation to egoism. It is harder to be egoless, harder to learn
how to be selfless, on this level of wealth and comfort than on the lower levels of obedient toil. And since, for India, the goal of life is to learn selflessness, it is important that people should be graded properly according to their capacity. But the ruling, aristocratic, or warrior class, of course, has more temptations than even the merchant to become egocentric. The members of this class have the power to do as they will, and so here the disciplines were extremely severe . And then, finally, for the Brahmin, who was worshipped as a god, the temptation to ego was prodigious, and the rules of life were almost incredibly constraining, Now everything that is described here implies the idea of reincarnation, and this idea is fundamental to all Indian thought. It is believed that through our experiences of life, we are gradually clarified in our vision, so that we become less and less the victims of ego and its systems of hope and fear. We learn more and more how to become egoless.

In our Occidental, democratic society, we do not believe that people are born into precisely the social class for which their souls are ready. We believe in a loose social structure, with equal opportunities for all. The Indian view, on the other hand, has always been that people are born into the class for which they are ready, and so the system is designed to hold them there. It is important for us to realize, however, that the Indian system of caste is not associated primarily with wealth. People even of the very lowest caste may become wealthy; and a Brahmin priest in a little rural temple will almost certainly be very poor indeed. It is only on the level of the third, the Vaishya caste, that life is devoted primarily to the ideology of wealth. Hence the caste organization itself is not to be understood as an organization based on money, It is based on what is regarded in India as a spiritual principle: the idea that one must learn the lesson of life first on its lowest levels, and then return in later incarnations for more and more difficult lessons, until achieving, complete release from this school of rebirth.

Let me tell you a story, to indicate something about the nature of this Indian idea of the spiritual value of the performance of duty. It is taken from a very interesting Buddhist text, The Milindapanha, which dates back to perhaps the second century A.D., and it tells of the great Buddhist emperor Ashoka, who lived in the third century B.C., in the city of Pataliputra (which is now called Patna). The river Ganges flows past this city, and the river, according to this tale, was rising at that time with such force that it was threatening the city with a flood. The Emperor was greatly troubled, and everybody in the town was greatly troubled, and so all-the Emperor included-assembled on the bank of the river to watch the waters rise. Now there is an Indian

notion that if you have fulfilled your life duty to perfection, you may perform what is known as an Act of Truth. you can say (and this is magic now): "If I have performed my duty without any trace of ego, but, like the sun rising and the sun setting, have done just what I should have done, every hour of my life, then let such and such happen!" And such and such will happen. This is called an Act of Truth. For, since you are part of the organism of the universe, and perfectly so, you partake of the power of the universe. You have become a conduit of universal energy and can perform miracles.

And so now, this story tells us, when all the city had gathered along the bank of the river Ganges, the emperor Ashoka, perceiving the danger, asked: " Can no one make as Act of Truth and cause the waters of the Ganges to flow back upstream?" Apparently the Emperor himself could not do so; nor could any of the members of his court: they stood around and looked embarrassed. The Brahmins hung their heads, the nobles hung their heads,, and the merchants hung their heads. But way down the way there was an old prostitute, and her name was Bindumatæ, and she belonged to what was regarded as the abyss of the social structure. She was the lowest of the low. And yet she said to those around her, "I have an Act of Truth." The old woman shut her eyes and presently the Emperor noticed that the waters of the vast river were slowing down, backing up: there was a roar, and the waters of the Ganges began to flow upstream. You may imagine the action of the people. "Who," asked the Emperor, "performed this Act of Truth?" But no one around him knew. He looked about, and no one within range of his eye gave any sign of either being or of knowing the person whose virtue had saved the city. In a little while, however, the rumor reached him, and the Emperor proceeded to Bindumatæ in amazement. "You!" he exclaimed. "Wicked old sinner! Disgrace of the community! Do you mean to say that you have an Act of Truth?" "Your Majesty," she answered, "I posses an Act of Truth by means of which, if I so desired, I turn the world of men and the worlds of the gods upside down."

The Emperor requested to be told this act of Truth, and the old prostitute replied: "Whosoever gives me money, your Majesty, whether he be a Brahmin, Kshatriya, Vaishya, or Shudra, I treat him as any other. I make no distinction in his favor if he is Kshatriya; and if a Shudra, I do not despise him. free both from fawning and from contempt, I serve the owner of the money. And this your Majesty, is the Act of Truth by which I caused the mighty Ganges to flow back upstream." The obvious part of this remarkable tale is that any way of life whatsoever is a way to God, if followed faithfully, selflessly, in perfect humility. This woman had power as no one else in the community, because she had performed to perfection the duties of her coarse and humble role. But the second lesson of the story is that she did not rise in the social scale for having saved the city: she remained Bindumatæ, serving the owner of the money. Which indicates an important thing about Oriental thought-namely, its distinction between moral and spiritual judgment and its ultimate dedication to the latter. This is something a little difficult for us to understand, since practically all of our own religious emphasis is moral. The religious interest of the Orient, on the other hand, though moral in large measure, is finally metaphysical; and its main idea is this: that by some act, some
experience, some realization, some knowledge, we should achieve an effective relationship to our essential being, which is identical with the being that creates, supports, and annihilates the world.

When one reads the Bhagavad Gætå, which is the most important single text of Hinduism, one comes across a very strange statement. The God there declares that he is the essence of all things:

of the lion, he is the power and the fury; of thieves, the thievery; and of cheats and the cheating. "I am the victory of those who conquer," he declares, "and of those who die, the death." In other words, since divinity is the essence of every being, we must not let our moral judgments obscure from us the fact that God is shining through all things, even those of which we cannot approve; yet this should not disturb us in the performance of our own duties, according to the terms of our own system of ethics. There is a very nice paradoxical principle involved here, which, though it may be difficult for us to appreciate, is fundamental to the Indian point of view. Moreover, there are many means, or ways, by which we may learn to shift our perspective from that of the multiplicity of this world to that of the unity of all things; and all these ways are called yogas. A number of apparently contradictory teachings have therefore been developed in the great domain of Hinduism.

Yoga, in the broadest sense of the word, is any technique serving to link consciousness to the ultimate truth. One type of yoga I have already mentioned: that of stopping the spontaneous activity of the mind stuff. This type of mental discipline is called Råja Yoga, the Kingly, or Great Yoga. But there is another called Bhakti Yoga, Devotional Yoga; and this is the yoga generally recommended for those who have duties in the world , tasks to perform, and who cannot, therefore, turn away to the practice of that other, very much sterner mode of psychological training. This much simpler, much more popular, yoga of worship consists in being selflessly devoted to the divine principle made manifest in some beloved form. One may dedicate oneself, for example, to the service of some god or goddess-one of those that I have just described-or any other, for that matter.

Bhakti Yoga will then consist in having one's mind continually turned toward, or linked to, that chosen deity through all of one's daily tasks. But since divinity is present in all things, one may devote oneself equally to some living person as an incarnation or manifestation of the divine-or even to some animal or plant. In the Hindu marriage the woman is to be thus devoted to her husband. He is god for her, just as the deity of his caste or craft-guild, the deity of his particular system of duty, is God for him.

There is an illuminating story told of the deity Krishna, who, in the form of a human child, was raised among a little company or tribe of herdsmen. One day he said to them, when he saw them preparing to worship one of the great Gods of the Brahminical pantheon: "But why do you worship a deity in the sky? The support of your life is here, in your cattle. Worship these! " Whereupon, they hung garlands around the necks of their cattle and paid them worship. This wonderful art of recognizing the divine presence in all things, as a ubiquitous presence, is one of the most striking features of Oriental life, and is particularly prominent in Hinduism.

I have seen very simple people out in the country, climbing a hill, who, when they became tired and paused to rest and eat, set up a stone, poured red paint around it, and then reverently placed flowers before it. The pouring of the red paint set that stone apart. The idea was simply that those people were now going to regard it, not as a stone, but as a manifestation of the divine principle that it is immanent in all things. The pouring of the red paint and placing of the flowers were typical acts of Bhakti, Devotional Yoga: simple devices, readily available to anyone, to shift the focus of the mind from the phenomenal aspect of the object as a mere stone to its mystery of a miracle of being. And this popular form of yoga, no less than the very much sterner and more

difficult discipline of Patanjali's Yoga Sutras, to which I first alluded, is a technique to link consciousness to the ultimate truth: the mystery of being. The sense of the whole universe as a manifestation of the radiance of God and of yourself as likewise of that radiance, and the assurance that this is so, no matter what things may look like, round about, is the key to the wisdom of India and the Orient.

Through the Imperial Looking Glass – The Raj Syndrome excerpts

(source: **The Raj Syndrome: A Study in Imperial Perceptions - By Suhash Chakravarty**. Penguin Books.1991)

The Empire-building was a demanding responsibility was repeatedly affirmed. There was no lack of flamboyance and poets and publicists were eager to extol the abounding achievements and fruitful experiments of the 'pioneers' and guardians.' The pattern of imperial sensibility was thus nourished by falsified facts. Hypocrisy, which supplied this nourishment to false consciousness, found in the same consciousness its own moral justification and confirmation. In the process of the self-glorification of the Raj, the nebulous dividing line between faith and casuistry, admiration and worship, conscious deception and false consciousness was blurred. A confused reflection of reality, distorted insights and half-truths together with an officially sponsored organization of optimism and swagger tinged the imperial looking glass.

"There is too much Asia and she is too old. You cannot reform a lady of many lovers.' Rudyard Kipling propounded, 'and Asia has been insatiable in her flirtation.' She would never attend Sunday school or learn to vote or render habitual obedience to law without the show of the naked sword.

Everywhere the civilizing mission of Britain, the onward march of a 'masculine' and 'scientific' Christianity and the assertion of the superiority of imperial pride were discerned in the assault of imperialism. At all places it was made to confront barbarism, superstition and tyranny and everywhere an atmosphere of lawlessness of the native society was improvised and condemned for provoking an inevitable imperial retribution.

Kipling spelt out a well-circulated fable that the new acquisitions had been, before annexation, 'one crazy hell of murder, torture and lust'; a hysteria of blood and fanaticism.' Kipling spitefully recalled the gory days when Sudan was being 'reduced to sanity by applied death' on an unprecedented scale. In one day and night, he gibed, ' all those who had any power and authority were wiped out…till no chief remained to ask after any followers.' The imperial retribution in Khartoum, as elsewhere, was savage. One is also forced to recollect the blood-thirsty *ravanche* in India following the Revolt of 1857 which had covered a wide area from Delhi to Awadh. Flora Annie steel depicted the inhuman realities of the uprising in her flamboyant novel *On the Face of the Waters* in which the heroine Kate Erlton learnt to appreciate the assertion of her husband, Major Erlton, that he was a Christian soldier whose task was to become 'the happy instrument of rescuing his neighbor from eternal damnation' of Hinduism, the cult of the inevitable.' The triumphant movement of the Christian power had been violently challenged and the imperial deposition fashioned, by an unholy combination of obscurantism of various forms in 1857.

The Raj was the center piece of the British Empire and it experienced all forms of imperial experiments. Kipling's analysis of British initiatives in Egypt and the Far East applied equally to India. Together, they represented the exploits of an aggressive imperial culture. Defending the aloofness of the Englishmen in India, a writer in the Quarterly Review, dismissed the 'favorite caricature' of the Englishman in India as a hectoring, domineering, swaggering overlord, exacting salaams from every Indian who traversed his path. At home, Aldous Huxley wrote, the same Englishman was lost in a nameless crowed; he did not count because he was nobody. But in India, life satisfied the most powerful of all the instincts – that of self-assertion. For example, even the young man of Kipling's *Barrack Room Ballads* who went out from a London suburb in search of a career in India found himself a member of a small ruling elite surrounded by slavish servants, dark-skinned subordinates and millions of Indians from the coolie to the maharaja, from the illiterate peasant to the holder of an Oxford degree. Huxley, who shared in full measure British prejudices about India, wrote: 'Superiority in India is a question of epidermis.' Robert Byron who was equally sensitive on this point, stressed the foundations of British arrogance in his *An Essay on India*. White pigmentation of skin, he wrote, 'at first only a symbol of material efficiency assumes, and is paid, the homage of a divine attribute.' Every white man in Asia becomes an Apostle and is prepared to maintain his part in face of all opposition.

Flora Annie Steel compared the British experience in India with the repressive frustrations and exacting obligations of Babur, the Empire builder of the sixteenth century. The founder of the Mughal Empire, she thought must have found the Indian countryside 'ugly and detestable' and must have wondered, as did the British general subsequently, if he had better left India undisturbed only to allow it 'to stew in its own juice.' The people, she indicted, were not handsome and had no idea of the charms of friendly society or of social intercourse. They had little 'comprehension of mind', no 'politeness of manners' and no 'fellow feeling.'

To Kipling, Maud Diver, Flora Annie Steel, Sarah Duncan and even Edward Thompson, like Lord Curzon, Milner, Rhodes, and Kitchener, the imperial mission was an obsession and all of them became prisoners of their propaganda. They placed the Empire on a higher pedestal than the daily routine of the Government of India and the democratic uneasiness of the British Parliament. Kipling's 'burden' was an idealization of an aggressive and flamboyant Raj. Curzon went out of his way to applaud the Indian experiment as the highest achievement of their race. Kipling became the barometer of British interests in India. Civilians affirmed that they served Kipling's India. W.W. Hunter, who misjudged *Departmental Ditties*, exhorted the young Kipling to present to the world the British experiment in India which 'has never had an equal in history'. Ronald Wingate, like many others, felt the weight of the white man's burden.

After the announcement that the Noble Prize was to be awarded to Rabindranath Tagore, Western critics sought to establish the superiority of the 'Caucasian race' over the 'Indian race': to discover in the poet, a dreamer with a 'narrow Western outlook' and a dated Western sensibility who had been favored by preferential treatment that was, according to them, often meted out to 'colonials' for political exigency. They saw the award as something of a humiliation to which they were supposed to adjust themselves.

"It is the first time that the Noble Prize has gone to anyone who is not what we call 'white'. It will take time, of course, for us to accommodate ourselves to the idea that some one called Rabindranath Tagore should receive a world prize for literature. "

'We of the West do not want from the East poetic edifices.' *The Liverpool Post* declared, 'built upon a foundation of Yeats and Shelley and Walt Whitman. We want to hear flute of Krishna as Radha heard of it, to fall under the spell of the blue God, in the lotus-heart of dreams. As an Oriental poet Rabindranath Tagore, the *Queen* of London pronounced, had nothing to offer the West. Indeed, critics often crossed the frontier of sanity and moved into the realm of absurdity.

There was no paucity in Anglo-Indian fiction of examples depicting the liberating influence of Christianity. Nora E. Karn in her collection of short stories, *The Believer and other Stories*, identified Christianity with humanity. The Christian nun of 'The Bhaktani' spoke in the warm language of the East, another girl a child in her lap became a sadhni of Jesus, defied a cruel Hindu society and trudged all over religious India in the garb of a mendicant with the joy of St. Francis in her heart. Christianity, it was maintained, was the essence of liberty and unless a significant proportion of the whole community had become true Christians, self-government might become a sheer calamity. Christianity, it was assumed, could not co-exist with Hinduism and missionaries often called for exclusive official patronage. Over the years the sympathies of the Government had shaped and regulated a set of firm guiding principles. Basking under the warm glow of official care, Christian propaganda turned intensely intolerant. **'If Christ is to rule over India, wrote one of its active cadres, 'then Hinduism and all its various superstition must go. You can neither lessen His light nor illuminate its darkness by a process of assimilation.'**

As the prospect of Christian conversion loomed large in the eyes of the missionaries, they were often carried away by their unrestricted optimism beyond all reasonable proportion. Thus Henry Whitehead, the Bishop of Madras and G.W. Briggs of the Christian Missionary Society, reported gleefully that there existed in India enormous raw material ripe for instant conversion. Christianity, Briggs penned, was for the lower castes like the Chamars more than a social and economic gospel. Hinduism, he maintained, on its lower side was polytheistic and saturated with demonology. Bishop Whitehead endorsed this view. The first step towards any social progress in rural India, he argued, was to demolish this chaotic clutter of beliefs and practices, rites and ceremonies and clear the ground for the teaching and worship of the Christian church.

Henry Whitehead characterized Hinduism as 'a religion of fear and superstitions' finding its outward expression in mean symbols and 'in forms of worship that are to a very large extent disgusting and even immoral.'

The imperial mind questioned, in utter bewilderment, the queer imagination that had conceived 'these strange creatures.' It was overwhelmed by a creepy feeling which stood between it and Hinduism with its 'ugly gods', devastating 'evil eyes' and 'sure charms' – all shrouded in mysterious forces that were beyond any rational explanation. It shivered at the infinite and immense secrets of India. The Jain temples at Mount Abu rattled Edmund Candler. He was amazed by 'the miracle of elaboration' the diversity of compositions and the uncompromising 'severity of the details' of the shrines.

One fifth of humanity, the imperialists swaggered, lived here and the British could not have held the country for even a day unless ninety-nine percent of the people were stirred by them. Even Islam with its uncompromising monotheism, Valentine Chirol contended, made only a marginal impact on Hinduism. **As a political force, it was concluded, Islam had already become moribund and it was generally held in official circles that it owed its political existence**

largely to the British rulers who had resisted the political revival of Hinduism and had ever since held the balance even between all creeds and communities. In the antagonism between the two religions, it was argued, the deepest chasm in Indian society ought to be located and nursed.

It is small wonder that Katherine Mayo ingeniously appended Indian nationalism with the superstitions of a ritualistic Hinduism and fused them into a powerful anti-Indian demonstration. The impact of Katherine Mayo's (*Mother India*) was more than ephemeral. She rendered the racial arrogance of the exclusive clubs into a self-righteous assertion. There was a general agreement on the issue that there was no rational ground for the development of democracy in India and that there was little likelihood that one could discover any method by which a stable government could be established upon 'any other foundation than of British bayonets.' All their 'sub-human civilization', 'repulsive personal habits', 'amazing egocentric mania' and 'unparalleled sexual degradation' were exposed by Katherine Mayo and in the process she reduced 'India's claim for Swaraj to sheer nonsense' and 'the will to grant it' in some quarters to 'almost a crime.'

Katherine Mayo set the trend for a new branch of literature whose pre-occupation was to stretch the morbidity of Hindu customs, superstitions and rituals to a point of absurdity and invest it with a unique spiritual inhumanity.

W. A. Frazier's *Caste* was one of them. To Barlow (one of the characters of the book) the compelling voice of the Brahmin signified idols and a depraved materialism. The scientific and Christian West, Frazer underwrote, was incompatible with a 'barbarous ' and 'fanatic' Hinduism even if the West made the necessary adjustments and carried out effective surgery in its own value system in order to meet the East on its own terms.

There were many who were upset by the fact that the country had been suffering from abject poverty despite British rule. They considered it a disgrace to the British Empire that there should be any large body of citizens who were continually hungry. It was conceded that Arnold Lupton in his *Happy India*, a reasoned rebuttal of William Digby's *Prosperous British India*, found the roots of India's poverty and misery in the apathy of its callous upper castes and their peculiar social attitudes. Lupton lambasted the Hindu social system and its self-centeredness. Englishmen, Lupton bemoaned, could teach but if only the Indians would care to learn.

The balance sheet of British rule (the social insecurity of Britons in India and the life of gross humiliation led by educated Indians on the other hand) was, however, drawn up with a promising note. One of them announced: ' I am proud that our country should have been chosen by fate, nature, God or whatever you will it, to clear up the debris of the Moghul Empire and to unlock for India, the treasures of Western thought. I think on the whole we are worthy of it. The date for this self-righteous exhilaration is not 1917 but 1943, when the memories of the movement of 1942 were still fresh. The author was neither a swashbuckling champion of the Raj nor a poet laureate of the Empire. He was the modest Penderel Moon known for his sympathies for a new India.

Dwelling on the position of India in the British educational system, the India League, in 1945, came to an unfaltering conclusion that the children of the British school system had been over the years taught on the assumption that since they lived in a country which had for centuries held a great empire under control, they were peculiarly fitted to rule. Although this did not manifest

itself crudely in the same way as in the Nazi *Kerrenvolk* teaching, it was almost as dangerous in the underlying acceptance without question of all the implications of such a position. The teacher's committee of the League noted that although the British children had been encouraged to appreciate and assess the contribution of countries other than the Great Britain to world civilization, the curriculum was judiciously selective and misleading. The countries which were covered by the enquiry of the students fell into two categories: those which had contributed to the development of Christianity and to Western civilization in general and those which were fighting on the other side of the allies in the Second World War including the U.S.A. and the U.S.S.R.

Most serious gaps occurred in the case of Japan, China and the Islamic countries while India, the brightest gem in the British crown, witnessed remarkable distortion. Thus while the caste system, child marriage and Sati as reprehensible institutions were heavily underlined, the absorptive capacity of Hinduism, the general attitude of tolerance, the role of Buddha, Ashoka and Akbar, the development of composite culture, the historic role of the Sufi and the Bhakti movements were either overlooked or pushed into a twilight of hazy information. Even the resurgence of India in the nineteenth and twentieth centuries was glossed over and the name of Rabindranath Tagore did not figure in the school textbooks although the works of American writers like Longfellow and Whitman found adequate representation and the work of Christian missionaries in India was emphasized on a disproportionate scale. The civilizing mission of Britain in India continued to dominate the minds of both the teachers and the students. In contrast, India's contribution in the spheres of art, literature, science, and politics as also its nationalist movement remained a well-guarded secret from the average Briton.

For the ideologues of the Raj, the human race was divided into two categories: that of the poor of the black and brown colonies and that of the rich which was restricted to a small white European stock. It was believed that in both these areas, men might attain salvation – but by different means. The road to freedom opened to the wretched colonies was conditioned by the nature of their subjugation to the white race. It was a traverse through a world of humility, patience and submission – a long and tedious journey to be undertaken with faith, conviction and cheerfulness. The Empire-builders, on the other hand, were to sanctify their superior ability, authority and honor by infinite mercy, and the result of their munificence was sure to meet the 'ungratefulness of the conquered race.' Thus the Indians ought to be forced, if necessary, to discern and acknowledge their cultural, social and religious and economic inferiority and trace their restrictive frontier of life. As Edmund W. said has conceptualized, the idea of 'Orientalism' has come to fashion an academic tradition. By its very definition, the perception inherent in Orientalism is racist, imperialist and ethnocentric. The white man's burden was thus placed even theoretically on force and it was to be buttressed by a constant exhibition of physical might. It was a sentiment, an attitude, a policy and a reality. The white man, as a consequence, was never to meet the East on equal terms.

The Raj Syndrome - excerpts

(source: **The Raj Syndrome: A Study in Imperial Perceptions - By Suhash Chakravarty**. Penguin Books.1991).

(The book is a study in imperial sensibility. The author has examined the nuances of British perceptions of India during the period, roughly, from the imperial assemblage of the Delhi Durbar of 1877 to the replacement of the Union Jack on the Red Fort by the Indian tricolor in 1947.The Raj was central to the formation of British imperial ideology and the syntax of imperial prose in India was candid and unambiguous.)

There was no dearth of Social Darwinists to draw up an argument from the natural sciences and to belabor the basic inequalities between the European and non-European peoples. Karl Pearson, for example, idealized imperialism as an essential part of 'natural history', as the inevitable struggle between races leading to the triumph and survival of the fittest. "The path of progress, he announced in 1900, ' is strewn with the wreck of nations; traces are everywhere to be seen of the hecatombs of inferior races…(p. 8)

Lord Curzon proclaimed that he had been called upon by Providence to devote 'the whole of his working manhood to the study and service of the Empire.'

He maintained that the physical expansion of Europe was prompted by the law of modern nations which stated that every nation must expand. Although initially Britain had launched on historic quest, her example soon inspired other nations to follow faithfully. The United States of America, it was pointed out, had been pushing ahead towards an imperial destiny. This lesson had also been grasped by France, Italy and Germany. Imperialism had become a respectable world phenomenon. Curzon insisted that the Empire should not be interpreted either as an upshot of national vanity or as the outgrowth of territorial cupidity. On the contrary, a noble commitment, he stressed, formed the point d'appui of imperialism.

In keeping with this perception, the expansion of the British frontier in India as elsewhere was presented as a spectacular march of civilization. Whether amidst the mango groves of Palasi or on the banks of the Sutlej, whether in the rugged Aravallis or in the fastnesses of the Maratha uplands, it was drummed into the ears of the prostrate population that British diplomacy and arms desired justice. In imperial literature British rule meant law and British force signified the protection of the weak against a barbarous bully.

The relentless service of the Raj to mankind was 'projected in every aspect of its endeavor. Englishmen in India were depicted as the most conscientious servants of God. Kipling faithfully sang these claims in his A Song of the English.

The elements of progress and loyalty, it was underlined, had transformed imperialism into a progressive force. This was not an assertion of an egalitarian worldview as it glorified a mercantile past, rhapsodized the brutal ascendancy of an aggressive military power and romanticized the liquidation of traditional societies.

Curzon ranted that despite human failings, the British Empire in India epitomized a happy combination of moral virtues, a spirit of humanity and a puritanical fervor.

The Boer War was admittedly the bloodiest military encounter since the days of Napoleon. It lasted 2 ½ years, and of 45,000 British and colonial soldiers on the front, some 22,000 were killed. To many, the spectacle of a big England bullying a little Transvaal was too unseemly and repellent a sight to be overlooked casually. Diplomatically, Britain had been cornered and her splendid isolation was more discomforting than her solitary magnificence. Yet England remained unrepentant. The war resulted in the creation of a reconditioned imperial idea. Imperialism was endowed with the halo of divinity. In fact, the Boer War made imperialism an effusive sentiment. Englishmen in the Empire as also the Americans in the Philippines were urged to:

Take up the white Man's burden-
Send forth the best of ye breed –
Go bind your sons to exile
To serve your captives' need;
To wait every harness
On fluttered folk and wild –
Your new-caught sullen peoples,
Half-devil and half child.

The imperial adventures were composed as measures blessed by the will of God.

The Yellow Peril:

The Russo-Japanese War was a relevant milestone in imperial history. Kaiser had coined for the imperial vocabulary an explosive phrase, ' the yellow peril' – denoting the danger from the Chinese and the Japanese. With regard to this alleged threat to European supremacy he had raised a clamorous outcry in the imperial citadels. It articulated a campaign for the recognition of a pretentious claim of racial superiority by all its necessary attendants. The rise of modern Japan seemed to have challenged the axiomatic supremacy of the white Christian race. Everyone fore glimpsed in it a frightening prospect.

All forebodings with regard to Japan spearheading a resurgent Asia against an imperial West were submerged by a vigorous assertion of self-confidence. It was noted with spiteful relish that in India popular ideas betrayed little enlightenment, that the awakening of China had been following a tardy process, that would have little impact on a resurgent India. Most Englishmen were certain that there was no danger of a nationalistic steam 'overpowering us in India.'

India formed the principal rampart of the British imperial system.

She was its halting place, its springboard and its central operation theatre. No one was willing to relinquish that 'divine dispensation'. The Raj meant much to the Empire. Early in 1870, Richard Southwell Brooke, the Earl of Mayo, had noted its conspicuous potential. Apprehending the

Russian designs towards the Indian frontier Mayo declared: **‘ We are determined as long as the sun shines in heaven to hold India – Our National Character – Our Commerce demands it.’**

Russia, he added, was ignorant of the mighty power that Britain wielded in India and of the ‘moral influence we could, if we choose exercise on our borders.’ To that intensely practical Viceroy, India had become the conduit of British prosperity and repository of her ‘national character.’ Recognizing the strategic importance of India in British imperial calculations, Lord Lytton in 1877 sought to actualize the nebulous imperial idea in the magnificent Delhi Durbar with the assumption of the title of Empress of India by the British Queen. Lord Curzon’s tenure as Viceroy was the high noon of the Raj. Both in terms of imperial vision and its fulfillment, ‘the Jewel in the Crown’ had become luminous, enterprising, domineering and extrovert. The numerical strength of the Indian subjects and the immense natural wealth of India actuated a sense of pride which came to be grafted permanently on the British imperial sensibility. The imperial pride of Britain was its chief political asset: it was both a moral and a material force. The loss of British power in India, it was believed, would have been a frank confession of Britain’s moral bankruptcy in a world dominated by concession, treaty ports, extra-territorial rights, buffer zones, client states and formal empires. Without India, the Empire was lost. ‘When India has gone, the great colonies are also gone. Valentine Chirol, said, with the loss of India, British position all over Asia, would be completely shattered. The severance of India from the Empire, Chirol argued with an air of prophetic insight, would be inopportune **for ‘the supremacy of the White Man’** all over the world. Japan had already shaken the faith of imperialism in its own sense of invincibility. Its confidence quivered at the sight of a resurgent Asia. The publicists of the Raj shuddered at the thought of the collapse of its principle hinge on which the whole system turned.

It was natural, therefore, that Indian loyalty could not be allowed to evanesce. **The British Empire of India was essentially based on force and it had to be maintained, if necessary, by brute force.**

England’s euphoria with regard to a ‘Greater Britain’ was a kind of ideological formulation. India was ubiquitous in the British imperial sensibility. It carefully contrived the fantasies of a modern Roman Empire and grafted the passion for unrestricted authority on to the viceroy, governors and administrators who were greeted as proconsuls and centurians. It was construed that the imperial obligation of Rome had been inherited by Britain and ‘in the discharge of the highest features in English character have displayed themselves. **Rudyard Kipling** hailed the ‘**Imperial Fire of Rome’ as a divine dispensation that had fallen ‘on us, thy son.’**

The Empire created its own captains. In thousands of classrooms children were taught to prattle the story of the nine little nigger boys and the importance of being a gentleman. They were also brought up on the exploits and legends of the old and new knights, of Peter Pan, of the Lost Boys in the Never Never Land and on the adventurous prince awakening the Sleeping Beauty and slumbering civilization of life amidst an unruly people. The Empire, they were taught, was the product of very imaginable variety of heroism and valor. There was no paucity of publicists and there was no dearth of improvisation. V. A. Smith, H. Rawlinson, Edward Thompson, G.T. Garrett, W.W. Hunter, Percival Spear, to name a few, buffed the imperial sculptures with their tutored skill and historical imagination.

The Empire called for physical expansion and a determination to defend, hold on to and

consolidate territorial acquisitions against all intruders. It demanded indomitable bravery, supreme sacrifice and unflinching patriotism. It sanctioned the conviction of the Light Brigade to ride on to the Valley of Death, underwrote the credo of Tennyson to hail 'once more to the banner of battle unroll'd and recommended W.E. Henley's prayer for a war 'righteous and true.' The imperial consciousness of Britain inspired Newbolt to implore:

So shall thou when morning comes,
Rise to conquer or to fall
Joyful hear the rolling drums
Joyful hear the trumpets call.

Empire building, it was asserted, was an uphill task. For Rev. Henry Inglis, it meant rough travel through tracts of scrubs, jungle and heavy forest, across riverbeds, up and down the slopes of hills carrying with him a few medical comforts 'to semi-savage people jungle tribes, poor, primitive souls and bodies as yet hardly higher than animals, owing to the cruel barriers of castes and customs.' **The claims of British mission was 'to lighten the darkness of these miserable beings' and give them 'spiritual and physical aide.'** Between the illusions and realities of English society in India, the myth of the white man's burden discovered a very large and attentive audience.

The ideologues of the Empire made no bones about the economic and financial impulses of expansion. Lord Curzon vouched 'that both our Indian and African dominion had an economic origin.' The search for a potential market and the raw materials of an Asian El Dorado were far too seductive even for the most circumspect stateman. With Indian resources tamely at the command of Britain, the expansive impulses were regulated and given a direction. 'There is nothing ignoble or selfish in seeking fresh markets for our produce and manufacture', Lord Curzon clarified: 'There is nothing wrong in establishing ourselves in an unsettled and derelict country with a view to bringing wealth to our people.' Yet he implored that the Indian Empire should not be depicted as an exclusive commercial concern. He entreated that imperialism must adopt a lofty vision. It must don on a gorgeous apparel.

In the past, it was held, that loyalty of India had been presumed as axiomatic because of her respect for the courage and fortitude of the Englishmen and for their commitment to justice and fairplay. India, by and large, had been reconciled to the British rule despite displaying an occasional delinquency for she was convinced, the publicists assumed, that the British connection had ensured for her a more honest, stronger and a more humane government that what she had herself developed and organized over the centuries.

There was a sanctimonious air in the fatuous exhortations of the Raj. A divine will, the social obligations of a superior race, the central position of India in the economic and strategic map of the Empire and the existence of a well-synchronized elite corps both in India and Britain in tune with much-publicized British mission had inaugurated an imperial paranoia.

India, according to the British statesmen, was a geographical expression, inhabited by various ethnic stocks and held together by British imperial hegemony. A Christian sense of superiority was grafted on to that imperial mission. Thus, one was faced with a paradoxical situation. While the exercise of despotism over the Christian and 'civilized' people of Cyprus was to be resisted, such a form of government was safely recommended to the people of India, Egypt and Singapore.

Christianity and progress, according to the imperial ideologues, were interdependent as a 'universal law for all times, all states and all societies.' This perspective was confirmed by the Simon Commission and the Lindsay Commission and largely adhered to by the Conservative and Labor parties during and after the Second World War.

The centrality of the Raj in the Empire rendered the Indian undertaking very attractive. Its possession reinforced British culture with a renewed interest in militarism, royalty, national heroes, cult of personality, racial ideas of superiority and a contrived sense of Christian mission. The determination to hold on to India at all costs led to the improvisation of a series of myths and legends. The providential character of British mission in India was upheld on grounds of lofty moral principles. Mastery of this enormous territory conferred on British character an inflated imperial pride as also a set of prejudices. Maintenance of an arbitrary rule over India, despite professed British traditions of freedom and justice, was sought to be cushioned by widely circulated racial stereotypes. **Kipling gave the Raj a wide ideological umbrella which sheltered a whole range of self-righteous exaltations, romantic images and contorted visions wrapped in a seductive phrase: 'white man's burden.'**

Uncomfortable Claims: Untenable Positions – The Raj Syndrome - excerpts

(source: The Raj Syndrome: A Study in Imperial Perceptions - By Suhash Chakravarty. Penguin Books.1991).

The overpowering atmosphere of a cantonment was ubiquitous in official India. This was, it was believed, but a natural product of the interaction between a rational Western mind and the lurid customs of a spooky land full of snakes, cholera, superstitions and babus. The civil lines, the cantonment, the sadr, and, along with it, a lalbazaar provided the physical expression of an overbearing Raj on the outskirts of an Indian city. Of course, there was the inevitable buffer zone of 'fat Indians' as a reliable cushion.

A British establishment in India was situated outside the old walled town. It was generally divided into two parts, the civil lines and the cantonment. The former was spaciously arranged with lots of green between the bungalows inhabited by the *sahiblogs* and the latter was organized on severe military lines. The conspicuous feature of the life of the cantonments and civil stations was a disciplined unity **against an alleged native insubordination. As a ruling race it was not the friendship of the ruled that was to be sought after. They required no friendly overtures from the natives. On the contrary, they believed in the unswerving obedience of the Indians and cultivated a calculated detachment from them.**

While the 'hill stations' were acclaimed as an English spring superimposed on an Indian summer and the select clubs fashioned an odd world of make-believe.There were many hill-stations and hence plenty of choice. About eighty stations were established by the British as retreats from the heat and cholera of the plains. 'Like meat,' one of the memsahibs cribbed, 'we keep better up here.' Some of the hill resorts were purely escapism. Simla was, however, 'the abode of the little Tin Gods' as Kipling had put it. For several months in every year it was the capital of the Raj and the embodiment of the absolute power of the viceroy. Despotic power was frankly exhibited. There was also the imperial cathedral and the Gaiety. Together, they constituted the complex structure of an imperial hierarchy which **segregated** even the shopping center. The Mal was separated from the Lower Mal and both from the chhota bazaar. The hill-stations espoused the desire to recreate British atmosphere with exuberance which was always alien and incompatible.

By and large the British community in India lived its own life, ran its own shops and newspapers, entertained itself at exclusive halls and concerts, admired or criticized itself on Chowringhee Road and Connaught Circus, congratulated itself at the official receptions at the government houses and the viceregal palace, exalted itself at the Imperial Orchestra played **Rule Brittania** on the Mall at Simla or titillated itself down memory lane as a certain Mr. Cunningham performed Othello at the Gaiety Theatre. The Brahmins, **F.Yeats-Brown** put it bluntly, made a circle within which they

cooked their food. So did we. We were a caste, pariahs to them, princes in our estimation. The compulsions of imperialism negated all passions for democratic equality or Christian egalitarianism. Imperialism, by virtue of its very nature, was insular, racist and arrogant.

The whole range of historical novels on the Indian theme stoked the self-righteous imperialism in India. These works of fiction were the result of the imperial consciousness, and, in turn, they provided the emotional and material impulses for more rigorous actions and heroism.

Imperial stereotypes

Major General Agate of The Rains Came had been in India for half of his life and was a perfect Kipling general both in appearance and temperament. It was 'on his own solid shoulders', he reminded his over-awed neighbors, that 'he carried the burden for all dark races.' He remained smug in the belief that he was serving the British Empire in its grand tradition.

There was an orthodox Winston Churchill sneering at the 'naked fakir' (Gandhi) and refusing to preside over the liquidation of the Empire. Meanwhile imperialism got away with its inhuman ordinances, its broken pledges and the future of the Raj.

E. M. Forester, was disturbed by the social exclusiveness of the rulers. As Benita Parry puts it, almost all the historical, analytical, propagandist and fictional writings on India devised a way of presenting world history in such a way that British rule in India appeared a political imperative and a moral duty.

Charles Andrews would have concurred with Forester but for the fact that he had also desired to initiate a singular synthesis between the new India and the old and consecrate the imperial mission with Christian piety.

In 1934 Robert Byron echoed Forester's uncomfortable claims and untenable positions with regard to the demands of imperial partnership as well as his general faith in England's civilizing mission.

Edward Thompson having acclaimed the fulfillment of the British goal in India gazed remorsefully at the decline of the Raj. He had witnessed the pageantry and splendor of an arrogant Empire. It was as certain as Rome had been. He had for seen the last days of British rule as he helplessly watched a rising tide of opposition around the issue of partition of Bengal.

C.F. Andrews, E.M. Forester, Edward Thompson, Horace Alexander and Robert Byron tried to resolve the contradictions of imperialism by weaving a sense of obligation into the system. 'To see a great race given scope for the exercise of its greatest strength, to see it conduct the art of government on a scale and with a perfection accomplished by no previous race, is to achieve that sublime pleasure in the works of man, which, ordinarily, is conferred only by the great artists. This I saw in India.'

The Western man's assumption of racial superiority, Byron argued, had rendered him odious to the East. And the only means which the East devised of resisting this assumption were either to swallow the materialism whole and undisguised, or else, take a little of it and rebel against him forcibly. Japan tried the first course and was about to lose her soul; China opted for the second and relapsed into chaos. 'India remains', he said, 'holding in her precarious balance,

the residue of hope.'

In India the white man was always the ruler and the native was always the ruled. It could not have been the other way around. To put it in other words, the Englishman was painted as virile, bold, energetic, and masculine, while the natives were presented, with the exception of some Pathan tribesmen of the frontier, as effeminate, weak, cowardly and lethargic. Masculine Christianity was firmly established as the governing principle of imperialism and this perception continued almost unabated.

Jim Corbett, a hunter, a storyteller and a Christian gentleman, wrote: " Those who visit India for pleasure or profit never come in contact with the real Indian – the Indians whose loyalty and devotion alone, made it possible for a handful of men to administer, for close on two hundred years, a vast subcontinent with its teeming millions.

To most British, India was central to his concept of the Empire, and he tried to clothe imperialism with Christian virtues…

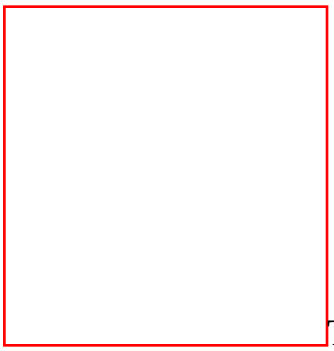
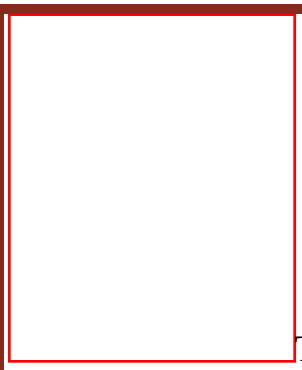
AshtaVinayak - The Eight power centers of Lord Ganesha

By Chalomumbai correspondent
http://www.chalomumbai.com/asp/article



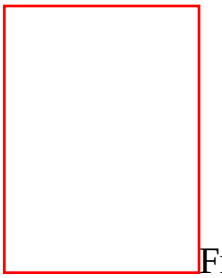
Ashta means eight and Vinayaka is one of the several names of Lord Ganesh. The Ashtavinaykas are eight Ganesh temples in Maharashtra namely Morgaon, Theoor, Pali, Mahad, Lenyadri, Ozar, Ranjangaon and Siddhatek, five of them being in Pune district alone.

The Ganesh idols in these temples are known to be swayambhu (born on their own, in other words, discovered, not constructed). That's why these temples have special significance. Devotees strongly believe that their wishes would be fulfilled if they visit these temples at least once in their lifetime. In fact, one would find very few Maharashtrian families that have not done the Ashtavinayakadarshan yatra once in their lives.



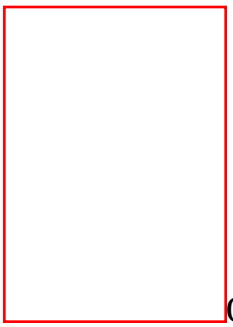
There are a number of travel companies taking pilgrims to Ashtavinayakas throughout the year. But one can go independently by Maharashtra State Road Transport Corporation buses, private luxury buses or private vehicles too. Except for the two steep ones -- Ozar and Lenyadri, the other temples are easy to reach.

Let's set out on the journey



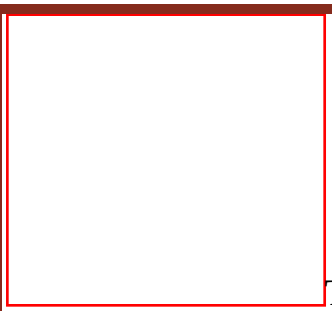
Moreshwar at Morgaon

 There are various routes to reach Morgaon from Pune but the most commonly taken one is Pune-Hadpsar-Saswad-Jejuri-Morgaon. Old-style construction marks the temple. With a silver cobra adorning its head, the Ganesh idol sparkles with radiant diamonds which make its eyes. Eight different statues of Ganesh, installed in eight directions attract attention in the temple compound. A huge mouse and a nandi bull (the vehicle of Lord Shiva) in metal catch your eye as they sit in front of the Ganesh idol.



Girijatmaj at Lenyadri

 This is a tough one to climb. On Pune-Nashik highway, if one takes the Chakan-Rajgurunagar-Manchar-Narayangaon-Junnar route, Lenyadri mountain falls on the way. The 302 step climb is worth it. The cave temple and the stone statue are beautiful. But what's amazing about the place is that the cave which is 50 ft long and 60 ft wide does not have a single pillar! If this architectural wonder doesn't make you curious, there is a well on the mountain, storing chilled water which tastes good too!



Chintamani at Theoor

 From Pune, when you take the Hadapsar route, 3 km away from Loni is the Theoor road. This temple is endowed with scenic beauty -- there is a river flowing behind the temple and the long temple passage is usually quiet in the evenings, making it a perfect place of worship. It's said that a saint called Morya Gosavi became enlightened here in the past. In the recent times, during the Peshwa rule, the temple was renovated as Madhavrao Peshwa was very fond of it. For Pune residents, the distance of 25 km is something that can be covered easily. As a result, the temple is always crowded.

Vighneshwar at Ozar

 On the same route but a little before Lenyadri is Ozar. Situated on the banks of Kukdi river, this temple has been surrounded by a solid stone wall. The huge shrine and the attractive idol inside it create a sense of grandeur. Nearby is the fort of Shivneri where the Maratha king Shivaji was born. Pilgrims make it a point to visit the fort more because of its historical significance than its proximity to the Ozar or Lenyadri temple.

Ballaleshwar at Pali

 This one falls in the Raigad district. The easier route is Mumbai-Panvel-Khopoli and Pali. Built in stone, this huge shrine has visitors throughout the year. But in the month of Magh, according to the Hindu calendar, there is a festival of Ganesh and many pilgrims from Mumbai, Pune make a beeline for the early morning darshan on Chaturthi (the fourth day). A huge metal bell at the entrance adds to the overall vastness of the structure.

Mahaganapati at Ranjangaon

 This one is close to Pune. On the Pune-Ahmednagar highway, one has to go via Pune-Koregaon-Shikrapur route. Ranjangaon is close to Shirur. The temple is built in such a way that when the Sun is in transition - moving from Uttarayan to Dakshinayan, its rays invariably fall on the idol.

It is said that the original statue which was found in the village was called Mahotkat and it had 10 trunks and 20 hands. But it has been preserved in the underground cell of the temple. The one which is kept for worship is different.

Varadavinayaka at Mahad

 One can take the same Mumbai-Panvel-Khopoli route since this one also comes in the Raigad district, except that 6 km before Khopoli, there is a turn which takes one to the Mahad temple. As such this temple looks like an old-fashioned residential structure. It has no grandeur that mark many other temples. But Varadvinayaka is supposed to be very jagrut (one who grants wishes, even gives darshan if worshipped sincerely). Another important feature of this temple is the lamp which has been burning here since 1892!

Siddhivinayak at Siddhatek

In Ahmednagar district, on the Pune-Solapur highway, one has to take the Pune-Hadapsar-Loni-Yavat-Chaufula-Patas-Daund route. Cross River Bheema or take a longer route to make it to the temple. Legend goes that Lord Vishnu became enlightened here. Hence this place is supposed to be appropriate for attaining siddhi (divine powers).

For the devotees of Ganesh, the Ashtavinayaka pilgrimage is an experience that is satisfying in itself. That it can also ward off any evil or fulfil their wishes is actually the secondary advantage.

Ramayana tales told differently
By Nidhi Chaturvedi
http://www.dailypioneer.com/secon2.asp?cat=\fory14&d=Foray

The most popular epic Ramayana has been retold in various countries adopting the local flavor.

Dussehra and Diwali, the two greatest Hindu festivals revolve around the epic Ramayana and are all about Rama, Sita and Ravana.

The Ramayana has remained the perennial source of inspiration down the centuries not only in India but in the whole of South Asia. Valmiki s Ramayana is the oldest work of the legend.

According to a legend, when Narada departed for heaven, Valmiki went to the banks of Tamasa river, not far from the Jahnavi (ie Ganga). The Ramayana started its journey from this place.

The different regional versions of the Ramayana like Kambar's Ramayana in Tamil, Krittivasa's Ramayana in Bengali, Tulsidasa's Ramacharitamanasa in Awadhi, Eluttaccan's Adyatma Ramayana in Malayalam etc, are not mere translations. Instead, they also incorporate the local cultures and legends into the adaptions.

The **Tibetan** story says that Sita was Dasagriva s daughter (ie Ravana) and was abandoned on the advice of astrologers. She was brought up by the cultivators. Vishnu incarnated as Rama to kill Ravana. And as the plan, Rama abdicated his throne and went to the forest to allow Lakshmana to assume kingship.

In **Burma,** the legend of Rama goes back to the 10th century. Here, Rama has been described as a pious Buddhist king. Another Buddhist addition is that Rama and Sugriva met under the shade of Bodhi tree.

In **Malaysia**, most of the manuscripts discovered were written after the advent of Islam. And are thus, subsequently altered in the light of Islamic tenets and believes. In course of this transformation, many new episodes were included. An interesting example is that Allah sent Adam to Ravana, and Adam made the latter the lord of earth, water, nether world and the kingdom of Indra.

King Dasaratha was a great grand son of Adam. He had two wives, Mandudari and Baliadari.

Ravana asked Dasaratha to hand over Mandudari, who in turn assumed an illusory form named Mandudasi to become Ravana s wife.

According to the Malaya Rama stories, all chief characters such as Rama, Sita, Ravana, Valin and Hanuman are related to each other. Sita is Ravana s daughter. Laxman and Hanuman have been have illustrated as great characters.

According to the **Thai** notion, Valmiki s Ramayana finds its roots in Thailand. In fact, the Thai identify themselves so much so that they are not interested to know whether Ramayana was originally written in India.

They believe that Ramayana is their own creation and the **Thai Ramakien** is the original Rama story. Many places in Thailand have been identified with Ramayana episodes. For example, the city of Ayutthaya ie, Ayodhya has been mentioned as the capital of the kingdom. It is believed that Rama, on his return to Ayodhya after defeating Ravana, wanted to reward Hanuman for his services. He shot an arrow and where the arrow fell would be identified as Hanuman s capital.

The arrow fell at the town of Lopburi. The impact of the arrow made the soil white, that is why the soil of the place is white. There is a hill named chayanat, with a flattened top. It is believed that when Hanuman went out in search of certain medicinal plants to save the life of Laxman , he lay on the top of the hill and swept the nearby forests with his long tail for searching out the desired plants and herbs. It was then that the top of the hill was flattened by the body weight of Hanuman. Also included in the epic is a hill named Sarburi with an indent. Folklore has it that when Ravana, after abducting Sita, was driving his chariot very fast, the axle of the chariot dashed against the hill, creating the crater.

The residents of Chonburi attribute the red soil of the place to a bloody fight between Valin, the monkey king and Thorapi or Dundubhi, a mighty buffalow.

Another striking feature of Ramkien is the character of Hanuman. In India, we know Hanuman as a celibate (a bramhacharee). But in Ramakien, Hanuman s marriage has been described in great detail. He had affairs with many women celestial, demonic and human. He even had children.

There are many interesting deviations in the Lao versions of the Ramayana. Ravana is a nephew of king Dasrath. Rama, while roaming in the forest in search of Sita, ate the fruit of a particular tree in the forest and was transformed into a monkey.

He met a Nengsi, who originally a woman who had been turned into a female monkey. Rama married Nengsi and Hanuman was born out of this marriage. Rama, having killed Valin, married the latter's widow.

According to **Cambodian** Ramaker, Ram was Vishnu s incarnated and Akaingameso, doorkeeper of the God, was born as Rava, i.e, Ravana.

Sita, in her earlier birth, was the wife of Indra, when she was insulted by Ravana. With a view to avenge the wrong, she was born as Ravana s daughter. Ravana, as advised by his astrologer

brother Bibhek (ie Vibhishana), shut her in a chest, carried the chest to a distant land and burried it there.

She was later unearthed and discovered by king Janaka. Sugreeva and Valin are two sons of the wife of a sage, by Aditya and Indra respectively. When the wife s infidelity was disclosed, the sage cursed the two sons, as a result of which, they turned into monkeys. Hanuman was born of Svaha (sister of Sugreeva and Valin) and Naray, ie, Narayana.

The Ramaker, however, closely follows Valmiki s Ramayana episodes of Ram s friendship with the monkey chiefs, Hanuman s embassy to Lanka, construction of the bridge, invasion of Lanka by Ram and Laxman, Vibhishana s joining the camp of Rama, fighting with Indrajit and Kumbhkarna, slaying of Ravana, Sita s ordeal by fire and Rama s coronation as king.

There is only one difference that Sita gave birth to a son who was named Ramalaksa by Valmiki. One day, Sita went to the river for a bath with her son when the sage was engrossed in meditation.

When he did not see the child after his meditation, he created another child by his yogic power and he was named as Jupalaksa. The rest is as it is in the Ramayana.

But, the moral of the story is the same in all the versions victory of good over evil no matter what the deviations.

VEDIC MATHS, A FORGOTTEN SCIENCE

By Sriranjan Chaudhari

The Times of India

Thursday, April 15, 1999

BANGALORE: It is being taught in some of the most prestigious institutions in England and Australia. NASA scientists applied its principles in the area of artificial intelligence. And yet, in the country of its birth it languishes as a forgotten science.

Vedic mathematics, which simplifies arithmetic and algebraic operations, has increasingly found acceptance the world over. Experts suggest that it could be a handy tool for those who need to solve mathematical problems faster by the day, especially in a system where the emphasis is on examinations.

The subject was revived lar gely due to the efforts of Jagadguru Swami Bharathikrishna Tirthaji of Puri Jaganath. Having researched the subj ect for years, even his efforts would have gone in vain but for the enterprise of some disciples who took down notes during his last days. That resulted in the book, Vedic Mathematics, in the 1960s.

Says P.R. Srinivas, who has taught the subject in some of the city's colleges: ``It is an ancient technique which simplifies multiplication, divisibility, complex numbers, squaring, cubing, square and cube roots. Even recurring decimals and auxiliary fractions can be handled by Vedic mathematics."

Vedic scholars did not use figures for big numbers in their numerical notation. Instead, they preferred to use the Sanskrit alphabets, with each alphabet constituting a number. Several mantras, in fact, denote numbers; that includes the famed Gayatri mantra which adds to 108 when decoded.

The bases of Vedic mathematics are the 16 sutras which attribute a set of qualities to a number or a group of numbers. Mr Srinivas feels that given the initial training in modern maths in today's schools, students will be able to comprehend the logic of Vedic mathematics only after they have reached the 8th standard. Among his students are Armymen and doctors in their 50s and younger students keen to make their mark in competitive entrance exams.

India's past could well help them make it in today's world.

Ram Mandir is nation's agenda

By T. Mani Chowdary

http://www.organiser.org/24dec2000/cover1.html

It is astounding how people could be worked up about the Babri structure that was pulled down in Ayodhya in 1992. First of all, **Babar was not an Indian. He was an alien invader.** Secondly, in the year the General built the mosque, the Muslim population of the city could not have been more than a few hundreds, while the Hindu population would have been tens of thousands. Leaving aside whether the Muslim place of worship was constructed on the very site where there was a Hindu temple by pulling it down, was it necessary that the mosque should be very near to the place which is believed by millions of Hindus to be the birth place of their most venerated God Rama? Could it not have been a few furlongs away from the Hindus sacred place? The fact that it was built on the site or adjacent to the site believed to be Sri Rama's birth place is to assert the Muslim arrogance of their conquest of Hindus. How can a monument to the humiliation of Hindus constructed by an alien invader be tolerated by the people of this country? When they are not ruled by such conquerors? It is a historical fact that various Hindu organisations in Ayodhya have been repeatedly rising in revolt against Muslim powers to re-possess the site sacred to the Hindus. Also since 1947 there had been no worship or prayers of Muslims at the “mosque”. It is arrogance and fundamentalism and intolerance to question the belief of the Hindus that Lord Sri Rama was born at a particular site.

Hindus do not question the virgin birth of Jesus of prophet Mohammed going to heaven on a white steed from Al-Aksa-mosque. The Hindus' faith and belief about Rama's birth place cannot be less respectable than the faith of the followers of other religions. No law can establish the facts believed in by the Christians, Muslims and the Hindus. Let us be very clear about it. **Objective writers of history and the chroniclers of Muslim invaders of India have recorded the fact of tens of thousands of Hindu temples having been razed to the ground and in those very places or just by their side mosques were built by using the bricks and stones and other materials of the razed temples.** The stones with images of the Hindu gods have been used as steps on which the Muslims going to the mosques would be trampling. At many a place even today such desecration can be clearly seen.

Independent India has removed the statues of so many British generals and viceroys and even Queen Victoria because they are symbols of India's humiliation at the hands of the alien invaders. Many countries around the world have, after gaining independence from their colonial masters have removed the statues of the conquerers; have renamed their countries and their towns after their own historical persons and places and this is still going on. People who had been wronged like the Blacks and the native Indians in United States and Central American Republics and the

aboriginals of Australia are asking not only for apologies from the conquerors and colonists but are demanding reparations. The Japanese emperor apologized to the Koreans; the Federal Republic of Germany not only apologized but paid reparations to Israel for the inhumanity it inflicted upon the Jews of Germany; the Black majority government in South Africa has constituted a Truth and Reconciliation commission (TRC) before which if the White conquerors confess their crimes and inhuman treatment of the black natives for hundreds of years, they would be pardoned. It is natural that when the oppressed and the wronged people come into their own, become independent they would wage a struggle for righting the historic wrongs. It is stubbornness and arrogance and intolerance of the former ruling classes and communities not to acknowldge their guilt.

On the other hand, if they go on persisting in the belief that they did no wrong, the wronged people will not be forgiving until the symbols of the worst humiliation on their country and their faith are got rid of Rama, Shiva and Krishna, the most venerated gods of the Hindus irrespective of one's cast and region. In the very places of temples for these gods had come up mosques. How would the Muslims like that by the side of Al-aksa-mosque or the mosques in Mecca or Madina, the British conquerors had built churches? Wisdom and prudence require that the Muslims who have chosen to live in this country after getting it partitioned for creating an Islamic homeland for them should amicably settle the issue. If they persist in their stubbornness not to acknowledge that this is an independent country, that it is not an Islamic republic, that its people had been subjected to the worst humiliation for over 800 years, then there would be perpetual disharmony and suspicions about the true mind of the Muslim residents of this country. History and religion are very powerful in moulding the psyche of people.

It is for this that independent India restored Somnath, the shrine for Shiva in the first few years of independence itself. Somnath was three times razed to the ground by Muslim invaders. The so called secularists in the Congress and the perpetually anti-Indian political multi-national communists and other parties are doing a great disservice to the Muslim residents of India in stridently and repeatedly including them to separatism, fundamentalism and in supporting their stubbornness not to compromise on Ayodhya and the two other sacred Hindu sites. It is these who are more culpable than the Muslims themselves. As long as the Rama mandir is not built in Ayodhya the Hindu mind and Hindu people cannot be expected to be at peace. The Rama Mandir in Ayodhya is a national agenda. **If Moslims in India agitate for the safety and sanctity of Al-Aksa in distant Israel, can't they understand why the Hindus are agitated about Ram Mandir in Ayodhya?** History will condemn all those who are unwisely stocking the indefensible arrogance, stuborness in the remnants of those who have perpetrated inhuman crimes against the people of this country for centuries.

They didn't start the fire
http://www.dailypioneer.com/secon3.asp?cat=\edit3&d=EDITS

Unkaa khoon khoon, hamara khoon pani? (Is their blood blood, ours merely water?) This melodramatic enquiry from a Hindi film protagonist championing the cause of the economic underdog in the 1980s sprang to mind as one absorbed media reactions, largely scripted by Hindu secular-liberal intellectuals, to the carnage that travelled from the charred Sabarmati Express at Godhra on February 27 to the streets of Ahmedabad the following day.

Gujarat was "burning", "innocents" were dying, there was "arson and loot" on the streets-all this on February 28; all references to the manner in which the Vishwa Hindu Parishad (VHP) fashioned its response to the carnage on Sabarmati Express. The singling out of Muslims is indeed unforgivable. But was the 2000-strong Muslim mob, which should forthwith surrender its membership to a club called human civilisation, "innocent" in its decision to attack a bogey-full of Ramsewaks because the latter committed the crime of singing bhajans on their way back home from Ayodhya?

Secular defendants of the Muslim cause in India promptly pronounced the Ramsewaks guilty of "provoking" **a bunch of miscreants** into medieval barbarity? Apparently the sewaks had committed a crime serious enough to invite a retribution that reminded some of us of the terrible days of Partition, of bogeys being locked from the outside as countless Hindus, particularly women and children, went up in flames. Then, February 28 brought news of attacks on Muslims, Muslim shops, Muslim restaurants, Muslim places of worship, etc, etc; not one report on Godhra the previous day even hinted at the fact that the 58 Ramsewaks, sent to their deaths in cold blood, were victims of Muslim violence; that it was a targeted attack on the Hindu community. Those who perpetrated the Godhra massacre were merely identified as a bunch of "miscreants" of a "particular community" who set a train afire, never mind if their impotent rage killed 25 women and 14 children out of a total of 58.

So much for media squeamishness when it comes to calling a spade a spade. Quite clearly, a nation obliged to preserve its secular credentials, on the basis of its august foundation, is often forced to do so at a cost unacceptable at least to some of us. Violence is condemnable. That is a trusim. But then simple truisms lend themselves to extremely subjective, prejudiced, and partisan interpretations when it comes to the question of communal tension in this country. If violence against Muslims is condemnable, so is brutalisation of Hindus. What was indeed the provocation for snuffing out 58 innocent Hindu lives in a gory carnage, an act that was bound to invite retaliation? If tears must be shed for the loss of Muslim lives, they must in equal measure be sapportioned for the Hindus. Certainly, action and reaction must both be judged by the same scale.

Those attacked on the Sabarmati Express were not masons carrying construction material to Ayodhya, in defiance of the law of the land. Even if they had been, they should have invited retribution from law-keepers, not lawless barbarians. The country's "secular" brigade, a section that Muslims of the kind who attacked the Sabarmati Express must remain eternally indebted to, lost no time in issuing indifferent "violence-is-condemnable" statements. Worth noting however were warnings highlighting the immense threat the VHP posed to the country's internal security and secular harmony. For this section, Muslims continue to be the victimised community, even if that "victimisation" stems from grave physical provocation of the Godhra variety. One section even extended a dangerous and patently subversive theory, of the kind the Pakistani President voices when an Indian aircraft is hijacked; that Godhra may have been a VHP subplot in the Ayodhya saga.

Would Gujarat have burned had the Sabarmati Express not been set on fire? The Hindu secular intellectual would insist Godhra was a result of the VHP's growing belligerence. **For this section of opinion it is as marvellously simple to flog Hindu fundamentalism as it is intriguingly difficult to identify its Muslim equivalent.** For others less committed, however, the manner in which the Muslim mob at Godhra chose to respond to the VHP's defiance over Ayodhya is not humanly, ideologically, socially or civilizationally justifiable. Strangely, in a world where opinion-makers are not shying away from talking about Islamic fundamentalism, in India voices are quick to rise against Hindu fundamentalism but not against the one which constitutes its Muslim equivalent. If the evil of fundamentalism is to be condemned, the condemnation must be honest, comprehensive and total.

Admittedly, the VHP's intransigence on the Ayodhya issue was waiting to step out into the open. In this, the Bharatiya Janata Party (BJP) must take its share of the blame. It is after all the party that once rode the Hindutva vehicle, the mandir issue catapulting it to national recognition. Political expedience of the kind that arises out of running a coalition Government at the Centre subsequently dictated the BJP's move away from a regressive Hindutva agenda. The delinking, eminently desirable in a party that was to head a Government at the Centre, however ought to have been engineered in a manner the party did not lose control over a fringe like the VHP that always carried with it the potential of going berserk, in no small measure owing to a sense of alienation from and betrayal by its erstwhile political patrons.

The recently-concluded elections in Uttar Pradesh proved that the mandir has ceased to be an issue in the State. At the national level too, Ayodhya was hardly a concern. Given the dictates of a globalising world, the BJP successfully shed the negative connotations of being a "Hindu nationalist party" that the international media painted it as till the other day. What this metamorphosis did not take into account however was the fact that the mandir issue would fester and rear its head at a future date, a time when the BJP leadership would be expected to exercise the necessary control. However, not having carried the Ayodhya issue to its conclusion, logical or otherwise, the BJP is now left battling rebellion from the VHP, mounting criticism from its political allies and detractors alike, while facing an unfortunate test of its leadership's credibility, a leadership that is left "appealing" to the VHP, instead of ordering it, to desist from violence. The situation to say the least is grim.

It may take days for the fire in Guajrat to be doused. For the moment it has caused substantial damage to India's secular credentials. Only a month ago, one sat in Israeli Deputy Prime Minister

Shimon Peres' office at the Knessett in Jerusalem, savouring the veteran leader's compliments on how India was a model of secular harmony, a democracy which admitted a 140 million Muslim component in its billion-strong population. Secular India is under attack today. As much from Hindu fundamentalists who swear by a temple no one seems to particularly want, as from those Muslims who consider carnages like Sabarmati Express a fitting response to that fundamentalism.

Ironically for the country's leadership, the Gujarat carnage comes at a time when it was revelling in Pakistan President Pervez Musharraf's discomfort over reining in the jihadis he had painstakingly nurtured till only a while ago. Deja vu?

***

"Salim Abdul Gaffar, vice-president of the Youth Congress, lead the frenzied mob".

"How come there were 2000 people awaiting outside the Godhara station waiting with Petrol at 8 am in the morning."

Godhra and our double standards

http://www.dailypioneer.com/secon3.asp?cat=\edit4&d=EDITS

The reactions of 'secular parties' to the massacre at Godhra has once again exposed the double standards which define the contours of public life in independent India. The victims of the pre-planned and mindless violence were not criminals.

They were only 'guilty' of chanting 'Jai Sri Ram' and 'Jai Bajrang Bali' and such other socio-religious slogans. The opinion of people at large may be sharply divided on whether or not the Vishwa Hindu Parishad was right in taking up the temple agitation now. But none can contend the VHP's right to demonstrate for a cause that it considers right, regardless of what others might think. Democracy also allows every one to raise slogans in support of one's cause so long as it does not hurt anyone else. Nobody can claim that slogans in support of the construction of Sri Ram Mandir can be offensive to another community. Plurality of demands is the essence of democracy even when some of these demands might be in conflict with others.

Many 'secularists', including a top CPI(M) leader while expressing lip-sympathies with the victims, however, are practically trying to justify the gruesome incident. A former Governor of UP, a savvy Congressman, defined the incident as a 'but natural corollary of the VHP's temple movement'. According to these apologists, the behaviour of Ram Sevaks were 'provocative' and called for just retribution.

The CPI(M) leader's finding an excuse for the Godhra attack on the pilgrims is not surprising. For long Muslim communalism has found a niche in the lap of Communism and the two are intertwined. It was the undivided CPI that supported the demand for division of the country. The Communists have always held that India is a conglomeration of nations and not an integrated country.

In West Bengal, several discoveries of arms and ammunition in minority-dominated areas have been pushed under the red carpet by the CPI(M)-led government. The recent backlash when the Left Front Chief Minister called for the regulation of madarsas is another clear instance of this Communist-communalist collusion. The way the Marxists are going out of the way to cover up these communal incidents from Godhra to Kolkata is simply outrageous. Similarly, the endeavour of some other self-styled 'secularists' to whitewash the ISI's inroads into Indian society is dangerous.

The 1993 serial blasts in Mumbai and Coimbatore clearly indicate what such links can do. The ISI is depending heavily on this linkage to magnify its capacity to damage the Indian State. If political parties in India are prepared to turn a blind eye of this link to get some vote bank advantage, they would indirectly be serving the ISI's interests. Whether that will damage India is something I

leave to their conscience.

Less than three years ago, a father and his two sons were torched to death in the darkness of night in the jungles of Orissa. It attracted immediate countrywide condemnation. Secularists went all over town to paint it red. Without any evidence whatsoever, the heinous crime was attributed to the Sangh Parivar and the face of the country was painted black as an intolerant nation. **Why are they less than belligerent today in condemning the present carnage? Is it because the three were White, Christians, and were involved in the 'noble mission' of converting the 'rustic tribesmen'?** On the other hand the Ram Sevaks were local Hindus, belonging to the lower middle classes of the society and returning from a pilgrimage. There is no doubt that the assault was carried out by the same forces that were responsible for the fidayeen attack outside J&K Assembly on October 1, storming of the Parliament on December 13 and the recent slaying of journalist Daniel Pearl. **The attack at Godhra is a wake-up call for those who cherish the institution of civil society and believe in democracy.**

Hindutva is Elst-where

http://www.dailypioneer.com/secon2.asp?cat=\opd1&d=Oped

According to a body of opinion, the handling of the KN Govindacharya affair by the RSS last week was symptomatic of a malaise that afflicts the Sangh parivar. True, a cadre-based political formulation demands that an individual be subservient to the organisation, but when this "cardinal principle" becomes overbearing to the extent that any voice of dissent is treated as rebellion, it must give rise to the larger questions: For instance, is there something fundamentally wrong with the ideology which claims to be the "inheritor" of this 5000-year-old civilisational ethos? Is "accountability" a non-issue for the political party which discovers its ideological moorings only on the eve of an election?

This "conflict of interests" (party versus government) has been captured by Koenraad Elst in his various works, beginning with his first book on the Ayodhya debate (Ram Janmabhoomi vs Babri Masjid, Voice of India, 1990). Elst, a Ph D from the University of Leuven in Belgium, recently came out with his "Decolonising the Hindu Mind". Predictably, with Elst's passionate advocacy of the Mandir cause, the RSS tried to portray him as "one of us". For Elst, however, disillusionment soon set in, and he blasted the RSS-BJP for abandoning the "cause" (read, the Mandir plank) in a three-part article in the now defunct The Observer of Business and Politics. In this interview, he tells Suman K Jha that the RSS is caught in a time warp: "While Hindu mobilisation is going on everywhere, the RSS cannot see beyond its shakhas".

Q: It's frequently heard that the debate-dialogue-dissent culture has been the biggest victim with the advent of the BJP as the pre-eminent political force in the country. It's more pronounced in the post-September 11 phase. Do you agree? And, is the situation here any different from the one prevailing in the West?

A: In India, as in the West, confusion reigns in the form of superficial relativism, that is the assumption that contradictory truth claims can be equally valid. In India, they call it secularism; in the West, it goes by the name of multiculturalism, but either way it amounts to crass superficialism and a refusal to evaluate competing ideologies and religions in accordance with facts and logic. **Hence, for example, the sour reactions by Indian secularists to VS Naipaul's dismissal of Islam as an imposition which estranges nations from their own heritage. Hence also the shrill condemnation of Silvio Berlusconi's claim that European civilisation is superior to Islam.**

That view is shared by over 90 per cent of the Europeans but not by the chattering classes. I readily concede that a lot is wrong with European civilisation, as also with Hinduism, but in comparative perspective, I think Islam comes out even worse. Just look how many Muslims settle

in Europe and prefer to practice their Islam in the fairly free atmosphere of modern democracies rather than under dictatorships in their homelands.

Q: My question however remains whether you agree with the view that the space for dissent has only decreased ever since the BJP came to power. The BJP-led Government's handling of the recent History textbooks controversy, for instance, amply proves this, according to its critics...

A: I don't have the impression that the BJP's coming to power has made much of a difference. Earlier, you had schoolbooks denying historical facts that Tipu Sultan forcibly converted thousands of Hindus. Now, you may get textbooks denying that the Vedic Rishis ate beef. Apart from that, not much has changed. In the media, and academia, Hindutva is still in the opposition. True, under the market system, dissent is marginalised, ridiculed, suffocated financially, or rendered ineffective in other subtle ways, but I prefer all that to being murdered or imprisoned in a Gulag camp. And if you want to know whether Hindutva poses a threat to freedom comparable to Communism, I don't think so.

Q: Let's put it this way. Going by your own thesis, why has this "Hindu civilisation" failed to produce scholars/intellectuals who respect the tradition of dialogue and accommodation? There is an impression that the RSS volunteers, the self-proclaimed "torch-bearers of this civilisation", are mostly inward-looking and even their "baudhik pramukhs" are found wanting as far as intellectual rigour is concerned. No wonder, we fail to produce an Edward Said, a Noam Chomsky or even a Huntington!

A: The Indians need not be so modest. **Allow me, as an outsider, to have a higher opinion of India's intellectual performance. Huntington's notion of a "Clash of Civilisations" was already used by Girilal Jain, who died the year before Huntington gained fame. Have you ever cared to read the works of the late Ram Swarup? He was soft-spoken and avoided hurtful language, yet his observations on the deeper issues underlying the communal problems in India were razor-sharp. The RSS reduces everything to the typical nationalist discourse of "the Motherland vs the anti-national forces". But there is more to Hindu revivalism than that.**

And I would trade Edward Said's books any time for those of your own Arun Shourie. Said's "Orientalism" wrongly dismisses criticism of Islam as a colonial ploy. In Belgium alone, there are plenty of Christian refugees from Turkey and Lebanon, and they know who chased them out. Said, however, has become the leading apologist for Islam in the West.

It is, however, true that the RSS has failed to produce great minds. But then that may not be the job of a mass organisation. On the other hand, it is indeed a glaring failure of the RSS that it never produced a serious analysis of the very problems which led to its creation, apart from some sweeping nationalist slogans about "anti-national forces". This has to do with a choice made by KB Hedgewar and MS Golwalkar against intellectual activity and in favour of mindless activism. But this mistaken party-line of the RSS matters less and less, because there is more and more Hindu self-organisation outside the Sangh Parivar framework. The "shakha" gatherings are becoming obsolete as a form of mobilisation. Hindu civilisation has always functioned in a

decentralised manner, and now the "Hindu awakening" (announced so often at RSS fora) is taking place through informal networks, for example, the internet. The movement is reverting to decentralised forms of mobilisation, after the RSS interregnum of boy scout-type uniformity and centralism.

Q: Lastly, if you noticed last month, the reception to someone like Noam Chomsky here is to be seen to be believed. How do you explain this? It was only the BJP's youth wing, the Bharatiya Janata Yuva Morcha, which saw in him a "threat" and tried to disrupt his public engagements...

A: I don't think Indian society is indifferent to debate. But while I have great sympathy for Chomsky, I don't think the warm reception he usually gets in India is the result of India's "debate-mindedness". Rather, his positions only reinforce the opinions of his hosts. Today, for instance, most Indians are very critical of the crude and mindless manner in which the Americans are conducting their so-called campaign against terrorism, and they are happy to recognise in Chomsky an American who thinks likewise. My impression is that he tends to see the world through the glasses which his hosts have selected for him, for example, by adopting the Indian Communist view of Hindu revivalism without getting to know it first-hand. We cannot study everything first-hand, so often we rely on the authority of contact persons whom we trust. That is perfectly understandable in the case of a non-specialist like Chomsky, who earned his laurels in other fields. More problematic is that the same reliance on biased Indian sources is found in the works of people who pass as experts on Hindu revivalism. Most of them don't really know what they are talking about.

Verily consciousness is Brahman

http://www.dailypioneer.com/secon3.asp?cat=\opd2&d=OPED

From ancient times, seekers of truth aiming at emancipation (moksa) have hankered after the knowledge of the self (atman confined in the body) vis-a-vis the cosmic supreme Self (Brahman). That the two are same has been established by the mahavakya: Ayam atma Brahma (The self is Brahman). In Brihadaranyaka Upanisad, Yajnavalkya emphatically tells his wife-disciple Maitreyi, "Self alone should be heard of, should be contemplated and be meditated upon."

That being so, an inquiry about the nature of the self is natural. In Aiterya Upanishad, a seeker has posed the question: "What is that we meditate/worship as atman the self or the supreme Self, the Brahman? Also, which of the two (para-brahman or apara-brahman) is to be meditated upon? Is it that by which a living being sees (form), hears sound, smells (odour), utter words (speech) or that which he discriminates between what is sweet and what is not sweet (sour)?

The question aims at a clear understanding of Its real nature for the purpose of a proper meditation. The atman (Brahman) has been described as both with attributes (saguna with attributes, meaning Hiranyagarbha which can be attained and that without attributes (nirguna, which can only be realised). It is not unnatural that a non-indiscriminating mind lumps all activities of organs of sense-perception and collectively considers these as atman.

Each organ of sense perception responds to a particular sensation that leads to cognition. But one hears what is good and also what is not good, one smells what is pleasant and also what is fetid and also one sees what is worth seeing and what is not worth seeing. A close scrutiny reveals that since atman that is unborn, eternal which must be unchanging in its nature, cannot have a variable element as an integral part in its being. Thus, these could not be the self (atman) that is to be worshiped for seeking the knowledge that leads to emancipation.

The process of cognition has to be distinguished in terms of gathering the cognition, collectively from different senses, and that which enables a panoramic view of the external world. For example, eye only provides a visual sensation of an object. The process of seeing has to be coordinated with the mind. It is said, "one sees with the mind". Some time we may "see" an object but if the mind was not attentive, one would say, "I saw that but I was out of mind" - meaning I did not give any attention.

The verse continues: Does one worship consciousness as Brahma, Prajapati (the first born), other gods, etc., who are themselves evolved from the Brahman or the five elements of nature: Earth (prithvi); water (jal); fire (agni); air (vayu); and, ether (akasa), which are themselves insentient or the big and small men, animals and birds that fly and objects (as trees) that do not move?

One has to keep in mind that instruments of cognition that enable various functional activities, heart, mind and antahkaran are verily (names of) those which arise from consciousness, and hence enable knowledge. The sense, mind, antahkarana function only as long as the atman is in the body and provides to it the consciousness. Both are needed. Even when there is the self within, but when one is rendered unconscious, say by a head injury or on being administered anaesthesia, one does not have cognition of objects around him. Also, after the self has discarded the body as on death and there is no consciousness, there is no cognition or a knowledge of the objects around one.

It is the self within the body that is the cause of consciousness that enables functioning of various organs of sense perception and action, mind, antahkaran, prana, etc., as the effect. Thus consciousness (prajnana within) is the basis of all activities and has to be the object of meditation.

It is concluded that all these and the whole world, impelled by consciousness, is based on consciousness (prajna) within. Therefore, consciousness (at the body level) is verily the atman which at the cosmic level is Brahman. Thus is the mahavakya Prajnanam Brahman.

Dig for truth

http://www.dailypioneer.com/indexn12.asp?main_variable=EDITS&file_name=edit1%2Etxt&counter_img=1

The Lucknow Bench of the Allahabad High Court deserves to be congratulated for ordering the Archaeological Survey of India (ASI) on Wednesday to excavate the disputed site in Ayodhya to ascertain whether a temple existed underneath the demolished Babri Masjid. It has adopted a rational approach which seeks archaeololgical evidence, gathered with the help of sophisticated technology, on which to base its verdict. Besides, it has sought to prevent the excavation delaying matters by ordering the ASI to begin work within a week from Wednesday and complete it within a month, informing it on March 24 of the progress made.

Nor can there be any question about the competence of the Delhi-based Canadian firm, Tojo-Vikas International Limited, whose assistance the ASI has been asked to seek. It had earlier used the same ground-penetrating radar technology to survey the stretch between Delhi University and the Central Secretariat, for the Delhi Metro Rail project. Unfortunately, despite all this, a predictable clutch of historians have resorted to their familiar game of throwing red herrings. This time, the burden of their song is that, even if the ruins of a temple are found, one would still have to prove that it was destroyed by Babar's general Mir Baqi, that it was for the worship of Ram Lalla, and that the latter was born at the disputed site at Ayodhya. It is not difficult to understand why they have done so. A survey by the same firm, using the same technology and undertaken at the ASI's behest, in January, had established the existence underground of a structure with pillars at the Ram Janmabhoomi site. Though the survey has not said whether the structure was a temple, the 'secular' historians are clearly worried that it may turn out to be so and, hence, have started preparing for shifting the ground of battle. Their worry must be all the greater because, after the Babri Masjid was demolished, Hindu idols and fragments of a destroyed temple were found among the debris.

Needless to say, their discordant notes should be dismissed with contempt. It should be enough if the court, on the basis of the evidence unearthed by the excavation, concludes that a temple did exist at the Ram Janmabhoomi site. Even Muslim leaders have claimed that they would forego their claim to the latter if this indeed turned out to be the case. Foolproof evidence showing that the temple was indeed for the worship of Ram Lalla and that the latter was born at the place, would be impossible to find. To continue looking for it would only be to prolong a dispute which needs to be buried as soon as possible in the interest of communal harmony, of which the 'secular' historians claim to be the exclusive champions. If anything, there should be restraint and a desire for mutual accommodation on all sides. The Islamic Council of India, an umbrella body of Muslim clerics, has shown the way by urging Prime Minister Atal Bihari Vajpayee to allow Hindus to start religious activity on the undisputed land. Organisations like the VHP should conduct themselves in kindred spirit so that a final settlement of the Ram Janmabhoomi dispute on the basis of a judicial verdict marks the beginning of a new chapter of communal harmony in the country.

articles on hinduism

The Base of Social Order

By Alain Danielou

Excerpts taken from "Virtue, Success,Pleasure, & Liberation. The Four Aims of Life in the Traditon of Ancient India."

Today we hold up egalitarian democracy, equality of the sexes and races, and multiculturalism as our social and political ideals. We are constantly faced with constant propaganda and pressure to be assimilated into a mode of human existence consistent with the goals and values contained within the perception of reality and the imagination of Western progressive commercial society.

Wherever assimilation and adaptation to these goals and values are resisted, conflict, oppression, and exploitation occurs. The "First World," comprising only 20 percent of the world's population, enjoys 66 percent of the world's income. The inconsistency between our "ideals" and these horrifying world realities makes it imperative for us to investigate the prevailing Eurocentric world view.

Prior to its colonization, India was the most culturally diverse nation on earth. How is it that all its different races, cultural lifestyles, religious practices, deities, and languages survived for more than five thousand years to the present day? What is the nature of the social order that unquestionably produced one of the greatest and longest lasting civilizations know to man?

Elements of social Order

An ideal society must be based on the form of society that is natural to man and suited to his biological nature and collective psychology as a social being. From point of view of a systematic study of mankind's collective tendencies, it must be stated that most modern ideologies are mere abstractions – dreams corresponding to no possible form of real society. If biological facts and the differences between the sexes and races are ignored rather than harmonized and artificial society is created in which practice fails to match theory. As a result, society is constantly plagued by conflict and disorders, which can be fatal, and inevitably becomes unjust and inhuman, since the more cunning rather than the more deserving will often appropriate every advantage.

In the resulting social and political crises, entire civilizations can flounder and disappear unless an eventual reaction brings about a return to more normal social patterns. None of the founders of the political and social systems currently discussed in the West seem to have studied the patterns of stable human societies.

The Hindus assert that their social formula meets the requirements of man's individual and collective nature. The fact that the Hindu civilization has been able to survive over thousand of years, despite disorders caused by invasions, schisms, and internal wars, and has been capable of

constant renewal, as demonstrated by one brilliant period after another, merits all our attention in the study of a social system whose longevity is unique in history.

Prior to colonial intervention, the resulting corporative organization created a deep unity over a continent whose linguistic, racial, religious, and national extremes and divisions seemed to condemn it to perpetual discord. It created harmony in which differences of origin were attenuated by the unity of the occupational group. Clashes between the different peoples were reduced to a kind of folklore competition, in which each was proud of being different, and to tournaments between princes to win noble titles. These activities no longer affected the continuation of civilization and the right of each class of individuals and ethnic and religious groups to stay as they were, keeping their customs, religion, social life, and systems of marriage and inheritance without impeding those of others. In fact, the differences in dress, custom, and manners became a title of glory and interest instead of an object of scorn and ridicule by groups who considered themselves superior or more evolved.

The Castes

The institution we know as the caste system is called varna-ashrama for the Hindus, varna meaning color, and ashrama a refuge of peace and harmony. The aim of the system is thus the harmonious coexistence of the various races and different sorts of human beings.

From its very beginning, the caste system was envisaged as the expression and codification of the social and ethnic realities inherent in all societies. The Hindu lawgivers felt that no advanced society could exist without the recognition of certain facts, such as professional organizations, relations between the various occupations needed to maintain the economic, political, and social stability of the state, and the problems arising from the various degrees of development among peoples and individuals, their various aptitudes, and the drawbacks of intermarriage.

It should not be forgotten that the so-called equality in aptitude of the sundry human races takes only the capacities of the most aggressive races into account, and not of those that are unable to adapt to modern conditions, such as the Pygmies, the Australian aborgines, the munda populations of India, and many other groups.

For the Hindus, the caste system is not a man-made invention to justify slavery but the recognition of the Creator’s will, the codification of a state of fact, an attempt to harmonize human society in accordance with the general scheme of creation. It is easy to see that despite all the national and linguistic barriers, even modern Western society is fundamentally, like all societies, a caste system. From whatever position we view it, we see international corporations whose members have far more in common with each other than with the various professional or social levels of their own country. The problem with western society derive from the fact that while proclaiming the equality of men, it is entirely graded on a hierarchical system as far as the professions are concerned.

Under the pretext of equality, Western lawmakers do not let the various groups cooperate among themselves while keeping their different habits, ethics, and social life. Jews, Mormons, Muslims, Celts, Basques, Albigensians, Pygmies, blacks, or Inuits are accorded a relative equality on on condition that they conform to our customs, losing most of their social, national, and religious characteristics and in fact abandoning their own personality.

In order to cope with all the problems posed by a multiracial society, the Hindu lawgivers sought to establish rules making coexistence possible, resulting in the caste system which is still today solidly established in India despite all efforts to destroy it. In a country where populations of highly different origins and aptitudes live side by side, from men of the forest to refined Gangetic craftsmen and proud Aryan warriors, an equitable place had to be found for all. Each had to be able to continue in his ancestral way of life, governed by laws suited to him and with the form of social, religious, agricultural, intellectual, and moral life he preferred, without adversely affecting the rest of the community. This meant recognizing each group and each individual's right to be different which is in fact liberty's only valid criterion.

"The system of the four castes was created by me according to the difference in aptitude and occupation.
I created it, I who am inactive and immutable.

Bhagvad Gita, 4.13)

To some modern eyes, to be destined from birth to a certain profession is an injustice, to which it can be objected that all professions are indispensable and that one is good as another. However the selection is performed, there will always be a difference or inequality between professional groups. The real problem consists in making all professions honorable, rather than in opening to everyone certain professions considered more respectable than others.

Race and Racism

The respect accorded by the caste system to the various races and cultures is exactly the contrary of what the West terms racism. Racism, whose logical outcome is genocide, is the defense system of an oligarchy that claims to be superior and egalitarian. The naïve and romantic social ideas of Europeans who preach the equality of man but insist that equality must be on the level of their own beliefs, way of life, customs, clothing, feeding habits, hygiene, and so on can only lead to genocide or false assimilation, which will in the end destroy the society that fathered it.

To present the Pygmies or Mundas of India with the alternatives of becoming bankers, lawyers, or factory workers, or else of disappearing, is a sinister jest, which has unfortunately already justified the annihilation of many human races. In the whole of history, India has been the only defender of peoples who do not adapt to the industrial exploitation of the world. The nomadic gypsies, victims of racism in Europe, have never had problems in India since their expulsion from their original home in Gandhara (present day Afghanistan) by Islamized Arab, Turkish, and Mongol invaders. Anti-Jewish racism is first and foremost a struggle for economic and financial supremacy, directed against the only people in the West who resisted the imposition of Christianity. In India, the Jews form a caste and have never known such problems.

Duties and Privileges

It is certain that abusive caste practices were introduced when the administrative power ceased to be in Hindu hands, thus making the repression of abuses legally impossible.

Such abuses as there are have been greatly exaggerated in order to justify Western domination and are normally quite local. In most of India, the caste system functions today as always has: as a harmonious whole in which each tribe, family and religious group to live according to its customs,

traditions, and convictions is respected as it is in no other country and no other form of society. Even in modern India, the most humble artisan, like the craftsman of medieval Europe, is proud of his race, profession, caste and customs, which he would not want to exchange for anything in the world. Nor has he the slightest desire to impose his habits or ways of seeing things on others. Even, if like the Christian, he is convinced on the grounds of his religion, customs, and moral concepts, unlike the Christian he has no urge to proselytize.

Caste and Marriage

For the Hindu lawmaker, marriage is above all a social institution, whose exclusive purpose is the propagation of the species and preservation of the caste, community, even the nation itself. The Hindu makes a clear distinction between erotic enjoyment in all its forms, which is part of the harmonious development of the individual, and marriage whose sole aim is the family and the continuation of the species. Marriage results not from love but from careful choice, which takes account only of the heredity, stability, and happiness of the children.

Momentary pleasures do not require an institution such as marriage, which can only lose dignity if viewed in such a light. Marriages of love, chance, or accident, which can be broken by divorce, is countenanced today by many Westerners, are from the Hindu point of view absurd and immoral, a sort of legalized prostitution. The Western notion of marriage has no moral or social counterpart in Hindu society. Marriage is not merely the legitimizing of sexual relations but an important institution, whose exclusive purpose is offspring – the continuation of the species under the best possible conditions of heredity and environment.

Love with all its fantasies is an essential achievement for the individual, but marriage is quite different. The sexophobic fanaticism of the Christian world and its extraordinary taboos were needed to give a sacred character to a marriage in which the child's heritage is not even considered. The institution of marriage on such a basis has no meaning, and the consequent systematic mismatching of aptitudes is producing an ever-increasing number of ill-adapted beings in the modern Western world, lacking the basic virtues of the various groups.

Based on respect for the species as the work of the Creator, marriage as an institution concerns caste, race, profession, and nation, with which the individual has no right to tamper because it affects everyone else. If marriage restrictions are rigidly obeyed by all, the various castes or races can live amicably together, profiting by each other without endangering each other's customs, traditions, and progeny. Women in ancient India were never shut away as they were after the Muslim invasion and are even today, because they were respected by all, and marriage out of the caste was unthinkable. Hindu legislation is not puritanical and gives much leeway to human weakness, but marriage outside the caste is considered an antisocial act jeopardizing the entire structure on which society is balanced.

Caste and Conquest

There is no moral objection to a prince or a state conquering other territories or peoples, providing caste restrictions and the duties of the conqueror are observed. By upsurping the prerogatives of other castes, one becomes a tyrant. Such an empire will not endure, because conflicts will break out.

It was this error that led to the failure of all the Western colonial empires. The use of Christianity

spread by the missionaries as a means of assimilating conquered peoples had had disastrous results on every side.

"He must consider as law whatever the religion of the (conquered) peoples ordains."

(Manu, 7.203)

Divide and Convert; Divide and Rule
http://www.rediff.com/news/2002/nov/22spec.htm

Majestic, fluid, quietly mighty! In many ways, the waters of the Brahmaputra encapsulate the North-East. We saw them only late October, after their summer fury had abated yet the great river's beauty still fills our eyes. Cutting open the Himalayas, bringing life and fertility to this huge valley, and providing a gateway to the rest of India, how hard it has worked through the ages.

On its banks stands the Vivekananda Kendra Institute of Culture, our first halt in Guwahati. Buzzing with activity, among other things it conducts considerable research and documentation on the North-East's ancient cultures and traditions. I had the honour of delivering there the Bhubaneswar Bharthakur Memorial Lecture, on the theme of **The Invasion That Never Was;** with the help of slides I presented recent archaeological and cultural evidence to show the falsity of the divisive nineteenth-century Aryan invasion theory -- a theory which, as we discovered a few days later, is still much misused in the North-East in order to convince tribals that they have no connection with Indian "Aryan" culture, no identity of their own, and would therefore be better off embracing Christianity.

Missionaries and others who have recourse to such perverse arguments really belong to the colonial dark ages -- for massive evidence from archaeology, anthropology and other sciences, piling up in recent decades, has thoroughly disproved the theory of an Aryan invasion of India. It simply never took place, nor was there ever any Aryan race or any Dravidian race. It is time these crude and unscientific distortions of India's past are laid to rest forever; they have done enough harm to the Indian people as it is. Do we really have to blindly perpetuate colonial myths in this 'scientific era'?

Science was also the topic of a talk and slideshow I gave at the Indian Institute of Technology, Guwahati, about India's scientific heritage, highlighting some of the early -- and pioneering -- developments in mathematics and astronomy in ancient India.

Back in the city, this was followed by a well-attended public lecture organized by the Bharat Vikas Parishad, on the theme 'Is Indian Culture Obsolete?' Focusing on some essential roots of Indian culture, I explained why, in my view, the answer to this question can only be in the negative, and why India still has much to contribute to the world - perhaps even more today than in the past.

The next day took us to the Kamakhya temple with its impressive underground *garbha griha*. We

also enjoyed the sweeping view of the city from atop the Nilachal Hill, near the quiet Bhubaneswari shrine. After a flight to Dibrugarh, we left eastern Assam through Marguerita, braving the roads with a four-wheel drive jeep and an expert driver -- but "road" is too noble a term for these endless series of bottomless potholes and gaping mudpits, eloquent and back-breaking testimonies of State neglect. It was a relief to enter Arunachal Pradesh, where we remained at foothill level for a few days, during a teachers' orientation camp organized by the Vivekananda Kendra. This spiritually-oriented service organization based at Kanyakumari is well known in Assam and Arunachal for its 25 excellent schools and numerous balwadis.

History and culture were the central themes of the five-day camp -- and so the many distortions Indian history remains burdened with, from Harappan to colonial times. Again we touched on the discarded yet still widespread Aryan invasion theory, the many features of the Harappan civilizations that have survived to this day, the grossly unscientific race concept (still in vogue with our professional division-*walas*), the essential continuity of Indian civilization, also how the organic, polymorphic, assimilative, integrating entity called "Indian culture" succeeded in cementing the subcontinent, giving to, but also taking from, regional and tribal sub-cultures, without ever imposing itself on anyone....

We talked of science and technology, ecological heritage, the caste system, India's considerable and always peaceful contributions to world culture, but also how to make the teaching of history more living and relevant to a student. India has so much rich history -- tragedies but also achievements, wars but also peaceful expansions, advances in art, science, literature -- yet few countries have been so clumsy in projecting their heritage to their younger generations. A look at the drab and sad textbooks in use in various parts of the country is enough to put one off learning history, not to speak of the heavy ideological biases they often inflict on Indian students; Marxist historians have long been past masters at this game, which is why they are so loud against any attempt to alter their misrepresentations and provide a fair, ungilded, and unmuddied perspective of Indian civilization.

A few public programmes -- at Kharsang, Jairampur, Marguerita and Changlang -- brought into sharp focus some of those misrepresentations, together with the racial biases introduced by colonial scholars. Often, following my positive projection of Indian culture -- which evoked surprise, so deep the habit of self-denigration has gone -- there would be the usual objections: but look at the perverse caste system, look at the imposition of Aryan culture on the Dravidians, on the tribals, note how this region never had any links with India, was always separate culturally, linguistically, racially, see how Hinduism is now trying to convert the tribals....

It was not too hard to guess that most of the questioners were devout Christians or recent converts. Nor was it hard to show the incurable ignorance all such statements were founded on. For instance, the fact that the North-East, repeatedly mentioned in the *Mahabharata*, the *Ramayana*, in Kautilya or Kalidasa, and of course in several *Puranas*, was always regarded as just one of the regions of Bharat, a fact confirmed by the existence of tribal versions of the Epics, also by archaeological finds from the 4th Century AD onward of established Hindu and Buddhist settlements (I am sure that more systematic excavations would push those dates further back). Or again the falsity of the racial concept and the non-existence of any so-called Aryan or so-called Dravidian race. Finally, the inherently non-aggressive nature of Hinduism, in contrast to the inherently aggressive nature of Christianity (recall the Pope's call for "a great harvest of faith from

Asia" during his state visit to India; can we imagine a swami visiting the Vatican and calling for Christians to convert to Hinduism?).

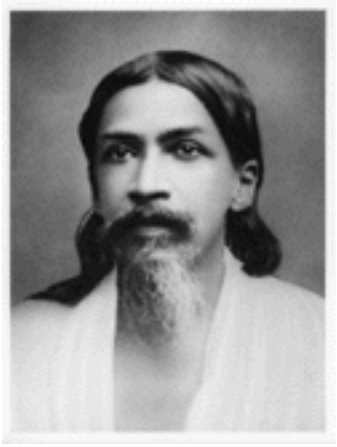
So when my questioners, subtly or not so subtly, tried to paint Hinduism in a bad light, they found the spotlight on Christianity rather uncomfortable, especially when I pointed out that not a single pre-Christian culture or religion of ancient Europe was allowed to live, or that Christianity's essentially non-rational, unverifiable, dogmatic foundation was the cause for its virtual disappearance from the West, where more and more people are now turning to yoga, meditation (as in America), or (as in France) to Buddhism. Such debates have of course been taking place all over India, but it is distressing to see how they stick to obsolete theories, discarded misconceptions, and unjustifiable strategies of systematic conversion and division of society.

The last point was brought to us in sharp focus during our interactions with a few tribals of Arunachal, who voiced the same distress at the methods used to secure conversions to Christianity: not only monetary allurements, but psychological pressure on the sick, promises of cure upon conversion, pressures to rope in the rest of the family when the promises don't materialize, and finally to throw out of the family those who continue to "worship Satan". In fact some missionaries and Christian educational institutions openly refer to tribals, Hindus, and Buddhists as Satan ka bachcha [children of Satan] while Christians are Ishwar ka bachcha [children of God]. We heard several heart-rending tales of teenage boys or girls having been thus expelled from their families when they refused to convert, accused by their own parents of being "Satan". Converted families are then instructed not to have contacts with the non-Christians, as a result of which they refuse to take part in traditional harvests and other aspects of the community's collective life; the centuries-old harmonious working of the community suddenly becomes divided, and indeed division is a great way to secure conversions: "divide and convert", until you can "divide and rule".

That ultimate step is already visible in the militant movements of the North-East, most of which are rooted in Christian ideology. Witness the conversions the militants secure at gunpoint in remote villages at night, a fact asserted to us repeatedly. I remembered a Don Bosco father in Tamil Nadu telling me a few years ago how "tribes have no future within the Indian Union" and explaining why he was exhorting them "to take up guns". It all fell into place.

The real tragedy is perhaps not the devious methods used by Baptists or Catholics alike -- for, after all, the whole of Christian history is full of them and tainted in deep red. Rather it is the failure of the government to fulfil its primary duty of protecting from aggression peace-loving citizens and endangered communities and cultures. And the failure of educated Indians ("miseducated" would be more correct) to ably project the specific values of Indian culture, such as the oneness of humanity, the essential divinity of man, or the complete spiritual freedom to choose one's path towards the manifestation of that divinity -- values that are conspicuously absent from Abrahamic religions (notwithstanding the hollow slogan that "all religions preach the same truths": unfortunately they don't). Surely, one may be critical of a few aspects of Hinduism or Indian traditions; but to throw away a gem because some mud has stained it is plain ignorance.

The flight from Dibrugarh to Guwahati followed the Brahmaputra, whose hundred branches meandered lazily around countless islets. The Himalayas glistened to the north, a perfect line of



white peaks hovering over the clouds and kissed by the setting sun. Yes, that which has its roots beyond time cannot die. That which has countless forms will always be reborn.

French-born Michel Danino has been settled in Tamil Nadu for 25 years; he has given many lectures in India and is co-author of The Invasion That Never Was*. He is also the convener of the International Forum for India's Heritage.*

A perennial quest
By Manoj Das
http://www.indiaserver.com/thehindu/1999/08/15/stories/1315090c.htm

MANOJ DAS pays tribute to Sri Aurobindo on his 127th birth anniversary today.

If mankind only caught a glimpse of what infinite enjoyments, what perfect forces, what luminous reaches of spontaneous knowledge, what wide calms of our being lie waiting for us in the tracts which our animal evolution has not yet conquered, they would leave all and never rest till they had gained these treasures. But the way is narrow, the doors are hard to force, and fear, distrust and scepticism are there, sentinels of Nature, to forbid the turning away of our feet from her ordinary pastures.

Sri Aurobindo, Thoughts and Aphorisms

THE departing century leaves behind a vision of human destiny which is, probably, optimism.But can optimism be subject to scrutiny by our intellect? This depends on the scope we grant to intellect, heeding this warning: "We should take care not to make the intellect our god; it has, of course, powerful muscles, but no personality." (Einstein: Out Of My Later Years).

The intellect, tempered a bit by humility, can go a long way in appreciating Sri Aurobindo's vision. Indeed, the most significant discoveries of modern science instruct us to be humble. Take for example the grand unified theory of Nature, recreating for us the good old concept of the Brahman the one and indivisible reality: "Without electromagnetism there would be no atoms, no chemistry or biology, and no heat or light from the sun. If there were no strong nuclear force then nuclei could not exist, and so again there would be no atoms or molecules, no chemistry or biology, nor would the sun and stars be able to generate heat and light from nuclear energy. Even the weak force plays a crucial role in shaping the universe. If it did not exist, the nuclear reactions in the sun and stars could not proceed, and supernovae would probably not occur, and the vital life-giving heavy elements would therefore be unable to permeate the universe. Life might well be impossible. When we remember that these four very different types of force, each one vital for generating the complex structures that make our universe so active and interesting, all derive from a single, simple superforce, the ingenuity of it all literally boggles the mind." (Paul Davies: Super Force).

Does this the mind-boggling superforce at work in this universe have a scheme to execute on the earth through the process of evolution?

Sri Aurobindo's perception is, it has. The biological concept of evolution, of course, does not go further than stating a phenomenon. Sri Aurobindo reinterprets it in the Vedantic light: if life evolved out of matter, and mind out of life, it was because life was already involved in matter and mind was involved in life. If that is so, there is no reason why a principle loftier than mind but involved in mind, could not evolve, changing or transform mankind into a new race, the Supramental.

Mankind, at present, is going through an evolutionary crisis, he says. Mind has given man all it could in terms of knowledge, science, technology and has added as much as it could to his search for happiness. At the same time it has landed him in an impasse marked by paradox. Far from feeling that he had "arrived", man rather feels lost amidst his monumental achievements in technology and lifestyles, polity and politics.

The destination, at this rate, cannot but be the abyss, unless man is rescued by the intervention of a new consciousness.

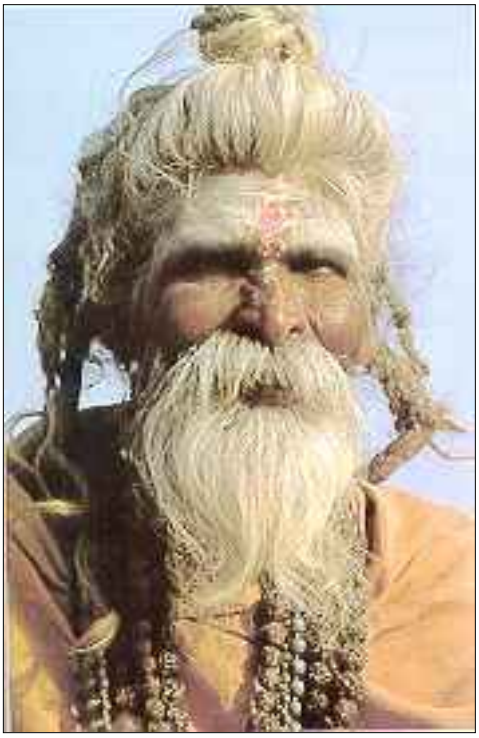
For this man must cultivate an aspiration; he must liberate himself from his bondage to ego and ignorance from his animal inheritance of instincts and passions masked by civilization.

But man need not despair, for, in a sense, the process of evolution itself is a process of this liberation. The appearance of the earliest forms of life as plants out of the apparently lifeless matter was a step towards the liberation of the imprisoned consciousness. A far greater degree of freedom of consciousness - and an exercise of that freedom in infinitely different ways - was possible with the emergence of the primeval creatures, from worms, insects, butterflies and td the birds to the whales and the dinosaur.

Needless to say, man is the only creature who has never stopped growing. With relentless zeal not only has be adapted himself to the changing environment, but has also made the environment meet his demands. Emerging from the world of primeval Nature he has created for himself new worlds of art, architecture, literature, music, philosophy and of a perennial quest for the meaning of life.

Thus, if the process of evolution itself is a movement of consciousness realising its own freedom from its bondage to material and other limitations, the 20th Century has witnessed the most momentous events and ideas ensuring greater freedom for man in several fronts. It saw the collapse of imperialism, colonialism, monarchy and feudalism - all paving the way for man's social, political and economic freedom. Democracy, socialism, 'emancipation' of women from age-old taboos and discrimination, end of apartheid - all point in the same direction.

But the greatest of all freedom is yet to be achieved - our freedom from ignorance. Sri Aurobindo believes that this last freedom is not a mere possibility, but a certainty inherent in the very nature



of the evolutionary process of human destiny.

**"ARISE, TRANSCEND THYSELF.
THOU ART MAN AND THE WHOLE NATURE OF MAN
IS TO BECOME MORE THAN HIMSELF."** **Sri Aurobindo**

An American Odyssey
By Nandini Dasgupta
The Weekend Observer
November 27, 1999

Justin O'Brien is a well-known writer, theologian, philosopher and a long time explorer in 'wellness' and human consciousness. A former Catholic monk, he is also an ordained Pandit in the Himalayan tradition. He lived with Swami Rama - the master of yoga, spirituality, meditation and ayurveda - for over 20 years.

His latest book **Walking With The Himalayan Master** offers an exciting, powerful and delightful story of the 'extraordinary yogi' and the author's candid revelations of his own spiritual odyssey. The book, to be published in India by Full Circle early next year, has been well-received in the US and has been described as the 'real relationship of a sincere disciple to a great guru' by Swami Sachianand.

In a free-wheeling discussion with Nandini Dasgupta Justin O'Brien talks about his book and his association with Swami Rama.

Q. What As your latest book Walking with the Himalayan Mater all about?

A. It is a biography of how an American scholar reluctantly meets a saint, is inspired by his philosophy of life and a how new vista emerges for this century. It is an insight into two decade of my close association with Swami Rama. The book talks in detail about Swamiji's reasons for coming to the West and how he enlivened others scientifically, emotionally and spiritually. I describe the Swami as he was perceived by his disciples.

Q. How did you come In contact with Swami Rama?

A. It was in 1973, when I was 30 years old and a college professor at Chicago University, that I first came in contact with Swami Rama. For several days before I met Swamiji, I was dreaming about a gathering where a saint or a guru is sitting and talking to his disciples. And that I am sitting there as one of disciples. The dream kept on haunting me for several days and one day as I was walking through the streets of Chicago, I came across a poster which was advertising on some 'Healing Seminar.' I attended the seminar and to my surprise the saint (Swami Rama), the

room, the tree and even the discourse that was going on were similar to the incidents that I had been dreaming about. The entire episode left a strong impact in my mind and I knew that I had met my true guru.

Q. What are the reasons that Inspired you to write this book?
A. It was Swami Rama's philosophy of life that inspired me the most. Swamiji emphasised on the goodness of people and that one must ignore negative qualities. He stressed that one is not born with positive or negative attributes and that all the treasures are within one's self. Men have to study themselves and our job is to awaken them and channelise their energies in the right direction. One should focus in a particular direction which would determine your way of life. Very few people are aware of this philosophy and this book is an attempt to reach out to them.

Q. What Is the most Interesting feature of this book?
A. In this book I have mentioned how Swami Rama chose to shake up the West with his experiments which shattered the myth that science and spirituality are poles apart and that the two cannot be mixed. Swamiji provided a scientific approach to spirituality and human wisdom.

I have described how Yoga or meditation which has so far been regarded as 'spiritual' exercises have scientific connotations. The science of Yoga helps one to compare results of the past and aim for a better future.

Yoga is an experience of life and it is a path which offers dignity and sacredness.

Q. How have you described Swami Rama as a person?
A. I have described Swami Rama as the kind of person he was. He was just like any one of us. He liked to play cards with us at night, loved to eat Pizzas and loved to take care of dogs. He insisted on truth in life.

He was careful not to cultivate a cult around him and create any sensation by being in the limelight. Most people will term his experiments as miracles but he used to stress that it is all possible by harnessing the natural power that is present within one's self. Miracles are done for the benefit of others.

Q. How is Walking With the Himalayan Mater different from your earlier works?
A. My earlier book Wellness Tree is a six-step programme for rejuvenating health and creating optimum wellness. It challenges to transform ordinary health and ensuing decline into powerful possibilities for rejuvenation and awakened consciousness. Meeting of the Mystic Paths is about the principles of Yoga and how these can help Christianity discover new energy, retrieve lost wisdom and reexamine the mystical levels of life.

Walking With The Himalayan Master deals basically with human nature and how it was perceived by Swami Rama. By citing suitable instances from Swamiji's life, I have stressed that the body is within the domain of the mind. I have also challenged the myth that the body and mind work separately.

The guiding principle of this book is that -by following the right path human nature can be redefined.

VINAYAK DAMODAR SAVARKAR

The Bogeyman

By Swapan Dasgupta

http://www.sulekha.com/hoppercomments.asp?cid=300069

On February 26, 1966, Vinayak Damodar Savarkar died in Mumbai at the age of 83. Two days later, distinguished CPI parliamentarian Hiren Mukherjee rose in the Lok Sabha after question hour to suggest that the House pay homage to Savarkar in recognition of his services to the nation. The Speaker agreed to write to the family, conveying the feelings of the House. Earlier, the entire political class joined President S. Radhakrishnan in paying homage to Savarkar. Prime minister Indira Gandhi described him as a "byword for daring and patriotism" and CPI leader S.A. Dange called him "one of the great anti-imperialist revolutionaries".

Last week, Congress President Sonia Gandhi boycotted the function in Parliament to unveil Savarkar's portrait. The leftist Delhi Historians Group, dominated by discarded textbook writers, dubbed Savarkar "anti-national" and the pro-CPI(M) Sahmat termed the installation of the Hindu Mahasabha leader's portrait a "disgrace".

What has changed in these 37 years? Politics. When Savarkar died, he was a fringe figure, out of active politics since 1948 when he was implicated but acquitted in the Mahatma Gandhi murder case. He had a reputation as a Marathi litterateur and was also honoured for first describing the upheaval of 1857 as a "war of independence". Even among the charmed circle of Hindu nationalists, he was peripheral. Savarkar had charisma but the Hindu Mahasabha was history.

It is different today. Hindutva, the term Savarkar first popularised from prison in 1923 is, by L.K. Advani's admission, "the ideological mascot" of the ruling BJP. Savarkar's definition of the Hindu as one who regards India as his fatherland and holy land, has moulded those seeking to extricate Indian nationhood from Nehruvian clutches. For the new generation of "political Hindus", impatient with the RSS' over-emphasis on organisation, the agnostic and rationalist Savarkar is a key inspiration.

The extent to which Savarkar's concerns of yesterday shape the discourse of today is remarkable. An extract from his 1937 presidential address to the Hindu Mahasabha in Ahmedabad has been cited by the Congress to suggest that he was the protagonist of the two-nation theory.

The claim doesn't withstand scrutiny. In that speech, Savarkar said, "The solid fact is that the so-called communal questions are a legacy handed down to us by centuries of cultural, religious and national antagonism between the Hindus and the Muslims ... Let us bravely face unpleasant facts as they are. India cannot be assumed today to be a unitarian and homogeneous nation, but on the contrary there are two nations in the main: the Hindus and Muslims in India." Indeed, Savarkar spent much of the 1940s warning of the imminence of Congress capitulating to Muslim separatism. He spoke of the Congress' "pseudo-nationalism" just as four decades later the BJP was to sneer at its "pseudo-secularism".

Savarkar led a chequered life. As a daring revolutionary and prisoner in the Cellular Jail, he enjoyed iconic status between 1911 and 1924 comparable to Bhagat Singh in the 1930s. As leader of the

Mahasabha from 1937 to 1948, he earned the respect of many Hindus, but never secured their loyalty. Even this respect turned to notoriety after his close disciple Nathuram Godse killed Gandhi. In life, Savarkar was very famous but never very influential.

Power came posthumously. The attack on his reputation is actually a proxy battle against his ideas.

***

comments -

The British were never worried about Gandhi and Nehru, they were mortally scared of revolutionaries such as Subhas Chandra Bose (who left India incognito to pursue his patriotic activities), Aurobindo Ghose (who settled in Pondicherry, then a French territory), and Vinayak Damodar Savarkar (who preferred to stay, suffer, and struggle in India). More than the so-called public image, what matters with great nation-builders and patriots is their dedication, sacrifices, and love for the country. If the Government has decided to honour Savarkar, it has only atoned for the sins committed in the past.

A Wonder of Ancient India: The Mahabharata - By Nhilde Davidson

http://www.halcyon.com/theosnw/world/asia/as-nhild.htm

Daunted by its size and a misconception that an intimate understanding of Hinduism was needed, I never considered taking the Mahabharata off the shelf. By accident I tuned into an episode of an Indian television production of the Mahabharata (subtitled in English) -- and I was hooked. Ninety-six one-hour episodes later (and many more hours of reading) I am still enthralled and continue delving into this fascinating epic. Its appeal is on many different levels and, through the ages, ascetics and scholars alike have dedicated their lives to studying, collating, and translating the varied and voluminous material. When the series aired on Indian television, railway schedules had to be adjusted as each week almost the entire country sat in front of a TV. Similarly, most things ground to a halt when the Ramayana was serialized. We all love a hero -- heroic action appeals to children and adults alike -- and these epics *are* heroic. On a deeper level it is the philosophical depth and the psychological profundity that endure, keeping the stories alive in the soul, drawing one back again and again.

The epic is about a Holy War fought on the fields of Kurukshetra at the junction between the end of the Bronze Age and the beginning of the Iron or Kali Age. The Kali Yuga is said to have begun with the death of Krishna on February 17, 3102 BC -- thus dating the war to 3138 BC (in the epic Krishna died 36 years after the Great War). However, dating the epic is an ongoing debate. The extant written versions can be traced to the period 400-100 BC when the present form was settled on. The Mahabharata has eighteen major chapters or *parvas* which are, in turn, subdivided into many smaller parvas or sections. There are hundreds of different versions, adjusted by various sects to include their own individual religious biases (for example there are 300 known versions of the Adi Parva).

Krishna-Dvaipayana (also known as Veda Vyasa for his work in synthesizing the Vedas in their present form) is said to be the author of the original 24,000 slokas (verses). Sloka meter is characterized by 32 syllables divided into 4 pada or quarter verses of 8 syllables each, written in either 2 or 4 lines. It is the metrical form commonly used in Sanskrit epics. (1) The present form of the epic contains around 100,000 slokas, though it has been estimated that it may include as many as 150,000. Critical editions intended to discover the pristine material are only a few decades old, the best work having been done by the Bhandarkar Oriental Research Institute, Poona.

While the accrual of additional material is ongoing, the age of the texts and questions about the historical accuracy of accounts in the epic are hotly debated. Many believe that the Mahabharata and also the Puranas give the history of not only the peoples of India but of humanity. Scholars have established that the parvas were written at different times -- some being much older than

others.

One of the parvas contains the Ramayana. According to Hindu tradition the Ramayana recounts the history of Rama and Sita, and is believed to have taken place at the beginning of the Treta or Silver Age, i.e., shortly after the end of the Satya Yuga (Golden Age) -- roughly two million years ago by Hindu reckoning -- thus potentially very old indeed. The current archaeological dating of the age of humanity prevents scholars from giving credence to the Hindu chronology.

The known history of India does not include verifiable records of a war where millions of soldiers fought and died, or the destruction of Dvaraka (the region governed by Krishna) by tidal waves and cataclysms of the proportions described in the Mahabharata. This leads some to believe that the epics may not be historical. However, corroborating evidence in texts from other sources and countries suggests that these writings are a blend of accurate history, myth, and soul memory, as well as ethical treatises.

The crux of the matter is that the entire Mahabharata has one obvious aim -- to awaken a love of truth and right action. The core story is the thread that ties together a profound philosophical content. Embellished by substories to clarify various ethical premises, the central theme always leads in one direction -- the ascendancy of right over wrong, justice over injustice, truth over untruth. In the war between the Kauravas and the Pandavas it is made clear that the side of Truth (represented by the Pandavas) will ultimately win. The reasons for this war and the human aspects of the story are what make the epic ever fascinating -- its slokas are the mirror whereby we see into our own souls, and the consequences of actions, both gross and subtle, are laid bare for scrutiny.

The cast of characters is large, but one soon finds oneself relating to and caring about them: Draupadi, the virtuous, beautiful wife of the five Pandava brothers; Vidura, the wise younger brother of Pandu and Dhritarashtra; Kunti, the mother of the three eldest Pandava brothers -- Yudhishthira, Bhima and Arjuna; Madri, the mother of the younger twin sons of Pandu -- Nakula and Sahadeva. As all the characters come alive, the strange names and customs become familiar and comfortable.

The wisdom of the Pandava and Kaurava princes' tutors -- Bhishma, Drona, and Kripacharya -- enrich the text at every turn. Bhishma, patriarch of the families on both sides of the conflict, has a magnificence and stature which make him beloved and respected by all the characters, while his all-encompassing wisdom and virtue still earn him the love and reverence of Hindus today.

The central story concerns the rivalry for the throne of Hastinapura, where the ancient dynasty of India has its domain. As jealousy goes unchecked the dynasty is finally destroyed. Pandu, the second son of Santanu, becomes king because his elder brother, Dhritarashtra, was born blind and thus considered unfit to rule. However, when Pandu dies Dhritarashtra, already an able administrator of the country during Pandu's many absences, proceeds to reign. It is the line of succession that is the bone of contention. Yudhishthira, virtuous son of Pandu and eldest of the Pandava brothers, is heir-apparent, but Duryodhana, eldest of Dhritarashtra's and Gandhari's one hundred sons, wishes to be king. Gandhari has a gambler brother, Sakuni, living at court who helps inflame Duryodhana's jealousy and envy of the five Pandava princes.

Known as the Kauravas, the family and supporters of Dhritarashtra are spearheaded by

Duryodhana, his brother Dushasana, Sakuni, and Karna (a protege of Duryodhana whose lineage is mysterious and who, ironically, is finally shown to be linked to the Pandavas). These four try many ways to eliminate the five sons of Pandu. As Dhritarashtra and Gandhari fail to curb Duryodhana's hatred of the Pandavas -- and more especially of his birthday twin, Pandu's second son, Bhima -- the peoples of Hastinapura are inexorably propelled into war.

Through the popularity of the Bhagavad-Gita the third son of Pandu, Arjuna, is perhaps the best known of his five sons. This parva recounts the discussion between Arjuna and Krishna just prior to the Battle of Kurukshetra. Arjuna asks Krishna why he should fight. Krishna, having sworn not to fight himself but to steer Arjuna's chariot during the battle, explains to Arjuna his duty -- in reality the duties of all who seek for truth.

One may read the epic just as an excellent tale, for it has all the elements of good storytelling, yet it also includes the psychological dilemmas inherent in life, though the meaning behind some of the episodes is not always clear -- each reader must interpret the episodes according to his own insight and vision. Like a diamond sparkling in the sun, each time a passage or an episode is reread new illuminations and nuances come into focus.

The Mahabharata says that even before the Battle of Kurukshetra the caste system had effectively come to an end. No longer were people to be considered as being born in a particular class, miscegenation having broken the old ways and codes. With the advent of the Kali Age all reflect, by their own actions, what class each act belongs to -- the determining factor being whether the motive arises out of wisdom and truth, the passionate or emotional nature, or from ignorance and darkness (*avidya* or untruth).

The Kshatriya, or divine warrior class, as represented by Arjuna and his peers, died out in this Holy War on the fields of Kurukshetra and the unholy aspects of life during the Kali Age are prescient. It was incumbent upon these godlike men -- whose concentration was on *dharma* (duty), *artha* (right resolve or motive), *karma* (action), and *vidya* (wisdom/truth) -- to be just, benevolent, and charitable at all times -- always protecting and honoring truth. As the eighteen-day war drags on, all partake of unrighteous acts eroding the old codes of honor and ethics. Finally, at the end of the war, with the loss of the ancient value system and their loyalty solely to truth destroyed, the link with the past is broken. After Kurukshetra a limited age of justice was reestablished and the sun of truth shone briefly -- but the Kali Age had begun.

Fortunately for us the old truths remain accessible in this vast storehouse of wisdom from ancient India. The Bhagavad-Gita, the best loved of all Hindu writings, is a profound treatise on the causes and results of action and stands on its own, yet coupled with the entire epic, it acquires an additional lustre -- for the Mahabharata has much to say about the qualities and duties of every aspect of life. B.R. TV's Indian production of the Mahabharata shows the veneration that the Hindus have for this work and their understanding of its effect for good on individual lives.

Use this epic tale as an inspiration to solve your problems. The story is your armour and also your weapon . . . Be heir to Light, to Justice and to Truth. Turn the Kurukshetra of your heart into Holy Ground -- That is Salvation!

Whatever there is in th e World / Whatever this World is -- / Sage Vyasa's epic tale narrates all that the World is!

-- From B.R. TV English subtitles

Giving life to an epic

By V. R. DEVIKA.

http://www.indiaserver.com/thehindu/1999/05/30/stories/1330067b.htm

The ten-year effort of a Finnish-Indian team materialised into the documentation of the Siri epic in Tulu. Comparable to the world's great epics, this has also been rendered into English with a transcription. An awe-inspiring work indeed, says **V.R.DEVIKA.**

``KEREYA Neeranu Kerege Challi varava padedavaranthe kaaniro ..." said the melodious voice in the background which brought home the poignancy of the situation, bringing tears to some in the audience. The verse, from a Purandaradasa kriti in Kannada which extols devotees to pour water back into the river to be blessed... was sung as the Ambassador of Finland to India, Mr. Benjamin Basssin opened the sandalwood box with three volumes of the ``Siri epic" and presented them to the singer Gopala Naika. Later, Naika was presented with a gold ring by the spiritual head of Dharmasthala, Veerendra Hegde.

Earlier, the casket was brought in a decorated palanquin in a procession led by an elephant with all the dignitaries following it. Did a book release merit such a grand function?

Consider the work. It consists of textualisation of the Tulu (a rich dialect of South Canara) Siri epic. The Finnish-Indian team that worked on the project has documented the 15,683 line (five lines short of Homer's Iliad) performance of the epic sung by Gopala Naika, a talented singer of oral epics in Tulunadu. This purely oral epic has been published in Tulu with an English translation and transcription. The cultural background, field work on oral composition and textural problems encountered in the transcription and translation of the Siri text and the nature of the ``oral text" in general are brought into focus in the brief introduction. The primary oral textualisation and the secondary written modification of the epic are described in a separate introductory volume. Several core problems of traditional research are discussed and new concepts such as ``mental text" and ``multiform" are introduced for the analysis of oral compositions in the work.

``Siri Sandhi," says Prof. Lauri Honko, ``is one of the two truly long epics of the Tulu speaking people, Koti Chennayya being the other. Where the latter glorifies male warriors and their violent battle for justice, the Siri epic epitomises Tulu womanhood in its emancipation and non-violent fight against male supremacy and injustice."

Describing the legend of Siri, Prof. Honko says, ``Siri is a woman of divine origin who undergoes in her human life, the typical ordeals of a woman in Tulu society with its particular mix of matrilineal and patriarchal kinship systems. Assuming the form of biographical epic, the story of

Siri expands to describe the fate of her only son, Kumara, and her female descendants in two generations. This epic ranks with the world's great folk epics."

What emerges at the end is a set of life models for Tulu women, constantly revived in possession rituals in which the woman belonging to the Siri cult participates. In these rituals, the Siri story is performed mostly indirectly, through prayer and recitation reflecting the intensive interaction and interpenetration of the divine and human worlds.

What did a Finnish couple find interesting in a South Indian coastal legend? Finland and India share a common folk tradition of epics. Finland's own oral epic, Kalevala, is a much-celebrated one. As described by ambassador Bassin, at the centenary of Kalevala, in 1930, a competition to collect proverbs and folk beliefs was announced by the Finnish Government. He says a population of three million people had come up with more than 1.5 million proverbs. Bassin wondered aloud that if such a small population could produce so much, the vast rural population of India must possess undocumented material.

Dr. Vivek Rai and Dr. Chinnappa Gowda constituted the Indian members of the team. Prof. Haridas Bhat, Director of the Regional Resources Centre for Folk Performing Arts, Udupi, had known of the great interest in oral epics in Finland and also of the folklore research being conducted there. He made it a point to visit Finland's Turku University when he was in Europe. He appraised Dr. Laurie Honko, Professoer of Comparative Religion and Folklore at the Kalevala institute of the University about the Tulu epics and invited him to Udupi. Prof. Bhat also organised a seminar on Kalevalal at Udupi in 1985, to mark the 150th anniversary of Kalevala.

The tripartite project (the Turku University, the Mangalore University and the Regional Resources Centre) got underway with a study of the Siri epic, the documentation of the Siri Daliya at Machar and the Siri festival, their documentation, the investigation of the remains of the Satynapura palace which reveal the legends of the Netravathi region, the place region of Nandolige, Urkitota and, finally, the taping of the 15,683 line performance by the Gopala Naika of the epic. The epic is generally sung only in parts during the rituals, and never sung completely as a performance. Gopala Naika had evinced interest in recording the epic and had dictated some portions to his student living in his house at Machar in 1985.

``The singing of the Siri epic took seven days," says Prof. Honko. ``Physically, the continuous singing was strenuous and taxing for the singer, but as a mode of performance it was most satisfying. Gopalal Naika obviously enjoyed the chance to sing without the limiting collateral action always present both at ritual performance and the work song context."

``Many modern researchers feel the text is outmoded," said Lauri Honko. ``But actually there is no context without the text." He spoke with humour about his experience of the new methodology in the seminar on oral epics the day after the release of the epic. ``In Europe, the oral epics are stone dead. They are alive in Asia and Southern India is a treasure trove of oral epics. People living in the treasure trove must realise the assets they have and folk scholars must concentrate within this reach."

``Documentation seems simple but it is quite hazardous. Good documentation means a perfect phonetic transcription too. Then the document becomes independent of the scholar. And will become open for study and analysis. Documentation of the epic is just one manifestation. It is the

personality and the experience of Gopalal Naika that has edited and presented the performance."

``If I were a dictator," says Dr. Honko, ``I would tell all scholars to listen to the folk voice. Scholarly ideas are nothing compared to the folk ideas. We should never be the tellers of wisdom but transmitters."

``Each epic has its own poetical structure and prosodic template. Refrain and the melodic artistry are very important here. This is the first time that the entire epic has been sung in one sitting and we are very happy to present it to the world of folklore."

The process of documentation, study, textualisation, transcription and translation and publication has taken ten years. Veerendra Hedge, the head of Dharmasthala said when someone exclaimed that it took 10 years, I said yes it only took 10 years.

So valuable and awe-inspiring is the work .....

My Experience at the Kumbh Mela

By ROMESH DIWAN

http://www.newsindia-times.com/20010601/viewpoint01.htm

Thanks, to Prime Minister Atal Behari Vajpayeeji's invitation for a goodwill visit, to Dr. Mukund Mody's kindness for including me among 20 plus Indian Americans, and Shri Ashok Singhalji's generosity, I, along with this group, had the good fortune to have a dip at Sangam during Kumbh 2001 on 27th January. I had not even thought of such an eventuality. Not spiritually advanced - have hardly walked few inches on the miles long spiritual path - I was not a pilgrim. It is a spiritual experience and Prabhu's gift of the highest order. The surprise therefore was unusually great and sweet. I was overcome by a sense of sheer gratitude and peace. As I sat in the British Airways plane, I couldn't help thinking about the enormity of this event. How much my late grandmother who had a pilgrimage to Hardwar during a Kumbh would have been pleased to learn about it. As I reflect further, it becomes clear that this is THE event of 21st century, which can't be repeated in the next 100 years. Yet its enormity and significance has been missed in public discourse.

It is easy to understand its enormity. 100 million people - 10 % of India's population - attended this 40 days event. The size and magnitude of the attendance alone is mind-boggling. All related material statistics, such as number of tents, ashrams, street lights, patroon bridges, are unmatched. There are far deeper issues. People came by their own will; no one sent them an invitation. Almost 99.9 percent came with the clear understanding that it is a pilgrimage involving body and material sufferings; crowded trains, buses, uncomfortable places to stay, at best - most slept in the open and in cold - limited food, many a times going hungry, unusually long crowds. Yet they came in all shapes; old, young, sick, children, babies, families, communities; Hindus in all varieties, so-called untouchables, non Hindus. Given the size of the crowds, physical needs and suffering, all sorts of frustrations, how easy it would have been to create a problem: a riot, a stampede, etc.? But these pilgrims were unusually self disciplined, patient and tolerant. A Pakistani woman Sairah Irshad Khan wrote from her experience: "we were struck by the sea of humanity plowing its way to, or from, the river. Amazingly, there was no jostling, no pushing, little garbage, and although this must surely have been an assembly of among the most wretched of the earth, no begging." ["Indian Spring" http://www.newsline.com. pk/html/impressions.html] No doubt a good and competent U.P. government made excellent arrangements. Yet given the size, no government, however good, can assure such success. The success depended, fundamentally, on every pilgrim's "self discipline." This Maha Kumbh offered the most compelling evidence on the "self discipline" of Hindu pilgrims.

To understand the significance of the event, one needs a frame of reference; a perspective. Ram Dass alias Richard Alpert, with a Stanford Ph.D. and professorships at Harvard, Stanford and

California, the very high priest of Western education, explains the meaning of perspective from his personal experience given in one of his best sellers, [How can I Help.] Well informed about India's poor and poverty, as Richard Alpert he came to Varanasi, walked around its ghats, saw thousands in final stages of one illness or another waiting to die, and placed change in their begging bowels but could not see them in their eyes. Three months later after having met his guru, Neem Karoli Baba, he visited Vanransi again as Ram Dass with a different perspective. And this time, he wrote, " to my profound amazement I found in their eyes not the suffering that I have been reticent to face but looks of peace. In fact I even saw some of their eyes pity for me, lost as I was in illusion. Leprosy, leukemia, blindness, such poverty that they had only a loincloth and a begging bowl...and still... peace." Mahakumbh has also been seen from similar two perspectives. While pilgrims looked for, and saw, asceticism in the Naga sadhus, the clothed cameramen, like the guards at Aschwitz, were doing their job photographing their nudity and eccentricities little wondering what it meant. Similarly, like Eichmann scheduling trains, the editors at magazines were sensationalizing pictures to sell their wares, never questioning their ethical dimensions in demeaning the pilgrims. MahaKumbh can't be explained by the Western intellectual tradition; that would be like Parmahans Ramakrishna's dressed up salt doll wading in the ocean to measure its depth. For its proper understanding Ram Dass's is the spiritual and relevant perspective. Kumbh is inherently, and fundamentally, spiritual; after all it is all about amrit.. Any Kumbh is holy and MahaKumbh is the holiest of the holy. Sangam, the meeting of three waters, represents to the pilgrims, by act of their faith, a phenomena of transcendence. Faith is fundamental. As Gandhiji said: "So long as our eyes of knowledge have not opened, we have no choice but to see with the eyes of faith."[The Bhagavadgita] Swami Chimnayananda said it well. "The amrit has gone to them [pilgrims from villages] because they have no ego. What they have instead is faith"

Like a major decennial Census that provides detailed information about some aspects of a country's population, large gathering at regular Kumbhs provide authentic evidence on the various dimensions of the Hindu faith. This Maha Kumbh being the most special and attended by the largest population provides the most authentic evidence on Hindu beliefs, practices and rituals. Like a huge census, the evidence from this Maha Kumbh is vast and multidimensional. Its analysis and implications would take many years and fill major treatises. To start with it has shown, once again and after a long time, a different and better view of the Indian society: beautiful, peaceful, real, serene, spiritual and vast as contrasted with the India seen through Bollywood and media: vulgar, violent, unreal, ugly, poor, materialist, greedy, corrupt, and bounded.

Over the past hundreds of years, Hindu religion has been belittled, censured, condemned, criticized, decried, deformed, demeaned, demonized, denounced, depreciated, derided, derogated, despised, detested, disdained, disgraced, disfigured, disparaged, distorted, ridiculed, scorned, scoffed. Much of this denunciation has been carried on by a number of myths promoted by two arguments: (i) evaluated within the Western materialist, rationalist, scientific framework, and (ii) by association. For example a common myth is that caste system and untouchability is fundamental to Hinduism. That is take the caste system and untouchability then Hinduism will wither away. Since some of the "low caste" Hindus are defined as untouchable. They are therefore discriminated against and hence are poor. It follows therefore that Hinduism is a source of poverty or poverty is embedded in Hinduism. Many writers have added a new charge of fundamentalism against Hinduism. The evidence from Maha Kumbh directly contradicts all such contentions.

How did caste and untouchability express itself at the Maha Kumbh? Were there Brahmins at the gate checking the pilgrims status in case they belonged to lower caste and were untouchables? Look at the evidence. (i) Maha Kumbh happens every

144 years. (ii) It is the holiest of holy occasion in the Hindu religion; there can't be, and is not, a more holy occasion. (iii) Dipping at Sangam during this period is therefore the holiest of holy ceremonies. (iv) 100 million people performed these ceremonies including dalits, so-called "low caste" and "untouchables' Hindus. (v) Entry to this ceremony was not restricted to any one.

If caste system and untouchability is essential to Hinduism, as the myth has been propagated, would it not be logical for them to bar these low caste and "untouchables" from these holiest of the holy ceremonies? The direct evidence is that these low caste and untouchables performed exactly the same ceremony, of dipping in the holy waters, as any Brahmin or Hindu sage. Not only low caste

Hindus, even Muslim women from Pakistan were welcomed to participate in these ceremonies. "Here we were, Pakistanis and Muslims, readily announcing both, being treated like the most welcome of guests, invited to not only watch, but participate in what were the most sacred of Hindu rites, at their holiest of religious ceremonies." wrote a thankful Sairah Irshad Khan and concluded; "Apart from the undeniable spiritually uplifting element of the exercise, the thought that lingered long afterwards was the warmth we had encountered at every step of the way." The Maha Kumbh provides the most direct and clear evidence that untouchability is neither germane to, nor a part of, Hindu religion.

Untouchability is a form of discrimination following from exploitive power relations. There is ample evidence of the prevalence of untouchability among Christian, Muslim and other communities. In fact holocausts are the most severe and oppressive forms of untouchability. History is full of stories about Crusades, Jihads, Hindukush, genocide of Native Americans, Slavery and lynching of Black Americans, Armenian, Jewish and Romas holocausts. British Rule in India caused the deaths of two hundred million Indians. ["Mahatma Gandhi, Amartya Sen and Poverty" Gandhi Marg. Vol. 20. No. 4. January -March 1999. pp. 421 - 444] Mike Davis has made a similar argument in his book: Late Victorian Holocausts.

Not only is untouchability NOT a part of Hindu religion, every Hindu sage and leader, Vivekananda, Gandhi, to name two, have acted against such discrimination. In fact fighting for the weak and exploited is the most important Hindu dharma. Accepting low caste and so - called untouchables at the holiest of holy Hindu ceremonies at Maha Kumbh, and treating them equally, follows logically from Hindu beliefs, dharma and principles. By contrast, we know from the apologies offered by the current Pope, the then Pope participated in the Jewish holocaust; no Pope has so far acknowledged the 3 million Romas holocaust; is it because Romas originate in India and Indians are untouchables for them. One is hard pressed to find Muslim and Christian leaders who have spoken against untouchability and caste system in their own communities.

From the evidence of 5,000 ashrams at Maha Kumbh it is clear and obvious that there are many different shades of ideas, opinions, philosophies and practices in Hinduism. There is no single person or body who speaks for all Hindus.

Compare it to Christianity, which has a large number of different churches. Can a lay Christian

participate in a gathering where all these sects meet together?

There has never been one single place or occasion where Christens of all denominations have gathered together. Evidence from Maha Kumbh fully refutes the charge of fundamentalism in Hinduism.

Maha Kumbh confirms that in spite of abuse for the past one thousand years, and still from those in authority, it is toady alive and well.

Hundred years ago Swami Vivekananda understood its bright future. Sri Aurobindo anchored his nationalism in Hinduism. Mahatma Gandhi made it clear to the Christians trying to covert him: “To-day my position is that, though I admire much in Christianity, I am unable to identify myself with orthodox Christianity.

(The author is a professor of economics at the Rensselaer Polytechnic Institute, Troy, NY 12180) diwanr@rpi.edu).

Navratras, Story of Cosmic Evolution

By Pankaj Dixit

http://www.timesofindia.com/today/28edit5.htm

NAVRATRA or nine auspicious nights signifies the basic principle of yoga that energies should involute back to the primal source to rejuvenate the individual form, which is the human body. This return brings out the union of the microcosmic individual, *Pinda*, and the macrocosmic consciousness, *Brahmanda*, passing through the entire cyclic process of creation because time and space are self-perpetuating.

In *Navratra*, Nav means nine and Ratra means night. In Indian philosophy the number nine is closely associated with the process of creation in the cosmic time cycle. The entire cosmic cycle consists of three phases -- creation, preservation and dissolution. Each of these three parts split into triads (3x3=9) brings the numerical order to nine. Adi Sankaracharya in the 8th century AD clearly indicated the significance of number nine in the *Soundaryalahiri*, 11th sloka: ``The four *Siva chakras* and five *Sakti chakras* create the nine *Mula-Prakratis* or basic manifestations, because they represent the source substance of the whole cosmos".

These nine cosmic wombs or *Nava-Yoni* have a parallel nine categories of nature in the macrocosm. This nine-fold division is projected in nine apertures of the body -- two eyes, two ears, two nostrils, mouth, genitals and anus, nine psychic centres, nine planets, nine divisions of time -- *ghatika, yama, ahoratra, vara, tithi, paksha, masa, ritu*, nine gems, nine moods or *Navras* and nine forms of Goddess Durga or Tripurasundari worshipped during *Navratras*.

The intricate relationship of the number nine with creation is clearly visible in the nine months' gravidity of the human being. According to the Tantric concept of cosmic involution from the *Sahasrara chakra*, 56 rays are said to proceed to *Muladhara chakra* to constitute earth element, 52 in *Manipur* to form water element, 62 in *Svadhistan* to establish fire element, 54 in *Anhata chakra* pertains to the character of the air element, 72 in *Visudhi chakra* forms ether element and 64 in *Ajna chakra* shapes *manas* or mind.

In total, there are 360 rays or potencies of universal *sakti* represented by *Maha Tripurasundari*. It is vindicated in the form of a circle which has a 360 degree angle indicating fullness. This 360 digit again totals to nine, the number of creation. The universe is also composed of 36 *tatvas* unfolding from primal unity or *Parama Shiva* which again has the numerical value of nine. The days representing the 16 phases or *kalas* of the moon constitute a fortnight or *poksha* and two pakshas -- waxing and waning -- make a month. These *tithis* are also 360 in a lunar year again depicting a total of nine. Nine is considered to be complete, *puran*, because any number multiplied by nine gives a figure that totals to nine. Likewise nine added or deducted from any

number gives a figure with the numerical total unchanged. This concept is explained in the famous *santi path mantra* of the *Upanishads*.

The other significant part of *Navratras* is ratra or night. The Rig Veda clearly says that before creation began everything was shrouded in the darkness of night and from that darkness creation came about. The same idea is reflected in the *Brihadaranyaka Upanishad*. These nine nights occur on equinoxes or equal nights when the sun is vertically overhead at the equator or centre. Hence the human body also attains equilibrium with nature and meditation and worship of *Sakti* with *Beej mantras* revitalises the body.

Therefore forms of Durga are worshipped with their respective *yantras*. Barley is sown in homes as a symbol of the creative power of the mother Goddess. In recognition of the importance of *sakthi* or feminine force, traditionally, little girls are symbolically worshipped on the eighth day, *Ashtami*.

The Navratras also celebrates the victory of Lord Rama over the demon Ravana and many chant the famous *Ramrakshastotra* in the mornings. In Bengal these nine days resound with devotion and dedication to Godess Durga. Durga Puja was initiated by the landlord Kans Narayan of Bengal in the 16th century. In South India, especially in Mysore, Dussehra celebrations , symbolises the triumph of virtue over vice.

Between the sublime and the ridiculous

By Anuradha Dutt

http://www.dailypioneer.com/secon3.asp?cat=\opd2&d=OPED

There is a growing impression that the BJP agenda is being laid down by pujaris. The perceived attempt to saffronise education through the rewriting of history books for schools, and the induction of astrology, karamkand and Ayur Veda, hitherto the preserve of the priestly class, into college and university curricula, seems to support this contention. It has been reinforced by the fracas over the shila daan at Ayodhya.

The centre was seen to be held to ransom by the suicide threat of Mahant Ramchandradas Paramhans, chairman of the Ramjanmabhoomi Nyas, which has been spearheading the temple movement. While the Mahant's motives may have been apolitical, the manner in which the Government's hand was forced, with rival pontiffs and prelates all trying to intercede, appears to have given legitimacy to the priestly class's attempt to determine state policy.

Antipathy to the Sangh parivar's revivalist agenda among groups that espouse the cause of oppressed castes, hinges largely on fears of a Brahminical resurrection. Over ages, new faiths and sects have sprung up as a reaction to the dominance of this class. Buddhism, Jainism, Sikhism and even the Bhakti cult, while adhering to the Vedantic principles of karma and rebirth, rejected the right of hereditary priests to mediate between God, truth and man. Apparently, all disowned the hierarchy that characterises Hindu society, and affirmed individual dignity. In recent times, the reformist Arya Samaj attempted something similar within the parameters of Hinduism.

But, so deeply ingrained is caste in Hindu tradition that it rears up to strike like a snake when provoked. The irony is that the very sections that are wary of a Brahminical revival, have welcomed the Mandal Commission's enhancement of caste based reservations in Government jobs. Such a provision is seen as a means for self-empowerment by the beneficiaries, even if it entrenches their place in Manu's hierarchy even more firmly.

The BJP, by convention, a party that represents upper caste interests, has been forced by political compulsions to accept the Mandal formula, so as to enlarge its votebank. However, the party's endorsement of the activities and pursuits of the priestly class, as a matter of policy, is very much in evidence. And nowhere is this more so than in the spheres of education and culture. The Human Resource Development Ministry seems to have provided ample bait to Hindutva opponents.

The appointment of supporters of the revivalist agenda to academic bodies as well as the exercise to prioritise the study of epochs of Hindu ascendancy and knowledge systems have triggered bitter criticism. The struggle to build the temple at Ayodhya is viewed as part of the larger design to

Sanskritise India's political and social edifice. The conflict between the votaries of Hindutva votaries and the Left-secular intellectuals has preoccupied the media. While the former see these developments as a long over-due correction of an unfair historical perspective, the latter deride them as a retreat into obscurantism. The debate has focused on the motives of the progenitors of change, who have been charged with trying to subvert the nation's secular identity.

The fact that Brahmins have traditionally been the repositories and perpetrators of scriptural and esoteric knowledge, vested in texts compiled in Sanskrit and its offshoots, seems to have lent credence to the charge. **Yet, the reality is that for the vast majority that has little to do with sanitised notions of religion and conduct, nurtured by the secular-liberal ethos, the old beliefs and customs are more relevant to their existence. Divested of them, their lives would be rudderless. They can hardly opt to survive in a cultural void by rejecting their distinctive evolutionary history, or replacing it with an inadequate substitute, lifted from some other cultural paradigm. Therefore, to keep on blaming Hindutva for perpetuating retrogressive practices is unjustified as astrology, karamkand and Ayur Veda are traditional support systems, that mark the rites of passage through life.**

The demand to build the temple to sanctify Lord Ram's birth place is equally valid as he occupies a seminal place in the Hindu psyche and worldview, just as Prophet Mohammad does in the Islamic, or Jesus Christ in the Christian. Only the means needs to be dissociated from political aims. **The charge of trying to resurrect Brahminical supremacy via the educational agenda also seems exaggerated as the traditional preserve is now open to even non-Hindus.** But, knowledge of Sanskrit would clearly be necessary as the incantations and conceptual matrix are in the classical language. In this context, the UGC's proposal to set up over 400 Simple Sanskrit Speaking Centres makes sense.

The agenda can be faulted for a very different reason. **Esoteric wisdom in all cultures is kept secret.** This is implied in the Biblical injunction not to throw "pearls before swine."

Viewed thus, the UGC plan to set up a National Centre for Jyotir Vigyan and Other Occult Sciences, for the study of Tantra and other mysteries seems absurd. For, the disclosure of the "secret doctrines" would further expose them to ridicule by skeptics and misuse by charlatans. The end result would be to make them plebian.

Secularism and India Inc

Priyadarsi Dutta

http://www.dailypioneer.com/secon3.asp?cat=\edit4&d=EDITS

Na tatra yatra na'ham, na tatra yannmanyi, kimandammi banchami, sarvam sanbinmay tatam" (There is nowhere, where I am not, there is no where that is not within me, what more I am left to covet, when all pervades the entirety). Thus spake Acharya Vidyaranya Swami, the 14th Century Mathadheesh of Sringeri, shortly before he passed into Mahasamadhi. His last words represent the all encompassing catholicity of Sanatan Dharma that has tussle with none. True to his vow of mendicancy he had relinquished the long held post of Prime Minister of Vijayanagara, the legendary Hindu kingdom he was instrumental in establishing with Harihara and Bukka in AD 1336. The Sringeri monk Acharya Vidyaranya was provoked to tread a nationalistic path when Allauddin Khilji's commander Malik Kafur was cleaving into southern India, razing temple after temple and turning Hindu cities into killing fields.

With reference to Sankaracharya Jayendra Saraswati of Kanchi some people are today asserting that monks should restrict their activities to spirituality. These detractors are captives of an escapist interpretation of Hindu philosophy. Sublime as they might sound, they want to imply that since the soul is immortal, how does it matter if the body is hacked to pieces-will it make a difference to Lord Shiva if one amongst his million temples, viz Somnath, is sacked? But there is another interpretation that Jayedra Saraswati, perhaps the greatest living exponent of Sanksrit in India, drives home. Even though the body has no purpose without the soul, it is important since without the body as the medium the soul cannot be known.

Last year at a public function in New Delhi he had expressed his personal belief that Hindu culture being Sanatan (timeless) will survive despite all persecution by invaders or commotion from within. And yet, he added, we should be pragmatic on the ground level to ensure it is so. Hence while he expresses his predilection for Ram Janmabhoomi Nyas over the VHP, he does not dismiss either as communal. The VHP might be doing many idiotic things, but it represents the resolve that Hinduism henceforth will not lie low. And it is highly unfortunate that affiliates of a religion that specialises in breaking down temples, converting cathedrals and shrines in mosques, and demolishing archeological treasure are hailing the Supreme Court verdict over symbolic puja as the "victory of secularism".

The renewed secular jihad declared by the media in the wake of the Gujarat backlash accuses Hindutva of communalising the atmosphere in the country. Liberal intellectuals can afford to do so only because they are safe in a country whose frontiers are defended by a Hindu army. In an imaginary case scenario they could not have preached this secularism under the reigns of Allauddin Khilji, Giyasuddin Tughlak, Babur or Aurengzeb. They

cannot do so even in Srinagar, let alone Islamabad or Dhaka for even though secularism is dear to them, life is dearer than secularism.

Was there something ironic when 57 innocent pilgrims were scorched to death inside the Sabarmati express, when the name Sabarmati had become synonymous with peace, non-violence and tolerance? On the other hand the carnage was actually a product of the political Gandhianism of minority appeasement that emanated from Sabarmati in te 1920s and 30s.

As Naipaul observes, post-conversion, there is a tendency to obliterate the past. Secularism can come about when the religious faith of people are kept parallel. There is no need for them to meet in the typical East-West encounter of Indo-Anglican writing. To maintain a detente, some ground rules have to be accepted by those who wish to force their sectarian beliefs but do not have the numbers to do so.

A TRIBUTE TO HINDUISM

articles on hinduism

An American in Varanasi (Excerpts - rest at the site given below)
by Rod Eason
http://www.indiainfo.com/articles/rod-eason.html

As I stood on the steps of Manikarnika Ghat, the preeminent cremation grounds in Varanasi, and gazed out on the murky water of the Ganges River, I knew I was in another world altogether. "This ain't Kansas," as they say, and although I had been in India for almost three weeks, nothing could have prepared me for the sights of Varanasi.

India's oldest city lived up to its reputation as both wondrous and bizarre. The three days I spent there were the culmination of an incredible journey that took me from the noisy, crowded capital of Delhi to the spiritual heights of the Himalayas to the union of three great rivers in Allahabad and finally to the strange City of Light known as Varanasi.**India?**

Why would an American want to go to India? That's the question everybody asked during the six months that lead up to my departure. Even the Indians I work with at a software company in Sunnyvale were surprised, particularly by my decision to bypass the more typical tourist attractions in Agra and Rajasthan and head for the holy Garhwal region in the Himalayas.

What attracted me to India was not the Taj Mahal or the lavish palaces of the 18th century, but rather the true essence of India as described in the Vedas. The Veda is a blueprint to India's spiritual heritage. It has brought to light the practical value of meditation, Ayur-Veda and Jyotish. These disciplines are gaining wider appreciation in the West as they are beginning to be seen as a compliment to our own knowledge and experience rather than a contradiction.

I've been practicing meditation for 23 years. Although far from an expert in Vedic literature, I nonetheless have felt a closeness to this knowledge due to my own meditative experience. The desire to travel to the home of the Veda became increasingly strong in recent years. However, as a married father of a nine-year old with too many responsibilities and too little vacation time, a trip

to India seemed as remote as India itself. I mean, this isn't exactly like planning a week at the Grand Canyon. We're talking about the other side of the world here. Across eleven time zones and the international date line. Yeah, India was a nice idea, but how do you make it happen? As it turned out, the fulfillment of this desire came from an unlikely source.

Here's The Deal

For the last seven or eight years I've been playing in a monthly poker game. Five buddies, all married, holding on to a 'boy's night out' once a month. Poker is really just an excuse to get together. The stakes are small, the talk is cheap, occasionally risqué and always interesting. We all look forward to it. And everybody thought India was a great idea. This could be our trip. We knew the wives wouldn't want to go. This was for us. But at the same time we knew it would never work. The wives, after all, would never *let* us go.

Next month it came up again. India just wouldn't go away. We started planning the trip. We told the wives about it. They didn't really object too much. It was a year away and I think they figured it was just some guy's thing that we would eventually lose interest in. As the months went by, the interest grew stronger. We talked about India, bought travel books, exchanged email and surfed the internet. However, I also began to realize that due to circumstances, we wouldn't all make it. Sure enough, two of our buddies fell out. We were down to three.

We made arrangements with a local travel agency to put together a package for the three of us—Frank, Charlie and myself. We gave them a list of places we wanted to go and they booked a guide to get us there. With three months to go, we scheduled a weekday lunch at an Indian restaurant to review the trip. That morning I received an email from Charlie. I called Frank and told him Charlie couldn't make it. "To lunch?" he asked.

"No, he can make it to lunch," I said. "He just can't make it to India."

We met at lunch, hammered Charlie for about an hour and convinced him that this was the trip of a lifetime and he had to go. As we finished lunch, Charlie said, "I don't know what I was thinking. You guys are right. I'm in!"

As he drove away from the restaurant, Frank and I looked at each other and said, "He's not going."Two weeks later Charlie was out for good. We didn't even bother trying to turn him around. There would be just two to India.

Shots And More Shots

From our research, we gathered that northern India has just three main seasons—summer, winter and monsoon. Our challenge was to find a window of time that avoided the extreme heat of the summer, the torrential rainfall of the monsoon and the snow of the winter. That window appeared to be the month of September. We set our departure date for September 7 and continued our preparations.

With the travel arrangements made we turned our attention to the supplies that would be needed. We decided that we would take only a backpack and another small carry-on bag. We proceeded to fill our backpacks with everything from mosquito repellent to flashlights to toilet paper. You know, all the essentials.

I put it off as long as I could, but after constant pressure from my wife and a weekly reminder from my mother—"Rod, have you gotten your shots yet?"—I broke down and visited my doctor. My hopes for an easy way out quickly vanished when he launched into a list that included hepatitis A, hepatitis B, cholera, tetanus, typhoid, polio, meningitis and malaria.

"That's it?" I asked.
"Well," he continued, "There are other diseases that we don't have vaccines for. Like dengue fever for example. They also call it broken bone fever because when you get it you feel like your bones are being broken."
"Swell," I thought. Maybe I should go to Hawaii instead.

Turns out my doctor had traveled quite extensively in Southeast Asia. Although he had never been to India, he knew a fair amount about the country. When I told him I was going to Varanasi, he said, "Ah yes, the holy city. Get the shots."

In the end I met him a little more than half way. I passed on hepatitis B because the Center for Disease Control indicated travelers to India were of little risk as long as they took basic precautions. Same thing with cholera, and the vaccine is only 20-30 percent effective. "20 to 30 percent is better than nothing," my doctor said.

"I'll take my chances," I bravely replied as I thought about the prospect of two additional shots. Despite some flu-like symptoms for two days and a couple of sore arms, I survived the shots in pretty good shape. The last vaccine was for malaria. It consisted of a series of tablets taken once a week for eight weeks. "Are there any side effects?" I asked.

"Well," my doctor began, "It's somewhat rare, but there is one thing that I should tell you about because it can sneak up on you."

"What's that?" I wondered.
"It sometimes can create the symptoms of mental illness," he said.
"Swell," I thought. Just what I need at 10,000 feet in the Himalayas.

On Our Way

We boarded United Airlines flight 805 in San Francisco on Sunday, September 7 at 1:30 in the afternoon. Fourteen hours later we were in Hong Kong. Having never been there, I was hoping to at least get a nice view of the city as we landed. The weather didn't cooperate and we landed smooth as silk in near fog and a driving rainstorm. "It doesn't get any better than this," remarked the flight attendant that had cautioned us to expect heavy turbulence on the way in.

About nine hours later, just after midnight local time, we landed at the Indira Gandhi International Airport in Delhi. Touchdown. We were in India.

We were met at the airport by our guide, Mr. Kapileshwar, and two drivers he brought along, Vijay and Nitin. Mr. Kapileshwar, or Kapil as we came to call him, was a pleasant man with a round, clean-shaven, smiling face. He had served as a tour guide throughout much of India and had been to the Himalayas on many occasions. A strong trekker, Kapil had also taken an expedition to Everest base camp.

Vijay was an older gentleman, large for his size with broad shoulders and a strong back. He had a

warm glow on his beard-covered face and a twinkle in his eye. He spoke little English, but we knew right away that we were going to like him. Nitin, in his early twenties, was much younger than the others, but seemed quite friendly.

The fifteen-minute drive to our hotel was our first exposure to Indian traffic. Our first surprise was that not all vehicles had working headlights. After the third large truck appeared out of nowhere, Frank asked Kapil if this was normal. "Actually, they are required to have lights," he explained. "But some drivers, they don't."

We spent our first night at the Jukaso Inn in the Connaught Place section of central New Delhi. Moderate by Delhi standards, the Jukaso Inn was comparable to a Motel 6 in the U.S. Little did we know at the time that this would be the only night during our three-week stay in India that would not have a power outage.

We never intended to spend much time in Delhi. And the intense humidity and a confusing trip through the center of the city to find a bank to exchange currency did not change our plans. We made only one stop at a large park called Jantar Mantar. Built in 1725 by Jai Singh II, the former ruler of Jaipur, it stands as the first open-air Vedic observatory. The park has several large red and white sundials along with other instruments carved out of stone, once used to calculate time and the astrological position of the planets. Viewing these instruments through the sense of sight is said to directly affect the physiology and awareness of the observer. Frank and I did notice that several of them were quite mesmerizing. You didn't want to take your eyes off them.

The Hierarchy of the Road

It's about a six-hour drive north to Haridwar. The fact that the road condition was poor didn't seem to deter the drivers, ours included, from driving as fast as possible. With constant use of the horn, we raced through the countryside, swerving to pass slower vehicles and narrowly avoiding a head-on collision with the on-coming traffic.

No American should ever attempt to drive a car in India. There is nothing in the U.S. that can possibly prepare a person for Indian driving. Even most Indians don't drive. Those that do are artists. Well, most of them. Ours certainly was. Vijay had driven taxis, buses and large trucks in his lifetime. "Forty years driving in Bombay," he proudly stated. He could easily handle our Tata Sumo, India's version of a sport-utility vehicle.

That doesn't mean that Frank and I weren't freaked out by our first encounter with the Indian system of driving. To begin with, it's all backwards. The steering wheel is on the right and you drive on the left; that is, when you're not driving down the center of the road which is what everybody does. There are few lane markings and the ones that exist are ignored. The idea is to drive up to the rear bumper of the car in front of you and honk the horn until the car moves over enough to let you by. Never mind that the on-coming cars are doing the same thing. At the last second everybody moves back into place and traffic continues without a hitch.

To Frank and me it seemed chaotic and out of control, but in some bizarre way the whole system works. One of the things that holds it all together is the trust and mutual respect drivers hold for one another. No one drives with an ego in India. Harsh words are never exchanged on the road. Unlike the U.S., there is a huge reliance on the other driver to do the right thing. As two cars approach from opposite directions on a narrow road, neither is forced to reduce his speed due to

this implicit understanding that every driver will act responsibly in a tight situation. Well, most of the time. Just outside Haridwar we saw the mangled ruins of a couple of buses that collided head-on. A not-too-subtle reminder that sometimes the system breaks down.

With so many people and so few roads in northern India, everyone competes for the straight line, the shortest distance between two points. Cars, trucks and buses all maneuver along the narrow twisting roads of the Himalayas. Drivers are constantly jockeying for position. As if handed down from generations before, there's an unwritten hierarchy that governs travel on the Indian roads. From the animals on up, everyone seems to know his place and accepts it. Larger faster vehicles have almost an obligation to overtake smaller slower vehicles. It's not exactly survival of the fittest, but Darwin would be proud nonetheless.

The cows are the slowest so everybody passes them. They are however, given their due respect and a small measure of space on the road. For 5,000 years these animals have roamed the land unthreatened by man. The look in their eyes as they lie down in a busy intersection as much as says, "What, me worry?" Ever present, but only occasionally a nuisance, they will move after a few blasts of the horn. They know the routine.

Next come the pedestrians. Slow of course, but usually intelligent enough to watch out for passing cars even if it means waiting until the last second to move.

For many, a bicycle is the common mode of transportation. These rickety contraptions can only hope for a smooth section on the shoulder of the road as they are the first ones forced off in the ongoing competition for space.

The next step up is the motor scooter. To refer to them as motorcycles would be too generous. They're basically underpowered mopeds, but they are nimble and able to move in and out of traffic rather quickly. In many cases this becomes the family car. Three or four on a scooter is not uncommon. Helmets are rare and reserved for the driver only. Ladies ride side-saddle with children in the drivers lap.

Ford Escorts and Geo Prisms dominate the sub-compact car field. More roomy are the older style Ambassador cars. They're comfortable enough for in-town driving, but lack the power needed for efficient hill climbing. That's not to say they don't make a strong effort, if exhaust emissions are any indication.

Our Tata Sumo seemed to be the ideal vehicle for five people to navigate through the hills in relative speed and comfort. We passed everything except the Jeeps. Because of their response and ability to handle various types of terrain, the Jeeps were the most capable vehicles on the road. They were also the most dangerous. Their mostly young drivers tended to display a touch of cockiness to go along with a lead foot. Fortunately, the responsiveness of the vehicle and the driver's quick reactions were usually enough to avoid any real trouble.

There is no shortage of trucks and buses on the roads in northern India. With thick black diesel smoke following in their path, they emerge as a stark contrast to the pristine beauty of the Himalayas. To be stuck behind one on an uphill climb is truly nauseating. The downhill is a different story. No one wants to mess with a large bus on a downhill slope. They travel the middle of the road and force all other vehicles to cower meekly to the edge in some kind of twisted payback for every car that passed them on the uphill climb. Any car foolish enough to challenge

them is usually forced to surrender by one strong blast of the horn.

"Namaste"

Haridwar (‘gate of God’) is one of the seven holy cities of India. The site of the Kumbha Mela every twelve years, it attracts pilgrims from all over India who come to bathe in the sacred waters of the Ganges. For Frank and I it was the first stop on our journey into the Himalayas.

Visible India - Darsan (Excerpts)
By Diane L. Eck

Hinduism is an imaginative, an "image-making, religious tradition in which the sacred is seen as present in the visible world – the world we see in multiple images and deities, in sacred places, and in people. The notion of darsan call attention as students of Hinduism, to the fact that India is a visual and visionary culture, one in which the eyes have a prominent role in the apprehension of the sacred. For most ordinary Hindus, the notion of the divine as "invisible" would be foreign indeed. God is eminently visible, although human beings have not always had the refinement of sight to see. Furthermore, the divine is visible not only in temple and shrine, but also in the whole continuum of life – in nature, in people, in birth and growth and death. Although some Hindus, both philosophers and radical reformers, have always used the terms "nirguna"(qualityless) and nirakara (formless) to speak of the One Brahman. Yet the same tradition has simultaneously affirmed that Brahman is also saguna (with qualities) and that the multitude of "names and forms" of this world are the exuberant transformations of the One Brahman.

India presents to the visitor an overwhelmingly visual impression. It is beautiful, colorful, sensuous. It is captivating and intriguing, repugnant and puzzling. It combines the intimacy and familiarity of English four o'clock tea with the dazzling foreignness of carpisoned elephants or vast crowds bathing in the Ganga during an eclipse. India's displays of multi-armed images, its processions and its pilgrimages, its beggars and its kings, its street life and markets, its diversity of people – all appear to the eye in a kaleidoscope of images. Whatever Hindus affirm of the meaning of life, death, and suffering, they affirm with their eyes wide open. Many westerners, for example, upon seeing Hindu rituals observances for the first time, are impressed with how sensuous Hindu worship is. It is sensuous in that it makes full use of the senses – seeing, touching, smelling, tasting and hearing. One "sees" the image of the deity (darsan). One "touches" it with one's hands (sparsa), and one also "touches" the limbs of one's own body to establish the presence of various deities (nyasa). One "hears" the sacred sound of the mantras (sravana). The ringing of bells, the offering of oil lamps, the presentation of flowers, the pouring of water and milk, the sipping of sanctified liquid offerings, the eating of consecrated foods- prasad – these are the basic constituents of Hindu worship, Puja.

For all its famous otherworldliness, India is a culture that has also celebrated the life of this world and the realms of the senses.

Meet the Brahmins of ancient Europe, the high caste of Celtic society

By Peter Berresford Ellis

http://www.hinduvoice.net/cgi-bin/maillist/mojo.cgi?flavor=archive&id=20030115010923&list=HV

The Celtic people spread from their homeland in what is now Germany across Europe in the first millennium bce. Iron tools and weapons rendered them superior to their neighbors. They were also skilled farmers, road builders, traders and inventors of a fast two-wheeled chariot. They declined in the face of Roman, Germanic and Slavic ascendency by the second centuries bce. Here Peter Berresford Ellis, one of Europe's foremost experts of the Celts, explains how modern research has revealed the amazing similarities between ancient Celt and Vedic culture. The Celt's priestly caste, the Druids, has become a part of modern folklore. Their identity is claimed by New Age enthusiasts likely to appear at annual solstice gatherings around the ancient megaliths of northwest Europe. While sincerely motivated by a desire to resurrect Europe's ancient spiritual ways, Ellis says these modern Druids draw more upon fanciful reconstructions of the 18th century than actual scholarship.

The Druids of the ancient Celtic world have a startling kinship with the brahmins of the Hindu religion and were, indeed, a parallel development from their common Indo-European cultural root which began to branch out probably five thousand years ago. It has been only in recent decades that Celtic scholars have begun to reveal the full
extent of the parallels and cognates between ancient Celtic society and Vedic culture.

The Celts were the first civilization north of the European Alps to emerge into recorded history. At the time of their greatest expansion, in the 3rd century bce, the Celts stretched from Ireland in the west, through to the central plain of Turkey in the east; north from Belgium, down to Cadiz in southern Spain and across the Alps into the Po Valley of Italy. They even impinged on areas of Poland and the Ukraine and, if the amazing recent discoveries of mummies in China's province of Xinjiang are linked with the Tocharian texts, they even moved as far east as the area north of Tibet.

The once great Celtic civilization is today represented only by the modern Irish, Manx and Scots, and the Welsh, Cornish and Bretons. Today on the northwest fringes of Europe cling the survivors of centuries of attempted conquest and "ethnic cleansing" by Rome and its imperial descendants. But of the sixteen million people who make up those populations, only 2.5 million now speak a Celtic language as their mother tongue.

The Druids were not simply priesthood. They were the intellectual caste of ancient Celtic society, incorporating all the professions: judges, lawyers, medical doctors, ambassadors, historians and so forth, just as does the brahmin caste. In fact, other names designate the specific role of the "priests." Only Roman and later Christian propaganda turned them into "shamans," "wizards" and "magicians." The scholars of the Greek Alexandrian school clearly described them as a parallel caste to the brahmins of Vedic society.

The very name Druid is composed of two Celtic word roots which have parallels in Sanskrit. Indeed, the root vid for knowledge, which also emerges in the Sanskrit word Veda, demonstrates the similarity. The Celtic root dru which means "immersion" also appears in Sanskrit. So a Druid was one "immersed in knowledge."

Because Ireland was one of the few areas of the Celtic world that was not conquered by Rome and therefore not influenced by Latin culture until the time of its Christianization in the 5th century ce, its ancient Irish culture has retained the most clear and startling parallels to Hindu society.

Professor Calvert Watkins of Harvard, one of the leading linguistic experts in his field, has pointed out that of all the Celtic linguistic remains, Old Irish represents an extraordinarily archaic and conservative tradition within the Indo-European family. Its
nominal and verbal systems are a far truer reflection of the hypothesized parent tongue, from which all Indo-European languages developed, than are Classical Greek or Latin. The structure of Old Irish, says Professor Watkins, can be compared only with that of
Vedic Sanskrit or Hittite of the Old Kingdom.

The vocabulary is amazingly similar. The following are just a few examples:

Old Irish - arya (freeman),Sanskrit - aire (noble)
Old Irish - naib (good), Sanskrit - noeib (holy)
Old Irish - badhira (deaf), Sanskrit - bodhar (deaf)
Old Irish - names (respect), Sanskrit - nemed (respect)
Old Irish - righ (king), Sanskrit - raja (king)

This applies not only in the field of linguistics but in law and social custom, in mythology, in folk custom and in traditional musical form. The ancient Irish law system, the Laws of the Fénechus, is closely parallel to the Laws of Manu. Many surviving Irish myths, and some Welsh ones, show remarkable resemblances to the themes, stories and even names in the sagas of the Indian Vedas.

Comparisons are almost endless. Among the ancient Celts, Danu was regarded as the "Mother Goddess." The Irish Gods and Goddesses were the Tuatha De Danaan ("Children of Danu"). Danu was the "divine waters" falling from heaven and nurturing Bíle, the sacred oak from whose acorns their children sprang. Moreover, the waters of Danu went on to create the great Celtic sacred river--Danuvius, today called the Danube. Many European rivers bear the name of Danu--the Rhône (ro- Dhanu, "Great Danu") and several rivers called Don. Rivers were sacred in the Celtic world, and places where votive offerings were deposited and burials often conducted. The Thames, which flows through London, still bears its Celtic name, from Tamesis, the dark river, which is the same name as Tamesa, a tributary of the Ganges.

Not only is the story of Danu and the Danube a parallel to that of Ganga and the Ganges but a Hindu Danu appears in the Vedic story "The Churning of the Oceans," a story with parallels in Irish and Welsh mytholgy. Danu in Sanskrit also means "divine waters" and "moisture."

In ancient Ireland, as in ancient Hindu society, there was a class of poets who acted as charioteers to the warriors They were also their intimates and friends. In Irish sagas these charioteers extolled the prowess of the warriors. The Sanskrit Satapatha Brahmana says that on the evening of the first day of the horse sacrifice (and horse sacrifice was known in ancient Irish kingship rituals, recorded as late as the 12th century) the poets had to chant a praise poem in honor of the king or his warriors, usually extolling their genealogy
and deeds.

Such praise poems are found in the Rig Veda and are called narasamsi. The earliest surviving poems in old Irish are also praise poems, called fursundud, which trace back the genealogy of the kings of Ireland to Golamh or Mile Easpain, whose sons landed in Ireland at the end of the second millennium bce. When Amairgen, Golamh's son, who later traditions hail as the "first Druid," set foot in Ireland, he cried out an extraordinary incantation that could have come from the Bhagavad Gita, subsuming all things into his being [see sidebar right].

Celtic cosmology is a parallel to Vedic cosmology. Ancient Celtic astrologers used a similar system

based on twenty-seven lunar mansions, called nakshatras in Vedic Sanskrit. Like the Hindu Soma, King Ailill of Connacht, Ireland, had a circular palace constructed with twenty-seven windows through which he could gaze on his twenty-seven "star wives."

There survives the famous first century bce Celtic calendar (the Coligny Calendar) which, as soon as it was first discovered in 1897, was seen to have parallels to Vedic calendrical computations. In the most recent study of it, Dr. Garret Olmsted, an astronomer as well as Celtic scholar, points out the startling fact that while the surviving calendar was manufactured in the first century bce, astronomical calculus shows that it must have been computed in 1100 bce.

One fascinating parallel is that the ancient Irish and Hindus used the name Budh for the planet Mercury. The stem budh appears in all the Celtic languages, as it does in Sanskrit, as meaning "all victorious," "gift of teaching," "accomplished," "enlightened," "exalted" and so on. The names of the famous Celtic queen Boudicca, of ancient Britain (1st century ce), and of Jim Bowie (1796-1836), of the Texas Alamo fame, contain the same root. Buddha is the past participle of the same Sanskrit word--"one who is enlightened."

For Celtic scholars, the world of the Druids of reality is far more revealing and exciting, and showing of the amazingly close common bond with its sister Vedic culture, than the inventions of those who have now taken on the mantle of modern "Druids," even when done so with great sincerity.

If we are all truly wedded to living in harmony with one another, with nature, and seeking to protect endangered species of animal and plant life, let us remember that language and culture can also be in ecological danger. The Celtic languages and cultures today stand on
the verge of extinction. That is no natural phenomenon but the result of centuries of politically directed ethnocide. What price a "spiritual awareness" with the ancient Celts when their culture is in the process of being destroyed or reinvented? Far better we seek
to understand and preserve intact the Celt's ancient wisdom. In this, Hindus may prove good allies.

The Song of Amairgen the Druid I am the wind that blows across the sea; I am the wave of the ocean; I am the murmur of the billows; I am the bull of the seven combats; I am the vulture on the rock; I am a ray of the sun; I am the fairest of flowers; I am a wild boar in valor; I am a salmon in the pool; I am a lake on the plain; I am the skill of the craftsman; I am a word of science; I am the spearpoint that gives battle; I am the God who creates in the head of man the fire of thought. Who is it that enlightens the assembly upon the mountain, if not I? Who tells the ages of the moon, if not I? Who shows the place where the sun goes to rest, if not I? Who is the God that fashions enchantments-- The enchantment of battle and the wind of change?

Amairgen was the first Druid to arrive in Ireland. Ellis states, "In this song Amairgen subsumes everything into his own being with a philosophic outlook that parallels the declaration of Krishna in the Hindu Bhagavad-Gita." It also is quite similar in style and content to the more ancient Sri Rudra chant of the Yajur Veda.

Peter Berresford Ellis is one of the foremost living authorities on the Celts and author of many books on the subject, including "Celt and Roman," "Celt and Greek," "Dictionary of Celtic Mythology" and "Celtic Women."

Our Druid Cousins

By Peter Berresford Ellis

Hinduism Today 2/2000

Meet the brahmins of ancient Europe, the high caste of Celtic society.

The Celtic people spread from their homeland in what is now Germany across Europe in the first millennium bce. Iron tools and weapons rendered them superior to their neighbors. They were also skilled farmers, road builders, traders and inventors of a fast two-wheeled chariot. They declined in the face of Roman, Germanic and Slavic ascendency by the second centuries bce. Here Peter Berresford Ellis, one of Europe's foremost experts of the Celts, explains how modern research has revealed the amazing similarities between ancient Celt and Vedic culture. The Celt's priestly caste, the Druids, has become a part of modern folklore. Their identity is claimed by New Age enthusiasts likely to appear at annual solstice gatherings around the ancient megaliths of northwest Europe. While sincerely motivated by a desire to resurrect Europe's ancient spiritual ways, Ellis says these modern Druids draw more upon fanciful reconstructions of the 18th century than actual scholarship.

The Druids of the ancient Celtic world have a startling kinship with the brahmins of the Hindu religion and were, indeed, a parallel development from their common Indo-European cultural root which began to branch out probably five thousand years ago. It has been only in recent decades that Celtic scholars have begun to reveal the full extent of the parallels and cognates between ancient Celtic society and Vedic culture.

The Celts were the first civilization north of the European Alps to emerge into recorded history. At the time of their greatest expansion, in the 3rd century bce, the Celts stretched from Ireland in the west, through to the central plain of Turkey in the east; north from Belgium, down to Cadiz in southern Spain and across the Alps into the Po Valley of Italy. They even impinged on areas of Poland and the Ukraine and, if the amazing recent discoveries of mummies in China's province of Xinjiang are linked with the Tocharian texts, they even moved as far east as the area north of Tibet.

The once great Celtic civilization is today represented only by the modern Irish, Manx and Scots, and the Welsh, Cornish and Bretons. Today on the northwest fringes of Europe cling the survivors of centuries of attempted conquest and "ethnic cleansing" by Rome and its imperial descendants. But of the sixteen million people who make up those populations, only 2.5 million now speak a Celtic language as their mother tongue.

The Druids were not simply a priesthood. They were the intellectual caste of ancient Celtic society, incorporating all the professions: judges, lawyers, medical doctors, ambassadors,

historians and so forth, just as does the brahmin caste. In fact, other names designate the specific role of the "priests." Only Roman and later Christian propaganda turned them into "shamans," "wizards" and "magicians." The scholars of the Greek Alexandrian school clearly described them as a parallel caste to the brahmins of Vedic society.

The very name Druid is composed of two Celtic word roots which have parallels in Sanskrit. Indeed, the root vid for knowledge, which also emerges in the Sanskrit word Veda, demonstrates the similarity. The Celtic root dru which means "immersion" also appears in Sanskrit. So a Druid was one "immersed in knowledge."

Because Ireland was one of the few areas of the Celtic world that was not conquered by Rome and therefore not influenced by Latin culture until the time of its Christianization in the 5th century ce, its ancient Irish culture has retained the most clear and startling parallels to Hindu society.

Professor Calvert Watkins of Harvard, one of the leading linguistic experts in his field, has pointed out that of all the Celtic linguistic remains, Old Irish represents an extraordinarily archaic and conservative tradition within the Indo-European family. Its nominal and verbal systems are a far truer reflection of the hypothesized parent tongue, from which all Indo-European languages developed, than are Classical Greek or Latin. The structure of Old Irish, says Professor Watkins, can be compared only with that of Vedic Sanskrit or Hittite of the Old Kingdom.

The vocabulary is amazingly similar. The following are just a few examples:

Old Irish - arya (freeman),Sanskrit - aire (noble)
Old Irish - naib (good), Sanskrit - noeib (holy)
Old Irish - badhira (deaf), Sanskrit - bodhar (deaf)
Old Irish - names (respect), Sanskrit - nemed (respect)
Old Irish - righ (king), Sanskrit - raja (king)

This applies not only in the field of linguistics but in law and social custom, in mythology, in folk custom and in traditional musical form. The ancient Irish law system, the Laws of the Fénechus, is closely parallel to the Laws of Manu. Many surviving Irish myths, and some Welsh ones, show remarkable resemblances to the themes, stories and even names in the sagas of the Indian Vedas.

Comparisons are almost endless. Among the ancient Celts, Danu was regarded as the "Mother Goddess." The Irish Gods and Goddesses were the Tuatha De Danaan ("Children of Danu"). Danu was the "divine waters" falling from heaven and nurturing Bíle, the sacred oak from whose acorns their children sprang. Moreover, the waters of Danu went on to create the great Celtic sacred river--Danuvius, today called the Danube. Many European rivers bear the name of Danu--the Rhône (ro-Dhanu, "Great Danu") and several rivers called Don. Rivers were sacred in the Celtic world, and places where votive offerings were deposited and burials often conducted. The Thames, which flows through London, still bears its Celtic name, from Tamesis, the dark river, which is the same name as Tamesa, a tributary of the Ganges.

Not only is the story of Danu and the Danube a parallel to that of Ganga and the Ganges but a Hindu Danu appears in the Vedic story "The Churning of the Oceans," a story with parallels in Irish and Welsh mytholgy. Danu in Sanskrit also means "divine waters" and "moisture."

In ancient Ireland, as in ancient Hindu society, there was a class of poets who acted as charioteers

to the warriors They were also their intimates and friends. In Irish sagas these charioteers extolled the prowess of the warriors. The Sanskrit Satapatha Brahmana says that on the evening of the first day of the horse sacrifice (and horse sacrifice was known in ancient Irish kingship rituals, recorded as late as the 12th century) the poets had to chant a praise poem in honor of the king or his warriors, usually extolling their genealogy and deeds.

Such praise poems are found in the Rig Veda and are called narasamsi. The earliest surviving poems in old Irish are also praise poems, called fursundud, which trace back the genealogy of the kings of Ireland to Golamh or Mile Easpain, whose sons landed in Ireland at the end of the second millennium bce. When Amairgen, Golamh's son, who later traditions hail as the "first Druid," set foot in Ireland, he cried out an extraordinary incantation that could have come from the Bhagavad Gita, subsuming all things into his being [see sidebar right].

Celtic cosmology is a parallel to Vedic cosmology. Ancient Celtic astrologers used a similar system based on twenty-seven lunar mansions, called nakshatras in Vedic Sanskrit. Like the Hindu Soma, King Ailill of Connacht, Ireland, had a circular palace constructed with twenty-seven windows through which he could gaze on his twenty-seven "star wives."

There survives the famous first century bce Celtic calendar (the Coligny Calendar) which, as soon as it was first discovered in 1897, was seen to have parallels to Vedic calendrical computations. In the most recent study of it, Dr. Garret Olmsted, an astronomer as well as Celtic scholar, points out the startling fact that while the surviving calendar was manufactured in the first century bce, astronomical calculus shows that it must have been computed in 1100 bce.

One fascinating parallel is that the ancient Irish and Hindus used the name Budh for the planet Mercury. The stem budh appears in all the Celtic languages, as it does in Sanskrit, as meaning "all victorious," "gift of teaching," "accomplished," "enlightened," "exalted" and so on. The names of the famous Celtic queen Boudicca, of ancient Britain (1st century ce), and of Jim Bowie (1796-1836), of the Texas Alamo fame, contain the same root. Buddha is the past participle of the same Sanskrit word--"one who is enlightened."

For Celtic scholars, the world of the Druids of reality is far more revealing and exciting, and showing of the amazingly close common bond with its sister Vedic culture, than the inventions of those who have now taken on the mantle of modern "Druids," even when done so with great sincerity.

If we are all truly wedded to living in harmony with one another, with nature, and seeking to protect endangered species of animal and plant life, let us remember that language and culture can also be in ecological danger. The Celtic languages and cultures today stand on the verge of extinction. That is no natural phenomenon but the result of centuries of politically directed ethnocide. What price a "spiritual awareness" with the ancient Celts when their culture is in the process of being destroyed or reinvented? Far better we seek to understand and preserve intact the Celt's ancient wisdom. In this, Hindus may prove good allies.

The Song of Amairgen the Druid

I am the wind that blows across the sea; I am the wave of the ocean;
I am the murmur of the billows; I am the bull of the seven combats;
I am the vulture on the rock; I am a ray of the sun; I am the fairest of flowers;

I am a wild boar in valor; I am a salmon in the pool; I am a lake on the plain;
I am the skill of the craftsman; I am a word of science;
I am the spearpoint that gives battle;
I am the God who creates in the head of man the fire of thought.
Who is it that enlightens the assembly upon the mountain, if not I?
Who tells the ages of the moon, if not I?
Who shows the place where the sun goes to rest, if not I?
Who is the God that fashions enchantments--
The enchantment of battle and the wind of change?

Amairgen was the first Druid to arrive in Ireland. Ellis states, "In this song Amairgen subsumes everything into his own being with a philosophic outlook that parallels the declaration of Krishna in the Hindu Bhagavad-Gita." It also is quite similar in style and content to the more ancient Sri Rudra chant of the Yajur Veda.

Peter Berresford Ellis is one of the foremost living authorities on the Celts and author of many books on the subject, including "Celt and Roman," "Celt and Greek," "Dictionary of Celtic Mythology" and "Celtic Women."PETER BERRESFORD ELLIS, 30 GRESLEY ROAD, LONDON, N19 3JZ, ENGLAND

An Atlantis in the Indian Ocean
(*Review of Stephen Oppenheimer: Eden in the East*)

By Koenraad Elst
http://www.swordoftruth.com/swordoftruth/articles/revelation/revelation.html

One of the many insulting epithets thrown at AIT disbelievers is that they are no better than "Atlantis freaks". Actually, this is not entirely untrue. Some AIT skeptics who have applied their minds to reconstructing ancient history, have indeed thought of centres of human habitation in locations now well below sea-level. When Proto-Indo-European was spoken, the sea level was still recovering from the low point it had reached during the Ice Age, about 100 metres lower than the present level. It was in the period of roughly twelve to seven thousand years ago that the icecaps melted and replenished the seas, so that numerous low-lying villages had to be abandoned.

After all, it is a safe bet that more than half of mankind lived in the zone of less than 100 m above sea level. In the context of the present debate on global warming, it is said that a rise in sea level of just one metre would be an immense catastrophe for countries like Bangla Desh or the Netherlands. The Maledives would completely disappear with a rise of only a few metres. But more importantly, most big population centres today are located just above sea level: Tokyo, Shanghai, Kolkata, Mumbai, London, New York, Los Angeles etc. If the sea level would rise 100 m, most population centres including entire countries would become a sunken continent, a very real Atlantis. Consequently, there is nothing far-fetched in assuming the existence of population centres and cultures, 10 or 15 thousand years ago, in what are now submarine locations on the continental shelf outside our coastlines.

In a recent book, **Eden in the East: the Drowned Continent of Southeast Asia** (Phoenix paperback, London 1999 (1998)), Stephen Oppenheimer has focused on one such part of the continental shelf: the region between Malaysia, Sumatra, Java, Borneo, Thailand, Vietnam, China and Taiwan, which was largely inhabitable during the Ice Age. Thinking that this was then the most advanced centre of civilization, he calls it Eden, the Biblical name of Paradise (from Sumerian edin, "alluvial plain"), because West-Asian sources including the Bible do locate the origin of mankind or at least of civilization in the East. In some cases, as in Sumerian references, this "East" is clearly the pre-Harappan and Harappan culture, but even more easterly countries seem to be involved.

Oppenheimer is a medical doctor who has lived in Southeast Asia for decades. He is clearly influenced by Marxism, e.g. where he dismisses religion as a means to "control other people's labour", with explicit reference to Karl Marx's Das Kapital (p.483). His book is based on solid scientific research (genetic, anthropological, linguistic and archaeological), and is in that respect

very different from the numerous Atlantis books which draw on "revelations" and "channeling".

The most airy type of evidence, in its massiveness nonetheless quite compelling, is comparative mythology: numerous cultures, and especialy those in the Asia-Pacific zone, have highly parallel myths of one or more floods. These are not opaque allusions to Freudian events in the subconscious but plainly historical references to the catastrophic moments in the otherwise long-drawn-out rise of the sea level after the Ice Age. For, indeed, this rise was not a continuous process but took place with occasional spurts, wiping out entire tribes living near the coast. The last such sudden rise took place ca. 5500 BC, after which the sea level fell back a few metres to the present level.

According to Oppenheimer, the Southeast-Asian Atlantis, provisionally called Sundaland because it now is the Sunda shelf, was the world leader in the Neolithic Revolution (start of agriculture), using stones for grinding wild grains as early as 24,000 ago, more than ten thousand years older than in Egypt or Palestine. Before and especially during the gradual flooding of their lowland, the Sundalanders spread out to neighbouring lands: the Asian mainland including China, India and Mesopotamia, and the island world from Madagascar to the Philippines and New Guinea, whence they later colonized Polynesia as far as Easter Island, Hawaii and New Zealand.

Oppenheimer aligns with the archaeologists against the linguists in the controversy about the homeland of the Austronesian language family (Malay, Tagalog, Maori, Malgasy etc.): he locates it in Sundaland and its upper regions which now make up the coasts of the Southeast-Asian countries, whereas most linguists maintain that southern China was the land of origin. Part of the argument concerns chronology: Oppenheimer proposes a higher chronology than Peter Bellwood and other out-of-China theorists. My experience with IE studies makes me favour a higher chronology, for new findings (e.g. that "pre-IE" peoples like the Pelasgians and the Etruscans, not to speak of the Harappans, turn out to have been earlier "Aryan" settlers) have consistently been pushing the date of the fragmentation of PIE back into the past.

Another reason for not relying too much on the theories of the linguists is that Austronesian linguistics is a very demanding field, comprising the study of hundreds of small languages most of which have no literature, so the number of genuine experts is far smaller than in the case of IE, and even in the latter case linguists are nowhere near a consensus on the homeland question. Linguistic evidence is very soft evidence, and usually the data admit of more than one historical reconstruction, so I don't think there is any compelling evidence against a Sundaland homeland hypothesis. Conversely, archaeological and genetic evidence in favour of the spread of the Austronesian-speaking populations from Sundaland seems to be sufficient.

It is quite certain that some of these Austronesians must have landed in India, some on their way to Madagascar, some to stay and mix with the natives. Hence the presence of some Austronesian words in Indian languages of all families, most prominently ayi/bayi, "mother" (as in the Marathi girls' names Tarabai, Lakshmi-bai etc.), or words for "bamboo", "fruit", "honey". More spectacularly, linguists like Isidore Dyen have discerned a considerable common vocabulary in the core lexicon of Austronesian and Indo-European, including pronouns, numerals (e.g. Malay dva, "two") and terms for the elements. Oppenheimer doesn't go into this question, but diehard invasionists might use his findings to suggest an Aryan invasion into India not from the northwest, but from the southeast.

But he does mention the legend of Manu Vaivasvata saving his company from the flood and sailing up the rivers of India to settle high and dry in Saptasindhu. Clearly, the origins of Vedic civilization are related to the post-Glacial flood, probably the single biggest migration trigger in human history.

The Tamils have a tradition that their poets' academy or Sangam existed for ten thousand years, and that its seat (along with the entire Tamil capital) had to be moved thrice because of the rising sea level. They also believe that their country once stretched far to the south, including Sri Lanka and the Maledives, a lost Tamil continent called Kumarikhandam. If these legends turn out to match the geological evidence quite neatly, our academics would be wrong to dismiss them as figments of the imagination. But the Indian or Kumarikhandam counterpart to Oppenheimer's book on Sundaland has yet to be written. This indeed is probably the most important practical conclusion to be drawn from this book: extend India's history by thousands of years with the exploration of now-submarine population centres.

Another language family originating in some part of Sundaland was Austro-Asiatic, which includes the Mon-Khmer languages in Indochina (its demographic point of gravity being Vietnam) but also Nicobarese and the Munda languages of Chotanagpur, at one time possibly spoken throughout the Ganga basin. It is the Mundas who brought rice cultivation from Southeast Asia to the Ganga basin, whence it reached the Indus Valley towards the end of the Harappan age (ca. 2300 BC). In this connection, it is worth noting that Oppenheimer confirms that "barley cultivation was developed in the Indus Valley" (p.19), barley being the favourite crop of the Vedic Aryans (yava). Unlike the Mundas who brought rice cultivation from eastern India and ultimately from Southeast Asia to northwestern India, and unlike the Indo-European Kurgan people whose invasion into Europe can be followed by means of traces of the crops they imported (esp. millet), the Vedic Aryans simply used the native produce. This doesn't prove but certainly supports the suspicion that the Aryans were native to the Indus Valley.

Concerning the political polemic, the usual claim that the caste system with its sharp discrimination was instituted by the invading Aryans to entrench their supremacy is countered by the finding that even the most isolated tribes on India's hills turn out to have strict endogamy rules, often guarded with more severe punishments for inter-tribal love affairs than exist in Sanskritic-Hindu society. Here, Oppenheimer confirms that in the Austro-Asiatic and Austrone-sian tribal societies, where many of India's tribals originate, inequality is deeply entrenched: "Yet the class structure which cripples Britain more than any other European state, is as nothing compared with the stratified hierarchies in Austronesian traditional societies from Madagascar through Bali to Samoa. (...) This consciousness of rank is thus clearly not something that was only picked up by Austronesian societies from later Indian influence." (p.484) Social hierarchy is not a racialist imposition by the Aryans, but a near-universal phenomenon especially pronounced among Indo-Pacific societies including most non-Aryan populations.

Stephen Oppenheimer makes a very detailed and very strong case for the importance of the culture of sunken Sundaland for the later cultures in the wide surroundings. India too certainly benefited of certain achievements imported from there. What is yet missing is a similar study for the equally important and likewise neglected culture of the sunken lands outside India's coast.

India, superpower in the 3rd millennium BC - and AD

by Koenraad Elst, Leuven (Belgium), 5 May 2000
http://members.nbci.com/_XMCM/koenraadelst/articles/superpower.html

In the 3rd millennium BC, the Indus-Saraswati civilization was the world leader in science and technology as well as in trade and philosophy. We are witnessing a return to India's roots, considering the bright prospects of India in the 3rd millennium AD, soon to begin. In current discussions about this development, the Pokharan nuclear tests were the inevitable main points of reference, because they have acted as an eye-opener to Indians and foreigners alike. The tests have made the point that India now plays in the top league: technologically, because Indian scientists have demonstrated their mastery of that very technology which, after 1945, decides a country's status in geopolitics; and politically, because India has demonstrated the will and capacity to assert its vision of a multipolar world, as opposed to the unipolar "new world order" inaugurated by the Soviet implosion. In this guest column, I would like to look into some of the implications of the emerging power e! quation.

India's relations with the Muslim world It is still customary in the Western media to see 'Hindu India' as one half of an antagonistic duo with Pakistan or the larger Muslim world. If this perception was ever valid, the nuclear tests and other developments have rendered it completely obsolete. Pakistan just cannot compete with India, and the Indian tests were correctly explained as necessitated by India's defense needs vis-a-vis China and the US. Contrary to all predictions by foreign 'experts', the BJP government has not built gas chambers for the Indian Muslims, and it has not given an anti-Muslim thrust to its foreign policy.

In this connection, I must congratulate the present ruling party, the BJP, for a policy of which I personally used to be a critic. When you study the BJP's foreign policy statements since the party's founding in 1980, you find that they strictly avoid any confrontationist positions vis-a-vis the Muslim world as such. There were of course harangues against Pakistan and its proxy wars, there were warnings against Islamic 'fundamentalism', but underlying all this was a basic assurance that a BJP government would continue India's policy of cooperation with Muslim countries, in parallel with the BJP's charm offensive towards India's Muslims. While independent Hindu revivalist intellectuals have analyzed relations with the Muslim world in terms of a 'clash of civilizations' since long before Samuel Huntington popularized this expression, the BJP's approach was strictly nationalistic: treat Indian Muslims as Indians, and likewise treat the Arabian Muslims as Arabs, the Ayatollahs !

as Iranians, rather than as representatives of a mythical pan-Islamic power. In years past, I used to deride this de-ideologization of the Hindu approach to the Muslims as a sign an intellectual sloppiness and opportunism; but in fact, it is eminently wise policy. While focusing on Islam as a

doctrine remains a valid project for scholars of comparative religion, it would be wrong for politicians to treat Arab or Indian Muslims as essentially spokesmen of Islamic doctrine, reducing them to their religious identity. In reality, the national interests of Iran or Egypt and the individual interests of Indian Muslims are shaped far more by objective realities than by religion. Hence the correctness of the BJP's approach of disregarding religious identities and emphasizing national identities instead.

Policy-makers in the West should pay more attention to the difference in economic and technological performance between India and the Middle-Eastern countries: while the former is poor but dynamic, the latter are rich but stagnant, unable to outgrow their status as a mere market for American goods. **India's image is increasingly determined by its brainy engineers rather than by Mother Teresa,** and the country should prepare to take a leadership role in the progress of its less dynamic West-Asian neighbors. Among other things, this will help all parties concerned to exorcise any remaining bad memories of religious conflict, and get on with their lives. For Muslims in India, it is now glaringly clear that their best interests lie in joining the mainstream. They have given up on Pakistan, witness recent occasions where Indian Muslims celebrated Indian rather than Pakistani sports victories. Pakistan, let's face it, is in a shambles: it is socially stagnant, educationally backward, economically bankrupt, and the number of Muslims killed in sectarian violence in the last five years is a hundred times higher in Pakistan than in India. Indeed, Pakistani Muslims too are reconsidering their position, increasingly emphasizing their ethnic (Sindhi, Baluchi, Pathan) identities and musing about some kind of confederation with India. While Pakistan as a state has an obsessive hostility to everything Hindu and Indian, India can treat Pakistan as just a nuisance, a failed state from which an increasing number of Pakistanis seek to free themselves. India plays in a higher league, it is one of the emerging world powers, and South-Asian ! Muslims want to be part of this, rather than play along in Pakistan's pitiable proxy wars.

India and the USA

One of the sad aspects of the Cold War was the estrangement between India and the West. For most of the time, India has been the only democracy between the Jordan and the Yellow Sea, and should have been the West's natural ally in the region. Attitudes on both sides were shortsighted and pre-occupied with ideological posturing and strategic calculations, but that should all be history by now. The aftermath of Pokharan saw a lot of anti-US defiance among Indian politicians and commoners, but now that the dust has settled, India should prepare for global partnership with the US, China and other countries to ensure peace and cooperation. The US, on its part, should of course invite India into the club of permanent Security Council members: this is a demand of fairness, but also of American interests. Both the US and India have been major targets of terrorism, so the US cannot continue to sponsor anti-Indian terrorism in Jammu and Kashmir all while combating anti-American terrorism in the Middle East. To the extent that the US sees China as a threat, it has an interest in treating India as a counterweight and check on Chinese expansionism. This is all so obvious to any rational observer, and it is about time US policy-makers wake up. Probably the gradual realization of the failure of the punitive policy against India, imposing 'sanctions' on a fellow nuclear power, which only draws more strength from them, will drive the message home.

LEFTIST SCHOLARSHIP IN INDIA

By David Frawley (Vamadeva Shastri),
Director AMERICAN INSTITUTE OF VEDIC STUDIES
PO Box 8357, Santa Fe NM, 87504-8357
http://hindubooks.org/authors/david_frawley/arjuna/ch5.htm

How would you expect that Hinduism, the world's oldest and most complex religion, would appear as seen through the eyes of Marxists? Naturally it would not look very good. After all Karl Marx himself declared that religion was the opiate of the masses. However now communism has fallen all over the world and religion, including Hinduism, is still going strong. We have learned that the real truth has been that Marxism was the opiate of the intellectuals, as it has been called, not that religion itself is an illusion.

Unfortunately, the universities of India have been strongly influenced by Marxists since independence and their view of Hinduism has often become entrenched in the educational system. A name which comes to mind readily is that of **Romila Thapar**, Emeritus Professor of History at Jawaharlal Nehru University (JNU), which is itself well known in India as a center of Marxist activity. Thapar is neither the most important, nor the most prominent figure of Marxist circles, but she has been very much in the news lately and represents a wider phenomenon, and her name has been picked here for no other reason. She and her colleagues are responsible for a number of textbooks in India on the history of the country, which not surprisingly are negative about the majority religion of the land. Thapar is not unique in her thought, but she affords us a good example of leftist scholarship has worked in India.

If we understand that historians like Thapar are Marxists the logic behind her studies becomes obvious. Thapar's historical criticisms of Hinduism are quite negative, and it is often easier to get more sympathetic accounts of Hinduism from professors in the West, particularly those who have practiced some professors in the West, particularly those who have particularly those who have practiced some Hindu-based yogic or meditational teachings. Thapar even doubts whether Hinduism as a religion really existed until recent times. She portrays Hinduism not as a comprehensive tradition going back to the Mahabharata or to the Vedas, but as a relatively modern appropriation, and therefore misinterpretation, of older practices and symbols, whose real meaning we can no longer know as we are not products of that cultural milieu which produced them in the first place. This view is called "deconstructionism" in the West and is the product of French Marxist thinkers.

By this view Thapar sees Hinduism, and religion in general, as reinterpreting cultural symbols for purpose of social and political exploitation. She tries to point out that Hinduism is mainly a vehicle of social oppression through the caste system and is not worthy of much respect for any

modern rational or humanistic person. This is standard deconstructionist thinking about religion which is based on the assumption that there is nothing eternal in human beings and therefore there can be no continuous meaning in religion. In other words she interprets Hinduism and religion which are supposed to deal with the eternal, only in terms of time and history. Such people have failed to understand the correct development of reason (buddhi) according to Hindu sages, whose real purpose is to allow us to discern the transient from the eternal, not to deny the eternal in favor of the transient such as is the movement of the logic of thinkers like Thapar.

In particular, Thapar tries to show that the non-violence and tolerance generally ascribed to Hinduism are myths that Hindus or India never really followed. There are a few historical in stances of Hindus being violent or oppressive of Buddhists and Jains, which she emphasizes. There are also historical instances of Buddhists being oppressive of non-Buddhists. Such is the egoism inherent in human nature that is difficult to root out. But these are exceptions. There is no Hindu or Buddhists tradition of crusades or holy wars like that of Western religions of Christianity and Islam there is a tradition of non-violence (ahimsa), which however imperfectly followed, was honored in India more so than anywhere else in the world.

What is most interesting about Thapar's studies of Hinduism is that they are devoid of any spiritual dimension. She ignores the great Hindu yogis and gurus and does not discuss the Hindu Philosophy of the universe or higher states of consciousness, which she does not give any validity to. She sees the institution of Sannyasa or monastic renunciation as another source of social authority (and therefore oppression of the masses), not a spiritual institution. Her interpretation of Hinduism follows purely social and political lines. Yet as an atheist and Marxist can we expect that she would understand or appreciate Hindu devotional or yogic practices? You will certainly never find her quoting the Upanishads or the Gita in a Favorable light. In this regard I am reminded of a communist poet of Maharashtra whom I once met, who described the Gita as "the greatest mystification the human mind has ever produced." No doubt Thapar would be inclined to concur.

To put together Hinduism and Buddhism along with Christianity and Islam is itself not a very bright idea and can barely be sustained intellectually, but Indian Marxists' view of Hinduism is on the same order as Karl Marx's view of Christianity, or the Chinese communist view of Buddhism. Going to them to understand Hinduism is a lot like going to Marx to understand Christianity or Mao to understand Chinese Buddhism. Following their Marxist mentors, they accuse Hinduism of having a political agenda in the guise of religion (which since there is no God in their view, religion could never have any real spiritual agenda anyway). Yet there is no doubt that such Marxist thinkers, seeing the world only in political terms, have an entirely political agenda. For instance, Thapar's recent historical accounts are clearly meant as attacks on the Hindu revivalist movement in India, which the communists have always regarded as their main enemy. As Hindu revivalists are emphasizing the continuity of the religion and the ongoing relevance of its traditions, Thapar and her associates are looking for ways to deny it.

Marxists like Thapar like to appear as social liberals and objective academicians and some intellectuals trained in the Western tradition may look at them in this light. Thapar does not parade her Marxism, particularly in recent years, and her criticism of Hinduism, though harsh, is presented in an indirect scholarly style, which makes it less obvious. But we should understand the background of such thinkers, which is hardly objective or free of political motives.

I am conscious of the fact that the subject is big and my treatment of it is sketchy. I am, for example, not discussing at all the tie-up of Marxists in Indian universities with Marxists in European and American universities, how the two stand together and by each other, how the Indian Marxists have found hospitality in Western universities, and so on. What I am pointing out is that simply because a don comes from India does not mean that he or she is providing an accurate or sensitive account of Hinduism or the history of India. In fact, India scholarship often tends to be very second-hand, and Indian scholars, in the absence of a perspective of their own, tend to be imitative. I must say that the most Westernized, anti-religious, materialistic intellectuals I have ever met were in India, not in the West, and they were often teachers in universities. The same inability to understand or even appreciate religion can be said of many professors in America, who as products of materialistic Western academia are similarly likely to analyze religion not as a spiritual phenomenon but as a purely social-political institution. Leftist scholars in India look to such Western thinkers for their inspiration and have little regard for the Hindu spiritual and philo-sophical tradition which they neither understand nor feel any kinship with. If they have any God or guru, it is Marx, and Hindu system like Vedanta are as foreign to them as they are to any non-Hindu.

Hindus who are religious-and the great majority are strongly religious-should not mistake such Marxist views for an objective pursuit of truth, whether they come from India or elsewhere. Fortunately with the downfall of communism in the world, the influence of communism in India is on the wane, but just as the old communists are holding on to their declining power in the political institutions of China (and Bengal), they are holding on in the educational institutions of India. It is unlikely that they will let go of their line of thought.

As a westerner writing on Hinduism in a positive light it is strange that the main opponents I have run into are Hindus them selves, that is the Marxist Hindus, who like many rebels are the most negative about their own cultural traditions which they have but recently abandoned. The views of these leftists are often on par with the anti-Hindu views of Christian fundamentalists while the latter see Hinduism as a religion of the devil, the former see it as a personification of social evil, the manifestation of caste division which is their devil (though curiously Marxism works to encourage class hatred, not to promote social harmony and peace between the classes).

Hindus today, like followers of other religions, should no longer accept the Marxist view of their religion and their history, but to do so they must first unmask it. This does not mean that Hindus have done no wrong or that they should not reform their social system or become more compassionate. The proper social changes that need to be done in India or anywhere else in the world do not require rejecting religion in the true sense, or adapting communist-socialist policies which are failing every-where. On the contrary, the appropriate changes follow from a better understanding of the spirit of universality in Hinduism, which is the essence of its religious view, its recognition of God as the self of all beings.

Observing such Marxist thinkers one is reminded of the Katha Upanishad: "Living in the midst of ignorance, considering themselves to be wise, the deluded wander confused, like the blind led by the blind. The way to truth does not appear to a confused immature mind, deluded by the illusion of wealth (materialism). Thinking that this world alone exists and there is nothing beyond, they ever return again and again to the net of death." The Upanishads saw long ago that materialistic thinkers who regard that this world is the only reality only lead us to ignorance and sorrow. It is

about time that people in India started to heed the words of their ancient sages, even if it means questioning modern professors.

One Truth, Different Paths

By David Frawley 'Vamadeva Shastri'
http://www.timesofindia.com/today/26repu12.htm

India possesses a great indigenous civilization dating back to 7000 BC, such as recent archaeological discoveries at Mehrgarh clearly reveal. It had the most extensive urban culture in the world in the third millennium BCE with the many cities of the Indus and Sarasvati rivers.

When the Sarasvati river of Vedic fame dried up in the second millennium BCE the culture shifted east to the more certain rivers of the Gangetic plain, which became the dominant region of the subcontinent. Gone is the old idea of the Aryan invasion and an outside basis for Indian culture. In its place is the continuity of a civilization and its literature going back to the earliest period of history. Based on this reclamation of its glorious past India can now look to the future as the broadest and most enduring culture on the planet.

The oldest Indian text and perhaps the oldest book in the world, the Rig Veda boldly proclaims: "That which is the One Truth the seers teach in many different ways (Rig Veda I.164.46)," and "May noble aspirations come to us from every side (Rig Veda I.89.1)." This bedrock of Indian or Bharatiya pluralism gave rise not only to the many different sects of Hinduism but also to Buddhist, Jain, and Sikh traditions, perhaps the largest diversity of spiritual teachings in the entire world. Though largely misunderstood in the West as polytheism or a worship of many Gods, this Bharatiya pluralism reflects an open quest for truth and a free flowering of all human potentials beyond any restriction to a particular name, form or institution. It embraced art and science as well as religion and metaphysics.

Unfortunately, over the first fifty years since independence India has not discovered its real roots. Its intellectuals have mimicked Western trends in thought. They have forgotten their own profound modern sages like Swami Vivekananda and Sri Aurobindo who projected modern and futuristic views of the Indian tradition. While Westerners come to India seeking spiritual knowledge, Indian intellectuals look to the West with an adulation that is often blind, if not obsequious.

The world is now entering into a global age in which pluralism must be the foundation of world culture. It is no longer a missionary, colonial or communist era in which one group can be allowed hegemony in the world. It is a new age of dialogue and respect in which we must learn to honour and cherish all the cultures of the world. This should start with tribal peoples who are the custodians of the Earth and of the wisdom of nature that we are so quickly losing to a destructive technology. It must include the great traditions of the East like Hinduism and Buddhism which have a firm foundation in tolerance and synthesis. We must learn to embrace all human beings

and their cultures as part of one great family. Let our differences be a cause for admiration and celebration, not for mistrust or hatred.

It is time for India to once more be a leader and an innovator in world culture, rather than a follower and imitator as it is at present. Sri Aurobindo remarked that India's real role was to be the guru among the nations of the world. At present it can hardly keep order within its own frontiers. While we see Indians doing well outside of India as the elite of foreign lands, inside India they are still floundering. Why is it that India today cannot nourish or promote the remarkable capacities of its own people?

To change this situation a new vitality and creativity is necessary that honours the country's venerable traditions but does not restrict itself to past forms and conventions. Above all, it requires a new generation of thinkers who are global in outlook but grounded in the practical spirituality of Yoga and Vedanta. Indian thinkers must return to their cultural wellsprings, not to stop there, but to create a new vision for humanity. New rishis, yogis and bodhisattvas must arise to complement the old.

We can already see how such traditional Indian disciplines as Yoga, Ayurveda and Vedanta are gaining respect worldwide for their integral and holistic approach. Such an Indic or dharmic perspective should be added to enrich religion, philosophy, and science all over the world. The new generation of Indians should take up this task of world-making as their goal. The new world order of the computer and the information revolution offers the country a situation quite favourable to its unique spiritual and intellectual talents. But for this to occur India must stand up and speak out, not merely to please everyone, but to blaze a new trail to the universe that dwells both inside and outside of ourselves.

Such a new India would combine science and spirituality in a global perspective, adding the intuitive insight of the ancient rishis to the critical acumen of modern scientists. If a unitary consciousness is indeed the basis of the universe, as quantum mechanics requires, India's yogis have already shown the way to realize it. It would create a system of medicine that would combine the advances of biochemistry along with an understanding of the life-force and the soul which mirror the greater human being that is cosmic in nature. The new India would develop our material potentials but for the glory of the Spirit, the Self of all beings, just as classical India combined a vast flowering of art, architecture, music and dance along with numerous philosophies of the absolute and yogic paths. The new India would protect the earth while reaching out to the planets and stars, reclaiming the paradise that this tropical land of many rivers used to be. It would honour our spiritual ancestors and their legacy, fulfilling the deeper urges of our species and not merely accepting material affluence as enough. It would raise the poor and the downtrodden, not to convert people to a belief but to help all people become happy and free in both body and mind.

Such an awakened India is crucial for world culture, which presently remains trapped between a destructive consumerism on one side and a rigid religious exclusivism on the other. Today the United States is only superpower in the world. But it is a superpower in the outer world only. Its material wealth hides a spiritual poverty and growing psychological and social unrest. No technological superpower can properly guide the world. Only a spiritual superpower can do this, which India has the best potential to become. The question is whether the country and its leaders are willing to make the sacrifice that this must entail. India holds the Shakti, the spiritual power

and evolutionary force of humanity. It is the great World Mother in her manifestation. Let its yogic force come forth once again for the benefit of all!

Scholarship or prejudice?

By David Frawley
http://www.hinduonnet.com/thehindu/op/stories/2003030400010200.htm

India does not need people like Witzel to save its soul, any more than it needs Christian missionaries to do so. It doesn't need them to teach it what dharma, truth or civilisation really are. Similarly, the world of Vedic scholarship does not require them to explain the secrets of the Vedas, which clearly they don't even suspect, much less know.

MICHAEL WITZEL predictably attacks anyone who suggests any greatness for Vedic culture or any connection between it and the Harappan civilisation. The number of such Vedic scholars East and West that he has made personal diatribes against is now over a dozen, though to his lament, he has still not succeeded in reducing their numbers or weakening the appeal of their ideas.

Strange views

Yet Witzel's own views, which he seldom highlights, are much stranger. He has not only proposed an Aryan invasion/migration into ancient India in the post-Harappan era (after 1500 BCE) through the Panjab going east, he has similarly detailed a Dravidian invasion/migration of India about the same time through Sind but going south. Yet he is fair in his judgment of the Aryans and Dravidians, he regards both peoples as equally primitive and as not having even developed agriculture much less any civilisation of their own.

He has stated that both Vasishta and Agastya, the two greatest Vedic sages of north and south India, were in fact Iranians. Now he is also proposing that Buddha, called Shakyamuni, was a descendant of recent Shaka (Scythian) migrants to Bihar from Iran around 600 BCE and suggests that Buddhism itself might even be an Iranian heresy, not anything really Indian. Influenced by the story of how Biblical Moses led the Jews out of Egypt into Israel, Witzel has written that Vasishta brought King Bharata (who gave his name to the land of India) out of Eastern Iran into India! Of course, while the Bible remembers such an exodus no such Vedic or Puranic records exist, but that does not slow him down.

Instead of either the Aryans or Dravidians as the authors of the great Harappan culture Witzel has proposed the Mundas or aborigines. While he claims I have offended the Mundas and other aboriginals for questioning their ability to create the Harappan civilisation, he doesn't seem to find any problem in offending both the Aryans and the Dravidians by finding them both quite incapable of its creation (in spite of their literary and historical records of great antiquity for which the Mundas have nothing comparable). Yet he also suggests that the Mundas themselves could just as well be migrants into the region from the southeast, completing his scenario that people and culture must come to India from the outside, regardless of how many peoples and cultures India is able to produce.

Such views are much stranger than suggesting that the Vedic literature, the largest remaining literature of the ancient world, may actually be related to the Harappan/Sarasvati civilisation, the largest urban civilisation of the ancient world, particularly since both reflect the same geographical region. Such scholars ignore the great Sarasvati river and its many archaeological sites that number in the hundreds. They would place the original Vedic Sarasvati river in Afghanistan and have the Vedic Aryans strangely ascribe this name of their holiest river to a dried up stream in India on which Harappan culture had

coincidently once been centred, as if the Vedic people had some intuition of the river's former greatness long before they arrived! They would equate the sophisticated and advanced Vedic literature with the compositions of uncivilised, primitive nomadic tribes, though it has managed to leave its mark on the culture of the entire subcontinent, and no other earlier literature has survived.

When I recently suggested in an article about the ecology of ancient India (which doesn't even mention his name), that India provided the ideal subtropical river system for developing civilisation, Witzel now adds that India is also an unsuitable place to live, quoting how people from the Iranians to the Moguls found the climate too hot for them to stay. I don't know if he ever counted the number of people able to live on these hot north Indian rivers compared to the deserts of Iran and Central Asia. Even in Harappan and post-Harappan times, North India was densely populated and could easily support a great civilisation and maintain its continuity through the ages.

Battle for the soul of India

Witzel's background is purely as a linguist. He does not claim a deeper study of Indian philosophy, yoga, or spirituality, for which he has never expressed any regard. So when he speaks now of the soul of India one has to wonder what he is talking about. Nor has he ever written about Indian culture or *Bharatiya samskriti* in a positive light or as a real entity in its own right.

His `love' for India is so well known to the Indian community in the U.S. that there is hardly an internet discussion list maintained by them where his rigid anti-Hindu and anti-India views have not been noted. Witzel's name is commonly mentioned along with Dan Burton and other India-bashers. A simple search on the Internet will reveal numerous contemptuous remarks that Witzel makes against Indians, Hindus, India and the Indian government. His open support for the Marxist historians of India is also well known. Many people have started seeing through his misrepresentations, abuse and vitriol, disguised as `scholarship.' The reader may himself refer to reviews of his writings at http://www.bharatvani.org/indology.html, including articles that question Witzel's knowledge of the Sanskrit language.

Odd endeavour

Witzel has even recently done some articles on the Vedic religion, as he claims, to show what it really was and to counter the many distortions about it that exist today (probably made by Hindus!). This is a rather odd endeavour for someone who neither believes in nor practises the Vedic religion, nor has ever shown any respect for its great ancient or modern teachers, much less sought to be a disciple in any Vedic tradition or lineage. It reminds one of the atheists on temple boards that have occurred in Kerala.

Yet for perhaps the first time, Witzel suggests in his latest response that he really honours the great civilisation of India after all, but leaves us guessing in exactly what way. Perhaps he hasn't quite figured it out yet. In any case he has not referred to which of his papers actually say this.

No, India does not need people like Witzel to save its soul, any more than it needs Christian missionaries to do so. It doesn't need them to teach it what dharma, truth or civilisation really are. Similarly, the world of Vedic scholarship does not require them to explain the secrets of the Vedas, which clearly they don't even suspect, much less know. In fact if Witzel is truly interested in real spirituality, which is the true soul of India and of the Vedas, India can provide him with quite enough teachers and teachings to keep him quiet for a long time.

articles on hinduism

A Hindu Call For Religious Pluralism

By David Frawley
(Pandit Vamadeva Shastri)

Hinduism is the largest pluralistic religion in the world. It teaches that there are many paths, many sages, and many holy books and that no religion can claim any exclusive or final representation of truth. This does not mean that Hinduism does not recognize a unity to truth. On the contrary, Hinduism recognizes a total and profound unity but one that is broad enough to allow for diversity and to integrate multiplicity, like the many leaves on a great banyan tree.

This Hindu pluralism has confused people coming from singularistic religious traditions, such as have dominated the Western world, who are baffled by the great diversity within Hinduism. It has caused them to look upon Hinduism as a collection of cults or sects rather than any consistent religious heritage. However if we look deeply into the many-sided vision of Hinduism we will discover that it has much wisdom to teach everyone. Today in the emerging global era we must learn to handle the great diversity of human beings and their often very different cultures. This requires a pluralistic vision in all aspects of life, from which religion, often the most important aspect of human culture, cannot be excluded.

Hinduism is built upon diversity and holds within itself an amazing,even bewildering, variety of teachers and teachings from what appear to be the most primitive forms to the most abstract spiritual philosophies and yogic practices. One could say that there are more religions inside of Hinduism than outside of it. Hinduism has more Gods and Goddesses, more scriptures, more saints, sages and avatars, than any other religion in the world, perhaps more than all the other major religions put together. This is because Hinduism has sought to preserve all the main spiritual practices that developed in India over the past five thousand years. It has never sought to reduce itself to any one teacher, book, faith or revelation. It has always remained open to new teachings and revelations on one hand, and yet has not cut itself off from older traditions on the other. It would be as if in the Western world today along with the dominant religions of Christianity, Islam and Judaism, that the old Greek, Roman, Egyptian, Babylonian and Persian religions had been preserved, as well as an acceptance of newer teachings and religions.

We can contrast the Hindu view with that of dominant Western religions and their standard formula of one God, one prophet or savior and one holy book that has led them to promote the supremacy of their belief for everyone. Christianity and Islam, with few exceptions, have sought throughout history to convert the entire world to their faith, and to this end have often tried to discredit, if not suppress other traditions - a practice that still continues in various parts in the world. On the other hand, Hinduism has never tried to create any one center, one church, one

pope, or one doctrine or to impose its views through any army or group of missionaries. It has sought to preserve diversity and emphasizes local application of the teachings.

In the dawning global age we can no longer claim that any one religion is the only truth for all humanity any more than we can claim that one language, culture or way of life is the best for all. We must have a broad enough view to recognize what is of value in the different peoples and cultures of the globe from so-called aborigines, who have a much deeper understanding of nature than modern people, to the great civilizations not only of Europe and the Middle East but of America, Africa and Asia, including those not built upon Biblical religious ideas.
Any great civilization, we must note, is a product of diversity. It is able to bring together many different views and practices in science, religion, art, and culture as well as embrace various racial, ethnic, and linguistic groups. It also has a long sense of history and can integrate within itself many different historical currents. A culture where everyone must have the same beliefs and follow the same practices is not a true culture and must deny the human spirit that always seeks to grow and express itself in a variety of ways.

Religious Pluralism and Unity of Religions

Some modern Hindu teachers have stated that all religions are one, that they are all ultimately the same and all equally good. They look upon different religions as merely alternative ways to reach the same goal, as little more than different names for the same thing. This has caused them to mix different religions together, often with little discrimination, trying to be all things to all people. While their view may be motivated by a sincere effort to bring about religious harmony and world peace, it has led to many distortions. Above all it has gone against the pluralistic approach of the Hindu tradition.

Making all religions the same is a denial of pluralism and can breed another form of intolerance. Pluralism in any field does not mean that all alternatives are the same but that we do have different choices, which may not all be good or equal. Having pluralism in food, for example, means that we can choose from many different types of food. It does not mean that all food articles are of equal nutritional value or of the same taste.
This equating of all religions as equal and good makes it appear wrong for religions to disagree with one another, even if their views are contrary. It destroys discrimination in religion and makes people blur over different views of God, immortality, the goal of life, and the ways to achieve these. Rather than honoring diversity in religion, it attempts to reduce this diversity to a vague identity that no one can challenge. Rather than giving people a number of different choices in religion it tries to make all these choices appear to be the same or inconsequential. In eliminating choice it destroys freedom and inhibits inquiry and growth.

And on what grounds do we make all religions the same? Do we do it on the grounds of monotheism, the belief that there is only One God? This debars non-monotheistic religions like Buddhism or Taoism, as well as many native beliefs. Do we propose it on that all religions teach us to be good? Yet what is said to be good in one religion may not be good in another religion. Like any other human cultural phenomena religions are so diverse that if we try to reduce them to a common pattern, we will only have a few bones left over, not a real human being. Could we reduce art all over the world to a single standard of sameness without destroying its richness and vitality? This attempt to make all religions the same is a continuation of the effort to stifle

religious differences and prevent freedom in the religious realm.

What Hinduism really teaches is religious pluralism, not the need to make all religions the same, which is intolerant of religious differences that are often not at all minor or inconsequential. Religious pluralism, on the other hand, is tolerant of religious differences. It does not seek to reduce all religions to a common model. It lets their differences stand out as they are and does not seek to cover them over with a veil of unity. Pluralism says that it is fine for us to have different or even contrary views about religion and this does not have to be a problem. The important thing for us is to seek truth or God in the way that is most meaningful for us.
Pluralism in religions does not require that we reduce all religions to a common mold in which their distinctions disappear into an amorphous unity. It certainly doesn't mean that we have to practice all religions or bow down to all their leaders as great and holy. Pluralism in religions does not mean that we have to believe in or accept all religions as true, regardless of what they teach. Pluralism means freedom. There should be freedom in the pursuit of the spiritual life, even if it allows others to arrive at a different understanding of truth than what we ourselves honor. This means that we should not bar people from changing their religious beliefs, nor should we seek to impose religious beliefs upon people by force or propaganda. We should give people the space to discover the truth without our interference.

After all truth is the truth. It is not a fantasy that has to be protected. If we allow people the freedom to discover what is real they cannot avoid it. On the other hand, if we try to impose truth on people, what they arrive at will not be their own truth, their own discovery but a mere doctrine, label or fantasy. Truth is self-evident. The truth that fire burns does not require a religious sanction or political law to protect it. It doesn't need a priestly order or a police force to enforce it. We don't need to use persuasion to make people believe that fire burns. We need only let them work with fire and discover what it is. The same is true of all the great laws and powers of both nature and the Divine. Hindu pluralism does not deny the unity of truth or the fact of cosmic law but regards it as a matter of self-discovery and self-knowledge, not the enforcement of a mere belief or opinion.

Pluralism and the Clash of Different Paths

A pluralistic religious view accepts that there are many different religious paths. These paths have various degrees of differences between them, some perhaps minor, some perhaps major. Different paths will appeal to different individuals relative to their varying temperaments or levels of development, which are bound to be diverse and ever changing. Some of these paths may be good or noble, others may be naive or perhaps even despicable. Some may appeal to a low level of religious temperament, others may appeal to a high level of spiritual realization.

A pluralistic view does not seek to force these paths into any preconceived harmony or bar people from following paths that are not good or exalted. It does not attempt to police the paths, but rather to sustain the freedom that prevents anyone path from imposing itself upon all as the final truth. In pluralism their is no final judgment on these different paths. Each person is allowed their own opinion of what they think is best. The freedom to follow a path is as important as what any path may be.
A pluralistic view does not bar either disagreement or debate between different paths. It allows people to critically examine and choose between different paths to find out what is valid for them

on an individual basis. In fact a pluralistic view encourages free and critical discussion and does not place religions, like sovereign nations, outside the sphere of examination as if anything called a religious faith could no longer be questioned. Pluralism allows the clash of paths, not as an outer battle, but as part of a spirit of free examination. This clash of paths is as important as any unity between paths for helping the human spirit grow. We grow spiritually more from dialogue with those who disagree with us than from having our beliefs unquestioningly affirmed by others. This requires that we are willing to have our own views scrutinized as well as being willing to examine those of others.

Yet though creating a forum for possible debate, a pluralistic tradition does not seek to finalize that debate or even insist that people partake in it. Pluralism asks that we maintain tolerance in spite of such disagreements and debates. It means that we should accept religious differences as a fact of life, like other natural variations, even if all such variations are not entirely wholesome. Pluralism not only does not require that we make all religions the same, it doesn't even require that we like all religions. It allows us to have our own judgments, however narrow or wide these maybe, as long as we allow others the same freedom of opinion. Nor does pluralism try to reduce one religion to another. It doesn't say that Buddhism has to become a form of Hinduism regardless of what Buddhists might think, that Christianity and Judaism must reunite, that all religions have to become sects of some greater religion, or similar attempts to equate or unite different religions. Nor does it say it is wrong for people to have such ideas. Pluralism allows different religious views to exist including those which are synthetic and those which are not. It allows religions to come together if they wish but to stay apart if that is their inclination as well. It recognizes that differences in religion can contribute to the beautiful diversity of life and don't have to be a problem.

Pluralism therefore does not mean that a person cannot be strong in their particular path. Pluralism does not mean that a Hindu cannot be a staunch Hindu but has to be a Christian and Muslim as well in order to be tolerant. Similarly it does not mean that a Christian cannot be dedicated to his faith as the highest. It means that however much we may think our path is the best for us that we must allow other people a similar dedication to their own path, even if it is contrary to ours, including the freedom not to follow any path at all.
Pluralism means that we must make the freedom of religious practice a more important principle than the supremacy of any particular belief. We should not only respect but uphold our neighbor's right to follow another religion, even if we think that it is contrary to the real truth. This means that missionary efforts to convert others by persuasion and intimidation should come to an end and be replaced by a free examination of religious issues with honesty, courtesy and friendliness.

To arrive at truth in any field we need freedom. Freedom creates diversity. Both freedom and diversity allow for creative growth and inquiry. In this development truth can be arrived at as an individual experience, rather than imposed upon the resistant individual as a collective belief which makes it little more than a blind emotion. Human beings naturally have their different temperaments, inclinations and states of development. We should have learned after so much bloodshed throughout history that to try to impose one way of thought on all people is an error. It is not only not spiritual, it goes against nature and life which are filled with every sort of variation. Should we insist that the wind only blow in one way or that plants only grow on one type of soil?

Of course groups that deny freedom and diversity to sustain their power and control may not be

happy with demands for pluralism. They may prefer to have their own territory where no competition is allowed. But their period of rule is coming to an end. Even singularistic religious traditions will soon have to recognize the validity of pluralism, including granting a new respect for the very pluralistic and so-called polytheistic traditions, like Hinduism, that out of intolerance they have not only failed to understand but have oppressed.

In Hinduism the ultimate goal of life is freedom or liberation, Moksha. This is not an outer freedom to get what we want but an inner freedom to go beyond all external limitations. This freedom is the real unity behind the diversity of Hinduism and the key to its many sides. Hindu pluralism therefore is not the denial of unity but the affirmation of real unity which transcends outer differences. True unity is built upon freedom, not conformity, and is a state of the heart or inner consciousness, not an outer condition of labels and slogans. While the West has emphasized external freedom, which has given it a sense of pluralism in the outer aspects of life, Hinduism teaches inner freedom, without which outer freedom has no real meaning. This inner freedom allows for the full flowering of the soul so that our entire human potential, which is ultimately one of spiritual aspiration, can manifest and bring truth and beauty to our entire existence.

Philosophies of Life of East and West
Edited by Allie M. Frazier
(Source: Readings in Eastern Religious Thought – Hinduism vol. 1. Edited by Allie M. Frazier pg 10-16)

In considering the beginning and development of Western philosophy **G.W. Hegel** remarked, that in the West the **"mind's way is roundabout".**

By this he points to the significant fact that Western thinkers first directed their attention to the **external world.** The most significant development in Western philosophy, is build upon the premise that truth is a relationship which exists between judgements and real things. The problem of the relationships and between thinking and reality thus emerged as a central concern for Western thinkers.

Part of our heritage in the West is the recurring attempts to evade the transcience of earthly life by means of religious hopes, metaphysical systems and vigourous activism.

Time exists by virtue of its "perpetual perishing". Any being subject to time is subject to its dominant characterisitic, transcience.While we may control an indifferent environment by our technological prowress and our scientific genius, we cannot thereby, alter the essence of time.

In the West, man has set himself and his will against the destructive movement of time.

The West has restructed its views, of history to the spans of man's life on earth (often restricting such history of Occidental man).

Moreover, the West has developed and responded to a linear and evolutionary conception of time. (perhaps rooted in and validated by the sciences of geology, history, and paleontology. Each historical moment is presumed to be unique and non-repeatable.

Westerners believe, that the destructive ravages of time can be averted only by careful planning and by preservation of existing modes of stability, such as institutions, religions, political orders.

While the West focuses principally upon human history, in general, the East focuses upon the history of nature or being. The scale of time (in Hindu and Buddhist scriptures) completely staggers the imaginations of the Westerners. Eons follow upon eons in a seemingly endless succession.

In the East, the great aim of religious men is to find that overall cosmic unity that is hidden behind the veil of temporal succession and cosmic change.

According to the Eastern appraisal of the human predicament, the ground of man's bondage to

endless suffering rebirth, and ignorance is his enslavement to the demonic forces of the cosmic illusion.

Men, through ignorance of their real spiritual destinies, are caught in the thralldom of desire and pleasure, and as a consequence suffer pain, death and rebirth.

Man seeks the death of temporality and rebirth in a mode of absolute freedom is symbolized in the concepts of Nirvana, Kevola, moksha, Tao – the shore completely beyond the chains of illusion.

The paths taken to reach such unconditional liberation, whether in Hinduism, Buddhism, Taoism or Jainism, lead the soul progressively away from involvement in its personal individuality, its world and their incessant becoming.

The aim of most Eastern religious discipline is not simply to comprehend the plight of man's bondage to illusion, but also to overcome that enslavement by the nullification of the factors which cause the bondage example, Desire, pleasure, pain, birth and death.

The contrast between the Christian appraisal of the human predicament and the typical Oriental appraisal of man's situation is quite instructive.

The Christian views man's fallen condition as a form of bondage to the destructive consequence of sin – such as anxiety, guilt, pride, self-centredness. While this is deplorable condition in which to exist, it is nevertheless a real condition.

For Eastern religions, man's enslavement to the world – to individuality, desire, pleasure, pain, rebirth – is not a real condition at all.

Hence, most religious persons in the East do not seek a relationship with external being, (God), but rather they seek a realization of an eternal mode of being which is hidden from them by their ignorance.

Western religious thought is produced by the convergence of two traditions – The Greeks and the Christian. Its key concepts are revelation, relationship and community. In the East, (India) the key concepts of religious thoughts are recognition, realization, release and reunion.

Human Evolution and The Ten Avatars

By NARAYANI GANESH

http://www.timesofindia.com/today/19edit5.htm

WE differ from each other by just a fraction of a per cent, according to the scientists who have successfully deconstructed the human genome. The basic chemistry is almost the same among different species. For instance, what sets us apart from mice is only a few hundred genes. No wonder, then, that Hindu mythology is replete with stories of what seem like `freaks' of nature - mutations and semi-mutations as reflected in exotic creatures. Even the story of evolution as enumerated in the Vedas and other scriptures is startlingly in tune with modern scientific theories.

Biologists describe evolution itself as the continuous adaptation of organisms or species to the environment by the integrating agencies of selection, hybridisation, inbreeding and mutation. All life began in the water and only after millions of years did some forms adapt to land. Let's take a look at the ten avatars of Vishnu. His abode is in the mythical ocean of milk, an oblique reference to the cosmos; he reclines on the coils of the Adisesha. the five-headed primeval serpent, each of its heads symbolising each of the five elements, the *panchabhootha* - Earth, water, energy, air and sky.

In his Matsya or fish avatar, the first, Vishnu saves the world from the deluge. His rescue of the *saptarishis*, the seven saints, ensured the survival and propagation of the species. As Kurma or the divine tortoise, an amphibian in the second avatar, Vishnu lent his back to be used as the pivot on which the gods and the asuras placed the rod with which they churned the ocean to recover some of the precious things lost in the deluge.

The third incarnation was that of Varaha or the wild boar, an unrefined land animal that rescued the earth from the waters after it had been dragged down by the demon Hiranyaksa. The fourth is an interesting mutation: Half-animal (lion), half-man, the Narasimha avatar. He freed the world from the oppression of Hiranyakasipu, the demon-father of Prahlada.

As Vamana, the dwarf-like man, Vishnu in his fifth incarnation restored the power of the gods which had been undermined by the penance and devotion of King Bali. As Parasurama in his sixth avatar, he delivered humankind from the oppression of the kshatriya rulers - Parasurama did that 21 times with the help of his axe, a basic tool - in a crude version of Rama.

As Sri Rama, the *maryada purusha* or ideal human, evolution reached a point of refinement, both biological and civilisational. Here too, Rama as Vishnu's seventh incarnation yet again destroys a wicked force personified by Ravana.

But it is as Krishna, the eighth avatar, that Vishnu steals hearts and minds. That's why it is referred to as the perfect avatar. The Lord becomes the eternal lover when he cavorts with the gopis in Vrindavan; but he also becomes the serious and eternal philosopher and guide when he advises Arjuna on the battlefield at Kurukshetra. This is immortalised as the *Bhagavad Gita*, the Song of God, a do-it-yourself manual on how to attain self-knowledge and realisation. Although Krishna is the `author' of the Gita, he is at once both its substance and its goal.

In his incarnation as Krishna, the Lord reveals the universe that is within each one of us. Little Krishna's mother Yashoda asks him to open his mouth to check if he's eaten mud as his companions complain he has. When Krishna opens his mouth wide, what she sees takes Yashoda aback: She sees the entire cosmos there - not just the earth but other

worlds as well. She could also see another face and mouth with all the worlds therein too, and still another within it, and so on without end, revealing the infinite nature of all existence.

Buddha has been included as the ninth avatar, an enlightened being who realised this truth and who advocated non-violence and equality. Meanwhile, we await the final and tenth avatar, that of Kalki on a white steed, who will help us re-establish virtue in the Kali Yuga.

We are all part of the universe, each one of us. We are constantly seeking out our origins, both in outer space and inside our own bodies, as we have done in the human genome project. What the Vedas and other Hindu scriptures and Krishna's revelation of the cosmos tell us is that the universe is, in fact, within our grasp - right within us, as the eternal `I'. We just have to realise it.

KONARAK: In all its resplendence sun

By Hugh and Colleen Ganter

http://www.indiaserver.com/thehindu/1999/09/26/stories/1326049l.htm

NO one is quite sure how old Konarak is, who founded it or why. But there are tales. Even in Bhubaneshwar, 65 km away, and in Puri, 35 km down the Marine Drive, history has turned into legend, evolved into myths, crystallised into crafts. If you should choose to take the road from Bhubaneshwar, pause briefly at the dazzling roadside hamlet of Pipli. Its craftsmen once specialised in making bright applique backdrops for the great idols of the temple of Puri: Lord Jagannath, Balabhadra and Subhadra. Today, these sacred skills have been adapted to creating vivid bags, cushion covers, bedspreads, tablecloths and brilliant garden umbrellas.

After all that resplendence, Konarak might come as a bit of a disappointment, at first. The town, which was a major port in the First Century A.D., is insignificant today. Its famed temple sits low in a walled depression, snugly cosseted in folklore.

According to the ancient Bhavishya Purana, Samba, the handsome son of Lord Krishna, once made the mistake of slighting the mischievous sage Narada. In revenge, Narada tricked Samba into visiting a forbidden place where the ladies of the court were bathing. When Lord Krishna learnt of this, he cursed his son and the young prince was immediately stricken by a disfiguring skin disease. Samba pleaded his innocence, and proved it. His repentant father told him to bathe in the Chandrabhanga river . When Samba was cured, he built a temple in honour of Surya, the Sun God.

The Sun God has always been revered as the curer of skin diseases. When the Ganga King, Narasimhadeva I (1238-1264 A.D.) built his sun temple here, in Orissa, he also relocated the Samba legend in the city of Kon (the corner) Arka (of the sun).

Walk down the steps, set in the slope of the retaining walls, and you will

encounter an architectural drama. The body of the ancient temple is concealed by the rise of a pillared building. In all likelihood, this was the Bhoga Mandip or Festive Hall.

Climb the steps of the Bhoga Mandip, very slowly, and let the temple reveal itself. It is magnificent but, nevertheless, it was only the entrance hall of the great temple. Behind it, soaring for 70 metres into the sky, was the tower protecting the sanctum. Sadly, that collapsed a century ago, leaving only its pillared platform. And to prevent the entrance hall from suffering the same fate, an English architect had it filled with sand which, possibly, was the wisest thing he could have done.

Walk around the remains of the Sun temple, admiring its intricate sculptures. The temple, now identified as a World Heritage Site by UNESCO, replicates the legendary Chariot of the Sun. Twelve enormous carved wheels appear to support the temple-chariot which is drawn by seven galloping horses. They represent the seven days of the week. The charioteer is the Sun God, himself, though the main idol once enshrined in the sanctum of the temple was removed to Puri after the temple began to crumble: it was built of that easily-eroded stone, khondalite. One reason for the abandoning of the temple could be that it was shunned by the local pundits. Surya was regarded as an alien god brought in from Iran along with his fire-worshipping priests, the Magi. A beautiful carving of Surya, still standing in the temple, shows him wearing knee- high boots, normally associated with equestrians. All other Hindu deities are barefoot.

Primarily, however, this temple was meant to glorify the life and times of a king and his court. The emphasis of the sculptures and carvings, therefore, is on luxury, valour, pomp and sensuousness. Keep this in mind when you walk around the temple. Let your imagination take wing to see and hear the musicians and the sounds of the royal hunt; the amorous whispers of the courtesans leaning languidly against pillars, or perfuming their bodies in the smoke of fragrant fires; hear the soft pad-pad of a lumbering elephant and the tong-tong of the bell around its neck; scent the aromas of rich viands simmering in a cooking pot, Konarak, then, was a burgeoning royal capital.

Even in the 16th Century, when the Mughal chronicler Abul Fazl wrote his Ain-i-Akbari, 28 temples stood here: six outside the entrance and 22 beyond its enclosing walls. Today, the ruins of only a handful remain. The site museum, however, has an impressive collection of sculptures found abandoned when the temples collapsed.

Traditions, though, are not as easily eroded as the stones of temples. Every year, when the moon waxes in the January-February month of Magha, a great fair is held around a small saline pool, three kilometres from the temple. The pool has been renamed the Chandrabhanga. Pilgrims bathe before dawn and wait for the red orb of the sun to rise out of the sea. Then they walk to the temple for their rich rituals of worship.

For a brief moment, then, life returns to Orissa's ancient temple of the Corner of the Sun.

KONARK – SUN TEMPLE
http://travel.indiamart.com/seasonal/history-beckons/konark.html

When Sun raises itself over Bay of Bengal, it's first rays fall on a temple dedicated him-- Sun God. This temple is located along shoreline of Bay of Bengal. It is called Konark temple. Invariably this temple stands as a symbol of Orissa. The sun temple was built in 13th century. The architecture and sculpture of Konark temple spell out poetry in stone. This monument form the golden era of Orissan art is included in the world heritage list.

Konark temple was designed in shape of a huge Chariot. This was the chariot of Sun. According to Hindu mythology, Sun God commands a chariot pulled by seven horses while it transverses from East to West in during daytime. The artists involved in carving out this temple had this story in mind and they were successful in creating the desired structure. Today many sculptures are in bad shape and archaeological survey of India has done a lot to restore many of them. But still it becomes clear that this marvelous piece of architecture was in shape of a mammoth chariot with 24 wheels pulled by seven horses and commanded by Sun God. The wheels of chariot depict time, which accompanies sun while he travels in sky. Some say that 24 wheel are 24 hours of a day and the seven horses represent seven days of the week.

The whole temple has intricate and delicate carvings, which enthralls any visitor to this temple. The surrounding was also chosen to suit the grace and glory of structure. Lush green forest and a clean atmosphere with sea roaring not far from this place has a charm of its own. The sea is just two kms away from Konark but when temple was built the waves touched the foot of temple and worshipped the deity inside.

The walls of Black Pagoda, as European sailors called it, have murals depicting different aspects of life. The sculptors who carved out these motifs on the temple have done their work with incomparable charm. These depictions are an attraction for not only the connoisseurs of art but they fascinate common man too. Scenes of love war trade court transactions, hunting, catching of elephants, sages teaching, childbirth, amorous dalliances, dancers and mythical figures all show vivid moods and colors of life. Incomparable charm of these figures bring alive a picture of day to day activities in those days.

The temple is built on a 4-meter high platform. The main spire of the temple was 220 feet high but it collapsed and Jagmohana or the porch is filled with stones to prevent it from collapsing. It is 120 meter high. The morning, noon and evening sun are caught by three chlorite figures of Surya. Each of these figures faces three different directions. The main entrance of has two huge statues of lions crushing elephants. The dancing hall, which lies between main structure of the temple and the enter ance, has very intricately carved depictions. In fact the walls, ceilings, the base; every thing is filled with delicate carvings. This temple also has erotic carvings as done on the walls of Khajuraho temples. These carvings were probably done to show that from worldly pleasure one could attain salvation by coming to god. Or these carvings also show how peace can be obtained

by renouncing the false pleasures. How could the artists forget planets when they were constructing temple for sun God? So they built a temple dedicated to the nine planets. This temple is located to the right of main entrance.

Konark is very near to Bhubaneshwar and Puri. From The state capital Bhubaneshwar it is just 65 Kms and Puri is just 35 kms from Konark. These two places also serve as transit points to Konark. Bhubaneshwar and Puri provide nearest railway links to Konark. The Bhubaneshwar airport is the nearest airstrip. Also these places reduce the accommodation problem in case of a major tourist inflow to the town of Sun temple.

Every year in November these temples come alive with classical dance performances by artists from all over India. Konark temples are venue for the Konark dance festivals. During this festival people from all over the world come here. They enjoy the classical dance performances by renowned dancers with Sun temple providing the back ground. This festival of dance is a major tourist attraction for the place.

Otherwise also when the sun goes down the horizon floodlights illuminate the Konark temple. The artificial lights enhance the beauty that engulfs the visitor during daytime. These lights reflect sun temple as mammoth structure as if there is no equivalent to it. And yes beauty and architecture of Black Pagoda in Konark is incomparable at least in this part of the world. It has created an image of its own on the world tourist map. The memories of Konark shall be etched in visitors' mind even years after his visit.

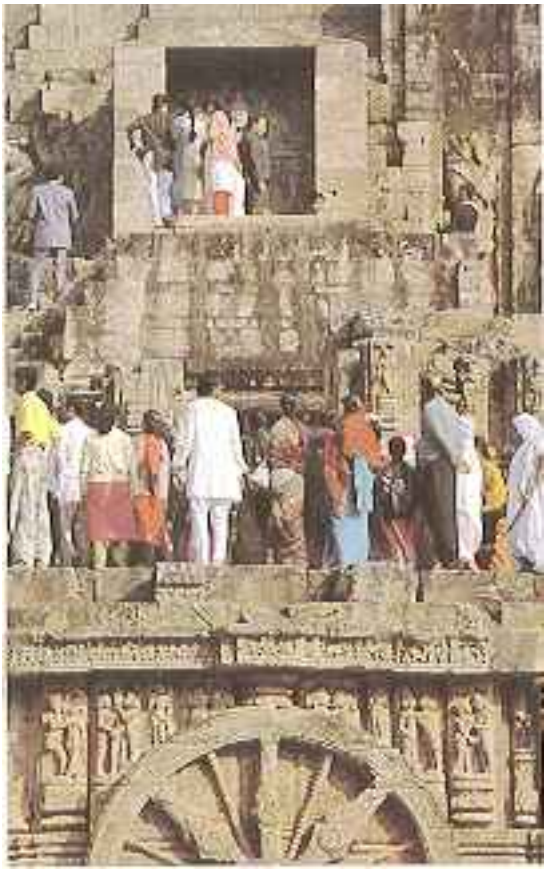
Konark Dance Festival:

Dance was always an integral part of worship in Orissa. This is distinctly manifested as the presence of dancing halls is in practically all of Orissa's temples. Odissi, the traditional classical dance of Orissa owes its revitalisation to the discovery of the ancient treatise on dance, the 'Abhinaya Chandrika' and the study of ancient sculptures on the walls of temples by dedicated artistes. Thus, it is only fitting that the Konark Dance Festival, a mega celebration of classical dance forms in India, is held every year at one of India's most splendiferous venues, for an evening of dance, is the Amphitheater located at the backdrop of the fabulous Sun Temple at Konark.

SILENT HISTORICAL PAST IN STATUES OF KONARK TEMPLE, ORISSA, INDIA

The pleasure that we experience after reading the great literary text of great authors gives the same feeling that can be experienced after looking the world famous Konark temple at Konark (Orissa state), India. Konark is famous for its majestic

temple of the Sun God. The word KONARK bears a name composed of two word elements - KONA means Corner and ARK meaning the Sun.



In this sun temple of Konark it appears like as if the architecture and his sculptors has written beautiful poems on stones in the smallest to smallest stone of the temple. Still the present silent ruins speak of their rich glorious past which we are all proud of.

A chariot wheel of the sun-god, Surya, from the temple at Konarak in Orissa

Due to various human interventions and natural calamities with the passage of time, the main temple had suffered destruction turning into a ruin. Still whatever is left illustrates the fine architectural skill of the rich historic past.

The Sun temple of the Konark was made by King Narshimha Dev-I of Ganga dynasty in 1250 AD. The entire temple of Konark was conceived as a single piece of sculpture. It is said that in its construction process about 12,00 sculptors worked for 12 years. In this context it is also said that its highly skilled master architecture and sculptor Bishu Maharana when left his home for 12 years when his son Dharampara was too young. When his son grew up and became a master in architectural mathematics, he came to meet his father at the site of construction. But there occurred an error in one of the element of construction without which it was not possible to build the crown of the temple. His son pointed out the error and gave solutions using his skills thereby letting the work go ahead. Legend says that at one instance his son Dharampara became happy for his success but at same time he felt guilty using his success behind the failure of his own father. This hurted his sentiments so much that he committed suicide after climbing the temple and jumping into the river Chandrabhaga flowing in backyard of the temple in those times.

Architect Bisu had thought of design as an enormous replica of the Sun-God's cosmic chariot. Konark temple has three marvellous illustrations - Rising Sun, Sun at its peak in afternoon, and the all days tired Sun. Expressions of love and fights, victory and defeat, hunting and trading, soldiers on elephant top, dancer beating drum and many day to day human activities of those times, which those sculptors had inscripted on stones.

When this temple was in its construction phase, it was the "Golden Period" for the architectural splendors in Orissa. Today this temple complex is in ruins and all efforts are made for its restoration. It also figures its place in the World Heritage List of Monuments. Still when one looks at this architectural marvel one becomes speechless on looking and feeling the hidden marvellous skills of sculptors of that period.
These silent statues of the ancient Indian civilization in Orissa, without saying the words speak for everything. And for feeling and seeing these silent statues thousand of people visit there every year.

The happiness after the victory chiselled in stones and the horses made of stone is in reality the unrivalled architectural marvel. The chariot of Sun comprising of 24 wheels and 7 horses turns the eye into fantasy as if the chariot of Sun God will go on a voyage in the sky. It is also said that the main temple, which is in ruins by the virtue of passage of time, was also the highest temple in India in those times rising to some 225 feet in height. Unfortunately the architect's dreams were never realised and it collapsed before it could be completed. However present day's temple height rises to a height of 128 feet.

In each and every statue of the Konark there lies some hidden meaning. The chariot of 24 wheels and 7 horses symbolises 24 months of the Indian calendar and 7 days of the week. Each of the 24 wheels had 8 spokes which resembles the time period in 8 parts (paher in Hindi) of the day. However the real experience and charm of those unsung skilled sculptors can only be experienced in person and not by photographs alone. However the Sun temple is towards its own sunset and all kinds of efforts are made to save it from extinction. This temple was constructed on the soft soil which is also a factor towards its early description. If the Konark temple was looked well after its construction, it would have surely been featured as another wonder like the Taj Mahal at Agra (Uttar Pradesh state).

However there are no two opinions that in Konark, 1200 sculptors' tireless labour is capable of filling with experience which elates one with happiness and joy. Anyone visiting there is filled with a magical sense of awe and wonder to experience the artistic and architectural genius and abilities those 1200 sculptors and craftsmen. Konark temple is not just a symbol of Orissa state but the entire Indian sub-continent.
I feel how poorer I would have been, had I missed the opportunity to see this majestic temple situated at a distance of 64 kilometers from Bhubneshwar, the capital city of Orissa.

When you become the Brahman
By Harish C Gaur
http://www.dailypioneer.com/secon3.asp?cat=\opd2&d=OPED

Scriptures mention four objectives of human pursuit; dharma, astha, kama and moksa, to be taken up in the given order. Dharma is the cultivation and practice of the code of moral conduct consistent with and as ordained by scriptures in first phase of life (as celibate pupil in the house of the preceptor or (in a gurukul).

These would include understanding and cultivation of divine traits as fearlessness, purity of heart, steadfastness in knowledge and yoga, (giving of) charity, control of desires, and senses, study of scriptures, (observance of) austerity, up-righteousness, (practice of) ahimsa, (speaking) the truth, compassion to all beings, modesty, forgiveness, fortitude and purity (of body and thoughts). One should also learn to avoid non-divine traits as ostentation, arrogance, self-conceit, anger, pride and excessive attachment to worldly possessions.

Several paths of treading on the path of spirituality have been elaborated. These include; path of (disinterested) action (karma yoga), path of devotion (bhakti yoga), path of meditation (dhyana yoga) and the path of knowledge (jnana yoga).

Among Hindus, Vedas are considered as source of the ultimate truth. They are 4 in number Rig Veda, Yajur Veda, Sama Veda and Atharva Veda. Each of these has 4 parts; the hymns (mantras in poetic metre), brahmanas (documents of ritualistic precepts for guidance of priests and the way of conducting sacrificial duties by householders); aranyakas are for meditation and contemplation by those who have retired to forests and upanisads deal with philosophical aspects tending to spiritual monism and knowledge about the self (atman, as distinct from the body) and its relationship with the supreme reality (paramatma, referred to as brahman in upanisads). There are 4 gospels in the form of 4 sacred verses (mahavakya) in respect of the ultimate truth one from (upanisad part of) each veda.

The starting point for first gospel is the understanding that self (atman) is not the body (sharir). About the self, it was said by Lord Krisna in Bhagavad Gita; it is unmanifested, unborn, immutable, indestructible, without parts, while the body is born (when it manifests itself) undergoes modifications as childhood, youth, old age suffers misery and ultimately meet death and becomes unmanifested in due course. The self is not the body but provides to it the consciousness and enables its functioning and various activities that sustain the body. When the self deserts, body rapidly deteriorates and has to be cremated or buried as per norm of the society.

The first gospel is; the self (confined within the body) is the supreme self (brahman) (ayam atma

brahma) from Atharva veda. This is often explained by the simile of air confined within balloons of different sizes and shapes in which it stays until punctured, when it again becomes part of the cosmic air from which it was withdrawn. In the same way self within different bodies of different living beings, is the supreme self.

This step, the realisation of the real nature of the self vis-a-vis the body also provides the consciousness that sustains the body. At some time the self discards the body, like a person discarding worn out clothes to put on new ones. The consciousness is due to self within. This is the second gospel, "The consciousness is (due to) brahman (prajnanam brahma) from Rigveda.

The next step is the realisation when the preceptor tells the disciple, "You are that (brahma) (tat-tvam asi). This is not easy. One has to realise that his real self is not the body or any of the modifications (gross, subtle or causal) nor (any of the modifications of) prana that support all activities of the body nor the organs of perception and antahkarna. Slowly he is led to the understanding, "You are that (brahman) which you are seeking", is from Samaveda.

The final step is the realisation by this aspirant, "I am brahman" (aham brahmasmi) from Yajurveda". This is the feeling of the immortal self, being unattached to all activities. This elevates the mind to magnanimous heights as: brahman alone is truth (brahma satyam) and the samsara is unreal (jagat mithya), like in a dream. This is all that one has to learn or what needs to be known. It is said, knowing brahman one becomes brahman, with this realisation one gets freed from all miseries, attains eternal happiness and is freed from the birth-death cycle of the samsara.

A TRIBUTE TO HINDUISM

articles on hinduism

Harvest of faith?
By Francois Gautier
http://www.dailypioneer.com/secon3.asp?cat=\opd1&d=OPED

This column is specially addressed to my Christian brothers and sisters of India. At a time when again a Western missionary ministering in India (Father Marian Zelazek who works among leprosy patients in Orissa) has been nominated for the Nobel Peace Prize, and when Mother Teresa's beatification - and later the canonisation - is being speeded-up by the Vatican, it is time to look into the real motives of Christian missionaries working in India.

We all know that Mother Teresa incarnated in the 20th century true Christian charity, helping "the poorest of the poor", and that she lived a life of nun, with rectitude and service, as Jesus Christ would have liked her to. It also should be said that Mother Teresa did the work that wealthy Hindus and Hindu organisations should have done. After all, there is no denying that it takes a Westerner to pick up the dying in the streets of Calcutta and raise abandoned orphans, a thankless task if there is one. Hindus, even though their religion has taught them compassion for 4,000 years, have become very callous towards their less fortunate brethren and there are not enough Hindu organisations, apart from the Art of Living, the Vivekananda and Ramakrishna missions, or the RSS, doing charitable work as the Christians do. This is despite the fact that there is growing awareness amongst Hindu organisations that it is time to get their act together, that they ought to be doing more for the dispossessed and the poor of the land than they have so far.

Unfortunately - and in spite of herself maybe - Mother Teresa carried a very negative image of India: That of poverty beyond humanity, of a society which abandons its children, of dying without dignity. Alright, it is accepted there is some truth in it. But then it may be asked again: Did Mother Teresa ever attempt to counterbalance this negative image of India, of which she was the vector, with a more positive one? After all, she had lived here for so long that she knew the country as well as any Indian, having even adopted Indian nationality. Surely she could have defended her own country? She could, for example, have spoken about India's infinite spirituality, her exquisite culture, the gentleness of its people, the brilliance of its children...

Regrettably, Mother Teresa said nothing of the sort. Does this mean that she stood for the most orthodox Christian conservatism? Was it, as some of her detractors said, that her ultimate goal was to convert India to Christianity, the only true religion in her eyes? I cannot believe it, although it is true that she never once said a good word about Hinduism, which after all is the religion of 700 millions people of the country she said she loved, and has been their religion for 5,000 years - long before Christianity appeared. Did Mother Teresa consider, as all good Christians do - particularly the conservatives ones - that Hinduism is a pagan religion which adores a multitude of heathen gods and should be eliminated?

The hardline Hindus argue that there has been no change in Christian or Protestant designs on India since they arrived with the Portuguese and the British, and that Mother Teresa was much more clever than Lord Hastings: She knew that on the eve of the 21st century, it would have looked very bad if she had openly stated her true opinions about Hinduism; so she kept quiet. It seems a bit farfetched but, ultimately, is not her charitable work - whatever its dedication - an indirect method to convert people? For without any doubt, most of the people she saved from the streets did ultimately become Christians. And if you ask those "elite" Indians who knew her well, such as photographer Raghu Rai, a great

admirer of her, she always said: "It is now time for you to embrace the true religion." (Raghu Rai politely declined.)

India today is an emerging super power and Indian Christians, while worshipping the memory of Mother Teresa, should try - by talking around themselves, writing articles and books - to propagate a more positive image of their country. Why does India's intelligentsia, most of whom are born Hindus, also defend her? These are intelligent, educated people; they must surely have some inkling of Mother Teresa's negative impact? Does Vir Sanghvi or for that matter Naveen Chawla, Mother Teresa's ever admiring biographer, understand what she really stood for? That she may have been someone basically hostile to their culture, their religion, their way of life?

Also, do they know that Hindu society has always been the target of Christians since their coming here? Do they understand that they and a thousand of their peers, who belong to the intellectual elite of India and keep praising Mother Teresa (or Father Zelazek), are doing harm to their country and opening it to its enemies? The Christian influence is very strong in India today: It shapes the minds of its young people in a subtle way through its schools, which many of the children of the affluent attend. It moulds the thinking of the tribes it has converted, particularly in the North-East where the missionaries have always covertly encouraged separatism (see the remarkable book Indigenous Indians by the Dutch Scholar, Koenrad Elst).

It is also sad to see the majority of Hindus are unaware of the very negative image of their country and religion which Mother Teresa's name is carrying. It is even more unfortunate to see that Hindus vote for her as the most popular Indian (as reported by a weekly magazine that recently conducted an opinion poll). Was Mother Teresa really Indian? Did she really love India as an Indian? While we must respect her memory, it is necessary that Mother Teresa's sainthood or Father Zelatek's potential Nobel prize be seen in their proper perspective by both Hindus and Indian Christians: By making her a saint, or giving Father Zelatek a Nobel, the Vatican and the West are still perpetuating a kind of condescending, neo-colonial attitude: "We, the Westerners, bring to you, the heathens, the civilisation and the true God."

Ultimately, when she becomes a saint, Mother Teresa's spirit will continue to haunt India because she will be worshiped by millions of Westerners for the very negative qualities and aspects that India is trying to emerge out of: Poverty, human despair and lack of self respect.

Hinduism is India

By Francois Gautier

pyare desh vasiyon
garv se kaho hindi-chini bhai bhai
garv se kaho Stalin zindabad
garv se kaho hum UN ke chele hain

Since the Gujarat riots, it looks as if a battle between two radically different Indias is happening right now, under our own eyes; and the outcome of this battle will decide what kind of India we will have in the 21st century. India's human rights groups, many of India's finest intellectuals, the communists, the Congress, many politicians - in fact a major chunk of India's elite population - assert in the strongest terms that on one side you find an India which is communal, mistreats, or even kills minorities;

tries to impose its majority feelings and way of life on the others and is generally attempting to create a Hindu state; on the other, they continue, you have the secular and democratic forces of this country, the journalists, activists, catholic priests, Muslim liberals, who truly believe that circumstances have come to such a boil after the Ayodhya episode and the Gujarat massacre, that India has to be saved from Hindu fundamentalists for its own good.

This is on the surface, because history shows us that what appears as truthful, is often false and misleading and what popular opinion holds as false is time and again the truth, which is attacked by dark forces by decrying it, denying it, or belittling it. Thus, if you examine closely the theory of the good secular Muslim/ Christian/Marxist, versus the bad/dangerous/ fundamentalist Hindu, you are bound to come-up against several deep contradictions. First, historically, Hindus have been the least fundamentalist people in the world: Never trying to impose their creed upon others by the power of the sword, like Christianity or Islam, or even by the non-violent means of preaching, like Buddhism. Hinduism has also proved over the ages its infinite tolerance towards other religions, giving refuge to all persecuted minorities in the world, whether Parsis, Syrian Christians, Jews, or Tibetans today.

Second, Hindus have been particularly targeted in the last 15 centuries: Louis Frederick, one of France's most respected, balanced and respected historian, called the Muslim invasions of India "cataclysmic". Indeed, these invasions have left a deep scar of fear in the Hindu psyche and most of India's modern problems - Ayodhya, Kashmir, or the dangerous enmity with Pakistan - are a left-over from these murderous assaults on Hinduism.

Moreover, Hindus in India are not only an object of mistrust and contempt from many, but they

are also chased from their own ancestral lands. There were one million of them in Kashmir in 1900, and 300,000 in 1947 - but only a few hundred today. Hindus have become refugees in their own land. In Assam, Tripura, or Nagaland, Hindus are being outnumbered by Bangladeshi illegal immigrants and terrorised by pro-Christian separatist groups, such as the Bodos or the Mizos, while local governments often turn a blind eye. Hindus are killed and raped in Bangladesh, were persecuted under the Taliban and are treated as second class in Pakistan.

It is true that the secular voices in India are often sincere, talented people who really want to preserve their country against the forces of communalism. One cannot fault a Shabana Azmi, an Arundhati Roy, a Medha Patkar, or eminent journalists like Dilip Padgaonkar with frivolity. These are people who are already famous or rich enough not to have to hog the limelight. They believe that they are putting their fame, or their pen, at the service of true secularism. But then, they have to ask themselves the

question how it is that they have the freedom to criticize and to write whatever they please. In China, a country which many of them admire, they would already be in jail or thrown out of the country; in Pakistan or Saudi Arabia, they might even get killed. It is time that India's intellectual elite realised how much they owe to Hinduism, both in terms of the ethos of tolerance in this country, its immense culture, and its spirituality.

It is also true that one has witnessed in the past few months a sudden hardening of the secular forces against Hinduism. Not only in India, but abroad; not only with Indian journalists, but also amongst the Western correspondents. In France, for example, all the major newspapers have carried again and again particularly nasty stories against Hindus. Recently, one of the leading French newspapers asked General Musharraf this pointed

question: "Why does the world protest against the killings of the

Palestinians by the Israelis, but stays silent when thousands of Muslims are killed in India?" And this gave Musharraf his golden cue: "It is not only Muslims who are targeted in India he answered, but also Sikhs and Christians...India pretends to be the biggest democracy in the world, but it is only a bluff..."

Why this sudden hardening against what the secular forces like to call "Hindu fundamentalism"? Throughout their history, Hindus have had numerous enemies: Arabs, British, Portuguese, and today Marxists, Muslims and Christians seem to have united against the common enemy. All of them, today and yesterday, felt that Hinduism was the only stumbling block to a wholly Islamised India, or a wholly Christianised India, or a wholly Marxist India.

And indeed they were right: It is because of Hinduism that for seven centuries India endured bloody after bloody invasions and still remained Hindu in its majority; it is because of Hinduism that India was never fully Christianised, as so many countries colonised by the British, the Portuguese or the French were; it is because of Hindus that Marx could never get a real foothold throughout India: It is because of Hindus that westernisation, the civilisation of Coca Cola, MTV and MacDonald, is having a tougher time in India than it has had elsewhere in Asia or the developing world.

And, ultimately, India has to decide: Does it want to lose its soul at the hands of the secularists and become a country like dozens of others in the developing world: Westernised, globalised,

christianised, standardised? Or does it want to remain unique, special, different, with a remarkable culture which has survived centuries of invasions and colonisation? It is thanks to this uniqueness that a Hindu is different from anybody in the world, or even that an Indian Muslim is different from a Saudi Muslim, or an Indian Christian different from a European Christian. Yes, there is truly a battle between two Indias at the moment; but it is not the secular versus the communal, or the good Muslim versus the fanatical Hindu. It is a battle between a spiritualised India and de-spiritualised, devitalised, dehumanised India.

The truth is: If India loses its dharma at the hands of India's enemies, there will disappear the only real spirituality left in the world. Once upon a time, true spirituality, which is the antithesis of religion, roamed the wide world: From Egypt to Mesopotamia, from China, to Greece. But today, the world is peopled by intolerant religions that still decree that their God is the only true one. Christianity is willing to put up millions of dollars of "charity " money to convert thousands of innocent tribals in the North-East of India, thereby cutting them from their roots and culture; Islam has men and women, who in good faith (look at the beautiful and innocent faces of some of the Palestinian women suicide bombers) are willing to kill and get killed to impose Allah's ways on an erring world. If we continue in this manner, we are going towards self-destruction, pralaya. I can only finish by quoting what the Mother of Pondicherry once said: "India must be saved for the good of the world, since India alone can lead the world to peace and a new world order

Copyright © 2001 - All Rights Reserved.

Why the cynicism about Indian gurus?

Francois Gautier

http://www.rediff.com/news/2001/mar/12franc.htm

Westerners have often a deep suspicion of 'gurus' and are wary of anything which has a 'Hindu' flavor. It is true that some of the gurus teaching in the West might have brought a bad name to Hinduism; but is this a reason to clamp them all together under the same 'fake' label?

Indian journalists unfortunately share often the same resistance to gurus as their Western counterparts. And one can also understand their misgivings, given the problems there has been in India with certain gurus having political connections. But these are the exception to the rule. Why then brand all gurus as 'godmen,' a negative and slightly cynical term, as many Indian journalists do? Or why always ask gurus the same pointed and devious questions about their opinions on Ayodhya and 'Hindutva?'

Isn't it also strange that Indian journalists do not display the same aggressiveness towards Christian bishops or priests, whom they never call godmen, but 'holy father?' They also like to question the 'miraculous' powers of Indian gurus, as it was done a few months ago in an issue of *India Today* targeting Sai Baba. But is it less rational or Cartesian to think, as the Christians do, that Jesus Christ multiplied breads, or resurrected the dead?

Running down Hindu culture and Hindu gurus is fine -- but a huge majority of the Indian population -- which, let us remember, is 85 per cent Hindu -- sees nothing wrong in this culture: ordinary Indians meditate, do *pujas*, perform *asanas*, chant *bhajans*, or practice *pranayama*. There is no sectarism here, no fake mysticism, no pagan obscure rites. **The irony is that this very spirituality on which Indian intellectuals tend to look down, is taking root in the West:** more and more sportsmen, for instance, are using *pranayama* to enhance their performances; ordinary Americans are meditating by the millions (see this week's *Time* magazine showing American children learning meditation); *hata-yoga* has long taken Europe by storm and has been copied by all kinds of gymnastics or aerobics…

Does India need the West to realise what an inconceivable spiritual inheritance it has in its hands? A knowledge which once roamed the shores of the world, from Mesopotamia to Egypt, from Greece to Babylon, but which today has disappeared in a world peopled by intolerant churches? Do Indian schools have to wait for the United States, before they start teaching Indian children their own culture?

Sri Sri Ravi Shankar, for example, the founder of the Art of Living has also been catalogued as a 'godman' by *The Deccan Herald.* Yet, he too is helping to spread both in India and abroad this

wonderful spiritual inheritance, promoting as much the revival of Sanskrit and Vedic knowledge, as an ecological concern for plastic disposal, or trying to save the centenary trees which are in danger of being chopped down on the Bangalore-Kanakapura road, as it is being widened.

His numerous associations prove that he is not only a "guru of the rich," as he has been accused by *The Indian Express:* his village schools, for instance, do so well, that children have a 95 per cent rate of success in exams; his youth training programs bring to India's remotest hamlets in Karnataka or even in Naxalite infested Bihar, Housing, Hygiene, and Human values. His volunteers work with their own hands in villages to clear the garbage, clean the sewage infested roads and generally renovate the place. Finally, the medically-tested Sudarshan Krya technique is today taught in Tihar jail, or in corporate offices in California.

The Kumbh Mela has just concluded. It was an extraordinary event: probably the biggest spiritual gathering in the history of the human race. At a time where the West has lost its spiritual moorings and when, even Eastern countries such as China or Japan are submerged by Western culture -- MTV, Coca-Cola and McDonald's -- India has shown that in spite of tremendous odds, she has succeeded in keeping her spirituality alive. But once again during the Kumbh Mela, the Indian media coverage showed the same Western slant against gurus, saints and sadhus.

Instead of highlighting the remarkable degree of cleanliness, orderliness and efficiency demonstrated by the organizers, the UP Government and the police, it chose to focus on naga sadhus smoking *ganja*, or the VHP "hijacking the mela," or on Western "hippies" in search of enlightenment.

Indian journalists could have shown a little more pride in their own culture by saying, for instance, that it is miraculous that there are still men in the world who are ready to give-up everything, including their clothes, for the love of God; or that as long as Indian villagers were smoking *ganja*, they did not beat their wives, gobble-up their salaries and drink themselves to death, as they are doing today, now that (foreign owned) alcohol has invaded India; or that any religion worth its name tries to protect its own interests, as the VHP is doing (the VHP is not trying to convert other religions, **yet they are subjected to a much greater bashing by the Indian press than Christian priests or Muslim mullahs); or that it is to India's credit that Westerners come here searching for the spirituality they can't get any more in the West.**

It is part of the freedom of the Press to be able to criticize anything and anybody. And we must acknowledge that Indian journalists have often played a positive role by highlighting injustice or corruption in public life. But the spitefulness that they sometimes display towards the saints, sadhus and gurus of India seems a little bit unfair. For however much poverty there is in this country, however many problems it is facing, India's gift to the world in the 21st century will be its spirituality, this eternal knowledge which alone She has preserved.

India should wake To the hour of God
By Francois Gautier
http://www.timesofindia.com/today/07edit5.htm

THERE is sadness today in India, after the terrible earthquake, which took so many lives. It is said that when so many people die a violent, sudden death at the same time, their sufferings and cries create sorrow in the atmosphere, which is so palpable that you can feel it thousands of kilometers away. But it is more than that: It was the 26th January, India's Republic day. India had reason to celebrate, as **after so many centuries of degradation, it may be on the verge of a Renaissance, spiritual and physical, of a gradual flowering back of some of the greatness of ancient Bharat, of maturing again into a great civilisation which once more will radiate towards Asia and the world.**

Naipaul called India a wounded civilization, and rightly so. India, the mother of all civilizations, has been wounded so many times already: nobody will ever understand the unspeakable barbarism that foreign invasions did to India; how many times India had been on the edge, on the verge of losing her soul, whether at the hands of colonialism, by the betrayal of her own people, or the stifling influence of modernity. India was caught unawares on this 26th January. Accidents sometimes happen, in the face of which even God may be helpless, as Sri Aurobindo says in Savitri: "An idiot hour destroys what centuries made". Was this earthquake such an an idiot accident, wounding India in her heart at a moment when she was riding high?

As Sri Aurobindo says again, "There are moments in the Hour of God, when the Spirit moves among men and the breath of the Lord is abroad upon the waters of our being; there are others when it retires and men are left to act in the weakness of their own egoism." The first are periods when even a little effort produces great results and changes destiny. Has India come at such a crossroads of her civilisation ? It does indeed look as if everything has been given to her so that she not only survives but also makes the progress necessary to again become a great nation, socially and economically, redeem within herself her ancient spirituality and gift it to the West which today finds itself rootless and lost in a soulless modernity. But to do so, India needs leaders who will have the vision and the courage to take bold decisions; it needs also the assent and the collaboration of all its citizens. Can she do it?

She should, as God has given Her a helping hand: a new leadership perhaps more in tune with her ancient spirituality and imbued with a vision of what India can be; a new millennium, where everything is possible; good conditions with a growing economy and competent people, who are today the best software programmers in the world, a must in the coming Information Age. And overall, it is very rare in the history of humanity that so many sages and avatars be born at the

same time, as they have been born in India in the last two hundred years : from Vivekananda to Sri Aurobindo, from Ananda Mai to Ammachi, from Sai Baba to Sri Sri Ravi Shankar.

However, the real question today is: Will India be faithful to her dharma? Will India heed the call? Listen again to Sri Aurobindo : "Unhappy is the man, or the nation which, when the divine moment arrives, is found sleeping or unprepared to use it. But thrice woe to them who are strong and ready, yet waste the force or misuse the moment; for them is irreparable loss, or a great destruction". India and Indians have the great opportunity now to collaborate with the Future and with the Force that beckons them. It is possible that India may not fully rise to the occasion, that its leaders are scared to take bold decisions, that its people are not united enough, that India is letting the Ganges be polluted beyond salvation, its forests shrink, and might be losing its soul to globalisation.

This earthquake then is more than a black karma: it is a warning that the time has come for **India to put its act together.** And the sadness can act as a lever for a more powerful realisation. Today, not only the whole of India is grieving for Gujarat, but maybe for the first time since the British left, a feeling of fellowship, which cuts across religions, has awakened amongst Indians here and abroad.

Sonia Gandhi and the great Aryan myth

By Francois Gautier

http://www.indian-express.com/ie/daily/19990927/iex27012.html

Everything has already been said about why Sonia Gandhi holds such a fascination for India: the fact that she belongs to the Nehru dynasty, or the eternal inferiority complex that a part of the Indian intelligentsia seems to be holding towards the West. This is particularly striking amongst a section of the Indian media (Outlook, Asian Age), which always appears to look at India through a western prism and constantly worry how the foreign press views India, how the foreign countries - particularly the United States of America - perceive India, what the human rights agencies say about India...

But what has never been said is this: the white skin of Sonia may also bewitch Indians because of the theory of the Aryan invasion, which is still taken as the foundation stone of the history of India. According to this theory, which was actually devised in the 18th and 19th centuries by British linguists and archaeologists, the first inhabitants of India were good-natured, peaceful, dark-skinned shepherds, called theDravidians, who had founded what is called the Harappan, or Valley of the Indus civilisation. They were supposedly remarkable builders, witness the city of Mohenjo-Daro in Pakistani Sind, but had no culture to speak of, no literature, no proper script even. Then, around 1500 B.C., India is said to have been invaded by tribes called the Aryans: white-skinned, nomadic people, who originated somewhere in Western Russia and imposed upon the Dravidians the hateful caste system. To the Aryans are attributed Sanskrit, the Vedic, or Hindu, religion, India's greatest spiritual texts, the Vedas, as well as a host of subsequent writings, the Upanishads, the Mahabharata, the Ramanaya, etc.

This was indeed a masterly stroke on the part of the British. Thanks to the Aryan theory, they showed on the one hand that Indian civilisation was not that ancient and that it was posterior to the cultures which influenced the Western world - Mesopotamia, Sumeria, or Babylon - and that whatever good things India had developed -Sanskrit literature, or even its architecture - had been influenced by the West. Thus, Sanskrit, instead of being the mother of all Indo-European languages, became just a branch of their huge family. Thus the religion of Zarathustra is said to have influenced Hinduism, and not vice versa. And on the other hand, it divided India and pitted against each other the low caste dark-skinned Dravidians and the high caste light-skinned Aryans, a rift which is still enduring.

But today, this theory is being challenged by two new discoveries, one archaeological and the other linguistic. Firstly, in the Rig Veda, the Ganges, India's sacred river, is only mentioned once, but the mythic Saraswati is praised fifty times. For a long time, the Saraswati river was indeed considered a myth, until the American satellite Landstat was able to photograph and map the bed of this magnificent river, which was nearly 14 km wide and took its source in the Himalayas. Archaeologist Paul-Henri Francfort, who studied the Saraswati regionat the beginning of the Nineties, found out that the Saraswati had "disappeared", because around 2200 B.C., an immense drought reduced the whole region to aridity and famine. "Thus", he writes, "most inhabitants moved away from the Saraswati to settle on the banks of the Indus and Sutlej rivers". According to official history, the Vedas were composed around 1500 BC, some even say 1200 BC. Yet, the Rig Veda describes India as it was before the great drought which dried up the Saraswati, which means in effect that the so-called Indus, or Harappan civilisation, was a continuation of the Vedic epoch, which ended approximately when the Saraswati dried up.

Recently, the famous Indus seals discovered on the site of Mohenjo Daro and Harappa have been deciphered by Dr N. Rajaram, a mathematician who worked at one time for the NASA and Dr Jha, a distinguished linguist. In the biased light of the Aryan invasion theory, these seals were presumed to be written in a crude Harappan (read Dravidian) script, although theyhad never been convincingly deciphered. But Rajaram and Jha, using an ancient Vedic glossary, the Nighantu, were able to prove that the script is of Sanskrit lineage and have so far deciphered 2000 seals. As the discovery of the Saraswati river, the decipherment of the Indus scripts also goes to prove that the Harappan civilisation, of which the seals are a product, belonged to the latter part of the Vedic Age and had close connections with Vedantic works like the Sutras and the Upanishads.

Hence, it is becoming more and more clear that there never was an Aryan invasion in India, a theory which was imposed upon the subcontinent by its colonisers and is today kept alive by Nehruvian historians (such as Romila Thapar), Christian missionaries (it is thus easy to convert the downtrodden tribals and Dravidians, by telling them that Hinduism was a religion thrust upon them by the hated "Brahmin" invaders) and the communists (who hate anything Hindu). But as long as India will not rewrite its history books andteach its children to be proud of its ancient and indigenous civilisation, there will be other Sonia Gandhis who will come and exploit India's Secret Craving For The White.

Cartesian Thoughts On Hindu Stone Gods

By FRANCOIS GAUTIER

http://www.timesofindia.com/today/05edit5.htm

WE westerners are brought up on the good old values of Logic and Cartesian Reason - from Descartes, French philosopher, mathematician and physicist, who in his Discourse of the Method elaborates a system whereby doubt is methodically used to analyse any unknown phenomenon. He is also the man who said, ``I think, therefore I am". We are taught right from childhood to believe, like Saint Thomas, only what we can see and to have faith only in what we experience ourselves. A few of us, whose parents have Marxist leanings, are also injected with a good dose of atheism - that is to disbelieve in the unnatural, the supernatural, the religious, and generally what is invisible to the eye.

This is why many of us when we come to India, have difficulty with the way Hindus adore Gods in the forms of statues. How in heaven can there be any form, any divine presence in a piece of stone, or even more so in a Lingam? You must have noticed how uneasy some of the western tourists look when they are in a living temple, whether in Badrinath, or Meenakshi: they are stirred by memories of old childhood stories of how Christian missionaries had to battle these superstitious beliefs in idols (the word idolatry implies that which is worshipped blindly, in an un-Cartesian manner) to install an altar or a church.

Yet, a few westerners, instead of rejecting outright this ``pagan" habit that Hindus have had for millenniums of adoring stone Gods, have tried to analyse it, using this very Cartesian reason and logic with which we are endowed, thanks to our rigorous education. One such person was Alexandra David-Neel, famous writer, explorer, spiritualist, and the first woman to have penetrated Tibet. In her book, `India as I saw it' (Plon. Paris, 1951), she remarks: ``The energy which the Hindus project on the idol is not totally immaterial. It could be assimilated to a subtle substance, which is impregnated with the thoughts, desires and images of the seekers". And she elaborates further: ``The existence, real or not, of the deity represented has no importance, what matters is the accumulation of the psychic forces in the statue". Thus, she continues: "Images of Gods are fulfilling a function similar to what electricity does to a car battery. In this particular case, it is the adoration of the devotees, which charges the statues. And once fully charged, one can draw energy out of it, because like a battery, the statue will not get empty if one continues to charge it with energy through the cult, and the concentration of the prayers and aspirations of the faithful". And Mrs Neel concludes: ``It is thus that an idol which has been adored for centuries by believers, is now charged with a considerable sum of energy due to the repetition of incalculable acts of devotion, during which the faith, imagination, aspirations, desires of these untold crowds of believers have been directed towards the image of their divinity". Her wrapping up of the subject is simple: Gods are thus created by the energy emitted by the faith in their existence.

Will this rather ``scientific'' explanation of idol worshipping be sufficient to convince the disbelievers? We are not so sure. This reminds one of the story of our friend Bruno Philip, ex-correspondent in India of Le Monde. He himself, like any good Frenchman, tended to disbelieve in supernatural stories. When he heard that Ganesh was drinking milk a few years back, he went to the nearest temple with a smirk on his face. But lo, he saw with his own eyes the God actually drinking the milk. However, when he telephoned Le Monde in Paris with his story, he was told that he must have drunk too much the night before and advised to go back to bed!

But then, Bruno could have told his disbelieving boss in Paris that all religions, however Cartesian they are, have their share of beliefs in the supernatural and unscientific. Is it more rational or Cartesian (than worshipping stone idols) to think, for instance, as the Catholics do, that Mary conceived a child while remaining a virgin, or that Christ came back from the dead and ascended physically to heaven (and not in his subtle body, which is more likely), or that Jesus multiplied breads and cured incurable people? Even today, American preachers who come to India carry full page advertisements in newspapers promising whoever comes to their rallies that not only will they encounter God, but they will also witness miracles. Descartes must be shaking his head, up there in heaven.

A TRIBUTE TO HINDUISM

articles on hinduism

The vicious circle

Francois Gautier

http://www.dailypioneer.com/secon3.asp?cat=\opd1&d=OPED

India is a country of wonderful people. Warm, hospitable, tolerant. Its intellectual elite, in Delhi, Bombay, Chennai or Bangalore, are good friends to have, fun-loving and always cordial with westerners.

Intellectually, the journalists and writers of this country are often witty, brilliant, speak good English, and write even better. In fact, quite a few of them, Arundhati Roy, Vikram Seth, Upamanyu Chatterjee and others, have become households names in the English literary world and have brought a good name to India. Arundhati Roy has even shown us that one can be a successful writer and also work for a social cause - even going to the extent of going to jail for that.

Yet, there is something that I have never understood: **Although most of India's intellectual elite is Hindu, the great majority of them are Hindu haters - and it even seems sometimes that they are ashamed to be Hindus. They always come out with the same cliches on Hindutva, the Saffron Brigade, the Hindu "fundamentalists"** and if you listen to them, you get the impression that India is in the hands of dangerous Hindu fundamentalists and that the Christian and Muslim minorities of India are being cruelly persecuted.

Recently, Courier International, a very prestigious French magazine, which is read by diplomats and politicians, published a special issue on "Hindu fundamentalism" with a cover photo of RSS members doing their lathi drill. The ignorant westerner who read it must have had the impression that India indeed is in the grip of fascist, nazi-like Hindu groups and that civil liberties are curtailed here. When the editor-in-chief of that magazine was contacted, he pointed out that all the pieces had been translated from articles... written in the Indian Press by Indian journalists...

If I did not know India, I would tend also to believe what I read about India in the Western press: A nation torn by caste discrimination, poverty, corruption, Hindu extremism and natural calamities. But after living more than 30 years in this country, my experience is totally different: Hindus are probably the most tolerant people in the world - they accept that God manifests Himself under different forms, at different times, according to the needs and mentality of each epoch: Krishna, Christ, Mohamed, Buddha... Thus they always allowed throughout the centuries religious minorities who were victimized in their own countries to settle in India and to prosper and practice their religion: The Syrian Christians, in fact the first Christian community in the world, the Jews, who have been persecuted all over the world (including in my own country France), but were left in peace in India; the Armenians, the Parsis, and today the Tibetans...

As a Westerner, living in India, apart from the obvious bureaucratic hassles, the slowness of everything and the dirt, being here has also been a dream: I have never been mugged in 33 years, no policeman has ever asked me my papers in the street (see what happens to you if you are dark-skinned and without a tie in the metro in Paris) and I have always been made welcome even in the remotest villages of India. As a journalist, it is even better: I do not have to ask permission to go out of Delhi and submit the subject and route of the features I propose to do outside the capital and I do not get kicked out of India, even if I criticize its government - all this contrary to China, which even then remains a more coveted post for a foreign correspondent than India.

It is true that for a western journalist, coming to India can be a baffling experience. The diversity - going from one state to the next is like passing from one country to another - the language is different, so is the food, the habits, the political set-up; the complexity of India's political life, its heavy subtleties; the incredible religious, social and ethnic diversity... So what does the new correspondent do, when often he has at heart to do justice to the country he has been asked to report about? He turns to his Indian fellow journalists for enlightenment.

Regrettably, the first input he is given by his Indian colleagues, is very negative: The black mark of Ayodhya on India's secular fabric, the heavy hand of the Army in Kashmir, the terrible castes abuses in Bihar, or the Taliban-like Bajrang Dal. And this is why if you read the Western reports on India, however good their styles, however well-meaning they are, they all say the same thing with infinite monotony (and often nastiness).

Again, it is absolutely factual that there are unforgivable things done in India in the name of caste; that the disparity between rich and poor is shocking, that affluent Hindus have very little concern about their less fortunate brethrens, or else have no respect for their environment. But it is also true that there is so much positive things to be written about India, so many great people, so much tolerance, so much talent, so many fascinating subjects. Nevertheless Western journalists seem only to concentrate on the negative.

This is the vicious circle of journalism and India: The negative goes from the Indian journalist to the Western journalist... and comes back to India under the form of unfriendly reporting.... The recent Sabarmati burning followed by the rioting in Gujarat, showed again the veracity of that phenomenon. Here you had 58 innocent Hindus, the majority of them being women and children, burnt in the most horrible manner, for no other crime but the fact that they want to build a temple dedicated to the most cherished of Hindu Gods, Ram, on a site which has been held sacred by Hindus for thousands of years.

When a Graham Staines is burnt alive, all of India's English press goes overboard in condemning his killers, but when 58 Graham Staines are murdered, they report it without comment. No doubt, the revenge which followed is equally unpardonable. No doubt, Indian and foreign journalists who rushed to Gujarat, wrote sincerely: after all they saw innocent women, children, men being burnt, killed, raped. Which decent journalist, who has at heart of reporting truth would not cry out against such a shame? But then history has shown us that no event should be taken out of context, and that there is in India, amongst the Hindu majority, a simmering anger against Muslims, who have terribly persecuted the Hindus and yet manage to make it look as if they are the persecuted.

And once again, the Western press coverage of the Gujarat rioting comes back to haunt India:

Hindus targeting Muslims, fundamentalism against innocence, minority being persecuted by majority... But when will the true India be sincerely portrayed by its own journalists, so that the Western press be positively influenced?

(Gautier is the correspondent in India and South Asia of Ouest-France, the biggest circulation French daily (1 million copies) and for LCI, a 24-hour TV news channel. He is also the author of **Arise O India** and A Western journalist on India).

Relink science to spirit

Author: Francois Gautier

Publication: The Indian Express
Date: January 1, 2001
www.hvk.org

Will science and spirituality ever meet? This was the topic of a recent seminar at the prestigious Indian Institute of Science in Bangalore. Indian scientists, one after the other, expounded, on how reason, rigour, logic and the spirit of inquiry are the most important parameters of scientific discovery. None of them, except for Abdul Kalam, made references to ancient Indian science. All of them spoke of science from a western point of view.

Truly western science, because of its immense material resources, has come to dominate the world. Billions of dollars is required these days for research which India can not afford. Since it is unable to remunerate honorably its scientists and engineers many of them have migrated to the West.

Western science is like a blind man, because it dissociated itself from the spirit in the 17th century. Reasons are several: First, because the powerful Christian church interfered in government matters. Thus it was very rigid and backward in scientific topics, believing until very late that the earth was flat or that the world started in 4003 BC. And whoever disagreed with these views was burnt at the stake!

Many thinkers of the 17th century, particularly French philosophers such as Descartes or Pascal, had unilaterally decreed that the only valid scientific and philosophical tools of inquiry were reason and logic. A third factor came in the 20th century with the advent of Marxism and Communism, which decreed that spirituality poisoned people minds and hence had to be eradicated.

Was this divorce of science from the spirit beneficial to the West? Well, western scientists have been able to devise the most sophisticated weapons to kill man; but man is still not capable of killing his own ego. The West, in spite of its huge prosperity based on its tremendous technological and scientific achievements, is becoming a sick society, where children go on rampage killings; where every other person in the US is under psychiatric treatment for depression or insomnia. Where out of five marriages, three end up in divorce.

Nobody in the conference, except Sri Sri Ravi Shankar, who was a guest of honour, also bothered to ask this question: has Indian science kept in touch with the spirit? Well, major discoveries in Indian science, such as the position of the stars, the calculation of solar eclipses, or the concept of the zero, were made at the time when there were no instruments. How were they made? Because

of a profound and everlasting quest for the spirit in India. It is in this manner that Buddha, was able to say, long before western science, that everything in our Universe is constituted of atoms, constantly changing, dying and being reborn at each moment. And this is the first theorem that any scientist should apply: Know Thyself, Know Thy mind. Because If you know your own mind, then you can fathom all other minds; if you know one particle of the world you know all the particles of the world. This is the truth that India has been practicing for millenniums.

Finally, nobody in the symposium cared to mention that western science owesa lot to India. Pythagoras, pioneer of modern geometry, was inspired byIndian mathematics; Egyptians built their pyramids by means of Indianarithmetic; 18th century French astronomers were using Hindu calculationsof the positions of the stars and the solar eclipses.

But unfortunately, Indian science today is very westernized, because the scientific knowledge taught in the universities lacks a connection with the spiritual, and never mentions India's ancient tradition of scientific inquiry.

The British colonials imparted through education a certain western bent of mind. Additionally, many of India's top scientists today have a strong connection with the West. The ultimate achievement for them is to have a chair in a foreign university, where some of them brand India as a backward, fundamentalist country. Isn' it so Mr Amartya Sen? But the real issue is: how can Indian science re-link itself again with the spiritual? There is no question that the Spirit is very much present in India: everywhere you go, you find ashrams, yogis, sadhus, ordinary people practicing meditation or pranayama.

The natural tendency here is to understand the levels of consciousness beyond the surface materiality. Other than Indian Nobel laureates there have been geniuses like Ramanujan, who, with no sophisticated means, were able to devise stupendous mathematical theorems. But Indian science has to look within and delve in its scientific past. The secrets of the Vedas, for instance, both spiritual and scientific, have never been fully deciphered; Sanskrit too has never been analyzed in a modern manner. Indian science mustshow the West how to reestablish the spiritual link and at last unite matter and spirit.

Journalism as the art of living

By Francois Gautier

http://www.indian-express.com/ie/daily/19991108/ile08020.html

In a year or so, a unique and revolutionary new Indian school of journalism is going to be inaugurated in Bangalore. In this school, students will not only be taught the complete art of journalism. They will also learn to look at India through an Indian perspective, to cast an eye on the world which will carry some of the knowledge and wisdom of a civilisation -- their own -- which is five thousand years old.

They will, for instance, be taught pranayama, the ancient technique of breathing devised thousand of years ago by Indian sages, so that they know how to regulate their breath in time of stress and thus control their emotions. They will be taught the art of meditation, so that they can get their inspiration from a quiet, strong and silent mind. They will be taught asanas, so that their body is strong and resilient and can endure any physical situation. They will be taught a unique cleansing technique called Sudarshan Kriya, which eliminates toxins and stress from the mind and body.

They will study the Vedas, which contain the ultimate truth, the Ramayana, the Mahabharata, and India's great philosophers like Sri Aurobindo. They will even be taught to sing and dance, so that there is joy and spontaneity in their life and not the dry, intellectual pompousness of the pipe-smoking, Oxford English-speaking journalist, or the chain-smoking pseudo-Marxist... In short, they will be taught the Art of Living.

Sounds preposterous? But these methods should be applied to all aspects of education in India, from the kindergarten onwards, so that schools and universities do not churn out western clones, who have no idea about the greatness and the immense wealth of their own country. And the first thing which should be taught to all students, whether they are toddlers or aspiring journalists, is that there exists a Knowledge - spiritual, occult, yogic - still alive in India, which has died all over the world, where only churches and dogmas survive, although this knowledge was once prevalent in ancient civilisations -in Egypt, Mesopotamia, Greece etc. They should also understand that if this knowledge, which is not Hinduism, which is not religious, is left to die in India, it will be gone forever from this world which might slowly drift towards pralaya.

At the moment, India is still living under Nehru's legacy, who had chosen to turn its back on anything which had a spiritual connection and had espoused the Marxist way of life, which produced an immense bureaucracy, corruption and the kind of politicians we see today. It also bred many generations of Indian intellectuals and journalists, who kept running down the greatness of their own country and aped anything that came from the West -- the good and the bad. Today many of Indian newspapers and magazines do not reflect a true Indian point of view,

but constantly look at India through a western prism which contains none of the wisdom and knowledge of ancient India.

Take the Pope's visit for instance. Instead of defending India's point of view - as it would have beennormal practice in any other country - by doing some background research on the atrocities committed by the Portuguese in Goa, or about the economic incentives wh-ich missionaries have used -- and are still using - to convert entire chunks of the Northeast and Central India, most of the Indian press went on its usual VHP-RSS-Bhajrang Dal bashing. It is too easy to repeat ad infinitum that Christians in India are only two percent (a nearly ten years old census), because the influence which Christians exert in India is tremendous. Not only do they control the best schools (and hospitals), thus shaping the minds of India's future elite, their sometimes alliance with Marxists make them redoubtable adversaries.

Furthermore, very few newspapers and magazines chose to publish extracts of the Southern Baptist Church's prayer books (the second largest Christian organisation in the US, of which President Clinton is a member) which call Hinduism "satanic" and say that "Hindus live in the darkness of their hearts,which no lamp can dispel". Some of the Christian leaders (the majority of Indian Christians are nice and peace-loving people) have thus been able to take full advantage of this hatred of the Indian press -- which is mostly composed of Hindus -- against any organisation or individual who dares to defend Hindus, and their softness for anybody who attacks Hindus.

It is in this way that the Vatican was able to lecture India on the "atrocities" committed against Indian Christians, without mentioning the much greater atrocities committed against the Hindus who had welcomed so wholeheartedly Christians centuries ago. It is also sad that the BJP, which not so long ago was the target of attacks by these very same journalists, chose to arrest a few of the leaders of those groups who had the courage to stand up for their own ideas. Do you remember, Mr Advani, when you were arrested and branded a "Nazi" by the Indian press, who stood by you then?

So what is needed is a new generation of Indian journalists who willbe proud of their country without being chauvinists, who will be brilliant without being superficial, who will take the best of the west, without being western clones, who will draw inspiration from the knowledge alive in this country, without being bigots. They will be Indian journalists.

Buddhism to blame for India's ills

By Francois Gautier

The Indian Express Monday, September 25, 2000

Buddhism offered a simple way out of human misery to anybody, whatever their status. This may explain why at the beginning of our era, the entire northern and eastern. India was practising Buddhism. Unfortunately, after Buddha's death, his followers gradually made Buddhism a religion of rigid tenets, do's and don't, which not only
diminished its popular appeal, but also harmed India. This harm has two facets: non-violence and maya.

Many Buddhists like to believe that Buddhism disappeared from India, because it was slowly "swallowed" back by Hinduism at the hands of the vengeful Brahmins. But the truth could be entirely different. Hinduism of the Vedas and the Gita always held ahimsa as one of its highest spiritual values, but at the same time understood that
violence can sometimes be necessary to defend one's borders, women and children. Which is why, until Buddhism made non-violence an uncompromising, inflexible dogma, India's borders were not only secure, but extended from Afghanistan to Kanyakumari.

But when Ashoka embraced Buddhism, one sees that soon thereafter the first invasion -- that of Alexander the Great -- submerged the subcontinent: India's great protecting armor, which had worked for millenniums, had been breached. As the first Muslim invasions started submerging India in the seventh century, Hinduism was able to initially withstand the violent onslaught of Islam, thanks to its tradition of Kshatriyas, but contrary to what history books say, Buddhism was literally wiped off the face of India in a few centuries, as it refused to oppose any resistance.

For the Muslim soldiers, Buddhists, who adored statues and did not believe in Allah, were as much infidels as the Hindus, and they razed every single Buddhist temple (and also Jain, as the ruins below Fatepur Sikri have proved) they encountered, burnt all the precious libraries and killed tens of thousands of monks, without encountering any resistance. This is why you cannot find a single trace of Buddhist structures today in India, save for a few stupas, which were too cumbersome to be destroyed.

The second unfortunate legacy which Buddhism gave to India is maya. "Everything is illusion, everything is misery, misery, misery, Buddhists said -- and still say today -- and the sooner you get out of it by attaining nirvana, the better. But Hinduism had always taught that the Divine is concealed in all things, animate and inanimate, and that every aspect of life has to be conquered by the spirit: even the Asura is a fallen angel, doing unknowingly God's work. Hence Hinduism

had addressed itself to all aspects of life, from the mundane, as brilliantly shown in Khajurao, to the subtle spiritual planes which stand one after the other above mind. In contrast, Buddhism came and said: "Just leave matter and take refuge in Buddha". And as result, because Buddhism has had a subtle influence on Hinduism, India started disdaining her physical envelope, her very body
and material sheath, India's yogis started withdrawing more and more in their caves, its people neglecting their surroundings, its leaders forgetting about beauty. And the result is there today for everybody to see: an ugly India, full of trash and refuse, with very little sense of aesthetics left; cities unplanned, polluted, crowded, hideous; a people who says it worships its mighty Himalayas and sacred Ganges, but which has allowed the
former to be nearly completely deforested and the latter to be so polluted, that sometimes it is not even fit for bathing.

And Indians cannot put all this on account of poverty, because its rich people are probably the most guilty, often not caring for anything and anybody beyond their own doorstep. It is true that Buddhism has nearly completely disappeared from the subcontinent but its rigid spirit endures in subtle ways: Mahatma Gandhi was
no doubt influenced by Buddhist non-violence when he refused Churchill's proposal in 1943 for a Commonwealth status after the Second World War, if India collaborated with the Allies' efforts against Japan and Germany; or when he constantly gave in to Muslim intransigence, thereby precipitating India's Partition. Today, we see that the enemies of a dharmic India often use Buddhism as a weapon, whether it is the much hyped Ambedkar, who advocated conversion of Dalits to Buddhism, or Indian intellectuals such as Praful Bidwai and Arundhati Roy, who borrow from Buddhist thought to show why India should not have the atom bomb.

We see also, in a country like Shri Lanka, a very militant Buddhism, chauvinistic in its promotion of Sinhala interests and anti-Hindu in its persecution of Sri Lankan Tamils. We notice too that new avatars of Buddhism, such as the remarkable Vipasana movement of Shri Goenka, have not fully lost their anti-Hindu slant and are still
proposing a very rigid non-violence. Western historians like to call Emperor Ashoka "the Great" and India chose at Independence his three lions trademark as its symbol. But was he that great? He went from being an extremely cruel emperor to a rigidly non-violent one, not a very balanced mental attitude for a religion which always
promotes the "middle path".

Western historians call Emperor Ashoka "the Great" but was he that great?

Hindus- majority yet minority

By Francois Gautier
Publication: The Indian Express
Date: December 4, 2000
http://www.hvk.org/

Hindus, who comprise the majority population of India, boasts of one the oldest cultures of the world. Sanskrit is often thought as the mother of all languages; Hindu philosophy has to considerably fashioned Greek mythology and Celticlore (as demonstrated by French Indianist **Guy Deleury**); and these two traditions represent the foundation of all European culture.

We all know that the zero concept originated from India, but it is not so well known that the Egyptians used Hindu arithmetic concepts to build their pyramids, that Hindus inspired Pythagorean mathematics, or what an 18th century French astronomers **Jean-Claude Bailly** had remarked: 'Hindu calculations of the position of the stars and of solar eclipses were so precise that we are still using them today'.

Thus the Hindus, inheritors of an immense, noble and age-old culture, constitute 85 per cent of India and represent the social, religious and cultural majority of this emerging Asian superpower of the 21st century. And yet, their voice is rarely heard in India. They are respected neither in home, nor abroad; and they generally lack self-confidence.

Could it be that Hindus are a psychological minority in India, whereas minorities, such as the Christians, which constitute only 3 per cent of the population, wield an enormous moral power in this country, thanks to the quality of their schools and hospitals and because of the pride they have in their own religion and moral standards?

All European children, Italian or German, are brought-up on Christian values and Greek philosophy. It would be impossible, in France for instance, for the Muslim minority – immigrants from French ex-colonies such as Algeria or Morocco to impose their views and culture on the government. In fact, Muslim girls are not allowed to wear a veil when they go to French school: 'you are in France, you have been given the French nationality, so behave like a French first and like a Muslim second', they are told bluntly.

Would that be possible in India? Would any Indian except the much-maligned RSS, have the courage to ask Muslims to be Indians first, and Muslim second? Or tell Catholics and Protestants that they have to revert to a more Indianised Christianity, such as the one that existed in Kerala before the arrival of the Portuguese Jesuits? And see how stridently Muslims and Christians backed by most of the media – react when the Human Resources Minister, Dr Murli Manohar

Joshi, wants to teach Indian children a little bit of the greatness of their culture.

There are two sets of standards used in India amongst intellectuals; one for the Christians or the Muslims; and one for the Hindus. When the Australian missionary Graham Stains and his two sons were killed the Indian and foreign press spent weeks – if not months – in eulogizing Graham and making Nazis of all Hindus held responsible for his murder. But if a few days later 20 labourers, as innocent as Stains' two sons, are savagely assassinated by separatists in Kashmir, it will only warrant a few lines in Indian newspapers, without any of the outraged comments which followed Staines murder.

When the Ayodhya mosque was brought down, it was as if eternal shame had descended upon India. 'Death of secularism', 'Hindu fundamentalists have taken over the country', 'a Black Day in the history of our democracy', the newspapers screamed. However unfortunate the Ayodhya episode was, nobody was killed there; but the terrible Bombay blasts which followed, orchestrated by Indian Muslims, with the active help of Pakistan and the silent approval of Saudi Arabia, which took the lives of hundreds of innocent Hindus, never warranted the kind of moral indignation which followed Ayodhya.

Hindus are ironically chased from their own ancestral lands. There were one million of them in Kashmir in 1900 but only a few hundred today, the rest having been made to flee through terror. In the North-East, Hindus are being outnumbered by Bangladeshi illegal immigrants and terrorized by pro-Christian separatist groups, such as the Bodos or the Mizos. In Karnataka, a bill will bring more than 43,000 Hindu shrines and maths under the commissioner's control. This act does not apply to Christians and Muslims. The Indian government still sponsors the Haj pilgrimage.

Hindus should become a little prouder of themselves: there is ample talent and brains in India today. Hindu children regularly top their schools and universities in the US, they are the best programmers of this planet and are are amongst the richest people in UK, the US or Canada. Why can't the majority of this marvelous, diverse, ancient and extraordinary country stop behaving as if it was a moral minority?

Shared spaces of Islam and Hinduism

By Francois Gautier

http://www.dailypioneer.com/secon3.asp?cat=\edit3&d=EDITS

At a time when Hindus and Muslims have again started killing each other; when mistrust, misunderstanding and hate stalk the two communities; it is imperative that Islam and Hinduism learn at last to live together. There is no other solution: Hindus cannot wish away the 130 million Muslim minority; and the followers of Islam in India cannot ignore forever the feelings of the majority community, who after all total 850 million strong in India and 1.1 billion worldwide. Kashmir is an unsolvable problem, as neither Pakistan, nor India, are ready to surrender their claims, and for obvious reasons. Ayodhya remains an equally inextricable dilemma, because it has been politicised and communalised so much by political parties, that nobody is willing to take the first step. But then, how to bridge the apparently immense gap between Islam and Hinduism ?

On the surface, you cannot find two more dissimilar religions: The first is a monotheistic faith which proclaims that Allah is the only God and that believers of all other religions are to be treated as "infidels"; the second swears by polytheism and adores thirty three million Gods and Goddesses. Hindus face East to pray; Muslims turn to the West. Hindus write from left to right; Muslims from right to left. Hindus love the colour saffron, Muslims dote on green. While Muslims are regarded as Mlechhas (unholy) by Hindus, Muslims consider Hindus Kafirs (infidels). Whereas the Quran condemns idolaters to Hell and grants permission to the faithful to kill infidels, Hindus are sitting and waiting for the Kalki Avatar to redeem the world of Mlechhas. Because of these differences, both these creeds have been at loggerhead for centuries and the Muslim invasions of India have been exceptionally bloody. Even today, Islam and Hinduism collide in Kashmir, in Ayodhya, or in the wars between Pakistan and India.

Yet, unknown to both Muslims and Hindus, there exists striking similarities between Islam and Hinduism. In a just released book, Hinduism and Islam, the Common Thread (Vyakti Vikas Kendra, Bangalore, vvkpress@vsnl.com) Sri Sri Ravi Shankar, the founder of the worldwide Art of Living movement, highlights the fact that contrary to common belief, Hinduism is as monotheistic in its creed as Islam. 'Advaita', for instance, keeps speaking about non-dual monotheism, while the **Bhagavad Gita says: "Eko devah sarva Bhutantaratma" (one God who dwells in everybody).** Or elsewhere: "All the 33 crore devi devtas are nothing but the rays of one Paramatma (the Supreme Being)". We also find that in Hinduism one God is given 108 names, or sometimes even 1008 names ("Sahastranaama"); in the same way, Islam believes in one God who is vast and formless and He also is addressed by 99 other names.

It is true that Islam abhors the worshipping of God in stones or images and that this has been the

prime motivation for Arabs and other Muslims to destroy so many Hindu temples and statues in India from the 7th Century onwards. But do Muslims know that many Hindus, at the end of a puja, say:"Hritpadma karnikaa madhye shivena saha sundari; Pravishadvam mahadevi sarvai aavarnai saha" (You return back to my heart from the idol). Though Islam strictly adheres to the formless (nirakar), it has nevertheless recognised the importance of the Form and the Symbol, symbolised by the Kaaba of Mecca; honouring it is worshipping the Formless through the Form (sagun saakar). Offerings like Chaddar at the Dargah is also a common traditional practice among Hindus, who like offering Chunni to the Mother Divine in the temple. More important even, Namaaz comes from two Sanskrit words: Nama (to worship) and Yaja (to unite with God.) Vajrasana (a yogic posture) is an essential part of the Namaaz, which is prescribed five times daily in the Quran. Friday, the holiest day for Muslims, is as well the holy day for Hindus to worship of the Mother Divine (the Rahukal puja or the noon puja on Friday is considered very auspicious by Hindus). "The 30 days of prayer and fasting", says again **Sri Sri Ravi Shankar,** "is akin to the Mandala puja and the name of the Islamic month of Ramadan comes from the Sanskrit word Rama-dhyan. Dhyan means to meditate and Ram in Sanskrit means 'the one who shines in the heart'. Thus Ramadan refers to a time to meditate on God. Fasts are also associated with Vedic worship, and Islam has retained that fasting and praying tradition for Ramadan".

It is also very important to note that in the Hindu tradition, although the moon and stars are revered, it is the sun that predominates, since it was a source of comfort in the icy Himalayas, the cradle of Hinduism. In the Arabian desert, it was the moon and stars that gave comfort, while the harsh sun was hostile; hence the moon and the stars were chosen as the symbols of serenity and divinity (Shiva is also known as Chandrashekhara-one who has the crescent moon for a crown). In a similar manner, in India, it was the saffron colour which stood out in the greenery of the Gangetic plains, whereas green was chosen by the Arabs, as it was seen from far in the yellow deserts and this is why today, green adorns many Islamic flags. Again, in the Hindu tradition the first born of God is Brahma and his wife is Saraswati; the first born of God in Islam is known as Abraham (a-Brahma) and his wife is Sara. **The Hindus have a practice of chanting mantras on the beads of the japamala; the Muslims too chant the 99 names of Allah on the 99 beads of their rosary.**

Finally, Mecca was also a holy place for Hindus. The ancient Vedic scripture Harihareshwar Mahatmya mentions that Lord Vishnu's footprints are consecrated at three holy sites, namely Gaya, Mecca and Shukla Teertha: "Ekam Padam Gayayantu MAKKAYAANTU Dwitiyakam Tritiyam Sthapitam Divyam Muktyai Shuklasya Sannidhau". Though Islam prohibits idol worship, the black Kaaba stone is held sacred and holy and is called "Hajre Aswad" from the Sanskrit word Sanghey Ashweta: Non-white stone (The Shiva Linga is also called Sanghey Ashweta). The pedestal Maqam-E-Ibrahim at the centre of the Kaaba, is octagonal in shape. In Hinduism, the pedestal of Brahma the creator is also octagonal in shape. Just as in Hinduism, the custom of circumambulating (Pradakshina) the Deity is practiced at the Kaaba also. The pilgrims go around the entire building (Kaaba) seven times in the anticlockwise direction.

We could go on forever and show more remarkable parallels between Islam and Hinduism. But it is best to say that it is unfortunate that Hindus have forgotten that all Muslims are their brothers and sisters and that only their ways of worship are different. Muslims, in turn, have completely blanked out the fact that their forefathers were Hindus once upon a time-even Afghanistan and Arabia were part of Hindu kingdoms before the advent of Christ-so they have every right to be

proud of Vedic culture; they should not disown Hindu traditions. Thus, Hindus and Muslims spring from the same family and must respect each other more and more, so that this senseless clash of religion, which in turn leads to a clash of civilisations, slowly fades away.

The great ambition of Hinduism

BY *Francois Gautier*

http://swordoftruth.com/swordoftruth/archives/byauthor/francoisgautier/tgaoh.html

It requires another foreign correspondent to provide a counterpoint to Delhi-based American journalist John Eliott's rather condescending article: ***Can Hindus be ambitious*** (Outlook, December 21, 1998), where he says that Hinduism is the main obstacle to India's modernisation and liberalisation. Because if an Indian had answered his attacks, he would have immediately been taxed of "nationalist", or even accused of being a follower of the Sangh Parivhar.

Let's first start by what John Elliott gets right:

For some mysterious reason, Hindus appear to be the most undisciplined, collectively selfish, and nationally uncaring community in India, so that it requires a Mother Theresa to look after their own underprivileged. In the same way, they do, as Mr Elliott points out, tend to extend cleanliness only to their own immediate surroundings : their homes, or their front porches, but neglect the rest. It is puzzling for instance how a people which has worshipped the Ganges for thousands of years, treats it with so little respect, dumping every day thousands of chemicals in its waters. True again, Hindus are a tolerant people. India for example, is probably the only country in the world where the Jews not only were not persecuted, but were also welcomed with open arms when they fled the destruction of Jerusalem and allowed to practise freely their religion. True also: this tolerance can often become misguided: Naxalites ought to have long ago whipped in public Rahul Bajaj, who is responsible for polluting entire cities in the name of his petty, selfish interests.

But all the rest is wrong.

Take John Elliott's view of Hinduism for instance : Hinduism has never been a religion, but a way of life, allowing countless sects, philosophies, creeds, to develop in its fold, as long as they were faithful to the central core of its essence - Santana dharma. Over the centuries, this way of life has subtly influenced even India's invaders, be it Christians or Muslims, who are like no other Christians and Muslims in the world. Mr Elliott has also not bothered to study Hinduism in depth, when he says that basically Hinduism teaches fatalistic acceptance.

On the contrary, Hinduism admits for example that one can use violence if necessary : when one's brothers, sisters, or country are in danger - this is the very message of Krishna to Arjuna in the Bhavagad Gita. It is Buddhism and Jainism which perverted that message and opened India to the first invasions of Alexander the Great and subsequently to the Muslim onslaughts. Later, it is Gandhi and his rigid and moralistic attitude of ahimsa, refusing even to fight Nazism, the most asuric force of our modern age, which paved the way for India's splitting in two.

"Hindus lack ambition", accuses Mr Elliott! But Indian civilisation not only had the loftiest of

ambitions, but it also achieved extraordinary realisations, which were unparalleled in the world. In the words of Sri Aurobindo, India's great revolutionary, philosopher, and Sage: "It lived with a noble, ample and vigorous order and freedom; it developed a great literature, sciences, arts, crafts, industries; it rose to the highest possible ideals of knowledge and culture, of arduous greatness and heroism, of kindness, philanthropy and human sympathy and oneness. It laid the inspired basis of wonderful spiritual philosophies; it examined the secret of external nature and discovered and lived the boundless and miraculous truths of the inner being; it fathomed self and understood and possessed the world."

Debilitating and cruel caste system? The caste system is the most misunderstood, the most vilified subject of Hindu society. Let us again listen to Sri Aurobindo: "Caste was originally an arrangement for the distribution of functions in society, just as much as class in Europe, but the principle on which this distribution was based was peculiar to India. A Brahmin was a Brahmin not by mere birth, but because he discharged the duty of preserving the spiritual and intellectual elevation of the race, and he had to cultivate the spiritual temperament and acquire the spiritual training which alone would qualify him for the task. So it was for the Vaishya whose function was to amass wealth for the race and the Shudra who discharged the humbler duties of service without which the other castes could not perform their share of labour for the common good".

But, yes, Mr Elliott, there is no doubt that the institution of caste degenerated: It ceased to be determined by spiritual qualifications and thus lost most of its meaning. The spirit of caste arrogance, exclusiveness and superiority came to dominate it instead of the spirit of duty, and the change weakened the nation and helped to reduce us to our present condition.

And of course, Mr Elliott has to feed us the mantra of foreign (and sadly Indian) journalists : the "(Hindu) fundamentalists / Hindutva". But a bit of nationalism is indispensable for the well-being of a nation. Most of Europe's culture is based on its Christian heritage and we the French are proud of our Greco-Roman tradition. Thus, India does need to regain a little of its self-pride, after having been trampled upon by so many invaders... and made fun by so many foreign corespondents! It is healthy sign that it is happening in a some small measure today.

Finally : has India failed, as Mr Elliott implies? But is not the very fact that India still exists a miracle in itself? This nation survived ten centuries of one of the most terrible genocide ever perpetuated on a race in the name of religion, the soul-stifling British colonial rule and 40 years of "secular" socialism; and it is going to survive the perils of industrialisation and westernisation, because, whatever Mr Elliott and his pairs say, no country which has survived so much when all other great civilisations, such as Greece or Egypt, are only memories in dusty text books, can be snuffed out by the winds of liberalism.

Thus, John Elliot's malevolent vision of an India which will gradually be shaped by more materialistic forces, such as liberalisation and satellite TV, may never come true. Thank God! That would be the end of this country's uniqueness and genius - whatever its faults.

The Genius (and innocence) of the Indian Voter
By Francois Gautier
http://www.indiagov.org/perspec/dec99/voter.htm

In more than fifty years of India's independence, the Indian voter has shown that he throws his ballot INTELLIGENTLY, as he always gives a chance to those politicians or parties who pledge to do things for him but rejects them outright at the next election if they fail to deliver the goods.

As everywhere else in the world, there are two kinds of voters in India: the rural voter and the urban voter. The Indian urban voter votes with his MIND - that is, he is mainly influenced by his atavism - parents, education, background etc. - and by what the English-speaking Press says. And there lies the Catch 22 of Indian politics, for the media in India has for a long time struck a single "secular" note. Which means in effect that anything belonging to the official history was deemed acceptable, while anything that had a Hindu flavour was ruthlessly attacked. It is in this way that the Bharatiya Janata Party combine, which is today in power for the third time and for which nearly 50% of India voted in the last election, was for long the outcast of Indian politics, variously called by the Indian media "fanatic, non-secular, communal, even Nazi (does the Indian Press know that Hitler killed six million Jews in cold blood?).

Until recently, nothing much had changed in India: the English-speaking press indulged in Hindu-bashing (and part of it still does today) and was faithfully copied by the western correspondents (who are still at it), most of whom are totally ignorant of India and turn towards Indian intellectuals to fashion their opinions.

It is thanks to this constant belittling that for a long time, the BJP had absolutely no chance in mainstream politics - remember how it got only two seats in 1984, while the Congress obtained an absolute majority? Fortunately, there has been a change of heart in a section of the Indian Press, particularly since the Kargil war, when the Pakistanis treacherously took advantage of the Lahore peace process initiated by the BJP Government in February 1999, to infiltrate Pakistani soldiers disguised as *Mujahideens* on the Indian side of the Line of Control in Kashmir. The Indian soldiers performed very bravely in the face of tremendous odds and the Indian voter not only appreciated this bravery but also Prime Minister Vajpayee's restraint in not crossing over onto the Pakistani side of the LOC. This war reawakened in India a bit of the ancient *kshatriya* (warrior) spirit of nationalism, which is indispensable for a nation to grow and be self-confident. The voter also understood that it is important for India to have a strong army to defend the country's borders, its women and children and the values which India always upheld since Vedic times.

The rural voter who, it should be remembered, forms 80% of the electorate, votes with his HEART, although he may be in some way influenced by what the local language newspapers say

- which often take up blindly the opinions of the English speaking press. It is both a wonderful and terrible trait, because since 1947, this innocence has been taken advantage of by various sorts of politicians, who have utilised four different kinds of factors.

1. The adulation of film stars

Film stars are enormously popular in India and are akin to demi-Gods. Since the early sixties, various film stars, who had no political qualification, ended up as being Chief Ministers of the southern states - often with disastrous consequences. Because they needed a lot of demagogy to sustain their image of demi-Gods and had to resort to heavy subsidises - rice at Rs. two a kilo, free distribution of saris, free water for the farmers etc. - thus emptying the coffers of the states while they were in power. Furthermore, they were often authoritarian, corrupt and did not give back to the people one inch of the adulation and respect they enjoyed.

2. Dynasty and sycophancy

Dynasty is a western word which does not really correspond to the Indian reality. And sycophancy should rather be called the "bhakti "spirit which is a 5000 year old spiritual tradition in India. This extraordinary "bhakti" tendency of Indian people means that they tend to worship anybody whom they feel has an aura about him, or her, no matter his or her personal faults, no matter if he or she is a fraud - or half a fraud. It's a marvellous principle and it has worked for millenniums in the *Guru-Chela* (guru-disciple) relationship - you surrender to divinity in your human guru and through him you attain realisations if your surrender is sincere. But it does not work in politics because politicians do not even have a gram of the aspiration and realisations of gurus.

3. The "Shakti" phenomenon

There is also amongst Indians of the subcontinent a very strong tradition to worship the female element of the Divine, who takes up many forms: *Mahakali, Mahalaxmi, Mahasaraswati, Maheswari*, etc. It's a bit of a paradox, because Hindu women in India can also be persecuted, but nevertheless, it has always played an important role in the history of the country: there are more women MPs in India than in France for instance. It is this *shakti* phenomenon which allowed Indira Gandhi to govern with an iron hand this male-dominated country for nearly twenty years; and this tradition has even survived in the neighbouring Islamic states, such as Pakistan or Bangladesh - witness Benazir Bhutto or the two Bangladesh Begums.

4. The Aryan myth

According to the theory of the Aryan invasion, which is still taken as the foundation stone of the History of India and which was actually devised in the 18th and 19th century by British-related linguists and archaeologists, the first inhabitants of India were good-natured, peaceful, dark-skinned shepherds, called the Dravidians, who had founded what is called the Harappan - or Indus Valley civilization. They were supposedly remarkable builders, witness the city of Mohanjo-Daro in Pakistani Sind, but had no culture to speak of, no literature, no proper script even. Then, around 1500 B.C., India is said to have been invaded by tribes called the Aryans: white-skinned, nomadic people, who originated somewhere in Western Russia and imposed upon the Dravidians the hateful caste system. To the Aryans are attributed Sanskrit, the Vedic - or Hindu religions, India's greatest spiritual texts, the Vedas, as well as a host of subsequent writings, the Upanishads, the Mahabharata, the Ramayana, etc...

This myth divided India for ever and pitted against each other the low caste dark-skinned Dravidians and the high caste light-skinned Aryans, a rift which is still enduring. The Muslim invaders, the European colonisers, the missionaries and finally the Congress, each exploited to the hilt for their own selfish purpose this artificial divide, as recent linguistic and archaeological discoveries are proving that there probably never was any Aryan invasion.

Voting with the heart is a unique quality and it is this innocence, these spontaneous tendencies of *bhakti* or *shakti* in the rural Indian which make the greatness of India, its "sanatana dharma" and not the pompous, secular, left-leaning intellectual in the comfort of his flat in New Delhi or Bombay. No, what has to be changed is the SYSTEM which allows power-hungry politicians to exploit this purity of heart of the rural voter. As Danielou wrote in his History of India: "on top of the Partition tragedy, there is the other calamity of modern India namely the post-Independence leadership, which chose to turn its back on most of its ancient institutions, social and political, and adapted blindly and completely the British system, constitutional, social, political, judicial and bureaucratic". And as India's Great Sage, Sri Aurobindo, also reminds us, "In ancient times, there always was a strong democratic element in India, which certainly showed a certain similarity with Western parliamentary forms, but these institutions were INDIAN".

India should then go back to the wisdom and the innocence of what constitutes the base, the soul and the essence of this country: the rural masses. And like in ancient times, but couched in modern forms, the rural voter should elect what he knows directly: the *panchayat* leaders of his village, town or community; in turn these leaders will elect those who will represent them at the state level and so on until the top. So that so much money and time are no more wasted on useless elections which throw up the same old politicians. Thus, the wisdom of India will go once more from bottom to top - and not from top to bottom as it is now.

The author, who has lived in India for thirty years, is the South Asia correspondent for "Le Figaro" France's largest circulation daily and has published two books: "Rewriting Indian History" (Vikas, New Delhi) and "Un Autre Regard sur L'inde" (Editions du Trident, Pans, Geneva). The views expressed in the article are solely of the author's and do not necessarily reflect those of his newspaper or our journal.

True colours

By Francois Gautier
August 20 2003

If you are looking for the right type of Hindu - one who is neither too fanatical nor too ritualistic, but is liberal minded, speaks good English, is able to interact with westerners; in short, a secular Hindu - then here is one: His Holiness Swami Agnivesh, chairperson of the United Nations Trust Fund on Contemporary Forms of Slavery; chairperson, Bandhua Mukti Morcha (Bonded Labour Liberation Front); and, general secretary, Bharatiya Arya Pratinidhi Sabha

Indeed, if you conduct a search with his name on the Internet, you will come up with exactly 4,345 hits - all to his credit. Swami Agnivesh is fighting on every front: For the Dalits, against bonded labour, for the underprivileged, against child labour, for oppressed women, against big dams, for minorities, for the holy cow... He is networking with various religious leaders of all major faiths, women's organisations and social-political activists in their effort to carry out anti-liquor movements throughout India; he is strengthening the Arya Samaj movement to fight against various forms of casteism, communalism, religious obscurantism and other social evils. He has been actively involved in assisting women's movement with a view to ensuring their equal participation in all walks of life...

Indeed, Swami Agnivesh's official biography reads like a virtual who's who. He has, to his credit, various published books like Vedic Socialism, Religion, Revolution and Marxism, and has published various articles on national, social and political issues in leading newspapers and magazines. He was the chief editor of Rajdharma, a fortnightly magazine, and Kranti Dharma, a monthly magazine. He has been awarded the Anti-Slavery International Award, London, 1990, and Freedom and Human Rights Award, Berne, Switzerland, 1994. He has been striving to establish a liberal, egalitarian society based on tolerance and mutual accommodation and coordinating efforts under the banner of 'Religions for Social Justice'.

Try to find a counterpoint to his stands, an article adverse to him, any piece of criticism... it would be impossible: There are none. Swami Agnivesh is a beacon of virtue, he is the West's ultimate answer to all the problems afflicting India, and this is why he strides all over the world, giving talks to rapt audiences on the evils of Indian society in New York, Manila, Paris, Tokyo, Montreal, Geneva... you name it. The trouble is that whenever you see someone who projects himself or herself as perfect, seek out the shadows, because nobody can be that good.

If you look a little closely at Swami Agnivesh's actions and words, you will quickly realise that his first target is what he calls "Hindu fundamentalism". He has, for instance, undoubtedly with

good reasons, very strong opinions about the Sangh parivar: "Even if we forget the Mahatma's ideals, we should never forget who killed the Mahatma." Or, "It is a medical analogy that explains the present convulsions (within the Sangh parivar) best - that of de-worming - when the worms in their final twitch of desperation release their poison." Strong words, indeed.

The unforgivable rioting by Hindus against Muslims in Gujarat went a long way in supporting Swami Agnivesh's theories on the Sangh parivar (except that there seemed to have been a lot of middle class, even Dalit Hindus). Subsequently, in a book written in collaboration with Reverend Valson Thampu, Harvest of Hate: Gujarat Under Siege, he makes a deserving attempt at recording in exacting details the plight of Muslims at the hands of raging Hindus during the violence.

However, it is not exactly balanced: The first mention of the burning of the Sabarmati Express, which after all triggered the whole thing, only comes on page 37, merely giving the Muslim version of the story: "The so-called kar-sevaks ordered tea from the Muslim vendors and forced them to shout 'Jai Shri Ram', before serving the tea; and those who refused to oblige would be roughed-up." Why does the good Swami not mention that in 1991, in a Godhra madarsa, all the Hindu teachers who were voluntarily tutoring the children, were massacred? Or that today the Electricity Board is afraid to go in Muslim areas of Godhra, where 80 per cent of electricity is illegally tapped?

If you continue to scrutinise Swami Agnivesh's deeds, you will discover that he has strange bedfellows. True, he chooses his allies in secular spirit: Christians, Dalits, Muslims... all of this is wonderful, except that many of them are avowed enemies of India and often work abroad to belittle its image. Indeed, Swami Agnivesh is often quoted in the Pakistani newspaper, Dawn, or on the website of the very aggressive Christian Mission Frontiers, where he says: "The appropriate terminology, therefore (to designate these Hindus), is 'Hindu fascists' or 'fascist Hindus'." You will also find him in the now defunct tehelka.com, which declares this about him: "Gujarat does not symbolise Nazi Germany, though Swami Agnivesh in a recent TV discussion was not too far wrong in suggesting that it now emerges as a laboratory for the Sangh parivar's governance experiments with human, and human rights, violation of minority communities."

It is good that Swami Agnivesh seems to have taken up the cause of the Muslims: Indeed, he is widely quoted by Islam on Line, or Islamic Relief about his views on Hindu fascism. But does he have to go as far as saying: "It is incredibly sad, how the Muslim community seems almost wholly abandoned by the rest of the country?" Or: "Can we really blame the Muslims of Gujarat if they come to prefer Dawood Ibrahim to Narendra Modi?" Ultimately, such statements will only strengthen Muslim extremists, incite moderate Muslims to become jihadis; his words are so anti-Hindu that they might even prompt moderate Hindus to support the Bajrang Dal, a most counter-productive result, which we are sure, is not the good Swami's intention.

At the end of the day, we would like to think that Swami Agnivesh is a misguided activist who overreacts in his enthusiasm. But nevertheless, he really seems to be too good to be true. There is an element of negativity in him, a total lack of positivism, which make us slightly uneasy. We all know there are unforgivable aspects of Indian society, such as untouchability, child marriage, poverty, or child labour... But what about the wonderful sides of this ancient and great civilisation, which still harbours one of the most tolerant and liberal spirituality of the world, which has given refuge to all the persecuted minorities in the world, from the Jews to the Parsis, from the

Armenians to the Tibetans?

There are today's saints such as Sri Sri Ravi Shankar, who are trying to reform Indian society, but with love and practical tools, not by hammering at it and lowering its image in the eyes of the world. Are then Swami Agnivesh's orange robes and turban a disguise, a lure with which he can hit out more freely at his own culture? Will the real Swami Agnivesh please stand up and show us his true colours?

Dislike of the Christian world towards Hindu India -Interview with Francois Gautier
By Rajeev Srinivasan
Rediff on the Net
http://216.32.165.71/news/1999/feb/12rajeev.htm

'There is an unconscious militant dislike of the Christian world towards Hindu India'

Francois Gautier *is the South Asia correspondent for* Le Figaro, *one of France's most respected newspapers. He has lived in India since 1971, and has been associated with Auroville in Pondicherry for much of that time. He has strong views on India, as can be seen in the following.* **Rajeev Srinivasan** *interviewed him by email.*

Could you tell us a little about your background, for example your education and upbringing?

I was born in Paris in 1950. I had a strict upper-class Catholic education but I never really fitted in the system and revolted against it quite early. Thus, I was sent to many famous boarding schools all over Europe, from which I was regularly kicked out! My family wanted me to be a businessman and I attended an American business school in Paris called IDRAC, but my interest was in writing and I quit to work in a small newspaper, which quickly folded; then I wrote the script of a film for a friend (whose father, a famous film director, had given him 30,000 francs to do his own film). Needless to say, the film was never released and soon after, I left for India: I had just turned 19.

Have you worked with anybody other than *Le Figaro*?

When I reached India, I stopped writing for a long time, except my own diaries and I went into other spheres -- meditation and gardening, for instance! In 1982, at the occasion of the Asian Games in Delhi, I chanced upon an article (*on the Asian Games*) in a French newspaper. It had all the usual clichés on India: poverty, fakirs, Mother Teresa... So I wrote a letter of correction to the editor; and he offered me to write an article, which I did. And then another article followed and another and another...

I then started writing and photographing for different publications and finally ended-up being the correspondent in South Asia, for the Geneva-based *Journal de Geneve*, which at one time used to be one of the best international newspapers in Europe. Five and a half years ago, I switched to *Figaro,* for which I now work exclusively, except for the occasional photo feature (on kalarapiyat for instance).

How did you become interested in Indology?

Indology grew on me the moment I started getting out of Auroville (which is a bit of an island in the midst of India). In fact I would say that India grows on those (Westerners) who LIVE in India in whatever field (dance, music, spirituality, crafts, photography -- but not journalism). Also I have an interest in spirituality and it opens up so many different areas of Indian life.

You are married to an Indian, aren't you? Do you have other roots in India now?

I have been married nine years to Namrita, who is from Delhi (mother is Hindu, father Sikh). Being married to a "daughter of India" is a natural complement of my being in this country for 30 years. My roots are very much in this country, even though I remain a Westerner. But I have no intention of going back to France, except for yearly visits to meet my family.

What is your relationship to Auroville?

I came to India with the first caravan for the international city of Auroville -- and even though I spent seven years in the Sri Aurobindo Ashram Pondichery, because I was immediately attracted by this totally Indian and spiritualised atmosphere (lots of Westerners in Auroville), my dedication is to Auroville, where I have spent most of the last 22 years. It is this ATTEMPT at human unity which makes Auroville great (because so far, we cannot boast of many achievements!) and the fact that such a place exists and that it is in India (where else could it be but in the land of great tolerance and spiritual experiment?) is a sign of hope for the rest of humanity.

I have read excerpts from Rewriting Indian History on the web at www.hindu.org, the site of Hinduism Today. What is your relationship if any, with Hinduism Today?

No direct relationship with them. Sitaram Goel, publisher of the *Voice of India* (*For a long time, Sitaram Goel and Ram Swarup, who just passed away, single handedly defended Hinduism in the face of the Marxist-Christian-Muslim onslaught in India*) had read some of my articles in *Blitz* magazine and asked me if he could publish a series of them under a book form. I answered that I would rather write the book from scratch and thus was born *The Wonder That Is India.*

Later, *Hinduism Today,* a remarkable set-up, which for the first time in the history of Hinduism is attempting to rationalise and gather together this great knowledge to present it to the world, offered to put it on their site in the net.

You take exception to A L Basham's *The Wonder that was India:* because it thinks of India only in the past tense?

Not only does he think that India was great solely in the past, but his idea of India's greatness is very selective; furthermore, he subscribes to the usual Western slogans: the eternal clichés propagated by a few Christian missionaries and "enlightened secularists" on the Indian caste system. "The Aryans anointed themselves the ruling class (= Brahmins and Kshatriyas), while the poor conquered Dravidians (Harappans), became the slaves, (= Vaishyas and Shudras)". Or: "As they settled among darker aboriginals, the Aryans seem to have laid greater stress than before on purity of blood and class divisions hardened..." (*pp. 36, The Wonder that was India*). Or else this monstrosity: "...In the Vedic period, a situation arose rather like that prevailing in South Africa today, with a dominant fair minority, striving to maintain its purity and its supremacy over a darker majority"... (*pp. 138, The Wonder that was India*). Poor India, being granted the honour by

Basham, of being the founding father of racism! But it is thus that Basham lays the ground for his later theories on what he calls Hindu imperialism.

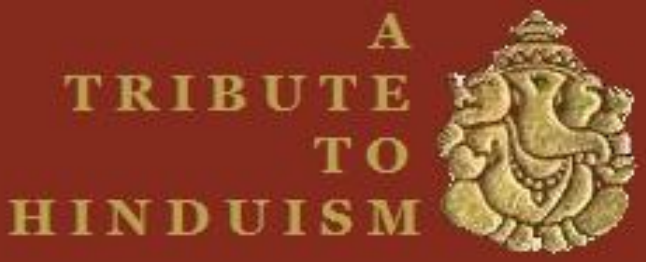
You quote widely from Koenrad Elst (whom I have interviewed in the past). Isn't Elst -- and for that matter Dr David Frawley and Dr Subhash Kak -- dismissed by some as not serious scholars?

It is very unfortunate that Konrad Elst is not able to publish his writings but in Hindu oriented magazines or publishing houses, for he is not only one of the most thorough and knowledgeable scholars on India, but also, because he is a Westerner, he is able to perceive things that Indians themselves, blinded by two centuries of colonialism and 50 years of so-called secularism, do not see any more. I hope that History will grant him his due place in the fight for Indian Renaissance.

All are very rigorous scholars -- the scope of Elst's knowledge is amazing. But they have been going for a long time against the mainstream thought of this country, which was initiated first by the Britishers and later taken on by Nehru and the intellectual left based in JNU, all of which were predominantly anti-Hindu and which strove to eradicate the genius that was India.

What other books have you written? Do tell me more about them.

I have written *Rewriting Indian History*, published by Vikas. In February *Un autre regard sur l'Inde (A Different look at India)*, will be published in France and Switzerland by Editions du Tricorne and I have just finished a novel called *The last caravan to India* which I hope to publish first in France and later in India, after getting it translated in English.



What are you currently working on?

I am working on two books in collaboration with Indian photographer Raghu Rai. The first one is on kalaripayat, which as you may know is the ancestor of all great Asian martial arts, such as judo and karate. This Kerala-based multi-discipline martial art travelled to China and later to Japan with Buddhism and brought to these countries not only martial knowledge, but also medical science which gave birth to acupuncture in China. The other book is about the French influence in India, past and present.

Your views on the discrediting of the Aryan Invasion Theory. Isn't it a bit far-fetched to suggest that in addition to not being invaded, in fact Indian tribes went westwards?

The massacres perpetuated by Muslims in India are unparalleled in history, bigger than the Holocaust of the Jews

The Symbol of Ayodhya
François Gautier
http://www.swordoftruth.com/swordoftruth/articles/revelation/revelation1.html

How many of those who have lambasted so many times the "Hindu fundamentalists" and lamented the destruction of the Babri Masjid mosque as the "death of secularism in India", have been to Ayodhya? (not Faizabad, mind you, which is Ayodhya's twin Muslim city). When one arrived in Ayodhya before the destruction of the mosque, one was struck by the fact that it was a Hindu town "par excellence". More than Benares even, it is dotted everywhere with innumerable temples; it has all these old Hindus houses and this lovely river with its ghats which runs through the lower town. And then, forlorn on the top, there was this lone mosque with its two ugly domes, which looked so out of place and unused, that any one with a right sense -and that includes the Muslims- should see that it was not worth making an issue of. The destruction of the Babri Masjid still evokes such fiery reactions, that the importance of Ayodhya has been totally overlooked: Ayodhya is a symbol, through which two India's are facing each other. And the outcome of their confrontation will shape the future of this country for generations to come.

The first India wants to be secular and unite together through an egalitarian, democratic spirit all the minorities, ethnic groups, religions and people of the country. But the question is: what would be the binding element of this kind of India? Secularism, says the first side. But secularism has a different meaning for each one. For the British, it was a convenient way to divide and rule, by treating each Indian community on par, although some were in minority and others in majority, thereby planting the seeds of separatisms. For the Congress Party, it has always meant giving in to the Muslims' demands, because its leaders never could really make out if the allegiance of Indian Muslims first want to India and then to Islam - or vice-versa. And for India's intelligentsia, its writers, journalists, top bureaucrats, the majority of whom are Hindus, it means, apart from belittling its own religion and brothers, an India which would be a faithful copy of the West: liberal, modern, atheist, industrialized, intellectual and western-oriented.

Moreover, what makes India unique? Certainly not its small elite which apes the West; there are millions of these western clones in the developing world who wear a tie, read the New York Times and swear by liberalism and secularism to save their countries from doom. Nor its modern youth, whom you meet in Delhi's swank parties, who are full of the MTV culture, wear the latest Klein jeans and Lacoste T Shirts, and who in general are useless, fat, rich parasites, in a country which has so many talented youngsters who live in poverty. Not even its political, bureaucratic and judicial system; it's a copy of the British set up, which is not fully adapted to India's unique character and conditions. What then?

The second India which is confronting the other through the Ayodhya issue is, of course, the India

of the Hindus. When Imam Bhukari states that "we (the Mughals) gave everything to this country, its culture, its manners, its arts, and the Hindus by destroying the Babri Masjid showed how little gratitude they have", apart from making a pompous declaration, he proclaims exactly the opposite of the reality. Because the truth is that not only Hinduism is what makes India unique, so different from all the other nations of the world, but it is the single most important influence in Indian history. In the words of Sri Aurobindo, India's Great Sage and Modern Age Avatar: "The inner principle of Hinduism, the most tolerant and receptive of all religious systems, is not sharply exclusive like the religious spirit of Christianity or Islam...it is the fulfilment of the highest tendencies of human civilisation and it will include in its sweep the most vital impulses of modern life.."

And indeed, if you look at India today, you find that Hinduism has permeated, influenced, shaped, every part of this country, every religion, every culture. Be it the Christians who are like no other Catholics of the world, or Indian Muslims, who whatever they may say, are utterly different from their brothers in Saudi Arabia. But Hinduism is too narrow a word, it's a corruption of the original word "Indu", for true Hinduism is Dharma, India's infinite and eternal spiritual knowledge, which took shape into so many varied expressions throughout the ages, be it the Vedantas, Buddhism, or the Arya Samaj and which is today still very much alive in India, particularly in its rural masses, which after all constitute 80% of its population. And the words of the great Sage still echo in our ears: "Each nation is a shakti or power of the evolving spirit in humanity and lives by the principle it embodies. India is the Bharata Shakti, the living energy of a great spiritual conception- and fidelity to it is the very principle of her existence...But we must have a firm faith that India must rise and be great and that everything that happened, every difficulty, every reverse must help and further the end..."

What one has to grasp is that the issue of Ayodhya only makes sense when the immense harm the Muslims did to India is not negated, as indeed it has been and still is today in the official History books in the West - and sadly in India also. The Muslim jehad against Hindus, alas, continues even today, whether in Kashmir, where the last Hindus were made to flee in terror, or in Bangladesh and Pakistan, where the crowds still regularly go on rampage against Hindus and their temples (as told by a Bangladeshi Muslim herself, Talisma Nasreen). It is in this light, that it becomes extraordinary for an impartial observer to see today that when for once, the Hindus wanted to displace, not even to destroy, ONE mosque and rebuild the "temple", which they believe was built in this particular place, for one of their most cherished Gods, the one which is loved universally by all, men, women, children, THEY were treated as rabid fundamentalists. The great Mughals must be laughing all the way down their graves! What a reversal of situation! What a turnabout of history! And when the mosque was destroyed, it evoked such fiery reactions, such pompous, overblown, sanctimonious, holier-than-thou, atrocious, ridiculous, sly and totally undeserved outrage, both within India and in the Western world (who should be the last one to give lessons to India), that the importance of Ayodhya as a symbol has been totally overlooked.

The obvious trap is to think that the demolition of the mosque in Ayodhya is something to gloat about and that it is the duty of all good Hindus to see that other important mosques at Mathura, Vanarasi, or elsewhere, be also razed to the ground; or that all cities with a Muslim name be renamed with a Hindu one. This is not true Hinduism, which has always shown its tolerance and accepted in its fold other creeds and faiths. Indeed a true "Hindu" India will be secular in the correct sense of the term: it will give freedom to each religion, each culture, so that it develops

itself in the bosom of a Greater India, of which dharma, true spirituality, will be the cementing factor.

Nevertheless, the destruction of the Babri Masjid, however unfortunate, has made its point: the occult Mughal hold over Hindu India has been broken and centuries of Hindu submission erased. Hindus have proved that they too can fight

Whose Kumbh is it?
Sagarika Ghose
http://www.indian-express.com/ie/daily/20010201/ied01022.html

I went to the Kumbh Mela as a journalist, thirsting for the extraordinary and the impossible. The spectacle of huge numbers, ganja-crazed trishul-waving Naga Babas and a river of thrilling filth. What a superb opportunity for purple prose! What a moment to demonstrate my metropolitan bafflement at a hot-eyed fervid throng. What picturesque Orientalism I might conjure up with my oh-so-potent art. I might write of the ``capering clowns of karmic comedy", or of ``dreadlocked hot-rodders riding a moksha-highway". I might write of the Irrational Subaltern, the Lunatic Other, the Bizarre Alternative or the Intoxicated Multitude.

But instead of excitement and stupefaction, I found my grandmother sitting on the banks of the Sangam. There she sat, an old woman who looked just like my dead òf40ódidima, with her paan supari spread out in her lap, the familiar smell of dhoop wafting out from her sari, surrounded by the cosy smells of my family pujas. I heard the quiet bells of everyday workaday piety. How she used to whisper ``Durga Durga" as I left for school in the mornings. The bamboo quills that she doled out parsimoniously during Saraswati Puja.

In a million strong crowd, I found little households carrying out their own customary rituals. I saw the remembered practices of faith that are handed down in every family. Amidst the differences, there were many unifying memories of my playful and merry religion. I was almost shocked at our shared inheritance of custom and belief: batasha and agarbatti, payesam and three blades of grass. And I saw them played out on a banana leaf sitting cross-legged on a clammy dusty riverbank, opposite my grandmother. The Irrational Other? The Great Indian Freak Show? But this was granny, whimsical prayer-chanting granny with her small boxes of this and that and her never-ending stories. ``No, no," I wanted to scream at the cameras, ``please don't convert my granny into a freak! Please don't transform these tiny silent beliefs into a demeaning spectacle of the bizarre with a price tag, for a shopping mall."

I saw no clichetically frenzied mob. Instead I saw serious patriarchs and gentle aunts, grave with intimations of mortality. This was no frightening stampeding crowd. Instead, I saw the dignity of the pilgrim in his unsmiling communion with the afterlife and in the struggles to overcome personal tragedy. I saw faces that were introspective, mature with the acceptance of death. ``òf40óAkeli ayee hai, bachchi," a woman offered me marigolds, ``òf40óphool lekar jaa."

Harvard-educated Srivats Goswami, of the Gambhira ashram, asked: ``What is the press doing to the Kumbh? Is the Kumbh a spectacle? Is it a circus of loudspeakers and flashing cameras? The Kumbh is a place of meditation, of courtesy and of affection. The Kumbh is where

you realise that The Impossible is not external to you, it exists side by side with the smallest domestic tasks. Cheek by jowl with our everyday lives, just next to our daily being, churns the vast secret galaxy. You need not seek out the high mountains and deep forests. Just press your hand against the invisible glass, and feel The Impossible, sitting right by you."

And there among the Kumbh families, I too felt the closeness of the Extraordinary. Not in the grotesque images of ``abnormal'' sadhus, but because I saw how easily a magnificent river and an auspicious sun can be bound up in my grandmother's very normal pallu. **I wept that a colonial education has taught me to view the quiet depths of my own family as nothing but ``colourful oddities''.**

(The writer works for Outlook magazine and has authored the novel The Gin Drinkers.)

Mark Tully pulls out all stops for Hindutva

By Bishwanath Ghosh

The Asian Age - August 27, 1997

The BJP has found a new advocate in Mr Mark Tully, the former BBC correspondent, who feels that Indian civilisation has a Hindu base to it and that Hindus should proclaim their identity with pride.

The party is so thrilled with one of India's famous foreigners endorsing its line that it has devoted seven pages to Mr Tully's views in a recent issue of its mouthpiece, BJP Today.

The former BBC correspondent has expressed these views while addressing the National Hindu Students Forum in Britain. "I believe that Indian has to have some way of expressing its respect for its own civilisation and accepting the fact, and I have said this publicly many times before, that it is, and you can argue, whether there is such a thing as Hinduism or not, scholars will always argue but most Indians feel that there is a Hindu base to this civilisation," says Mr Tully, who has authored several books including No Full Stops in India.

Mr Tully is considered by many in the BJP as more Indian than Indians, and they are extremely happy that the well-known foreign journalist has expressed such an opinion at a time when "many educated Indians were wary of endorsing BJP's Hindutva philosophy."

Mr Tully even comes to the rescue of the BJP: "As soon as you talk about Hinduism in Bharat, you are immediately, and I have had this said to me many times, been accused of or told that you are BJP or RSS or something like that. Now in my view the BJP is a political party.

"But I do profoundly believe that India needs to be able to say with pride, 'Yes, our civilisation has a Hindu base to it.' And for Hindus to be able to say with pride that they are Hindus."

Mr Tully says he was aware that this was the slogan of the RSS in some places, but he still believed that it was "right and proper" for both these things becoming part of India's life.

He opined that the genius of Hinduism, and the very reason of its survival for so long, was that it does not stand up and fight. "It changes and adapts and modernizes and its absorbs and that is the scientific and proper way of going about it as well.

Why is Christianity in so much trouble at the moment? Because it is so difficult for it to adapt," says the celebrated television journalist. Saying that Hinduism would prove to be the religion of the next Millenium. Mr. Tully added it should be proud that there are 125 million Muslims, who can do namaaz whenever they like, and that there are Christians who rejoice that St. Thomas probably came to India and 20 million of whom flood to the churches.

A vision for revision (History as taught in Pakistan)

By S Gopikrishna

http://www.rediff.com/news/2000/sep/14gopi.htm

The year is 712 AD

As the rays of the sun usher in the morning, a band of valiant soldiers sweep across the farmland on horseback. Behold the frenzied look in their eyes, listen to the hooves of the horses. Observe the gleam of the soldiers' swords by the light of the torches used for illumination and setting villages ablaze.

They rob, but are not plunderers...

They kill, but are not murderers....

They destroy, but are not desecrators...

For they are Allah's chosen warriors. What they destroy is ignorance, what they are ushering in is enlightenment...

Thus, in 712 AD, did history begin...

I can see you scratch your head and ask yourself as to how history can suddenly "begin" at a discrete point in time, but trust me! According to the enlightened scholars writing textbooks in Pakistan, history did begin in 712 AD when Muhammad Bin Qasim's hordes swept into Sindh.

While we poor Indians are in the process of weighing evidence to decide whether the Aryans were indigenous or foreign to India, a brilliant and elegant solution has been found to the question in Pakistan.

The question is simply not worth our time. After all, why bother about anything taking place before the advent of Islam? Anything and everything that happened before that is not worth knowing, remembering or discussing.

Talk about simplistic solutions by simpletons...

Pakistani textbooks and Pakistani "scholars" exemplify the phenomenon of logical skills atrophying because of an overdose of religious instruction. Like the genius who wrote to the Dawn, (a leading Pakistani newspaper) about why the government should destroy all vestiges of Harappan civilisation. According to this savant, all existing archaeological evidence should be destroyed and a sign installed in its place: "Behold the fate of idolaters!"

My only reaction was: "Behold idiocy in its pristine beauty!"

In fact, history as we understand it, is no longer taught at the school level in our neighbouring country. It has been long replaced by something called "Mu'ashrati Ulum" (social studies) and "Mutala'a-I-Pakistan" (Pakistan studies), the latter succeeding the former at the middle school to high school transition. Both form an interesting mosaic of geography, history, religious studies, half-truths, quarter truths, and plain fiction woven together in a tapestry as complex as that of an Iranian carpet minus its charm.

This exceedingly complex analytical technique, patented and propagated in Pakistan, converts a lemon into something as unrecognisable as a melon. A perusal of such textbooks enlightens to the following conclusions, which for some mysterious and unfathomable reason have evaded us simple and straight thinking folks in India:

1. The Congress was founded by Hindus in 1885 for ensuring that India would continue to be in anarchy.

Explanation: Everybody knows that Allan Octavian Hume founded the Congress party. The million dollar question is: "How does he become Hindu?"

Well, you see, the Hindus and the British colluded and intrigued with each other to replace the benevolent Mughal emperors (Yeah, Aurangzeb was very benevolent!) with tyrannical British rule. Given the intimate connections that existed between the Hindu back-stabbers and the British usurpers, it can be safely concluded that they constitute two faces of the same coin. Thus, there is nothing wrong in labelling Hume a Hindu.

The reference to anarchy comes from the fact that India plunged from its "exalted status" of a pillar of the Daar-Al-Islaam (such enlightened countries where Islam reigns supreme) to the lowly Daar-Al-Harb (those good for nothing countries where the governments remain ignorant of Islamic principles) when Bahadur Shah Zafar was forced to make way for the Brits in 1857.

Thus, when the Hindus were intriguing to grab power from the British, they were simply looking to replace one kind of anarchy with another. Thus, anarchy reigns supreme in India

2. Adi Sankaracharya, the Hindu philosopher, was influenced by Islam in propounding his theory of Monism (Advaita).

Well, Islam came to India in 712 AD. Sankaracharya, as we all know, lived for some time in Kashmir which was one of the first places to receive Islamic enlightenment. Ergo, how can Sankaracharya not have been influenced by Islam?

If you are still sceptical, just remember that Hinduism lacks the elegance of Islam's monotheistic tenets. Since monotheism is a feature of Sankaracharya's works, it is evident that he copied them from Islam.

3. It was the low caste Hindus who converted to Islam en masse as a result of the atrocities of the higher castes.

Which begs the question: "Er, ahem...How about those who were forced to convert as a result of their inability to pay the jazia?"

Benazir Bhutto herself suggests on Page 26 of her autobiography Daughter of the East that her ancestors were probably Rajput converts who became Muslims in the 18th century. Now, if the profound revelation about low caste conversions were true, we would have to conclude that the Rajputs were a "low caste" who suffered atrocities at the hands of the higher castes.

If people really did convert to Islam in order to escape the curse of caste, why do we find caste being bandied about in Pakistan even now? An examination of the matrimonial section on page L of the 'Advertiser's Section' of the edition of the Dawn dated August 20, 2000, reveals the services of a certain Mrs Asmat (with a Lahore telephone number) who can be contacted for "compatible matches of educated, beautiful boys of all castes and sects." On the same page, we find another Mrs Naqvi (again with a Lahore telephone number) who specialises in "Syed, Sheikh, Arrain, Rajpoot boys and girls."

Er, I thought Pakistan was an enlightened society where caste was a redundant abomination, which was the lot of us Indian ignoramuses... The Pakistani genius for telling tales and self-promotion in the name of history would leave even the most experienced of advertising executives dumb founded.

The art of story telling has become a cherished and hallowed tradition in Pakistan, spreading its tentacles to the top echelons of government. As an example, we have the former prime minister, the (not quite) Honourable Benazir Bhutto. On pages 26-28 of the aforementioned autobiography, she talks about the exploits of her ancestor, a certain Mir Ghulam Murtaza Bhutto, who was so handsome that "all the women in Sindh fell in love with him, including a young British woman. In those days, it was haraam (forbidden) for a brown-skinned man to fall in love with a white woman." It was this transgression that drew the wrath of the local British army officer, Benazir alleges.

"Col Mayhew heard about this forbidden relationship and sent for him," we learn.

"Mayhew screamed, 'How dare you encourage the affections of a British woman! I'm going to teach you a lesson,' and started to whip him when Murtaza `seized the whip and lashed the colonel instead'."

The narration would certainly make one bristle with seething contempt for British racism. Indeed, patriotism, racial pride and the revenge extracted would warm all our breasts. Who wouldn't cheer when this Murtaza, with an agility belying the best of the Bollywood boys, thrashed the racist Mayhew black and blue?

Very impressive, indeed!

Till you read Professor Stanley Wolpert's version of the same episode as narrated in his Zulfi Bhutto of Pakistan: His Life and Times. Stanley Wolpert is an authority on the modern history of the Indian subcontinent and has authored the section on modern Indian history in the Encyclopaedia Britannica. He accords Benazir (and her baba, the late Zulfikar Ali Bhutto) the unique honour of being named and denounced as liars.

According to the venerable professor, the lady who had set Murtaza's heart on fire was a simple desi, not a goree. Worse, the element of racism so prominent in Benazir's version is overshadowed by simple jealousy in Wolpert's narration. You see, this unnamed desi damsel who warmed

Murtaza Bhutto's heart had been hired by Mayhew for warming his bed. (Excuse my crude expression.)

Not surprisingly, the act of discovering his mistress and Murtaza Bhutto inflagrante delicto amidst their nocturnal trysts made Mayhew create mayhem. The element of patriotism in all the lashing and thrashing alluded to is as strong as melody in a peacock's call. It was the quintessence of a phenomenon accurately captured by the late Diana, Duchess of Windsor: "In a relationship, there is place only for two. Three people involved in a relationship make things a little crowded."

The whole point is, do the Bhuttos have to come up with such cheap exaggerations in order to increase their supposed sex appeal? Worse, do they have to put a patriotic spin on their sex appeal?

Anything goes as long as it serves the purpose of self-promotion. Mind you, it is only the concerns of the readers' attention and article length that prevent me from going beyond exposing the tip of the iceberg.

Well, you now know how Pakistani history works with respect to all periods, ancient, mediaeval or modern. It is a myth-maker's paradise. Revisionism and exaggeration are so commonplace that is difficult to find a book which desists from indulging in the practice. From the humblest to the highest, Pakistani historians possess a collective vision for revision. Indeed revision, as attempted in Indian history books, looks like a languishing molehill when compared to the mighty Pakistani mountain of tall tales.

Our educators and journalists have ignored the Pakistani forest in the process of identifying Indian trees (or should I say, herbs and shrubs) in their search for historical revision. They scream, rave and rant about the way history is being "engineered and manufactured" by the Government of India. Yet, you hear not a whimper or a whisper about revision in Pakistan, a process that has reached its zenith under the watchful and nurturing glances of a half a dozen regimes, starting from Marshal Ayub Khan onwards.

Will any kind soul explain to me as to why our "spokesmen" complain so much about revision in India while turning a Nelson's Eye to the Pakistanis merrily dedicating themselves to historical revision and carving massive mountains of myths in the process?

S Gopikrishna writes on India and on issues of pertinence to Indians from Toronto.

How the American press misrepresents India

By S Gopikrishna

http://www.rediff.com/news/2000/aug/23gopi.htm

How does an American journalist become an expert on India?

He opens his mouth wide open and puts his foot straight in.

"Whaddya speak in India? Gaun-dee?" the bespectacled student asked, ready to take notes.

"Excuse me!" I said, not quite understanding the question.

"Like… Isn't the language of India called Gaun-dee?" he repeated, with the air of a teacher rephrasing a question for a dull student.

"Gandhi! Gandhi isn't a language. Gandhi was a leader." I exclaimed.

"Oh really!" he said, with a quizzical look, "so whaddya speak there? Indian or Indonesian?"

Is the above event real?

Well, a budding journalist, majoring in Asian history and journalism from a renowned mid-western university, had the above conversation with me during an "interview" on India not too long ago. Before I discuss the nuggets penned by our American journalist friends about India, let me digress briefly and share with you an anecdote about their genius at substituting fact with fiction.

In the late forties, an enterprising American journalist journeyed to Bangkok to write an "insightful" article about that country of white elephants and spicy curries. His reports brimmed with information about the most exotic happenings conceivable -- of human beings who cohabited and consorted with the apes, underdressed women who lived on a staple diet of rice and curried ants' eggs and fanatically worshipped the royal family of Thailand. The royal family always posed for pictures without the queen mother because -- hold your breath -- she (the queen mother) had a bushy tail!

The news understandably caused a stir among journalists in the US. An army of journalists soon lined up at the Thai embassy for visas and tickets to discovering exotica that would catapult them to fame and a fabulous fortune. The puzzled embassy officials were aghast when they discovered the reasons for the spate in visa applications. They issued a statement to set the record straight -- the queen mother couldn't be seen in public because she had passed away ages ago.

The moral of the anecdote: Anything is right about countries where people aren't white.

Half a century later, have there been significant changes in the quality of reporting? As an example, let us examine the American (ie. North American) newspapers' reporting of facts (elementary facts) about Hinduism.

In 1994, at the onset of the plague in Surat, *The Washington Post* propounded the following hypothesis: Since rats are the cause of the epidemic, is there a specific reason for not killing the rats? Well, rats are considered to be so holy by Hindus that they would prefer to kill themselves over the rats.

Subsequent enquiries proved that the only grain of truth in this tall tale was that a certain deity called the goddess of rats, is worshipped in a remote temple in Rajasthan. This little fact was expanded, exaggerated and extrapolated into a conclusion that sounds comical, stupid and insulting.

Since nothing succeeds like sensationalism, the other American newspapers followed suit in reporting the incident, garnishing and flavouring the "Hindus worship rats" story till a mountain of Himalayan proportions had been built from the molehill. Despite numerous clarifications and demands for an apology, American newspapers had neither the courtesy nor the decency to issue one.

The venerable ***New York Times*** informed us in 1998 (in the course of its discussion of India's nuclear bomb) that the Bhagavad Gita venerates Shiva, the destroyer among the Trinity! Since the *Bhagavad Gita* is available on the Internet, search the text and discover for yourself how many times the word "Shiva" appears. In the 700 *shlokas* of the Bhagavad Gita, Shiva is mentioned 700 minus 700 times.

Not to be outdone, ***The Chicago Tribune*** declared Krishna to be a "goatherd" in January this year. A goatherd, eh! Given that India and snake-charmers are inseparable in the American imagination, I suppose we should thank ourselves that Krishna wasn't called a "snake-head". (Smugglers bringing Chinese immigrants on those rickety ships that appear periodically on the west coast are called "snake-heads".)

On Christmas Eve last year, ***The Toronto Star*** decided, (I suppose), that ten hands would prove a little unwieldy for goddess Durga and "downsized" her hands to a manageable eight -- "eight-armed fierce Hindu goddess Durga" was their description of the goddess.

Instead of heaping ridicule on them, why can't you write letters and correct the record? you ask. If you write a letter to the editors of any of these publications, consider yourself honoured if they condescend to reply, let alone correct the error. Since arrogance and ignorance are inseparable, your letter will probably end up in the shredder instead of the editor's desk. No matter how many letters you send them, you will discover that they are firm believers in the adage -- "Silence is golden."

Well, if you argue that accuracy in reporting on religions is difficult since grasping the finer points of another's faith is all but impossible, let us examine an issue far easier to comprehend: The geography of India. After all, the only "tool" that you need to study and understand the geography of India is an atlas.

Well, if an "experienced" journalist and a supposed South Asia specialist at that, declared to you that the Chinese got within 300 miles of Calcutta in 1962, what would you do?

Would you:

1. Ask for his mailing address so that you can send him a map of India?

2. Roll your eyes, cluck your tongue and ask him, "Will you ever learn?"

3. Encourage him to explore employment in other professions?

4. Nominate him for a prestigious award recognising journalistic achievement?

It turns out that the correct answer is **4.**!

Sounds crazy?

Well, let us examine the following excerpt from a book called ***War at the top of the world -- Clash for mastery of Asia*** written by a so-called "expert" on South Asia, a certain Eric Margolis. On page 214, we find the following:

"South Asia's rivers flow down from the Tibetan plateau. The headwaters of India's most important rivers and principal source of the groundwater that nourishes the continent including the Ganges, Brahmaputra, Indus, Chenab, Ravi, Yamuna, Gandak and the Saptakosi, to name a few, rise in Tibet. China has gained a death-grip over India's main supply of water."

Well, when I consulted three different atlases, I found that the headwaters of the Ganga and the Yamuna (Gangotri and the Yamunotri respectively) were in the Himalayan region of Uttar Pradesh. As for the Chenab, it originates in Himachal Pradesh, flows south and then north-west into Kashmir before entering Pakistan. The Gandak originates in central Nepal and flows into India. Since when have Himachal Pradesh, Uttar Pradesh and central Nepal amalgamated themselves into Tibet?

China gaining a death-grip over India's main supply of water or no, Margolis should certainly work hard at getting out of the death-grip of misinformation.

In a discussion on the Indo-China war on page 132, he reveals to us that the Chinese captured Bomdila, which is 300 miles from Calcutta. Consulting any map would make it very clear that any point 300 (as the crow flies) from Bomdila would leave you somewhere in Assam which in turn is hundreds of miles from Calcutta.

Given that the book is pregnant with factual errors such as the ones discussed, it becomes necessary to ask if Margolis can see straight, let alone think straight.

And how is the book released? To rave reviews.

How is the author of this tome rewarded? Well, he wins the SAJA (South Asian Journalists Association) Award for his writing on India.

Before I move on, let me highlight just one more nugget that I culled from this remarkable text. On page 205 of the aforementioned book, a discussion on nuclear technology enlightens us to the

fact that Tritium is an "element". Given his "discovery", shouldn't we write a joint letter to the nomination committee for the chemistry Nobel Prize requesting that Professor *Funda-gol* (oops, I meant Margolis) is to be rewarded for his efforts?

Of course, no discussion in this context is quite complete without referring to the exalted empress of erroneous embellishments -- **Madame Barbara Crossette.** Never averse to overlooking reality when it challenges her preconceived notions, she is the kind of journalist who manages to be "on the spot" in Kashmir, Karnataka and Kerala without getting facts correctly.

Her magnum opus on India, ***India -- Facing the challenges of the twenty-first century*** has more holes in it than a slice of Swiss cheese. A couple of the more obvious flaws are given below:

Her paeans of praise to Inder Gujral's performance as information minister before the Emergency -- his (alleged) ushering in of free speech, upholding high quality of reporting and not succumbing to political pressure -- overlook the fact that AIR came to be called "All Indira Radio" during his tenure. Gujral's being proclaimed the beacon of free speech is as pathetic as her allegations about India's "stealing" foreign technology to build bombs. Crossette also tears to bits the Communist Party of India (Marxist) -- which is Moscow supported. Would Comrade Jyoti Basu be amused if accused of clutching Kremlin's skirts?

Most (if not all) American reporters working in India, look up to Crossette as a role-model in view of her power and influence. She has thereby facilitated a perpetual contest amongst American journalists working in/on India for producing gibberish.

Welcome to American reporting on India -- a factory of fiction where the *dramatis personae* are more convinced of their expertise than anyone else.

Mythology as Weapon
By Frank Morales
http://www.hinduweb.org/home/dharma_and_philosophy/dharma/main.htm

The related terms "myth", "mythology", "mythological", etc., have had an interesting history and a very pointed polemic use. That the terms are rife with very negative connotations is doubted by very few. The way the terms are used today both within academia, as well as by the general public, is to denote something which is untrue, false, "primitive" (i.e., not European), a lie. Just the other day during a visit to the dentist's office, I saw a pamphlet on the table called "The Myths About Sexually Transmitted Diseases". The ultimate question that we, as committed Hindus, all need to ask ourselves is do we really want such powerfully negative terms also associated with the sacred stories, teachings and history of Sanatana Dharma?

Polemically speaking, one culture's "myth" is another culture's sacred history...and visa versa. The academic field of the study of "mythological" literature was started by 18th century European Classicists who took their misconceptions about their own Greco-Roman pre-Christian religious and cultural heritage and attempted to apply them to all contemporary non-Christian cultures - including that of Bharat. These founders of "mythological" studies were convinced, as is unarguably evident in their writings, that the realm of religious story could be clearly demarcated into two radically distinct camps:

1) "Myth", that is the primitive stories about gods, goddesses, spirits, demons, magic and mysticism etc. found throughout all of the indigenous and non-Biblical cultures of the world - all certainly no more than ignorant "pre-scientific" attempts by these heathen savages (THEIR words, not mine) to explain such mysteries as natural weather phenonema.

2) "History", that is Biblical literature and everything proceeding such literature to be found throughout the history of Europe and the post-Columbian Americas.

There is the wonderful saying that we have all heard, that "history" is written by the victors. Consequently, the stories of Noah's Ark, Abraham, Moses, the Judges, David, etc. are unquestioningly accepted by most European historians - and sadly by many Hindu historians! - as being incontrovertible and established fact. This, even though the evidence for these supposed historical facts are in many cases no stronger, or even less so, than the evidence supporting the historicity of the ancient stories of Sanatana Dharma. What these Western scholars and their Westernized Indian counterparts called the "mythical" Sarasvati River, for example, was discovered to be a concrete geological fact in our century by satellite photography; Krishna's "mythical" city of Dvaraka was, likewise, discovered off the coast of Gujarat about two decades

ago (anyone out there have a crane?).

Despite these facts, the Puranas, Itihasas and traditional histories of Bharat, unlike the Biblical "myths", are relegated by modern Western scholars to the misty realm of "myth". Bluntly: primitive fables. If you've guessed that what has brought this situation about has been nothing less than European racism and intellectual colonialism, coupled with a strong element of Hindu inferiority complex, you've guessed right! The terms "myth", "mythology", "mythological", etc., have been used as a powerful weapon by anti-Hindu bigots for decades as a way of delegitimizing Hindu beliefs and the Hindu way of life.

Whether such unscholarly use of these otherwise legitimate terms will be allowed to continue as a weapon against Hinduism is up to each and every person presently reading this. Such terms should be absolutely anathema to every sincere and self-respecting Hindu when speaking about the sacred stories of Sanatana Dharma. Our stories are not "myths". If we truly respect our religion, our culture, our selves, we must never use these terms again. Rather, we should do what many other formally oppressed non-Christian cultures have recently done (such as many Native American tribes), and call these "Sacred Stories". We can later, as informed Hindus, debate over the meaning of these stories - whether they are literal history (which many very clearly are), or meant to be taken allegorically, or whatever. But, please, let us all agree not to ever degrade our Sacred Stories again by calling them "myth".

Bhagavata Purana's Eternal Krishna

ACHARYA SHRIVATSA GOSWAMI

http://timesofindia.indiatimes.com/articleshow.asp?art_id=3704838

KRISHNA Dvaipayan Vyas was the great scholar and saint who had compiled the Vedic hymns, recorded the aphorisms on philosophy and metaphysics known as Vedanta Sutra, and finished the great epic of victory called the Mahabharata.

One day, the wandering sage Narad happened to meet Vyas and was not happy to see him looking forlorn. He asked, ''Why are you looking so lost, even after your great achievements?''

''A great achievement — that is precisely what I am looking for'', replied Vyas, ''I am not satisfied yet''. Narad advised him to sing the stories of Krishna, and Vyas began writing the Bhagavata Purana. In the Vishnu Purana, the Harivamsa Purana, and above all, the Mahabharata, the stories of Krishna had been sung by Vyas in considerable detail. Why, then, was Vyas dissatisfied? The answer lies in the Bhagavata Purana itself, where the essential Krishna is the one who dwells eternally in Vraja, the land of the cowherds around Mathura. The Mahabharata is concerned with Krishna outside Vraja, but Krishna as the embodiment of bliss manifests essentially in the lilas, plays and pastimes of Vraja.

Krishna's literary manifestation, rooted in Vyas's work, gives us his innumerable manifestations: In rituals and dramas, in paintings and songs, in frescoes and dances, and many other media.

The Bhagavata Purana and other works tell us stories of how the divine is always trying to break away from its divine fetters. When you are pervasive and omnipresent, how can you have the freedom to play? Being omnipresent, you are constantly watched by those who adore you, worship you and serve you. You need a disguise. The Lord tried several disguises in different animal forms, but those forms restricted his play, his lila, because with them it was not possible to relate to the other important partner of the game, humanity. He tried the trick of disguising himself as the half-animal and half-human Narasimha, but instead of getting the best of both worlds he got the worst: The animal kingdom and human reality were both alienated. Then it came to him; ''If I wish to play fully with my creation, and humanity is in the centre of that creation, I have to relate to it as human''. He tried various human incarnations, but in each of them he assumed the form of some special person: King, ascetic, or scholar. In these forms, a complete relationship with common humanity was not possible.

Krishna realised this and resolved that if he wanted to play, and to play fully, he needed a good playground and good playmates. In the best game, the players lose any other identity, and act only

as players in the game. Playing can be of two kinds, one within the rules and one without. When you start playing you have to follow the rules and the format, but when you grow as a player you play spontaneously, and the rules evolve as you play along. Krishna, when he came on a 'playing vacation' to Vraja, played both ways. The game of the Lord in the recreational weekend of this incarnation was to keep order in the arena called creation. Krishna came to Vraja, which was not a formal playground but a perfectly wild setting for an unwatched, carefree vacation. But since Krishna is also the supreme Godhead, he could not shirk his responsibilities. As he told his friend Arjun, he had to look after the welfare of his beloved devotees, and remove all the troubles and obstacles that get in the way of a good life for humanity. Even while vacationing in Vraja, he had to keep up his job of house-keeping. So Krishna as supreme Godhead took care of all the 'worldly' difficulties, the ones that create the problems in the world, and he did it playfully.

Krishna selected his playground and playmates very carefully. He was born in the royal family of Mathura, because he had promised Vasudev and Devaki that he would become their son, but as soon as this promise was fulfilled he acted on his priorities. He had not come down to be a king once again, so within moments of his appearance he started working on his agenda. The gods and the devotees — his parents Vasudev and Devaki — spoiled his vacation by worshipping him as God. So he moved from the formal world of grandeur and worship to the informal setting of play and love. When Vasudev carried Krishna through a storm, out of the palace and across the river to the home of the cowherd Nandababa, whatever speck of the dust of grandeur Krishna carried on his feet was washed away by the overflowing stream of love called Yamuna.

He had taken a vow that in this incarnation his only activities would be to love and play — activities where grandeur is a barrier

Indian shooting squad targets British for 'humiliating' treatment at games
http://www.guardian.co.uk/uk_news/story/0%2C3604%2C546484%2C00.html

When India's crack shooting squad arrived in Bisley for the Commonwealth shooting championships, they expected a friendly reception. Luxurious rooms, perhaps, vegetarian food thoughtfully laid on, and a few kind words from their British hosts.

But last night the Indian shooters described their 10-day stay in Britain as "humiliating" and said they would lodge a formal complaint with the competition organisers.

When the squad arrived at Bisley, Surrey, home of the national shooting centre, two weeks ago they discovered many of their delegation had been allocated "shabby" rooms only 6.5ft square. There were no towels, and one delegate said: "hardly room to hang up my coat".

Worse was to follow. At meal times surly British canteen staff allegedly refused to give the Indian marksmen second helpings of food. "We had to literally plead to get something to eat," India's national coach, Sunny Thomas, said. "They insisted we say 'please' even though many of us didn't speak English. If we were five minutes late they refused to serve us. It was belittling."

Mr Thomas also said a waiter informed him at a communal evening barbecue: "This food is not for Indians."

The Indian team also claims British officials treated them condescendingly. When Indian marksman Manavjid Singh accidentally left his gun under a tree, the officials demanded a written apology.

"The whole thing was completely blown out of proportion. I have never had that feeling before from any other country I have visited in 16 years of competitions," Baljit Singh Sethi, the secretary general of India's National Rifle Association, said last night.

Mr Sethi said that as the event went on, the mood became increasingly acrimonious. The Indian team won 13 gold, six silver and eight bronze medals - more than anyone else. Recalling the day when India took all four gold medals at stake, Mr Sethi said: "Every time the Indian flag went up, the murmurs increased; I could make out from their [the British officials'] expressions they were appalled at the clean sweep."

Mr Sethi finally complained to Graham Hudson, the Commonwealth shooting championship's New Zealand president. He told him: **"They [the British] still feel that the Indians are their slaves."**

Last night a spokesman for the National Small-bore Rifle Association said the competition's

organisers were "surprised" and "disappointed" by the Indian team's allegations.

"We are astonished. They were looked after the same as everyone else. Twenty-two nations were here. India was the most successful team."

The spokesman added that no complaints were made while the Indian team was at Bisley. "The accommodation that they used was left in a terrible state. Bedding and duvets were stolen as well as cutlery and some other things."

The championships at Bisley, which is owned by the Ministry of Defence, were run by the Small-bore Rifle Association together with two other shooting organisations, the National Rifle Association and the Clay Pigeon Shooting Association. The NRA has close links with the Countryside Alliance and says its aim is "to promote and encourage marksmanship" throughout what it calls "the Queen's dominions". The NRA describes several of its fixtures as "imperial meetings".

Last night Mr Thomas vehemently denied that his squad had stolen anything. "Everything was kept intact," he said. The team would now lodge a formal complaint, he said.

Mansher Singh, India's top marksman, who arrived back in Delhi on Sunday, said: "It happens only in Britain."

A Temple for the Goddess of Anima

By K M Gupta

http://timesofindia.indiatimes.com/articleshow.asp?art_id=22085884

Some way off the old Calicut-Madras Trunk Road there is a village called Thacha-nattu-kara. And in this village, there is a temple dedicated to Jyeshta, the goddess of misfortune. It is the only one of its kind in the whole of India.

Jyeshta in feminine gender means ‘elder sister’. She is the elder sister of Mahalakshmi, the goddess of good fortune. While Lakshmi is the goddess of riches, her elder sister is the deity of poverty, indigence, odium, reproach and ignominy. Her very name is a term of reproach. Lakshmi is the idol of the auspicious and the propitious, of all that is desirable in life, whereas her sister, Jyeshta, is the symbol of all that is detestable, damnable and loathsome.

The two sisters are born rivals. Where one is in, the other is out. So the Indian household is engaged in a constant fight to keep Lakshmi in and Jyeshta out. Waste, dirt, squalor, slovenliness, indolence, idleness, disorder, anger and all such undesirable things show the presence of Jyeshta in the house. Until she is turned out, Lakshmi wouldn’t enter and stay. In some houses, it is a custom for the lady of the house to open the back door first, send Jyeshta out and then open the front door and let Lakshmi in.

Once Lakshmi and Jyeshta stood at the doorstep quarrelling over which one of them was more beautiful. When the householder appeared, the two sisters asked him to be the judge. The clever householder, wary of displeasing either of them, hedged: ‘‘You, Lakshmi, are more beautiful when you enter, and you, Jyeshta, are more beautiful when you exit.’’ Both were pleased. Lakshmi entered the house and Jyeshta exited proudly.

Lakshmi is Sridevi, the goddess of the blessed and Jyeshta is Moodevi, the goddess of the accursed and the damned. Then how is it that this persona non grata among the Hindu pantheon was able to find a house of worship for her in Thachanattukara?

Lakshmi is known to be chanchala — unsteady and fleeting. She is also dukhamoola — the cause of misery and misfortune. Lakshmi is the source of happiness only in appearance. In truth, underneath, she is the source of misery. The fight for Lakshmi moolah, dukhamoola) debases and often inhumanises man. The world loves and worships Lakshmi because it is cursed to love and worship appearance. Lakshmi is the goddess of appearance.

Jyeshta is poor and indigent, but she has strength of character. She is not chanchala. She is not seductive. She discounts appearance. She is steady and unflinching. She has grit. It is the strength

of the soul that gives man real strength and happiness, not moolah. Beneath the level of appearance, Jyeshta is the giver of real strength and happiness. Actually, the roles of Lakshmi and Jyeshta are interchanged. In the deep spiritual sense, Lakshmi is Jyeshta and Jyeshta is Lakshmi. The wise worship Jyeshta, not Lakshmi.

Lakshmi is the goddess of persona and Jyeshta is the deity of anima. Jyeshta has no worshippers in the world because the world worships only persona or appearance and glamour — and not anima or inner soul.

The Jyeshta temple in Thachanattukara is a unique symbol of the Indian psyche, which is inexclusive by nature. Hence it is the 'Hindu Sphinx' to the West. India's Sanatana Dharma is in fact a miniature representation of nature where it is 'All In, Naught Out'. In nature everything has its role and place. So is it in Sanatana Dharma. It accommodates all. It expands to take up all. It extends from advaita to the most grotesque forms of worship. It extends from dhyana to animal sacrifice. It ranges from passionate bhakti to arch atheism. It extends from the worship of Lakshmi to the worship of Jyeshta. The Jyeshta shrine is a fine symbolism of India's anima.

The Rigveda: Widows don't have to burn

By O. P. Gupta

Publication: The Asian Age
Date: October 23, 2002

In August, 2002, one case of committing sati and two failed attempts to commit sati in Madhya Pradesh were reported by the media.

Reports also appeared that the Rajasthan high court allowed prayers within premises of Rani Sati Mandir of Jhunjhunu district, but prohibited organising fairs, distribution of pamphlets and performing chunri ceremony at the temple till final orders.

Some people assert that richa X 18.7 (seventh richa of sukta 18 of chapter ten) of the Rigveda commands a Hindu widow to mount on the pyre of her deceased husband. In fact, the word vidhwa (widow) does not independently occur in this richa at all. So how can this richa be related to widows?

The word vidhwa does appear in many other richas of the Rigveda. One website quotes Kane's translation of this richa as, "Let these women, whose husbands are worthy and living enter the house with ghee applied as corrylium (to their eyes). Let these wives first step into the pyre, tearless without any affliction and well adorned." From the moment of death of her husband, a woman is no more called "a wife" but a widow. So the phrase "these wives" in the above translation of Kane cannot be interpreted to refer to widows."

In fact, sukta 18 commands a Hindu widow to return to the world of living beings; the Rigveda confers on her all the properties of her deceased husband. The third richa (X 18.3) commands "May those who are living remain separate from the dead..." (Rigveda Samhita by H.H. Wilson and Bhashya of Sayana edited by Ravi Prakash Arya and K.K. Joshi). Dr Wendy D. O'Flaherty, Ph.D., in her book, Rigveda (Penguin Classics, page 52) mentions, "Those who are alive have now parted from the dead." Shri Ram Sharma Acharya of Bareilly in his Rigveda (in Hindi) translates, "Mritak ke pass se jeevit manushya laut aavey..." This command of Rigveda to leave behind the dead is equally applicable to Hindu widows as they are also living.

The English translation of the seventh richa (X 18.7) as given by H.H. Wilson etc. is,

"Let these women who are not widows, who have good husbands, enter (anointed) with butter. Let women without tears, decorated with jewels, first proceed to the house." Shri Radhakrishna Shrimali and Smt. Ashalata Upadhaya of Jodhpur in their book Rigveda (Diamond Pocket books, page 156) give similar interpretations of X 18.7 and X 18.8. Thus, different authors from different places vouch that richa X 18.7 does not refer to widows at all. What this richa says in a nutshell is that, married women should be first (among others) to return to their homes.

The eighth richa (X 18.8) specifically commands a Hindu widow to return alive to her home. H.H. Wilson translates: "Rise woman, and go to the world of living beings; come, this man near whom you sleep is lifeless; you have enjoyed this state of being the wife of your husband, the suitor who took you by the hand." Here again, it is confirmed that X 18.8 actually commands a Hindu widow to return to the world of living beings. Also, this very richa confers upon her full right on the house of her deceased husband (apne putradi aur ghar). In 1995, the Supreme Court interpreted Section 14 (1) of the Hindu Succession Act to the effect that a Hindu widow has full ownership rights over properties she inherits from her deceased husband. The Supreme Court said that the objective was to wipe out disabilities imposed by Hindu shastras. The Supreme Court thus reasserted rights conferred on widows under richa X 18.8.

According to Acharya Sayana, it is the first six richas of sukta 16 of the chapter 10 of the Rigveda (X 16.1 to 6) which are to be recited at funeral pyres; and, none of these six richas either call for burning of widows or make any reference to widows. I would like to draw the attention of readers to richa X 40.8 of the Rigveda which praises Ashwin gods for protecting a widow. It shows gods were praised for protecting widows. How could gods go to protect widows, and, thus act against the Rigveda if the Rigveda had actually commanded burning of widows? Another richa, X 40.2, may come as a complete surprise to many Hindus. H. H. Wilson translates it: "Where are you, Ashwins, by night? Where are you by day? Where do you sojourn? Where do you dwell? Who brings you into his presence in the same place (of sacrifice) as on her couch a widow (brings) her husband's brother, as a woman (brings) her husband (to her)." Thus, the Rigveda not only sanctioned survival of a widow but also her living with her devar with full dignity and honour in the family. So it expressly sanctioned widow marriage.

The third chapter of the Rigveda is considered the oldest part of the Rigveda. Richa III 31.1 commands that a son-less father accepts the son of his daughter as his own son. That is, all properties of a son-less father shall be inherited by the son of his daughter. Richa III 31.2 commands that if parents have both son and a daughter, the son performs holy acts of pindadaan (after death of father) and the daughter has to be enriched with gifts (rindhan, that is, to be made wealthy). Richa II 17.7 also attests share of a daughter in the property of her father.

Those who misinterpret the Rigveda to say that it sanctions sati do this mischief by misspelling the last word of richa X 18. 7 as "yomiagne." The last word of this richa is actually "yomiagre." Thus, there is no richa in Rigveda calling for widow burning. Veda, Ramayana and Gita are the three supreme scriptures of Hindus.

All others (like Brahmanas, Upanishads, Puranas, Dharmashastras, Sutras, etc.) are just commentaries, explanatory notes or stories written by individuals. As commentaries written on the Constitution of India cannot override the articles of the Constitution of India, similarly, commentaries or explanations on Vedas by individuals cannot supersede richas of Vedas or the Ramayana or Gita. In the Ramayana, everyone knows that after the death of King Dasharatha, his wives were never asked to step into the pyre of Dasharatha. Rather, they lived in family with full honour and Ram always bowed his head before his widowed mothers with full respect. In the Mahabharata, Kunti, mother of the Pandavas did not commit sati. Thus, there is no command in the Ramayana or in Gita to commit sati.

Over the centuries, relatives have been murdering relatives for property. This will continue in the coming centuries too. Greed is human nature. If greedy people incite a widow to commit suicide on the pyre of her husband, let us not say or believe that widow burning is sanctified by the Rigveda or by Hinduism. Richa X 18.3 commands a Hindu widow to separate from the dead and richa X 10.8 commands her to return alive to her children and her home. For their own empowerment, Hindu women should to remember the seven richas viz (II 17.7), (III 31.2) (X 18.3) (X l8.8) (X 40.2) and X 40.8) to assert and claim their status and rights.

Caste and Bhagawat Gita - Contributed to this site By Ambassador O P Gupta

Supporters of casteism oftenly quote two slokas viz. (IV.13) and (XVIII.41) of Shrimad Bhagwat Gita to support four castes by birth. Let us examine. In sloka (IV.13) Lord Krishna says: "Chaturvarnyma mayaa sristam gunkarma vibhagsah" i.e. four orders of society created by Me according to their Guna (qualities/behaviour) and Karma (profession/work/efforts).

Lord Krishna does not say guna and karma of previous life. In sloka (XVIII.41) Lord Krishna says "Brahmana Kshatriya visham sudranam cha paramtapa, karmani pravibhaktani svabhavaprabhavaigunaih."

It means people have been grouped into four classes according to their present life karma (profession/work) and svabhava (behaviour). `The division of labour into four categories - Brahman, Ksatriya, Vaishya and Sudra - is also based on the Gunas inherent in peoples' nature`. Had this division been based on birth, Lord Krishna would have naturally used phrase 'Janmani pravibhaktani' in the very shloka (XVIII.41).

In sloka (XVIII.42), Lord Krishna prescribes duties (karma) which one must do in order to qualify as a Brahman i.e. among other duties (karma), he must have studied Vedas and must teach Vedas to others. Thus, if a person has neither studied Veda, nor teaches Veda to others, he is not a Brahman.

Brahman categorisation is an acquirement through efforts like present day degrees of MA, MBBS etc. A teacher's son cannot be called a teacher by birth, a General's son is not a general by birth, son of an engineer is not an engineer by birth, son of an IFS officer cannot be called an IFS officer by birth.

Can he? Readers may note here Lord Krishna has clearly commanded that Hinduism is a missionary religion as sloka (XVIII.42) casts a duty on Brahmans to teach & propagate Vedas to others. Baba Saheb Dr. Bhimrao Ramji Ambedkar is the first writer who struck me asserting that Hindusim is a missionary religion (Dr. Ambedkar: Life and Mission, Dhananjay Keer, page 270).

In slokas (XVIII.68) and (XVIII.69) Lord Krishna has again cast missionary duties on his devotees to preach His gospel all over the globe. RV (X.191) and AV (III.30) also impose missionary duties on Hindu priests to bring all under harmony i.e.under one flag.

Under Islamic law, anyone who attempts to convert a Muslim into a Kafir has to be killed. Feroz Shah Tughlak (1351-88) ordered to burn alive those Brahmans who tried to convert Muslims into Hinduism. In view of this Islamic capital sentence, Hindu priests perhaps permanently gave up missionary zeal. It was restarted by Arya Samaj but during the British rule as 'suddhi.'

Following are the two missionary shlokas of Gita:

(Gita: XVIII.68) He who, offering the highest love to Me, preaches the most profound gospel of the Gita among My devotees, shall come to Me alone; there is no doubt about it. Gita: XVIII.69: (Among men there is none who does Me a more loving service than he; nor shall anyone be dearer to Me on the entire globe than he.)

In sloka (X.20) Lord Krishna says 'ahamatama gudakesa sarvabhutaa sayasthitah' i.e. `Arjuna! I am the universal self seated in the hearts of all beings.` Here, Lord neither excludes sudra from `all beings` nor excludes Himself from being in hearts of sudra. In sloka (XVIII.61) Lord says `eshwarah sarvabhutaanaam hraddesearjuna tisthati` i.e. Arjuna! God abides in the heart of all living beings.

Again, sudras are not excluded. In sloka (XIV.4) Lord Krishna says 'of all embodied beings Arjuna, prakrti or nature is the conceiving Mother, while I am the seed giving Father.' Thus, Lord Krishna says that he is as much Father of sudras as he is Father of any other Hindu.

In sloka (XVI.18) Lord Krishna says: "Given over to egotism, brute force, arrogance, etc. they hate Me dwelling in their own bodies as well as those of others." Thus, Lord Krishna instructs that a Hindu must not hate others Hindus as he is there in bodies of all Hindus so Gita prohibits untouchability.

In sloka (XVI.19) Lord says "These haters, sinful, cruel and vilest among men, I cast (them) again and again into demonical yonies (wombs)." In sloka (XVI.20) Lord again curses Manu supporters that such Hindus never attain Me (i.e. moksha): "Failing to reach Me, Arjuna, these stupid souls are born life after life in demoniac wombs (asura yoni) and then verily sink down to a still lower plane."

Gita: XVIII.71: In sloka (XVIII.71), Lord Krishna opens His gates for all Hindus including sudras when he says "The man who hears holy Gita with reverence, he too shall reach happy world (shreshtha ewam shubh lok) of the virtuous (punyatmas). So how can Manusmriti or Gautam sutra or anything ban Sudras from listening to Vedas and Gita? In sloka (V.18) Lord says "The wise (who desire to achieve moksha) look with the same eye (samadarshi) on a Brahmana endowed with learning and culture, a cow and pariah (chandal) too." Therefore, those who look down upon sudra are neither wise nor can they achieve moksha.

Shrimad Valmiki Ramayan also says whosoever including sudra reads it will achieve greatness and get rid of all sins. Valmiki Ramayana: 1.1.98-100) Thus, Vedas, Ramayana and Gita confer authority on sudras to possess and read these.

In Ramayan, Lord Rama has Himself set following two lessons for all Rambhaktas Hindus which we witness every year in Ramlilas but never follow in our practical lives so we were defeated by foreigners. (For a comparision, see how steadfastly muslims adhere to and follow examples set by Prophet in Sunnah). Ravana was a grandson of risi Pulatsya. He was an expert on Vedas too. So, he was a Brahimin by birth under Manu definition as well as a Brahimin (educated) by qualification (veda-gyata) but he and most of his family members were killed by Lord Rama for their wrong doings.

So, the first lesson of Ramayana is that everyone (irrespective of his caste) is equal before law. Lord Rama visited Shabri, called her a mother (mata); ate food from her hands and washed feet of Nisadraj.

Lord Rama lived for years among vanvasi (tribals). So, the second lesson of Ramayana is that a true Rambhakta should never discriminate against SC/ST/Dalit Hindus, should never hesitate to visit and dine with them. See, Mahatma Gandhi always followed mansa, vacha and karmana both these two lessons of Ramayana and he became a Yug Purus.

Many SC/ST/Dalit Hindus are not even aware of rich contributions made by their ancestors to the three supreme Hindu scriptures. To cite just a few:

(i) Risi Kavas Ilusu was revealed Suktas (X.30) (X.31) (X.32) and (X.33) of Rigveda and sloka 453 of Samveda. Risi Ilusu Aksova mojvan was revealed Sukta (X.34) of Rigveda. Both, under current Manusmriti definition were sudra.

(ii) In Tandya Brahman (14.66) risi Vatsa has been called a sudra-putra. Revelations to risi Vatsa are there in Rigveda, (VIII.6) (VIII.11), Samveda (8,20,137,143, etc) and Yaj (IV.16-36), (VII.40), (XXVI.15).

(iii) Risi Kaksivat was son of risi Dirghatamas by a sudra maid servant (Brihaddevata IV.24.25). Risi Kaksivat was revealed many richas in RV (I.119 to 125).

(iv) Maharisi Vedvyas compiled all richas into four Vedas in the format currently available. He also composed Mahabharat, Shrimad Bhagwat Gita and all the Puranas. He was born to Satyawati daughter of a fisherman by risi Parasar. He was of dark complexion (Krishna Dwaipayan). Thus, as per Manusmriti definition, he was a dalit Hindu/Varna-sankar by birth. As we know, Kauravas and Pandavas were descendants of this Satyawati through Vedvyasa. But, Kauravas and Pandavas are accepted as Kshatriyas not on basis of birth but on the basis of their occupations (as rulers/kings).

(v) Maharishi Mahidasa Aitereya, a Maharastrian Sudra (perhaps a Mahar), composed Aitereya Brahman and chapters I, II & III of Aitereya Aryanaka. His mother was a maid named Itara.

(vi) Maharisi Valmiki who composed Valmiki Ramayan was not a Brahimin by birth.

Thus, no one has right to deny free access to SC/ST/Dalit Hindus to what their ancestors have contributed, nor, should one give up or run-away from his ancestral heritage on teasings by others. One does not give up his ancestral properties on false presentations/forged documents.

The futility of religious conversions - Contributed to this site by Ambassador O P Gupta

Horrible and brutal lynching of five dalit Hindus in Duliana, Jhajhar (Haryana) in Oct. 02, 2002 and simmering tensions in Chakwara near Jaipur on use of a village pond attracted a number of articles either lamenting or accusing someone.

In wake of these, articles justifying conversions of dalit Hindus also appeared and group conversions into Islam, Christianity and Buddhism were organised at Jhajhar and at Selaiyur (Chennai, 6th Dec., 2002). On 28th Nov., 2002, SC/ST Commission reported that Duliana lynching was not based on caste considerations demolishing main plank of conversion lobby. Religion and conversion should be private matters like right to choose partners where State has no role but only so far as these private rights are exercised privately at private places.

Group conversions organised with fanfare at public places are not sanctioned by Constitution and are subject to IPC provisions on apprehensions of breach of public order.

First generation social reforms in Hinduism (abolitions of untouchability and caste based disabilities) were successfully led by Swami Dayanand, Swami Vivekanand, Mahatma Gandhi, Dr. B.R. Ambedkar, Sant Phule, Sri Narain Guru (SNDP), Basaveshwar, Varkari, etc. and have been codified in the Constitution and various Acts. Second generation social reforms in Hinduism from within for wider social acceptability of Vedic norms of equality by birth is the real solution to contemporary problems of the Hindu Samaj, not the gimmicks of conversions, nor the caste wars.

Root cause of conversions as rightly pointed out by N. Varadrajan, State Secretary of CPM(TN) are social ostracism and humiliations of dalits which this article attempts to remove. Late Shri Mohit Sen wrote in the Indian Express that what has aggravated the caste problem is the almost complete lack of any campaign against caste system - that decisive impediment to modernisation of Hindustan - to paraphrase the remarks of Karl Marx written in 1835.

In Ambedkar's view the caste system is a social division of people of same race. [Dr. Ambedkar Life and Mission by Dhananjay Keer, page 269]. This assertion of Ambedkar that all castes of

Hindus belong to same race is in conformity with 15 richas of Vedas, specially Yaj 26.02. 'Caste is the bane of Hindus. Caste is the cause of downfall of the Hindus. Owing to caste the Hindus' life has been a life of continuous defeats. Caste has made Hindus the sick men of India. Caste has ruined the Hindu race and has destroyed, demoralised and devitalised Hindu society.'

What is more, Dr. Ambadkar said, caste has made Shuddhi - conversion into Hinduism - impractical because one does not know which caste the convert to Hinduism will join. Caste has thus killed, he adds, the missionary spirit of Hindu religion [page 270].

Rigveda mentions four classes (but not castes by birth). Manusmriti mischievously converts these four classes into four castes by birth and introduces about forty mixed jaties but all related by blood. Manusmriti does provide some social mobility from one caste to another but through marriages. To keep Hindus divided under British Rule, 2378 main castes among Hindus were invented by employees of British Raj.

In the 1891 census about 1156 sub castes of chamars alone were recorded. God know how many castes and sub castes have so far been invented Intercaste marriages were allowed as per Satapath Brahaman(4.1.5.9) Paraskar Grihya(1.4.8—11) and Baudhyana Dharma(1.8.16.2-5).

Manusmriti's caste system militarily weakened Hindus. As per Manusmriti and subsequent smritikars , sudras (working class) were kept out of villages and, thus, excluded from military, politics and the Govt. Vaishyas were kept confined to business, agriculture and cattle breeding so Vaishyas were not required to participate in military, politics and the Govt. Brahimins took position that arms and military was not their prime concern. So under Manu system, majority of population (say 75%) was mentally conditioned to be militarily impotent & politically neutral.

Only Ksatriya was supposed to be in military and had duty to fight wars. If Ksatriya were 25% (say) of population, 12.5% being ladies were excluded from military, rest one third of male being children and one third being too old to fight were also not available for military service. Thus, in Manu system only three percent of population had moral duty to fight for nation.

So, under Manu system a population of 10000 Hindus could yield a maximum of only 300 to fight whereas from a population of 10,000 of other religions over 1700 men or more were eligible/available to fight. No wonder, Hindus though larger in numbers, were always defeated by small numbers of foreigners, their women raped and molested, their temples destroyed and they were dragged thousands of miles on foot and auctioned as slaves in Kabul etc.

Was it a punishment under Slokas (XVI.18, 29 & 20) that Hindu were defeated and auctioned as slaves for violating Vedic & Gita's norms of equality by birth? If so, should we not free ourselves from this curse by obeying Veda & Gita in our real lives? When the Constitution of India restored Vedic norms of equality by birth and gender equality, see, our Armed Forces have never been defeated; we Hindus have not again fallen as slaves, we are being accorded respect all over the world; and, India has become the fourth largest economy in the world in a short period of fifty years, a nuclear weapon country with its own missiles, satellites, digital telemetry, etc.

As per latest World Development Indicators, India's gross national income in 2001 on Purchasing Power Parity (PPP) basis was US$ 2913 billion, the fourth largest after the USA ($ 9781 billion), China ($ 5027 billion) and Japan ($ 3246 billion). These Big Four are followed by Germany ($ 2580 billion), UK ($ 1431 billion), France ($ 1425 billion), Canada ($ 825 billion) and Pakistan ($

263 billion) on PPP basis, etc.

Ambedkar rightly diagnosed that caste is a notion, a state of mind. Its destruction means a notional change in mental set up. Hindus observe caste not because they are inhuman and wrong headed. They (Hindus) observe caste chiefly because they believe deeply that it is so ordained in their religion" (page 291). Dr. Ambedkar concluded that destruction of authority of Veda, destruction of sacredness and divinity of Vedas will lead to annihilation of castes; but, failing to destroy spiritual authority of Veda he got himself converted into Buddhism in 1956. In his famous 22 vows, Dr. Ambedkar mercifully did not include destruction of sacredness of Vedas.

If Hindus practise casteism, as Dr. Ambedkar rightly assessed, in belief that it is part of their religion, how could Hindus have agreed to destruction of Vedas - the fountainhead of their religion? I think a better way to annihilate casteism is to convince Hindus that casteism, as substantively proved in previous two parts, is truly not a part of Hinduism.

It is contrary to Hinduism. Casteism is rust and dust collected around Hinduism over centuries. I believe much more pragmatic way to annihilate caste is not engineering of conversions; not mutual acrimony; not caste wars; but full throated articulation of correct interpretations of 25 richas of Vedas, the thirteen slokas of Shrimad Bhagwat Gita and two examples set by Lord Rama which should convince upper caste Hindus that by practicing Manusmriti, they are actually committing sins (paap) of violating Vedas, Gita and Ramayana.

Such a course of action will loosen religious grip of Manusmriti on mindset of sawarnas. No Hindu knowingly prefers to earn wrath (shraap) of Vedas or Lord Rama or that of Lord Krishna by going against their commandments.

Gandhi fought tooth and nail to maintain unity of Hindu Samaj by fighting against untouchability, underwent 21 days fast to retain unity with scheduled caste Hindus by promising them more number of seats in legislatures than offered by the then British rulers. Whereas Manu after Rigvedic rishis was the one who fragmented and divided Hindus pushing them into slavery, Gandhi proved himself to be the grand Unifier in grand chain of Rigvedic rishis who mansa, vacha and karmana implemented the missionary shukta RV (X.191); and, like Moses delivered Hindu Samaj to its political liberation/freedom ,though , some may argue at much higher cost in terms of Hindu lives lost, but Gandhi was not a member of the Government.

It is another thing that Gandhi failed in handling/assessing the then Muslim League.

Articulation of above 38 richas & slokas will also convince Hindu priests that they have been preaching contrary to Vedas, contrary to Gita and contrary to Bhagwan Shri Ram's examples. For comparison, one may note how steadfastly Muslims follow examples set by their Prophet in Sunnah. But, we, Hindus, do not put into practice what Bhagwan Ram himself practiced.

Managers of Hindu temples must instruct their priests to immediately put into practice these 38 richas and slokas. Stopping entry of SC/ST/Dalits Hindus into temples is violative of RV (X.191) and AV(III.30). Hindus of Chakwara violated AV (III.30.6) in denying access to village pond to Bairwa Hindus. Command of RV (X.191) oftenly came as shock and pleasant surprise to many Hindu priests whom I personally talked.

Many admitted not knowing Sanskrit nor ever having read Vedas but only having memorised

some mantras and shlokas for conducting ceremonies. Pujaries said that they expect present-day leaders of Hindu Samaj to re-educate them and they assured that they will be second to none in spreading correct message of Vedas.

Pujaries agreed with me that they should visit SC/ST/Dalit houses for offering religious services as it would increase their regular income but their main difficulty was jhijhak i.e. who will bell the cat. Simply abusing and cursing Hindu priests or Brahmans in general will not lead to annihilation of caste, rather, their exposures to above 38 richas and slokas will certainly.

Incomes of all Hindu temples should be pooled to educate pujaries and an all India Hindu Pujari Service (IHPS) should be started by management of temples in which all Hindus would be eligible for recruitment based on their knowledge. Supreme Court has been faster than our socio-religious leaders in opening recruitments in temples for all Hindus.

In March 96, Supreme Court (JJ K. Ramaswamy and B.L. Hansaria) rightly ruled that office of temple priest cannot be hereditary. In October, 02, Supreme Court (JJ S. Rajendrababu and Doraiswamy Raju) held that non-Brahimins are eligible to perform religious ceremonies and work as temple priests if they are well versed with relevant rituals. These two decisions are consistent with real Hinduism as per RV (X.125.5) and RV (X.98.7).

At page 271, Keer informs that Dr. Ambedkar had also suggested destruction of idea of the hereditary priesthood and democratisation of the profession of priests by the grant of a sanad to any Hindu who passed a certain test and now it has been given force of law by the Supreme Court.

Conversion of Dalit Hindus to another religion has not proved to be a satisfactory answer, as even after conversion, converts do not get 'social equality' in their new religions. Conversions have proved to be divisive raising social tensions and creating law & order problems. Use of phrases like dalit Christians, dalit Muslims, dalit Buddhists in Indian media proves the point. R. Thirumalvalavam, Head of the Panthers Party of India told a website (Nov. 15, 2002): 'that for emancipation of dalits, conversion is not the solution. Converts remain Dalit Muslims or Dalit Christians or Dalit Buddhists.'

A Dalit writer, told to the Week (18th Nov., 2001): 'Over the years, when Dalits converted to Islam, Sikhism or Christianity, they did not lose their Dalit identify. They remained primarily Dalits, and, then Christians or Sikhs. Conversion is not the answer to exploitation of Dalits.' Detlef Kantowasky, a German Professor of Sociology in his recent book `Buddhisten in Indien heute` says that Mahars who converted into Buddhism are still not able to shake off their untouchable stigma. In addition, new converts invite ridicule from Dalit Hindus for abandoning old faith generating another ripple of social tensions. Gaining 'social equality' is a two-way process involving two parties, oppressor and oppressed. Unilateral action (i.e. conversion, running away by oppressed) does not solve the problem as the other party continues to treat converts as before in villages. Converted dalits get socially cut off from Hindu dalits. Converts find their social circle in new religion further reduced and limited to previous converts from their old Hindu caste. As per Hindustan Times (15th June, 98), the then Census Commissioner of India (Dr. M. Vijaymuni) was quoted saying that there were caste divisions in Muslims (584), Christians (339), Sikhs (130), Buddhists (93), etc.

The 1901 census of Bengal placed Muslims into three groups: Ashraf (better class), Ajlaf (lower

castes) and Arzal (Degraded castes). This categorisation was repeated in the Indian Express of 19th March, 1997. A website lists 72 different Islamic sects. Sunnies accept and venerate Hazrats Abu Bakr (632-634), Omar bin Khattab (634-644), Uthman (644-656) and Ali bin Abu Talib (656-661) as their first four rightful Caliphs (Khalifa i.e. successor to Prophet Mohammad, sallahu alai wa sallam) in this sequential order.

Hazrats Omar, Uthman and Ali were murdered one by one. Shiat Ali (i.e. followers of Ali, shishya of Ali, written as Shia or Shiite) believe that Hazrats Abu Bakr, Omar and Uthman became Caliphs against expressed desire of the Prophet (Khumb Declaration) and; that, Hazrat Ali ought to have been accepted as the first Caliph and the first Imam after Prophet.

This is the fundamental difference between Shiites and Sunnies. Shiite Muslims do not accept Hazrat Abu Bakr, Omar, Uthman as Caliphs and Sunni Muslims do not accept Khumb Declaration. Shiite Muslims treat Hazrat Ali as the first Caliph and the first Imam. Sunnies accept Hazrat Ali only as the fourth Caliph. Consequently, text of Shiite Kalama and Shiite Namaz are different from those of Sunnies.

Shiite texts directly and indirectly declare and reaffirm that Hazrat Ali is the first Imam and the rightful successor of Prophet which Sunnies do not accept and cannot recite. The text of Sunni Kalama is La ilaha il Allah, Muhammadan Rasul Allah and the text of Shiite Kalama (Shahadatah) is La ilaha il Allah, Muhammadan Rasul Allah, Aliyun Wali-Allah, Wasiyu Rasulillah, wa Khalifa tuhu bila fasl. There is no God but Allah, Muhammad is the Messenger of Allah, ‘Ali is the Friend of Allah. The Successor of the Messenger of Allah And his first Caliph.

Basic tenets (usul-e-din) of Sunni Muslims are three: (i) Tauhid (unity of God); (ii) Noubouat (Prophethood) and (iii) Maad or Qayamah (day of final judgement). Shiite Muslims have two more basic tenets: (iv) Imamah based on family line from the House of Prophet (Ahlul-Bayt) and (iv) Justice of God (ahl). Shiite further believe that `noor` of Allah passes only through family line from generation to generation. These are matters of faith and belief which separate Shiite and Sunni. Shiite and Sunni generally do not inter-marry. They have different mosques, different texts of namaz, different body postures while offering namaz; and, different timings of namaz. Shiite are mainly divided into Ithna-Asheri, Bohras and Ismailies with no inter-marriages without conversion to husband’s sect; and, even these Shiite do not attend each others mosques. In Tanzania, intra-Islamic conversions were noticed: Shiite and Ahmadias were seeking converts from Sunnies and vice-versa. Ahmadias do accept Prophet Muhammad(saas) as a messenger of Allah but not as the last one. (http://www.alislam.org) (http://www.thepersecution.org).

Main sects in Sunni Muslims are Hannafi, Maliki, Shafii and Humbali. They are followers of Maulanas Abu Hanifa Al-Numan (699-767), Malik ibn Anas (714-796), Mohammad ibn Idris Al-Shaffi (767-820) and Ahmad bin Hanbal (780-855) respectively. Another Sunni sect is Ahle Hadith.

There are theological differences between Deobandi and Barelvi Sunnis. In the Islamic Republic of Pakistan, Ahmadias were declared non-Muslims and now there is pressure in Pakistan to declare Shiite to be non-Muslims. In this context, it is worthwhile to take note of a recent address made by H.E. Mr. Mahathir Bin Mohammad, Prime Minister of Malaysia, at the Al Azhar University, Cairo on 22nd Jan., 2003. He said `we all know that Prophet brought only one Islam but today there are many Islamic religions. There are Sunnies and Shiites divided into numerous

groups by different Imams and Orders. Some of these interpretations and teachings are so different that their followers actually accuse each other of not being a Muslim. In fact they regard many who profess to be Muslims as infidels because of the thousands of different interpretations of Islam and the very many sects and adherents, each claiming to be true followers of Islamic religion, Muslims are thoroughly confused.` (28th January, 2003 - International Herald Tribune).

Holy Quran (ISBN: 0-940368-56-0) does not accept Jesus as a son of God nor his crucifixion, therefore, nor his resurrection. It accepts Him only as one of the messengers of God. Surah (IV.157) says that `they did not kill Isa son of Marium, the apostle of Allah (Jesus Christ) nor did they crucify him;` and, Surah (IV.158) says that Allah took him upto Himself. In Surah (IV.171) it is stated that Messiah, Isa son of Marium is only an apostle of Allah.

'Desist, it is better for you; Allah is only one God: far be it from His glory that He should have a son.' In Surah (V.116) concept of trinity has been declared to be false. It reads: 'And when Allah will say: O Isa son of Marium! did you say to men, Take me and my mother for two gods besides Allah, he will say: Glory be to Thee, it did not befit me that I should say what I had no right to (say).'

Surah (XXV.2) again asserts that Allah did not take to Himself a son. Thus, the Holy Quran does not accept the basic principles of Christianity i.e. Trinity, Crucifixion and, therefore, the Resurrection.

The Holy Bible is silent about life, whereabouts and activities of Jesus Christ between twelfth to thirtieth years of his age. Karna was born to unmarried virgin Kunti by blessings of God Sun; and, in Christian belief Jesus was born to Virgin mother Mary. There is similarity of circumstances. A German author Holger Kersten in his book Jesus Lived in India (ISBN-1-85230-5509) has described in detail His unknown life in India before and after crucifixion.

Some scholars believe that Christ had visited many cities in India learning Vedas, Yogas, meditation, etc. before returning to Palestine to preach, and; after surviving crucifixion returned to India and died in Kashmir. Some scholars suggest that Jesus Christ was an Essene preacher.

Philosopher Schoupenhaure in his book 'Religion and other Essays' (page-116) asserts that the Christian faith sprung from the wisdom of India. From Girnar inscriptions of Ashoka, it is observed that Buddhist monks went to Syria to preach Buddhism. Pliny, a Greek historian of first century AD has written that religious sect Essene lived in Palestine about a century before Christ, now accepted as a sect of Buddhism. In Egypt, Essenes were called Therapeuts. Christians acknowledge Holy Trinity of the Father, the Son and the Holy Ghost and at the time of Baptism water is sprinkled. In Buddhism, water is sprinkled while performing 'abhishekam' and Buddhists acknowledge trinity of Buddha, Dhamma and Sangha. Births of Buddha and Christ were preceded by stars and both had twelve disciples. We Hindus also have Trideva (Brahma, Vishnu & Mahesh) and we also sprinkle water at religious ceremonies. Dead Sea scrolls (about 800) discovered in eleven caves near Qumran during 1947-65 are believed to be Essene literature.

Dead Sea scrolls are carbon dated between a span of about 68 BC to 124 AD and despite being contemporary of Jesus do not mention Jesus Christ being the son of God. On internet when one puts `Jesus Christ in India` into search mode one gets about 267000 references on Yahoo.

Website http://www.tombofjesus.com gives graphic details of grave of Yuz Asaf in Srinagar

(India) which points east-west keeping with Jewish custom. Some believe it is grave of Jesus. The second century Church Father Irenaeus (who lived until about 180 C.E.) in his book `Against Heresies` has written that Jesus lived to be an old man upto times of the Emperor Trajan (98 AD), before finally dying in Asia. The Acts of Thomas describes the stay of Jesus and Thomas in Taxila (now in Pakistan) at a marriage ceremony at the court of King Gundafor in the twenty sixth year of his rule (47 C.E.).

Bhavishya Maha Purana (volume nine verses 17-32) says that Jesus (Isha Masih) was in India/Kashmir during reign of King Shalivahan which has been placed within 39 to 50 C.E. On this subject of life of Jesus Christ after crucifixion one may see books by Nicolas Notovitch (1894), Maury Lee (Jesus of India), Elizabeth Clare Prophet (Lost Years of Jesus), Paul C. Pappas (Jesus' Tomb in India) and Mark Mason (In Search of the Loving God).

Jesus Christ preached in Aramaic language. Modern scholars believe that the Hebrew Bible(Old Testament), or Tanakh, was composed by four or five writers between 1000 to 400 BCE based on much older traditions. The New Testament was composed by a variety of writers between 60 to 110 CE. The contents of the New Testament were formalized by Athanasius of Alexandria in 367 CE, and finally canonized in 382 CE.

There are many disagreements about the order and composition of the Holy Bible among various sects (http://www.sacred-texts.com). The four Gospels (Matthew, Mark, Luke and John) differ in some aspects at places. What is the correct chronological order of these four Gospels is known as the Synoptic Problem in the Christian theology. Very little has survived about origins of these Gospels, when, where, why and by whom these were composed.

From first few centuries to 18th century, Augustinian hypothesis that Matthew, Mark, Luke is the correct sequence was the dominant view. In 1783, Johann Jakob Griesbach proposed Matthew-Luke-Marks sequence. In 1820 Johann Gottfried Herder proposed that Mark's Gospel being the shortest should be the earliest document. Roman Catholics, Protestants, Pentecostals, Orthodox Church, Seventh Day Adventists, Jehova's Witnesses, Mermons, etc. have many fiercely contested theological differences among themselves.

In the medieval period, one sect of Christians used to kill/execute Christians of another sects (Catholics vrs Protestants; Inquisitions, etc.) X-mas is globally celebrated on 25th December as birthday of Jesus Christ but not by all Christian faiths. What is the truth only Jesus knows. Luke (II.8) says that at the time of birth of Jesus `.And there were in the same country(near Bethlehem) shepherds abiding in the field , keeping watch over their flock by night. It is said that in Palestine/Bethlehem, December is the coldest month when shepherds and their flock are not likely to be there in fields by night Shepherds are out in fields with their flocks in better months of summer. Holy Quran vide surah(XIX.20) does attest that Mary(Marium) was a virgin & chaste, untouched by any mortal man before conceiving Jesus. But surah (XIX.23) states that Mary gave birth to child Isa(Jesus) near trunk of a palm tree, not in a cave/stable. Surah(XIX.25) says that fresh ripe dates fell upon Mary when shaking trunk of the palm tree. It is said that ripe dates fall only in the summer months(July to September) in Palestine.Thus, both Holy Quran and Luke's Gospel create some doubt about correctness of the present popular belief that Jesus was born in December. These are great puzzles of religion but could be explained as another miracles Jesus.

Atharvaveda says (XII.2.33) :: let him not hate us, nor let us(hate) him. Dhammapada says:

'Hatred does not cease hatred at any time, hatred ceases by love, this is its nature. Let us live happily, not hating those hate us.'

[1.5]. New Testament says: 'But I say unto you, Love your enemies, bless them that curse you, do good to them that hate you, and pray for them that despitefully use you, and persecute you. [Matthew 5.44]. `But I say unto you which hear, love your enemies, do good to them which hate you` (Luke 6.27). `Bless them that curse you, and pray for them which despitefully use you` (Luke 6.28).

But love ye your enemies, and do good (Luke 6.35). These show influence of Veda and Buddhism on Christ.

The News Week of USA (16th April, 2001) at page 45 reported that there are 33000 different Christian denominations in the world!!! The Catholic Bishops Conference of India (Sunday, 28th June, 98) estimated that 41% of new Pentecostals in India were former Catholics and 31% from other Christian sects.

So intra-Islamic and intra-Christian conversions are realities. In many countries Pentecostals have replaced Catholics as the majority denomination!!! Christians of one denomination generally do not attend Church of another denomination. Indian Christians are said to still discreetly follow pre-conversion castes of their Hindu forefathers. Syrian Christians (i.e. St. Thomas Christians) are said not to marry Latin Christians or Neo-Christians.

High caste Christians do not mix with Dalit Christians. As per http://www.dalitchristians.com, Christian Dalits suffer same oppression, segregation and discrimination at hands of caste Christians and 80% of jobs in Church and Church related institutions have been monopolised by caste Christians though dalit Christians comprise 75% of Catholic population in India.

TK Oommen & Hunter P. Mabry in their book `The Christian clergy in India` verify this discrimination. Dalit Christians website further alleges that untouchable Christians are forced to sit separately in many rural churches in India.

They must enter through a separate door into rural church and receive communion at separate altar!!! Jat Sikhs do not mix with Ramgarhias and/or Mazhabi Sikhs. There are separate gurudwaras for each group. One Muslim leader of Bihar (Dr. Ezaz Ali, President, All India Backward Muslim Morcha) was quoted (March 1997) that “social and economic condition of Muslim Dalit (arzal) is same as that of Hindu Dalit.

Their conversion to Islam has not helped them acquire social class mobility. While as Hindus they were ridiculed by upper caste Hindus, as Muslim Dalits they are looked down upon by upper caste Muslims (Ashrafs).” As per The Week (Jan. 31, 1999), Pasmanda Muslim Samaj of Bihar reiterated oppression of dalit Muslims at hands of upper caste Muslims pointing out that out of 245 Muslim MLAs produced by Bihar between 1952 to 1995 there has been no dalit Muslim MLA so far. How many Dalit Hindus have been elected to Bihar Assembly?

So, there are wheels within wheels in matters religious; these are too complicated for common persons, one does know what is truth and what is not truth and, the best way out is not to get involved in religious bigotry but to live and let live in peace and harmony with neighbours.

`Love thy neighbour` should be our motto. Let one not question correctness of religious faith of the other. Let us live happily under the banner of our tricolour reflecting unity in diversity.Concept of Vasudhaiva kutumbakam i.e. universal brotherhood is the best policy.

Another shocking but real problem is practice of some sort of untouchability, within SC/ST/Dalit Hindus. Conversion from one religion to another does not address this problem. Some websites espousing emancipation of dalits publicise only divisive/negative slokas of Manusmriti (to exclusion of harmony seeking richas/slokas of Vedas, etc.) which makes double damage to their own cause as, on one hand, it only further depresses SC/ST/Dalit Hindus to meekly give into submission believing it is too difficult to fight Dharma; and, on the other hand, convinces caste Hindus more & more that this is what Hindu Dharma ordains so they start practicing casteism with more conviction.

Various reform movements during freedom struggle made substantial gains which got codified in the Constitution of India. But from 1950s onwards there has been no real social reform movement. It is high time to do second generation reforms of Hinduism from within. SC/ST/Dalit Hindus who are already armed with the Constitutional articles and various Acts should be exposed more and more to the 25 Vedic Richas, 13 slokas of Shri Mad Bhagwat Gita and to rich contributions of their ancestors to three supreme scriptures so as to boost their morale and to convince them that their fight is not against Vedas, not against Dharma but only to cleanse Veda of the rust and dust collected over centuries - that they are going to fight to restore original teachings of holy three scriptures that they are returning to their roots.

Such a strategy will liberate dalit Hindus from their mental mindset of being “lowly born” and empower them mentally & spiritually to take up the fight.

On the other hand, exposure of caste Hindus to these very richas will change their mindset that practising untouchability and casteism is really a sin (paap) against dharma. Democratised All India Hindu Priest Service (IHPS) will only accelerate this process. Casteism cannot be annihilated by mutual acrimony, by violence or conversions, or by caste wars as it is a mental state or a mindset.

During my foreign service, I have seen educated Indians living in foreign countries for decades but still practising casteism there in foreign countries in more subtle form!! Let the Yajna (social movement) assisted by 25 Vedic richas and 13 slokas of Gita be initiated to permanently destroy both the demons – the demon of intra-Hindu casteism and the demon of intra SC/ST/Dalits Hindu casteism from the Hindu subconscious mind.

Let us return to our roots of Vedic brotherhood equipped with modern science and technology.

Rig Veda and the Indian woman - Contributed to this site by Ambassador O P Gupta

In August/Sept. 2002, one case of committing suttee or sati and two failed attempts to commit suttee in Madhya Pradesh were reported in the media.

Reports also appeared that the Hon'ble Rajasthan High Court allowed prayers within premises of Rani Sati Mandir of Jhunjhunu district, but prohibited organising fairs, distribution of pamphlets and performing chunri ceremony at the temple till final orders.

Some people assert that Rigveda vide richa (X.18.7) (seventh richa of 18th Sukta of tenth chapter) commands a Hindu widow to mount pyre of her deceased husband.

One website quotes PV Kane's translation of this richa as: "Let these women, whose husbands are worthy and living enter the house with ghee applied as corrylium (to their eyes). Let these wives first step into the pyre, tearless without any affliction and well adorned."

One may note that even this English translation does not categorically state that let these widows first step into the pyre. This translation simply says "let these wives first step into pyre." As per common sense, from the moment of death of her husband, a woman is no more called "a wife" but a widow (vidhawa). So phrase "these wives" in above translation of Kane cannot be interpreted to refer to "widows."

In fact, Sukta 18 commands a Hindu widow to return to world of living beings; to return to her house to live with her children and grand children and Rigveda confers on her all the properties of her deceased husband. One should go through all the fourteen richas of this 18th Sukta (revealed to Rishi Sunkusuk Yamayan) so as to understand the true and correct meaning of (X.18.7).

The third richa (X.18.3) commands "May those who are living remain separate from dead ……..…" (Rigveda Samhita by HH Wilson & Bhashya of Sayana edited by Ravi Prakash Arya and K.K. Joshi ISBN 81-7110-138-7). Dr. Wendy D. O'Flaherty, Ph.D. in her book the Rigveda (Penguin Classics) (page 52) translates: "Those who are alive have now parted from those who are dead…." Ralph T.R. Griffith translates "Divided from the dead are these, the living:…." Shri Ram Sharma Acharya of Bareilly in his Rigveda (in Hindi) translates: "mritak ke pass se jeevit

manushya laut aavey……..”

Dr. Ganga Sahay Sharma, Ph.D., in his Rigveda (Delhi Pocket Books) translates: “ye jite huve log marey huve vyaktiyo ke pass se laut aavey……...” This command of Rigveda to leave behind the dead; to remain separate from dead is equally applicable to Hindu widows too as the widows are also living/jeevit persons.

English translation of the seventh richa (X.18.7) as given by HH Wilson is “Let these women who are not widows, who have good husbands, enter (anointed) with unguent and butter. Let women without tears, without sorrow, and decorated with jewels, first proceed to the house.” Dr. Wendy O’Flaherty, Ph.D. translates this seventh richa: “These women who are not widows, who have good husbands – let them take their places using butter to anoint their eyes. Without tears, without sickness, well dressed let them first climb into the marriage bed.”

Shri Ram Sharma Acharya translates “yeh sunder patiwaali sadhawa naariya ghrit yukta kaajal lagaati hui apne grih ko prapta ho. Yeh naariya aasuuon ko tyag kar manoovikaaroo ko duur karati hui sundar aishwarya waali ho kar sabase aage chalati hui apne gharo ko prapt ho.”

Dr. Ganga Sahay Sharma, Ph.D., translates: “Ye sadhawa ewam shobhan patniya naariya ghrit aur anna ke sath apne ghar mey pravesh kare. Ye streeya aasuuon ke bina roga rahit aur shobhan dhan waali ban kar apne ghar mey sabse pehle pahuche.”

Shri Radhakrishna Shrimali & Smt. Ashalata Upadhyaya of Jodhpur in their book Rigveda (Diamond Pocket books) (page 156) give similar interpretations of (X.18.7) and (X.18.8). Thus, six different authors, from different places vouch that richa (X.18.7) does not refer to widows at all. What this richa says in a nutshell is that married women should be first (among others) to return to their homes. Readers may see that as per these authors this richa does not say that first these women step into pyres. This seventh richa appears in Atharvaveda at (XVIII.3.57) and (XII.2.31) also.

The eighth richa (X.18.8) especifically and expressly commands a Hindu widow to return alive to her home. HH Wilson translates: “Rise, woman, (and go) to the world of living beings; come, this man near whom you sleep is lifeless; you have enjoyed this state of being the wife of your husband, the suitor who took you by the hand.” This verse is to be recited by dead husband’s brother etc to widow and he has to make widow leave her husband’s body as per Asvalayana Grih Sutra(IV.2.18)

Dr. Wendy D. O’Flaherty, Ph.D., translates: “Rise up, woman, into the world of living. Come here; you are lying beside a man whose life’s breath has gone. You were wife of this man who took your hand and desired to have you.”

Pt. Shri Ram Sharma Acharya translates this richa: “Hey mritak ki patni! Tumhara yeh pati mrityu ko prapta ho chuka hai – ab tum iske pass vyartha baidhi ho. Apne putradi aur ghar ka vichar karti hui uutho. Tum ish pati ke sath garbh dharan aadi stree kartavya ko pura kar chuki ho aur tum uske pran ke chale jaane ki baat bhi jaanati ho attah ghar ko lauto.”

Dr. Ganga Sahai Sharma, Ph.D., translates: “Hey mritak ki patni! Tum apne putro ewam ghar ka dhyana karke yeha se uutho. Aap marey huey vyakti ke pass kyo soyee ho? Ish purush ke panigrahan wa garbhadhan ke anuroop aap vyavahaar kar chuki ho. Aap ishke sath marane ka

vichar chhodo." Arthur A. Macdonell, in his book "A History of Sanskrit Literature"(page106) also says that (X.18.8) is addressed to the widow, who is called upon to rise and take the hand of her new husband, doubtless a brother of the deceased, in accordance with an ancient marriage custom.

Macdonnel quotes following translation of (X.18.8) as given by Ralph T.R. Griffith: Rise up; come to the world of life, O woman; Thou liest here by one whose soul has left him. Come: thou hast now entered upon the wifehood Of this thy lord who takes thy hand and woos thee. Thus, eight different authors from different places confirm that (X.18.8) actually commands a Hindu widow to return to the world of living beings, return alive to her home and return alive to her children.

Also, this very richa confers upon her full right on house of her deceased husband (apne putradi aur ghar). In 1995 Supreme Court interpreted Section 14(1) of the Hindu Succession Act to the effect that a Hindu widow has full ownership rights over properties she inherits from her deceased husband. Supreme Court said that object was to wipe out disabilities imposed by Hindu Shastras.

Supreme Court, thus, restored rights conferred on widows under richa (X.18.8).This richa appears in the Atharvaveda at (XVIII.3.2) also.

In RV(X.18.9) the new husband takes bow (or any symbol or any item) from the hand of dead husband, and while taking the widow as his wife says to her: let us launch a new life of valour and strength begetting male children overcoming all enemies who may assail us. HHWilson translates:Taking his bow from hand of dead man,(new husband says) for the sake of our vigour, energy and strength, I say you(dead) are there(in grave);may we (who are) here (on ground), blessed with male offspring, overcome all enemies who assail us.

According to Achraya Sayana, it is the first six richas of 16th Sukta of Xth chapter of Rigveda (X.16.1 to 6) which are to be recited at funeral pyres; and, none of these six richas either call for burning of widows or make any reference to widows.

I would like to draw attention of readers to richa (X.40.8) of Rigveda which praises Ashwin gods for protecting a widow. It shows gods were praised for protecting widows. How could gods have gone to protect widows, and, thus, behaved against Rigveda if Rigveda had actually commanded burning of widows?

Another richa (X.40.2), may come as a complete surprise to many Hindus who wrongly presume that widow remarriages are not allowed in Hinduism. HH Wilson translates it: "Where are you, Ashwins, by night? Where are you by day? Where do you sojourn? Where do you dwell? Who brings you into his presence in the same place (of sacrifice) as on her couch a widow (brings) her husband's brother, as a woman (brings) her husband (to her).

Dr. Wendy D. O'Flaherty translates: "Where are the Ashwins in the evening, where in the morning, where do they stop and where have they spent the night? Who invites you as a widow takes her husband's brother to her bed, as a young woman takes a young man to a room."

Ralph T.R. Griffith translates (X.40.2): "Where are ye, Asvins, in the evening, where at morn? Where is your halting place, where rest ye for the night? Who brings you homeward, as the widow bedward draws her husbands's brother, as the bride attracts groom?" Dr. Ganga Sahay

Sharma translates in Hindi: “Hey Ashwin kumaroo! Tum raat aur din mey kaha rahate ho? Tumhara samaya kaha bitataa hai? tum kaha nivas karate ho? Jisprakar vidhawa apne devar ko aur sadhawa apne pati ko charpayee par bulaati hai ushiprakar merey atirikta kaun yajaman tumhe yajnavedi par apne anukul banaataa hai?” Thus, Rigveda not only sanctions survival of a widow but also her marriage and her living with her devar with full dignity and honour in the family. So, it expressly sanctions widow-marriage.

In Atharvaveda there are many richas which sanction/ instruct remarriage of widows, such as ,AV(IX.5.27-28) and AV(XVIII.3.1-4).WD Whitney translates AVX.5.27);:Whoever(a female)having gained a former husband,then gains another later one ,if they(both) shall give a goat with five rice dishes, they shall not be separated. AV(IX.5.28) reads :Her later husband comes to have the same world with his remarried spouse who gives a goat with five rice dishes with light of sacrificial gifts.

AV(XVIII.3.1) blesses a widow with progeny (children) and property in this life time. AV(XVIII.3.2) is repeat of RV(X.18.8). WD Whitney &Joshi translate ::Go up ,O woman, to the world of living; you stand by this one who is deceased ; come! To him who grasps your hand, your second spouse (didhisu) ,you have now entered into the relation of wife to husband. AV(XVIII.3.3) is interpreted as the command to turn back a maiden(young calf or young woman)away from dead to home. WD Whitney translates ::I saw the maiden being led, being led about, alive ,for the dead; as she was enclosed with blind darkness(agyanataa) ,then ,I led her off-ward from in front .AV(XVIII.3.4) is translated by another author as ::O ye inviolable one!(the widow) tread the path of wise in front of thee and choose this man (another suitor) as thy husband. Joyfully receive him and may the two of you mount the world of happiness .In this richa word aghnya has been used for widow which means a widow can not be killed .As a cow cannot be killed so a widow cannot be killed. Contradicting his translation of RV(X.18.7),PV Kane in his History of Dharmashastra has himself quoted verses to inform that:: another man is ordained for a woman in five calamities viz,(i)when husband is missing and is unheard of (ii)husband dies (iii)is impotent (iv)becomes ascetic;(v)husband is declared depraved. Agnipurana(154.5-5), ParasarSmriti(IV.30) and Narad Smriti(V.97).(Further details at http://baharna.com)

The third chapter of Rigveda is considered the oldest part of Rigveda. Richa (III.31.1) commands that a son-less father accepts son of his daughter as his own son i.e. all properties of a son-less father shall be inherited by son of his daughter. Richa (III.31.2) commands that if parents have both son and daughter, son performs holy acts of pindadaan (after death of father) and daughter has to be enriched with gifts (rindhan i.e. to be made wealthy). Richa (II.17.7) also attests share of a daughter in property of her father. Custom of daughter being given freedom to select her husband is attested in RV(X.27.12)

Those who misinterpret Rigveda to say that it sanctions suttee do this mischief by mis-spelling the last word of richa (X.18.7) as “yomiagne” and neglecting commands of other richas. The last word of this richa is actually “yomiagre” as shown in Sanskrit in above quoted Rigveda by HH Wilson and Pt. Shri Ram Sharma Acharya.

In fact, body of dead person is not burnt at all on a pyre in this 18th Sukta!! The dead body is being buried under ground (in a grave) vide tenth, eleventh, twelfth, thirteenth and fourteenth richas of this 18th Sukta. So, whose funeral pyre a widow is being asked by pro-sati lobby to

mount if corpse of her husband is being buried in the ground under this very sukta of Rigveda!!! Thus, there is no richa in Rigveda calling for widow burning. In fact, Rigveda commands a widow to return alive to her home with a new husband.

During the medieval period, thousands of women were burnt alive on stakes in Europe after Churches declared them to be witches. In his book "In Search of Loving God," Mark Mason (Chapter IX) has written that towards the end of the Dark Ages in Europe, Emperor Charlemagne had forbidden burning of supposed witches.

In the ninth century, the Church also repudiated the belief that witches had supernatural powers. Papal Bull (ad extirpanda) issued by Pope Innocent III in 1252 authorised seizure of possessions of persons accused of not following the faith as laid down by the Church, their imprisonment and executions.

Pope Innocent VIII issued the bull (1484) against witchcraft and appointed Inquisitors. It is estimated that a few million people were tortured and executed in Europe for witchcraft over three centuries and 85 percent of them were women who were burnt alive on fire stakes.

Others claim figure of burnt alive during 1450 to 1700 should be much less: only about two lakhs!!! No one knows the correct number of women who were burnt alive on stakes in medieval Europe .In Holy Quran, at many places it is said that Kafirs are inmates of fire such as surah(II.39), (III.10) (III.116) etc. In modern era,without recalling the past bitter memories, we may look forward , follow the policy of live and let live, policy of peaceful co-existence.

Veda, Ramayan and Gita are the three and the only three supreme scriptures of Hindus. All others (like Brahmanas, Upnishads, Purana, Dharma Shastras, Sutras, etc.) are just commentaries, explanatory notes written by individuals. As commentaries written on the Constitution of India cannot over-ride the Articles of the Constitution of India and as laws passed by the Parliament or State Assemblies cannot supersede the Articles of the Constitution of India, similarly, commentaries/explanations on Vedas by individuals cannot supersede richas of Vedas or Ramayan or Bhagwat Gita.

Maharishi Vedvyas has himself written in Mahabharat that in cases of conflicting views,Vedas shall supersede all other writings:

"whenever there is conflict between what is declared in the Vedas and provisions in any of the Smritis, Puranas, etc., what is declared in the Vedas shall prevail."

In Ramayana, everyone knows that after death of King Dasharath, his wives were never asked to step into pyre of Dasharath. Rather, they lived in family with full honour and Bhagwan Shri Ram always bowed his head before his widowed mothers with full respect. In Mahabharat, Kunti, mother of Pandavas did not commit suttee and she was active in all family matters and accorded full respects by all including Lord Krishna .Dharmaraj Yudhishthir ,being gyata of Dharma would certainly have asked his widowed mother Kunti to commit sati if it was a requirement of dharma.

Yudhishthir never did so means committing sati was not a requirement of Dharma. Thus, there is no command either in Ramayana or in Gita to commit suttee.

Over centuries relatives have been murdering or getting assassinated relatives for property, and, it

will continue in coming centuries also. Greed is human nature. If greedy people incite a widow to commit suicide on pyre of her husband so as to deprive her of her gold, silver and land, let us not say or believe that widow burning is sanctified by Rigveda or by Hinduism.

Richa (X.18.3) commands a Hindu widow to separate from dead and richa (X.10.8) commands her to return alive to her children/her home. RV(X.18.9) commands her to be remarried immediately to a brother/relative of deceased husband. For their own empowerment, Hindu women will be well advised to remember the seven richas viz. (II.17.7) (III.31.1) (III.31.2) (X.18.3) (X.18.8) (X.40.2) and (X.40.8) to assert and claim their status and Vedic rights.

Caste and the Hindu scripture - Contributed to this site by Ambassador O P Gupta

Over centuries, percentage of Hindus in the world population has been declining; and, even in independent India, percentage of Hindus in total population has been declining!!!

Percentage of Hindus in total population of India was 84.98% in the 1951 census; 82.7% in 1971; 82.6% in 1981 and 82.41% in the 1991 census. But in the Census Data Online report (tables 23 & 24) (www.censusindia.net), percentage of Hindus in the 1991 census has been revised downwards to 82%.

The 2001 census report is yet to be officially issued. Shri Ramesh Chander Dogra-Urmila Dogra at page 34 of their book `Let us know Hinduism` published by Star Publications (2003) have placed percentage of Hindus in India at 79% only. For this decline, we Hindus have to blame ourselves.

It calls for serious introspection and reappraisal of our socio-religious norms. Whereas Islamic priests (mullah) and Christian priests have been working overtime with missionary zeal to seek new converts so as to increase their demographic weight, Hindu priests (pujaries) unaware of Rigvedic norms of equality by birth and gender equality but armed with Manusmriti have been working hard over last one thousand years to reduce population of Hindus: by making it more and more difficult for a sizeable chunk of Hindus (now called ST/SC/Dalits) to let them remain Hindus with honour and dignity by concocting high caste- low caste syndrome; by not sanctifying widow marriages; and, by not seeking new converts to Hinduism.

Widow marriage is expressly sanctioned under RV(X.40.2), RV(X.18.8) RV(X.18.9), Atharvaveda (IX.5.27-28) and AV(XVIII.3.1-4).

The very concepts of castes by birth, upper/lower castes, superior/inferior castes, outcastes, untouchables, dalits, etc. are expressly prohibited by Rigveda, by Ramayana and by Shrimad Bhagwat Gita.

Protagonists of castes by birth cite in particular Purus-Sukta (X.90.12) of Rigveda and slokas (IV.13) and (XVIII.41) of Shrimad Bhagwat Gita. This claim is totally knocked down if one keeps

in mind other richas of Rigveda and other slokas of Gita and examples set by Lord Rama. There is no birth based caste in Rigveda is evident from a simple fact that names of none of Rigvedic rishis carry any present day caste titles like Pandit, Sharma, Tripathi, Chaturvedi, Trivedi, Singh, Rao Gupta, Namboodari, etc. etc.

There are about thirty women risi (risikas) in Rigveda implying gender equality that women were not discriminated in matters of education nor were prevented from gaining exellence.

In fact RV(X.85) the marriage hymn containing forty slokas was revealed to lady risi Surya Savitri which has to be recited at time of solemnising marriages as per Vedic rites but many out of ignorance donot recite it leaving marriage rites incomplete. For conferring full Vedic sanctity on marriage, parents should make it a point to insist upon pandits to recite (X.85) in mandapam before saptpadi ceremony. In some Hindi movies one finds Durga saptapadi slokas being recited at time of marriage!!!

Vedas, Valmiki Ramayan and Gita are three and only three supreme religious scriptures of Hindus. All others (Brahmanas, Upnishads, Puranas, Sutras, Smrities) are just commentaries, explanations, stories mixed with historical accounts and poets' imaginations.

Many Puranas themselves state that these are stories (mahatmya) as narrated by Kakbhisundi, Sukracharya or other sages. All books written in Sanskrit cannot be elevated to status of religious scriptures. Therefore, these latter compositions must yield to supremacy of Vedas. It is not a new assertion as these themselves acknowledge supremacy of Vedas. For example, Manusmriti vide Sloka (II.6), states that Vedas are the primary/first source of authority. Manusmriti (II.13) reconfirms that the supreme authority of law is the shruti i.e. Vedas.

So, it is logical that all such slokas of Manusmriti which are violative of Veda should stand rejected. In fact, Maharishi Ved Vyas, who is credited to have compiled/edited all the four Vedas in present format and who is believed to be author of Mahabharata, Shrimad Bhagwat Gita and all the Purans has himself laid down (Mahabharata: 1-V-4): that `whenever there is conflict between what is declared in the Vedas and provisions in any of the Smritis, Puranas, etc., what is declared in the Vedas shall prevail` (Human Rights and Indian Values by Justice M. Rama Jois, Page 2). In 1899 AD Prof. Arthur A. Macdonell 'A History of Sanskrit Literature' has written (page 28) 'works of vedic revelation (shruti) were deemed of higher authority in cases of doubt than the later works on religious and civil usage, called smrti.'

At page 31 Macdonell adds 'Dharma sutras are, in general, the oldest sources of Indian law and are closely connected with Veda which they quote and which the later law-books regard as the first and highest source of dharma.'

Thus, Macdonell suggests that Vedas supersede every other scriptures and stand the supreme. Justice A.M. Bhattacharjee also in his book 'Hindu Law and the Constitution' says (page 16) that by a rule of interpretation, if the shruti (Vedas) and the smriti differ on any point, the former is to prevail but the British Courts ruled just the opposite!! In practice, Justice Bhattacharjee says (page 18) commentaries & digests (nibandhas) replaced smritis in British Courts.

In Atmaram v Bajirao, the Privy Council ruled that opinions of latter day commentators (Bhasyakars) would prevail over Vedas. In view of the Privy Council decision in Ramnad case (1868), it was no more open to Hindus even to inquire whether disputed points were in conformity

with Vedas or not (page 37).

Thus, while paying lip services to supremacy of Vedas, British Indian Courts, in name of upholding local latter/usages & practices, slowly but steadily whittled down, caselaw by caselaw, the supremacy of Vedas; and, thus promoted divisiveness/diversities among Hindus to meet imperial interests of their political masters of the day to divide & rule.

No one can be definite how old are Vedas, Ramayana and Gita. What is their real antiquity? European scholars estimate that Rigveda was composed during 1500 to 1200 BC (Before Christ). Rigveda comprises revelations to 414 rishies.

Thus, Rigveda has aura/majesty of a Holy scripture having been approved by a sort of Dharam Sansad comprising 414 rishies. Thereafter, Ramayana and Mahabharata were composed. Shrimad Bhagwat Gita is a part of Mahabharata. Other scholars estimate that Rigveda was revealed much before 5000 BC as it does not mention cotton (kapas) whereas the oldest cotton seeds found in (Mehrgarh) Baluchistan have been carbon dated to 5000 BC (Scientific American Journal, August 1980).Astronomical data ,some zodiac configurations and references about equinoxes etc in Veda support antiquity of Rigveda beyond 5000BC.

It is believed that Manusmriti was composed much later during Kushan period, about 100 years after Chankya/Kautilya. Arthur A. Macdonnel ,Principal, Oxford College (born in Patna, Bihar) in his book 'A History of Sanskrit Literature' (1899 AD) estimates that Manusmriti in its present form was composed near about 200 AD, Yajnavalkya Dharma Sutra in 350 AD, Mitaksara in 1100 AD, Parasar Smriti in 1300 AD and Dayabhag in 1500 AD.

In his book, Macdonnel (page 366) warns that the smritis are not on the same footings as law books of other nations as these are works of private individuals (Brahmins); these were written by Brahimins for benefit of Brahinins whose caste pretentions these books consequently exaggerate. Further, none of these books from Manusmriti onwards were approved by any Dharam Sansad (religious congregation). Macdonnel advises, it is, therefore, important to check statements/claims made in smrities by outside sources.

But, British Indian Courts neglected this advice of Macdonnel. Further, the original text of Manusmriti has been tampered with was acknowledged by Sir William Jones, an employee of the East India Company who arbitrarily elevated it as the Law book of Hindus in British Indian Courts. Bertrand Russel in his book, Power, has traced from prehistoric times that priestly class used religious beliefs and practices to accumulate power and wealth. In medieval times, kings used to rule in many European countries at pleasure of Catholic Pope. Papal approval was a must for ascending thrones in Europe. So, priestly class acquiring power in name of religion was there in other societies also.

As devil is there in the details, readers may closely look at English translations. HH Wilson (ISBN 81-7110-138-7) translates (X.90.11): 'When they immolated Purusa, into how many portions did they divide him? What was his mouth called, what his arms, what his thighs, what were his feet called?' Ralph T.H. Griffith translates: 'When they divided Purusa how many portions did they make? What do they call his mouth, his arms? What do they call his thighs and feet?'

Translation of (X.90.12) by HH Wilson 'His mouth became the Brahmana, his arms became the Rajnya, his thighs became the Vaishya, and the Sudra was born from his feet.' Translation of

(X.90.12) by Griffith 'The Brahman was his mouth, of both his arms Rajnya was made. His thighs became Vaishya, from his feet the Sudra was produced.'

With a view to create hereditary monopoly on easy money of dakshina, greedy priests many centuries after Vedas concocted hypothesis in form of Manusmriti that as Brahman was born from mouth of Purusa, he was the superior most and as Sudra was born from feet which is impure part of body he was impure and the inferior most. In Manusmriti (5/132) it is stated that organs above nabhi are sacred (pavitra) and those below are impure (apivatra).

There is no sanction for such a hypothesis in Rigveda. Wilson says objective of (X.90.11) was 'to immolate Purusa;' and, Griffith says 'to divide Purusa.' This context, this background that, division of body of Purusa into four parts was done to immolate/sacrifice/kill the Purusa , has been totally suppressed and manipulated in Manusmriti. In sloka (I.31), Manusmriti claims, that for growth of people (lokanbridhi) Brahma created Brahman, Kshatriya, Vaishya and Shudra from mouth, arms, thighs and feet. What Rishi Narain, composer of (X.90) has conveyed is a very simple common sense, that: even the most powerful man like Purusa can be immolated/destroyed/killed if his mouth, arms, thighs and feet are separated.

If we kill a person what do we do? We cut his body into pieces. This is what followers of Manusmriti have been doing over centuries destroying/immolating Hinduism from within by dividing/separating Hindus among different castes by birth and by putting them at fratricidal war with each other, thus, reducing Hindu population. By throwing Sudras out of villages, followers of Manu amputated feet of Hinduism, thus, made Hinduism crippled and invalid. Will followers of Manusmriti agree to get their own feet amputated on the same logic that their legs are impure parts of their bodies?

Another interpretation of(X.90.11 & 12)is creative i.e. a powerful (virat) man emerges from Yajna. Acharya Shri Ram Sharma of Bareilly translates (in Hindi) 'Virat purus kitne prakaroo se utpanna huvey. Unka mukh Brahman, bhuja kshatriye, janghaye vaishya aur charan sudra huye.'

Acharya translates these two richas on lines of creation not immolation, so, in his translation, body of Purus is not being divided into four limbs. By common sense, a virat Purus is the one who is healthy and one is healthy only if his mouth, arms, thighs and feet are joined together and work in perfect harmony with each other. Whenever this harmony among different parts of body is disturbed/destroyed, he becomes paralysed and sick.: and he is no more a virat Purus. So, what Rishi Narain is saying is that a Society will emerge as the most powerful Society like the Virat Purus only if its intelligentia (educated people i.e. Brahmans), Government (Rajnya), business community (Vaishya) and professionals & workers (Sudra) are joined together and work in as close harmony with each other as mouth, arms, thighs and feet of any healthy person work.

These two richas, thus, emphasise total equality, perfect unity & complementarity of all the four classes of people so as to make a Society powerful. In a healthy person, mouth does not claim to be superior to legs, arms do not claim any superiority over legs, arms do not function independently of head (Parkinsons’s disease), etc. as each part of a body is composed of identically same materials and is functionally dependent upon each other.

No part of body is inferior or superior to any other part of the body; each dependent on the other; each complementary to the other, each supporting the other. Thus, Purus Sukta commands that

none of the four classes is inferior or superior to other and each is dependent on the other for its healthy survival. But, just contrary interpretation has been created by greedy people and British Courts to divide and rule over Hindus:Those who say that as Sudra represent feet of Virat Purus, and, as feet is impure so Sudras are impure should know that richa (X.90.14) says that earth was born from the same feet of Purusa. So, will they leave this earth on the same analogy of earth being an impure place? Based on (X.90.14) Sudras will be justified to claim the entire earth as exclusively theirs. Also one may note that whenever we worship, we always place our heads on feet of God in any temple, so how can anyone say that anything representing the same feet of God is impure and untouchable.

There is no stipulation of high or low by birth in Rigveda. Many rishis of Rigveda under current Manusmriti definition do not turn out to be Brahmins by birth. There is no stipulation in Rigveda that son will necessarily inherit profession of his father i.e. there is no hereditary claim on professions. In richas RV (V.23.1) and (V.23.2) Rishi Dyumna prays to Agni 'Bestow Agni, upon Dyumna, a son, overcoming foes by his prowess; one who may with glory subdue all men in battle' (HH Wilson). A rishi of Rigveda is praying Agni for a warrior son. In RV (IX.112.3) another rishi says 'I am the singer, papa is the physician, mama throws the corn upon grinding stones.` So, father of a Rigvedic rishi is a physician! In Manusmriti a physician has been called impure/sudra. In richa (X.125.5) rishi says that by imparting training one can be turned into a warrior, a Brahma, a rishi or a sage.

Thus, in Rigveda profession is not by birth, not hereditary, but by training (karma/efforts/prayatna).

HH Wilson translates (X.125.5), 'I verily of myself declare this which is approved by both gods and men; whosoever I will, I render him formidable, I make him a Brahma, a rishi or a sage.' This richa appears in Atharveda (IV.30.03) also. RV (X.98) is revealed to risi Devapi who was elder brother of King Shantanu of Mahabharata. In RV (X.98.7) Devapi, is functioning as a purohit to his own brother King Shantanu.

So being a ksatriya under Manusmriti definition, one brother (Devapi) under Rigveda is functioning as purohit to another brother (King Shantanu). Hymns RV (IX.96) and RV (X.179.02) were revealed to rishi Pratardana who was a King of Kashi. Lady rishi Lopmudra, a Ksatriya ' daughter of King of Vidarbha - was married to risi Augustya. The third Mandala of Rigveda was revealed to risi Vishwamitra and family. In (III.58.6) he confirms his family lineage to House of Jahnu who was a King of Kanyakubj. Gayatri mantra RV (III.62.10) was revealed to risi Vishwamitra Gathin. Gayatri mantra appears in Yajurveda (III.35) and in Samveda (1462) also. Therefore, by reciting Gayatri mantra one simultaneously venerates three Vedas. Richas RV (III.53.22-24) confirm risi Vishwamitra Gathin himself was a warrior. Hymn RV (VI.75) attests rishi Payu Bhardwaj was also a great warrior. In Mahabharata days Parasuram, Dronachraya, Kripacharya were great warriors.

Some assert that Arayns were/are fair complexioned people and sudras are dark skinned. They also claim that four varnas are based on colours of skin. This is not true as Lord Rama and Lord Krishna are always depicted in coloured pictures as dark complexioned (shyama varna). Rishi Ved Vyas who compiled Vedas was himself of dark complexion. Rishi Kanva who richly contributed to Rigveda was himself a dark skinned person vide RV (X.31.11):

There is no mention of forced southward migration either in Rigveda or in Dravidian literatures. But some scholars assert that fair skinned Aryans invaded India during 1500 BC and defeated dark skinned Dravidians and pushed them into South India. Such scholars end up concluding that Dravidians too migrated into India (before Aryans) from the Mediterranean regions!!

Word Dravida occurs in RV (III.61.6) but means treasure, prosperity. In Atharvaveda (XVIII.3.1) too word dravina means property/wealth. No society expels rich. So why did Aryans act against common sense and why did they expel rich people are another fundamental weaknesses of Aryan Invasion Theory(AIT)

The Aryan Invasion Theory, one school claims, was developed by Max Muller, a highly paid German employee of the East India Company to deny political & moral basis to Hindus to claim independence from British as they(Hindus), too, under this theory were foreigners in India (from Russian steppes or Mediterranean) like Britishers. This imperialist theory was designed to confer as much political legitimacy/rights on Britishers over India as Hindus (Aryans and Dravidians) had over India; all being foreigners.

Later, even Max Muller conceded that 'Aryan in scientific language is utterly inapplicable to race. It means language and nothing but language. Aryans are those who speak Aryan language with Aryan grammar whatever their colour, whatever their blood.' In Rigveda, Arya means educated ones.

Higher caste/lower caste and untouchability, etc. is in open and direct contradiction of many other richas of Vedas viz. RV (VIII.93.13), RV (X.191), Atharveda III.30 and VII.54 (or VII.52) and Yujurveda (26.02) and (36.18). Unity in diversity is famous Indian motto. Cows of different colours like black, red and spotted ones give same white milk RV (VIII.93.13) is a metaphor used in Vedas for diversity yielding to unity. HH Wilson translates (X.191.2): 'Meet together, talk together, let your minds apprehend alike: in like manner as the ancient gods concurring accepted their portion of the sacrifice:'

RV (X.191.3) 'Common be the prayer of these (assembled worshippers), common be the acquirement, common the purpose, associated be the desire. I repeat for you a common prayer, I offer for you a common oblation:'

RV (X.191.4) 'Common (worshippers), be your intention; common be (the wishes of) your heart; common be your thoughts, so that there may be thorough union among you:'

W.D. Whitney & K.L. Joshi translate Atharveda (III.30.1) 'like-heartedness, like mindedness, non-hostility do I make for you; do you show affection the one towards the other, as the inviolable (cow) towards her calf when born:'

Atharveda (III.30.5): 'Having superior intentful, be you not divided, accomplishing together, moving on with joint labour come hither speaking what is agreeable one to another, I make you united, like minded.'

Atharveda (III.30.6): 'Your drinking saloon be the same, in common your share of food, in the same harness do I join you together; worship you Agni united, like spokes about a navel.' Thus, SC/ST/Dalit Hindus have Vedic rights of equal & free access to water wells, tanks, food-shops, temples, worshipping, etc.

Atharveda (III.30.7): United, like minded I make you, of one bunch, all of you, by (my conciliation; (be) like the gods defending amrita; late and early be well-willing yours." Thus, all Hindus are of one bunch, one stock. Atharveda (VII.54.1) and (VII.54.2): "Harmony for us with our own men… May we be harmonious with mind, with knowledge, may we not fight… let the day not come when Indra's arrow fall on us."

Yajurveda (26.02) (richa No. 1460) prays for well being (kalyan) of all including sudras as under: RTH Griffith & Dr. Ravi Prakash Arya translate "That I to all the people say address this salutary speech, To priest and nobleman, Sudra and Arya to one of our own kin and to the stranger." Thus, Yajuveda confirms that Sudras belong to same community, same race as that of the priest, Rajnya and arya. Thus, Sudras are not a separate race, a point always so emphatically emphasised by Dr. B.R. Ambedkar (Page 269, Dr. Ambedkar Life and Mission by D. Keer). "In Ambedkar's view the caste system is a social division of people of the same race." Shri Ram Sharma translates: "Kalyan karane wali vani ko Brahman, raja, sudra, vaishya, apne jano aur samasta jano ke liye kahata hoon." Yaj (36.18): "O Deva, strengthen me. May all beings regard me with eyes of a friend. May I regard all beings with the eye of a friend. With the eye of a friend do we regard one another."

Thus, the central command of the 15 harmony richas and 10 profession not hereditary richas is that all Hindus are totally equal by birth, of one bunch, share same water and food, worship together united in same temple, common are the prayers, common be the purpose, common be thoughts, united like spokes of a wheel, common be oblation, friendly towards each others, etc. etc. One becomes a warrior (Rajnya), Brahman (educated ones) or rishi, not by birth but by his efforts/training (karma) vide RV (X.125.5). No one is superior by birth and no one is inferior by birth. In fact RV (V.60.5) reads "No one is superior (ajyestasa) or inferior (akanishtasa). All are brothers (ete bhrataraha). All should strive for the interests of all and should progress collectively. (sowbhagaya sam va vridhuhu):

Imagine they were Christian missionaries, or Islamic terrorists

By S Gurumurthy

http://www.newindpress.com/column/Column.asp?ID=IEH20010826004254&P=old

All four of them were kidnapped, over two years ago, in August 1999. By a leading purveyor of terrorism in Tripura, the National Liberation Front of Tripura. The Indian intelligence knows that the American-powered Baptist Church, which keeps spreading the poison of separatism among the tribals of North East, fully backs this terrorist outfit.

Now, after two years it has been confirmed that the terrorists have snuffed out the kidnap victims. Both the Central Government and the Tripura Government have confirmed their deaths. But most Indians are unaware of the abduction earlier and of their death now.

Why was this abduction the least known? Why no screaming headlines day after day. Why no stinging editorials week after week. No biting criticisms from secular columnists. No statements from secular intellectuals. No accusation from secular leaders or their parties. No adjournment or other motions in Lok Sabha. No storming of the well, no strangulation of the Rajya Sabha asking to dismiss the Tripura government. Why?

Simple. Though highly dedicated social workers, the victims happened to be Hindus. Worse still, they were all RSS men. But, not one of them is an ordinary RSS worker; every one a responsible leader of the organization.

Shyamal Sengupta was the secretary of the RSS for the entire Eastern India. Sudhamoy Dutta was a fulltime worker of RSS in charge of the Agartala segment. Dinendra Nath Dey was in charge of the organisation in South Assam. And Subha Shankar Chakraborty was a full time worker of the organization in charge of a district in Tripura. They were kidnapped and killed precisely because they were fighting the violent separatist elements in the North East like the National Liberation Front of Tripura.

Since Independence, North East India has become the hunting ground for different denominations of the Christian churches for their religious head count through organized and un-resisted conversions. Nowhere in the world churches of all denominations are allowed to hunt the less informed people as in India; more importantly, as in the North East. Most of the foreign churches carry their national flag. The Anglican Church carries the British Flag. The Lutheran the German flag. The Baptist the American flag. So do the Danish, Dutch and all other national churches. They carry their flags and politics wherever they go. There is more of politics, global politics,

than Christianity in the work of most national churches. The geo-political designs of the US internalize the role of the church. It is such geopolitical designs of the West during the cold war, which handed over drugs and guns to the youth of the North East. And this is what extended terrorism and separatism to others in the most sensitive area of our country.

International aid money for religious conversions to drug funds operate in this region to make the tribals believe that they have nothing to do with India, as to disfigure India. The sermon of most of the foreign national churches to the less informed tribals is that they are distinct and separate. So they must become separate from India. This is what these four kidnapped and killed patriots were resisting and fighting against.

But it is workers like them who rush to render relief to the victims of flood or drought, earthquakes or other disasters. When the Russian and Saudian aircraft had a mid-air collision near Delhi, and all mutilated bodies, most of them of Muslims, were strewn around, it was the RSS workers who rushed first to the spot and took charge of everything, including the cremation of the stinking flesh remains, and restoration of the valuables. Even its worst detractors admit that be it war times or at peace time, the work of the RSS has been commendable. But their good work goes mostly unreported by the media. Nevertheless the media puts them on the front page whenever it has to, for precisely the wrong reasons. But anyway they do not work to get the media attention. Like in work, in their kidnapping and death administered by the terrorists also, the four patriots have been denied recognition. But they did not work or die to get the recognition of any.

Imagine it was the other way round. Had the kidnapped and killed been Christian missionaries. Let it be just one missionary, not four. What would the secular editors, newspapers, columnists have not said. "barbaric communalism at work" "secularism in danger" "fascism at play" and what not. What would not the secular political leaders and parties have done? Would they have allowed Parliament to function? The completely fabricated nun rape case in Jhabua in Madhya Pradesh had debilitated the nation's mind for months and months. Thanks to the secular megaphones in the media and politics, the whole world was made to believe that it was some kind of pastime in India to rape nuns. Even after the incident was proved fabricated, not a single accuser withdrew his word. Not a single newspaper expressed regret. Not a single political leader regretted his hysterical conduct. Not a single political party expressed guilt at having misled the nation. The less said about those Christian leaders, who took millions of captive school children on to the streets to protest against the false rape, the better. Now the court in Jhabua has explicitly ruled that there was no communal rape. Most newspapers did not even report the court verdict, thus serving the cause of secularism.

Even if the killed four had been Islamic terrorists, there would be enough secular elites and editors who would walk up to the Wagah border with candles in their hands to plead for peace so that no more killings take place. It is a different matter that they would not have the guts to walk in the streets of Srinagar and Anantnag with the same message of peace. Their struggle for peace is conditioned by assured protection, which the government can give at Wagah, not in Kashmir.

This is the drift in the national mind. This is what made V P Singh who was the prime minister (when the Kashmiri Hindus were thrown out of their domicile of thousands of years on to the streets of Delhi) not to visit the Kashmiri Hindus who had become refugees in their own land of

birth. They were at the refugee camps in Delhi, a stone's throw from the PMs office and home. He knew the rule of Indian polity that it was un-secular to meet the Jihad victims who belonged to the majority faith. He never saw them till he ceased to be the PM and even after. It is not without reason that he is an unquestioned leader of the secularists! It is this drift, which makes responsible editors of newspapers to arrange meetings of the Jihad-advocating-Kashmiri separatists with the elites of India. Like V P Singhs, they would not even meet the victims of Jihad, much less arrange the meetings of the victims.

The logic is clear. It will be un-secular to be seen with the victims who belong to the majority faith, but totally secular to work with the Jihadis. With those who religious head hunt in the North East. Nothing is more indicative of a drifting mind. This is what the four kidnapped patriots had fought to resist, and got kidnapped and killed.

Even Ashoka would go for war, should his people be killed

S Gurumurthy

http://www.newindpress.com/Column.asp?ID=IEH20020522124732

'War is not the option' they say. 'Nor is it the solution', they counsel. 'Be restrained' they pontificate. Whether it is the peace-loving media or the neutral intellectual in India or the United Kingdom or Iran or China, they speak in one voice. For every warmonger in the world, we have a million peace-makers. This ratio is increasing by the day. There are more peacemakers than at any point in history. Subject to one difference. The warmongers are sincere about the war, highly motivated about their cause. The peacemakers are terrified of them. So they do what is easy. Pontificate to the victim.

The Wagah candle carriers are telling Vajpayee to tell Bush to tell Musharraf to tell the terrorists to stop the terror. Marxists, by habit and belief, are suspicious of the US. But Harkishen Surjeet is advising India to tell the US to pressure Pakistan to rein in the terror. So bizarre is the counselling to avoid the war.

War is of course a bad word now. But surprisingly not when the West wages it. England will go to the far off Falklands to wage war. Just for its honour. The US would carpet bomb and flatten a whole Afghanistan, in the name of protecting Americans. A global alliance has been forged for this war, the war against terror, a highly respectable war. Israel will hit the nuclear facility in Iraq, to destroy a perceived danger to the Jewish people. These are wars. But being waged by the 'civilised', they are not bad wars. They are wars for peace; noble and good wars.

But if India were to think of a war as a counter to the attack on innocent citizens, against the attack on its Assembly and its Parliament, it would be a bad war. Not wholly a war against terror, for it is against a partner in the war against terror, that is Pakistan. It is not just that the US or UK or China or Iran would consider it a bad war. Even the Indian liberal will not accept such a war.

It is conceded that the life of an American is so precious to the US that it must go to war if they die or their lives are threatened. Similarly the life of a Jew is so precious to Israel that they should go to war, every time there is a suicide attack. Is the life of Indians so cheap that even over 60,000 of them dying at the hands of terror in Kashmir is not good enough to think of a war?

'Yes', they say. 'Let any one go to war. India should not go to war'. Their obsession with peace at any cost proves, by contrast, that any one who thinks of war as a solution is against peace. So those who sincerely believe war as a legitimate means for peace are shy of talking about it. With

the result the whole national mind is confused. Nothing would benefit the enemy than a warrior's confusion.

This was precisely the position of Arjuna before the start of the Kurukshetra war. And it was exactly the position of Ashoka after the Kalinga war. One was confused by noble thoughts before the war, and the other was confused by noble thoughts after the war. But fortunately Sri Krishna laboured through 18 long chapters of discourse in Bhagwat Gita to clear Arjuna's confusion and to help him take a decision. Arjuna finally decided to wage the war. But unfortunately Ashoka did not have the wise counsel of a Sri Krishna to clear his confusion. **Result, Ashoka's confusion still haunts India. In the Indian dictionary, war has turned a dirty word, thanks to our construction of Ashoka.** But what our intellectuals failed to fathom is that only wars waged **out of ambition**, like Ashoka did and realised, are wrong. Not wars to prevent the slaughter of the innocents.

So we have perverted Ashoka. **Whether it is Tsun Tsu or Bhishma, men of wisdom have regarded war as sometimes essential to bring peace.** A great saint once said even wars may have to be waged out of love. **What is wrong is war of hate. That is Jihad. But a war to protect ourselves from Jhad is not a war of hate.** In dictionary and statistics, of course, both are wars.

What Ashoka retreated from was war motivated by lust and ambition, not wars to prevent wars. Even the peace-at-any-cost peacemakers would not say that India is motivated by lust of ambition. Imagine if Ashoka were ruling Delhi today. Would he shy away from the war imposed by Jihadis? Never. He would have taken them on frontally. He would have brushed aside the peace-at-any-cost peacemakers with contempt.

articles on hinduism

Madam, will they be shamed by your blunt words?

By S Gurumurthy

http://www.newindpress.com/Newsitems.asp?ID=IEH20020301124139&Title=Top+Stories&rLink=144

Commenting on the roasting alive of 60 persons inside the Sabarmati Express in Godhra in Gujarat, she said, ``it is saddening and strange that when such acts are perpetrated against the minorities all political leaders rush'' to condemn. But when the majority is attacked, ``not a single political leader'' condemns it.

She rubbed it in further. ``It is not as if crime is a crime only if it is committed against the minorities, and not so if it is committed against the majority community.'' She is also a politician. She is all set to become the Chief Minister of Tamil Nadu again. That is Jayalalithaa.

Indeed a stunning admonition of the secular pack by one from within. She has exposed and shamed the entire political class by this single statement. She has shown the courage to speak out on the malaise in our secular polity. But the malaise runs deeper.

It is not confined to politics. It extends to the entire secular class. And a large intellectual class. It is founded on pseudo-intellectualism and pseudo-secularism that presently form the foundation of the public discourse. Let us analyse this in its full dimension.

The reaction of Indian seculars to the gruesome killing of over 58 persons in the train in Godhra was predictable. From Star TV, for which anti-India campaigns are a hobby, to every small English newspaper, virtually it is the dead, that is, `the Ram sevaks', who provoked the mob to kill them. Their thrust: ``The Ram Sevaks shouted provocative, abusive slogans.'' So goes their report. ``The local people in Muslim-dominated Godhra got irritated'. This virtually rationalises the rest. It means this: ``Yes, the roasting of a hundred men, women and children is unfortunate, wrong, condemnable, but inevitable.'' That is, the Ram sevaks invited it upon themselves.

Look at the first facts. The Sabarmati Express stops in Godhra for just three minutes. In three minutes a large mob of thousands of people cannot gather. It has to be a planned attack. From what the Home Secretary of Gujarat says and the news reports, a common thread emerges.

First, when the train approached Godhra, some people had thrown stones at it. At this point there was no question of any provocative slogans being heard by anyone. Because, from a moving train nothing decipherable can be heard.

Second, as soon as the train started moving out of the station, after its three minutes' halt, some one _ unknown _ pulled the chain and stopped it. It is said that it could be the handiwork of an attacker who had got into the train. The train stopped near the signal point. It is unlikely that passengers who were being stoned would stop the train to invite being hit. Particularly when the train had many women and children. They would have only liked the train to move away as fast as possible from the place. So the miscreant who stopped the train could

not be the victim. He could only be the attacker.

Third, as soon as the train stopped the mob did the rest. It rained stones on passengers. One of the coaches was doused with kerosene and petrol and set on fire. The fire, say reports, spread to more compartments. Many passengers jumped out. But those who could not, some 25 women and 15 children, were burnt to death.

The sequence establishes not a spontaneous outburst as the seculars in the media attempt to make it out. It does establish a pre-meditated plan to attack the train. The secular media virtually rationalises the killings.

Imagine it was the other way round. The passengers had been Muslims, and the attackers Hindus. **All hell would have broken loose. ``Hindu fundamentalists, blood thirsty Bajrang Dal goons on the rampage.'' ``National shame.'' There would have been a national shutdown. Leader after leader and party after party would have trooped towards Godhra and Ahmedabad. There would have been global condemnation. The nation as a whole would have stood condemned.**

As chance would have it, those killed were only Hindus, irrelevant to secular India. If a Christian church in thatched roof were attacked, Christian governments in the west to US would pounce on us. If it were Muslims the entire Muslim world would converge on us. Because the burnt were Hindus there was no such danger of any one protesting too much. Even more fortunately, those killed were after all Ram sevaks, Hindu bigots. After all those who attacked them had enough justification because the Ram sevaks were provoking them. So no one was at fault, except those who provoked their own death. Like a victim of rape having invited it upon her.

Compare the Godhra carnage with what happened when some tribals torched Staines and his children in Orissa. Hell broke loose. The entire country was set upon and came to a halt. ``Hindu Fundamentalists, RSS-VHP-Bajrang Dal'' goons have snuffed out a great social worker, shouted the secular megaphones _ the media, leaders and parties. Thanks to the media in India and missionaries, the entire world abused India as a country.

Then came the report of the **Wadhwa Commission** on the Staines murder. The former Supreme Court judge ruled out the involvement of RSS or VHP or Bajrang Dal. **He also held Staines responsible for effecting conversions, which was disliked by the local tribals**. The findings completely falsified the concoctions of the secular media and the minority religious leaders. But the damage had been done. We were projected as a nation of religious bigots. **Not a single word of regret from the media, which destroyed the nation's image in its enthusiasm to finish off the Hindu movements.**

The same was the case in Jhabua rape. It was established to be an intra-tribal and intra-Christian affair. But the secular media and the minorities blamed the Hindus and RSS. Even after the truth was established the secular media would not report it, much less express regret.

Every such concocted charge demeaned India and destroyed its brand. All thanks to the despicable role of the seculars in the media and the minority religious leaders. Christian nations of Europe who had in the past baked over 9 million women as witches and eliminated over 140 million native Americans to create the present Christian US - a historic fact which Bill Clinton recalled in the wake of the World Trade Center attack as what is haunting the US even now _ are advising us about religious harmony.

So unlike the Jhabua rape, and the hyped Staines murder, the killing of a hundred Hindus will fortunately not smear the honour of India. For, those women and children, who have been reduced to ashes alive in Godhra,

are not Christians or Muslims. So the nation's name will not be tarnished. No one outside India will ask a question, as fortunately there is no Hindu nation in the world. No one will ask a question for they happen to be not just Hindus, but also Ram sevaks. Their right of existence is lost once they provoked the attackers. So even after being torched alive, the Ram sevaks will have to share the blame for their death.

This is the real face of secularism as practised in India, of the secular media, of the secular leaders and of the secular polity. This is what the Ayodhya movement questioned. It is not just a movement for a temple. A temple could not integrate the Hindus as it has done. It is far more. Thanks to this the nation woke up to the pseudo among the seculars. But still the pseudo masquerades as the real. Perhaps the Ayodhya movement will continue as long as the very notion of secularism _ and who is the real secular and who is the pseudo _ is not defined, only to question it. If Gujarat is on fire today, and the country is witnessing fits of communal outburst the secular class has to accept its own share of blame.

Jayalalithaa has implicitly condemned the entire secular class, not just the political leaders. Rightly. Will they be shamed into accepting the truth?

Assaulting India's pluralist ethos (Letter)
Author: D. Harikumar, Kochi
Publication: The Hindu
Date: November 6, 1998
http://www.hvk.org/articles/1198/0010.html

Sir, - This has reference to the articles, ssaulting India's pluralist ethos (The Hindu, Oct. 26) by Ms. Malini Parthasarathy and "BJP belies hopes of moderation" (The Hindu, Oct. 28) by Mr. Inder Malhotra. The core of their argument is that the (so-called) Indianisation, nationalisation and spiritualisation of our education is the worst thing than can happen to the nation. The reasons are many - dilution of minorities' rights, negation of the constitutional spirit, Hindutva overtones and compulsory teaching of Sanskrit are a few.

Let us take the dilution of minorities' rights first. It is amazing to find that whenever a social or historical evaluation is done, these progressive intellectuals have invariably kept the mirror towards Europe and Germany, in particular. According to them, we needed so and so articles in our Constitution because history warranted them in the Constitutions of the European countries. But they conveniently forget that, since time immemorial, it is only in India that the minorities - be they religious, linguistic or ethnic - have never been discriminated against. And even the controversial new proposals of the Government have nothing in them to curt Bail the rights of the minorities to establish and administer educational institutions of their choice. On the contrary, it is proposed to extend them to all religious orders of this country. One fails to understand how a move to extend a right to all citizens can be counted as divisive.

Then comes the negation of the constitutional spirit. Ms. Malini Parthasarathy has taken pains to buttress this point. The enlightened groups of people who pored over the draft of the Constitution 50 years ago also included a directive in it that the citizens of this country shall have a uniform civil code. It was also explicitly made known by Nehru himself that Article 370, giving special status to J & K, was a temporary one. But unfortunately in the eyes of secular intellectuals, all those who ask for a common civil code or deletion of Article 370 are
fundamentalists and fanatic zealots. It is this kind of selective interpretation that has done maximum harm to the cause of secularism.

Regarding the Hindutva overtones, whether one likes it or not, it has been a Hindu nation, it is so even now and will remain so; not because the Hindu religion is in a majority, but the ethos which has shaped our nation has come to identity itself with Hinduism. Hinduism is nothing but a geographical-cum-cultural concept. **The Church of England is the official religion of the U.K. The U.S. President-designate has to swear by the Bible and in 1983 the American Senate unanimously voted to celebrate 1984 as Bible Year. Yet we do not hold them as fundamentalists because they only conform to the ethos on which these nations were evolved.** Though it is only 50 years since we
got political freedom, it is a fact that both the fundamentalists and the secularists alike boast of a history of at least 5,000 years. In our case it is the Vedas, the Upanishads and the epics which have shaped the ethos on which this nation is evolved. For those who think that the word "Hindu" is religious and is of a recent origin, let me quote from Agama Purana: Himaalayam samaarabhya / Yaavad Indu sarovaram / Tham deva nirmitham desom / Hindustaanam prajakshatheth.

It means, "This God's own land which extends from Himalaya to Indu sea is called Hindustaanam." Still,

the son of this soil, irrespective of his religious belief, finds it difficult to call himself a "Hindu." The fault lies in our education system.

The Vedas and the Upanishads have nothing to do with the Hindu religion. They only expound the theories of the existence of the
world and the do's and don'ts for the creatures living in it. We just cannot wish away the fact that everything that we consider our contribution to mankind lies in Sanskrit. Until and unless we, learn that language how can we come to know the greatness and pitfalls of our tradition?

As Max Mueller, the propagator of the Aryan invasion theory, wrote to his wife, "It took only 200 years for us to Christianise the whole of Africa, but even after 400 years India eludes us, I have come to realise that it is Sanskrit which has enabled India to do so. And to break it I have decided to learn Sanskrit." The soul of India lies in Sanskrit. And Lord Macaulay saw to it that the later generations are successfully cut off from their roots.

Adi Sankara's philosophy

CHENNAI NOV. 13. Followers of all religions have a common goal, which is universal in nature. The ultimate aim of every individual is to reach the Supreme Lord. In order to achieve it, the core need for human beings is to escape the cycle of births and deaths. Pointing out to a devotee the right direction as the role of religion in its entirety from time immemorial,there has been only one desirable way of leading one's life — that of following the path of virtue. While in earlier ages it was easier to remain steadfast in the pursuit of the goal, with the advent of Kali Yuga the attendant distractions on the human mind are a major factor to contend with. Helping the devotee out of this self-created maze becomes the role of preceptors and saints.

Sri Jayendra Saraswathi, Kanchi Sankaracharya, in a discourse paid glowing tributes to Adi Sankara as a beacon light to the spiritually floundering flock. At a time when there was a multiplicity of spurious cults Adi Sankara's life and philosophy was a turning point in the spiritual ethos. His commentaries on Vyasa's works and other scriptures put spiritual knowledge within the easy reach of the ordinary devotee. The cornerstone of Adi Sankara's philosophy, Adwaita, is enshrined in the Upanishads. What are the difficulties that a devotee faces in his quest for the ultimate? On the one hand it is the challenge of grasping the abstruse and the subtle; on the other it is the ubiquitous struggle in transcending one's ego and achieving union with God.

If one follows the spiritual recommendations, then God-realisation becomes but a natural extension of one's life. Both Saivism and Vaishnavism, which have been in place since the origin of earth, also lay emphasis on the supremacy of the Lord. Saints like Ramanuja and the Nayanmars, have played a stellar role in perfecting the formula for purifying oneself through devotion in order to qualify for the kingdom of God. Sankara's philosophy advocates attaining pure consciousness or ultimate reality in this life itself. Such a guideline is however not to be mistaken for "quick fix" method. Rather it is a state of being to be achieved by resolving inner confusions with knowledge and conflicts through devotion with the added aid of absolute control of senses. In the ultimate analysis, truth is one, philosophy is one; the difference lies only in the manifold choices and approaches available to a devotee. Adwaita is of universal import, broad based on the Divinity of the Self and does not conflict with other schools of thought.

History as Hoax
By the Editor
Editorial
Hinduism Today, December 1994

This issue of Hinduism Today is like none other. We set aside some usual features to publish our seven-page Hindu Timeline, a rich collection of the major events and people that have shaped India. We hope you will keep it, use it as a resource, refer to it when someone asks a question or when writing an article for your local paper.
As complete as it is, our Timeline does not tell the whole story.

What it fails to mention is that history, as it happens, never happened. History is a hoax. "What?" you say, "Who licensed you to belittle so proud a profession, so indispensable a discipline as human history? What do we have of the past except the cherished chronicle of what, not to mention who, went before us?" Okay, okay. History is important, but historians know of what I speak. Listen to the preeminent Will Durant who spent a lifetime studying the record of civilizations: "History is mostly
guessing; the rest is prejudice."

It is certainly formidable to ponder the whole of human history (said to be somewhere between 500,000 and two million years) and to assess just how much we really know of the past, how well a few bone fragments and distilled lines in a book reflect the truly awesome complexity of billions of human beings interacting with each other, with other tribes, with their environment and geography. To humanize it, consider your own life. Take all you did, all you endured and attempted, all you said, learned and forgot. What is the bottom line? "Anjali Patel, 1938-2022. Beloved wife and mother. Rest in peace." Less than a dozen words. It's easy to see that history is but a frail record of reality. Multiply this individual example by the ten billion souls that have lived in India during the past 10,000 years (an interesting number a local mathematician helped us find), divide that by the 14,339 words in our (fairly thorough) history, and you get one word for every 697,398.7 people who made that history
happen. Hmmm! It's getting easier to see why historian Richard Cobb concluded that "The frontiers between history and imagination are very little more than Chinese screens, removable at will."

History may be a mental monument to human achievement and progress, but it is equally a repository of our prejudices, a museum of our mistakes. It keeps feuds alive beyond their time, it impedes progress more than it impels, and it restrains many of us from living in the here and now, so consumed are we with what happened there and then. History is millstone as much as

milestone.

The bad news, then, is that history is always inaccurate and often injurious. The good news is that India and Hinduism live beyond history. Other nations know exactly who they are, when they began, who their first president was. Their history is compact, unambiguous. Not India. She has too much history to be pithy, too complex a career to avoid ambiguity. Nowhere else do people live in so many centuries at the same time. Where else do past and present exist side by side-Sun worship with atomic research, astrology with space exploration? Where else does the old add itself to the new rather than relinquishing its hold and departing?

This issue's timeline chronicles exciting discoveries about the Indus Valley/Saraswati River civilization and the present effort of historians to wrest India's self-understanding away from Europeans who long ago left behind a false biography of Bharat. Whereas the past provides others with the all-important basis of identity and self-importance, India enjoys a leisurely, even careless, relationship with history. British historian Christopher Dawson explains: "Happy is the people that is
without a history, and thrice happy is a people without a sociology, for as long as we possess a living culture we are unconscious of it, and it is only when we are in danger of losing it or when it is already dead that we begin to realize and study it scientifically."

Hinduism also lies beyond history. Other faiths, excluding some tribal and pagan paths, are rooted in events. They began on such and such a day, born with the birth of a prophet or the pronouncements of a founder. Thus they are defined, circumscribed, by history. Not Hinduism. She has no founder, no birthday to celebrate.
Like Truth, she is eternal and unhistorical. Even if we compel Hinduism to admit of some immanence in history, she merely smiles and brushes aside the few thousand years that most of humanity takes as the crucial narrative. To the Hindu those few years are a pittance, and they too perish. While all known human history lies within a few hundred millennia, Hinduism speaks of unspeakably vast epochs, of earthly yugas that last millions of years, of days and nights of Brahma that span
billions, of a universe that lives and dies and lives again. Such is India's expansive reading of history.
Ultimately, history is contemporaneous with the present, in the form of karmas by which all actions of the past live in the now. That is a living history, much more precious than any dead one.

A TRIBUTE TO HINDUISM

articles on hinduism

Beauty of the Sari
http://www.hinduismtoday.kauai.hi.us/ashram/htoday.html
January 1999

It's the only ancient dress to remain fashionable in the 21st century.

Fashion in clothing is a kind of living archeology, a wash-and-wear history. It tells us much about who we are and where we came from, and maybe not a little about where we're going. Modern clothes tell a story of simple pragmatism. Throughout the world clothing has become more spartan, more practically polyesterish, less elaborate. Men, especially, have made some dismally utilitarian decisions about their wardrobe. Around 1666 the present-day suit was first stitched in France and England, and by 1872 it was widespread enough in India to be fiercely satirized. Somewhere in that era men from all cultures made the very bad decision to abandon other attire in favor of the egalitarian grey suit, white shirt and necktie. What could they have been thinking?

Sadly, men around the world lost their national and personal character when they adopted the Western business suit as manhood's global garb. Japanese men, who once looked so very Nipponese in their graceful robes, now look like Europeans. South Americans, once so distinctive in their hand-woven costumes, now look like the Japanese who look like the Europeans. Indian men, who 200 years ago had regional raiment that was earthy and full of elaborated colors, now look like the Brazilians, who look like the Japanese, who look like the Europeans. Grown men everywhere look like that. Check out the marriage photo to the right. She's elegant, he's--there's a word in the world of fashion--boring!

I know of what I speak. Visitors to our Hawaiian editorial offices know our staff is not sitting around their PowerMacs in jeans and T-shirts. We are all swathed in saffron and ochre cotton--hand-spun, hand-woven and unsewn--draped in the old South Indian style.

I can never forget the first time, three decades ago, that a Jaffna elder helped me wrap a veshti, and then took us to the bustling main marketplace. Every step was terrorizing, the unwieldy garment threatening to fall, with me cinching up the subversive sarong several times a minute, both hands never more than a few swift inches from my waist. How awkward I felt, and certainly looked. As time passed and the fabric was tamed, I learned how refined one feels in such attire. It was like floating, living in your spirit more than in your body. To this day, I only feel comfortable

and soulful in these traditional robes. And to this day, Jaffna is one of the few sanctuaries where Western pants and shirt are disdained, and all men, including politicians, go around in their veshtis.

Indian women who wear saris know all this. They have watched their sisters go the way of men, wearing dresses that look like the dresses that every dressmaker dresses her customers in. Okay, women at least have wide options in type and fabric and color. And that is good. But still, women in Japan look like women in Australia, who look like women in China, who all look like women in Europe. There are few kimonos left to announce the passing of a Japanese lady and few ao dai to tell us that the woman shopping over there is a Vietnamese.

So, we pay trib ute to India's women and Hindu women abroad who have not relinquished their elegant dress. They alone have preserved traditional attire, for the sari is the only major apparel to have survived the last 500 years and to remain elegant and voguish daily wear in the 21st century. That's quite an accomplishment. No wonder the Western world has been smitten by the sari, and every woman with a smidgen of sartorial savvy wants one.

Exploring the Worldwide Web on saris, I found this gem, written by Shantipriya Kurada in 1994:

"The beauty of the sari never ceases to amaze me. There is something strikingly feminine about it. Flowing like sheer poetry, graceful in every contour and fold, it's a fascinating mixture of tradition and style. A single stretch of fabric that comes in a range of textures and patterns, the sari is creativity at its best. A cotton sari, charmingly simple, starched and perfectly in place, has such a natural feel. Chiffons and crepes add a glamorous touch. Fragile, utterly soft and delicate, they create an aura of fine elegance. Weddings come alive with the grandeur of silk saris. Painstakingly handwoven to the last detail, the brocade created to perfection by skilled hands, each silk sari is a work of art. A sari has such a special place in every girl's life. It all starts with wrapping around mother's sari, playfully and clumsily tripping on its edges. Then there is the first sari you wear, perhaps to a college function, looking self-conscious and achingly innocent. And, of course, the precious wedding sari that's fondly preserved and cherished for a lifetime. In a world of changing fashions, the sari has stood the test of time. There is something almost magical about it, for it continues to symbolize the romantic image of the Indian woman--vulnerable, elusive and tantalizingly beautiful."

Historians say the sari can be traced back more than 3,500 years! Sanskrit literature from the Vedic period insists that pleats be part of every woman's dress. The pleats, say the texts, must be tucked in at the waist, the front or back, so that the presiding deity, Vayu, the God of wind, can whisk away any evil influence that may strike the woman. Colors, too, are ruled by tradition. Yellow, green and red are festive and auspicious,
standing for fertility. Red, evoking passions, is a bridal color and part of rituals associated with pregnancy. Blue evokes the life-giving force of the monsoon. Pale cream is soothing and represents bridal purity. A married Hindu woman will not wear a completely white sari, which is reserved for brahmacharinis and widows. Life without a husband, it is said, is a life without color.
The sari culturally links the women of India. Whether they are wealthy or poor, svelte or plump, the sari gives them a shared experience, a way in which they are all sisters, forging a link that binds them across all borders, even geographical ones. Women wearing saris in Durban, Delhi or Detroit are part of a social oneness that is nearly eternal and which may, it seems, last yet another thousand years.

In 1997, French anthropologist Chantal Boulanger, published her landmark work, Saris: An Illustrated Guide to the Indian Art of Draping.

France goes Indian: Valentino and dhotis:
Models wore sweaters, Indian dhotis and chappels as part of French Designer
Valentino's 1998 spring-summer men's fashions presented in Paris.

Namaskar
By Hinduism Today March 1998
http://www.hvk.org/Publications/namaskar.html

THE WORD - NAMASKAR

"Shake hands and come out fighting." It's the referee's final counsel to two pugilists about to beat each other's brains out with clenched fists. Even outside the ring, a handshake can be a little off-putting. When one returns to the West from an extended sojourn in Bharat or elsewhere in Asia, the hand suddenly thrust forward can seem more ominous than friendly, especially if the hand offered is that of a stranger. Of course, one soon acclimatises and the menacing aspect of this salutation subsides.

Perhaps that moment of intimidation derives from the history of the handshake. According to one anthropologist, the handshake evolved in medieval Europe, during the times of knights. It seems not all were laudable Lancelots or gallant Gallahads. More than a few would approach opponents with concealed weapons and when within striking distance do the needful, driving dagger or striking sword into the unguarded paladin.

To fend off the fear of a foe's foul foil, knights took to offering their open and visibly empty hand to each other. It was a kind of surety, a gesture of trust which said, "See, I am unarmed, so you may safely let me approach." As the story goes, soon the gesture itself took on meaning and the less noble, less lethal man on the street adopted the handshake as the proper way to greet others.

In much of the world today, people do not shake hands when they meet. They may hug formally or kiss one another on the cheek, as in eastern Europe and Arab states. They may bow softly, eyes turned to the ground, as in Japan and China. The Hawaiian greeting, termed "honi," consists of placing the nostril gently beside that of the person greeted, a kind of sharing of breath, which is life and Pran(a).

For, Hindu(s), of course, the greeting of choice is "Namaste," the two hands pressed together and held near the heart with the head gently bowed as one says, "Namaste." Thus it is both a spoken greeting and a gesture, a Mantr(a) and a Mudr(a). The prayerful hand position is a Mudr(a) called Anjali, from the root Anj, "to adorn, honor, celebrate or anoint." The hands held in union signify the oneness of an apparently dual cosmos, the bringing together of spirit and matter, or the self meeting the Self. It has been said that the right hand represents the higher nature or that which is divine in us, while the left hand represents the lower, worldly nature.

In Sanskrit "Namas" means, "bow, obeisance, reverential salutation." It comes from the root Nam, which carries meanings of bending, bowing, humbly submitting and becoming silent. "Te" means

"to you." Thus "namaste" means "I bow to you." the act of greeting is called "Namaskaram," "Namaskara" and "Namaskar" in the varied languages of the subcontinent.

Namaste has become a veritable icon of what is Bharatiya. Indeed, there must be a Bharatiya law which requires every travel brochure. calendar and poster to include an image of someone with palms pressed together, conveying to the world Bharat's hospitality, spirituality and graceful consciousness. You knew all that, of course, but perhaps you did not know that there can be subtle ways of enhancing the gesture, as in the West one might shake another's hand too strongly to impress and overpower them or too briefly, indicating the withholding of genuine welcome.

In the case of Namaste, a deeper veneration is sometimes expressed by bringing the fingers of the clasped palms to the forehead, where they touch the brow, the site of the mystic Third Eye. A third form of namaste brings the palms completely above the head, a gesture said to focus consciousness in the subtle space just above the Brahmarandhra, the aperture in the Crown Chakr(a). This form is so full of reverence it is reserved for the Almighty and the holiest of Sat Guru(s).

It is always interesting, often revealing and occasionally enlightening to muse about the everyday cultural traits and habits each nation and community evolves, for in the little things our big ideas about life find direct and personal expression. Take, for instance, the different ways that American and Japanese tool-makers approach the same task. A saw for cutting lumber, if designed in the U.S., is made in such a way that the carpenter's stroke away from his body does the cutting. But in Japan saws are engineered so that cutting takes place as the carpenter draws the saw toward himself. A small detail, but it yields a big difference.

The American saw can, if leaned into, generate more power, while the Japanese saw provides more control and refinement in the cut, requiring surprisingly less effort. Each has its place in the global toolbox. each speaks — like the handshake and namaste greetings — of an underlying perception of man's relationship with things.

In the West we are outgoing, forceful, externalized. We are told in USA (By telelphone company) by Ma Bell to "reach out and touch somebody." We are unabashedly acquisitive, defining our progress in life by how much we have — how much wealth, influence, stored up knowledge, status or whatever. Every culture exhibits these traits to some extent, but in the east Mother is there to remind us, "Reach in and touch the Self." here we are taught to be more introspective, more concerned with the quality of things than their quantity, more attuned with the interior dimension of life.

So, there you have it, the whole of Eastern and Western culture summed up in the handshake which reaches out horizontally to greet another, and Namaste which reaches in vertically to acknowledge that, in truth, that there is no other.

As a test of how these two greetings differ, imagine you are magically confronted with the Divine. The Paramatma, Almighty, walks up to you on the street. What do you do? Reach out to shake His hand? Probably not. Though suitable between man and man, it;' an unseemly expression between man and Paramatma. We never shake hands with Paramatma. I mean, what if your palms are sweating?

So you namaste instead. The reason it feels natural to namaste before Paramatma is that it is, in its

very essence, a spiritual gesture, not a worldly one. By a handshake we acknowledge our equality with others. We reveal our humanity. We convey how strong we are, how nervous, how aggressive or passive. There is bold physicality to it. For these and other reasons, Popes never shake hands. Kings never shake hands. Even mothers don't shake hands with their own children.

Namaste is cosmically different. Kings do namaste, Sat Guru(s) namaste and mothers namaste to their own family. We all namaste before the Almighty, a holy man or even a holy place. The namaste gesture bespeaks our inner valuing of the sacredness of all. It betokens our intuition that all souls are divine, in their essence. It reminds us in quite a graphic manner, and with insistent repetition, that we can see Paramatma everywhere and in every human being we meet. It is saying, silently, "I see the Deity in us both, and bow before Him or Her. I acknowledge the holiness of even this mundane meeting. I cannot separate that which is spiritual in us from that which is human and ordinary."

And while we are singing the praises of Namaste, it should be observed how efficient a gesture it is in an age of mass communication. A politician, or performer can greet fifty thousand people with a single Namaste, and they can return the honor instantly. In such a situation a handshake is unthinkable and a mere waving of one hand is somehow too frivolous.

There are other, more mystical meanings behind Namaste. The nerve current of the body converge in the feet, the solar plexus and the hands. Psychic energy leaves the body at these junctures. To "ground" that energy and balance the flow of Pran(a) streaming through the nerve system, Yogi(s) cross their legs in the lotus posture, and bring their hands together. The Anjali Mudra acts like a simple Yog(ic) Asan(a), balancing and harmonizing our energies, keeping us centered, inwardly poised and mentally protected. It closes our aura, shielding us psychically. It keeps us from becoming too externalized, thus we remain close to our intuitive nature, our super consciousness.

Here are some insights into Namaste from a number of Hindu(s):

* Namaste elevates one's consciousness, reminding one that all beings, all existence is holy, is the Almighty. It communicates, "I honor or worship the Divinity within you." Also it draws the individual inward for a moment, inspires reflection on the deeper realities, softening the interface between people. It would be difficult or offend or feel animosity toward any one you greet as Paramatma.

* Namaste is a gesture of friendship and kindness, also of thanks or special recognition. Mystically it is called "Namaskara Mudra" in the Agami(c) Pooja, and it centers one's energy within the spine.

* I've heard it means "I salute the Almighty within you." The true Namaste gesture is is accompanied by bowing the head and shoulders slightly. This is a gesture that lessens our sense of ego and self-centredness, requiring some humility to do it well — whereas shaking hands can be quite an arrogant event.

* Touching the hands together puts you in touch with your center, your soul. Namaste puts you forward as a soul, not an outer personality.

* The gesture has a subtle effect on the aura and nerve system. bringing focused attention and a collection of one's forces, so to speak. It also protects against unnecessary psychic connections

which are fostered by shaking hands. This might be called a form of purity also — protecting one's energies.

This form of acknowledgment is so lovely, so graceful. Just look at two people in Namaste and you will see so much human beauty and refinement.

Uneasy heads that wore the crown

http://www.hindustantimes.com/nonfram/nizam/nizam.shtml

In the middle of 1940s, while Indian leaders were hard at work uniting Hindus and Muslims, the British were opening another, "more explosive front", to divide India. Hitherto, their targets were the 562 princes for whom Indian independence meant running the risk of losing title, territory and royal privilege.

For Britain, the princes were sitting targets. Their royalty and their divine rights still swayed 90 million Indian subjects. Together they had with them an area larger than the size of Western Europe. Some of them had full nations to themselves - Kashmir, for instance, was larger than France, Travancore more populous than Portugal. Some even had their own armies and currencies. "Their interests needed to be protected in free India as much as the interest of the Muslim minorities in Hindu India."

Whereas the British continued to play the royal card in their attempt to postpone the transfer of power to India, they did not realize, until quite late, that the princes were unpopular and that Indian people had little sympathy left for their kings.

In fact, by the end of the 19th century, after the British had snatched the last vestiges of control from the Indian rulers, there were really no royal duties left for the latter. Though they had feudatory control over their territories, they were always under the watchful eyes of the colonizers. The princes were even barred from continuing their favourite pass time of waging war on their neighbours. Thus deprived, the out-of-work rulers fell upon wasteful ways and were cut-off completely from their subjects and their problems.

Some of the rulers directed their energies into building palaces modeled on Windsor or Versailles and stocking them with trophies from the jungle or luxury goods from Europe. They developed a reputation for eccentricity and depravity. The Nawab of Junagadh, who was loath to spend money on public projects, squandered a small fortune to celebrate the "wedding" of his favorite dog. Annoyed by a salesman's snub, the Maharajah of Bharatpur bought all the Rolls-Royces in a London showroom and turned them into garbage trucks back home. The Maharajah of Alwar, notorious as a sadist, poured kerosene over his polo pony and set the poor animal on fire. The Nizam of Hyderabad, acknowledged as the world's richest man, used egg-sized diamonds as paperweights, while the Maharajah of Gwalior built a 90,000-sq-m palace in which he never lived.

"The British systematically alienated us from the real world. They demolished the capability of the order," laments Arvind Singh of Udaipur, scion of a 1,400-year dynasty that could be the

world's oldest.

So when the British realized the futility of their 'royal scheme', they withdrew their support and left the princes to devise their own ways of dealing with the new dispensation under Jawaharlal Nehru and Sardar Patel.

Left without a mentor, the rulers were hopelessly outfoxed during the negotiations on the transfer of power in 1947. Finally, they had little choice but to cede their kingdoms to the new Indian union. They were allowed initially to retain administrative control, except over communications, defense and foreign affairs. But by 1949, contrary to the assurances given earlier by Nehru's government, they were forced to merge their territories with the Indian provinces.

Maharajas of free India

Unlike the sultans of Malaya, who retained a constitutional position after the British left in 1957, India's maharajahs could retain only their titles and personal assets. To make the surrender less painful, however, they were accorded a few privileges, such as exemption from income tax and the right to a state funeral.

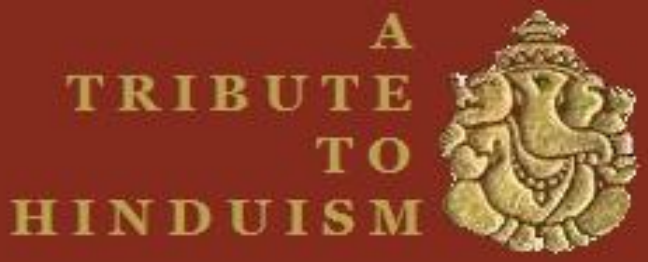
The princes soon discovered, though, that they still could win the respect of their erstwhile subjects. Apart from renewing their claim to "descent" from gods and goddesses and placing themselves at the centre of religious ceremonies, many of the princes also began improving their image as annadata (grain-giver)

"My grandfather used to be under canvas (in a tent) for more than six months of the year, touring his kingdom. He was a man of the people," recalls Madhavrao Scindia of Gwalior, a Congress politician who gets elected regularly to Parliament from the former capital of his princely state.

Feeling betrayed by New Delhi in 1949, the princes decided to show Nehru that they could be as adept at the game of democracy as at billiards or polo. When free India's first big elections were called in 1952, several maharajahs jumped into the fray. One even succeeded in giving Nehru's party a fright.

However, when Nehru's daughter Indira Gandhi came to power in the late 1960s, she quickly moved against the royals. A public campaign was launched to tar the princes as exploitative and anti-democratic. Breaking pledges given at the time of independence, the government abolished all royal titles and privileges in 1971 and stopped payment of special pensions, called privy purses. Gandhi also set the tax sleuths on her blue-blooded opponents and threw a few in prison. Gayatri Devi was one royal who paid for annoying India's new empress: she served time in New Delhi's notorious Tihar Jail.

Consider the fate of Pravirchandra Bhanjdeo, the 20th Maharajah of Bastar in India's tribal heartland. The Bastar rulers trace their ancestry not just to the moon, but also to Prithviraj Chauhan, the last Hindu king to rule from Delhi in the 12th century. In the 1960s, Bhanjdeo organized impoverished tribals and became immensely popular. The government responded first by declaring him "insane" and stripping him of his royal title. Then, in 1966, as tribal supporters armed with bows and arrows milled around him in his crumbling palace, he was shot and killed in cold blood by police.



Despite such setbacks, the royals had shown they could play a role in democratic India. One study

found that blue-blooded candidates enjoy an extraordinarily high success rate of 85% in elections. Amrinder Singh, whose father was the last ruling Maharajah of Patiala, resigned from the Indian Army to enter politics, serving briefly as a minister and working to help end Punjab's secessionist Sikh insurgency in the 1980s. Still an active politician--he left the Congress to join the regional Sikh party, the Akali Dal--he remains committed to his people. "The underlying cause for the insurgency remains," he says. "Educated unemployed youth have been beaten into submission, but how long can they be kept down?"

At the eastern extremity of a far-flung nation lies Tripura, a backward state long neglected by New Delhi and now threatened by angry tribals. As he examines a massive bust of Mussolini presented to his father by the Italian dictator in 1936, Kirit Bikram Dev Burman, former Maharajah of Tripura, observes sadly, "I joined politics because I thought I could help Tripura. After all, it was my state."

The 186th ruler in a thousand-year-old dynasty, Burman had stepped aside to let his second wife, Bibhukumari Devi, take the political spotlight. Though defeated in the Parliamentary elections because of a split within the Congress, she remains confident about her political future. "For a section of the people, we are very dear," she says. "Basically, they know we won't cheat them, won't make money at their expense." That point is endorsed by Jagat Mehta, former Indian foreign secretary whose father worked for the Maharajah of Udaipur: "Maharajahs appear so much more benign, so much more restrained than today's corrupt politicians."

Vastu is latest Indian rage in the West

http://www.hindustantimes.com/nonfram/010602/dlfor24.asp

First yoga and meditation mesmerised the West. Now it's the turn of vastu, with stores here showcasing a new book whose author spent 12 years in India studying Vedic sciences.

Kathleen Cox's "The Power of Vastu Living: Welcoming Your Soul Into Your Home and Workspace," is the second she has authored on the subject.

"I believe I am a messenger and I am doing my best to spread the word," Cox said about vastu. Cox describes vastu as organising your home or workspace to improve your well-being and says it is vital in these times, especially in the West.

"Our lives have become so fragmented," she says "that we need to find a way to rediscover our balance, to re-centre ourselves, and to rediscover our connection to what really matters."

Cox studied Vedic sciences, such as yoga and ayurveda, for nearly a decade and studied vastu for over three years.

Cox explains these sciences are all inter-connected. "While yoga and ayurveda focus on our body to increase our well-being, vastu works on the external environment in which we live and work to achieve this same goal.

Cox also believes that vastu, like all valid sciences, is logical and was meant to evolve over time. "No science is static," she says. In her own adaptation for the West, Cox has substituted the use of ayurveda in place of astrology.

"Vastu is not-a-one-size-fits-all science, and ayurveda works as well as astrology. Ayurveda also has practical benefits that are easier for Westerners to grasp and appreciate."

So how does one practice vastu? Cox says that first a person's ayurvedic constitution is determined, which allows specific needs to be addressed. Then three vastu principles are followed.

The first principle asks one to respect the rhythms that govern the universe by honouring the five basic elements that exist in all creation.

"We try to honour the assigned location of each element in our home or workplace. By doing this, we end up aligning our own biorhythms with the universal rhythms. We live in sync with the rhythms that flow through each daily cycle."

The second principle asks us to draw the world of nature into our home and workspace. Nature is calming and its presence in the home reminds us that everything that exists is interconnected.

The third vastu principle asks us to celebrate our own identity and willingly put it on display. "We too are divine," Cox says, "and we must learn that the respect that we offer nature should extend to our self as well. We must take care of ourselves and appreciate who we are and what we love."

By following these three principles, we create environments that are supportive and welcoming. Our home and workspace increase our inner-harmony.

While setting up a home or workspace so that it is properly aligned with the elements can be difficult, Cox explains that one can fix problems that may arise when the elements are not in their correct location through the use of healthy colours or through the therapeutic use of nature.

"Vastu is very forgiving. The Vedic scholars who developed this great science understood that we mortals are imperfect," says Cox, who also runs Web site www.vastuliving.com

"Only homes for the deities are ever perfect in vastu. So if we can fix our home or workspace so that it is 51 percent vastu-correct, we're on the winning side. We reap the benefits. We feel better, we work better, and we are in a much better position to achieve our goals-whatever they are."

Ghaggar flows in Saraswati's place

http://pub6.ezboard.com/fhinduunityhinduismhottopics.showMessage?topicID=8337.topic

Bangalore, May 5: Unveiling the mystery of ancient river Saraswati, which many archaeologists believe had vanished, remote sensing experts reveal that the present day river Ghaggar in northern Rajasthan was the main course of the Vedic river.

Utilising remote sensing data obtained from IRS satellites, experts at the regional remote sensing service centre in Jodhpur have plotted the drainage of the river Saraswati, according to Isro.

The experts said the river further flowed to Rann of Kutch and a channel of the main river course passed through Jaisalmer district while a major part of the river was drained further west inside Pakistan.

According to Isro sources a team of experts from the Jodhpur centre said from the prominence and the width of the palaeo channels on the satellite data, supported with data from archaeological finds, age and quality of ground water and sediment type data it could be concluded that Saraswati indeed flowed in ancient time with the main course passing through river Ghaggar in north Rajasthan.

Mention about river Saraswati could be found in the Vedic and ancient literature such as Rigveda, Brahmana and Srautasutra, Mahabharata, Ramayana, Bhagvat Purana and Vamana Purana.

Many seats of learning and ashrams, inhabited by rishis such as Yagyavalka, were situated on the banks this holy river. The Jodhpur centre of Isro carried out a detailed study to map the palaeo channels to establish the course of the river.

Data from wide field sensor of IRS, which had a spatial resolution of 188 m and a swath of 810 km, had been used for mapping prominent palaeo channels.

Imageries generated from specific areas were used to select sites over the palaeo channels for drilling 11 borewells in Jaisalmer district to check the ground water and the analysis of the age of ground water samples had confirmed the presence of palaeo channels.

Shiva worship in ancient Arabia
By Muzaffar Hussain

CULTURAL affinity is stronger than even national unity. Because any chunk of land comes alive only when culture infuses life into it. Two hostile nations can be brought back to amity only when the cultural bonds between them are activated. This was the thread Prime Minister Atal Behari Vajpayee picked up to revive the pre-partition cultural bonds between the two scions of the Akhand Bharat. He, therefore, chose artistes and poets to accompany him on his occidental odyssey in quest of amity with Pakistan, because only the cultural appeal could touch the right chord. Thus the sympathetic resonance alone can be expected to replace the chronic mutual distrust with mutual trust and friendship. The style of prayer or the method of worship can always be shorter in life than a nation. Therefore, the particular way of living that has evolved on a particular stretch of land is recorded in the history of that land. This history concretizes that country's heritage, and that country preserves this heritage and bases its plans for future development on this legacy.

Pakistan may have declared itself an Islamic State. But it cannot shed its ancient heritage dating back to the Mohenjo Daro and Harappa civilization. And its most famous national hero can only be the great grammarian Panini. The fanatic religious madness called Taliban may attempt to destroy every vestige of pre-Islamic Civilization, but it cannot deny the historical reality of Afghanistan's ancient religions of Vedic or Parsi fire-worship. In spite of Iran's embracing Islam, Cyrus, Sohrab and Rostam are even today hailed as Iranian icons. Gandhar (modern Kandhar) cannot disown Gandhari and the Mahabharat. Iran may observe the most militant form of Islam, but when the question of their ethnic origin arises, the Iranians proudly claim their Aryan descent.

Kafvinak Zikramin Ulumin tab aseru
Kaluvan Amatatul hava a lazakkuru
Na tazasveroha udan elelavada-a lilavra
Valuka ene zatallahe aum tab aseru
Va aha lolaha Azah aramian Mahadev
Manozel ilamuddine Minahum va savatt aru

That means :

"Can the person, who indulged in bad deeds and lustful and angry activities, be granted salvation if he repents, atones for and proposes to embrace dharma and follow righteous path?

If he worships Lord Mahadev with true devotion he can attain the highest position in spiritual

attainments."

The name of Mahadev is mentioned in the Arabic original exactly as it is pronounced in Sanskrit or other Indian languages.
Umer bin Hashsham further says, "Oh Lord! Grant me a day's stay in India in exchange for my entire life, because by reaching there a man attains salvation."

Va sahabe ke vam fim kamil Hinde you man
Yakulun na lajaha jan fainnak tavajjaru
Another poet is cited in this same book on p. 257 who says,
Aya mubarekal araz vashaive nohaminar Hinde
Va adarakkallah majye vashaiye nazzale zikaratun

The means :-
"Oh holy land India, you are great
Because God has made you to spread His Wisdom."

The above lines are enough to show what sentiments the Arabs entertained regarding Lord Shiva and India. Lord Shiva was held as God of knowledge, and India the land of knowledge and both were respected for their benign influence.

"Hind" is the name Arabs gave to India. They considered India almost like paradise and so they endearingly called their beloved daughters "Hindus" (intention was the daughters were heavenly fairies). They borrowed the figures "0 to 9" from Indian mathematicians. They called the numerals "Hindsa". Arab traders were impressed with the mouth-watering taste of Indian "tamarind". The English word itself has been a corruption of Arabic—"tamar-i-Hind" which means the "fruit of India" in Arabic. The Arabs' trade with India has been going on from ancient ages. Those guides who guided Vasco-da-Gama, the Portuguese explorer who found a new route to India in early sixteenth century, were the same Arab traders. The noted archaeologist, Shri Wakankar, has described this extensively in his book.

Hindu, Jew tell world of their marriage

India Abroad News Service

http://www.timesofindia.com/today/20worl24.htm

TORONTO: After five years of a blissful marriage, a Canadian Jewish man and his Hindu wife have put their experiences on paper to tell the world that liaisons between people from vastly varied cultures can work wonderfully.

Ehud Sperling and Vatsala, who came together under the Indian system of "arranged marriage", took their wedding vows after an eight-month correspondence through letters. They have put those letters together, chronicling their courtship, and published it in the form of a book titled 'A Marriage Made in Heaven: A Love Story in Letters'.

After two failed marriages, Sperling had decided the Indian system of arranged marriage would work best for him.

Sperling, 51, runs a publishing company. Vatsala, 34, who belongs to a traditional Hindu Brahmin family in Tamil Nadu, used to run the microbiology department of the largest private children's hospital in Chennai before their marriage.

Sperling has travelled across India extensively. Once he stayed in the interiors of Uttar Pradesh with a friend and watched his daughter Sapna opt for an arranged marriage. "I was part of her wedding. I stayed with my friend for over one month, actively participating in giving of gifts, receiving gifts, participating in all wedding rituals and ceremonies," the Canadian recalled.

"I went through the whole experience of sexual revolution, feminism, the radical transformation of the Western culture from the culture in the 1960s," Sperling said of his past. "I heard about idealism. I was looking for happiness at home as well....Men and women didn't understand how to relate to each other," he found.

After closely watching arranged marriages in India, Sperling decided to opt for one himself. It wasn't an altogether alien concept for him as his grandmother had been paired off in similar fashion. Sperling's family is originally from Poland and many of his relative were killed in the holocaust preceding World War II.

Sperling inserted an advertisement in the matrimonial column of The Hindu newspaper in India. Vatsala saw the advertisement and discussed it with her parents and then responded to it. That marked the beginning of their correspondence through letters.

Vatsala showed all of Sperling's letters to her mother before responding. "Each time I showed the letter, I looked at her face and I saw peace on that face...She was at peace and that was her

blessing and the reason that gave me courage to go ahead and get married," she said.

Sperling said that in their correspondence they discussed at length "how to work out a relationship, who's responsible for what, how to be a man and how to be a woman. What are the ideas about the Western man and how can they harmonise with the traditional Indian point of view."

After their long correspondence, the met, got engaged and married. "When I met him in person after this long correspondence I didn't have to go through the drama of romance. I had already in me a person for whom I have pure worship," Vatsala told IANS.

But how did two people from such diverse cultures come together? "If you are respectful of cultural diversity and human beings, then human values will connect us all over the world and those in my views are the most important things in marital relations," Sperling said.

"No matter what beliefs you hold, your basic expectations from life are the same," Vatsala said. "You can follow any religion....no matter which background you come from, whatever be your religion, that basic expectation is the way to work out to achieve that."

Sperling remains a Jew and Vatsala a Hindu. And their four-year-old son follows both faiths.

To Ehud Sperling, India is the most tolerant society in the world despite strife and violence. "I have never met people more tolerant than Indians of others and others point of view," he said.

For God's sake, let it be

A prayer from Middle India

http://www.indian-express.com/ie20020318/ed3.html

There cannot be a dry eye in our land, nor many people sleeping well. The children's voices call us from inside the burning train, and the ex-MLA's home, hoarse with begging for protection on the phone for six hours. What did the Godhra mob hope to achieve? Or the kar sevaks? Another Partition? Why is Narendra Modi still in his chair when he has failed to protect the rest of his state?

The English press blames the VHP. But, logically, don't we need to look back even further? Who had the media and academia in a death-grip for four decades since Independence? The Left. Going by its line of reasoning, if the train victims can thank the VHP for their ghastly fate, then the rest of us can thank the Left for creating the VHP, for midwifing this monster with their godless, sterile, fascist ideas.

The Left wanted to take away people's religious faith, but what did they offer in return, except an arid wasteland of borrowed ideas that they themselves were the first to exploit on the international seminar circuit? All that bleeding concern about poverty and inequity, that perennial government-bashing, in order to obtain grants and stipends from the West, but contributing precious little to the actual betterment of the country.

If thinking was their 'pesha', did they employ either imagination or creativity in suggesting alternative ways to be? No, the bandar-log rarely did. It took Manmohanomics to give a hardworking middle class some sense of reward for effort. It was India's misfortune that worldwide recession hit this new chance to create wealth and, consequently, jobs.

Meanwhile what did the Left offer India? A failed state in West Bengal. Education without employment in Kerala, leading to the highest national suicide rate. Not that the others were perfect. Successive governments lost generations when they did not focus on primary education. But the only thing the Left offered was shrill ideology.

And lectures! They knew how to lecture everybody else, and mock the legitimate desire of a people for kama and artha. In fact we were not supposed to hanker after moksha either, but only follow a pattern of dharma decided by the Left over a lal salaam and rum in a thick Yera glass.

We don't mean the sincere ones in the field who took on the feudals, or people's poets like Ghadar. No, it is the opining armchair Lefties in the press and in big universities who hurt people's sentiments and irritated moderate Hindus into casting their lot with the kaccha brigade. How have their many unreadable books on tribals, on agrarian systems, on social relationships, been of any practical

use in either policy or legislation?

At the end of the day it comes down to committed NGOs and the initiative and sincerity of individual citizens, either in the bureaucracy or in private life, does it not? People who possibly never read an OUP book in their lives? Middle India needs to draw a deep breath at this horrible moment and reconsider. Have we Hindus held onto our ancient faith despite the last 800 years merely for this? The Left's totalitarian approach has only made the wounds of history bleed further.

Can't we in Middle India now speak up and undertake a personal mission to defuse the anger of neighbours, friends and family? A one-point programme to patiently convince one Hindu each to let go of hurt and anger at what happened hundreds of years ago.

We can't presume to tell mourners what to feel. Nor do macho nations like the USA forgive. But Gladys Staines and Marianne Pearl forgave. Can't we be like them, not like the jehadis? And for God's sake, **can't educated Muslims persuade the ghettos to join the mainstream instead of sustaining medieval Arabistans in a Bharat that will never lose its Hindu majority, despite mullah fantasies?**

TALKING WITH PAULA RICHMAN

http://www.indianexpress.com/archive_frame.php

'Ramayana is important to people because it's tied up with the truth'

Paula Richman has studied the Ramayana for the last 15 years. She is a Professor of Religion at Oberlin University in the USA and put together the book Many Ramayanas about the diversity of this narrative tradition. Currently on research leave, Richman lectured on her subject at the Sahitya Akademi in New Delhi last weekend. Excerpts from an interview with Renuka Narayanan.

What drew you to Indology?

Professor A K Ramanujan at Chicago University. I met my husband (Persian scholar and author Michael Fisher) there. We were both attracted by the sparkle in Ramanujan's eye, his enthusiasm, the way he made classical Indian literature come alive for us.

With such a wide choice of subjects in ancient India, what attracted you to the Ramayana, a text with which many modern people have huge problems?

There is no other story on earth that comes close to the Ramayana in the extraordinary way it is lives as a vital, fluid, narrative tradition. I'm sure everyone knows that there are many Ramayanas. It is important to go through these many versions to understand the problems others had with it in the past and how they retold the tale.

Did they too have problems, like we do today, about the ambivalences—the less-than-perfect behaviour of Lord Ram in the episodes of Vali, Surpanakha and Sita's Agnipariksha?

Yes, absolutely. But that is the marvellous thing in the Ramayana. These issues are present in the very first Ramayana, by Valmiki. They were not edited out but allowed to stay and yet, unlike the Vedas which had to be memorised exactly so, with not a word that could be changed, the Ramayana was treated as a beloved epic open to re-interpretation in regional texts and in the oral tradition.

Why do you suppose it was so important to somehow make sense of the Ramayana and hang on to it, despite the grey areas?

I love what Telugu scholar Narayana Rao once said, which sums up this situation. He said, ''Fiction has only one form; truth has many''. The Ramayana is so tied up with truth that it is important to people. A novel by Jane Austen is just one text. The Ramayana is less a single text than a tradition of tellings. It reflects the concerns of people at different stages in time, in different places. The Ramayana your grandmother heard will be different from her granddaughter's, but all the stories of the past will be in it.

How many Ramayanas are there exactly?

There are over 300 traditional versions and I've read (in English translation) more than 200, not counting the hundreds of oral narratives.

Are there any patterns discernible in these 'types'?

I think there are two strands visible—Ramayanas which deal with happiness in union and those which deal with the sorrow of separation.

That sounds like the emotional dynamics of classical dance—the counter-pull between vipralamba (separation) and sambhoga (union).
Exactly. Sita's either banished or there's a mangalam ending. There are more Ramayanas that favour a happy ending, in fact, as many know, there's this theory that the Uttara Kandam (Agnipariksha) was added later. But sadness is truer to life, perhaps? Ram is never happy after Sita's banishment.

Does anyone have a theory on why Lord Ram really sent her away?

I can tell you it's upset lots of people in the past! In fact, some of the best stories relate to Lakshman's wife, Urmila. In the modern Malayalam play Kanchana Sita by Srikantan Nair (made into a film by Aravindan), Urmila whiles away her separation by going to college! She sits with the most learned pundits to study the Dharma Shastras and by the time the 14 years are up, she's an expert. So when Rama banishes Sita, she has a big debate with him. He justifies the banishment as ''the will of the people'' and not his own dharma as a husband. But then, says Urmila, what about your own banishment? That was against the will of the people. But you insisted on upholding the king's personal commitment.

What kind of happy ending could there be?

Bhavabhuti has them meet and forgive each other. Ku Vem Pu's Kannada story has Rama and Sita both going into the fire to purify themselves, because who is really free in human birth from mistakes?

What other patterns do you see in the tradition?

The regional influences are very interesting. In the Eastern areas the Shakta Ramayanas have Sita going in to battle to kill off a hundred-headed cousin of Ravana's who suddenly shows up after

the battle, when Rama is too exhausted to fight. The South Indian Ramayanas like Kambar's or Ezhuthacchan's tend to be more lyrical and poetic. Kerala and Karnataka, because of Kathakali and Yakshagana, have the most talented Ramayana actors. Ravana gets a lot of respect in South India as a warrior, scholar, veena player and devotee of Shiva. No way is he demonised, in fact he tells Vibhishan, ''I know Rama is a good person, but I have to avenge my sister Surpanakha.''

In the north, there is an anthology of devotees' questions to Tulsidas called the Sankhavali which asks things like ''What did they eat in the forest,'', ''Which mother did they bow to first?'' Every region has some format in which the complexities of this epic are repeatedly raised.

Where Sanskrit is a way of life
http://www.indianexpress.com/full_story.php?content_id=19997

Rajasthan village switches to ancient language

Ganoda, Banswada, March 10: From the walls of Shambhunath Jha's house, plastered posters vie for attention. But the one that catches the eye is a conversation chart that goes something like this: ''Welcome. Please sit down. Would you like some water? Nice to meet you. See you again. Goodbye.''

The chart doesn't just tell you how to make polite conversation. It also tells you how to do it in Sanskrit.

Jha's little daughter rapidly replies to her father's questions, all in Sanskrit. Near the kitchen, the Jha household has put up another chart, this time listing the name of cooking ingredients and food items.

''We use it as a regular glossary. Sanskrit is not our mother tongue, so sometimes we need to look up the chart. But most of the time, we manage without it,'' says Jha proudly.

The professor is one of the many residents in Ganoda village who are confident that they can carry on an entire conversation in Sanskrit without a problem. The grocery shop owner claims he can rattle off shlokas in Sanskrit while in the adjoining utensil store, the owner informs that he helps his children with their language homework.

''Almost everyone can speak or understand the language here,'' Naresh Doshi says. ''I studied only till class VIII but I still manage in Sanskrit. We don't speak it at home all the time, but we understand and if someone comes to my shop and asks for something in Sanskrit, I'll know what to give.''

In this tribal-dominated village, Sanskrit is slowly becoming a way of life. Slogans in Sanskrit make the village walls, the language spoken in practically every house and every school-going child rattling off a few sentences.

The entire process actually started by default. Until about 10 years ago, Ganoda village was like any other in Banswada district of Rajasthan. Tribal dominated, average literacy levels and a non-descript entity.

But the growing number of students passing out of the government Sanskrit college in Ganoda changed all that. Over 1,000 students in the three Sanskrit institutions of the village — a primary school, middle school and the college — have joined hands with a group of their teachers to try and make Sanskrit the second language of the Wagdi-speaking population.

In 14-year-old Dharmesh Joshi's house, almost everyone understands a smattering of the language. ''My mother can't speak very well but everyone else manages. Now I have attended a few Sanskrit camps and we are slowly trying to teach others.''

Kanhaiya Lal Yadav is a first generation learner from his tribal household in Dukhvada. ''We speak Wagdi at home but with my friends I often debate in Sanskrit,'' says the undergraduate student.

Jha adds: ''We decided recently to try and take the language to as many people as possible. There's

already an atmosphere of learning that has been created over the years. Now we are trying to reach out to people in remote villages and initiate them into the world of Sanskrit.''

And to spread the good word, the teachers and students are practically going door-to-door, teaching, putting up posters and impressing many with their synchronised recital of shlokas.

For the motivated Sanskrit-speaking lot of Ganoda, the ulitmate aim is to make it a unique and model Sanskrit village. Their punchline is ''don't say hello, say *Hari Om*.''

Inter-Community Relations
New Conclusions Likely After Latest Excavations
By Meenakshi Jain
India Today

Frightened by the growing avalanche of archeological evidence which threatens to pulverize historiography, the desperation of leftist academics to salvage their rendition of the past is entirely understandable. Decades of labor expended in effacing references to the destruction of Hindu temples, shifting the focus instead to sectarian Hindu conflict, is now in jeopardy.

The emphasis in the so-called "Rightist discourse" so far was mainly on the demolition of Hindu sacred structures by iconoclasts. But, in the heart of Akbar's Fatehpur Sikri, a mounting debris of Jain statues is currently being un-earthed. Given the Jain community's impeccable non-militant credentials and Akbar's reputation as the best face of Indian Islam, this casts an entirely new light on inter-community relations in medieval India. That is why, though Jain-Hindu reactions have been muted so far, Marxists have rushed in to defend their carefully sanitized version of the past.

They have questioned the legitimacy of the excavations on the ground that as Fatehpur Sikri is a famous monument and tourist site, there was no justification for reopening the site to discover an old settlement.
They have argued that Brahminical intolerance could well account for the mutilation of the Jain idols. That would, they say, also explain the near-perfect condition of a Saraswati statue, given the goddess' clear Brahminical associations.

Unfortunately for leftist academics, the time for such crude theories
is fast running out. A re-examination of religious texts, historical records, and literary treatises has forced a growing body of non-Marxist scholars to reach entirely different conclusions about India's religious culture.

For instance, they now believe that undue stress has been laid on the so-called orthodox—heterodox religious divide. In historical practice, the division between Hinduism, Buddhism and Jainism was never so fundamental as to fore-close the possibility of mutual exchange. Explaining the presence of Hindu gods and
so-called Hindu "elements" in Jain temples, the scholars highlight a shared religious culture wherein divine figures and even ritual forms were reincorporated, reformulated and re-situated. In the Jain context, the distinction was that Hindu gods were given a lower place in the hierarchical classification of souls, and this was visible in the layout of images in their temples.

The doctrinal, ritualistic and institutional similarities between Hinduism, Buddhism, and Jainism were too marked to be overlooked. The Jains and Shaiva Siddhantis, for example, believed in the plurality of souls fettered by maya, which could be liberated through karma. They also believed in the separate existence of liberated souls after moksha. Both placed great emphasis on material austerity. The Shaiva sadhaka
moreover, bore a striking resemblance to the Jain atmacintaka nirapeksa, as did the Shaiva math to Jain monasteries. All of this points to a highly interactive spiritual environment.

Buddhism, too, is being recognized as an integral part of the Indian religious tradition. Buddha's biography incorporates many of the characteristics of the Rig Vedic god Indra, as also of the Jain tirthankara, Parasvanath. Buddhism was closely allied to the Upanishads, in its advent and philosophy. Brahmins constituted the largest group of monks and supporters of early Buddhism and were strongly represented in most religious movements in India. Several key Jain philosophers were Brahmins.

The claim of Brahminical intolerance is mischievous and dishonest. The Brahmins were known for their tendency to absorb, assimilate and upgrade deities, not for exhibiting animus towards them. Krishna, who has been linked by scholars to a deity of the Vrishni tribe, was elevated by them to the highest godhead. Rudra, identified with low-caste cremation ground cults, has been recognized in the Svetasvatara Upanishad as the Absolute Reality.

While leftists have accused Brahmins of intolerance, they have downplayed, if not purged, evidence of Muslim bigotry. Even the "great Akbar" flirted with the most orthodox forms of Sunni Islam. He persecuted Shias and Mahadawis, forcibly converted Hindus, rechristened Hindu holy cities, and levied the jazia. Though
he did seek a neutral legitimization to rationalize his rule, the state under him remained, unmistakably, a Muslim state.

The harsh truth is that the level of integration between the two communities remained pitiful even in the best of times. The Hindustani composite culture that one constantly hears about involved the assimilation of the Hindu administrative elite into Muslim culture and the Islamization of Muslims away from Hindu culture. The pattern was continued by Muslim provincial rulers after the decline of the Mughal empire. Prayag, Ayodhya, and Benaras became cities which were "Mughalized" under the Nawabs of Awadh, who continuedthe culture established by the Mughals.

Given the Hindu disposition, many of them worshipped at the shrines of Muslim saints, but the guardians of the shrines ensured that they could never get too close to the central enclosure. A distinction was always maintained between Hindu and Muslim devotees. The latter were never encouraged to visit Hindu temples. The history of the Hindu-Muslim encounter before the British period has led some scholars to concede that if communalism was "constructed" during the colonial period, it was constructed in part from already existing material. The excavations at Fatehpur Sikri seem to reinforce this view.

Sanitizing Temple Destruction by Islam

By Meenakshi Jain

http://www.sulekha.com/articledesc.asp?cid=142374

Politics may or may not be the art of the possible, but historical writing on the Muslim community in India is certainly fast approaching that exalted state. It is truly extraordinary that as echoes of *jihad* reverberate through the sub-continent, western and Marxist scholarship should be desperately segregating present battles from past contests and in the process, willfully exonerating Muslims of acts of commission traditionally laid at their door. The sanitization of Islam's public profile is all the more intriguing given the west's own growing preoccupation with problems of fundamentalism and terrorism.

Be that as it may, there is a continuing thread between India's historic experience and contemporary predicament, which we can ignore only at our peril. At the heart of the matter is the long drawn-out unresolved and stalemated civilizational struggle, which refuses to blow away, and in fact demands final resolution. This is not simply a clichéd clash between Islamic monotheism and Hindu polytheism as is made out in standard accounts on the subject. The issue is far more visceral, which explains both its extended duration and bearing on mankind.

Scholars of religion would see merit in the proposition that India is the last refuge of a once universal spiritual tradition that has everywhere been replaced by Semitism of varying varieties. **Given that Islam is the extreme form of Semitism and India the greatest expression of 'paganism', the formula of accommodation can logically have no appeal for the former. This remains the painful reality, however well historians may camouflage it.**

The intolerance of idolatry was first exhibited in Arabia and by the Prophet Mohammad, who had never set eyes on India. That was the inexorable logic of the religious movement he had set in motion. (Muslims, like many others, confused the Hindu practice of image worship with idolatry. **Hindus were never idolators. The image was always perceived as a means of focusing on the Almighty, it was never equated with the Almighty. Elaborate rules governed the consecration of a statue into an image of worship, and its disposal in case of damage).**

Since the issue of temple destruction has acquired a fresh leash of life in the wake of the Babri Masjid – Ram Janmabhoomi controversy, it is understandable that academics should have directed their considerable talents to clearing up this particularly messy bit of the past. It is not possible here to take note of the rich literature generated on this vexatious issue. A reference to Richard Eaton's essay on 'Temple Desecration and Indo-Muslim States', published in his book, *Essays on Islam and Indian History*, (OUP 2000), would suffice to highlight the main theses of this genre of historical writing.

The preliminary argument expounded holds faulty use of Persian chronicles and treatises responsible for the unflattering depiction of Muslims down the ages. British administrator-scholars, so the story goes, consciously produced inaccurate translations of Persian texts in a bid to contrast their beneficent rule with that of their bigoted and intolerant predecessors. The historical truth, present-day apologists of Muslims argue, is that Persian chroniclers of medieval times widely exaggerated and sometimes even invented, the temple-demolition sprees of their patrons.

But surely this raises more questions than it solves. **One does not need to be communally-minded to infer that desecration of Hindu holy sites was held to be meritorious activity in the entire Muslim world, which is why the writers in question felt the need to glorify such acts, whether they actually took place or not.** Certainly, even the most pro-Muslim historian would be hard put to name a single medieval writer of whatever stature, who disapproved of such vandalism or regarded it as un-Islamic. Further, the fact of a level of destruction is not contested by any scholar, though there is debate on its possible motives.

Pertinent in this context is the Muslim community's perception of the manner of its spread in the sub-continent, and the pivotal role played by temple destruction in the 'remembered past' of the Muslim state and people. Local legends invariably eulogize a small band of the faithful who arrive as torch-bearers of the faith in the hostile terrain and face the resistance of the infidel populace. The ensuing bitter struggle climaxes in the take-over of the area temple by the army of Mohammad, its transformation into a mosque, and the conversion of the principal pagan leaders to Islam. The mosque thereafter serves as the disseminator of Islam in that region, in course of time contributing to the establishment of a sizeable Muslim population in the environs. However modern historians may interpret such narratives, they are indicative of the Muslim community's preferred account of its expansion.

The ingenuity of modern scholarship is most severely put to test in the case of Mahmud Ghazni. Even in the Muslim world, it is difficult to rival his record in temple destruction, he belonging to a breed apart. Yet we are asked to believe that these were 'secular exploits,' waged with a view to financing political ambitions in Khurasan. His plunder of Iranian cities is cited in defence of this argument. But, skeptics may well ask, did he also attack Muslim sacred architecture in erstwhile Persia? Further, what fraction of the wealth of India was actually concentrated in temples, and what proportion did it constitute of Mahmud's total haul from this country? Did the indemnity and spoils of war from Indian princes not far exceed the loot from temples? If wealth to pursue an expansionist programme were all that was needed, would not the booty obtained from Hindu rajas have sufficed?

Since temple destruction did not cease with Mahmud Ghazni, this is obviously not a wholly viable interpretation of events. Indeed, every single Muslim ruler after him till Aurangzeb indulged in this past time, with similar or lesser frequency. So, modern scholarship defines temple destruction in this era as a purely political activity intended to 'de-legitimize and extirpate' defeated Hindu ruling houses. Scholars like Eaton argue that it was only in instances where Hindu rulers had linked their political authority to royally patronized temples that destruction was resorted to. This activism, he says, was not prompted by the 'theology of iconoclasm', but by the desire to sweep away all 'prior political authority' in the newly conquered territory. Further, Eaton says, attacks on images patronized by enemy kings was well integrated into Indian political behaviour from the

sixth century AD itself, long before the Islamic advent in the sub-continent. The Muslims, he contends, only followed and continued established sub-continental norms.

This is a skilful dressing-up of events, but alas, grievously faulty on many counts. As is abundantly obvious, its fundamental thrust is to reduce, if not altogether eliminate the religious dimension in the world-view of Muslim conquerors. But the supposed secular orientation of the Sultans is not easy to reconcile with their consistent endeavours to remain on the right side of Islam's religious divines. Logically, the goodwill of the latter entailed compromise with the former stance. The two were diametrically opposed perspectives.

Indeed, Eaton himself draws attention to the intimate links forged between Muslim religious divines (he mainly focuses on the *Chishti Sufi* order) and the Islamic state. In every instance of the establishment of a Muslim state in the sub-continent, Muslim divines, he says, injected a legitimizing 'substance' into the newly created body politic at the moment of its birth.

It would be natural to infer from the steady association of Sufis with Islamic state formation that Muslim empires had a pronounced religious dimension. In the Hindu world, by contrast, religion and state never acquired such a symbiotic relationship, there being few instances, if any, of Hindu pundits actively participating in state formation. Separation of religion and state was a fact in the Hindu world from the very outset. Certainly, its spiritual leaders did not pontificate on matters of state or on the policies to be pursued vis-à-vis state subjects belonging to other denominations. Buddhist *bhikshus,* for instance, never advised Emperor Ashoka on his dealings with his Hindu subjects, just as Brahmins refrained from directing the initiatives of Gupta kings towards the *sanghas*.

Further, though Hindu rulers patronized temples, they did not uproot existing modes of worship or impose their own favourite gods on their people. In a significant number of cases, in fact, they elevated already existing local deities, a phenomena which accounts for the great spurt in temple building from the 6th century onwards, that Eaton refers to. Lord Jagannath, widely acknowledged as the state deity of Orissa, was, for instance, originally worshipped among some tribal communities, and was later adopted as the regional deity by successive ruling dynasties.

Even if it is conceded that temples had become sites for 'contestation of kingly authority' before the coming of Muslims, the fact remains that Hindu kings were thereby attempting to *appropriate the identity symbols of their rivals*, and not to crush or destroy them, as in the case of Muslim conquerors. The difference in the two intentions is important.

It is also not inappropriate to question why Muslim rulers fighting rival Muslim contenders never vandalized Muslim sacred architecture, sponsored or patronized by the enemy party. If temples were destroyed merely to 'sweep away' prior political authority, mosques, *mazhars*, *dargas* and *madrasas* associated with renegade, rebellious or usurper Muslims should have been meted the same fate. That this was not so was because they were part of a shared religious culture that was common to Muslims on both sides of the political divide. Hindu temples, not partaking of this spiritual tradition, and in fact constituting the despised 'other' in Muslim theological discourse, inevitably met a different end.

Lastly, Prof. Eaton makes the point, that once the territory of a Hindu *raja* was incorporated into the Muslim realm, the temples within it were treated as state property and left unmolested.

However, he hastens to add, that any suspicious activity on the part of the Hindu ex-ruler rendered the temples immediately vulnerable to attack.

Surely this admission exposes the chinks in Prof. Eaton's argument. If, as he had earlier claimed, Muslim Sultans attacked temples because they were a source of legitimacy, then surely the link between the Hindu ruler and the temple had snapped on annexation of the kingdom and its absorption into the Muslim dominion. Why then was this form of punishment now resorted to? Such behaviour on the part of Muslim sovereigns is eloquent testimony to the hollowness of the so-called synthesis that allegedly evolved under their dispensation. It is farcical to talk of a Hindu-Muslim political, material and spiritual culture when the first and set response of every Muslim ruler on however slender a pretext, was to attack the holy sites of their infidel subjects.

What emerges starkly from the tour de force of modern scholars on temple destruction in medieval India is that though the motives of the Muslim Sultans may have 'evolved' and 'advanced' over the centuries, there was no variation in the end result. On the admission of modern scholars, be it financing expansionist programmes, consolidating political authority, punishing formerly loyal Hindu princes, Muslim rulers without exception responded with one standard solution -- temple destruction. It is astounding that modern scholarship should gloss over this fact.

Further, the issue of temple destruction cannot be relegated to the backburner, given its hold on the Muslim psyche. In the last half century, temple destruction has been liberally indulged in, in Pakistan, Bangladesh and the Kashmir Valley, to name just three prominent arenas. Since Muslims constitute the dominant majority and political community in all the three areas and face no threat from the Hindus, temple desecration here cannot rightly be attributed to the alleged political compulsion to contain infidels.

Leftist Indians who talk of the futility of righting medieval wrongs exhibit complete insensitivity to the fact that temple destruction is not just a past hobby in the Muslim world, but a continuing modern trend, and that, its underlying motivation is religious not political. What makes the Babri episode so galling for Muslims is that it constitutes a rare instance of them being at the receiving end, though even here Hindu actors in the drama had taken care to select a non-functional masjid as the ground on which to join this issue.

The Islamic problem in India cannot however, be reduced to a single point issue of temple destruction. That was only symptomatic of the deep chasm between the two antithetical belief systems. Genuine synthesis was never a feasible proposition given the Muslim religious fraternity's profound horror and disdain of native traditions. No school of Islamic theology in the sub-continent ever advocated dialogue, much less rapprochement with the native faiths, which is the pre-requisite of a synthetic culture. Hinduism and Islam were never placed on an equal footing throughout the period of Muslim political domination.

Scholars who treat Muslim rule as just one of the routine dynastic shuffles in India show inadequate appreciation of the cataclysmic nature of the change that occurred in 1196 AD with the establishment of the first Islamic state in the sub-continent. **Hindu and Buddhist rule never acquired the brutal edge that remained the trademark of Muslim domination; they never entailed forcible conversions, the imposition of a foreign political elite or the ascendancy of an alien language and culture. India had known foreign rulers in her ancient past as well, but they had completely immersed themselves in the spirit of the land and become**

propagators of her civilizational greatness. No one can honestly claim that Muslim rulers sought to emulate such predecessors.

By now sufficient documentary evidence exits of the Muslim religious classes' resolve and determination to ensure that Islam retained its pristine purity in this land. Scholars who harp on the Hindu practices of Muslim converts refer to an interim period during which such behavioural patterns were gradually replaced by Islamic ones. Though one can list endless number of Muslim revivalist movements, one is hard put to name any that advocated that the faith strike local roots.

On the basis of available evidence, it is difficult to support the contention of Marxist scholars that a composite culture eventually evolved in the land. It would, however, be equally erroneous to conclude that either faith triumphed over the other. The implicit struggle resumed during colonial rule with the overwhelming majority of Muslims refusing to countenance the possibility of Hindu political ascendancy. Partition flowed from the logic of events, but in the nature of things it, too, was an expression of the continuing civilizational deadlock. The Hindu political community in independent India fudged the larger dimension of the struggle and embarked on a policy of identity-dilution and Muslim appeasement. In other words, it ensured the continuation of the civilizational stalemate, rather than its termination. This monumental lapse of the Indian political elite has facilitated Islam's burning quest to re-join battle with its millennial foe. Kashmir is an expression of that renewed struggle, as is the silence of most Indian Muslims on this new theatre of the war.

Viewed in the context of implacable Islamic hostility towards paganism and the expansionist nature of the faith, Pakistan 's policies towards India assume a frightening coherence. Its espousal of the cause of Kashmiri Muslims and silence on Muslims in the rest of India is indicative both of its strategy and objective. It stands to reason that if Muslim rights are ensured in the rest of India, they cannot be endangered in Kashmir, where in any case, the Muslims are treated by the Indian state as more equal than their co-religionists in the rest of the country. Clearly this dimension of the problem needs to be explicated.

Today, there is a two-way battle being fought in the Indian sub-continent. There is, most prominently, the old millennial struggle between Islam and the kafirs. Less noticed, but not less crucial, is the contest between predominantly *Sunni* pan-Islamism with its international dimension and disdain of local cultures and a non-*Sunni* Islam that is wary of being swamped by the former and in search of allies and indigenous links. This latter Islam is yet very much a fledgling struggling for survival. Not surprisingly, its pre-eminent exponent hails from the strife-torn state of Jammu & Kashmir, where both the battles are acutely joined. He is the state's present Chief Minister, Dr. Farooq Abdullah.

Non-saffron history unnerves reads

By Meenakshi Jain

Publication: The Weekend Observer
Date: December 4, 1999
http://www.hvk.org/articles/1299/0.html

Leftist intellectuals are of late busy defending the Marxist contribution to history writing in India. Frightened by a perceived threat to their hegemony following the loss of formidable positions of intellectual power and patronage, they are gearing up to resist the inevitable challenge to their version of history.

Sneering at 'saffron historians' whose views have begun to command some attention in intellectual circles, the Leftists claim that the former will be unable to present a history that can seriously overturn their account.

Their cockiness is baffling since 'saffron historians' have no need to engage in such an endeavour at all. A formidable pre-Marxist history already exists; it has merely to be restored to its former glory. Marxists claim to have widened the spectrum of historical research to include economic, social, subaltern and sundry other perspectives, to create a more complete narrative.

However, archaeologists, anthropologists, sociologists, linguists, philosophers, and specialists on comparative religion have put together a far richer rendition of the Indian reality. What is more, it seriously contests the Marxist version in several key areas.

The asymmetry between archaeological findings and Leftist treaties on early Indian history is now too great to be ignored by serious scholars, though it Must be admitted that Marxists are taking a valiant last stand; they are fanning out to various colleges with ever-greater vigour in a bid to impress susceptible audiences of the strength of their theses.

It would be interesting to know whether members of the Archaeological Survey are also being courted in university campuses, which are more or less still Marxist bastions. However, it is empirical archaeological data, not normative saffronist fancy, that has disproved an Indo-Aryan or European invasion in the pre-or proto-historic periods. There is simply nothing to prove that the Vedic-speaking people were intruders in the Indus-Saraswati region. The 'big bang' theory of Indian Civilization - the so-called seismic clash between Aryans and Dravidians - has bitten dust, without RSS historians having to lift a shovel.

Philosophers and experts on comparative religion have also cast the weight of their scholarship in favour of an integrated Indian Civilization long before saffron intellectuals came on the scene. **S N Dasgupta's magisterial History of Indian Philosophy** marshalled an amazing body of

religious documents to present a powerful argument for the Vedic basis of Indian Civilization. Sadly, but perhaps predictably, this authoritative study has been edged out of the recommended reading, at least in Delhi University.

Even writers of such eminence as **Mircea Eliade, Rene Guenon, Hanrich Zimmer**, who elevated Hinduism to a level unpalatable to Marxists, have suffered eclipse. These scholars have written forcefully of Hinduism as the oldest of the mystery religions of the world: A form of Philosophia Perennis, embodying those universal truths to which no people or age can make exclusive claim. Its doctrines, they have said, can neither change nor be perfected, only viewed and formulated afresh, "each successive formulation always remaining completely faithful to the traditional spirit." **It is to Hinduism that these scholars credit Indian's coherence**, even in the absence of outward structure and authority, again without any prompting from the Parivar and its affiliates.

Then there is **Ananda Coomaraswamy** who detected in India "a strong national genius... since the beginning of her history." He found Indian art and culture "a joint creation of the Dravidian and Aryan genius." Of Buddhism, he wrote:' "the more profound our study, the more difficult it becomes to distinguish Buddhism from Brahmanism, or to say in what respects, if any, Buddhism is really unorthodox. The outstanding distinction lies in the fact that Buddhist doctrine is propounded by an apparently historical founder. Beyond this there are only broad distinctions of emphasis." No right-wing historian could dare put it so boldly in Indian today.

Unfortunately for Marxists, sociological and anthropological works on Indian social structures are also overwhelmingly at variance with their tomes on the subject**. In sociological accounts, the caste system, projected by Marxists as the archetype of oppressive institutions, appears as not-so-villainous.** Non-Marxist accounts bring out the high degree of fluidity in the caste system, with upward mobility the greatest pursuit.

It is sociological and anthropological accounts that have fully alerted us to the irrelevance of varna hierarchy in day-to-day life, where power was a crucial determinant and was exercise more often than not by dominant castes belonging to the fourth varna. At the local level at least, the varna order was turned on its head with agricultural castes serving as benefactors and role models for all in their vicinity.

Sociologists and anthropologists like, M N Srinivas, C J Fuller, Jonathan Parry and Marcel Mauss have unraveled (without help from rightist quarters) the ritually limited role of Brahmins, their complete dependence on their lower caste patrons, and the contempt and ridicule they generally evoked in tile countryside. In Marxist historiography, in sharp contrast, the Brahmin has been consistently equated with Shylock.

Sociological accounts of the Indian village community also contradict Marxist pontifications on the subject. The former have laid far greater stress on 'inter-caste complementarily,' the sense of community that was reiterated in joint celebration of festivities, rituals, worship, and in combined efforts to raise the crop and defend life and property from freebooters and natural calamities. Institutions of caste come across as vibrant and supple in sociological and anthropological writings, as opposed to their oppressive and status quoist depiction in Leftist literature. Here too, it may be noted, saffron writers have played a negligible role.

On Islam, too, there is little need for a saffron academic effort. Enough work has been done by such renowned scholars as Bernard Lewis and Patricia Crone for us to fully appreciate the significance of the Islamic revolution in the world context. Crone has adequately explained the centrality of conquest in 'the Muslim scheme of things. Mohammed's God" she writes, endorsed a policy of conquest, instructing his believers to fight against unbelievers wherever they might be found. In short, Mohammed had to conquer, his followers liked to conquer, and his doily told him to conquer; do we need any more?'

Bernard Lewis, in turn, has dwelt at length on the "radical change" and "discontinuity" that Islam brought wherever it went in the Middle East. The pre-Islamic states, scripts and languages were wiped out.

There was a violent break "in the self-image and corporate sense of identity, and the collective memory of the Islamic Peoples in the Middle East" We should not expect that things could have been differently intended for India.

On Indian specifically, we have works such as those of the late Prof. Aziz Ahmad, whose Studies in Islamic Culture in the Indian Environment provides a devastating account of the magnitude of the rift between the two religious in the subcontinent and speaks of the inevitability of Partition.

Prof. Ahmad's works have been supplemented by those of a number of American academics whose researches have led them to similar conclusions.

In the light of such a formidable intellectual corpus just waiting to be rehabilitated, Marxist intellectuals should refrain from taunting saffronists to pick up the gauntlet. Their time would be better spent scrambling for cover. The bubble is about to burst.

A TRIBUTE TO HINDUISM

articles on hinduism

Swadhyaya: A Global Indic Phenomenon - Contributed to this site By Pankaj Jain

Swadhyaya is one of the most prominent living phenomena of Indian culture in 21st century. We have read and heard a lot about the Indian culture, well, here is Indian culture in action. A role model for the entire world based on indigenous Indic concepts. *Swadhyaya Parivar* is a global family of volunteers who follow Swadhyaya, a holistic Vedic philosophy based on *Gnaan* (knowledge), *Karma* (Action) and *Bhakti* (devotion). Swadhyaya, in the true spirit of Indic Traditions, is neither a sect nor a cult. It neither tries to define Hinduism nor defend it. It matches with the broad based definition of *Dharma* rather than "Hinduism" as defined by orientalists and post-colonialists. Its admirers include Muslims and Christians also.

Neither the founder of Swadhyaya nor the current leader is S*anyaasi*. All Swadhyayi (practitioners of Swadhyaya) are householders. Number of Swadhyayis now ranges more than 20 million people around the world. Swadhyaya never asks or appeals for any form of donation. There is never any “fund-raising” done for any Swadhyaya events in any part of the world. Swadhyaya has never built a single temple anywhere in the world. It has never asked for any outside support from government or from wealthy people. It has no concept of membership, hierarchy or formal office. It has never done any advertisement or propaganda and so it remains a low key (best kept secret according to one of my friends!). Even though it is a spiritual and cultural Parivar, the followers are not given any *Mantra* to meditate, nor is there any concept of maala or *Taaweez*. Rather the focus is on the intellectual aspects of Dharma.

It was founded by Shri Pandurang Shastri Athavale who himself was an authority on Sanskrit, Vedas, Upanishads, Gita and other Indian scriptures. He was also a scholar of western knowledge including Marxism, Hegel, Khalil Jibran, Freud, Judaism, Islam, and Christianity etc. He was honored with doctorates by two Indian Universities. According to him, "*Swadhyayis* are merely *Bhaktas* (devotees)" and "*Bhakti* (devotion) is social force." Indeed this novel concept of devotion married with intellectual and activistic zeal has created a massive force by launching a *Panchrangi Kranti,* a quiet revolution on five fronts, political, social, economical, cultural and psychological.

What Swadhyaya is not and what it is:

- It strives to uplift women but Swadhyayis are not “feminists” since they don’t reject the traditional roles of women even though they have devised many novel concepts for them.
- It builds bridges across castes and classes but they are not “social workers”, since their perspective is of being spiritual workers.
- It interprets traditional Vedic concepts in modern ways but they are not “religious reformers”,

since they prefer to call their ideas as experiments rather than reforms.

- It inspires patriotism in youth but they are not “nationalistic leaders”, since it is not involved in active politics.
- It focuses on innovative experiments in the field of education in all levels and ages of society but they are not “educators”, since that is not its sole criterion to spread knowledge.
- It is involved in charity work at a massive level in thousands of Indian villages but Swadhyaya is not a “charity organization”, since it rejects the usual definition of charity in which wealth is used to donate to earn name and fame.
- It develops new theological concepts but it is neither a “sect” nor a ”creed” nor a “cult”, since it does not encourage blind devotion to any ideology or personality.
- Major emphasis of teachings is derived from Vedic scriptures but it is not a typical “Hindu organization”, since it is not bounded by the regular definition of Hindu or Hinduism.
- One of the most important aspect is to spread the Vedic philosophy in remote areas of society by active out-reach efforts but it is not a “Missionary Proselytizing church-like movement”, since there is no conversion involved.

Swadhyaya In International/ Interfaith Forums:

Swadhyaya has already left its mark on international/interreligious platforms. Consider following examples:

1. In Jan 2002, when **Pope John Paul organized Assisi Peace conference** in the wake of 9/11, Swadhyaya was given the first place to deliver the keynote speech. An irony to note here, when Dharma conference or any Hindu/ Indian conference occurs, nobody even has heard of Swadhyaya, but when Pope does a similar event, Swadhyaya is the most prominent presence. It is time for us all to take a serious look at Swadhyaya.

2. In May 2002. When **UNICEF** organized a conference on Children education, once again it was only Swadhyaya, which was invited from Indian/ Hindu community. Imagine a similar conference organized by Indians/Hindus; Swadhyaya is still Greek and Latin for them!

3. This is the only Vedic Parivar, which was awarded world's biggest monetary award Templeton Prize in 1997 for progress and innovation in religion. This prize was founded by Sir John Templeton about thirty years ago to create a prize in the field of religion, since Nobel Prize does not include religion as a category. What makes it even more remarkable is the fact that Templeton Foundation’s major emphasis is to spread the Christianity by emphasizing its scientific appeal. Yet, they could not ignore the innovative zeal of Swadhyaya and had to give this award to a non-Christian thinker. The founder of Swadhyaya was also given Magsaysay Award in 1996 for Community Leadership. It was only after these awards, that Indian Government woke up and awarded Padma Vibhushan to him in 1999.

4. Two North American universities have courses about Swadhyaya, Concordia University, Montreal and University of Iowa. In addition, Swadhyaya is appreciated by scholars such as T S Rukmani, Subhash Kak, Arvind Sharma, Majid Rahnuma, Daniel Gold, Betty Unterburgar, Paul Ekins, Arun Shourie, and Vidyanivas Mishra etc.

Above examples show that Swadhyaya has achieved many milestones with very little effort on publicity, since their focus is more on internal strength and development. It remains a dormant thread in the public sphere because it has never depended on the media for publicity. Swadhyaya is emerging globally as a strong Indic phenomenon unbound by traditional Hindu definition, but based on truly dharmic definition. It is neither sectarian nor dogmatic nor ritualistic; rather it is based on Indic concept of *Vasudhaiva Kutumbakam,* world as a family.

It is time for all of us to take a serious look at Swadhyaya and do a deep analysis of it and say it with pride in international forums of our practical example of Indian culture. On the one hand, we worry that

India is not producing enough global leaders and on the other hand we tend to be ignorant of our own leading initiatives.

Mahavira's Message Of Ahimsa & Anekant

By PRADIP KUMAR JAIN

http://www.timesofindia.com/today/04edit5.htm

IN the Jain calendar, tirthankar Mahavira's birthday is celebrated as Mahavir Jayanti. This year it becomes special as the whole world joins the Jains, a 5-million strong minuscule community in remembering Lord Mahavira and his immortal teachings in this, his 26th birth centenary year which is being observed as `Ahimsa Year'.

Lord Mahavira, born as Prince Siddhartha, was brought up amidst immense wealth and luxuries. Never inclined towards worldly pleasures, he renounced everything when he was thirty and became a wandering monk in search of knowledge of the Self. He kept his bodily needs of food and water to the bare minimum, often observing fasts. He became a digamber monk practising the highest level of penances in the wilderness. He attained Kevaljnana (self-enlightenment) after over 12 years of severe penances. On gaining self enlightenment he became a tirthankar or propagator of faith. Thereafter he devoted his life in re-establishing and preaching dharma and showing the path of liberation to the masses.

Tirthankar Mahavira asked people to vanquish four Kasayas or great vices - Krodha, Moha, Mada and Lobha (anger, desires, vanity and greed) and practise the panchayama dharma or five principal virtues - Ahimsa, Satya, Achaurya, Brahmacharya and Aparigraha. He reiterated that freeing the Atman of Kasayas is one's greatest triumph. The Atman can then follow unhindered the panchayama dharma to attain self realisation or eternal bliss.

Lord Mahavira preached the path of peace, ahimsa, equality and Anekant. His philosophy aims at welfare of both the individual and the society. Everyone is equal in Jainism and the utmost importance is given to refining the individual character and behaviour to achieve the knowledge of the self.

Jainism is unique in according equality to women in the practice of religion and other social spheres. Women were actively encouraged to get themselves educated and playing social roles equal to men. The roots of this empowerment of women can be traced to the teachings of Lord Mahavira on religious organisation and the respective roles of householders and monks.

Ahimsa is the most distinct contribution of Jainism and tirthankar Mahavira to the society. Ahimsa implies a love of life in all living beings and a firm belief in the principle of "Live and let live". Lord Mahavira said that thoughts of attachment and aversion i.e. raga and dwesha and any action under their spell constitutes violence. He propounded that complete detachment from worldly possessions and vanity is a pre-requisite for the perfect practice of non-violence. Ahimsa, i.e. non-injury and non-offence to the maximum extent possible to all living beings, has become

synonymous with Jainism. In modern times, Ahimsa in its most convincing form along with truth and love for humanity was practised by Mahatma Gandhi. Nelson Mandela has been another famous practitioner of the path of Ahimsa.

Lord Mahavira put forward the doctrine of Anekantavada, that is many-sidedness. He always advised his disciples to discover the truth after taking into account all aspects and giving them due weight. This broadens one's outlook and trains the mind to accommodate the feelings and the way of life of other faiths and communities.

Anekant encourages interpersonal and communal harmony by promoting tolerance in the community. The same principle of tolerance can be extended to intellectual, social, religious and other fields of activities. Tolerance as enunciated by Anekant, will end all inter-caste strife and communal violence. Anekant is thus the pillar of religious and social harmony and the sheet anchor of secularism. Anekant ensures peaceful coexistence of all shades of philosophical and religious opinions, paths as well as as their followers.

Mahavira regarded the individual and his social responsibilities as the key to the progress of both the individual and the society. The teachings of Lord Mahavira are as useful and timely as they were 2600 years ago. They point to a new era of hope and promise for the masses delivering social equality, peace, empowerment of women, non-violence, tolerance and social justice.

Lord Mahavira was a towering personality who has left a lasting impact in the form of his teachings for the spiritual advancement of the individual, protection and conservation of all forms of life, and a rational, just, peaceful and secular social order.

Political lesson of demography

By Sandhya Jain
August 26 2003

The tasteless offensive by certain groups in London against Gujarat Chief Minister Narendra Modi, the motivated uproar against the release of the accused in the Best Bakery carnage following perjury by a series of witnesses from one community, **the studied silence against the massacre of Hindu fishermen in Marad, the demonisation of those who object to evangelical activities in their communities, and numerous such daily occurrences draw attention to what we must honestly concede are communal fault lines.** We must also admit that, in recent times, inter-community relations have been marked more by irritability and suspicion than by harmony.

This growing communal tension merits serious introspection from academics and analysts alike. **When a culture as famously tolerant and inclusivist as India's native tradition has been through centuries, begins to show stress and anguish in its modern dealings with exclusivist traditions that nonetheless claim to be peaceful and secular, there is need to examine how things have come to this pass.** Obviously, there cannot be an easy answer to the question, but an honest inquiry will throw up interesting variables.

Changing demography in specifically targeted regions is one possible answer. It would be dishonest to deny that sharp changes in the demographic patterns of certain areas is not perceived as alarming by ordinary citizens, or even administrators. Given the fact that this is also a politically sensitive issue, the Indian Council of Social Science Research (ICSSR) deserves kudos for daring to fund a study on the changing religious profile of India by the Centre for Policy Studies, Chennai. Titled 'Religious Demography of India', this voluminous work is the fruit of the academic courage of Drs AP Joshi, MD Srinivas and JK Bajaj.

Striding terrain over which angels fear to tread, the trio has attempted to trace the rise and decline of religious populations in undivided India, as also present-day India, Pakistan and Bangladesh, and make projections for the future. Understandably, they have raised hackles in our effete and 'secular' groves of academia. While their methodology and statistical projections are a matter for subject experts, I feel they have drawn attention to issues of immense significance, which have hitherto been ignored in public discourse. For this reason alone, their effort deserves to be commended.

The authors have chosen to be straightforward, without being offensive, in stating the fundamentals of the matter. Simply put, their argument is that **India has had a unique culture and civilisation for millennia, anchored in its native sanatan dharma, which was accepted even by foreign invaders until the advent of monotheistic creeds disrupted this ancient inclusivity and catholicity.**

What is more, for all its apparent diversity and variety, Indian culture was homogenous. This is a point that deserves to be emphasised as it has been studiously effaced from public consciousness in the decades since Independence. Yet as the renowned demographer Kingsley Davis perceptively observed (1951): "Indian ideas and institutions ... resemble those of no other people. They have a peculiar shape and flavour of their own ... This peculiar culture has to some degree penetrated and pervaded nearly every part of what is geographically India. It has everywhere been affected by local, indigenous variations ... But neither the geographical nor the social barriers inside the subcontinent have been sufficient to prevent the widespread diffusion of a common, basic culture, which despite great variation is peculiar to India."

This common basic culture received its first serious rupture when Islam reached the heartland of India towards the end of the 12th century AD, with the defeat of Prithviraj Chauhan. Given the nature of the study, the authors have wisely avoided the contentious issue of forcible conversions. They have, however, observed that all Islamic rulers were unswerving in their commitment to maintain a distinct Islamic identity. Acculturation into the spiritual milieu of India was stubbornly resisted; the rulers for the first time professed a faith different (indeed, it was also opposed) to that of the populace. And with time, they sponsored the growth of a community that was similarly at variance with the native cultural ethos.

The British added a chapter to this religious heterogeneity by their systematic patronage and propagation of Christianity. But their abiding, and far more dangerous legacy, was the negation of India's civilisational homogeneity and de-legitimisation of its hoary civilisational principles.

What is equally pertinent is that Christian evangelisation has been extremely aggressive and unapologetic in the post-Independence period, as witnessed in the North-east under the patronage of Jawaharlal Nehru and his successors, and in other parts of the country. That there is a design behind conversions can be readily gauged from Pope John Paul II's acerbic remarks against the Tamil Nadu Government's recent legislation against change of faith through force, fraud or inducement.

Given the statistical parameters of the study, the authors have refrained from commenting on some of the interesting socio-economic and cultural issues that arise as a result of their projections. They have avoided the issue of India's failure to assert its ancient civilisational ethos after Independence. They have, however, candidly pointed out that religion, particularly the large presence of a religious community in compact border regions, was the cause of Partition less than six decades ago. And they have graphically established the current build-up of such religious concentrations along sensitive borders, which any police station in-charge could tell you is the result of design, not accident.

Much of the information is not new. Yet, when presented with a map and statistics, only a cynic can be unaffected by the alarming growth of Muslim presence in the border belt comprising Bahraich, Gonda, Basti, Gorakhpur and Deoria of eastern UP; Champaran, Muzaffarpur, Darbhanga, Saharsa, Purnia and Santhal Pargana districts of Bihar; West Dinajpur, Malda, Birbhum and Murshidabad of West Bengal; Goalpara, Kamrup, Darrang and Nagaon of Assam. Muslim population of this belt is said to touch 28 per cent, an increase of seven per cent in just four decades. Other pockets of high Muslim growth include western UP, Cachar (Assam) and Kolkata (West Bengal).

Among other sensitive border regions, Kerala has 23 per cent Muslims and 19 per cent Christians. The Lakshadweep Islands are predominantly Muslim (approximately 94 per cent). The Andaman and Nicobar Islands are largely Christian, as is the Northeast. Tripura has resisted evangelisation and Christians

comprise less than two percent of the population (1991 figures). In Arunachal Pradesh, there is cause for alarm. Though there were no Christians in 1961, they now constitute 10 per cent of the population. Meghalaya also had a sprinkling of Christians in 1901, but by 1931 both Meghalaya and Nagaland had 10 to 15 per cent Christians. By 1951, Mizoram was almost completely Christian, as was half of Nagaland. In Manipur, Christians form 34 per cent of the population, but most outer districts are Christian.

Clearly, there is a message in the statistics which we can ignore at our own peril. In recent years, East Timor has separated from Indonesia because of religious demography. Thus, the lesson of history is that monotheistic creeds have difficulty coexisting even with sister monotheisms, let alone gentler traditions like the sanatan dharma. Barring this reality from public discourse would be a destructive ostrich-like attitude. We need to recognise the gravity of the situation, defend our civilisational presence on our borders and interiors, and take pride in our national genius.

The manacles of monotheism
By Sandhya Jain, June 2000
http://www.americanfriends.org/prejudice/monosandhya_p3.html

The recent controversy over the RSS conducting training camps in Punjab has brought the issue of the nation's defining ethos to the fore once again. As was only to be expected, the vociferous proponents of the so-called 'composite culture' (an euphemism for the cultural supremacy of Islam) observed a deafening silence in support of Sikhism's pathological links with Hinduism, and the anti-Hindu chorus emanating from some sections of the state's religio-political hierarchy was loud enough to cause concern to discerning citizens.

Chief Minister Prakash Singh Badal has made a valiant attempt to put Sikh, or rather Akali, particularism in a national framework. But even apart from his legitimate concern with his own political survival, Mr. Badal is intellectually ill equipped to grapple with the fundamental and multi-faceted civilizational issues thrown up by the debate. Indeed, the reported reluctance of some tribal communities to identify themselves as 'Hindu' in the forthcoming census is also relevant in this context.

The genesis of the present conflict lies in the horrible negation of the unique Hindu civilization (sannatan dharma) at independence, when Mr. Jawaharlal Nehru reversed the freedom struggle's unwritten consensus that the Hindu ethos would be the emerging modern nation's foundational ethos. Nehru subverted the Hindu political consciousness assiduously crafted by Bal Gangadhar Tilak, Mahatma Gandhi, and Sardar Patel, and substituted the soulless communist ideology for India's rich spiritual traditions. He de-legitimized the country's striving to reclaim her ancient heritage and, on the pretext of promoting a 'scientific temper,' sought to create a new nation divorced from her civilizational moorings in the resultant spiritual vacuum. The false propaganda that Hinduism is only one among the many religions of India, unworthy of special treatment, followed as a natural corollary, along with the thesis that the distinct dharmas that arose from her belly were 'revolts' against Hinduism, and hence separate, opposed.

The hallmark of Marxism is monotheism, and the Hindu spirit, badly bruised from a thousand year encounter with Islam, was ill-prepared for the new menace unleashed by Mahatma Gandhi's anointed heir. The trouble with Marxism is that, although conceived by a Jew, it is essentially a Gentile faith, with all the failings of the Gentile versions of monotheism, and none of the virtues of the original Jewish monotheism. Nehru's Marxist monotheism made it possible for the other monotheistic faiths to assault the Hindu tradition by claiming the right

to convert adherents of a 'false' faith, and demanding that resisting Hindus practice 'tolerance.' I do not blame either Gandhi or Patel for failing to adequately comprehend how Nehru was emasculating India. They were both ideologically illiterate, and remained untouched by any ideological fashion sweeping Britain during their respective stints at the Inner Temple.

As such, it is quite understandable that they should have mistaken the Stalin-style interventionist state structure erected by Nehru as simply a 'wrong' economic policy, when the reality was both deeply ideological and highly political. Indeed, it was Nehru's great fortune that none of his critics ever fully realized exactly what was going wrong in India. That is why the opposition to his rule could not be convincingly articulated, and even stalwarts like C. Rajagopalachari and J.B. Kripalani looked like churlish dropouts when they parted company with him.

I have, through letters on this column, often been accused of trying to impose a Hindu dominion in the name of the nation's foundational ethos. Nothing could be further from the truth, though I concede that this perception may be partly due to a failure to adequately define the essential genius of the sannatan dharma in terms that can be understood by those who fear its rise to pre-eminence.

The sannatan dharma does not describe itself in the seductive certitudes of monotheistic faiths, and in fact cloaks itself in enigmatic parables. Yet if we look for one distinct quality, it is that none of the religions born in India has been monotheistic in nature. Hinduism, Buddhism, Jainism, even the myriad tribal cults adorning the land, all lay less emphasis on forms than on the promotion of self-realization and consciousness. Indeed, it is my thesis that India's unique spiritual genius emphatically rejects monotheism.

Hinduism is a subtle, complex, multi-dimensional spiritual cosmos. Although it spawned a great and powerful religion with profound philosophies and daring intellectual constructs, it never ceased to be a 'way of life.' It never wholly identified with the religious forms it gave birth to (Shaivism, Vaishnavism, et al), nor was it subsumed by them. This is how it remains a living civilization: the individual seeker is accommodated theoretically and actually. Even today a seeker may reject the world of man and the world of formal religion, and pursue a solitary salvation on the banks of the Ganges or in the Himalayan mists. None may chastise him for deviance (for there is none), nor catechize him about the path to take (for there are as many paths as there are seekers).

I may be wrong, but available evidence suggests that India experimented with monotheism under Emperor Ashoka who made Buddhism the state religion and even called a council to codify the basic tenets of the dharma and exclude beliefs held to be 'heretical'. Zimmer has recorded dissenting views of monks at the codification. It is worth pondering if the monotheist cast given by Ashoka was the reason for Buddhism's decline in India, and the ungenerous, uncompassionate, uncompromising nature of the faith in Sri Lanka, where it migrated via the emperor's good offices.

Judaism, the original monotheism, has little in common with the Gentile-Christian variant. The Jewish covenant was with a God who was personal and exclusive to His people. From Moses to Jesus, through centuries of persecution culminating in the holocaust, this singular belief has sustained Jewish piety. **Yet this crucial limitation was emphatically rejected by Christians who claimed a mandate to wreck mayhem on the world in order to bring it the 'light'. Notwithstanding the rupture of the Catholic Church into a plethora of sects and denominations, the monotheistic conviction in the superiority of its 'truth' has promoted unmitigated hostility to other faiths, particularly non-monotheistic creeds. Islam followed this**

hallowed tradition of forcing the 'true' path on kafirs.

The irony is that modern religious scholarship on Christianity and Islam is inexorably establishing that these faiths, supposedly based on a complete revelation to one prophet, are actually syncretic traditions. That is, the religious forms and theology were crafted onto a supposedly 'core' revelation. And since the first interpretation and codification began at least a century after the death of the founder, there is endless scope for disagreement about what was actually said, let alone what it truly meant.

The history of monotheistic faiths is witness to the truth that no single interpretation of 'truth,' howsoever profound, suffices for all mankind, for all eternity. But history also reveals that the search for spiritual bondage (through monotheistic certitudes) can be as intoxicating as the search for spiritual freedom (through self-realization). Ultimately, the faithful must charter their own course. Sikh religious scholars, intellectuals and free thinkers will be giving thought to the issue in the coming days. They would do well to accept that notwithstanding the perceived compulsions of Punjab politics, the corpus of religious literature that comprises the faith is undeniably syncretic. As such, Sikhism can only enrich itself by maintaining a lifeline with the civilizational genius that has spawned its unique expression.

The Indic tradition is catholic
By Sandhya Jain, October 2000
http://www.americanfriends.org/prejudice/indicsandhya_P32.html

The Vatican's reiteration, in the wake of the recent UN Summit of World Religious Leaders, that its real agenda is to convert every person in the world to the Roman Catholic variant of Christianity, is a sharp reminder of the divergence between the world-views of Western and Eastern civilisations.

On the one hand, the Roman Catholic Church has retracted from the summit's basic premise that all religions are equal and entitled to the right to exist in peace and dignity. On the other, its adherents in India are aggressively hawking the fallacious notion that their constitutional right to practice their faith without let or hindrance is tantamount to a carte blanche to press ahead with conversions. They are pretending that the Hindu community's resistance to conversions is an infringement of their right to practice and propagate their faith.

What is truly disturbing in this scenario is that, notwithstanding the unfortunate tension this position has generated across the country, a number of intellectuals and political leaders have adopted a stand at variance with the sensitivities of the majority community. It is true that in esoteric matters, it is exceedingly difficult to decide which side is right. Nevertheless, a comprehensive elucidation of the Hindu position on both religion and religious freedom, could enable discerning citizens and scholars to appreciate that the community, too, has a case. A legitimate one at that.

India has existed for several millennia; it is rooted in history and enshrined and encompassed by a civilisational ethos based on the attainment of Consciousness (self-realisation). India s ancient religion, Hinduism, is not a codified creed in the manner of other world religions. Properly known as the Sanatan Dharma or the Eternal Tradition, it is simultaneously a religion and a living civilisation or way of life, and is inspired by the ideal of universal welfare of all beings, both human and other creatures. Dharma is natural (cosmic) law. As Hinduism, it takes on a formal structure, creed and ritual; yet it is never the captive of absolutism. The sanatan dharma recognises even the atheist as morally valid, and does not deny him space in the religious-spiritual spectrum. This is because sanatan dharma is all-embracing: it is righteousness, duty, and the eternal law that is not fixed (in time or space) but eternally renews itself in response to changing times and provides for as many paths to salvation as there are individual souls who seek it.

Dharma demands that all faiths be treated with respect and courtesy, as they are all attempts to attain Godhead. Its quintessential argument is that each soul must chart its own evolutionary course, and that it is not given to any human agency to arbitrate a final truth for all mankind. Hindus do believe that the Vedas are the revealed truth that was heard by the Vedic rishis (Sruti). But that is no reason

that they should be imposed upon the world by human regents who claim to be sole prophets of the only true revelation. This is the reason why, despite the belief in One Supreme Being, non-monotheism has been the hallmark of all Indic religions. Our polity and innate secularism has flowed naturally from these values; it is not for nothing that Aristotle observed that the Hindus were the only people to have successfully made dharma the basis of their public life (Politics).

Being a living civilisation, Hinduism is by definition multi-dimensional, multi-layered. It is inherently distrustful of the one-dimensional approach towards religion, and does not perceive other faiths as alien, threatening or unacceptable.

This natural respect for all faiths has traditionally made India the perfect nurturer of all. When the small Parsi community fled Persia, they were not only offered protection by local Indian rulers, but invited to build a Fire Temple for their worship and rituals, so that they could observe and preserve their unique culture. This courtesy was extended to the Dalai Lama and his followers when they arrived in India some decades ago, and India now has a very substantial Tibetan refugee population. More recently, when the Bahai community fled persecution in Iran, India again upheld dharma. The Bahai s world-famous Lotus Temple in New Delhi bears eloquent testimony to the grandeur of India s universalist vision and its embodiment in the flowering of a foreign religion. Christian and Muslim communities established themselves in India hundreds of years ago, as did the Jews.

Indian political culture has been similarly sensitive to the need to accommodate all groups. When the wounds of Partition were still fresh and refugees were pouring in from both borders, the very first Cabinet of independent India included Maulana Azad and Dr BR Ambedkar. Christians were represented through Rajkumari Amrit Kaur and John Mathai. **One has only to consider that despite the formidable power of American Jewry, the United States has taken more than 200 years to have a Jewish running-mate for President, in order to appreciate that this is not a small achievement.**

What is noteworthy is that because the sanatan dharma permeates the whole culture, India is comfortable with the idea of co-existence with ethnic, racial and religious groups that do not desire assimilation to its unique civilisational-cultural ethos, but desire political space while maintaining a distinct identity on the plea of preserving their special culture. This is something that the West is only just beginning to learn under pressure from immigrant groups of different racial and religious composition.

The spirit of the sanatan dharma is to respect identity, but avoid fixing rigid lines of division. **As Prof Arvind Sharma, Birks Professor of Comparative Religion, McGill University, argued before the US Commission on International Religious Freedom, the notion that one can belong to only one religion at a time, and that one s dominant identity derives from such affiliation, is an entirely Western concept.** Perceptions are markedly different among Eastern peoples. For instance, in contemporary Japan, the 1985 census showed that 95 per cent of the population declared itself as Shinto, while 76 per cent of the same population simultaneously declared itself as Buddhist.

Hindu tradition similarly permits multiple religious participation and affiliation. The Indic religions Hinduism, Buddhism, Jainism and Sikhism are not perceived as mutually exclusive, and freely overlap across the country. If Indian census-takers did not persist with the colonial fallacy that citizens declare adherence to only one religion, Indian religious statistics could well resemble the

Japanese. The merit of this argument can be seen from the experience of the Bombay Census Superintendent in 1911, who felt harassed by the `inextricable combination of multiple practices, beliefs, and even self-definitions' among the 35,000-strong community of Hindu-Muhammadans in Gujarat. Pulled up sharply by Census Commissioner EA Gait, he was ordered to locate the persons concerned to one or other as best as he could.

The Indian reality was thus falsified to conform to a notion that belonging to a religion implies exclusive adherence to it. The lived experience of Indians, however, has been different. Most Indians are probably unaware that ordinary Muslims in the countryside functioned within the orbit of the Hindu worldview upto the eighteenth century, when Shah Waliullah, followed by Sayyid Ahmad Barelvi in the nineteenth century, launched the project of purging Indian Islam of its Hindu elements. Indian Christians also lived quite non-aggressively, until the perceived political fortunes of an individual co-religionist, **coupled with resurgent evangelism emanating from both the Vatican and Protestant missionary groups, provoked them to up the ante.**

Buddha battered, dharma grounded
Sandhya Jain
http://www.dailypioneer.com/secon3.asp?cat=\edit3&d=EDITS

The most distasteful aspect of Taliban's military offensive against the Bamiyan Buddhas and other pre-Islamic relics in Afghanistan is the **ill-disguised glee of our predatory radical secularists** who have worked overtime to subvert the significance of this civilisational assault and provide an alibi to its perpetrators.

Delighted at this unexpected exoneration of Islamic fundamentalism, Muslim intellectuals have jumped on the bandwagon to unjustly equate Hindu and Muslim fundamentalism. Worst are the puerile jokes about Buddha smiling.

By justifying the ballistics at Bamiyan in terms of the reclamation of the Ram Janmabhoomi by Hindus, secularists have taken unacceptable liberties with truth. But in their haste to absolve the Taliban, they have ceded valuable ground on the very issues they seek to fudge. **Thus, by linking Bamiyan with Ayodhya, they have held Hindus responsible for Taliban's retribution and placed the Sakya muni firmly on the Hindu/Indic firmament, contradicting their own canard that Buddhism is a faith separate from and opposed to Hinduism, that was "driven out" of India by scheming Brahmins. After all, if Buddha statues can be battered in response to Hindu misdeeds, he must have a contemporary relevance to the community.**

The Hindu tradition (scholars prefer the term Indic) reveres Buddha as an avatar (incarnation) of Vishnu. Buddhism is rooted in India's dharmic tradition and constitutes an essential part of the invisible yet tangible unity of the Indic narrative. Dharma is natural (cosmic) law, and has, through the ages, assumed various forms. It is not a static notion espousing values of a bygone era, but accepts and adapts to change. **Moreover, just as India is a living nation, so Buddhism, Jainism and Hinduism are strands of its living civilization - the sanatan dharma (Eternal Tradition).**

This civilisation is now in peril - in Kashmir, in Kerala, in the environs of Kabul. It is in acute danger of being cannibalised by marauding hordes armed with more deadly weapons, and even more lethal intent, than ever in the blood-splattered past. This is why there is a stark difference in the perception of Indians and non-Indians to the destruction of the statues. Buddhist countries have reacted with anguish, viewing it as a humiliation of their creed; they wish to save and retrieve the icons. The western countries, including the United Nations, are concerned at the loss of valuable cultural heritage.
Both

have failed to perceive Taliban's action as a new, more vicious chapter in the old civilisational conflict with India. This is why, even in the absence of a Buddhist community there, Taliban feels sufficiently deranged by the lingering sanctity of the images to take up cudgels against them. I hope Taliban's unpaid envoys will not insult us with the claim that Afghanistan's miniscule Hindu-Sikh community enjoys full freedom of religion and worship, when even today Indians working in Gulf countries cannot carry images of their Gods with them for private worship.

For India, Bamiyan cuts much deeper. For us, civilisation, culture and religion are a continuum; a strike against one is violence on the whole. When you dynamite an icon, you wage war on Dharma itself. At Bamiyan, the wheel of Dharma (dharma chakra) set in motion by Buddha when he proclaimed his new teaching to the world has been grounded; the monetary or artistic value of the relics being destroyed stands belittled before this grim truth. The Taliban and its secular allies can claim that the desecration is retaliation for the Masjid-i-Janmasthan (Janmabhoomi Masjid) only because Buddha is inseparable from our living spiritual tradition. This is a universal tradition; it stands and strives for Consciousness, Truth, Beauty, Wisdom and Compassion, and is India's true, eternal legacy to mankind. The West - which takes its religion from Palestine and culture from the Graeco-Roman world - must learn to appreciate this; it will need India to combat the threat Islamic fundamentalism poses to the civilised world.

If the West is serious about such an endeavour, it must prove its credentials by withdrawing funds and patronage to Christian missionaries and the questionable practice of conversions; these, too, outrage dharma. Without labouring the point, I would like the US to introspect about the status of Native Americans living like wild game on sanctuaries (called reserves), and the situation of Blacks since the days of Uncle Tom's Cabin. As for European nations, the horrendous destruction of Latin American civilisations and peoples has few parallels in history. By the time wisdom dawned, even the most strenuous efforts by the white man himself could not recollect the lost traditions (not save or revive, mind you), so complete was the devastation. Octavio Paz has written of the identity crisis gripping his society, Christianity having failed to compensate for the loss of the old way of life. The efforts of Carlos Castaneda and his nagual (mystic) masters do not amount to the recovery of the tradition; it is gone forever. As for Africa, it does not even bear thinking about.

I may add that Muslim nations and intellectuals who formally condemn Taliban's action as "un-Islamic" are engaging in subterfuge as they are addressing an exclusively non-Islamic audience. None of them can dare raise the issue of the destruction of Gods of another faith within the Islamic world (with the clergy and civil society), which is where it must be debated and decided if the world is to be spared such sacrilege again. Scholars of Islam are aware that the community closed the doors on ijma (consensus) and ijtihad (interpretation) centuries ago; that no dialogue has taken place in the Islamic world since, while the clergy has intensified its stranglehold over the faithful. As the clergy recognises only the reign of the Prophet and the first four pious Caliphs as valid, it can hardly be persuaded to respect other faiths. Islamic society has no secular space in which so-called liberals can operate and prevail; their role is only to deflect attacks on and negotiate space for fundamentalists.

Before the bogey of Hindu fundamentalism is raised, let me state that in the modern period, there

is not a single issue concerning Hindu society that its leaders have not confronted directly. Even setting aside the centuries-old tradition of Bhakti saints and their efforts to uplift lower sections of society, Hindus from the days of Raja Rammohan Roy and Ishwar Chandra Vidyasagar have not hesitated to take entrenched orthodoxy head-on - be it sati, widow re-marriage, child marriage, female infanticide, education and emancipation of women, or more modern evils such as dowry, bride-burning, and now female foeticide. In fact, by the time Mahatma Gandhi launched his public crusade against Untouchability, the orthodox had already lost the capacity to fight against reforms on the hitherto secure ground of tradition and shastric (scriptural) sanction.

This is not to say that Hindu society has become perfect. However, all debates and reforms in Hindu society are internal to itself and consistent with the demands of dharma, which must renew itself in every age. We also have our share of obscurantists. But we know how to sideline even Shankaracharyas if they defend sati or any practice repugnant to modern sensitivities. I do not know of a single Islamic scholar, religious divine or political leader who can debate upon modern-day sensibilities with mullahs in Cairo (which has a pro-west benign despotism that deals harshly with fundamentalism), leave alone Kabul.

This is what makes the equation of non-existent Hindu fundamentalism with doctrinaire Islam so obnoxious.

A TRIBUTE TO HINDUISM

articles on hinduism

To Hell with them!
By T R Jawahar
http://newstodaynet.com/08oct/cd1.htm

A clay idol of Ganesha and a carved wooden cross are thrown into the muddy pond under the sanguine supervision of a white-robed gentleman. As the throng of illiterates inhabiting the remote hamlet watch with bated breath, the clay idol sinks without a trace, but lo, the wooden thing floats for all to see. The robed gentle(?)man, now turns around to face the crowd, a benign smile adorning his facade but not betraying the malignant intent, and announces the triumph of the true god over the illusory idols. Having thus proved the superiority of the Son of God over the Son of Shiva, by this remarkable miracle he now very magnanimously leaves it to the innocent, illiterate simpletons, for whom seeing is believing, to decide on their faith ...on their own, to be sure. Through the miracle of the floating cross, the stage is thus set for the crossover of those at the crossroads of their conscience! Then follows a subtle, but insidious sermon that details the benefits that would accrue to those who had the good sense to launder their sins for salvation. Invariably, the potential targets are those who have already been softened by sustained social service over a period and the miracle was only the last straw. Yet another group of errant sheep join the flock, with mutual benefits for the converts as well as the convertors --salvation from sins for the former and a ticket to heaven for the latter not to speak of material benefits for both.

One is at a loss whether to call the above ruse a fraud, inducement, immoral force, exploitation or all of these. These are common tricks that are routinely conjured up by the conscience-hunters whose divine vocation it is to enlist mercenaries for their unholy schemes. However, not all such experiments to prove the superiority of the Son are as laborious and painstaking. With the conversion market booming, what with foreign funds for the asking if only an evangelist could prove the worth of his work in numbers, haste, very indecent at that, is the name of the game. Also, with awareness about the missionary mischiefs increasing by the day even among timid or indifferent Hindus, it is now a matter of making hay while the sun shines and so material inducements are blatantly used as instruments of conversion. With commerce rather than conviction forming the bedrock of such activities increasingly, it is a question of one evangelist beating it to the pile before the other round the next street corner does. And to be sure, there is an army of such white robed gentlemen roaming the countryside in search of wholesale soul-sellers whose penury and illiteracy could be traded for well-packaged religious detergents that could wash away stain and sin, better than even Super Rin!

But to brand these conversion exercises as solely commercial ventures would be to belittle their dangerous portents. Though the package comes with the coating of material allurement, it is only a clever ruse to lure the gullible; really conversions are motivated by deeper religious and political factors. For one, while Hinduism recognises the validity of all paths to attain God, Islam and Christianity clearly condemn all non-believers as kafirs or heathens and quite explicitly exhort their practitioners to convert those of other religions to their own faith. For them it is a religious duty to do so, and it does not recognise social niceties and common courtesies. Armed with such a religious sanction, the missionaries of both these faiths over the centuries have evolved or varied only in their methods in order to suit prevailing social and political milieu: at the core, the zeal if anything has only hardened. And Hinduism with all its plurality and self-defeating secularism, is too soft and dicey a target to be left unattacked. Even the Pope, who was let into this country in all innocence by a BJP government that rolled the red carpet for him in his capacity of a head of State, could not resist his genetic religious

instinct and issued a call, standing on this very soil, for a massive harvest of faith! It is a different matter that the crop has largely failed, but the slip is quite revealing. If that is the wont of an honourable gentleman who was actually a guest, imagine what would be the cumulative zeal of resident missionaries who are rooted in this land, possessing intricate knowledge of its social fissures and upheavals and having at their disposal several instruments like money, media, Marxists and myopic secularism. To ignore the threat posed by this combination to communal harmony and national security, would be a sin that no Father & Son duo can salvage us from!

The differences between Hinduism which is pluralistic and Islam plus Christianity which are exclusivist, are very basic and cannot be reconciled. The militants of one and the missionaries of the other are just the two sides of the same coin, as far as the Hindus are concerned. Heads or Tail, the Hindus stand to lose and greater the peril, if the one who tosses the coin or adjudicates, happens to be a secularist. While one guarantees instant death, the other is slow poison, programmed to kill. Well, what about the secularist? He stands for suicide! It is really a miracle, a greater wonder than the floating cross alluded to above, that Hinduism is still around despite the onslaught of this diabolical trio. All these centuries it is only the tolerance of the Hindus that has ensured whatever communal peace that had prevailed in the country, despite dire provocations from these other religionists and the subversive secularists. But the Hindus of the land have paid a heavy price for that in the form of not only desecration of their places of worship but also putting up with insults and innuendos that are always being heaped by the preachers who also double up as poachers, in all piety, for sure. Why do these men seek to convert? Apart from the commercial spin-offs, it arises from their basic belief that Hinduism is a contemptible religion and Hindus need to be salvaged if they were to walk into heaven. They have utter hatred for anything Hindu. Now in the face of such unconcealed derisive intent, would not allowing conversions be tantamount to conceding that such contempt is correct and justified? Let alone the religious angle, should India, in utter disregard of the sentiments of its majority, invite such an ignominy upon its own people just to put up a tolerant face or to satisfy the itches of blind maniacs and blinkered secularists? When even just-born nations seek to trace their roots and cultural identities, in India which can boast of a far richer and ancient heritage, its dominant religion which also reflects its character, whether one likes it or not, is sought to be treated as a boxers punching bag and made to accommodate rank rabid faiths that entertain neither any pretension of religious tolerance nor are weighed by compulsions of reciprocity!

Talking to them is futile; one has to only deal with them. Indeed, the ordinance to check conversions, though a small step, is a bold initiative in the right direction. Checking conversions may not be the cure-all panacea for the social tensions prevailing presently, but at least one major *agent provacateur* would be under scrutiny and control. It is high time this menace is given some attention. To be sure, there would be a cacophony of protests on this assault on secularism and religious freedom, and of course, wails of pandering to communal, read Hindutva, forces. But that is an old gag and in any case it is difficult to fathom what Archbishops and Imams have got to do with secularism and tolerance. Such words do not figure in their Books! So why complain?

Secular Boomerang!
By T R Jawahar
http://newstodaynet.com/24oct/cd1.htm

It is heartening to know that secularism can fire both ways. If not handled with care, it can blow up in the face of even its expert proponents, like a bomb in the making. Of course, such occasions are rare in this very tolerant' country, given the one-sided secular-sermons that the people are customarily and consistently subjected to, but a wonder has indeed happened.

The **Madras High Court** while ruling that the closure of schools and colleges run by minorities in the State for a day is not clothed with legal sanction', has also **dropped a few pearls of secular wisdom that the inveterate secularists can do well to pick.** After declaring that the Court knows no religion, the learned Judge goes on to say: No student who is studying in minority institutions, regardless of religion, shall be involved in this kind of protest and we hope that they shall not be dragged into any kind of controversies, religious or political, and be spared only for the purpose of developmental activities like education, sports, etc. so that they grow up as healthy secular students'. Note the catch phrases: ...knows no religion' and ...secular students'. These are normally hurled by the secularists and of course, the minorities to hound and humble the Hindus. Now the very same verbal weapons have felled these habitual deployers who had appropriated them so long for their sole use. And they cannot complain because it is the court which has put them in place, not the communal Hindus. As they sow, so do they reap!

The secular boomerang has struck at them with greater force than they had unleashed it with. The Court had wanted to know from the defendent secularists why at all the schools run by them have to be closed when there were several other ways of expressing their protest, particularly when the ordinance was applicable only to conversions through force, allurement or fraudulent means. The Judge also queried if he had the jurisdiction to test the veracity of the ordinance or annul it in the absence of any Supreme Court judgment sanctioning it and then advised the defendents to shun other modes to express the protest and wait as a writ challenging the ordinance itself has been filed for specific relief. Of course, the last word is yet to be said with the case having been posted for further hearing to January, 2003, but do not the Courts observations echo a familiar pang in every parents, nay, every, citizens heart?

The Christian community leaders and their secular sponsors were obviously suffering from a high degree of presumptuousness - that they can get away with anything. This in turn has been wrought by decades of over-indulgence to them, their whims and their religion, by everybody who is somebody, both in politics and society. So, any step to rectify anomalies, balance the scales or check their activities is met with stiff resistance and dubbed as an

anti-minority atrocity which has to be shunned forcefully and shelved forthwith! Sure, but if the anti-minority syndrome itself could be so potent, then what if some move is deemed anti-majority? By the same token and proportion, should not the earth beneath the nation shake? But in India that is Bharath, not a leaf will ruffle! Because we are secular and tolerant, while as pet, adamant children, the minorities have to be pampered, fed, nourished and nurtured so that they are healthy enough and emboldened adequately to keep asking for more. Now can anyone be satiated by appeasement? On the contrary, it can only increase the appetite, particularly if the hungry ones know the giver to be a sucker who can be milked dry. Little wonder that, having secured hefty aids and grants from the money of the tax payers, a majority of whom are secular Hindus and so sinners, and then thriving on the fees paid by students, a majority of whom are again off-springs of those wretched sheep, the Christian managements still had the temerity to order closure of the schools.

But for once their bluff has been called with the State government making it clear that if they went ahead with the closure of the schools run by them, (and not wholly funded by them, mind you), then the aid would be cut forthwith. **Very few people know that most of the so-called Christian-run institutions are heavily aided by government doles.** These educational institutions and even those which are self-financed, rely heavily on secular students for sustenance, charging them fees that are in no way less than the market rates. At best, they can be deemed custodians of public money, secular money at that, vested with them for imparting knowledge and at worst can be classified as enterprising entrepreneurs engaged in the business of education, their holy attire notwithstanding. That is, there is very little of service involved for their acts are akin to paying one with ones own coin and all this lofty talk of the missionaries great service to the cause of education is one of the longest surviving lies. And by resorting to the closure, they have only reinforced the common suspicions about their motives, a self-indictment that is more eloquent than a thousand judicial verdicts. If secularism and service are their avowed motives as they claim, why should they seek to drag the secular students and even their teachers into a protest that they have no stake or interest in? But more basic is the question why a law banning only forcible conversions should be any business of Bishops and managements who are solely engaged in voluntary service with no religious strings attached?

Rendering of Saraswathi Vandhana was deemed a blashpemy in this secular country, but day in and day out lakhs of students, majority of them Hindus, studying in the thousands of schools that have downed shutters today, are made to begin their day with an invocation to the Holy Father and Holy-whateverelse. And this happens in educational institutions that are funded out of the money of their parent whose purse it exits either as tax or fees. And these donors do not even know that and instead have all along been led to believe by the past masters of propoganda that they, the parents and students, are at the receiving end of benign charity. And now comes the ultimate insult, that the robed religionists masquerading as educationists will not hesitate to hold society to ransom if they are not allowed to have their secular way. Indeed, it should be a revelation for many on the extent to which public funds has been diverted as grants and doles to promote this sort of perverse secularism. The State government should press ahead with its warning to withdraw the grants, now that the Christian institutions have carried on with their closure threat. Let the gauntlet be thrown back at them. We should never pay a blackmailer, for it is not in him to say stop!

CRUCIFYING MORALITY

T R Jawahar

http://www.newstodaynet.com/2002cd-a/221102.htm

'Convert me if you can', challenged Mahathma Gandhi, when confronted by a missionary who was quite incensed by the great man's strident opposition to conversions. And missionaries being what they are, they must have certainly tried. But we all know that Mohandas Gandhi did not become Malcolm Gandhi and remained a Hindu till death with 'Hey Ram' on his lips because he was very firm in his spiritual convictions besides being well aware of missionary machinations. The provocation for the Mahatma, who knew the Bible inside out, to throw the gauntlet at the Missionary was simply this: the relentless targetting of the tribals and harijans by the evangelists. Gandhi was convinced that this was pure exploitation of an oppressed people and had nothing to do with real spirituality. So to expose the utter immorality of their acts as well as the hollowness of their 'truth', he invited the missionary to first convince and convert him before preying upon hapless and desperate people who have neither the means nor the mind to verify the claims of evangelists.

Now, imagine a typical filmy scenario that is also rooted in reality. A destitute woman approaches a man for succour. Her poverty and privation has even prepared her to place her chastity on the altar. She might also have been emboldened so by a wayward, often drunkard, husband and hungry children. The woman therefore has her reasons and since she has decided to cross the threshold, the merit of her act is irrelevant any more; the focus is rather on the man. Now what would a man when confronted by such a woman do? Obviously, whatever he does, will tell on his character, irrespective of the fact that the situation was not his making. He can either turn wolf and grab the opportunity as well as the woman or tell her to keep her chastity intact and still help her out, to the extent he can. The former is commonplace and condemnable, while the latter is true charity and reflects character. Even a man of lesser morals would still turn her away because he will know that the woman's soul would not accompany her body to bed. In short, it would require a truly depraved bent of mind to exploit the woman's penury and frustration. And it constitutes rape, of both body and soul.

It would be difficult not to draw a parallel between the above and conversions of the oppressed. Religion is an intensely personal matter and is as sacrosanct as chastity. For someone to change his religion of birth requires enormous mental effort and thorough overhaul of conscience and this cannot happen in a jiffy. It calls for intense contemplation which cannot be achieved on an empty stomach or with creditors knocking at the doors. And again, how can this

solitary pursuit happen on a mass scale? But in India we see the spectacle of people willing to shed their religion of birth in droves aided by an equally eager faith waiting to gobble them up. And the reasons touted by those threatening to convert as well as the ones itching for the communion are social oppression and economic deprivation: the same factors that propelled the woman alluded to above to shed her inhibitions. By their own admission, the conversions are not prompted by any play of conscience or pursuit of spirituality, but owing to frustration and anger, genuine though they may be. In fact a leader of a Dalit outfit even says that he believes in no religion but would still want to convert just to express his anger!

It is not just the poor and those at the lower rungs of society who are targets. Any one who is weak owing to whatever reason is a potential convert.The predators are always on the lookout - scouting in the streets, waiting outside temples, stalking stable households, perching on hillocks, scanning the hospitals and even fanning out in funerals - for that isolated soul in torment which is deemed ripe for the picking. The infirm and the dying are 'saved' from their sin by being made to move their lips just to utter 'Christ' before breathing their last. Even corpses are not spared with many getting buried instead of being cremated after a pliable relative, often an errant son, is compensated adequately for the 'funeral expenses'. And he too gets 'saved' in the process. Indeed, emotional blackmail and psychological pressure are potent weapons in the evangelical armoury.

Now, why this ugly haste and frantic fanaticism? Does it not betray an empty vessel? Otherwise, what sort of a true religion is it that casts a blind eye to real conscience change and instead acknowledges mere cosmetic makeovers and seeks to accommodate an emotional crowd wading in on empty stomachs and broken hearts? What kind of grouping would that be that exploits the deprivation of the masses to pander to its own depravity? What character or credibility could be attached to these soul-hunters who make it their wont to encourage and enlist renegades, deserters, defectors and desperadoes as well as entice and engulf the gullible to their fold without regard to motives or morals? Will true men of morals succumb even if these are proffered on a platter? But our evangelists commit these with impunity, without remorse but with zeal instead! Well, such acts are worse than the rape of a destitute woman. It is spiritual mass rape - inflicted upon a depressed class by those whose own consciences had been conveniently despatched for a sabbatical! It is perversity without peers.

The Constitution's sanction for religious freedom comes with the caveat of morality. For those who claim that morality is a grey area and subjective, it would suffice to say that so are the terms 'secularism' and 'tolerance'. But really, morality is a very powerful and unambiguous concept if only one has one's conscience intact. Helping the poor and the weak who come to them is real charity which is moral and therefore constitutional. But making them walk to the nearest church to thank the 'saviour' amounts to crossing the moral threshold rendering the same unconstitutional. Thus, by no stretch of imagination could exploitation of the anger and hunger of a class of people be deemed moral. There is another danger lurking. Today, it is just switching faiths, but tomorrow it may be a case of changing national loyalties, with anger and hunger remaining the culprits. If we accept the rationale today, can we later contest the outcome which could be disastrous and even too late? It is therefore imperative that the gauntlet is thrown back at the offenders. But for starters, religious conversions of the kind that are now rampant will have to be stopped on the count that they are immoral. And this can be achieved constitutionally. Doubting 'Thomases' are advised to check notes with the Father, I mean, the Father of the Nation. After all, he was a very tolerant and secular man and we know what he felt. And we also know

that he had read the Book and still did not feel impelled to change his name from Mohandas to Malco...No, let's leave it at that!

'TRUE' FAITH, FALSE ALIBIS
By T R Jawahar

"Give unto Caesar what is Caesar's and
give unto God what is God's"
- Bible

http://www.newstodaynet.com/2002cd-a/201102.htm

Societal inequalities and economic deprivation are evils that haunt all people, irrespective of their religion. It is a misnomer to imagine that religion can address these issues and it needs real courage to admit this. Particularly so when the missionaries are looking for just this confession so that they can make their entry with doles and false promises. But admit we must, despite the evangelical eagles hovering overhead scavenging for festering souls for the picking, if we are to put an end to the despicable scourge of conscience-kidnaps. Unless the purpose of religion is put in the proper perspective, false faiths and their champions are bound to exploit the gullible.

Ensuring food, shelter, medication and education for the people is the duty of the State. It was the case with monarchy and remains so with democracy too. Let alone Welfare States where the government's role needs no elucidation, even in capitalist economies the State maintains a constant vigil over these areas despite privatisation of virtually every activity. Having said that, it has also to be stated that it does not preclude other agencies from extending or enhancing these services to the people, but the point is that the primary responsibility still vests with the State. It is the State that should be put in the dock for its inability to take care of its subjects on those counts.

Religion on the contrary caters to the spiritual aspirations of a person and helps him in his quest for god and such other higher truths. Its concern should be the eternal and it must not get bogged down by the temporal. Though it may be argued how spirituality can thrive on empty stomachs, the only counter that can be placed is that hunger is quite secular in nature and stalks all humans irrespective of their faith. But it could never be deemed the duty of religion to provide for the basic needs alluded to above. Pitting religion against economics is like asking a hockey team and cricket team to play against each other. The resultant confusion needs no description. Under no stretch of imagination could it be claimed that it is the responsibility of temples to first provide food and education to devotees. Temples are primarily for prayer and even if the aforementioned activities are carried out there, they are purely incidental and secondary, lofty and welcome though they may be. This has been the case in India over centuries with piety remaining an inner quest while bread, butter and its spread are ensured by a combination of economic activity and State intervention. However, Hindu scriptures being exhaustive have also produced extensive

treatises on these aspects, charting out clear guidelines for people w.r.t their conduct in society, politics and business too. But the goal remained and remains God.

But the advent of the Church and Missionaries marked a significant and decisive shift. The missionaries took over these key areas of social action as their main tools to spread Christianity in India. Whatever service was proffered was touted as gifts from Jesus, the ubiquitous string that was always attached to charity and this was, not surprisingly, accompanied by campaigns of calumny against Hindu gods and practices. It would require tons of perversity to describe their acts as even remotely religious. But the charade came to stay in all its vile potency. The prevailing systems of education and medicine were meticulously dismantled on the pretext that they were primitive, when they were actually not, and a vacuum was consciously created by the colonial regime for the missionaries to step in. The usurpation of this role of the State by the missionaries went unchecked owing to the active support of the English rulers for whom the Church was the most potent force, more reliable than even the army or navy, in securing and strengthening their imperial stranglehold over India.

And this hangover continues in the secular dispensation of independent India till today, something though outwardly benign all the same cocks a snook at the very foundations of governance. This was evidenced when Christian institutions in TN closed the schools run by them for a day, when actually they were funded by grants and fees of secular taxpayers and secular students respectively, to protest an ordinance that sought to call their religious bluff. They had the gumption to do this, and most unabashedly at that, because they held, or they thought they held, absolute sway over what should rightly be a State's prerogative.

In this context, how can conversions be deemed a panacea for social evils or economic disparities? It is understandable if someone gets converted after losing faith in his religion as a means of attaining higher spiritual truths. But can social oppression or economic deprivation be deemed a legitimate cause for switching religion when it is not the job of religion to ensure food and shelter? How can Hinduism be responsible for the impoverishment of a people or the inequities when it is actually the secular State -- India not being a Hindu rashtra - that has failed to correct them, particularly when it is vested with all the constitutional powers for alleviating the same? If these are the yardsticks for the success of a religion then can it not be concluded that all religions have singularly failed the faithful, given the global spread of destitution and racism?

Again, at a micro level, can it be proved that there is a societal uplift for those who have converted or that their economic status has changed for better for good? Never. If anything, the converts carry their social baggage to the new religion and any prosperity that comes their way remains purely temporary, often confined to the conveyance to and fro the nearest church, besides some pocket money for the day, not to mention the pocket-sized book. But on the day of conversion, it is a major media event, a display of social revolution, a political watershed and of course, for the beneficiary religion, a grand groundswell of its flock. But after that it is business as usual for the converts, whose toil now continues under new masters - shall we call them 'Caste Christians' in line with the secular media parlance namely, 'Caste Hindus'? And instead of that ignominious tumbler it may be a ceramic cup now, but which not certainly is the same cup their new master sips his morning tea from. No saving grace, here either!

Conversion by exercise of conscience is the only real conversion and is bound to be a rarity. All

others, be they owing to anger, poverty, social ostracisation etc etc are nothing but cosmetic changes, as they are not accompanied by any change of heart as often vouchsafed by the potential converts as well as their mentors themselves. Pray, how many well-fed, socially mobile, happy people have the missionaries converted so far? How is it that only under-nourished or uneducated people get converted invariably? Those citing economic and social reasons for converting are actually challenging the State and not the religion, here, Hinduism. Also, the loyalty of those getting converted is directed towards the new faith for 'saving' them with a proportional hatred for the old faith as well as the State for 'letting them down'. Condoning such conversions would not only be tantamount to conceding the prerogative of the State to Bishops, but also giving way to insurgency in the long run, as we are witnessing in the North-East. Instead, does it not become the duty of the State to ensure that the challenge is taken head on in national interest as well as for preserving public order? But for this to happen the country has to first emerge out of the secular smokescreen!

A TRIBUTE TO HINDUISM

articles on hinduism

The stones of Hampi
By MAYA JAYAPAL.
http://www.indiaserver.com/thehindu/1999/05/30/stories/1330106d.htm

The ruins of Hampi can make your imagination run riot. In these surroundings there was a cultural efflorescence, when musicians, artists, and artisans gathered to create poetry and fulfill the grand vision of their kings, says MAYA JAYAPAL.

The banks of the Tungabhadra river in Bellary district, Karnataka are strewn with massive boulders, scattered like the playthings of giants. These granite boulders, estimated to be millions of years old, were used to construct the magnificent city of Hampi, capital of the Vijayanagar a empire which held sway in the Deccan for 250 years from 1336 A.D. to 1565 A.D., when at the Battle of Talikota, four Muslim kingdoms ingloriously routed its armies.

The rulers the river to form aqueducts, drains and tanks used. Their ruins remain at Hampi, evidence of the might and sagacity of the city's rulers. One spectacular excavation is the stepped tank, about three metres deep, into which water was fed by a series of stone channels. The steps are effectively arranged, in small pyramids, each block of stone bearing an inscription in Kannada detailing its exact location in the scheme of construction.

The opulent palaces, the magnificent temples and the massive fortifications appear very natural among the rock formations, as if they have just grown out of these theatrical, barren, craggy surroundings. A foreigner said of the stones: ``they are piled one block on another in a manner most singular, that it seems as if they stood in the air, not connected with each other''. The stones have been used for many purposes, some of the slabs are shaped like banana leaves with depressions for food, a stone trough with a hold for drainage, probably for horses and elephants to drink water from.

My favourite is the Hazara Rama temple, an exquisite structure for private worship of the Vijayanagar kings. Standing within a walled enclosure, it exudes an air of elegant serenity either when the moonlight softly washes over the friezes, or when it glows in the sunlight. The herds and bands of elephants, horses, dancing girls and musicians, and scenes from the Ramayana come alive on the outer walls of the temple. The eye lingers on the fine features of a musician, or the graceful limbs of a dancing girl or the noble prancing of a caparisoned steed. Inside, the four black polished pillars invite you to run your fingers over their smoothness. Their geometrical square blocks alternate with cylindrical shafts, all luxuriantly carved in tangible loveliness.

The large stone chariot in the Vithala temple is a marvellous testimony to the skill of the stone carvers - its wheels can rotate on the axle. The carved pillars in the Hall of Musical Pillars resound like musical instruments. The Hampi ruins include the monolithic statues of Ugra Narasimha (Vishnu's incarnation of the man-lion creature), badly mutilated by the invading Moghul armies and Ganesa. The 22 ft. high statue of Narasimha had Lakshmi seated on his thigh - unfortunately it was hacked to pieces. The Virupaksha temple has beautiful gopurams, and on the way there is the King's Balance on which he was weighed against gold and diamonds which were then distributed to the people.

A massive platform known as ``Mahanavami dibba'' has a floor area of 5,300 sq. ft. rising by a series of sculpted terraces. On this the king and queen would sit to watch the festivities below. Seated with them were other aristocratic women, who, according to Domingo Paes, a visitor from Portugal, ``wore collars of gold and bracelets so heavy that they had to be supported on either side''. The platform has densely carved bands of horses, soldiers, a couple of foreign looking dignitaries, and a scene showing girls sprinkling water during Holi. From here a bird's eye view of the ruins is impressive, and one can only wonder at how spectacular it must have been for Paes 400 years ago when he climbed up to gape and wonder at the opulence and the grandeur of the festivities.

The Zenana enclosure is an eclectic blend of Hindu and Islamic styles, for the Vijayanagara kings had Muslim horsemen in their cavalry and traded in horses with Arabia, Persia and Portugal. The elephant stables are a majestic row of 11 domed stalls, with arched connecting doorways. There are lofty watchtowers, the queen's bathing enclosure and plinths of erstwhile palaces, and the Lotus Mahal, an ethereal structure which in the moonlight gives the impression of a floating palace. Here the cusped arches open to the playful breeze and the women whiled away their time here.

The Persian ambassador Abdul Razak, (1443) describes the crowded bustling bazaars of Hampi with their pillared galleries. ``In the long bazaars, flowers are sold everywhere ... the jewellers sell publicly pearls, rubies, emeralds and diamonds.''

Who was the man who created a legend with his capital Hampi, and made the nine day festival, Mahanavami, a wonder? The most brilliant of the kings, Krishnadeva Raya, has been described by Domingo Paes as of medium height and fair, a man who was an athlete, who could appreciate horsemanship. He was a good commander who ensured the stability and prosperity of his kingdom, and sensitive enough to encourage the arts in this atmosphere.

The ruins of Hampi can make your imagination run riot. In these surroundings there was a cultural efflorescence, when musicians, artists, and artisans gathered to create poetry and fulfill the grand vision of their kings.

What is left of the Hampi ruins is evocative of what it must have been, the pomp and glory which brought visitors from across the seas to marvel and write about it.

Hung(a)ry for Sanskrit

www.hvk.org

By Priya Jestin

Publication: The Sunday Times of India

Date: December 3, 2000

There's a small land-locked nation in faraway Europe whose people mouth Sanskrit shlokas and devour Kalidasa's Shankutala and Jayadeva's Gita Govinda. Unbelievable? Probably, but Hungary is really like that. Though most Indians don't know much about it, this is a land where the Vedas and Upanishads have been religiously read for the past two centuries.

"We have always been interested in the literature of the East, especially India. However till a few decades ago, these texts were available only to a select few." Says Jozsef Vekerdy, a leading Sanskrit scholar in Hungary who has single-handedly popularised Sanskrit among the Hungarian masses. Vekerdy was in Mumbai recently to receive the Dayawati Modi Award for this achievement.

The twinkle-eyed 74-year-old explains how he adapted the Sanskrit texts to suit Hungarian tastes. "My love story with Sanskrit began when I was a teenager," he reminisces. "My first contact with Sanskrit literature was through fictionalised versions of the Mahabharata and Ramayana written by E. Baktay, one of Hungary's prominent writers. His versions of the epics enraptured me. That was when I decided to take up a career as a linguist."

Though there were translated versions of Sanskrit works, they were third-hand-translated from the English and Germans copies, says vekerdy. "I wanted to go to the roots and get an accurate Hungarian translation of the original works," he states.

Fuelled by this ambition, Vekerdy went on to become the first Hungarian Sanskrit scholar. Peppering his story with a few anecdotes, Vekerdy recollects the time he was left directionless as the only Sanskrit teacher at the University fled the nation after the Soviet Union overtook the country in 1956. "Since I was the only student, I finally had to teach myself," he chuckles.

However, being the only Sanskrit scholar had its benefits, as the Russians "viewed anything Western with a suspicious eye". "We were encouraged to have ties with countries that were friendly with Soviet Russia like China and India," he says. Soon, Hungarian publishers were seeking out people who could translate the literary works of China and India. And some publishing houses approached Vekerdy to translate Sanskrit epics.

However, when Vekerdy's first book, a translation of Kalidasa's Meghdoot was published, he was cooling his heels in a jail. "I was arrested with a copy of a letter written by students to then Indian

prime minister Jawaharlal Nehru," he says in a stage whisper. "Over 2000 students were deported or hanged after a student uprising against the Soviet occupation. That was when I sent the letter to Nehru explaining the conditions in our country and soon, through Nehru's personal intervention, the atrocities against us stopped." However, the letter led to Vekerdy's spending three years in prison.

"Prison life has its own advantages," he says with a naughty grin and hastily explains how he read and translated quite a few of Kalidasa's works during his prison tenure. It was during this time that he tried to innovate and make Sanskrit texts more interesting to the lay reader. "All Sanskrit texts are long and laborious to read. Hence to retain reader interest, I first translated only selections from the Vedas, Upanishads and versified them. Later, I began selecting a few sentences from a paragraph and then put them together to make a cohesive text;" he explains.

Adhering to the original text was a must and Vekerdy even got some poets to put the translations to verse. "All metric translations strictly follow the original Sanskrit verse format. Since Hungarian is phonetically similar to Sanskrit, the essence of the verses can be retained in the language," he explains. To date, he has translated at least 28 Sanskrit texts, including the Vedas and the Upanishads. Vekerdy's labour of love seems to have paid off. "Today, many Hungarian youngsters can recite verses of the Gita Govinda in Sanskrit," he says proudly.

Apart from Sanskrit works, Vekerdy also studied and later translated the sayings of the Buddha from Pali. For a man who loves Indian culture and literature, isn't it strange that is Vekerdy's first trip to the land? "I am a lazy man," he explains candidly. Now that he has translated quite a few ancient texts, Vekerdy proposes to begin translating another Sanskrit tome, a relatively modern one this time: a poem on Indira Gandhi.

And when does he plan to stop? "When there are no more Sanskrit works left to translate."

A TRIBUTE TO HINDUISM

articles on hinduism

Invoking God

by Bharat Jhunjhunwala
March 25 2003
http://dailypioneer.com/indexn12.asp?main_variable=OPED&file_name=opd1%2Etxt&counter_img=1

US President George Bush is quite certainly a deeply religious person. Mr Bush was a heavy drinker in the early phase of his life. A report in the Newsweek says that he could be obnoxious at parties. He later joined a Bible-study group. Slowly worship grew on him and he kicked-off the habit after his 40th birthday. "It was 'goodbye Jack Daniels, hello Jesus'," said one of his friends from those days. Now Christianity and Jesus have become integral parts of Mr Bush's life.

The famous "Axis of Evil" was originally phrased as "Axis of Hatred" but Mr Bush replaced it with "evil" as it had a more Christian ambience. "If people want to know me," said Mr Bush during his campaign for President, "they've got to know that's an integral part of my life-my acceptance of Christ."

This religious attitude runs through the Bush presidency. Bible-study groups are held frequently in the White House. He has provided Government grants to teach abstinence to school-going teenagers and cut grants to NGOs that promote abortion. Why is it then that such a deeply religious person is being perceived by the world as a tyrant lusting after Iraqi oil?

The difficulty is that devoutness and righteousness are two different things. In other words, bhakti can go with adharma. Two examples will make this clear.

The Christian Crusades in the 11th to the 13th century were based on a similar worshipful attitude. Christians had been persecuted in Palestine and made to flee to mainland Europe. The "famine and plague-ridden" peasantry, says the Funk and Wagnalls Encyclopedia, was oppressed by the nobility and was anxious for foreign conquests. In this situation Pope Urban II exhorted Christians to take up arms to reconquer Jerusalem. Deep religious fervour permeated all sections of the population. Participation in the Crusade was said to have great spiritual value for the individual crusader. The result was that for 300 years Europeans waged relentless wars against the Muslims in West Asia. A large number of people were killed and cities pillaged. But in the end Palestine remained in Muslim hands. These wars are, in part, responsible for the aversion to war that is presently being seen in Europe.

Worse, the Crusades had degenerated with time. Movements directed against the political foes of the popes too were termed as "Crusades". British journalist Victoria Clark writes in her book, The Far-Farers: "A Journey from Viking Iceland to crusader Jerusalem that notion of a 'soldier of Christ' changed during the Crusades. The earlier meaning was that of a monk battling inner demons. Now Christ's soldier was one who was waging bloody wars against Muslim infidels. The worshipful attitude and commitment to Christ was pervasive throughout this period. Devotion to Christ did not prevent such a perversion of the true message of Christ, which was love and compassion."

Another example from closer home is more expressive. One of the chief disciples of Ramakrishna Paramhamsa was Nag Mahashay. Those were the times when the British were plundering India and killing the freedom fighters. His biographer Sharatchandra Chakravarti says: "Nag Mahashay would respectfully honour the Government servants. He used to say that the King's powers were working in them. The divine mother is unhappy if they are disrespected. He used to say - The Queen has been born from a part of the

shakti, by her punya alone the people will be happy." Here we have a devout disciple of Ramakrishna bowing equally devotedly to the Queen who was exploiting and impoverishing the Indians.

The common point in both narratives is that devout commitment to a God - whether Jesus or Shakti - is not a guarantee that one is on the right track in worldly matters. Thus both Mr Bush and his opponents claim they are fighting in the name of God. In his State of the Union Address the US President declared confidence in "the loving God behind all of life and all of history... May he guide us now." Clearly Mr Bush has an inner conviction that he is doing God's will in fighting terror and Saddam Hussein. On the other hand, Osama bin Laden is an equally devout Muslim who exhorts Muslims to rise in the name of Allah and expel the Americans from West Asian soil.

Devoutedness to one's own God leaves no space for dialogue with the opponents. Bhakti does not answer the worldly questions of politics.

Raja Ram Mohun Roy had clearly grasped this problem. In his first book, A Gift to the Monotheists, he wrote: "I have traveled in many areas of this world. I have seen that generally there is consensus about one God or brahman, but there is no agreement in the specific features of that God and religious principles. I have thus concluded that every sect follows some devotional practices that which are acquired by training and habit. The followers of these sects follow their ancestors. They are ever willing to question the beliefs of other sects though their own ancestors made mistakes like other people. Thus these sects are either all true or all false. If they are all true then their mutual differences are not explained. If they are all false then none can be followed."

The problem can be resolved only by acknowledging that the "one God" manifests in various ways, which, though mutually incompatible, have their own merits that are rooted in their specific circumstances. The **Mandukya Upanishad** (1.1-3) makes this distinction between the iswara and brahman. Iswara is the specific manifestation of the one brahman at the level of the individual.

Every religion loses its moral sanction to wage war on others at the level of the iswara because it is incomplete or less than the whole. In this context Mr Bush's morality becomes questionable. In 1993 Mr Bush claimed that only believers in Jesus go to heaven. Similarly he has said that the US has been "chosen by the God and commissioned by the history to be a model to the world." These pronouncements smack of a new crusade. This conflict cannot be resolved by recourse to one's faith howsoever true it may be, for every faith or sect makes a basic folly of dividing the world into "us" and "they". If there is one all-pervasive God then he cannot be divided.

It's time that all religions of the world sit together and acknowledge that none has exclusive claim to God. Every religion will have to accept that its iswara is as much his manifestation as the iswara of others. The inter-religious conflicts cannot be, therefore, resolved by reference to one's iswara. We will have to use our discriminative capacity to asses whether a particular action is beneficial for the whole world. It will not do, therefore, for President Bush to try to combine "American interests" with religion. Religion has to be para-national. Human history has many examples of needless wars made under the false belief that one's iswara is the final authority. Jesus, likewise, cannot be the final authority. If Mr Bush still wages war in the name of Jesus, he will rightly be called a "hired Christian thug" as done British playwright Harold Pinter.

The fascination with Ayurvedic medicine

By Peg Jordan

http://www.indiaserver.com/hindu/stories/1318048g.htm

Noted fitness expert PEG JORDAN examines the global resurgence of interest in natural healing methods and answers queries from readers.

THERE is little question that centuries of colonisation takes a toll, its tragic toll on a country's people, religions and languages, but one of the most lasting effects is the attack on its original healing arts. Both Muslim invasions in the 11th and 12th Centuries and later British colonisation imposed their own medical beliefs to the point where both Indian folk medicine and Ayurvedic medicine were suppresssed. The British Medical Journal from the 1920s labelled the oldest healing system in the world as "unsupported metaphysical dogma". But despite being marginalised for decades, Ayurvedic medicine is the final victor. Today, there is a global resurgence of interest in natural healing methods, and Ayurvedic medicine tops the list in terms of the West's latest "alternative" health fascination.

While Ayurvedic remedies are sold through many new companies through Europe and the United States, there are numerous Ayurvedic clinics and treatment centres arising as well in the West, where a single treatment balancing doshas draw celebrity clientele willing to pay thousands of dollars. The popularity of plant-based healing systems is even evidenced in new shopping malls.

An international franchise known as the Body Shoppe has launched a new line of Ayurvedic-herbal lotions and skin care products with a mass marketing campaign that aims at younger consumers interested in natural botanicals.

Similarly, the other ancient healing systems of India are gaining credibility among plant researchers. As drug companies encounter more resistant strains among bacteria and viruses, older methods of treatment such as the Ayurvedic recipe of dita tree bark to treat malaria, chronic diarrhoea, fevers and skin diseases, become valuable as non-toxic options.

Not only Ayurvedic medicine, but other forms of folk medicine have suddenly attracted researchers for their vast knowledge of leaves and poultices to treat anemia, heart disease, cough, intestinal colic and diabetes.

Medical anthropologists have recently convened panels on the ancient medical system of the Tamil culture, Siddha, and its use of herbs to reduce the toxic effects of metals in remedies.

An ironic twist to this worldwide clamour for India's ancient healing philosophies is the fact that

India itself has become a premier supplier for low cost pharmaceuticals drugs. Ranbaxy Laboratories, in New Delhi, pours out generic drugs , such as popular antibiotics like amoxicillin, as a central player in India's low cost pharmaceutical industry. Churning out inexpensive copies of generic drugs due to its strategy of reverse engineering know-how, Ranbaxy's earnings were reported over $500 million and it has expanded operations to China and the U.S..

Herbal sources for sleeping well

My last column described the pervasive problems of sleeplessness for millions of people, and offered some natural herbs and techniques. It must have struck a chord among readers, because over 60 of you wrote to me, asking for local names of herbs, sources and other types of remedies.

I was able to find an excellent natural herbal formula by a company in Bangalore, The Himalaya Drug Company. Their propietory herbal blends are based on ayurvedic plant knowledge, and are being studied in clinical trials. A company spokesperson reported that seven decades ago, the founder of The Himalaya Drug Company discovered people feeding some roots to pacify elephants on a trip to Burma. The root was Rauwolfia serpentina, a plant known for its calming properties in this Burmese region. Upon further research, it was discovered that the plant was not only a natural tranquiliser, but it lowered high blood pressure as well.

Other herbs researched by the company include Commiphora mukul (Guggul) for helping the immune system, Garcinia Cambodia for promoting normal lipid metabolism and helping with weight control, and Capparis Spinosa for improving liver function. One of the finest collections of herbs is offered in their "StressCare" formula, containing chyawanprash, Emblica officinalis (Indian gooseberry), ashwaganda, asparagus root, and gotu-kola (Centella Asiata Urban).

Otherwise, your search for herbs that promote a good night's rest may be facilitated by knowing their botanical names: Kava kava (Piper myethysticum), Valerian root (Valeriana officinalis), Passion flower (Passiflora incarnata) and As for the other recommendations: Melatonin supplements (three mg at bedtime) or 5-http (50 mg at bedtime) are available online throughwww.mothernature.com, www.allherb.com, and www.drugstore.com.

If you have muscle cramps or "restless legs" that disturb sleep, try taking magnesium (250 mg at night) and vitamin E (400-800 IU daily.)

Other recommendations include avoiding caffeine and alcohol later in the day. Starting your day with some protein, then eating carbohydrates such as whole grain cereals and breads in the evening may help sustain nighttime serotonin (a brain neurotransmitter) activity through the night, and assure a good sleep.

The Divine Feminine In Indian Tradition

By Jagdish C Joshi

http://www.timesofindia.com/today/23edit5.htm

Ancient Indian culture as revealed in Sanskrit texts was strongly oriented towards masculine goals. The social system was overwhelmingly patriarchal and Sanskrit works largely devoted themselves to giving an account of male hierophanies, a phenomenon that occurred over most of the world.

However, from the fourth century AD the religion of Goddess become as much a part of the Hindus as the religion of God and about the same time female hierophanies develop. In these we have a reasoned exposition of the nature of Goddess, of her process of creation, of her relation to God and of her relation to her worshippers.

The phenomenon of feminine theology in the Brahminical religious tradition is unique because all over the world the female gods were replaced by male gods. Diana and Berecynthia, Isis and Cybele were exiled with the coming of Christianity although female hierophanies reappeared in the figures of Mary and the female saints. However, the figure of the virgin and its supporting theology are subordinate to her son.

It is therefore quite interesting to analyse the Hindu religious tradition, which discusses the feminine theology in detail. It is important to note that it is not a description of female icons. On the other hand it strives to express possibilities of the Goddess rather than her iconic limitations. It seeks to construct a theology that does not restrict feminine values in the world of the sacred by the strictures of subordination to which women were and are still subject in the secular world.

Of all the religious practices and beliefs concerned with feminine divinities it is Shaktism which gives the Goddess a place of supreme importance. In this tradition female is raised above the male as Durga is described as Shakti, the energy of cosmos. Without her, we are told in one of the texts that the world is lifeless and even Shiva, the great god (maha deva), is merely a corpse (shava). It is further remarked that the world without her ``though living is dead as it were''. An analysis of these legends, doctrines and abstract philosophies indicates that first, the Goddess is portrayed as power, and the female Shakti element is identified as the essence of reality, the male element playing a subservient role. Secondly, she is identified with Prakriti, the primeval matter. As such she is identified with existence itself or that which underlines all existent things. The emphasis is not on the restricting aspect of the matter but on the feminine principle, the Goddess as the ground of all existence. Thirdly, she is described as giving food to nourish all life and yet she is said to take life and to cause decay. Life and death, therefore, is the process through which the female energy is continuously recycled according to the myths associated with the Goddess. Fourthly, the Goddess, according to the various religious texts, incarnates in herself all the brilliance and power that the gods collectively possess and her pervasive magic gives them sufficient definition to be able to do battle with the power of evil.

It is an exuberant celebration of the various forms of Devi, the Goddess, and their role in her victory over demons who are supposed to be tormenting the people of this earth. Besides, she is described as the embodiment of supreme eternal knowledge (vidya) which becomes the cause of release (mukti) from bondage. Moreover, the Goddess is described as the primary ontological reality. The gods derive their bodily forms from her and all material existence proceeds from her.

Similarly, Goddess Kali is said to be an embodiment of maya, prakriti and shakti. Thus she may be understood to express the nature of these qualities or the truths inherent in these ideas. Maya is often understood in terms of the

magical quality of creation, which lends to reality a mysterious and unpredictable quality leading at times to destruction. The darker aspect of reality as maya is represented in Kali's wild appearance and behaviour. Moreover, prakriti is the basis of the material word and is lush and teeming; so is Kali who symbolises eternal time and thus represents growth, decay, death and rebirth. Besides she is shakti, power or might and represents the tendency of the divine to action and to displace. In the midst of eternal night she stands upon `non-existence', the static but potentially dynamic state that precedes manifestation. In that capacity she is able to allay the terrors of those who invoke her and also bestow gifts of true perception leading to liberation.

Thus we see that the Indian tradition preserves and constantly reaffirms the idea of pervasive and dominant female divinity, an idea which was a widespread and early religious experience of humanity.

India: The Home of Gunpowder and Firearms – By G R Josyer

(source: **Diamonds ; Mechanisms ; Weapons of war ; Yoga sutras - By G.R. Josyer**).

In every inquiry which is conducted with the object of proving that a certain invention has been made in any particular country, it is of the utmost importance to show that so far as the necessary constituents of the object invented are concerned, all these could be found in the country credited with such invention.

The ordinary components of gunpowder are saltpeter, sulphur, and charcoal.

1. It is now generally admitted that the nitrum which occurs in the writings of the ancients was not saltpeter, but natron, i.e. sodium carbonate; the latter word is nowhere extant in Greek or Roman literature, though the words nitrum and natron are no doubt in their origin identical.

The word neter occurs twice in the Bible. It is described as an alkali, which was used as soap: “For though thou wash thee with nitre, and take thee much sope, yet thine iniquity is marked before me, saith the Lord God.” (Jerem. Ii. 22); and “As he that taketh away a garment in cold weather, and as vinegar upon nitre, so is he that singeth songs to an heavy heart.” (Proverb xv. 22).

Herodotus mentions nitrium as litron in his description of the embalming of dead bodies as practiced in Egypt. Pliny repeatedly speaks of nitrum, and Galen records that it was burnt to strengthen its qualities. This would have had no effect if applied to saltpeter. There is no doubt that, had the ancients known saltpeter, its oxidizing properties would soon have been discovered by them, which is the most important step towards the invention of gunpowder.

The word natron was introduced into Europe from the East by some European scholars who had been traveling there about the middle of the sixteenth century, and who had thus become acquainted with this salt; and though the word natron was originally used there for denoting saltpeter, its other form nitrum has been since assigned it; however, as we have seen, the nitrum of the ancients is quite different from our nitre, which is saltpeter (potassium nitrate).

Native saltpeter, i.e. saltpeter produced by entirely natural processes is very scarce, so much so that the inventor of nickel, **Freiherr Axel friedrich von Cronstedt** (1722-65) was unacquainted with it. It is found especially in India, Egypt, and in some parts of America. Since the introduction of gunpowder in European warfare saltpeter has been manufactured wherever native saltpeter could not be obtained from the difference on walls (sal murale) and other sources; this exudation, together with all the other artificial modes of producing saltpeter, became a perquisite of the sovereign, and this saltpeter regale grew in time into as obnoxious a burden to the people as the hunting regale. The saltpeter regale is first mentioned as having been exercised in 1419 by Gunther, Archbishop of Magdeburg.

The little knowledge possessed by the ancients of chemical science, their utter ignorance of chemical analysis, accounts for their not improving, or rather for their not being able to improve the materials at their disposal and discovering the natural qualities of the different alkalis in their possession.

Throughout India saltpeter is found, and the Hindus are well acquainted with all its properties; it is even commonly prescribed as medicine. India was famous for the exportation of saltpeter, and is still so. The Dutch, when in India, traded especially in this article.

In Bengal, it is gathered in large masses wherever it efforeces on the soil, more particularly after the rainy season. In the “Sukraniti” saltpeter is called suvarcilavana, well shinning salt. The Dhanvanatri – nighantu describes saltpeter as a tonic, as a sonchal salt; it is also called tilakam (black), krsnalavanam and kalalavanam. It is light, shiny, very hot in digestion, and acid. It is good for indigestion, acute stomach ache, and constipation. It is a common medical prescription.

2. Sulpher, the second ingredient of gunpowder, is also found in India, especially in Scind; it is, and was, largely imported into India from the East. It is well known and received its name from its smell, being called gandha or gandhaka smell, or in this case as it has not a good smell, rather from its stench. Its quality differs with its color, according as it is white, red, yellow, or bluish. Though sulphur is a very important part of gunpowder, gunpowder is in some parts in India even prepared without it. Sulphur was always in great demand in India, and in medicine it is often made use of.

3. Charcoal is the third component of gunpowder. Its constitution varies necessarily with the plants which in the different countries are used in its manufacture. In Prussia the coal of the alder, limetree, poplar, elder, willow, hemp, and hazel is used for powder. The charcoal of willow trees is especially esteemed on account of its excellent qualities. In the Sukraniti the arka (Calatropis gigantean), the snuhi, snuhi or snuh (Euphorbia neriifolia), and the Rasona (Allium saticum) are given as the plants whose charcoal is best fitted for gunpowder.

(a) The arka, gigantic swallow wort, is a common bush growing in great quantities all over the country. It has a very good fiber, and is regarded by the natives as possessing most powerful and useful qualities. If the arka is used with discretion when iron is being forged, it contributes greatly to the excellence of the Indian steel. It is applied against epilepsy, paralysis, dropsy, etc. Its milky juice is smeared on wounds. It is a common sight in India to see suffering people applying it. The root is also used against syphilis. Its charcoal is very light and much used for pyrotechnical preparations, and its qualities in this respect are so well known that every school boy is acquainted with them and prepares his own powder and mixture from this plant. Its name in Tamil is erukku, in Malayalam eruka, in Telugu jilledu, in Bengali akund, and Hindustani mudar or ark.

(b) The snuhi, snuh, (triangular spurge, kalli in Malayalm pasan kalli in Tamil, bontajammudu in Telugu, narashy, seyard in Hindi and narsy in Bengali) grows like the arka in waste places all over the Indian Peninsula. The qualities of this plant for pyrotechnic displays are as well known as those of the Calatropis gigantean. Dried sticks of this plant are scarce. It is widely used as a medicinal plant, externally against rheutmatism, and internally as a purgative; it is given to children against worms.

(c) The rasona is a kind of garlic; the Marathi equivalent is lasuan. Its botanical name is Allium sativum.

The prescription for making gunpowder is, according to the Sukraniti, as follows:

Mix 5 parts of saltpeter with 1 part of sulphur and 1 part of charcoal. The charcoal is to be prepared from the arka snuhi, and other similar plants in such a manner that during the process the plants are so covered that the smoke cannot escape. The charcoal thus obtained must be cleaned, reduced to powder, and the powder of the different charcoals is then to be mixed. After this has been done, the juice of the arka, snuhi, and rasona must be poured over the powder which is to be thoroughly mixed with this juice. This mixture is to be exposed and dried in the sun. It is then finally ground like sugar, and the whole mixture thus obtained is gunpowder!

The proportion of saltpeter varies, as some take 4 or 6 parts instead of 5, but the quantities of sulphur and charcoal remain unaltered. These two are the usual recipes. Nevertheless the mixture is often changed when the gunpowder is to be of a particular color or if it has to serve a special purpose. The three principal ingredients are mixed in different proportion, and realgar, orpiment, graphite, vermilion, the powder of magnetic iron oxide, camphor, lac, indigo, and pinegum, are added to the compound according as they are required.

It seems peculiar that gun-powder should not be mentioned in some Sanskrit works, but it is most probable that the very common occurrence of gunpowder interfered with its being regarded as something extraordinary and worth mentioning. The actual mode of preparing the different sorts of gunpowder may, on the other hand, have been kept a secret in certain classes. Explosive powder either used for rejoicings as fireworks for discharging projectiles was known in India from the earliest period, and its preparation was never forgotten.

In an extract taken from the Mujmalut Tawarikh – which was translated in 1126 from the Arabic, into which language it had been translated a century previously from a Sanskrit original – we read:

“that the Brahmins counseled Hal to have an elephant made of clay and to place it in the van of his army, and that when the army of the king of Kashmir drew nigh, the elephant exploded, and the flames destroyed a great portion of the invading force. Here we have not only the simple act of explosion, but something very much like a fuse, to enable the explosion to occur at a particular time.”

Vaisampanyana mentions among the things to be used against enemies smoke-balls, which contained most likely gunpowder, and which are according to the explanation proposed by his commentator made of gunpowder.

The following stanza, which is taken from the Rajalakshminarayana-hrdaya, a part of the Atharvanarahasya, is no doubt a clear proof of the fact that the Hindus were familiar with gun powder at a very remote period:

“As the fire prepared by the combination of charcoal, sulphur, and other material depends upon the skill of its maker so also may thou, O! representative of knowledge (Lakshmi), by the application of my faith manifest thyself quickly according to my wishes.”

The Sanskrit word for gunpowder is agnichurna, firepowder, which is occasionally shortened to churna. The Dravidian languages have all and the same word for medicine and gunpowder; in Tamil marundu, in Telugu mandu, in Kanarese maddu, and in Malayalam, maruna. Occasionally the word gun (tupaki) is prefixed to remove any doubt as to what powder is meant. In Malayalam, the word vedi, which means explosion, is prefixed. The Chinese crackers are called by the Tamilians Sini vedi – Chinese crackers – to distinguish them from the Indian crackers. The word marunda is most probably derived from the Sanskrit past participle mardita, pounded, in the sense of different ingredients being pounded together, as a medicine powder. The meaning of gunpowder is then in a special sense derived from the general expression. The Dravidian equivalent of churna is Sunnambu in Tamil, Sunnamu in Telugu, chalk.

Two kinds of firearms are described in the Sukraniti, one is of small size and the other is of large size. The former is five spans long, has at the breech a perpendicular and horizontal hole, and sights at the breech and muzzle end of the tube. Powder is placed in the vent, near which is a stone, which ignites the powder by being struck. Many dispense with this flint. The breach is ell wooded and a ramrod compresses the powder and ball before the discharge. This small musket is carried by foot-soldier.

A big gun has no wood at its breech; moves on a wedge in order to be directed towards the object to be shot at, and it is drawn on cars.

The distance which the shot travels depends upon the strength of the material from which the gun is made, upon the circumference of the hole, and the gun’s compactness and size. The ball is either of iron or lead or of any other material. Some big balls have smaller ones inside. The gun itself is generally of iron, occasionally also, as we have seen in the Nitiprakasika, of stone. The gun is to be kept clean and must be always covered.

The term used for gun nalika (nalika) is derived from the word nala a reed, a hollow tube, which is another form for its synonyms nada, nadi, or nadi; in the same way nalilka corresponds to nadika. Considering that the guns were in ancient times made out of bamboo, and that some bamboo guns are still used in Burma, the name appears both appropriate and original. That the idea of bamboo being the original material for guns was still in the mind of the author of the Sukraniti seems to be indicated by his calling the outside of the stock of a gun bark (tvak).

In all European Sanskrit dictionaries the word nalika has been rendered as stalk, tube; arrow, dart, etc, but the third significance is not given; though it is one which is known to every learned Pundit. At the outset every body can easily see that the meaning of arrow and of gun can be rightly applied to a reed; the arrow is a reed which is discharged as a missile, and a gun is a reed out of which missiles are shot.

In the sholkas 21 and 24 of our extract of the Sukraniti we read that a king should keep on a big war chariot two large guns, and in sholkas 31, we are further informed that his beautiful iron chariot should be furnished with a couch, a swing, and among other things also with sundry arms and projectile weapons.

This tallies with an account concerning the fortifications of Manipura, as described in **J. Talboys Wheeler's History of India**: "On the outside of the city were a number of wagons bound together with chains, and in them were placed fireworks and fire weapons, and men were always stationed there to keep guard." The above mentioned statement appears to rest on good authority, as the Sukraniti declares, that the wall of a fortress "is always guarded by sentinels, is provided with guns and other projectile weapons, and has many strong bastions with proper loop-holes and ditches."

In the second stavaka of the Bharatacampu composed by Anantabhatta, some three hundred years ago, we find the following simile: "The fierce warrior who killed his enemy with heaps of leaden balls, which emerge quickly from the gun lighted by a wick, is like the rainy season which killed the summer with hailstones which descend quickly from the gun lighted by a wick, is like the rainy season which killed the summer with hailstones which descend quickly from the rows of black clouds lighted by lightning."

While the verse just quoted from the Bharatacampu reveals an intimate knowledge of firearms, yet its apparent recentness may be alleged as an objection against its being produced as an authority for the existence of firearms in India at an early period. To obviate such further objections as sloka will now be given from an undoubted early poem, the Naisadha which describes the adventures of Nala and is generally ascribed to one Sriharsa, a Brahman, who must not be confounded with Sriharsa, the King of Karmira. It s date goes back to the twelfth century. i.e., before the introduction of firearms into Europe. The verses in question run as follows: "The two boys of Rati and Manmatha (Cupid) are certainly like her (Damayanti's) two elevated nostrils." To leave no doubt that guns are meant here, the learned commentator Mallinaatha explains nalika as the Dronicaapa, the projectile weapon from which the Dronicapaastra, a dart or a ball is discharged, an expression, we have already noticed in Vaisampayana's Nitiprakaasika.

On the other hand it is doubtful whether the asani missile, which was given by Indra to Arjuna and which made when discharged a noise like a thunder-cloud, alludes to firearms, as Von Bohlen explains it.

In the first book of the Sukraniti we find it stated that the royal watchmen, who are on duty about the palace, carry firearms. The Kamandakiya, acknowledged as one of the earliest works on Nitisastra, says that "confidential agents keepingnear the king should rouse him by stratagems, gunfiring and other means, when he is indulging in drinking bouts, among women, or in gambling. It seems from this statement that the practice of firing guns as signals was in vogue among the ancient Hindus, if we can trust the evidence of one of the older Sanskrit writings.

In the preface to a **Code of Gentoo Laws or Ordinations of the Pundits**: **From a Persian translation, made from the original, written in the Shanscrit language,** occurs the following passage: "It will no doubt strike the reader with wonder to find a prohibition of firearms in records of such unfathomable antiquity; and he will probably from hence renew the suspicion which has long been deemed absurd, that **Alexander the Great did absolutely meet with some weapons of that kind in India as a passage in Quintus Curtius seems to ascertain. Gunpowder has been known in China, as well as in Hindustan, far beyond all periods of investigation.**

The word firearms is literally Sanskrit **Agnee-aster**, a weapon of fire; they describe the first species of it to have been a kind of dart or arrow tip with fire and discharged upon the enemy from a bamboo.

Among several extraordinary properties of this weapon, one was, that after it had taken its flight, it divided into several separate darts or streams of flame, each of which took effect, and which, when once kindled, could not be extinguished; but this kind of agnee-aster is now lost. Canon in the Sanskrit idiom is called Shata-ghnee, or the weapon that kills a hundred men at once, from (Shata) a hundred, and (ghnee) to kill; and the Purana Shastras, or Histories, ascribe the invention of these destructive engines to Vishwakarma, the architect who is related to have forged all the weapons for the war which was maintained in the Suttva yuga between Devta and Asur for the space of one hundred years."

And again we read in page 53 of the same works: "The Magistrate shall not make war with any deceitful machine, or with poisoned weapons, or with cannon and guns, or any other kind of firearms; nor shall he slay in war a person born an enunch, or any person who putting his hands together supplicates for quarter, nor any person who has no means of escape, nor any man who is sitting down, nor any person who says. " I am become of your party," nor any man who is asleep, nor any man who is naked, nor any person who is not employed in war, nor any person who is come to see the battle, nor any person who is fighting with another, nor any person whose weapons are broken, nor any person who is wounded, nor any person who is fearful of the fight, nor any person who runs away from the battle."

As these passages are so often quoted without their origin being stated, it may at once be remarked that the prescription about the use of arms and the treatment of persons is a free translation from the seventh book of the **Institutes of Manu**, vv. 90-93.

The meaning of arrow (sara, baaba) is much wider than is generally supposed. It was, and became more so in time, the usual term for any missile, whether it had the shape of an arrow or not; in the same way as the word Dhanu signified, in course of time every missile or weapon, so that the Dhanurveda, the knowledge of the bow comprised the knowledge of all other arms.

For instance, the shot out of a gun is called a sara, as we have seen when describing the nalika, but it may be a ball and not an arrow. A rocket is generally styled a baana (compared the Hindi term bana rocket); and banapattrai in Tamil, or banapatra in Telugu denotes a gunpowder or firework factory.

A comparison of the context of the Manavadharmasastra with those of the Sukraniti and the Nitiprakasika make it clear that Manu alludes to firearms. The Sukraniti runs in our extract as follows:

A king, bearing in mind the six principles of policy and the designs of his enemy and his own, should always kill his enemy by fair and unfair fighting.

When the king gladdens his soldiers on the march with a quarter extra pay, protects his body in the battle with a shield and armor;

Has induced his soldiers to drink up to a state of intoxication, the strengthener of bravery, the soldier kills his enemy with a gun, sword, and other weapons.

A charioteer should be assailed by a lance, a person on a carriage or elephant by an arrow, an elephant by an elephant, a horse by a horse.

The stamp of India

By Lini S. Kadaba
INQUIRER STAFF WRITER

http://web.philly.com/content/inquirer/2000/06/13/magazine/CHIC13.htm

Bindis, mehndi, samosas, chai: Indian words, styles, flavors are permeating popular culture. A writer muses on how her "weird" heritage has become the rage.

When I was growing up, I wouldn't willingly go near a sari or a samosa. My mom would try to persuade me to wear the traditional dress of her native India to the school dance. No way!

Indian food? Too spicy. Indian stuff? Too weird. Kids would constantly ask me why my mom's forehead was bleeding when she wore the traditional red bindi. If she wore a sari back in Lexington, Ky., people just plain stared.

Now, Main Line teens show off silver toe rings. Naomi Campbell and Madonna wear bindis. Tony stores are selling those long tunics-with-loose-pants outfits that resemble the Indian salwar-kameez to society ladies. And images of Hindu deities grace lunch boxes sold at the Philadelphia Museum of Art.

Yo! The Acme in Newtown Square even sells potato-filled samosas and tandoori sauce.

"Everybody is going Indian," said Clare Ramsey, a trend-spotter for Youth Intelligence in New York.

Figures all things Indian would be cool 20 years too late for me. No longer a hippie relic or, worse, furrin', the trappings of Indian culture are chic and quickly moving into mainstream America.

Masala stories by Indian or Indian American authors are spicing up best-seller lists, with more due this year. Movies with South Asian themes (most recently, Cotton Mary, East Is East) are attracting non-Indians. The rhythms of traditional bhangra music are heard at clubs.

Deepak Chopra is guru to the stars and masses. Yoga is an aging yuppie's best friend.

Not that long ago, Miss India never made the cut in the beauty pageants I loved to watch as a child. Every year, I'd search for the raven-haired contestant, hoping to catch a glimpse as she sashayed by on TV. I'd usually be disappointed. Now, Miss World and Miss Universe are both

Indians.

"I think people are tired of everything having the McDonald's stamp," Ramsey said.

Maybe this love affair with India reflects America's embrace of multiculturalism, or the impact of nearly a million Indian immigrants across the country, or the arrival of a global economy that relies on Indian software techies to keep Silicon Valley humming.

Maybe the movies and books that explore India's cultural curiosities are ultimately universal, age-old tales of trying to find meaning in a changing world.

"America has always had this fascination with the East," said Leonard Norman Primiano, a folklorist at Cabrini College who studies American popular culture.

"Fifty years ago, the influence of Indian culture in America was very much colonialist in nature," said Primiano, also an assistant professor of religious studies. "This was a British colony and there was an exoticism to it."

Times have changed. The American fabric now includes Jhumpa Lahiri's Pulitzer Prize-winning short stories, and chai, the spicy Indian tea, is sold at Starbucks.

"We've gone from a colonialist idea to a neocolonialist idea - a new idea of India," Primiano said. "I think it's a celebration of a new America."

Walk the city, and a taste of India is suddenly everywhere.

At the Reading Terminal Market, vegetable vendors stock mangoes and Indian lentils. The Cook Book Stall displays dozens of Indian cuisine titles, from A Taste of Madras to The Sultan's Kitchen. Amazulu sells incense sticks, toe rings and om pendants. And at Viva Imports, mirrored handbags and recycled saris made into jackets, dresses and skirts sell like, well, samosas.

Over on Walnut Street, Urban Outfitters hangs saris from the ceiling, to be worn sarong style or used as a tapestry. (Maybe I'll raid my mother's closet full of heavy silk beauties!) Mehndi, the intricate henna designs worn mostly by new brides in India, is a funky temporary tattoo stateside, with transfers sold at hip stores. Even that American staple, the blue jean, has knelt at the Indian altar, trimming its cuffs in gold brocade reminiscent of sari borders.

Linley Stroud, 15, and Alex Kinzig, 14, shopped recently at Urban Outfitters for the latest fashions, many of them inspired by sari prints and the colors of Indian spices, such as saffron and turmeric. The Shipley School sophomores who live on the Main Line both wore toe rings.

I hid away my plain silver toe ring almost immediately after my traditional Hindu wedding. It was entirely too old-fashioned and un-American for me.

But neither Linley nor Alex even knew about the adornment's place in Indian marriage rituals. "I just thought it was cool," said Linley, whose ring has the unorthodox design of a buckle on it. "I

wear it all the time."

For me, the popularity of Indian stuff is more complicated than cool can encompass. Whether yoga or mehndi, each comes with a long tradition and sometimes with the baggage of expectation.

When my mother came to America, she eventually discarded saris, toe rings and bindis, symbolically liberating herself from the traditional roles expected of an Indian woman - and, truth be told, sidestepping the stares.

Now, we have what writer Shekhar Deshpande calls "the packaging of India" - something the Indian immigrant views with ambivalence. He takes offense at pop stars' wearing mehndi. "In some ways, those symbols are quite sacred. They mean something to us," said the writer for Little India magazine who also directs the communications program at Beaver College.

"In the '60s, I think there was a genuine fusion," Deshpande said. "Americans in the West had discovered India in a very real way." Transcendental meditation was popularized. The Beatles traveled to India.

"Now," he said, "India is purely a commodity" for bored Americans in search of a safe but still "exotic, awesome" alternative.

But as even Deshpande allowed, we with connections to India shouldn't be so possessive of our culture that we cannot share it with others. And, while it would be nice if the toe-ring-wearing girl knew its significance, I can't help but smile, with a bit of pride, at the very notion of my culture as chic. Maybe I'll even dig out my wedding-day toe ring.

Macauley's Children

By Subhash Kak

http://www.sulekha.com/cgi-bin/column.cgi?resource=ms_macaulay

Imprinting is the key that explains many of our peculiarities. Imprinted birds and mammals act as if they were human. Goslings, when reared by a person, become imprinted to the caregiver, and they will ignore geese. Imprinted people live in their own world of symbols, and their behavior to an outsider would appear strange.

Imprinting occurs during a sensitive window of development. Imprinted animals will mate with their own kind but will prefer the animal to which they have been imprinted. In extreme cases they will refuse social contact with their own kind. Imprinting is fixed for life; it occurs also in motor patterns, as in birdsong. Humans are also imprinted--- to ideas and beliefs they are exposed to in their childhood.

All this has been known for a long time. Herodotus tells us of how hostage children raised in court became loyal to their captors. In the US, Canada, Australia, the children of the natives were forcibly taken from their parents and put in foster homes for this reason.

The Ottoman Empire built a bizarre but effective system based on this idea. It created the institution of the *Kapi Kullari* ("Slave" or "Ruling Institution"), whose members were legally slaves of the sultan: they were born Christians but were converted to Islam primarily through the practice of *devsirme*, where able-bodied young children were recruited as child-tribute and immersed in Islamic culture.

The *kullars* were forbidden to contract legal marriage, to have acknowledged children, and to own private property. They served solely at the pleasure of the sultan, at whose will they were promoted and executed. The slave status divested the *kullars* of any personality outside the service of the master.

The *kullars* as Janissaries were the best regiments of the Ottoman army; they also served in the palace jobs and as provincial governors. The Grand Vizier was invariably a *kullar*. They constituted a superlative bureaucracy: they were devoted to their duties, were completely loyal and since they were isolated from the general population, they were fair. Their non-hereditary status prevented the formation of a ruling elite that might threaten the sultan.

With time, the *kullars* began seeking reforms in their inhumane system. By the end of the Empire, they had won the right to matrimony. But as their circumstances changed they became venal; what was their strength as an isolated community now became a license to do good only for themselves.

If the *kullars* constituted the backbone of the Ottoman Empire, an institution, similar in spirit but somewhat different in form (but more subtle and resilient), was formed to safeguard the British Empire in India. This was the institution of the *brown sahib*, the colonial apologist, formed under the directive of the famous Minute of Macaulay (1835) who wished to create "a class who may be interpreters between us and the millions whom we govern; a class of persons, Indian in blood and colour, but English in taste, in opinions, in morals, and in intellect." These Indian *kullars* may be properly called *Macaulay's children*.

The central idea in the imprinting of the Indian *kullars* was Macaulay's assertion that "a single shelf of a good European library was worth the whole native literature of India." The British, following Macaulay's ideas, dismantled the traditional *pathshala* system of village education, which had provided universal literary to the people. William Adam, a Scottish missionary in Bengal and Bihar during 1835-7, estimated that there were 100,000 *pathshalas* which were popular with all classes of people, "irrespective of their religion, caste, or social status," and the "curriculum was designed towards meeting the practical demands of rural society."

The village school had great room for improvement but it was very effective and was one of the institutions of local power. When it was superseded by the new system, controlled by the British bureaucracy using an alien language whose benefit ordinary people could not see, children of the poorer classes simply pulled out. This led to the illiteratization of the great masses of the Indian population.

The Macaulayite bureaucracy worked against other traditional knowledge also. For example, it targeted the millennia-old system of water tanks, which had been serviced by village councils. In its place was instituted a system of canal irrigation. This was done even where it was unsuitable, and the local councils were disbanded. Soon, the tanks fell into disuse and the water table dropped; this had disastrous effects for agriculture.

In the colonial state, the idea of profit was replaced by that of service of the British empire. The new system of education was instrumental for the socialization of this view. The idea of the other-worldly Indian was promoted.

In 1947, there was hope that India would create a progressive nation-state, but Macaulay's children quietly seized power. Taught to hate India's past and lacking a defining center, they took the fashions of the day--such as Socialism and Marxism--, and elevated these to their religious ideology. The terms Socialism and Secularism--but with a perverted meaning--were even written into the Indian Constitution during the Emergency of the mid-1970s.

In awe of the British and insecure of their positions, those of the Macaulay children who went into governance were good administrators. But as the system of checks and balances eroded after independence, they lost their reputation for incorruptibility.

Blind adherence to an ideology can stunt intellectual and emotional growth. Such people are forever seeking approval from those whom they idolize, and they are unable to grasp the incongruity of their behavior. Emotionally stunted people are like imprinted children, who can be very cruel. (The Khmer Rouge massacres of Cambodia, amongst the most horrific of the past century, were carried out principally by teenagers imprinted to one brand of Marxism.) Adults, with the minds of children, also brook no opposition, although their ways may not be as drastic.

The Macaulayite establishment in India is especially intolerant: it also knows a few tricks of Stalin. It silences its opponents using censorship and a system of patronage. But recently, independent minded American-style Internet magazines have provided a means to side-step this censorship.

Take Arun Shourie's experience: Although India's most famous and recognized journalist and author, winner of the Magasaysay award, he was black-listed by mainstream publishers and the media as soon he turned his attention to subjects considered taboo by the establishment. During the last ten years he has been compelled to self-publish his books and newspapers have banned him. But thanks to his Internet column he remained hugely popular until he joined the Vajpayee administration as a minister and stopped writing.

Having been black-listed once, his books are still not reviewed, and his speeches as a minister are rarely reported unless his words can be twisted to paint him as a monster. He is like a non-person of the apartheid South Africa. The favorite abusive label to pin on the opponent is to call him "communalist" or "fascist", and Shourie has carried these labels frequently.

As another example consider Mark Tully, the distinguished British journalist and author, who was for a long time the bureau chief of BBC in Delhi. Just because one of his books was perceived as somewhat critical of the Macaulayites, he was called names and declared a sell-out. His books have also stopped receiving notices.

This is quite unlike the rivalry between the liberals and the conservatives in the West, where the most partisan writers concede that their opponents have the right to be heard through the print and the TV media.

Some have suggested that the current turmoil in India is just a struggle between the traditional and modern approaches to governance. Nothing could be further from the truth. The opponents of the Macaulayites and Marxists do not wish for a religious state. They want to build a modern society somewhat like that of the United States: forward-looking but yet connected to its culture.

Reading the reportage of the culture wars of India by Western journalists in a hurry, one gets the feeling that the only sane people in India are these Macaulay's children. The reformers are labeled nationalists, swamis, traditionalists, or worse. These journalists do not understand the real nature of the struggle.

It is funny. The West proclaimed a certain imagined view on India, and now its pupils insist this is the real thing, even though there is evidence to the contrary for everyone to see. Could there be a better case of the tail wagging the dog?

Resources: For those who wish to take part in meaningful debate on the nature of the Indian civilization, consider joining the IndianCivilization egroup. If you are interested in changing India's portrayal in the media and in textbooks, participate in the programs of ECIT and the discussions of the IndicTraditions egroup

A Distant Looking Glass

By Subhash Kak ~ March 10, 2000

http://www.sulekha.com/cgi-bin/column.cgi?resource=ms_glass

Indian ideas have prospered greatly in the West. Consider yoga, meditation, the notion that reality transcends the divides of body and mind. Indian ideas were the foundation of the Transcendentalist movement of Emerson and Thoreau that has played a great role in shaping the American world-view. Indian immigrants have not matched the fervor of the Westerners for these ideas. Going through a period of adjustment and consolidation, their efforts have focused on the building of temples and establishing dance and music schools.

But even these efforts can lead to deeper meaning, if we ask the right questions. Speaking just of temples, why do temples have a characteristic look? Can we build temples that are functionally modern, and still not lose touch with our tradition? What role should a temple have in the life of the community?

The answer can be gleaned by peering into a looking glass -- distant in time and space -- that best embodies, in brick and stone, the meaning and role of a temple. I am speaking of the great Vishnu temple of

Angkor Wat in Kampuchea (Cambodia), one of most impressive and enduring architectural monuments of the world. The plan of this incomparable temple reveals to us many secrets that were lost to India for centuries. These are secrets about the nature of temple design and, ultimately, about the fundamental bases of Indian culture.

Together with my friends, the historian of astronomy Graham Millar of Halifax, Canada, and Lokesh Chandra, India's foremost scholar of Asia, I have investigated the architecture of this temple during the past few years and discovered amazing continuity with Vedic knowledge. But this is not the appropriate place to speak about the technical details of this surprising continuity, so let me give you a broad outline of what we know about this temple.

The Angkor Vishnu temple was built by the Khmer Emperor Suryavarman II, who reigned during AD 1113-50. One of the many temples built from AD 879 - 1191, it arose when the Khmer civilization was at the height of its power. Although Vishnu is its main deity, the temple, through its sculpture, pays homage to all the Vedic gods and goddesses, including Shiva.

Apart from its other uses as a place for ritual, dance and drama, study and scholarship -- it had many libraries -- , the temple served as a practical observatory where the rising sun was aligned on the equinox and solstice days with the western entrance of the temple. The temple architecture reflects calendric and cosmological time cycles.

The most impressive aspect of the design of this temple is that the representation of the universe -- which is what a temple is supposed to be -- occurs in several layers in a recursive fashion, mirroring the Vedic idea that the microcosm symbolizes the macrocosm at many levels of expression. This is done not only in the domain of numbers and directions, but also using appropriate mythological themes, and historical incidents. The mythological scenes skillfully use the oppositions and complementarities between gods, goddesses, asuras, and humans defined over ordinary and sacred time and space.

The temple complex is vast: it is a bit less that a square mile in size. At the heart of the temple are three rising, concentric galleries. Bordering these is further space, and a rectangular moat. About 40 m in from the moat is a laterite wall, 4.5 m high, with large single entrances from the east, north, and south, and five entrances on the west.

The dimensions of the temple reflect various astronomical numbers. For example, the west-east axis represents the periods of the yugas. In the central tower, the topmost elevation has external axial dimensions of 189.00 cubit east-west, and 176.37 cubit north-south, with the sum of 365.37. This division of the almost exact length of the solar year into unequal halves remained a mystery for some time until it was found to be based on the Vedic numbers for the asymmetric motion of the sun.

The Khmer kings of Kampuchea (Cambodia) trace their ancestry to the legendary Indian Kaundinya and to Soma, a Khmer princess. At first there were several warring kings. The state was unified by King Jayavarman II, who in 802, in a ceremony near Angkor, declared himself a ``universal ruler'' (*chakravartin*).

The kings of the Khmer empire ruled over a domain that, at its broadest, reached from what is now southern Vietnam to Yunan, China and from Vietnam westward to the Bay of Bengal. The structures one sees at Angkor today, more than 100 temples in all, are the surviving religious remains of a grand social and administrative metropolis whose other buildings -- palaces, public buildings, and houses -- were all built of wood and are long since decayed and gone. As in most parts of India where wood was plentiful, only the gods had the right to live in houses of stone or brick; the sovereigns and the common folk lived in pavilions and houses of wood.

Over the half-millenia of Khmer rule, the city of Angkor became a great pilgrimage destination because of the notion of Devaraja, that was a coronation icon. Jayavarman II (802-850) was the first to use this royal icon.

The increasingly larger temples built by the Khmer kings continued to function as the locus of the devotion to the Devaraja, and were at the same time earthly and symbolic representations of mythical Mt. Meru, the cosmological home of the Hindu gods and the axis of the world-system. The symbol of the king's divine authority was the sign (*linga*) of Shiva within the temple's inner sanctuary, which represented both the axes of the physical and the psychological worlds. The worship of Shiva and Vishnu separately, and together as Harihara, had been popular for considerable time in southeast Asia; Jayavarman's chief innovation was to use ancient Vedic *mahabhisheka* to define the symbol of government.

Angkor Wat is the supreme masterpiece of Khmer art. The descriptions of the temple fall far short of communicating the great size, the perfect proportions, and the astoundingly beautiful sculpture

that everywhere presents itself to the viewer. Its architecture is majestic and its representation of form and movement from Indian mythology has astonishing grace and power. The inner galleries of the temple have depiction of the battle of Kurukshetra, procession of King Suryavarman and his ministers, scenes from heavens and hells, churning of the sea of milk, the battle of Vishnu and the asuras, victory of Krishna over Bana, battle of the devas and asuras, Ravana shaking Kailasa with Shiva and Parvati atop, and the battle of Lanka between Rama and Ravana. These and other scences are drawn with great artistic beauty. No wonder, the temple ranks amongst the greatest creations of human imagination.

To understand the astronomical aspects of Angkor Wat it is necessary to begin with the Indian traditions of altar and temple design on which it is based. And since the Angkor Wat ritual hearkened to the Vedic past, that is where we must begin. Vedic astronomy was decoded very recently. The Vedic altars had an astronomical basis related to the reconciliation of the lunar and solar years. The fire altars symbolized the universe and there were three types of altars representing the earth, the atmosphere and the sky.

The altar in its grandest form becomes the temple, now considered a representation of the Cosmic Purusha (Man), on whose body is displayed all creation in its materiality and movement. Paradoxically, the space of the Purusha is in the sanctuary only ten fingers wide, although he pervades the earth.

The temple construction begins with the *Vastupurusha mandala*, which is a yantra, mostly divided into 64 or 81 squares, which are the seats of 45 divinities. Brahma (symbolizing the origin of time) is at the centre, around him 12 squares represent the Adityas (the twelve months of the year), and in the outer circle are 28 squares that represent the *nakshatras* (the constellations of the moon's orbit). The *Vastumandala* with its border is the place where the motions of the sun and the moon and the planets are reconciled. It is the Vastu in which the decrepit, old Chyavana of the Rigveda asks his sons to put him down so that he would become young again. In this story Chyavana is the moon and Sukanya, whom he desires, is the sun. Clearly, astronomy, an understanding of the physical universe, is the very basis of temple design.

The altar or the temple, as a representation of the dynamism of the universe, requires a breaking of the symmetry of the square, which stands for the heavens. In particular, the temples to the goddess are drawn on a rectangular plan. In Shiva or Vishnu temples, which are square, change is represented by a play of diagonal lines. These diagonals are essentially kinetic and are therefore representative of movement and stress. They embody the time-factor in a composition.

Alice Boner, art-historian, writes that the Devi temples ``represent the creative expanding forces, and therefore could not be logically be represented by a square, which is an eminently static form. While the immanent supreme principle is represented by the number ONE, the first stir of creation initiates duality, which is the number TWO, and is the producer of THREE and FOUR and all subsequent numbers upto the infinite." The dynamism is expressed by a doubling of the square to a rectangle or the ratio 1:2, where the *garbhagriha*, the sanctum sanctorum, is now built in the geometrical centre. For a three-dimensional structure, the basic symmetry-breaking ratio is 1:2:4, which can be continued further to another doubling.

The constructions of the third millennium BC in India appear to be according to the same principles. The dynamic ratio of 1:2:4 is the most commonly encountered size of rooms of houses,

in the overall plan of houses and the construction of large public buildings. This ratio is also reflected in the overall plan of the large walled sector at Mohenjo-Daro called the citadel mound. It is even the most commonly encountered brick size. Structures, dating to 2000 BC, built in the design of yantras, have been unearthed.

As a representation of the macrocosm, change in the temple is described in terms of the motions of the heavenly bodies. But the courses of the sun, the moon and the planets are unequal, so the temple design represents all characteristic time sequences: the day, the month, the year and the wider cycles marked by the recurrence of a complete cycle of eclipses.

But astronomy only fixed the framework for the temple, the details were related to social and spiritual function. The temple was more than an observatory and ritual ground, it was also the drama and dance school, the arts society, yoga academy, library, school and college and publishing house.

Angkor Wat has revealed to us the grammar of the Hindu temple. Given this knowledge, it should be possible to create new forms and designs. The modern temple will facilitate the understanding of old symbols; more importantly, it will have functions that help us fathom the mysteries of our own beings.

A Lover of Indian Wisdom

By Subhash Kak

http://www.sulekha.com/cgi-bin/column.cgi?resource=ms_indwis

Although the recent success of Indians in the knowledge industries has changed perceptions quite a bit, it is common to consider Indians to be other-worldly folks, stuck in outmoded ways. Likewise, it is often said that Indian traditions offer nothing of value to our times. Indian thought is considered overly mystical, and disciplines such as yoga considered just a means of keeping the body fit.

It is because of these views, internalized by educated Indians over several generations, that Indian universities offer literally nothing on Indian science and knowledge. Just to give an example, consider IIT Delhi, my own old school. It has 14 professors in the department of humanities and social sciences. Of these professors, seven are experts in English, two in philosophy, one in economics, one in sociology, and two in psychology. There is no expert in Indian languages, art, design, history, or Indian science. There is no Sanskrit, or Tamil, or Hindi. The colonized minds of modern Indians reject things Indian much more stridently than was done by the English.

Actually the negative attitudes about Indian traditions are not justified and these ideas are not only of relevance to modern thought but they may have already shaped it to a remarkable degree. To make this point let me talk of a savant who benefited from Indian ideas and transformed the world.

I have in mind the Austrian physicist Erwin Schrodinger, who was arguably one of the two greatest scientists of the 20th century. If Albert Einstein is celebrated for his creation of the theory of relativity, Erwin Schrodinger is equally famous for his creation of quantum mechanics, the deepest theory at the basis of outer reality. Quantum mechanics went so far beyond the already radical framework of relativity that Einstein refused to accept it to his last day.

It is a fact that the great European scientists have searched for truth by first abandoning the narrow theologies of the religion into which they were born. But for Schrodinger Indic ideas provided the very foundation for his uncompromising search for meaning.

It is not generally known that before he created quantum mechanics he expressed his intention to give form to central ideas of Vedanta which, therefore, has had a role in the birth of quantum mechanics. In 1925, before his revolutionary theory was complete, Erwin Schrodinger wrote:

> This life of yours which you are living is not merely a piece of this entire existence, but in a certain sense the "whole"; only this whole is not so constituted that it can be surveyed in one single glance. This, as we know, is what the Brahmins express in that sacred, mystic

> formula which is yet really so simple and so clear: tat tvam asi, this is you. Or, again, in such words as "I am in the east and the west, I am above and below, I am this entire world."

Schrodinger's influential What is Life? (1944) also used Vedic ideas. The book became instantly famous although it was criticized by some for its emphasis on Indian ideas. Francis Crick, the co-discoverer of the DNA code, credited this book for key insights that led him to his revolutionary discovery. According to his biographer Walter Moore, there is a clear continuity between Schrodinger's understanding of Vedanta and his research:

> The unity and continuity of Vedanta are reflected in the unity and continuity of wave mechanics. In 1925, the world view of physics was a model of a great machine composed of separable interacting material particles. During the next few years, Schrodinger and Heisenberg and their followers created a universe based on superimposed inseparable waves of probability amplitudes. This new view would be entirely consistent with the Vedantic concept of All in One.

Schrodinger was born on August 12, 1887, so we celebrate the 113th anniversary of his birth. He became a Vedantist, a Hindu, as a result of his studies in his search for truth. Schrodinger kept a copy of the Hindu scriptures at his bedside. He read books on Vedas, yoga, and Sankhya philosophy and he reworked them into his own words, and ultimately came to believe them. The Upanishads and the Bhagavadgita were his favourite scriptures.

According to his biographer Moore, "His system -- or that of the Upanishads -- is delightful and consistent: the self and the world are one and they are all. He rejected traditional western religious beliefs (Jewish, Christian, and Islamic) not on the basis of any reasoned argument, nor even with an expression of emotional antipathy, for he loved to use religious expressions and metaphors, but simply by saying that they are naive."

Schrodinger was a professor at several universities in Europe. He was awarded the Nobel Prize in 1933. During the Hitler era he was dismissed from his position for his opposition to the Nazi ideas and he fled to England. For some years he was in Ireland, but after the conclusion of the World War II he returned to Vienna where he died in 1961.

Quantum mechanics goes beyond ordinary logic. According to it reality is a superposition of all possibilities which restates Vedic ideas. It is quantum mechanics which explains the mysteries of chemical reactions and of life. In recent years, it has been suggested that the secrets of consciousness have a quantum basis.

In a famous essay on determinism and free will, he expressed very clearly the sense that consciousness is a unity, arguing that this "insight is not new... From the early great Upanishads the recognition Atman = Brahman (the personal self equals the omnipresent, all-comprehending eternal self) was in Indian thought considered, far from being blasphemous, to represent the quintessence of deepest insight into the happenings of the world. The striving of all the scholars of Vedanta was, after having learnt to pronounce with their lips, really to assimilate in their minds this grandest of all thoughts."

He considered the idea of pluralization of consciousness and the notion of many souls to be naive. He considered the notion of plurality to be a result of deception (maya): "the same illusion is produced by a gallery of mirrors, and in the same way Gaurisankar and Mt. Everest turned out to be the same peak seen from different valleys."

Schrodinger's ideas continue to be fundamental in a variety of new fields. The wonders of modern science, such as electronics, biology, chemistry, wouldn't have been possible without the insights of quantum theory. The possibilities inherent in quantum theory have not all been realized. Schrodinger remains one of the most discussed figures in modern scientific thought. His ideas will continue to inspire science.

Schrodinger was a very complex person. But he had a sense of humor and paradox. He called his dog Atman. Perhaps he did this to honour Yudhishthira whose own dog, an incarnation of cosmic justice (Dharma), accompanied him on his last march to the Himalayas. More likely, he was calling attention to the unity that pervades the web of life.

It is frustrating to note that the Indian educational system will not let students know of the centrality of Vedantic thought in the works of scientists like Schrodinger or our own Jagadish Chandra Bose. Is it possible that at some future time Indians will have to travel to the West to know about their own heritage?

Our school books talk about Socrates, Plato and Aristotle but don't mention Yajnavalkya, Panini and Patanjali'
Dr Subhash Kak/Interview
http://www.rediff.com/news/1999/nov/18inter.htm

'Our school books talk about Socrates, Plato and Aristotle but don't mention Yajnavalkya, Panini and Patanjali'

Dr **Subhash Kak** *is a professor of electrical and computer engineering at the Louisiana State University, Baton Rouge. He is also a renowned authority on ancient Indian science and technology. Originally from Kashmir, Dr Kak has worked at IIT Delhi, Imperial College, Bell Laboratories and the Tata Institute of Fundamental Research. He has authored ten books and over three hundred journal articles in areas as varied as neural networks, quantum physics, artificial intelligence, and the philosophy and history of science. Dr Kak's websites www.lsu.edu/ee/kak and ftp://www.lsu.edu/pub/kak provide links to some of his articles.*

Rajeev Srinivasan *interviewed him by email in connection with his research into Indian science.*

You are a practising electrical engineer who holds patents in leading-edge areas such as neural networks. Yet, you are also a published poet and writer, as well as a Sanskrit scholar and expert on ancient Indian science. You are a Renaissance man, in other words. How did all this come about?

I was interested in both writing and sciences in school but when I finished I was leaning toward becoming a writer. My mother warned me it was no way to make a living and she packed me off to an engineering college. I am glad for that because before long I discovered that literary and scientific imaginations are not all that different. For sure there is much that is tedious and mechanical in science, but the same is true of literature as well.

My work in ancient science developed when I tried to find an answer to the question of the milieu in which Panini's 2500-year-old grammar, a work of most astonishing subtlety, arose. The more I consulted the standard texts, it became clear that the paradigm in which Indian history of science, and ancient Indian history in general, had been examined was wrong!

What is your background? Is this C P Snow-like conflation of science and the arts something that happens a lot in your family?

My initial research -- at IIT Delhi -- was on information theory. Now information is something that we all deal with, whether we are engineers, physicists, or businessmen; or even if we are artists or poets. We are in the midst of the information age where knowing how to manipulate information is worth money! Basically, I have applied the idea of information to questions in different disciplines.

It was lucky that I grew up in small towns of Jammu and Kashmir; we moved as my father, a veterinarian, was frequently transferred. My father was a scholar, with interests in a wide range of subjects -- from mythology to history to politics. We also met other people with similar encyclopaedic interests. These were professional people who were also connected to traditional wisdom. Perhaps they followed the old Indian dictum that considered one properly educated only if one was trained in the 64

arts, and sciences besides. I had good role models.

Actually, a lot of people in the West also straddle the CP Snow-divide of the science and the humanities. The best scientists are also competent philosophers, well-versed in their Greco-Roman heritage. Many of them even know more of the Indian heritage than most Indians! It is only the India of the past fifty years that has turned its back on its own heritage and our scientists literally know nothing about our intellectual history, excepting the distorted second-hand accounts written by colonial historians and their Indian followers.

You have done a good deal of research into the history of Indian science. But there will be sceptics who ask, what good is all this? It is in the remote past -- and today's Indian science is at best derivative and at worst grossly behind the times. How would you respond?

There are several reasons. First, curiosity; we should know the facts about our history. Second, there is the puzzle that our ancestors made astonishing advances in certain fields -- as in grammar or in consciousness studies -- where we moderns are yet to catch up! Third, for lessons; so that we may know where we went wrong.

You're right that recent Indian science is derivative and worse. It is particularly true of Indian science post-independence. But look at the first five decades of this century; some of the greatest names were those of Indians: S Ramanujan, J C Bose, S N Bose, C V Raman, Meghnad Saha, S Chandrasekhar, and so on. But these were people who were confident, who thought they were as good as any; most importantly, these people were connected to our own knowledge tradition. A study of history will reveal to us why our own scientific renaissance of the first five decades fizzled out in the next five.

And then there is another reason to study ancient Indian science. One of the greatest scientists of the 20th century, Erwin Schrodinger, was directly inspired by Vedanta in his creation of quantum mechanics, a theory at the basis of all our advances in chemistry, biochemistry, electronics, and computers! Is there more in our ancient science that is yet relevant?

How do you separate the mythology from the real science? Indians are famous for not being observers -- it appears our forebears were content to speculate (admittedly it was interesting speculation) rather than do exact measurements and record them.

We must look at ancient science with a critical mind and be sure to separate hard science from speculation and mythology. But it is a modern myth that Indians did not make exact measurements. This myth has been repeated so often we have started believing in it. In the field of astronomy, it was the Frenchman Roger Billard who showed this belief was totally wrong! We were excellent experimentalists in medicine, chemistry, metallurgy, agriculture, and so on. Before the Enlightenment that took place in Europe in the 17th century, we were still ahead in most intellectual fields. The Enlightenment came as a by-product of the turmoil set in motion by unprecedented wealth that was appropriated from America and by a rejection of Church doctrine. India of that period did not have favourable economic or political conditions for a similar flowering.

In your research, where have you been most amazed? Where, in other words, were the serendipitous and wholly unexpected 'Eureka' experiences?

My discovery that the organization of the Rigveda was according to an astronomical plan was a truly 'Eureka' experience. It came upon me rather suddenly, but once everything fell into place it was clear that I had been led to it by the many direct and indirect references in the Vedic texts. The 'Eureka' of it was the realization that I had the key to unlock the ancient mystery of the Veda. Ritual and mythology made sense! And it opened up a hidden chapter of Indian science with the greatest implications for our understanding of India and the rest of the ancient world.

You have done a fair amount of work on the Indus-Sarasvati Civilization and on the conjecture that the Sarasvati did in fact exist, and that what has been known as the Indus Valley Civilization in fact was on the banks of the Sarasvati River. Can you elaborate on this? What new evidence has come to the fore?

Archaeological digs have confirmed that the Sarasvati river flowed down to the sea, parallel to the Sindh (Indus), before a major earthquake in about 1900 BCE robbed it of its two tributaries, the Satluj and the Yamuna, which were captured by the Sindh and the Ganga rivers. Since this river is praised as the greatest river of the Rigvedic times, it is clear that the Rigveda predates 1900 BCE in the least.

There are other scholars who say that 1900 BCE only marks the final drying up of the Sarasvati, and it had ceased to flow to the sea around 3000 BCE. If that were to be the case, the traditional chronology which dates the end of the Rigvedic period to about 3000 BCE is correct.

I have read of a number of new sites being excavated, including Lothal, Kalibangan, Dholavira, Balu, Banavali, Bhagwanpura, Manda, Amri, Kunal.... There is even some speculation that Lothal -- with its port and dry dock for large ocean-going ships -- was the site of the legendary Dwaraka that was submerged after an underwater earthquake and resulting tidal wave.

Yes, an enormous amount of new information is coming in from the new sites. We must not forget Mehrgarh which goes back to about 8000 BCE which was excavated in the late 70s. The most exciting thing is that major sites of Ganweriwala and Rakhigarhi are yet to be excavated. Could Lothal be the Dwaraka of the Mahabharata? It is plausible, but we don't know for sure yet.

You have also argued against the Aryan Invasion Theory. What specific evidence has come to light recently?

There is absolutely no evidence of a break in Indic tradition, going back 10,000 years. No break in ceramic styles, artistic expression, skeletal remains, and so on. Now if you compare that with regions that have suffered invasion, such as the Americas, you will see a clear break in all these things. This apart, all the recent iconographic finds confirm that key elements of what is generally called Classical Hinduism were present in the Indus-Sarasvati civilization before 2500 BCE. Examples are: ritual bathing, vermilion, bangles, conch-shells in religious ritual, a buffalo-killing goddess, abstract symbolism, the centrality of cattle in the economy.

You have argued that the Aryan-Dravidian divide simply doesn't exist, and that the superficial differences between North and South India are overlaid on a unified cultural foundation.

The concept of an Aryan-Dravidian divide is a by-product of the racist discourse of the 19th century. It was this racism that postulated a single language from which all modern languages were derived. Linguists now acknowledge that there must have existed very many language families in the past and what has survived represents complex interactions between different peoples and languages, many of which have left no trace. It is also being recognized that while by one reckoning Sanskrit, Greek and Latin belong to a family; by another, Sanskrit and Tamil and Telugu belong to another. Linguists are now talking of the concept of a linguistic area and the whole of India is one such area.

Culturally, India shows great unity as far back as we can go. If the art historian David Napier is right about Greece having received a major artistic impulse from South India in the 2nd millennium BCE, we find this unity to be at least 4000 years old. Remember also that Tamilian kings in South India and Sri Lanka called themselves Aryan. The word Aryan in Sanskrit simply means "cultured". There is a famous slogan in Sanskrit saying "Make the whole world Aryan". The term "Aryan" has nothing to do with race or language.

One of the things you have mentioned is the Gundestrup Cauldron (*Scientific American, March 1992*), something that was unearthed in a peat bog in Denmark. Apparently it shows strong evidence -- including goddess-images similar to Lakshmi and Hariti and a god-image similar to Vishnu -- of cross-cultural connections between Indic civilizations and those of far northern

Europe. You have also noted the apparent connections between Celtic/Druidic pre-Christian cultures of Europe and Hindu practices. Is this merely circumstantial evidence or does it prove conclusively that there was a migration of peoples westward from India, rather than eastwards into India (the Aryan Invasion Theory)?

There is whole host of evidence that proves that Indian ideas, if not people (that is apart from the Gypsies), travelled from India to Europe. Indic people were apparently present in Palestine, Turkey, Babylon in the 2nd millennium BCE. The names of the ruling dynasties of these places and some Sanskritic inscriptions tell us this. The father of the beautiful Nefertiti, Queen of Egypt, was a king of the Near East named Tusharatha or Dasharatha.

The Puranas also say an Indian tribe called the Druhyus emigrated West. Whether they emigrated all the way to Europe, we cannot say. What is likely to have happened is that an Indic element became the political and religious aristocracy in many countries, all the way up to Europe. This may also explain the parallels between Indian and European mythology.

What are the parallels between Indian and European mythology?

We have these parallels at many levels: in names and in the grammar of the myths. Let's begin with names. There are two Rigvedic skygods, Varuna and Dyaus; the corresponding Greek skygods are Ouranos and Zeus. Similar to Agni and Bhaga we have the Slavic Ogun and Bogu. For Aryaman and Indra we have the Celtic Eremon and Andrasta; Ribhu and Ushas are the Greek Orpheus and Eos. The list goes on and on, and the most interesting thing is that the Vedic list is comprehensive and we see parts of it remembered in different parts of Europe suggesting that the Vedic is the original.

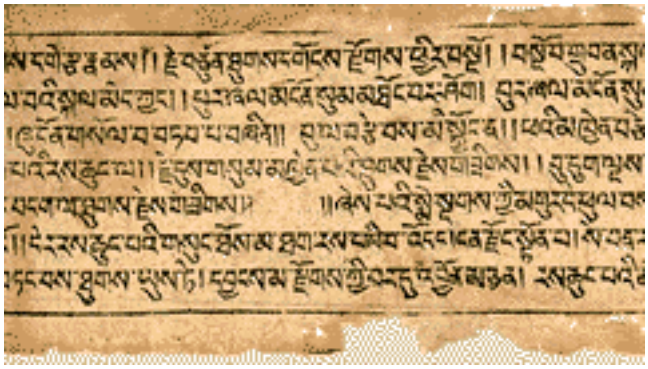
The Vedic gods belong to three categories: the terrestrial, the atmospheric, and the celestial, if we see them superficially, as the Indologists of the 19th century saw them. In reality, they represent categories in the spiritual firmament: they are shadows of the One. The Europeans also saw their mythology in similar terms which is why when the Greeks came to India they declared that Shiva and Krishna were like their own Dionysius and Herakles.

There are still deeper connections, and these have been examined by the scholar Georges Dumézil in a series of fascinating books. In Rome, the raj-brahmin dichotomy of India was paralleled by the rex-flamen division. The injunctions to the flamen -- the keeper of the flame -- are very similar to those to the brahmin. The gandharvas in India had a shadowy role related to music and fecundity; in Rome this was assigned to centaurs. Dumézil found enough parallels to fill five or six books. Joseph Campbell also wrote about these connections in his books, as have many others.

After the Old Religion of Europe was extinguished, Indian myths continued to influence Europe. From the lives of Krishna and Buddha a nascent Christianity adopted the stories of miraculous conception and birth, the star over the birthplace, the twelve disciples, and the various miracles. Parables such as that of the pious disciple whose faith makes it possible to walk on water, or the story where the master feeds his numerous disciples with a single cake or bread were borrowed. Medieval Christianity took some Indian Jataka tales and transformed them into accounts of Christian saints. The most famous of such instances is how a Buddha legend from the Lalitavistara became the story of Barlaam and Josaphat!

If there were was no Aryan Invasion, then what exactly happened to the Indus-Sarasvati civilization? A major civilization that spread some thousands of square miles and was apparently quite sophisticated cannot simply vanish.

It never vanished. There was a shift of population after the economy around the Sarasvati river collapsed due to the drying up of the river. People moved to the east and to the northwest and to the south. There was no break in the cultural tradition. The same ceramic styles continued. Only the level of prosperity went down. The Vedic books also speak of a period when the rishis went to the forests, the age of the Aranyakas. The Puranic books speak of a catastrophe in 1924 BCE.



Your work in archaeo-astronomy suggests unambiguously that the Max Mueller chronology of the Vedas must be rejected and that the Rig Veda must be dated not to ca. 1500 BCE, but to ca. 3000 BCE. What is the impact of this?

Well if not 3000 BCE, certainly prior to 2000 BCE. Max Mueller was absolutely wrong. What is the impact of the new dates? It changes the history of ancient India and that of the rest of the ancient world. It gives a centrality to India in world history.

Your recent book with Georg Feuerstein and David Frawley, *In Search of the Cradle of Civilization* (Quest Books, Indian edition to be published by Motilal Banarsidass, Delhi), suggests that in fact India was the site of the very first civilization, not Sumer in Iraq. If this is true, then India has not only the oldest continuous and surviving civilization, but in fact it is the birthplace of civilization. Could you elaborate on this?

Look, India has had cultural continuity for at least 10,000 years. Before that we had a rock-art tradition which, according to some estimates, goes back to 40,000 BCE. Not only are we one of the most ancient civilizations, we have found in India the record of the earliest astronomy, geometry, mathematics, and medicine. Artistic, philosophical and religious impulses, central to the history of mankind, arose first in India.

You have done considerable research on the structure of the fire altars in Scriptural ritual (*The Astronomical Code of the Rigveda*, Aditya Prakashan, New Delhi), and you have demonstrated that there was a very formal and mathematical basis to the construction of these. Could you explain?

Vedic Indians were scientific. They believed in laws of nature. They represented their astronomy in terms of the altar constructions. One problem they considered was that of the synchronization of the lunar and the solar years: the lunar year is about 11 days shorter than the solar year and if we add a round number of days every few years to make up for the discrepancy, we find we cannot do it elegantly unless we have a correction cycle of 95 years or its multiples. This 95-year cycle is described in the earliest Vedic prose books.

The altars were to be built to slightly larger dimensions each year of the cycle to represent the corrections. There were other symbolic constructions. Like building a square altar (representing the sky) with the same area as a circular altar (representing the earth), which is the problem of squaring the circle. This led to the discovery of the earliest geometry. They were aware that the sun and the moon were at 108 times their own diameters from the earth.

These fire altars are at this time obsolete, right? Nobody uses them any more, or is that not so? The only time I have heard of them before reading your work was when I read of an impoverished Nambudiri (Kerala brahmin) family whose *illam* or house was being sold, and they had fire altars in the shape of a falcon, and the old head of the household said this 5,000-year-old tradition was dying because they couldn't afford the rituals any more.

It is a great pity that we are letting our cultural and civilizational treasures die right before our eyes. We must do whatever we can to preserve and celebrate this heritage.

You have mentioned a connection, apparently evident in the Vedas, between internal and external things -- for instance between the rhythms in the human body and astronomical cycles. Could you elaborate?

A central Vedic belief was that there are connections between the outer and the inner. The rishis declared that it was due to these connections that we are enabled to know the world. One dramatic aspect of these connections are the biological cycles which run the same periods as various astronomical cycles. For example, the Purusha Hymn of the Rigveda says that the mind is born of the moon. Just recently, by research on volunteers, who stayed in underground caves for months without any watches or other cues about time, it was found that the natural cycle for the mind is 24 hours and 50 minutes. The period of the moon is also 24 hours and 50 minutes. Our clock is reset every day by daylight!

The connections between the outer and the inner were also represented by other symbols. The 108 sun diameters from the earth of the sun were paralleled by the 108 beads of the rosary for a symbolic spiritual journey from the normal state to one of illumination.

I have read the book edited by you and Dr TRN Rao (*Computing Science in Ancient India*, University of Southwestern Louisiana Press) on some surprising mathematics: pi to many decimal places, Sayana's accurate calculation of the speed of light, hashing algorithms, the binary number system of Sanskrit meters -- are these mere coincidences or is there conclusive evidence of advanced mathematics?

The binary number system, hashing, various codes, mathematical logic (Navya Nyaya), or a formal framework that is equivalent to programming all arose in ancient India. This is all well known and it is acknowledged by scholars all over the world. I shouldn't forget to tell you that a most advanced calculus, math and astronomy arose in Kerala several centuries before Newton.

In particular, I am amazed, as a layman, by the evidence that Sayana, circa 1300 CE, who was prime minister at the court of the Vijayanagar Emperor Bukka I, calculated the speed of light to be 2,202 yojanas in half a nimesha, which does come to 186,536 miles per second.

Truly mind-boggling! The speed of light was first measured in the West only in the late 17th century. So how could the Indians have known it? If you are a sceptic, then you will say it is a coincidence that somehow dropped out of the assumptions regarding the solar system. If you are a believer in the powers of the mind, you would say that it is possible to intuit (in terms of categories that you have experienced before) outer knowledge. This latter view is the old Indian knowledge paradigm. If it were generally accepted it would mean an evolution in science much greater than the revolution of modern physics.

It is also well-known that the Vedic or Puranic idea of the age of the universe is some 8 billion years, which is of the order of magnitude of what has been estimated by modern astrophysicists. Is this also a mere coincidence?

Again, either a coincidence, or the rishis were capable of supernormal wisdom. Don't forget that the Indian texts also speak about things that no other civilization thought of until this century. I am speaking of air and space travel, embryo transplantation, multiple births from the same embryo, weapons of mass destruction (all in the Mahabharata), travel through domains where time is slowed, other galaxies and universes, potentials very much like quantum potential (Puranas). If nothing else, we must salute the rishis for the most astonishing and uncanny imagination.

You also suggest that that the modern computer science term for context-free languages, the Backus-Naur Form, should more accurately be called the Panini-Backus Form, since Sanskrit grammarian Panini invented the notion of completely and unambiguously defined grammars (and devised one such for Sanskrit) as early as about 500 BCE.

Oh yes, all this is well established and well known, as also the Indian development of mathematical logic.

How has the reaction been in scholarly circles to some of these discoveries and conjectures of yours, which do turn conventional wisdom on its head? In India, you are aware, some of your views would have you branded as "reactionary", "Hindu fundamentalist", etc.

My work has been received most enthusiastically in scholarly circles both in the West and India. I have written several scores of scholarly articles and reviews and am in the process of writing major essays for leading encyclopaedias. School texts in California and other American states have been rewritten. Likewise, new college texts in the US speak of these new findings. We are talking here of hard scientific facts, they can neither be "fundamentalist" nor "reactionary". But I am aware that some ignorant ideologues in India may actually pin pejorative labels on this work. This only creates opportunities to bring facts to the attention of such people. I am ever hopeful of converting more and more people!

How has your work in the history of science affected your research in computing science?

Surprisingly, it has strengthened my technical work. It has provided me a focus and a perspective. It has also given me the courage to work on fundamental problems.

What do you attribute this to? Is this because it is a matter of self-image? Indians have always been self-effacing, and perhaps not believing in themselves much?

Self-image is a central factor in our development. We eventually become what we want to become. We need faith in ourselves. That is why a cultural focus is so crucial. I think our current self-effacement is a result of the negative stereotyping we have experienced for generations. Our school books talk about Socrates, Plato and Aristotle -- and rightly so -- but they don't mention Yajnavalkya, Panini and Patanjali, which is a grave omission. Our grand boulevards in Delhi and other cities are named after Copernicus, Kepler and Newton, but there are no memorials to Aryabhata, Bhaskara, Madhava and Nilakantha!

Is self-image, then, sufficient reason for us to explore the past?

It could be a sufficient reason for some. For others, it is one of the many impulses that guides them in their personal journeys.

Is there something that your Web readers can do to take some of this research forward? Any references or other suggestions?

There is so much to be done to spread the knowledge of Indian history. For at least 50 years, Indian intellectual life was stifled by a Stalinist attitude. And before that, for two centuries, colonialist historians appropriated Indian past for their own purposes. What they left for us was a mutilated version of our past. We are barely emerging from that hell. We need more people to actively carry forward this research. We also need institutions -- private foundations, perhaps --that ensure that our historiography will remain vital, critical and devoted to truth.

Any messages from you for your diasporic readers?

Pay attention to Indian and world history, there is much to be learned from the past. Also go to the springwells of Indian tradition, you'll find great treasure. Indian ideas provided central themes to the American transcendentalists in the early 19th century which led to American culture as we know it. I believe even more vital Indian ideas will transform world culture in the coming decades, and if you choose to be the interpreters of these ideas to the modern world you would have participated in the most wondrous drama of our times!

THE WISHING TREE: The Presence and Promise of Hinduism

by Professor Subhash Kak

http://www.caribbeanhindu.com/Hinduconf200_launch.htm

In the imagination of the West, India is the land of magic and mystery, wisdom and religiosity, tradition and ritual. India is exotic; its arts, literature, music, cuisine appear different.

But, at the same time, there are aspects to India that speak straight to the heart of the West.

This shouldn't surprise us because India and the West have had a shared prehistory. Sanskrit is the oldest remembered language of Asia and Europe. That the Indians and the Europeans shared the same homeland in remote antiquity has been the grist of ceaseless speculation. The Indians are still connected to their past, so is India a doorway to discover the long-forgotten past of Europe and America? The art historian and philosopher Heinrich Zimmer, put it thus: ``We of the Occident are about to arrive at a crossroads that were reached by the thinkers of India some seven hundred years before Christ. That is the real reason why we become both vexed and stimulated, uneasy yet interested, when confronted with the concepts and images of Oriental wisdom."

Columbus set out to find a new seaway to India and he ended up discovering America. Since then America and India have met in the realm of the spirit. In the 19th century, the transcendentalists, inspired by India, gave a characteristic orientation to America's self-definition. In our own century, Mohandas Gandhi's ideas influenced the civil rights movement. Most recently, Hindu wisdom about yoga, mind-body connection, and self-knowledge has swept the West. It appears that we are nearing the time when the quest of Columbus will be taken to its logical conclusion, by understanding the heart of the Indian civilization.

America is a country of great spaces and great appetites--- both material and spiritual. The machines that are the foundation of America's material wealth compel conformity to their rhythms, leading to alienation, carpal tunnel syndrome, and angst about meaning. Americans are the most church-going nation of the world, but they are increasingly becoming aware of the limitations of organized religion and now they seek psychologists and religious masters. Indian spirituality, an unbroken sequence that goes back to hoary antiquity, holds a special fascination for the American. It is a spirituality that is non-sectarian, universal and unconnected to ritual. Addressing the deepest questions of meaning and knowledge, it seems to speak to man's innermost concerns in this age of science.

Indian wisdom has been replenished for each generation by its epics, literature, fables, and aphorisms. India, with its ancient remembered past, is a counterpoint to an America whose history is no more than five hundred years old. Through epics, literature, fables and aphorisms from the sacred and secular texts of India, Indian Wisdom exemplifies the great promise that the universal truths discovered by the sages of India will find resonance in America and the rest of the world.

But in India this tradition has been under relentless attack by the Indologists and Marxists, who have controlled the public discourse and contents of the textbooks. The intention to destroy India's own traditions of knowledge was articulated in Macaulay's famous Minute of 1835 which

led to the establishment of a colonialist system of education that is still in force. Macaulay justified this by saying, ``I am quite ready to take the Oriental learning at the valuation of the Orientalists themselves.

I have never found one among them who could deny that a single shelf of a good European library was worth the whole native literature of India...It is, I believe, no exaggeration to say, that all the historical information which has been collected from all the books written in the Sanscrit language is less valuable than what may be found in the most paltry abridgments used at preparatory schools in England...We must at present do our best to form a class who may be interpreters between us and the millions whom we govern; a class of persons, Indian in blood and colour, but English in taste, in opinions, in morals, and in intellect."

Macaulay's ignorance about India was matched by his arrogance. His ideas were challenged in his own times, but they were adopted because they suited Britain in its creation of a system which would make India dependent not only physically but also intellectually. Indian tradition was now interpreted for Indians by Western scholars who were ill-equipped to understand its complexity.

Their synthesis cast Indian history in a mold that did it disservice. And outside the halls of the ivory towers, the tradition was described as being devoid of any real scientific achiements. The complexity of the social institutions was represented in the ill-fitting categories of hierarchical caste, and this, together with speculative philosophy, were declared to be the hallmarks of Indian civilization.

Those, especially in the cities, who learned about India from these textbooks soon came to hate their past. After independence, the Nehruvian socialists seized control of institutions of education and the process set forth by the British was much accelerated. It is only now, fifty years after political independece, that an objective understanding of the foundations of Indian culture is emerging.

A Bridge to the Future

There is a legend about a magic tree, [kalpataru], that fulfills all wishes. Indian civilization is this tree of riches and wisdom. Kings and emperors sought to conquer India for its material wealth; the campaign of Alexander, the unceasing attacks of the Turks, the voyage of Columbus, the British empire—these all had India as the focus. On the other hand, Indian sages, philosophers and mystics have held out a shining vision that has inspired the world. Even Alexander took Indian yogis back to Greece with him.

Indian thought transformed not only China and Southeast Asia, it may also have provided key impulses to Western thought. We find the Indic people in West Asia in the second millennium BC, in the Kassite kingdom of Babylon and the Mitannis of Israel.The father of the famous Queen Nefertiti of Egypt was the Mitanni king Tushratha (or Dasharatha). The Indic element has been seen in the beginnings of Greek art. It is quite conceivable that the religious traditions of West Asia preserve a remembrance of their Indic past.

The modern mind was shaped after adoption by the West of the twin Indian beliefs of living in harmony with nature and search for a scientific basis to reality. In the past 300 years, these ideas of universality and a quest for knowledge have transformed European and American society. Many of the greatest writers and scientists of the past 100 years have taken inspiration from Indic ideas.

Perhaps the most remarkable intellectual achievement of the twentieth century was quantum theory, which is at the basis of our understanding of chemistry, biology, and physics and, consequently, it is at the basis of the century's astonishing technological advances. One of the two creators of this theory was Erwin Schrodinger (1887-1961). In an autobiographical essay, he explains that his discovery of quantum mechanics was an attempt to give form to central ideas of Vedanta which, in this indirect sense, has played a role in the birth of the subject. In 1925, [before] his revolutionary theory was complete, Erwin Schrodinger wrote:

This life of yours which you are living is not merely apiece of this entire existence, but in a certain sense the whole; only this whole is not so constituted that it can be surveyed in one single glance. This, as we know, is what the Brahmins express in that sacred, mystic formula which is yet really so simple and so clear: [tat tvam asi], this is you.

Or, again, in such words as ``I am in the east and the west, I am above and below, [I am this entire world.]''

Schrodinger's influential [What is Life?] (1944) also used Vedic ideas. The book became instantly famous although it was criticized by some for its emphasis on Indian ideas. Francis Crick, the co-discoverer of the DNA code, credited this book for key insights that led him to his revolutionary discovery.

According to his biographer Walter Moore, there is a clear continuity between **Schrodinger's understanding of Vedanta and his research:**

The unity and continuity of Vedanta are reflected in the unity and continuity of wave mechanics. In 1925, the world view of physics was a model of a great machine composed of separable interacting material particles. During the next few years, Schrodinger and Heisenberg and their followers created a universe based on superimposed inseparable waves of probability amplitudes. This new view would be entirely consistent with the Vedantic concept of All in One.

He became a Vedantist, a Hindu, as a result of his studies in his search for truth. Schrodinger kept a copy of the Hindu scriptures at his bedside. He read books on Vedas, yoga, and Sankhya philosophy and he reworked them into his own words, and ultimately came to believe them. The Upanishads and the Bhagavadgita were his favourite scriptures.

According to his biographer Moore, ``His system---or that of the Upanishads---is delightful and consistent: the self and the world are one and they are all. He rejected traditional western religious beliefs (Jewish, Christian, and Islamic) not on the basis of any reasoned argument, nor even with an expression of emotional antipathy, for he loved to use religious expressions and metaphors, but simply by saying that they are naive."

Schrodinger was a professor at several universities in Europe. He was awarded the Nobel Prize in 1933. During the Hitler era he was dismissed from his position for his opposition to the Nazi ideas and he fled to England. For some years he was in Ireland, but after the conclusion of the World War II he returned to Vienna where he died in 1961.

Quantum mechanics goes beyond ordinary logic. According to it reality is a superposition of all possibilities which restates Vedic ideas. It is quantum mechanics which explains the mysteries of chemical reactions and of life. In recent years, it has been suggested that the secrets of consciousness have a quantum basis.

In a famous essay on determinism and free will, he expressed very clearly the sense that consciousness is a unity, arguing that this ``insight is not new... From the early great Upanishads the recognition [Atman = Brahman] (the personal self equals the omnipresent, all-comprehending eternal self) was in Indian thought considered, far from being blasphemous, to represent the quintessence of deepest insight into the happenings of the world. The striving of all the scholars of Vedanta was, after having learnt to pronounce with their lips, really to assimilate in their minds this grandest of all thoughts."

He considered the idea of pluralization of consciousness and the notion of many souls to be naive. He considered the notion of plurality to be a result of deception ([maya]):

``the same illusion is produced by a gallery of mirrors, and in the same way Gaurisankar and Mt. Everest turned out to be the same peak seen from different valleys."

Schrodinger's ideas continue to be fundamental in a variety of new fields. The wonders of modern science, such as electronics, biology, chemistry, wouldn't have been possible without the insights of quantum theory. The possibilities inherent in quantum theory have not all been realized. Schrodinger remains one of the most discussed figures in modern scientific thought. His ideas will continue to inspire science.

Schrodinger was a very complex person. But he had a sense of humor and paradox. He called his dog [Atman]. Perhaps he did this to honour Yudhishthira whose own dog, an incarnation of cosmic justice (Dharma), accompanied him on his last march to the Himalayas. More likely, he was calling attention to

the unity that pervades the web of life.

So there are several reasons for us to be interested in India. Some relate to the past to the origins of science and religion, others concern our yearning for knowledge of self and future of mankind. The Indian culture area provides us extensive material, across a very broad time-span, to help us understand some of the the earliest history of ideas. The ancient Indian texts are layered in such a fashion that we can see the gradual development of mathematical, physical, linguistic, and psychological ideas. We find that the ancient Indians were greatly interested in geometry, astronomy, grammar, music and other fields. They were also interested in cognitive science where they were so advanced that their insights may yet be useful to modern science.

The understanding of the chronological framework of the Indian civilization has changed greatly in the last few years due to revolutionary discoveries in archaeology. The archaeological record has been traced in an unbroken tradition to about 8000 BC. The earliest textual source is the Rigveda which is a compilation of very early material. There are astronomical references in this and the other Vedic books which recall events in the third to the fifth millennium BC and earlier. The recent discovery that Sarasvati, the preeminent river of the Rigvedic times, went dry around 1900 BC due to tectonic upheavals implies that the Rig Veda is to be dated prior to this epoch. According to traditional history, the Rig Veda is prior to 3100 BC.

Tbe beginning of Indian writing has been traced to about 3300 BC. The original writing was called Sarasvati and it is this that was given the name the Indus script in the last century, when inscriptions in this writing were unearthed. The later historical script called Brahmi evolved out of this writing. The invention of the symbol for zero appears to have been made around 50 BC to 50 AD.

The earliest Indic art is preserved on rocks in the paleolithic, mesolithic and neolithic stages (40000 BC onwards) and the seals and the sculpture of the Indus-Sarasvati phase which lasted from about 8000 BC to 1900 BC. The beginnings of the rock art have been traced to 40,000 years BP (before present) in the decorated ostrich eggshells from Rajasthan, dated using radiocarbon techniques. Subsequent phases have been determined using evolution of style and other radiocarbon dates. The mesolithic period has been dated as 12000 to 6000 BP. The sites of the rock are found distributed all over the country, although the most impressive sites are to be found in Madhya Pradesh.

The earliest drawings of this tradition are characterized by dynamic action, vitality in form, and an acute insight into abstraction and visual perception. It has been found that there is significant continuity of motif in the rock art and the later Indus-Sarasvati civilization indicating an unbroken link with the paleolithic and the mesolithic cultures of India. A striking aspect of the early rock art is its drawing of tessellations, which show infinite repetition. This repetition may occur for a basic pattern or, more abstractly, the lines extend spatially in a manner so that a basic pattern is repeated in two directions. An understanding of this abstract concept must have been a part of the thought system of the artists. This is in continuity with the central place of the notion of infinite in later Indian thought.

The abstract and the iconic elements in Indian rock art are different from the more naturalistic ancient European cave paintings. There is also difference in the nature of the community and state in the Western and the Indian civilizations in the earliest urban phase. The West has monumental temples, tombs, palaces whereas the society in India appears to have been governed by a sacred order.

One aspect of the Indian literary tradition, which is several thousand years old, is its imagination. The epic Mahabharata mentions embryo transplantation, multiple births from the same fetus, battle with extra-terrestrials who are wearing air-tight suits, and weapons of mass-destruction. The Ramayana mentions air travel. The Bhagavata Purana, a medieval encyclopaedic text, has episodes related to different passage of time for different observers which is very similar to what happens in the theory of relativity. The notion of self in the Upanishads embodies a very subtle understanding of observers and of reality. The Yoga Vasishtha and the Tripura Rahasya present a deep discussion of the nature of consciousness.

In this lecture we will present several new findings about ancient India. But before we do so, we outline

the main periods of Indian archaeology and literature. The archaeological periods are:

1. The Rock Art Period: 40,000 BC onwards to historical times
2. The Indus-Sarasvati Tradition: 8000 BC to 1300 BC
3. Early Harappan: 3300 BC to 2600 BC
4. The mature Harappan period: 2600 BC to 1900 BC
5. Late Harappan: 1900 BC to 1300 BC
6. The Second Urbanization: 900 BC

The Puranic genealogies start with mythical events and the early Saptarshi calendar starts from the epoch of 6676 BC which is taken to be beginning of the genealogies; a later Saptarshi calendar, still in use in different parts of the country, begins from 3076 BC. Other old calendars are Kaliyuga (3102 BC), Vikrama (58 BC), Shaka (78 AD).

The Mahabharata War was the epochal event of ancient India. Later astronomers assigned it to 3137 BC or 2449 BC. Still another tradition assigns it to 1924 BC. The main actors of this War belong to generation number 94 in a list that is supposed to begin in 6676 BC.

The early Indian Sanskrit literature falls in the following main layers:

The Vedic collections: pre-2000 BC by the Sarasvati river argument. Traditionally assigned the period pre-3000 BC. The Brahmanas (prose commentaries on the Vedas): 1900 - 1600BC, because they speak of the drying up of Sarasvati river as a recent happening. The Aranyakas (forest books): 1500 - 1200 BC, this period followed the Brahmanas.

The Upanishads (wisdom books): 1900 - 1000 BC appears to be the period of the earliest Upanishads. The Bhagavadgita appears to belong to the the end of this period. The Sutras (aphoristic books): These were written in the centuries before and after the Buddha. The Puranas. The original Purana was coterminous with the Vedas, but this later gave rise to several texts. The Puranas are encyclopaedias of Vedic mythology and spirituality.

The Mahabharata and the Ramayana. The original Mahabharata dates to the Mahabharata War. A series of enlargements made it attain its size of 100,000 verses about two thousand years ago. The Ramayana is epic verse that deals with events earlier than those of the Mahabharata.

There was another problem related to the finding that Indian and European languages belonged to the same family. Indians and Europeans must have, at some remote time in the past, lived in the same homeland. Since India was poor and ruled by the British, it was easy to hypothesize that the original European blood of the ancient Indians was weakened by admixture with the dark races. Modern science has debunked this theory connecting race and language but this was the standard view in the 19th century. In their extreme form, these ideas led to the racism of Hitler. A more subtle telling of the same racist ideas continues in many books on India.

The myth that Indian astronomy is derived from those of the Mesopotamians and the Greeks arose from similar racist thinking. Indian geometry texts were dated to a period after Euclid solely on the grounds of assumed priority of Greek geometry.

A similar logic was applied in astronomy and the theory that Indians knew very little astronomy was considered corroborated by a passage in an ancient text called the Panchavinsha Brahmana, The Knowledge-Book of Twenty-five Chapters.'' It says, The world of heaven is as far removed from this world as a thousand gava stacked one above the other.'' What does the word gava, which is the plural of gauh, mean? If we consult Nirukta, the earliest book of etymology from India, we find two primary meanings of the word gauh in the following order:

1. The planet earth

2. The animal, cow.

Now guess which of the two meanings was used by the famed Dutch translator of this book: The cow! His translation reads:

The world of heaven is as far removed from this (earthly) world as a thousand cows standing the one above the other.

How do we know that this translation is wrong? Weren't the ancients primitive and even though the statement that the sky is one thousand cow-heights sounds ludicrous to us, it may very well have been believed then. We can be sure of our meaning by seeking independent evidence from other texts. These other texts tell us that the sun (taken to be halfway to the sky) is about 500 earth-diameters from the earth, so the second meaning, the commonsensical meaning, is the right one. The Greeks and the Babylonians also took the sun to be at this same distance. Nevertheless, the textbooks base their histories on the first

meaning!

If one looks at the order in which the meaning of the term gauh is given, it reveals to us that the sacredness of the cow may just have symbolized the sanctity of the planet earth? The Greeks also visualized the earth as Gaia, the cow!

VI MYSTERY OR CHANCE

Imagine that archaeologists, digging a thousand year old virgin site in Antarctica, come across an inscription deep underground that shows the sun, and next to it the numbers 186,000 miles per

second, the speed of light. What would the world do? More likely than not, this find will not be accepted by scholars. A fraud, they would say, committed for cheap fame. The reputation of the archaeologists will be ruined.

Only lunatics will support them, claiming that this proves that aliens have visited the earth from time to time. The high priests of the academy will say that even if the find was genuine it proves nothing; at best it is a coincidence. But what an astonishing coincidence! Just the right number out of an infinity of different numbers!

The speed of light was first determined in 1675 by Roemer who looked at the difference in the times that light from Io, one of the moons of Jupiter, takes to reach earth based on whether it is on the near side of Jupiter or the far side. Until then light was taken to travel with infinite velocity. Even Newton assumed so.

The reason why we are talking about the absurd scenario of the archaeologists in Antarctica is because we are confronted with a situation that is quite similar!

I am an archaeologist of texts. I read old texts from the point of view of history of science. One such book is the celebrated commentary on the Rigveda by Sayana (c. 1315-1387), a minister in the court of King Bukka I of the Vijayanagar Empire in South India.

Of a hymn addressed to the sun (RV 1.50), he says that it is "remembered that the sun traverses 2,202 yojanas in half a nimesha. "

This statement could either relate to the speed of the sun or to that of light. The units are well known. For example, the Puranas define 1 nimesha to be equal to 16/75 seconds; 1 yojana is about 9 miles. Substituting in Sayana's statement we get 186,000 miles per second.

Unbelievable, you'd say! It cannot be the speed of light. Maybe it refers to the speed of the sun in its supposed orbit around the earth. But that places the orbit of the sun at a distance of over 2,550 million miles. The correct value is only 93 million miles and until the time of Roemer the distance to the sun used

to be taken to be less than 4 million miles. This interpretation takes us nowhere.

What about the possibility of fraud? Sayana's statement was printed in 1890 in the famous edition of Rigveda edited by Max Muller, the German Sanskritist. He claimed to have used several three or four hundred year old manuscripts of Sayana's commentary, written much before the time of Roemer.

Is it possible that Muller was duped by an Indian correspondent who slipped in the line about the speed? Unlikely, because Sayana's commentary is so well known that an interpolation would have been long discovered. And soon after Muller's Rigveda waspublished, someone would have claimed that it contained this particular secret knowledge. The fact that the speed in the text corresponds to the speed of light was pointed out only recently. Also a copy of Sayana's manuscript, dated 1395, is available.

Further support for the genuineness of the figure in the ancient book comes from one of the earliest Puranas, the Vayu, conservatively dated to at least 1,500 years old. (The same reference is to be found in the other Puranas as well.)

In Chapter 50 of this book, there is the statement that the sun moves 3.15 million yojanas in 48 minutes. This corresponds to about 10,000 miles per second if considered as speed of light, and 135 million miles for the distance to the sun, if considered as the speed of the sun. Sayana's speed of light is exactly 18

times greater than this speed of the sun! Mere numerology?

We must also not forget that the Puranas speak of the creation and destruction of the universe in cycles of 8.64 billion years, that is quite close to currently accepted value regarding the time of the big bang.

For the rationalists these numbers are a coincidence. Given the significance of these numbers, they'd look very carefully at the old manuscripts of Sayana's commentary. There are others who would say that consciousness, acting on itself can find universal knowledge. Look, they'd say, by examining biological cycles one can know the periods of the sun and the moon. So why shouldn't it be possible to know other universal truths? They'd add that ancient texts speak ---and this is true --- of embryo transplants, multiple births from the same fetus, air and space travel, slowing or speeding of time, weapons that can destroy the entire world. They'd say that it is more than ancient science fiction, it shows that the human imagination can envision all that can happen.

VII THE TREE OF KNOWLEDGE

The tree of knowledge may answer our wishes, but it is so dense that one can get lost in it. The Upanishads tell us that the gods love what is paradoxical (paroksha) and detest what is straightforward (pratyaksha). Not surprisingly, the Upanishads also tell us that those who worship only the material end up in darkness, and those who worship only the spirit end up in greater darkness.

The path of wisdom is a narrow path. The pulsations of reality may be subtle, but appearances are structured. Great scientists, who work at the frontier of their field, are aware of the limitations of their knowledge and its transitory nature, but most other scientists are no more open-minded than religious

bigots.

When I was a boy, I heard my father tell me about his extraordinary experience during his years of quest. He chose to mention some of these in his fragmentary autobiography, Autumn Leaves. I heard and marvelled but didn t know what to make of it. I shut my eyes and tried to envision everything or nothing but it didn t take me far. So I chose science.

I started out by studying information; this eventually led me to quantum theory. It was good to see that, at its deepest, science asked as many questions as it answered. I was also interested in grammar, linguistics and machine translation and before long I marvelled at the magnificent creation of Panini. I also found a long-lost astronomy in the Vedic books.

The ancient rishis were incredibly prescient and creative. A lot of what they said is still relevant. After all, their main concern was consciousness, precisely what modern science is trying to understand.

This brings us to yoga-- the union of our ordinary awareness with our true self. The promise of Indian wisdom is the realization of our potential. This is done through yoga as a discipline that complements the way of looking at the outer world through academic science. We get gleanings of the spark within by learning to observe ourselves.

The universe is woven together and interconnected. The symbol of the interconnectedness of the physical universe is the invisible axis (pillar) around which the stars move; likewise, the unity of our experience is established by the axis of consciousness to which we bind our associations.

We are so used to the routine of the everyday that we become oblivious to the extraordinary nature of our commonest experience. It is not just the coming of new life that is magical, every experience when our senses are truly open is magical. The dance of Shiva happens not only at the cosmic level, it occurs also at each moment, and as one grain of time is gone and dead, the next grain comes along and there is new creation!

There lie many adventures in the path to the unfolding of the mystery of consciousness. Each human being is a scientist and historian of sorts: we reason and gather knowledge, we structure all that happens around us. If it all doesn't add up, we must step back and wonder.

Mind is the last frontier of science. We observe the physical universe through our mind, yet we have

no clear idea how mind functions, how memories are stored and recalled and what is the origin of

our subjective feelings. Is this level of ignorance a result of the reductionist nature of the tools that

have been used in the study of mind and consciousness? If that is so, will an approach that has a different

philosophical basis help? It is for this reason we turn to the Vedas, where the central concern is self and awareness.

The Vedic texts consider reality to transcend the duality of matter and mind. This non-dual reality is termed [Brahman]. Although seen to be present in all its material manifestations, Brahman is understood best as the knowing subject within us. The space of this knowledge is called [chit], consciousness. Later literature, like the Yoga Vasishtha and the Tripura Rahasya, self-consciously describes itself as dealing with the nature of consciousness.

The Vedas, and later the yogic and tantric texts, speak of the cognitive centers as individual, whole entities which are, nevertheless, a part of a greater unity. The vocabulary used in these texts challenges the modern reader, but once one has learned the definitions of the operative terms, the structure soon becomes apparent.

Vedic mythology is often an explication of understanding of consciousness, and so mastering the Vedic vocabulary provides us a means of unlocking the hidden meaning behind the myths.

In the Vedic discourse, the cognitive centers are called the devatas or devas-- deities or gods, or luminous loci. The Atharvaveda (10.2.31) calls the human body the city of the devas. This passage also speaks of the body consisting of eight cognitive centers which, other references suggest, are hierarchically organized.

The devas are visualized in a complex, hierarchical scheme, with some being closer to the autonomous processes of the body and others being nearer creative centers. In analogy with outer space, inner space of consciousness is viewed to have three zones: the body (earth), the exchange processes (prana, atmosphere), and the inner sky (heavens). The number of devas is variously given, the most extravagant passages count 3.3 million. The Brhadaranyaka Upanishad (3.9.1) remembers a hymn that praises 3306 of them, arguing there are 33 major deities, distributed in three groups of eleven among the three zones. All these devas are taken to embody the same light of consciousness. The mind consists of discrete agents, although it retains a unity.

Since each deva reflects primordial consciousness, one can access the mystery of consciousness through any specific deva.Thus there is a deva for reading and learning, one for recognition, one for friendship, one for generosity, and so on. Physics and the Vedas agree that reality is consistent only in its primordial, implicate form. The Vedas insist that speech and sense-associations cannot describe this reality completely. In quantum physics, use of ordinary logic leads to paradoxes such as the present can influence the past! At a less technical level we may ask: How do we reconcile the determinism of science to the subjective sense of free will?

The modern discoveries that are based on a study of consciousness states and the deficits caused by lesions, stroke, injury, or surgery that disrupts the normal functioning of our senses and cognitions appears to uphold the Vedic view. For example, we have the case of alexia without agaphia, in other words, a patient who, due to injury or a stroke, is unable to read, yet able to write. These discoveries suggest that the mind is a complex structure of various localized functions held together by a unitary awareness.

To conclude, Indian has had a glorious past, but that, in itself, is no reason for us to do anything more than take notice. The more interesting reason for our fascination with Sanatana Dharma is the possibilities it offers to the modern man, curious to know the nature of his self. It is for this reason that we celebrate the tradition, and for this reason alone that this tradition will eventually triumph all over the world.

American finds home in Hindu India

S Mitra Kalita

http://www.rediff.com/news/2000/jan/20us3.htm

When Stephen Huyler speaks of his upcoming trip to India, he describes it as a journey home

The 48-year-old author and photographer, raised in southern California and Wyoming, fell in love with India more than a quarter-century ago and has spent three or four months in different regions of the subcontinent every year since.

"India is as much my own as America. I am going home in two weeks," he said in a recent interview with *rediff.com*

Indeed, Huyler's life, both personal and professional, reflects this familiarity. His most recent book *Meeting God: Elements of Hindu Devotion,* stimulates a reader's eye with colorful photographs of daily rituals in Indians's lives from sunrise to sunset, from bathing themselves to conducting business.

The book, published by the Yale University Press, contains 160 color photos taken by Huyler. Its intentions are lofty: to illustrate how devotion to God is incorporated into the daily life of India's estimated 800 million Hindus, according to Huyler.

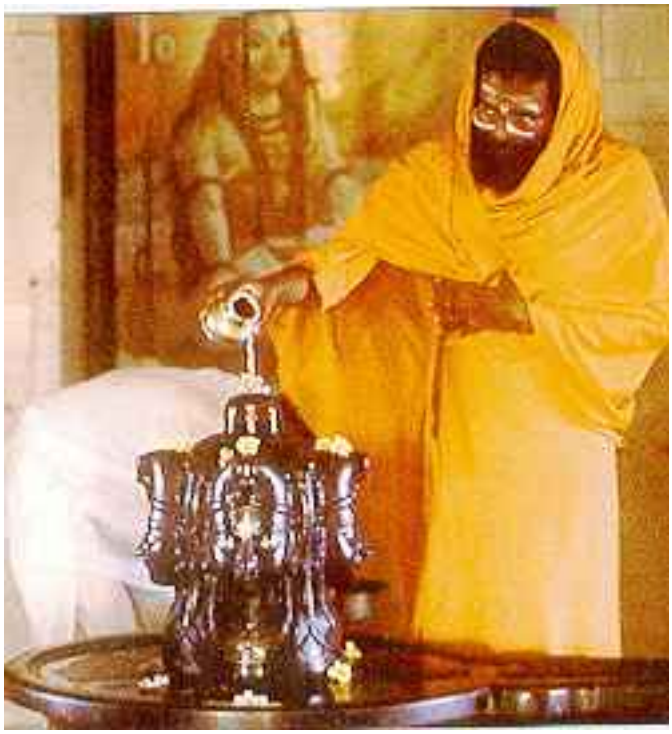
"We lack that in most Western cultures," Huyler said. "In Hinduism, you get a sense of the way in which the divine is made accessible and recognized as a part of all existence. It is not separated, as in the separation of church and State." In the preface to the 250-page book, he writes of his efforts in capturing the commonalities of "an extremely complex and diverse religion."

He didn't start out captivated by the religions of India. This art historian, cultural anthropologist, photographer and author initially traveled to and spent time in India to conduct a cross-cultural survey of Indian arts and crafts. His prior works include *Village India* (1985), the only book to survey rural Indian life and cultures across the subcontinent and *Gifts of Earth: Terracottas and Clay Sculptures of India* (1996). His book *Painted Prayers: Women's Art in Village India* (1994) documents women's ritual wall and floor decoration, which he discovered on his first visit to India.

Huyler, who received his BA in Indian Studies from the University of Denver and his Ph D from

the University of London's School of Oriental and African Studies, also curated an exhibition of photographs with *Painted Prayers* that traveled to numerous museums throughout the Germany, India and the United States, including the Smithsonian Institution.

The designs are also featured in *Meeting God,* as Huyler recalls the first time he observed women using powders and water to sprinkle designs on the damp earth in the shape of leaves, birds and flowers. 'When I questioned the meaning of this extraordinary process, I was told that these paintings are sacred designs intended to protect the home from evil and to encourage benevolent spirits to enter it,' he writes. 'In more than a million homes, these *kolams* are created daily, and the women pride themselves in never repeating a design!'



Huyler is outspoken on the important role Indian women have played in his introduction, immersion and enchantment with the country. He arrived on his 20th birthday, invited and accompanied by Dadaist Beatrice Wood, his mentor, who was then 77 years old.

Kamaladevi Chattopadhyaya and Rukmini Devi Arundale arranged for him to stay in homes throughout the country. "My first introduction to India was through the home and the heart rather than the hotel," he said. "I was exposed to the remarkable generosity of the Indian people and that had a remarkable influence on my interest in country."

Over 28 years and hundreds of stays in Indian homes, Huyler said he is repeatedly struck by the strong role of the Indian woman in both family and religion. "One of the reasons that we misunderstand Indian culture is that Hindu society is divided into public and private spheres. Most outsiders don't have any contact with the private sphere," he said.

"But it is in the private sphere where women make the decisions and choices for the family's livelihood, the choices of their male children's careers, the purse strings, the rituals." He tempered his remarks by saying female infanticide and bride burning are unfortunate realities and atrocities, albeit practiced in a minority of Hindu homes.

In his introduction to the private sphere, Huyler learned that his area of study -- folk arts and crafts -- in India was intertwined with the people's devotion. "I came into the study of Hinduism through the back door. It was not through intent, but because I discovered that none of the arts and crafts could in any way be divorced from spiritual content and aspects of ritual."

He writes and speaks intimately of the role Hinduism has played in his life. "Now when I am invited to attend a sacred ceremony, I no longer withhold myself in critical appraisal. I am fully present with all of my senses to absorb the ritual, to feel the full experience. I realize now that my earlier distance was merely the consequence of my own limitations. The many Indians with whom I have interacted have always invited my full participation. I can admire and even be in awe of the ways in which the sacred permeates the lives of the Hindu people while still maintaining strong attachments to my own home, family, friends, culture and ideals. Awareness of one only enriches awareness of the other."

A testament to his faith and devotion to both Hinduism and Christianity is the *puja* room in the home Huyler shares with his wife Helene in Camden, Maine. Alongside Jesus and Mary are statues of Ganesha, Laxmi, Shiva, Shakti and Vishnu. "My understanding of Hinduism has only enhanced the understanding of my own heredity," he said. "I incorporate many Hindu beliefs in my prayer and worship."

In India, Huyler said he is almost never asked to explain himself or his religion. His blend of faiths benefits from Hinduism's tolerance, he says. "In America or in Europe, a non-Christian in a Christian environment would be challenged often."

Through his book and an accompanying exhibit, Huyler said he hopes to "demystify one of the primary belief systems in the world." A traveling exhibition of photographs and interactive wooden shrines that complement *Meeting God* just finished a run at the Houston Museum and is expected to travel around North America and abroad over the next few years. Huyler also co-curated an exhibition about sacred rituals in India entitled *Puja: Expressions of Hindu Devotion,* on display at the Smithsonian's Arthur M Sackler Gallery from May 1996 till 2001.

Huyler asserts that this tolerance is what has allowed Hinduism to thrive in an increasingly modern, Westernized society. 'In India I am frequently in awe of the sense of personal peace in the midst of apparent turmoil. A station crowded with ten thousand milling commuters, the cacophony of tea and coffee sellers and the cries of vendors,' he writes. 'In the midst of this riot of activity, a small man stops to pray silently by himself. For these five minutes, he is oblivious of his surroundings, immersed in his personal relationship with God.'

Hinduism is not under threat by modernization because it changes with times and embraces all walks of life, Huyler said. He denounced recent attacks on the religion by the Southern Baptist Convention. The group published a prayer guide that made said, among other things, 900 million Hindus lived under darkness and they did not have the concept of sin or personal responsibility. Indians in Atlanta, Boston and Houston staged rallies and protests in response.

Huyler said the Southern Baptists's statements demonstrate Western misunderstandings and

misconceptions of Hinduism and a failure to see commonalities among religions.

"Because they think their system is the only way, they think others must be less," he said. "That is just arrogant prejudice. I think Christians, Jews, Hindus and Muslims have a lot to learn from one another."

White Man's Burden: Indian Holocaust
By A. P. KAMATH
2/18/2001
www.rediff.com

In trying to buttress his thesis about the death of 32-61 million people from famines in India, China and Brazil in the 19th century, author and political activist Mike Davis poses the question: **"How do we weigh smug claims about the life-saving benefits of steam transportation and modern grain markets when so many millions, especially in British India, died along railroad tracks or on the steps of grain depots?"**

Davis, a winner of the $315,000 Mac Arthur Foundation grant given annually to "exceptionally creative individuals," answers his question in the book *Late Victorian Holocausts* (Published by Verso, $27). Its second title: *El Nino Famines and the Making of the Third World.*

He argues that while the El Nino weather phenomenon contributed to the droughts in the last third of the 19th century, the death of millions was due to the arrogance and callous policies of imperialist powers. He slams the official British explanation that millions were killed by extreme weather.

The killer, Davis argues, was imperialism.

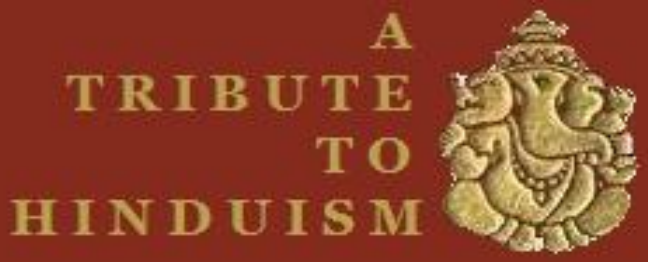
If the governments had made serious efforts to use transportation system to benefit the poor, he says, there would not have been a famine holocaust. He notes that the British rulers launched public work programs to fight famine in India but the workers, already emaciated, got such poor food that their health deteriorated further.

Davis asserts that what is known as the Third World today was born in the late 19th century; the seeds of underdevelopment were sown during the height of imperialism. The price for capitalist modernization and the industrial revolution was paid in the blood and toil of farmers' lives.

Mike Davis, 52, is one of the most controversial political writers in America. The son of a meat cutter, Davis dropped out of high school to follow his father's profession.

But he went back to college when he was in his late 20s studying economics and history at University of California, Los Angeles, became active in leftist organizations such as Students for Democratic Society, and moved to London in the early 1980s to edit the *New Left Review.*

Among his widely discussed books is *City of Quartz*, a bitter indictment of the whites who run Los Angeles—and the economic disparity and racial politics. His critics have slammed him for



exaggerating racial and political issues confronting the city. But his backers see him as a perceptive critic and a conscience keeper who does not hesitate to speak out his mind.

Winning the Mac Arthur award helped Davis to continue the research that resulted in the present book. Though *Late Victorian Holocausts* was published by a small avowedly leftist press in New York, it is getting plenty of attention in mainstream publications.

Nobel Laureate Amartya Sen, who gave it a page-long review in *The New York Times Book Review*, found the book “gripping” and “highly informative.”

Sen, however, also points out that imperialist and capitalist countries are not the only ones who failed in combating famine. In the 20th century, the Soviet Union and China faced famines; in China, an estimated 30 million people died in a famine that raged for three years from 1958.

Secularism - American style
By M V Kamath
Free Press Journal
February 15, 2001
http://www.indiavotes.com/elections/news/feature781.html

India is about the only country in the world where secularism is a problem. This is precisely because it is a multi-religious country with substantial segments of he population professing various religions like Islam, Christianity, Sikhism and Buddhism. This is not to say that other countries do not have their own religious minorities.

There are Muslims and Christians in China, not to speak of Buddhists, but the prevalent philosophy of state is Communism that doesn't take religion at all into consideration. Indonesia has a substantial percentage of Christians, not o speak of Hindus and Christians of late in Indonesia have been under pressure from Islamic fundamentalists. But most European countries don't need to worry about minorities.

Portugal, Spain, France, Italy, Germany, Belgium, the Netherlands, the Scandinavian countries are all Christian though there may be varied proportions of Roman Catholics and Protestants among them. The United Kingdom is Christian with the Church of England being supreme. The head of the Royal Family is crowned according to Christian rites by the Archbishop of Canterbury and the oath is taken on the Bible but nobody dismisses the country or the people as communal. Secularism in those countries has a separate connotation. In Germany a party can call itself the Christian Democratic Union (CDU) or the Christian Socialist Union (CSU) but it does not invite opprobrium from secularists. A citizen may refuse to pay a small tax for the upkeep of churches but that is left to the good sense of the tax-payer whether to pay or not. When President de Gaulle of France and Chancellor Adenauer of then West Germany prayed together at Koln Cathedral in a gesture of reconciliation, no one suggested that they were 'communal'. Both France and Germany were Christian countries and praying in a cathedral seemed the most natural thing to do. **It is only in India that singing Saraswati vandana at an official function comes under severe damnation by our 'secularists'.**

The general belief is that the United States of America is 'secular', even if the President-elect of the country may take his oath of office on the Bible and attend Church. Is the United States truly 'secular'? The question has been raised - and sought to be answered-interestingly enough, in the current issue of Span (January/February 2001) by one Wilfred M. McClay. He speaks of two concepts of secularism. He says that despite "impressive victories in the courts and in the halls of government and academe, prayers (in the US) are still uttered at the commencement of Congressional sessions. God's name appears in our currency and in the oaths we take in court, chaplains are still employed by Congress and the armed services (and) the tax-exempt status of religious institutions remains intact". "The fact is" avers McClay, "America is still not an entirely secular country, one sanitized of any form of public sanction for religion".

The pressure of religion on the individual could be very heavy as Yellapragada Subba Row, a great scientist working at Lederle Laboratories in the United States found, being alone in a Christian community in the thirties. To escape his uniqueness Row who was born Hindu first turned to atheism only to accept Christianity later to get a feeling of belonging. In the United States, McClay insists, one "comes face to face with a crowd of paradoxes" And he adds: "And none is

greater than this: that the vanguard nation of technological and social innovation is also the developed world's principal bastion of religious faith and practice. The United States has managed to sustain remarkably high levels of traditional religious beliefs and affiliation, even as it careens merrily down the white water rapids of modernity".

Sociologists from Max Weber to Peter Berger have insisted that secularisation is one facet of the powerful monolith called "modernisation", trusting that secularisation would come along bundled with a comprehensive package of modernising forces such as urbanisation, rationalisation, professionalisation, functional differentiations and bureaucratisation. The more the modernisation that society underwent, the presumption was that secularity, in all its fullness would arrive "as naturally as adulthood". Apparently this has not yet happened in the United States. McClay argues that perhaps the religious efflorescence that one sees in America today is merely defensive and fleeting. Indeed, he remarks, it could be argued persuasively that the United States has never been more thoroughly under the command of secular ideas than it is today" and that "the nation's elite culture, as it is mirrored in mass media and academe, is committed to a standard of antiseptically secular discourse, in which the ostensibly value-neutral languages of science and therapy have displaced the value-laden language of faith and morals". As he further notes, a steady stream of court decisions since the 1940s has severely circumscribed the public manifestation of traditional religious symbols and sentiments, helping to create what has been called 'the naked public square.

For all that there is the view that "secularism, rather than religion" is the power that is ebbing away. Noting that, McClay feels that it is "small wonder, then, that religion has responded to the challenge of secularism with a vigorous defence of its role in public life - a role that, whatever one thinks of it, shows no sign of going away quietly". Indeed, he adds, and this is very significant, "there is a growing sense that religion may be an indispensable force for the upholding of human dignity and moral order in a world dominated by voracious state bureaucracies and sprawling trans-national corporations that are neither effectively accountable to national law nor effectively answerable to well-established codes of behaviour".

If this is said of the United States where the majority of Christianity-professing people have never felt the suffocating power of an elite professing a minority religion, should it be surprising that Hindus in India should hark back to their own centuries old faith to find an anchor for their lives?

McClay speaks of two kinds of secularism: a negative one and a positive one. When, under the guise of separating church and state, secularism seeks to exclude religious belief and practice, as much as possible, to the realm of private predilection and individual taste, it is negative. Positive secularism has aims that are higher and nibbled, seeking, as it does, to free human beings to fulfill the most exalted elements of their nature. This understanding of two secularims, McClay suggests, may help explain the paradoxical situation in which secularism seems at one and the same time both victor and vanquished. As he sees it, Americans have by and large accepted negative secularism as an essential basis for peaceful co-existence in a religiously pluralistic society. Furthermore, he adds: "Religious activity and expression (in the United States) will likely continue to grow, further eroding the rule of positive secularism - but it will do so largely within the container of a negative - secularist understanding of the world. The return of religious faith is not likely to be a fearsome 'return of the repressed' at least not in the United States".

If religious faith can return to the United States without a fearsome "return of the repressed", why should it not return similarly to India in the same manner? Whatever the shortcomings of the majority faith-Hinduism - in India (and, alas, it has several), attacks on the minority faith is not one of them. McClay makes an interesting point. He says: "It follows, however, that religious faiths must undergo some degree of adaptation in accommodating themselves to negative secularism. To begin with, they must, as it were, learn how to behave around strangers. But there is more to it than that. The key question adherents must ask is whether such an adaptation represents compromise of their faith or a deepening and clarifying of it". What does adaptation mean in the Indian context? In India the majority faith is Hinduism. For centuries it has been the target of first Islam and later evangelical Christianity both of which were resented. Living under Islamic rule, Hindus in past centuries hardly could resist

conversion. Who, in the circumstances, should adopt to whom? Can Christianity, under the presumed right to propagation, give offence to Hinduism by indulging in conversions, howsoever sophisticatedly described? These are points to ponder over.

Secularism, in essence, means respect for all religions. Respect involves not giving offence to another religion or faith in any way whatsoever. The line dividing propagation and conversion is very thin and in India, at least, it can give rise to a lot of epistomological confusion, which is best avoided in the larger interests of communal peace. To insist that propagation is of the very essence of Christianity which has to be conceded under the articles of the Constitution is to demand allegiance not to the spirit but the letter of the law. A wise minority will have to learn to adapt to the society in which it functions in order to live in peace and harmony. The Sanskrit concept of sarva dharma samabhava must be upheld in all its nuances if secularism has to be truly meaningful in India. That, truly, would be positive secularism worthy of applause.

Secularists be warned

M V Kamath

http://www.hindustantimes.com/nonfram/150302/detpla01.asp

May I make a sincere request to my fellow Hindus to give a respite to the use of the word 'secular' for the next five years? The word stinks to high heavens.

It smells of hypocrisy, cowardice, an attitude of holier-than-thou and a singular ignorance of history unparalleled in the annals of our sorry times.

There were **no secularists** around when Ghazni invaded India 13 times, smashed the *lingam* in the Somnath Temple and took the pieces to be scattered in front of a masjid in his hometown for his kinsmen to merrily trample over. Nor were there any secularists living when, during the long Islamic reign in India, 3,000 temples were demolished. It was considered part of medieval behaviour and so to be taken in one's stride.

If not Babar it was his general who destroyed a temple in Ayodhya, and despite the hysterical denials of our demented historians, a temple did exist where the Babri masjid once stood and there are enough records — and architectural evidence — to prove the fact. Only the determinedly blind will refuse to accept the testimony of writers like Mirza Jan (1856), Mohammad Asghar (1858), Mirza Rajah Ali Beg Sarur (1787-1867) and Sheikh Md Azmat Ali (1869) who have had no reason to tell a lie.

But even if, for the sake of argument, there was no temple in Ayodhya, it ill-behoved anybody, let alone a murderous marauder like Babar, to build a masjid in what is considered a Hindu holy city any more than a theoretical Hindu invader of Saudi Arabia would have in building a temple in Mecca close to or on the site of the Kaaba. Ram is as much meaningful to Hindus as Allah is to Muslims. **The Babri masjid was raised in Ayodhya to tell the Hindus who the rulers were.** The VHP does not have to be apologetic to anyone, least of all to the secularists, for wishing to raise a temple to Ram at a site they believe he was born.

The real issue is not Ayodhya as much as it is the secularists' dogged determination not to face up to history. The attitude of the average secularist is either to bury his head, ostrich-like, in the sands of time in the face of embarrassing facts or to say that the Hindus deserved what they got. By their cowardly behaviour, the secularists have both directly or indirectly encouraged the hardliners among Muslims to refuse to consider any sensible compromise with the VHP, and if anybody is to be blamed for all the disturbances of the past decade, it has to be the secularist with his contempt for Hinduism.

What happened in Ahmedabad is no different from what happened in Delhi when Indira Gandhi was assassinated or what happened in Punjab following Partition. The Gujaratis are as law-abiding as anyone else and don't deserve to be maligned. Does anyone remember Rajiv Gandhi's remarks about the killings of Sikhs following Indira Gandhi's death? Did the Congress pull him up for his thoughtless comment? The Ahmedabad rioting was not pre-planned unlike the Godhra killings by Muslim fanatics or the killings of innocent Kashmiris by ISI-supported jehadis.

The Ayodhya issue is not for the court to decide but for the Muslim community to concede to the VHP what rightfully belongs to the Hindus — graciously. And who will believe this community when it says it will abide by a court verdict? What happened in the Shah Bano case? For the Muslim community, it is a win-win situation. If it wins the case, it can have the last laugh. If it loses the case, it can always say that the BJP government has bought the judges.

Such is the power of blackmail that the secularists, in their blind hatred of the BJP and the VHP, wield. Why should anyone blame the VHP? Hasn't it shown exemplary patience for 10 long years?

The blame for the VHP's and the kar sewaks' militancy lies entirely at the doors of the secularists. It is not the kar sewak who is destabilising the country. The fault is that of the secularist and a weak and indecisive government which is afraid of its own shadow. Ten years is a long time to wait. That is why the kar sewak is blandishing his *trishul*.

How long are we going to appease the irrational among the Muslim community to show how secular and law-abiding we are as a people? It serves the rabid among the Muslims to see how the BJP is being reduced to a joke. And the secularists' stand has only served to strengthen the rabid Muslims to hold on to their own and watch the *tamasha*.

The Babri masjid was of no great architectural wonder. *Masjids* are routinely levelled to the ground in Muslim countries including in Saudi Arabia and Pakistan to make way for development. No Hindu protested when ancient temples had to be submerged in the course of raising dams. The VHP would have happily agreed to build a special *masjid* for Muslims to pray in peace in Ayodhya — but in some other location, away from the *janmabhoomi* site.

But that wouldn't convince the secularists, who would rather see the country reduced to ashes than worship at the altar of reason. For them, bashing the Sangh parivar has become an end in itself. The nation is heading for a major crisis of unprecedented proportions that would make the Ahmedabad riots pale into insignificance. The secularists are warned.

They are driving a frustrated people to desperation. And when that comes to pass, logic and good sense are stood on their head and the entire nation will suffer. And then let not the kar sewaks be blamed for what is not their fault. There has to be a limit to secular pig-headedness.

Why are Hindus angry?

V KAMATH

http://www.newstodaynet.com/guest/2402gu1.htm

In a snap election, the BJP Alliance would secure 320 seats in Parliament, according to the India Today-ORG-MARG Mood of the Nation Poll taken in January 2003. The Poll noticed that the popular vote for the NDA may touch 42 per cent, giving the ruling coalition a clear majority of between 310 and 320 seats. And, noted in the Poll, if the BJP and the BSP strike a poll alliance in Uttar Pradesh, the NDA tally may even reach 340.

This finding must be sending shivers down Congress spines. Furthermore, according to the Poll, 'most heartening for the BJP is that the surge is most marked in its traditional strongholds and particulary in the Hindi heartland states where Assembly elections are due late this year'.

How come? Reeling from the after-effects of Gujarat the Sonia Gandhi Congress seems to be in a state of total disarray. Indeed, it is clear that the Congress has lost its bearings, and does not know which way to go.

In Gujarat it tried 'soft Hindutva' and Sonia Gandhi started her campaign from Ambaji Temple when she might have done so from Sabarmati Ashram. But she must have felt it necessary to appease Hindu sentiment, which had been deeply hurt over what the party and the Secular media said about Hindus in Gujarat.

And may this be said: it is not just the Gujarati Hindu whose anger has been aroused. The Hindus throughout the country spread across castes and creeds, languages and ethnicities are in revolt against what they consider unfounded charges levelled at them by secularists, and by minority spokesmen.

They have become sick of secular humbug and they are out to teach Congress and the so-called secularists the lesson of their lives. The secularists went overboard in criticising Hindus generally and the BJP particularly, accusing Narendra Modi of all sorts of crimes.

Many newspapers (and journals) revelled at publishing the photo of a Muslim, hands folded, stalking fear in his green eyes, pleading for his life. It epitomised the unleashed terror in Ahmedabad as nothing else did.

It was an indictment of the rioting Hindu and the media lapped up the picture with undisguised glee. Unfortunately no photographer took any picture of the last minutes of 58 innocent women and children, as they coughed and choked and felt the stinging heat of the surrounding flames, shouting to God to save them.

How did the faces of those women look like as they clasped their children to their bosoms as the heat and the smoke slowly ate through their skins and their young died in their arms screaming till they were silenced? Alas, there was no photographer around to immortalise the fiery scene. What is now remembered is the callousness and bias of the secular press and the utter indifference to Hindu suffering of Sonia's Congress.

No wonder Narendra Modi's BJP won the Assembly elections in Gujarat with astounding ease.

Yes, the Hindus are boiling mad at the Congress which has had its heydey in Nehruvian days. Nehru had little use for Hinduism which he held in contempt. And under his leadership there grew a generation, western in thought, word and deed that Macaulay would have applauded. Macaulay's children were everywhere, ensconced in seats of power.

Over the decades Hindu thought dared not openly surface; it would have been quashed if freely expressed. To be 'secular' was fashionable. Rajiv Gandhi unconscionably exposed the hypocrisy of it all in the matter of the Shah Bano Case.

The Babri Masjid episode showed another aspect of Congress hypocrisy. The Shias to whom the Masjid belonged would have happily given up their claim to the Masjid but our secularists would have none of that. They wanted BJP blood. And they had it.

It only enraged majority Hindu sentiment. The average Hindu is more secular than anyone else. But constant denigration of Hinduism has done more than what partition could not do: It has made Hindus conscious of their culture and heritage.

They are getting united as seldom before in the past, despite major efforts by Congress to play the caste game. In Gujarat all castes were united, as were even Scheduled Castes and tribals in their opposition to Congress. For the first time in post-independence history Hindus as a whole stood together in opposition to the shady secularism of the Congress.

There is a message here. Hindus would go a long way to be accomodative of other religionists. But when their sensitivities get continuously trampled upon, their goodwill taken for granted or deliberately misunderstood or wilfully exploited, does it come as a surprise that their cup of frustration and anger boileth over. One minority columnist even has gone to the extent of advocating the weaning of tribals and Scheduled Castes from the collectivity of Hindu society and condemning ayudh pooja during dussehara as indicative of Hindu bloodthirstiness! Another such columnist continues to heap abuse at the majority community in a Mumbai daily. That, apparently, is considered fair. Only, the Congress seems either blissfully ignorant of gathering Hindu anger or believes it can be assuaged by taking recourse to artificial means such as party leaders taking to wear Gandhi caps, Chief Minister of Madhya Pradesh Digvijay Singh conceding that the Congress is not against buildng the Ram Temple in Ayodhya and members of the Rajasthan Cabinet nestling cozily at the feet of Gujarat's famous sant Murari Bapu as he recited Ram Katha in Jaipur at the invitation of the State's Governor Anshuman Singh.

Minority leaders are propagating against Hindutva refusing to accept that the word is not linked to religion but, in the words of Atal Bihari Vajpayee 'encompasses all sections of society, irrespective of caste, creed' and is timeless. Hindutva has been defined in terms of cultural nationalism but apparently as much with the support of secularists as on their own, minorities are rejecting it only to add fuel to Hindu fire.

What is saddening is that even as an effort is being made to bring all people together under a cultural umbrella, Congress states are trying to prop up Muslim separatism as in evident in a proposal to set up a Muslim University in Bhopal. So fed up with the bogus secularism are many Hindus that they are quietly turning to the BJP on the theory that 'enough is enough'; they are equally quietly demanding that their suppressed voice be heard, a voice that expresses resentment at being called 'fascist' and 'communalist' when Hindus are neither.

The record of one thousand years of history shows it. In all these years it was the Hindu who was being terrorised and suppressed by rulers from alien lands. The Congress would do well to listen to the voice of anger. Very novel for Hindus, they are beginning to assert themselves at the polls in hitherto unexpressed sense of oneness. To continue to mock at them is for the Congress to invite disaster. What minorities should remember is that it is under a majority - not majoritarian - rule that they can get the greatest protection and safeguards. So it was under Shivaji, so it was under all Hindu kings that ever ruled India.

(The author is a veteran journalist and chief of the Prasar Bharati)

articles on hinduism

Help us bear the burden of secularism

By M. V. Kamnath

http://www.organiser.org/31dec2000/mfinger.html

Recently, a distinguished columnist, **T.V.R. Shenoy**, made a point in relation to the Babri 'Masjid' affair that beautifully summed up the dilemma of the Hindus in India. He said: **"Help us bear the burden of secularism."** He was addressing the minorities. It must have come straight from the heart. It was, as the French would say: cri de coeur. The cry of the heart. **For no other country in the world from east to west, faces the agony that the Hindus in India have to face. They are the injured party; but they are crucified by the secularists—most of them themselves Hindus—at every stage. No country in the world has been so ravaged and raped by outside forces as India has been down the centuries: Not Japan, not China, not Russia, none of the European countries, neither the Arab nations and certainly not the United States of America. Krishnadevaraya of the Vijayanagar Empire did not send his forces to Portugal to tear down churches, use force to convert Christians to Hinduism and indulge in religious terrorism. Prithviraj Chauhan did not invade Afghanistan nor Central Asia and raise temples.**

No Chola, Chera or Pandya ruler sent a fleet to Saudi Arabia to tear down the Ka'aba and build a temple to Meenakshi on its ruins or even next to it to demonstrate Hindu might. India and Hinduism have been ravaged beyond belief. Hindu missionaries did not accompany a conquering horde to Britain and under their benign rule set to convert Scottish peasants to Hinduism—or even Buddhism. Whatever their million faults, Hindus in this matter have their hands clean. When Christian rulers fought back the Moors in Spain, they destroyed every vestige of Islamic influence in the country save the Alhambra in Grenada and no one, not even the most fanatic Hindu, would dream of duplicating Spanish behaviour. All that they have so far asked is the restoration of the Ramjanmabhoomi site that was—it is recorded in history—desecrated by an alien ruler. Even presuming that to say so is historically incorrect—what should count is popular faith, which has kept that belief alive for decades if not a couple of centuries. In their hatred of the Bharatiya Janata Party, the secularists have done untold damage to the Hindu psyche.

The time has come to place the blame for the bloodshed in India because of the Babri 'Masjid' dispute on the hands of the secularists. These are red with the blood of the innocents. What happened on December 6, 1992 was not a breakdown of law and order; what happened was a cataclysmic event which was an outpouring of the anger of five centuries that nobody could have stopped. Not Atal Behari Vajpayee, not L.K. Advani, not even God Almighty could have stopped that event. Our secularists with no roots in Hindu society have just no understanding of the Hindu

psyche. The bringing down of the Babri 'Masjid' was not a physical act; it was an emotional necessity. It has nothing to do with Islam: it has everything to do with a peoples' self-respect. The gravest damage to Hindu-Muslim unity was done by the secularists by making it a Hindu-Islam issue. That it is not. It was the cry of a people whose wound of being ruled first by Muslims and then by a Christian nation called for healing. The greatest service that Muslims in India can do to themselves and to their Hindu fellow-countrymen is to understand that angst and to make amends by voluntarily agreeing to the rebuilding of the Ram Mandir on the site where the Babri 'Masjid' once stood.

Secularism is not a burden to be borne only by Hindus. The Muslim populace —indeed the entire 'minority' populace— has divine duty to share that burden. And it is not the Babri 'Masjid' issue alone that calls for burden-sharing. There are several issues over which the majority community—and a long-suffering community it has been—would appreciate minority understanding. And such understanding is long due. Sonia Gandhi, as the president of the once-great Indian National Congress—there are no rival Congress factions of any substance today—has a great responsibility to bear. She should realise that had not Jawaharlal Nehru and Sardar Vallabhbhai Patel shied away from tackling the Babri 'Masjid' issue way back in the late forties, the dispute would not have persisted. No matter what the jaundiced eyed secularists may say, Hindus have a genuine claim on the Ramjanmabhoomi site. That fact was tacitly acknowledged by the Hindu populace during L.K. Advani's famous rath yatra and it was that acknowledgement that was reflected in the victory of the Bharatiya Janata Party at the hustings. Atal Behari Vajpayee owes no apology to anyone—least of all the Congress—for saying that the building of the Ram Mandir on the site that rightfully belongs to it, is his party's unfinished business. Unfinished business it is.

The Muslims must help him in his endeavour, instead of constantly harping on secularism. Secularism is a burden not for Hindus alone to bear. The Muslims have a solemn duty to share that burden. It is a point that cannot be emphasised too strongly. For the Congress and Leftist opposition to lay the blame for the demolition of the Babri 'Masjid' on L.K. Advani, Atal Behari Vajpayee and Murli Manohar Joshi is the height of impertinence. Factually it is incorrect. According to Nirmala Deshpande, a Gandhian social activist and former Rajya Sabha Member [quoted by The Pioneer (December 5)] and secretary to Acharya Vinobha Bhave who was present at the site when the demolition took place, "the situation was beyond their control" and she could "see and hear Advani and other leaders shouting on the mike asking people to come down from the domes". But none of the BJP leaders need feel ashamed of the event. It had to happen because of historical reasons. But how can the burden of secularism be shared by the minorities? It has been pointed out that Nawab Shuja-ud-din in his time donated 50 bighas of land to Hindus to build a temple—the second holy one in Ayodhya—to Hanuman.

According to Mohd Hashim, the Hanuman Garhi always had a Muslim worker in it till 1932 who used to get a share in its offerings. Hashim has been quoted as saying: "The practice, if continued, will improve relations between the two communities." High-minded though it may be to demand of the majority community to alone bear the burden of secularism, the minorities must do some heart-searching on their own to ask whether their expectations are fair and equitable. It comes easy to damn the Vishwa Hindu Parishad, the Bajrang Dal, the RSS and the BJP and it may warm the cockles of minority—and secular—hearts to run them down as fascists, fundamentalists or whatever. But in their turbulent way they reflect the thousand-year agony of Hindus. The

minorities may do well to remember history and give some credit to the majority community for whatever their tolerance—enforced or otherwise—is worth. Secularism is a cross to which the minorities and secularists want to nail the Hindus. It is time they realize the enormity of their intolerance—and crime.

Accupuncture origin in Ayurveda

Author: K. Kannan

Publication: The Hindu
Date: April 3, 2001
http://www.hvk.org/

In what could bring about a change in the current perception of Ayurveda, a practising Ayurvedic doctor from Haldwani has claimed that the roots of Chinese acupuncture are to be found in this ancient Indian science.

According to Dr. Binod Kumar Joshi, who has been conducting research for some years now on the undisclosed subjects of the ancient treatise ``Sushrut Samhita'' , there was perfect corroboration between ``Marmas'', vital energy points in the body, and acupuncture points.

Along with his colleagues -- Dr. Ram Lal Shah and Dr. Geeta Joshi -- Dr. Joshi has been working on this for quite some time now. While interpreters have thus far said that the ``marmas'' were masses of tissue surrounding vital organs, they actually represented the stimulating points that contained the vital force, the trio claim.

In acupuncture, it is believed, there are channels and meridians that traverse the body along certain important points that hold the vital energy. The three doctors now claim that these are very well described in ``Sushrut Samhita'' in exactly the same manner. Their significance was, however, lost due to wrong interpretation and translation of Sanskrit texts, he said.

In the Capital recently to share his findings, Dr. Joshi said they stumbled on this discovery when they found that the size of the heart described in the ancient text does not match its real size as described by modern science. In fact, it was quite small, almost representing a point. The same was true of other organs as well as was revealed in their study.

Ayurveda, therefore, seems to hold a mirror to a holistic health management system with the vital points, or ``dhamnis'', controlling the body mechanism and its functions. Together with the ``siras'', which number around 700 and were akin to the various other microscopic points of acupuncture, they represented the vital energy flow.

``Earlier, it was thought that the ``dhamnis'' and the ``siras'' represent arteries and veins and, therefore, whenever a damage used to occur, the first move was to preserve the concerned tissue. But then, these are actually the channels and meridians controlling the vital energy flow,'' Dr. Joshi said.

According to the practitioner, the 107 ``marmas'' described in the ``Sushrut Samhita'' were the topographical points of the inner vital organs. These ``marmas'' were important groups of ``siras'' and not just tissues to be saved during surgical operations.

``Our conclusion is that the ``Sushrut Samhita'' is the base of the so-called Chinese acupuncture. It is actually the `Siravedhan of Sushrut', he argued, adding that their research could shed light on the as-yet unexplained theories of Ayurveda as well as acupuncture.

The trio also claim that even the approach to Ayurveda will change as a result of this discovery. They are publishing their research in the form of a book which is to be published by Motilal Banarasidas. ``We

are practising these theories on patients with wonderful results", Dr. Joshi says.

Upanishads and the Universe

By Hiranmay Karlekar
August 22 2003

In his absorbing book Uncommon Wisdom: Conversations-with Remarkable People, Fritzof Capra, talks of an after-dinner conversation in Berkeley, the United States, among him, his wife Jacqueline, the designer of the Bell helicopter, Arthur Young, his wife, Ruth, the head of the Lawrence Berkeley Laboratories and an outstanding physicist, Dr Geoffrey Chew, his wife Denyse. The subject was the notion of certainty in science. As Chew showed that the successive examples of scientific facts presented by Young were really approximate notions, Young cried out in frustration, "Look, here are absolute facts. There are six people sitting around this table right now and this is absolutely true." Chew said, smiling gently at Denyse, who was pregnant then, "I don't know Arthur. Who can tell precisely where one person begins and the other ends?"

Wrote the English poet, John Donne, "No man is an island, entire of itself; / Every man is a piece of the continent, a part of the main./ Any man's death diminishes me because / I am involved in mankind; and therefore/ Never send to know for whom the/ bell tolls; it tolls for thee."

Geoffrey Chew, and John Donne spoke of interconnectedness of human beings. The Upanishad's propounded the concept of an inter-connected world as a part of an inter-connected cosmos. The common presence of the Brahman or the Universal Consciousness linked all things, animate and inanimate. It created and put itself into everything which, as a result, was its manifestation and, therefore, sacred and had to be treated according to the principles of Dharma.

Says the Isha Upanishad, "He who sees all beings in the self, and the / self in all beings, hates none/ To the illumined soul, the self is all./

"For he who sees everywhere oneness, how/ Can there be delusion or grief?" (Translated by Swami Prabhavananda and Frederick Manchester).

The Brahman, unborn and deathless, invisible, without colour and formless, one and without a second, was present in human beings as the Atman or the individual self, whose attributes were identical to those of the Brahman. More, the essence of the Atman and all other things was the same. Thus in the Chandogya Upanishad, the sage Uddaloka Aruni asks his son, Svetaketu Aruneya, to bring the fruit of a banyan (nyayagrodha) tree. He then makes him get the seeds out by breaking the fruit, and break the seeds into invisible parts, and says,

"Good lad, on this subtle part-the/ subtle part you do not see-rests the great banyan tree. Good lad, have faith.

"This subtle part is what all this has as self. It is the truth; it is the self. You are that Svetaketu." (Translated by Valeric J Roebuck).

Earlier, Uddaloka Aruni had talked of "this great tree" pervaded "by the life, by the self" that stood "happy, ever drinking", and added, "When separated from the life, it dies, but the life does not die. This subtle part is what all this has as self. It is truth. It is the self."(Roebuck).

If the self, that is life, identical with the Brahman of which it is a part, is consciousness, are these subtle parts repositories of consciousness? Is consciousness life? Is life the common presence in cosmos? If so, where do inanimate objects, obviously a part of the cosmos, fit? Is life inherent in matter? The Upanishadic concept of the all-pervasiveness and nature of Brahman was intuitive. The sages whose wisdom the Upanishad's embody, had neither the accumulated corpus of knowledge nor the analytical tools and equipment for observation and experimentation that scientists the 18th century onwards had at their disposal. The question arises: To what extent is their intuitive vision borne out by modern science, which originated in the West in the post-Renaissance period?

The seventeenth century saw the demolition of the concept of a living universe, that was based on the application of Aristotelian system of logic to Christian theology, within an epistemic framework that has historically come to be known as the scholastic, and that had subordinated the temporal to the spiritual, reason to faith. What took its place was the Newtonian idea of a mechanistic, law-governed universe that functioned eternally according to its own gravitation-based dynamics and had nothing to do with any kind of divine or spiritual entity. So great was the prestige of Isaac Newton, whose landmark discoveries of the working of nature led to its emergence, and so much in harmony with it was with the post-Renaissance humanist Weltanschauung with its emphasis on the supremacy of reason and relegation of the spiritual and religious, that it influenced thinking in almost every sphere of knowledge, the most striking example being the Marxian emphasis on the inexorable laws of a dialectically unfolding history.

It took its first major knock when the second law of thermodynamics, enunciated in the 19th century by Rudolph Clausius and Lord Kelvin, stated that there was an inexorable loss of thermal energy in the universe as disorders measured in terms of entropy had a natural tendency to increase in closed systems. There was, therefore, an inexorable, movement towards "death" from loss of heat. Another knock came in 1897 when Joseph John Thompson discovered a fundamental particle smaller than the atom, called it the electron, and inaugurated the chapter of particle physics. Niels Bohr's theory of Complimentarity showed that a phenomenon could be viewed in two mutually exclusive ways, both valid in their own terms. Max Planck showed that like matter, energy existed in particles or packets or quanta, and Louis de Broglie that sub-atomic particles-even atoms-could sometimes behave as waves. Erwin Schroedinger mathematically proved the existence of De Broglie's waves and that electrons were a kind of matter waves-and Max Born that what Schroedinger showed was not an electron but its statistically possible location because some electrons could go through a barrier, some could not. And then Werner Heisenberg's famous Uncertainty Principle showed that the exact position and the precise location of an electron could not be simultaneously determined, nor could one be certain where an electron would go if hit. Albert Einstein doubtless rejected the Uncertainty Principle but his Theory of Relativity viewed space and time as a continuum and implied that the universe looked different from different places.

Whatever the differences among the scientists, the tumultuous developments of 1920s shook the foundations of Newtonian physics, which believed that all physical phenomena could be reduced to solid material particles. The solid particles are now seen to turn, at the sub-atomic level, into wave-like patterns of probabilities of inter-connections among parts of a unified whole. If this leads one back to the Upanishadic concept of an interlinked universe, a new dimension has been added to the discourse by Ilya Prigogine, the well known physicist and Islabelle Stengers, a chemist, philosopher and historian of science, who show, in their book Order out of Chaos that while some parts of the universe may operate as separate, closed systems of the Newtonian type, most parts-particularly biological and social systems-function as open ones exchanging energy and matter with their environment. Besides, all systems have subsystems which are constantly fluctuating and sometimes reach a "bifurcation point" when they disintegrate into "chaos" or reorganise themselves into new, higher levels of order, and it is impossible to predict which course it will take.

Prigogine and Stenger's efforts to include social and biological systems into the study of the universe indicates that the latter is a living whole which cannot be understood in terms of physics alone, that scientists are a part of the phenomenon they observe. This is in keeping with the holistic approach which has gained an irreversible momentum with the coming of age of the life and environmental sciences which posit a living, interlinked and interdependent world where life is latent in all matter. We are again back to the Upanishads according to which life of the atman pervades everything.

A TRIBUTE TO HINDUISM

articles on hinduism

Jesus Lived in India
By Holger Kersten

Thus begins Holger Kersten's book "Jesus Lived in India". This German book is a thorough, methodical and authoritative examination of the evidence of Christ's life beyond the Middle East before the Crucifixion and in India and elsewhere after it. This article is a summary of Kersten's exhaustive research into Christ's travels after the Crucifixion, his arrival in India with the Mother Mary and finally his death and entombment in Kashmir. Kersten notes the many parallels of Christ's teachings with other religious and cultural traditions and suggests that at least some of these figures may have been one and the same personality. It is not possible, Kersten asserts, to disprove that Christ went to India. The current information documenting Christ's life is restricted to the gospels and the work of Church theologians. One can hardly trust these sources to be objective considering their obvious interest in maintaining the authority of their Church and its grip on the masses.

The Russian scholar, Nicolai Notovich, was the first to suggest that Christ may have gone to India. In 1887, Notovich, a Russian scholar and Orientalist, arrived in Kashmir during one of several journeys to the Orient. At the Zoji-la pass Notovich was a guest in a Buddhist monastery, where a monk told him of the bhodisattva saint called "Issa". Notovich was stunned by the remarkable parallels of Issa's teachings and martyrdom with that of Christ's life, teachings and crucifixion.

For about sixteen years, Christ travelled through Turkey, Persia, Western Europe and possibly England. He finally arrived with Mary to a place near Kashmir, where she died. After many years in Kashmir, teaching to an appreciative population, who venerated him as a great prophet, reformer and saint, he died and was buried in a tomb in Kashmir itself. The first step in Christ's trail after the Crucifixion is found in the Persian scholar F. Mohammed's historical work "Jami-ut-tuwarik" which tells of Christ's arrival in the kingdom of Nisibis, by royal invitation. (Nisibis is today known as Nusaybin in Turkey) . This is reiterated in the Imam Abu Jafar Muhammed's "Tafsi-Ibn-i-Jamir at-tubri." Kersten found that in both Turkey and Persia there are ancient stories of a saint called "Yuz Asaf" ("Leader of the Healed"), whose behaviour, miracles and teachings are remarkably similar to that of Christ.

The many Islamic and Hindu historical works recording local history and legends of kings, noblemen and saints of the areas thought to be travelled by Jesus also give evidence of a Christ like man; the Koran, for example, refers to Christ as "Issar". Further east, the Kurdish tribes of Eastern Anatolia have several stories describing Christ's stay in Eastern Turkey after his resurrection. These traditional legends have been ignored by the theological community. Kersten

also suggests that prior to Christ's mission in the Middle East, he may have been exposed to Buddhist teachings in Egypt. After his birth in Bethlehem, his family fled to Egypt to avoid Herod's persecution. Surprisingly some scholars now acknowledge that Buddhist schools probably existed in Alexandria long before the Christian era.

More clues are drawn from the Apocrypha. These are texts said to have been written by the Apostles but which are not officially accepted by the Church. Indeed, the Church regards them as heresy since a substantial amount of the Apocrypha directly contradicts Church dogma and theology. The Apocryphal 'Acts of Thomas', for example, tell how Christ met Thomas several times after the Crucifixion. In fact they tell us how Christ sent Thomas to teach his spirituality in India. This is corroborated by evidence found in the form of stone inscriptions at Fatehpur Sikri, near the Taj Mahal, in Northern India. They include "Agrapha", which are sayings of Christ that don't exist in the mainstream Bible. Their grammatical form is most similar to that of the Apocryphal gospel of Thomas. This is but one example giving credibility to the idea that texts not recognised by the Church hold important clues about Christ's true life and his teachings.

In tracing Christ's movements to India and beyond, Kersten also discovered that many of his teachings, which have been gradually edited out of the modern Bible were originally Eastern in nature. Principles such as karma and re-incarnation, for example, were common knowledge then, and seem to have been reaffirmed by Christ. Imagine the implications that this discovery holds for Western Christianity and its churches, who have kept Christ in their doctrinal top pockets and have constrained the entire Western culture within the narrow teachings of blind faith, organised religion and original sin!

Further clues are cited from The Apocryphal Acts of Thomas, and the Gospel of Thomas which are of Syrian origin and have been dated to the 4th Century AD, or possibly earlier. They are Gnostic Scriptures and despite the evidence indicating their authenticity, they are not given credence by mainstream theologians. In these texts Thomas tells of Christ's appearance in Andrapolis, Paphlagonia (today known as in the extreme north of Anatolia) as a guest of the King of Andrappa. There he met with Thomas who had arrived separately. It is at Andrapolis that Christ entreated Thomas to go to India to begin spreading his teachings. It seems that Christ and Mary then moved along the West coast of Turkey, proof of this could be an old stopping place for travellers called the "Home of Mary", found along the ancient silk route. From here Christ could easily have entered Europe via France. He may have even travelled as far as the British Isles, for in England there is an ancient oak tree called the "Hallowed Tree" which (says local legend) was planted by Christ himself.

In his travels through Persia (today's Iran) Christ became known as Yuz Asaf (leader of the Healed). We know this because a Kashmiri historical document confirms that Isa (the Koranic name for Christ) was in fact also known as Yuz Asaf. The Jami - uf - Tamarik, Volume II, tells that Yuz Asaf visited Masslige, where he attended the grave of Shem, Noah's son. There are various other accounts such as Agha Mustafa's "Awhali Shahaii-i-paras" that tell of Yuz Asaf's travels and teachings all over Persia. It seems that Yuz Asaf blessed Afghanistan and Pakistan with his presence also. There are for example two plains in Eastern Afghanistan near Gazni and Galalabad, bearing the name of the prophet Yuz Asaf. Again in the Apocryphal Acts of Thomas, Thomas says that he and Christ attended the Court of King Gundafor of Taxila (now Pakistan), in about 47AD, and that eventually both the King and his brother accepted Christ's teachings.

Kersten claims that there are more than twenty one historical documents that bear witness to the existence of Jesus in Kashmir, where he was known also as Yuz Asaf and Issa. For example the Bhavishyat Mahapurana (volume 9 verses 17-32) contains an account of Issa-Masih (Jesus the Messiah). It describes Christ's arrival in the Kashmir region of India and his encounter with King Shalivahana, who ruled the Kushan area (39-50AD), and who entertained Christ as a guest for some time.

{Christ's life in India, after the crucifixion, challenges current Church teachings at their very foundation. The theology of Saint Paul, the major influence on modern Christianity, is empty fanaticism in the light of this discovery.

The historian Mullah Nadini (1413) also recounts a story of Yuz Asaf who was a contemporary to King Gopadatta, and confirms that he also used the name Issar, ie. Jesus. There is also much historical truth in the towns and villages of Northern India to prove that Jesus and his mother Mary spent time in the area. For instance, at the border of a small town called Mari, there is nearby a mountain called Pindi Point, upon which is an old tomb called Mai Mari da Asthan or "The final resting place of Mary". The tomb is said to be very old and local Muslims venerate it as the grave of Issa's (ie Christ's) Mother. The tomb itself is oriented East-West consistent with the Jewish tradition, despite the fact it is within a Muslim area. Assuming its antiquity, such a tomb could not be Hindu either since the Hindus contemporary to Christ cremated their dead and scattered their ashes as do Hindus today.

Following Christ's trail into Kashmir, 40km south of Srinagar, between the villages of Naugam and Nilmge is a meadow called Yuz-Marg (the meadow of Yuz Asaf, ie. Jesus). Then there is the sacred building called Aish Muqam, 60km south east of Srinagar and 12km from Bij Bihara. "Aish" says Kersten is derived from "Issa" and "Muqam" place of rest or repose. Within the Aish Muqam is a sacred relic called the 'Moses Rod' or the 'Jesus Rod', which local legend says, belonged to Moses himself. Christ is said to also have held it, perhaps to confirm his Mosaic heritage. Above the town of Srinagar is a temple known as "The Throne of Solomon", which dates back to at least 1000BC, which King Gopadatta had restored at about the same time as Christ's advent. The restoration was done by a Persian architect who personally left four inscriptions on the side steps of the temple. The third and fourth inscription read: "At this time Yuz Asaf announced his prophetic calling in Year 50 and 4" and "He is Jesus -- Prophet of the Sons of Israel"! Herein lies a powerful confirmation of Kersten's theory. Kersten suggests that Christ may have travelled to the South of India also, finally returning to Kashmir to die at the age of approximately 80 years. Christ's tomb, says Kersten, lies in Srinagar's old town in a building called Rozabal. "Rozabal" is an abbreviation of Rauza Bal, meaning "tomb of a prophet". At the entrance there is an inscription explaining that Yuz Asaf is buried along with another Moslem saint. Both have gravestones which are oriented in North-South direction, according to Moslem tradition. However, through a small opening the true burial chamber can be seen, in which there is the Sarcophagus of Yuz Asaf in East-West (Jewish) orientation!

According to Professor Hassnain, who has studied this tomb, there are carved footprints on the grave stones and when closely examined, carved images of a crucifix and a rosary. The footprints of Yuz Asaf have what appear to be scars represented on both feet, if one assumes that they are crucifixion scars, then their position is consistent with the scars shown in the Turin Shroud (left foot nailed over right). Crucifixion was not practised in Asia, so it is quite possible that they were

inflicted elsewhere, such as the Middle East. The tomb is called by some as "Hazrat Issa Sahib" or "Tomb of the Lord Master Jesus". Ancient records acknowledge the existence of the tomb as long ago as 112AD. The Grand Mufti, a prominent Muslim Cleric, himself has confirmed that Hazrat Isa Sahib is indeed the tomb of Yuz Asaf!

Thus Kersten deduces that the tomb of Jesus Christ Himself is in Kashmir!

he implications of Kersten's discovery are monumental. Christ's life in India, after the crucifixion, challenges current Church teachings at their very foundation. The theology of Saint Paul, the major influence on modern Christianity, is empty fanaticism in the light of this discovery. Threatened also are the doctrines of obedience to the Church, original sin, salvation through blind faith and the non-existence of reincarnation, etc. Yet these ideas underlie the morality and ethics, (or lack of them), that govern the entire Western social structure, from the legal system to medical health care schemes. It is no wonder that the modern Churches and their secular interests refuse to consider such a proposition as Kersten's!

The Synopsis of "Jesus Lived In India" by Holger Kersten was written by Dr Ramesh Manocha & Anna Potts.

Denigrating Savarkar is to insult patriotism

Author: Shyam Khosla
Publication: Rajasthan Patrika
Date: February 26, 2003

Uncalled for and unnecessary controversy over the unveiling of Veer Vinayak Damodar Savarkar's portrait in the Central Hall of Parliament by President A.P.J. Abdul Kalam last week has deeply hurt all patriotic Indians. It is an ungrateful nation that fails to remember its heroes. It is not a case of not honouring our freedom fighters but worse. Opposition parties and a section of the leftist media are denigrating the great freedom fighter. Cooked up allegations that have been exposed, time and again, as half-truths and blatant lies have been fished out by the these elements to malign the great patriot who underwent grave hardships and is a source of inspiration to generations of Indians. The critics launched a media campaign to dissuade the President A.P.J. Abdul Kalam from unveiling Savarkar's portrait in the Central Hall of Parliament. Opposition leaders wrote letters to the President informing him of their decision to abstain from the ceremony and requesting him to reconsider his decision to associate himself with the ceremony that, one of them alleged, aimed at "re-inventing Savarkar as a national hero".

Things might have taken an ugly turn if a leftist like K.R. Naryanan was in the Rashtrapati Bhavan. Only three years ago, Narayanan sat over the Prime Minister's proposal to posthumously award Bharat Ratna to Veer Savarkar. In an obvious bid to avoid yet another stand off with the Head of the State bent upon embarrassing the NDA Government on every conceivable occasion, the Prime Minister kept the dispute under wraps and let the matter rest. It is a tribute to the vision and nationalistic fervour of President Kalam that he refused to be influenced by the motivated campaign spearheaded by the Communists and their friends in the media. He insisted on going to the Central Hall to perform one of his sacred duties. In addition to top BJP leaders, Vice President Bhairon Singh Shekhawat, former Prime Minister Chandra Shekhar and Rajya Sabha Deputy Chairman Najma Heptulla were among the dignitaries present on the occasion. Conspicuous by their absence were the leader of the Opposition, Sonia Gandhi, and Deputy Speaker of Lok Sabha, P.M. Sayeed. They owe an explanation to the nation for showing disrespect to the great patriot.

Opposition parties' backtracking and launching an attack on Savarkar is reprehensible. CPM leader Somnath Chatterjee, Congress leaders Shivraj Patil and Pranab Mukherjee were present in the meeting of the parliamentary committee that took the decision to install a portrait of Savarkar in the Central Hall. The decision was by consensus. No one raised any objection to the proposal. Somnath Chatterjee did ask whether there was any room left for another portrait in the Central Hall to which the Speaker's response was that there was a niche near the entrance. CPM leader did not question the core issue - honouring Savarkar. As an afterthought, the Communist parties and the Congress chose to carry on a campaign of calumny against the great patriot. A political commentator writing in a leading English-language daily says the move to honour Savarkar is an attempt to "whitewash" his role role in the conspiracy behind the Mahatama's assassination. The gentleman is dishing out half-truths. The prosecution had no evidence against Savarkar barring approver Digamber Bagde's statement that he heard Savarkar wishing Godse all success in his mission. The court did not believe him. While all other accused were punished the court honourably acquitted Savarkar of the conspiracy charge. The prosecution did not challenge the special court's decision in the high court. The Government of the day

thought its purpose in implicating the Hindu Maha Sabha leader in the case had been served. How right it was. The mud slinging continues even after the great patriot is dead.

Savarkar's daring escape from the ship in which he was being brought to India as a prisoner is a saga of India's freedom struggle. Congress MPs, Violet and Joachim Alva wrote to Savarkar on February 5, 1966, "We humbly salute your unforgettable daring achievement - swimming the ocean and regaining freedom - will be long cherished in the pages of freedom struggle". Is Sonia Gandhi aware that her mother in law had in 1980 written a letter on the occasion of the great patriot's birth anniversary saying, "Veer Savarkar's daring defiance of the British Government has its own important place in the annals of our freedom movement". The great revolutionary doesn't need a certificate of patriotism from Sonia Gandhi who fled to Italy during the Bangladesh war and didn't apply for Indian citizenship for years after she married Rajiv Gandhi and resided in the Prime Minister's house.

Much is being made of Veer Savarkar's mercy petition to the British Government in 1913 during his incarceration in the Andaman Islands. Bipin Chandra and his group of "eminent" historians, who have raised the issue time and again, may please note that Savarkar petitioned the British not once but eight times between 1911 and 1920 to secure his release from jail. He was no satyagrahi who would not mind spending his entire life in jail waiting for British rulers' change of heart. Revolutionary-turned-Satyagrahi Bhagat Singh had decided to court arrest to propagate his vision. There is no point in comparing the two. Savarkar was a revolutionary and wanted to get out of jail by hook or crook to join the freedom movement. The British rulers knew him better than our "eminent historians". Declassified documents placed in the National Archives show what the British thought of Savarkar and his petition. The British Home Secretary Macpherson's note on Savarkar's petition is revealing. He wrote thus, "It will be dangerous for the British Empire to release Savarkar. His pleas are a ruse to get out of the jail. Once out, he will organise an underground movement against the British. I, therefore, reject the petition on the ground that it will be a danger to public safety". Our "eminent" historians know that tactics do play a role in a freedom struggle. They are not against Savarkar per se but against his philosophy of Hindutava. They are denigrating Savarkar today, tomorrow they may do the same to Shivaji - another icon of Hindutava - who sought mercy from the enemy whenever pushed to a corner but fought back and carried on his campaign for freedom once he was out of the enemy's claws.

It will not be out of place to recall the role of the Communists during the freedom struggle. The CPI, as in well known, supported the colonial rulers' war effort after Germany attacked Soviet Union - the fatherland of all Communists. File No. 7/15/42-Pol (I) is available in the National Archives. It contains a confidential memorandum running into more than 100 pages submitted by CPI Secretary P.C. Joshi to the British Government narrating the role the party played in exposing the "fifth columnists". And who were the fifth columnists, CPI exposed? Senior leaders of the Congress Socialist Party and the Forward block, including Ram Manohar Lohia, Jai Prakash Narain and Achhut Patwardhan. And they have the cheeks to question Savarkar's patriotism!

Swami Ram Tirath:The Unfettered Thinker

K. K. Khullar

http://www.indiagov.org/perspec/nov99/swami.htm

Swami Ram Tirath was a modern Yogi who gave a new meaning to Vedanta and inspired the youth of India to rise above material wants. He brought a new cheer to the suffering millions. "The highest gift you confer on man is to offer him knowledge", he said. "You may feed a man today, but he will be just as hungry tomorrow. Teach him an art and you will enable him to earn his living all his life." Born in 1873 in a village called Muraliwala (now in Pakistan), he opted for his watery grave while meditating in the Ganges at the age of thirty-three in the hills of Garhwal, in the present Indian state of Uttar Pradesh. According to Puran Singh, his biographer, Vedas were written by men like him.

His father, Hiranand Gosain, was a priest in the temple of the village. The child Tirath Ram was extremely sensitive. His speech was bird-like. He smiled like a babe in his sleep, a smile which he retained till his death. The soothsayers had predicted that the child would be a great scholar and bring glory to his Motherland. Brought up in abject poverty, he considered poverty a blessing. Even when he rose to the dizzy heights of popularity, he remained poor. He stood for renunciation. Like the Sufis of the yore, he possessed nothing and nothing possessed him except the name of God.

A Professor of mathematics at Lahore, a chance meeting with Swami Vivekananda changed the course of his life, He stood for the universal education of girls, as he believed that God resides in the hearts of women. "Neglecting the education of women and children and the labouring classes is like cutting down the branches that are supporting us, nay, it is like striking a death-blow to the roots of the tree of nationality." He presaged Gandhi in a number of ways, the most important being his concept of *Ahimsa* and *Dharma*. *Dharma* is not religion, it is a way of righteousness. In the words of Mahatma Gandhi, "Swami Rama's teachings have got to be propagated. He was one of the greatest souls not only of India but of the whole world. I adore his ideals." His ideals symbolized the wisdom of India. Very few people know that Swami Ram Tirath had predicted one hundred years ago that the 21st century would be India's century and that India would regain its glory and position for the onward march of civilization. Like Buddha, he propagated that the greatest sin was ignorance and the greatest virtue was knowledge.

Schooled by Christian Missionaries and educated at the Forman Christian College, Lahore, Tirath Ram obtained his Masters in Mathematics from Government College, Lahore, with distinction. A favourite student of Prof. Gilberton, he took the latter's classes when he was severely ill. Mathematics was music to him. He wanted to serve God through mathematics. While speaking on Mathematics at Amritsar he met a scholar named Narayan Swami who became his disciple. The

disciple later became Swami's first biographer. In November, 1897, he met Swami Vivekananda in Lahore.

During the summer vacations he used to visit Rishikesh where a dip in the Ganges would make him ecstatic. For hours on end, he would immerse himself in the waters of the Ganges. With each dip he discovered a new vision, a new life. It is here that he found answers to most of his questions. He wandered among the hills, moved among the snows, sat on the highest peaks and thought and read and wrote. His 'Jalwa-i-Kobisar' (The Spectacle of Mountains) in Urdu is the greatest invocation of a poet to the Goddess of Mountains.

In 1899, he resigned from his job at the Government College, Lahore, and announced his decision to explore the jungles of the Himalayas as a mystic. And one day he renounced the world. The scene at the Lahore Railway Station, where thousands had come to see him off, was a moving one. One of those who had come to see him off was Dr. Mohamad Iqbal, his colleague at the Government College. "Tirath Ram, don't go, reconsider your decision", he said. But Professor Tirath Ram had made his decision. It is only in the lap of the Himalayas that he found real peace, spiritual bliss and intellectual enlightenment. It is here that he blossomed and achieved greater perfection. It is here that Professor Tirath Ram became Swami Ram Tirath, the Punjabi monk who gave a new message to his countrymen.

According to Puran Singh, another biographer of Swamiji, Vedas were written by men like him. "Vedanta shows you that your happiness is your own business. Realize the truth and you are free. According to Vedanta, your soul is not impure or sinful by nature."

Puran Singh had met Swamiji in Japan in 1902. He arranged there a series of lectures by Swamiji which evoked tremendous applause. In fact, they were not lectures but divine expressions of a rare soul exalted by suffering. He did not belong to any organized religion. Religion for him was morality - a theme that Gandhi developed later.

This is how Prof. Takakushtra, Head of the Sanskrit Department, University of Tokyo, described him, "I have met many pundits and philosophers at the house of Professor Max Mueller in England and at other places, but I have never seen a personality like Swami Ram, who is a living and significant illustration of his whole philosophy. In him both Vedanta and Buddhism meet. His is the true religion. He is a true poet and philosopher."

And a poet he certainly was, not only in English but also in Urdu. He wrote about a hundred poems in English and a hundred-and-fifty in Urdu. A collection of his poems was published with an introduction by no less a person than C.F. Andrews.

What care for caste or creed
It is the deed, it is the deed,
What for class and what for clan
It is the man, it is the man,
What for crown and what for the crest
It is the heart within the breast.

When Swami Ram Tirath left Tokyo for San Francisco, a Japanese Buddhist remarked, "I see his smile still floating in the air like plum flowers." A Japanese lady remarked, "He has imparted

fragrance to our colourless flowers." Puran Singh in his 'The Story of Rama' narrates several such instances of Ram's popularity in Japan.

He stayed in the United States for two years. The Americans listened to him. When Ram chanted the word "*OM*" many Americans felt they were lifted from the earth. "I swam in the air as a figure of light", said an American lady. "His presence is divine. I felt as if I were the mother of the universe, all the countries were mine and all nations were my own children." A lady whose only child died went to Swamiji for solace. Pointing to a Negro boy, Ram said, "Mother, take him and love him as your own". He met President Roosevelt, by sheer chance, at Shasta Springs on May 20, 1903. Mrs. Welman published Swami's dialogues and letters. They run into eight volumes of four hundred pages each. Titled 'In Woods of God's Realization' these thoughts have provided solace to tens of thousands of readers all over the world.

Swami Ram Tirath stood for knowledge and the total eradication of ignorance and superstitions. His Vedanta is not confined to the man of the mountains. It also embraces the man of the world. He stood for the freedom of thought and independence in thinking. "Independent thinking", he said, "is looked upon in India as a heresy, nay, as the worst among crimes. Whatever comes from a dead language is sacred." Giving a clarion call to his countrymen he said, "Beloved orthodox people of India, put into force the *Shastras* (religious texts) aright. The *Dharma* of the country demands that you relax the stringent caste rules and subordinate sharp class, distinctions to national fellow-feeling. "

According to Lala Hardyal, a freedom fighter, Swami Ram Tirath was the greatest Hindu who ever came to America. Writing from the United States in 1911, he said, "In this part of the country there are many persons who lovingly cherish the memory of Swami Ram Tirath. They tell how he lived like a true ascetic and won the hearts of villagers in the mountain valleys of California. He was a real saint and a sage whose life mirrored the highest principles of Hindu spirituality as his soul respected the love of the universal spirit which he tried to realize."

And yet he said, "My religion is not Hinduism, Islam, Christianity, Catholicism or Protestantism, but it is hostile to none. The overlapping area covered by the sun, the stars, the rivers, gravity, mind and body, this is the field of my religion. Are there any Presbyterian lilies? Are there any Methodist landscapes? ... My religion is a religion without a name. It is the religion of nature. I call it the Common Path."

He returned to India in December 1904. On the way, he halted in Egypt where he addressed his audiences in mosques in Persian and Arabic. When he talked of the ancient civilization of Egypt, the Egyptians looked upon him as one of themselves. From Bombay he went straight to the hills, spending a few days in Mathura and Vrindavan. In November, 1905, he selected a place called Vyasa Ashram at a height of 12, 500 feet for his meditation. Here he meditated and wrote his books. In February, 1906, he set up Vashist Ashram, which afforded a panoramic view of the lofty peaks of Badrinath, Kedarnath, Gangotri, Yamunotri and, above all, Mount Kailash.

On October 17, 1906, Swamiji went for a bath in the Ganges. It was a Diwali day (a day considered auspicious in the Hindu calendar). Swami Ram Tirath sat in the lap of Mother Ganga in the pose of a *Samadhi*. His body floated in that pose and returned floating after on week to the very spot from where he had taken a dip. It was still in the state of a *Samadhi*, with arms and feet

crossed. The bier was entrusted to the holy waters where his soul found the eternal bliss.

When Mohamad Iqbal learnt about the end of his friend's earthly journey, he wept. In his immortal poem, on Swami Ram Tirath, he compared him to a pearl among the shells on the seashore of knowledge, a sun among the stars.

The author, a historian, is now a freelance writer.

Nalanda - The Ancient City of Knowledge

By PRANAV KHULLAR

http://www.newsindia-times.com/national36.htm

Nalanda, like Rome, was not built in a day. It took several centuries to evolve, diversify and extend its civilizing influence not only to all corners of the country but to lands as distant as China, Japan, Malaysia, Java, Sumatra, Korea, Nepal and Tibet. Originally a mango-grove called Pavarika in the village Bargoan in Bihar, the place was sanctified by the Sakyamuni (Gautam Buddha) himself when the Enlightened One broke journey here to halt and rest, not once but several times. Ashoka built a Vihara (monastery) here and Harsha made it possible for a thousand scholars to delve deep into a hundred disciplines everyday in its numerous halls and more numerous temples.

Contemporary eye-witness accounts testify that there were so many Viharas around Nalanda, Rajgriha and Vikramsila that the whole area was called Bihara, from which the present day Indian state of Bihar derives its name. The transformation of Nalanda Vihara into the Nalanda university was the result of a rich heritage which helped it become an international center of education and culture. Nalanda stood for freedom in learning, thought, expression and action.

This heritage was both non-Buddhist and Buddhist. While the former included the Vedas and the Puranas, the latter consisted of works such as Vinay Pitaka, Dhammapada, Abhidhamma and Majhima Nikaya, with excellent commentaries by scholars such as Nagarjuna, Maiteriya, Asanga, Vasubandhu and Dinnaga, who defined and refined Buddhism in its various facets and dispensations. Nalanda, therefore, honoured thought and men of thought in the best of Indian traditions.

Nalanda was a residential university like so many others in those times, such as Taxila, Ujjaini, Vallabhi, Vikramsila and Amravati.

Yet, it was a university with a difference. The Gate Keepers of Nalanda were scholars of the highest repute, well versed in their subjects and drawn from the best in the country to examine the fresh entrants at the Gate itself. This was a novel method of ‘Entrance Examination’ and deserves admiration when we consider the historical context of Nalanda’s period.

The Gate Examination was very tough. Seven or eight scholars out of every ten were unsuccessful. So the scholars came to the gates of Nalanda again and again, till they were selected. It must have been an extraordinary spectacle to see these scholars, from all parts of the world assemble at Nalanda seeking admission. Merit alone was the criteria and even the Vice Chancellor had no discretion.

There are records of instances where scholars either belonging to or patronized by royal families were rejected, in spite of the fact that the expenses of Nalanda were met with from royal grants of village revenues. There is evidence that the revenues of several villages were granted to Nalanda, for the maintenance of its hostels and the administration of its temples and Viharas.

Several Chinese scholars and monks visited, studied and taught at Nalanda. Their memoirs are a rich and authentic source for the reconstruction of academic life at Nalanda. According to one such scholar-monk, I-Tsing, the minimum age for admission to Nalanda was 20 years. This indicates that scholars who had already passed out from some other university were admitted to Nalanda to pursue higher knowledge.

We also have the evidence from Hiuen Tsang, the Chinese pilgrim who came to Nalanda in the days of the "Good King" Harsha. He confirms that "learned men from different cities, who desire to acquire renown in discussion, come (to Nalanda) in multitudes to settle their doubts." The Gate-Keepers of Nalanda were in fact, the Gate-Keepers of India's knowledge, her culture and heritage. Anyone was welcome for an open discussion on any aspect of religion, philosophy, law and life.

To be admitted to this great center of learning was a matter of great pride and prestige. Its multi-disciplinary approach to learning attracted students from far off lands. Although the subject of theology was compulsory, Nalanda was not a sectarian or a religious university imparting only Buddhist thought; other subjects were taught as fervently.

Almost all sciences, including the science of medicine were taught. So were the Upanishads and the Vedas. Panini's grammar, the science of pronunciation (Phonetics), etymology, Indology and Yoga were all included in the curricula. Surprisingly, even archery was taught. Hiuen Tsang himself learnt Yogasastra from Jayasena. When King Harsha requested Shilabhadra to send four learned scholars to Orissa to debate with the heretics, Hiuen Tsang was chosen to be one of them.

Hiuen Tsang, who stayed at the university for 17 years, first as a student and later as a professor under the Master, Shilabhadra, came to India via the Gobi desert and entered Kashmir through the Himalayas.

At Nalanda, he was received at the Gate with a thousand lamps, his erudition and reputation having travelled faster than him. Here he studied to obtain the degree of Master of Law and became the Vice-Principal of this great University. The head of the University was called 'Pandita' and Shilabhadra occupied this position when Hieun Tsang came to join as a student. In no time, the new entrant rose in the estimates of Shilabhadra who sent him out on difficult assignments involving long and perilous journeys.

According to Hieun Tsang's description, the daily schedule at Nalanda was packed with rituals. The day began with a call for the morning bath. It seems that a morning bath was compulsory for every inmate; at least it was obligatory to bathe at the prescribed hour. The bath was followed by the ablution of the holy image of Buddha, by furnishing heaps of flowers and incense, a fairly prolonged ritual accompanied by recitation of stotras and singing of hymns. Afterwards, the inmates had their meagre breakfast.

Thereafter, they went to their respective halls for discussion. In the afternoon, another ritual called 'Caitya Vandana' was held, wherein priests assembled at the main mate of the monastery and

sang songs in praise of Sakyamuni. They could go out in the evenings and the night was meant for repose.

Knowledge of Sanskrit was essential and it meant having a complete mastery over Sanskrit grammar, literature and correct pronunciation. The method of teaching was tutorial followed by discussions.

Listening to the discussions was education. It is extraordinary that the discussions continued throughout the day and, indeed, the night. Nalanda scholars never tired of discussions; rather, they welcomed them. Hieun Tsang was deeply impressed with the discipline at Nalanda. In its existence of about 700 years at the time of his visit, there had not been a single case of any strike or disturbance or even commotion (except intellectual ferment) at the University. Besides, there were discourses open to all where all subjects from life to death were discussed.

According to I-Tsing: “They arrange every day about hundred pulpits for preaching, and the students attend these discourses without fail, even for a minute.” There was no writing work for Nalanda scholars except the copying of manuscripts and texts. It may be recalled that both Hiuen Tsang and I-Tsing carried huge loads of such texts back to China upon their return.

Nalanda was an example of the Guru-Shishya parampara, a great Indian tradition. The authority of the Guru teacher) over the shishya (student) was absolute, and yet, dissent was permitted in academic matters. The tradition, although going back thousands of years, flourished at Nalanda more than elsewhere.

Describing the Guru-Shishya relationship, I-Tsing says: “He (Shishya) goes to the teacher at the first watch and at the last watch in the night. First the teacher bids him to sit down comfortably. Selecting some passages from Tripatakas, he gives a lesson in a way that suits the circumstances and does not leave any fact or theory unexplained. He inspects his pupil’s moral conduct, and warns him of defects and transgressions. Whenever he finds his pupil at fault, he makes him seek remedies and repent. The pupil rubs the teacher’s body, folds his clothes and sometimes sweeps the apartment and the yard. Then having examined the water to ensure there are no insects in it, he gives it to his teacher. Thus, if there is anything to be done, he does all on behalf of the teacher.” No fees of any kind were charged at Nalanda for the studies. No price was paid for food or clothes or accommodation. There was no punishment of any kind.

For the faults or the defects of the students, the teachers punished themselves. The teacher-pupil relation was like that of the father and his son. The greatest delight and the highest reward of the teacher came when his pupil outshone him. Sakyamuni had even laid down detailed duties and responsibilities of the teachers and the pupils, from early morning till might when the teacher went to sleep. In the words of Gautama the Buddha, “the pupil is also to act as a check, as it were, upon the preceptor, in keeping him steadfast in the faith.”

The fall of Nalanda at the hands of the Turks is a story too deep for tears. The City of Knowledge, which took several centuries to build, took only a few hours to be destroyed. Legend has it that when some monks fell at the feet of the invaders to spare at least its world-famed library, Ratnabodhi, they were thrown in the fire along with the books. The rest fled, and Nalanda was relegated to a memory. Thus ended the story of Nalanda till it was re-told first by Hamilton and later by Alexander Cunningham. The excavations started in 1915 and continued for twenty years.

Yet much remains to be done. At the Nav Nalanda Mahavihara, which stands close to this ancient site, Sakyamuni seems to beckon all men of knowledge to restore the glory of this greatest center of learning of the yore.

A Hill of Riches, Worldly and Spiritual

By KIRK KRAEUTLER
April 1, 2001
http://www.nytimes.com/2001/04/01/travel/TIRU.html

PRESSED to name the world's most visited holy cities, one might think of Mecca or Jerusalem. Rome maybe. But the name Tirupati would hardly roll off the tongue of many people, at least not many outside India.

Still, the temple above this city in southeastern India is reputed to draw more than a million visitors yearly, thousands a day and tens of thousands on feast days. That makes it not only one of the holy places most trafficked by pilgrims in a nation flush with holy places but also the richest temple in the land. It has been said that when Tirupati cashes in its gold, the heart of the Bombay financial markets skips a beat.

When I visited with my girlfriend Radhika on an ordinary weekday, the wait to enter the temple, even given the shortcut provided by paying a few extra rupees, was eight hours. Many of the thousands gathered had already waited far longer, escaping a sputtering rain by sleeping beneath a narrow, pillar-lined enclosure along the temple, or squeezing themselves into a line that snaked its way through a claustrophobic metal corral, like a winding cattle chute, just outside the entrance.

What draws these multitudes to this site is the god Balaji, also known as Venkateshwara, a dark-skinned deity whose eyes are normally depicted partly obscured by a veil of diamonds, and whose following has blossomed in recent times, making him one of the most popular gods of Hinduism, and the wealthiest.

In Hinduism's deep and diverse pantheon, what makes Balaji stand out so? Apparently, he delivers. He is a god, whose name is sometimes translated as "giver of worldly wealth," with a solid track record of coming through for his devotees, so that his followers consider him a font of miracles and compassion that knows no bounds.

One of the odder measures of Balaji's apparent powers is the trade that Tirupati is reputed to make in shorn hair. In return for having their prayers answered, Balaji's devotees often shave their heads and make the pilgrimage up Tirumala — the hill where the temple is situated — many walking more than eight miles up the steep slopes. Some offer their child's first tonsure.

Shaving the head is seen as an offering and a way of purifying the self and stripping away any trappings of vanity and pretense, and atop Tirumala, barbershops and bald heads are almost as plentiful as the narrow vendors' stalls that sell everything from blinking Balaji clocks and Balaji key chains to bangles and baseball caps.

To a Western visitor (of which, on this particular day, there appeared to be just one), the unusual development and "commercialism" of the site, where the modern, gleaming white Hotel Bliss smiles down contentedly on the meanderings of the pilgrims, seemed to imbue it almost as much with the feeling of Disney as of devotion. In particular, the wealth of the temple has provided Tirupati with a level of organization and order that seems unique in India.

Tirumala is approached along a broad boulevard lined by the many banks that are the repositories of the temple's ample tithings and where six lanes of traffic are neatly divided by a landscaped median planted with trees and flowers. The winding road to the temple, which would be treacherous under any other circumstance, is one-way up the mountain and one-way down, with reassuring cement barriers protecting visitors from a dizzying precipice. For those on foot, the paved steps up the mountain are shielded from the punishments of the sun by a constructed canopy.

At the top of the mountain, there is a notable absence of the destitute normally found begging outside temples in India. A menu is posted advising pilgrims of the kinds of prayers that can be made in their name for the price of their offering.

And in a remarkably officious attempt at crowd control in a country as crammed with people as any in the world, visitors are registered with a kind of bar-code scanner as they buy their tickets and issued a plastic bracelet that tells them the time, usually hours away, when they can begin lining up.

These signs of relative wealth are a stunning contrast to the town's surroundings in Andhra Pradesh, one of India's least developed states. The routes to Tirupati, narrow, precarious and pitted, where the 80-mile drive northwest from Madras can take four hours, throb with the kinds of uncategorical chaos that often makes road travel in India a bone-jarring, nerve-jangling experience.

For the determined, the energetic, the intrepid, it is a rushed round trip that can be taken in a day if you hire a taxi (about $70), as we did. That disappointingly, did not leave us enough time to brave the wait to enter the temple, which even non-Hindus may do. But no matter your belief, the drive itself is nothing if not a pilgrimage.

Crossing into Andhra from the southern state of Tamil Nadu, the landscape turns decidedly rural and a few oddly shaped ridges, one eerily sloping like a shark's fin, present themselves as harbingers of the more substantial range that shelters Tirupati. Road signs change from loopy Tamilian script to another more obscure, Telugu, resembling stylized waves interspersed with hieroglyphic pelicans.

In this agricultural expanse, tradition works in strange and sometimes dangerous symbiosis with the intrusions of modernity, as villagers spread the dry chaff of their crops across the road to be pulverized by speeding auto wheels, and then gather up the grains in shallow baskets. Crowding the roads, sluggish oxen, their horns brightly decorated with silver bells and red and green paint, lumber under the weight of rough wooden carts, and women carry on their heads shaggy rafts of hay so immense that they drape down and disguise their saris, until they look like waddling shrubs.

But arduous and uncomfortable as the journey is, thousands daily make this pilgrimage to Balaji. India holds temples that are certainly more beautiful and far grander, but they do not have Balaji, who the devoted believe has turned the old young again, restored vitality to the sick, and brought prosperity to those in need.

Though the origins of the god himself remain obscure, construction of a temple was apparently begun piecemeal between about the 10th and 12th centuries. The mountain, Tirumala, is revered nearly as much as the structure itself as the setting of parts of the intricate and epic tale of the god Vishnu, the preserver in the Hindu trilogy, of whom Balaji is said to be a manifestation.

If ever tempted to stoop to a far lowlier calling, Balaji would make the perfect politician of a fractious country routinely tugged in so many directions by the sheer variety of its regions, traditions and languages.

As Nanditha Krishna, a specialist in ethno-archaeology who wrote a book on Balaji, has described him, he is a Tamil deity situated in Andhra with a name from northern India whose feminine aspect resides in Maharashtra state, on the opposing coast, and is believed to be the manifestation of a pan-Indian god. A sizable minority of devotees are also Muslims.

In other words, he has constituencies across the land.

On this given day atop Tirumala, the features and costumes of the assembled pilgrims, many dressed in their very best for the outing, revealed their origins around the country. As many slept huddled under a canopy on a concrete floor, some curled around their children, other children played and vendors worked the crowd peddling food, postcards and simple toys, hollow plastic tubes punched with holes that could be filled with chalk and rolled on the ground to form playful patterns. A few of the wealthier among those waiting smoked cigars.

Then, though the low gray clouds hovering atop the mountain had decided to vent themselves again, told their designated time had arrived to enter the temple, a clutch of pilgrims scrambled up the stairs through the pelting rain to eagerly take their place in line.

Images of religion
By Nanditha Krishna
http://www.newindpress.com/sunday/sundayitems.asp?id=SEC20021025095027&eTitle=Co\

After two weeks abroad, I returned to the sound and fury caused by the government of Tamil Nadu's ordinance prohibiting conversion by force, allurement or fraudulent means. Good friends of mine in the Roman Catholic Church and the Church of South India, have told me how the behaviour, particularly the **methods of conversion, of many new Christian sects has embarrassed them. The use of force and financial allurements for conversion is a fact, and I have come across many instances in the course of nearly three decades of work in rural India. Senior Church leaders have even expressed their opposition to these methods in public. The new ordinance does not take away the right of a person who makes a considered decision to change his faith. The current protest is ridiculous and obviously political, considering the fact that only anti-AIADMK. parties have joined the fray.**

Meanwhile, the supreme court has ruled that religion may be part of the curriculum. This ruling has silenced those who claim that religion breeds violence. Religion has been a force for good, for the improvement of the individual and society. However, it is important to ensure the integrity of the information and the communication methods. We must distinguish between Religious Teaching — as done by pathashalas, seminaries and madrasas — and Teaching About Religion. The first should be restricted to religious teachers; the second is essential for people to appreciate the beliefs of others.

While the Christians and Muslims have been at war since the Crusades, medieval Roman Catholics and Protestants also fought each other. But most religious wars were, in reality, fought over land, power and wealth. Even aggressively missionary nations like Spain and Portugal went to the Americas for wealth and territorial expansion. Islamic conquerors were themselves looking for land and wealth. **Religion has been a cloak of respectability for the adventurer.**

Each religion has a great message. **Hinduism teaches the doctrine of nishkaama karma, or duty without desire for reward, and the suppression of the ego.** Buddhism's message is one of right conduct and living. Christianity emphasises the importance of love, compassion and service; Islam, the brotherhood of man and Jainism, compassion to all creatures great and small. The fault line in each religion is the result of social developments. The Rig Veda, the oldest and most sacred book of the Hindus, does not speak of caste (the Purusha Sukta is a later interpolation). Later, caste was decided by occupation, not birth, and was changeable. Yet caste became the curse of the Hindu religion, a medium to monopolise skills and knowledge and suppress people. The

Buddha established a few rules of good conduct. Buddhism was established as a new religion after his lifetime but became so rich and corrupt that it self-destructed. Jesus Christ was a Jew who tried to clean up his religion, Judaism. He never preached another religion - if he were reborn, would he call himself a Jew or a Christian? Today, missionaries and conversion define religion. Islam means peace, but cruel despots and terrorists have changed that meaning. **By teaching children about the evils of each religion, what do we want to do? Turn them into atheists? That would be an ideal leftist agenda.**

Ideally, religion should be a **personal matter**, taught at home. Unfortunately, with the breaking down of the joint family and both parents going to work, this is no longer possible. Schools must step in and teach moral values. The argument that existing schoolbooks have enough information on the Buddha, Kabir and Nanak is no argument. **Religions such as Hinduism and Judaism do not have a single founder, which does not mean that doctrines should not be taught.** As the supreme court has said, value education must ensure equal respect for all religions. The problem is that religious sects produce books that boost their own and put down others.

Tolerance of other religions implies putting up with what we dislike. We need to pass on to integration. The God we worship is an individual choice, born of an accident of birth; the culture we practise must be common and identifiable. A good example of this is seen in Kerala where the Onam festival is celebrated by almost everyone. When the Zoroastrians asked for permission to build a temple to preserve their sacred fire, the Raja of Surat gave them absolute religious freedom, but demanded that their dress and public customs be locally compatible. When our cricketers appear on the field, their blue uniform is a unifying factor. We root for our new age religion and its practitioners. Values are incomprehensible without the support of appropriate images. One textbook defined communal harmony with three schoolboys, Ram, Rahim and Robert — Hindu, Muslim and Christian — distinguished by their turban, topi and hat respectively! I would have defined their commonness by a shirt and shorts for each.

The artistic traditions of religions were used to teach the difference between good and bad. The scenes of the life of the Buddha in early Buddhist monuments were intended to serve as role models. The walls of Hindu temples are decorated with the stories of gods and goddesses who defeated demons, the message being that evil will be destroyed. The Chola bronzes of Nataraja send out an image of peace within ferment. Shiva's face is a picture of detached calm, even as he destroys evil and creates a new world, encircled by fire, dancing to the beat of the drum, fire in hand and the demon of ignorance squirming beneath his foot. The walls of temples were carved with images of Portuguese visitors and Arab traders, of Brahmins honouring the Buddha and Buddhists worshipping Hindu deities. While different occupations are portrayed, the obnoxious system of untouchability is never shown in Indian art. The religion was obviously not proud of this social development.

Art was used to send out messages by other religions too. The Cross is the defining image of Christianity, a reminder of Christ's ultimate sacrifice. Leonardo da Vinci's Last Supper and Michelangelo's Pieta convey the message of the tragic inevitability of the Crucifixion. Even an image-less religion like Islam promised paradise in the exquisite decorations on the walls of mosques and tombs. In Persia, the Sufis reproduced the life of Prophet Mohammed in exquisite miniature painting.

Today's popular art is produced by media images - cinema and television. After the Akshardham Temple incident, the most poignant images were of a qawwal singing of the need to build temples and mosques and trust in god and Hindu and Muslim women demanding a stop to further bloodshed. On the other hand, when the television beams images of killers identifiable as belonging to a particular religion and dead bodies of people of another religion, it sends out a very negative message. Media images of gun- and sword-toting Muslim fundamentalists or trishul-wielding Bajrang Dal members are not conducive for harmony. This is what fundamentalists are aiming for - negative messages that will elicit a negative response from the other community.

Images are very important in shaping society. Indian cinema, in the '50s and '60s, sang songs of communal harmony. The people responded accordingly. Unfortunately, the Hindi films of that period also portrayed smugglers and vamps as Christians. That image stuck. Then came the '80s and the cinema portrayed a world of angry young men and contract killings, gang wars and the underworld. Most of the mafia and contract killers are shown to be Muslims. These are the new images, and we know where they have led us. The streets of our cities are filled with cinema posters that carry negative messages. The media shows nasty images for news and sales value. They may be true, but they raise temperatures.

Art imitates life as much as life reflects art. Images, be it in the precincts of a temple or in a newspaper or in a cinema hall or beamed via satellite, shape ideas and behaviour, and their impact is severe. It is thus imperative that today's popular art carries the message of peace and good social values. The written word is read by very few - it must be accompanied by images that are seen by millions. Religion has preserved so many good values for millennia. With the judicious use of images, it can become a powerful force for social good.

Sri Aurobindo and Indian Civilisation

By Pradeep Krishnan

http://www.organiser.org/13aug2000/sri.html

Sri Aurobindo, India's greatest Yogi, rishi, poet and philosopher prophesised the rebirth of India's greatness. He had implicit faith in “her mission, her gospel, her immortal life and her eternal rebirth”. His hope lay in the conviction: “In India alone there is self contained, dormant, the energy and the invincible spiritual individuality which can arise and break her own and the world's letters.” His message has tremendous relevance in today's context. Never before has humanity faced a crisis of such gravity. The present crisis is truly multi-dimensional. Sri Aurobindo firmly believed that India is the country providentially ordained and historically prepared for showing the world its right path. Every moment of his life Sri Aurobindo discovered himself and discovered India. The two texts in the book are papers prepared by Michel Danino for recent seminars in New Delhi and Coimbatore. The first paper was presented at a seminar in connection with the celebrations of Sri Aurobindo's 125th birth anniversary held at New Delhi in November 1998 organised by the Department of Culture, Ministry of HRD.

It deals with Sri Aurobindo's view of Indian culture and confronts its state of deep neglect in today's India, though it was precisely what gave the country its special strength and its unique ability to survive the onslaughts of time. The author lays emphasis on the field of education and asks why Indian education should exclude the very materials that could easily transform the child into a rich human being, even as we witness today a worldwide degradation of the human substance. The second paper was presented at a seminar on value education organised by the Chinmaya Mission at Coimbatore on February 1999. It deals with a serious distortion found at the root of Indian history as it remains and is taught today—the so-called “Aryan invasion theory”—and shows how all scientific as well as traditional evidence argues against it. As a result, the motives of the proponents of the old model, which seeks to divide Indian people and languages into supposed “Aryan” and supposed “Dravidian”, become suspect, and in any case run counter to both science and Indian tradition, whether from the North or the South.

Making use of recent archaeological findings, the author gives an overview of the so-called Aryan problem which has distorted the roots of ancient India's history and therefore of Indian civilization. The author Michel Danino was born in 1956 at Honfleur, in France. From the age of 16 he was drawn to India and to Sri Aurobindo and Mother, and in 1977 cut short higher scientific studies to leave for South India, where he has since been living. Working in close collaboration with the Mother's Institute of Research (New Delhi), Mira Aditi (Mysore) and Instituted Researches Evolutives (Paris), he has participated in the English translation and publication of Mother's Agenda (13 volumes) and several other works, in the preparation of India's Rebirth and India the Mother, and has co-authored with Sujata Nahar The Invasion That Never Was.

His other fields of activity include nature conservation and photography. For many years he has also been studying Indian culture and India's ancient history in the light of both Sri Aurobindo's pioneering discoveries and recent archaeological research. The sadhak from France writes that as a young man he found nothing in France or the West-in its science, its philosophies, even in its culture—that could give a full meaning to his life until he read a few pages of Sri Aurobindo. Living in India under the guidance of what Sri Aurobindo has written about the nation's culture has been constantly enriching. It is true that the nation is not "the heaven we would all dream her to be." But Sri Aurobindo always saw behind the appearances and spoke in 1910 to his countrymen, who had become apes of the West, thus: "Was life always so trivial, always so vulgar, always so loveless, pale and backward as the Europeans have made it? This well-appointed comfort oppresses, me, this perfection of machinery will not allow the soul to remember that it is not itself a machine.

Is this then the end of the long march of human civilisation, this spiritual suicide, this quiet putrefaction of the soul into matter? Was the successful businessman, that grand culmination of manhood towards which evolution was striving? After all, if the scientific view is correct, why not? An evolution that started with the protaplasm and flowered in the orangutan and the chimpanzee, may well rest satisfied with having created hat, coat and trousers, the British Aristocrat, the American capitalist and the Farisian Apache. For these, I believe, are the chief triumphs of the European englightenment to which we bow our heads... What a bankruptcy. What a beggary of things that were rich and noble. Ninety years after Sri Aurobindo made this pronouncement, we have reached the final movement in the West's failure. It would be best to turn to him again for his prescription to cure the ills that afflict humanity today.

He never said that outer growth should be discarded, but pleaded for a corresponding growth within. India was itself an example of reaching great heights in material life as well as spiritual, both complementing each other with an integral vision. Quoting profusely from Sri Aurobindo's writings on the cultural past of India, and adding his own experiences, Shri Danino writes: "If we see today that nothing even of the Mahabharata or the Ramayana is taught to an Indian child, we can measure the abyss to be bridged. That the greatest epics of mankind should be thrown away on the absurd and erroneous protext that they are 'religious' is beyond the comprehension of an impartial observer. A German or French or English child will be taught something of Homer's Iliad and Odyssey, because they are regarded as the roots of European culture, and somehow present in the European consiousness. He will not be asked to worship Zeus or Athena, but will be shown how the Ancients saw and experienced the world and the human being.

But Indian epics, a hundred times richer and vaster in human experience, a thousand times more present in the Indian consciousness, will not be taught to an Indian child. Even the Panchatantra and countless other highly educational collections of Indian stories—even folk stories-are ruled out". Shri Danino laments that the young Indians were being deprived of their rightful heritage in this manner and were being cut off from their rich roots and were being fed with "some inspid, unappetizing hotchpotch, cooked in the West and pickled in India. He was also anguished to note that the teaching of Sanskrit is systematically discouraged in India, and that "the deepest knowledge of the human being, that of yogic science, is discarded in favour of shallow Western psychology or psychoanalysis; that the average Indian student never even hears the name of Sri Aurobindo". In more 54 pages, the author takes the reader on a journey of Indian culture, or

educational system, vedic civilisation, etc.

The work is a storehouse of new insights. The well-researched and well-documented work is so readable that one surely would like to finish it in one go. It is strongly recommended for readers of every age. While the scholars would be struck by its exactness, depth and simplicity, students and general readers would find it extremely relevant and would be motivated to need read Sri Aurobindo further. This book is the sixth in a series entitled Vande Mataram which has as its goal to make known a number of texts inspired by a similar vision of a new Indian.

For, as Sri Aurobindo saw, **“India of the ages is not dead nor has she spoken her last creative word; she lives and has still something to do for herself and the human peoples...”** He further said “Indian is the guru of the nations, the physician of the human soul in its profounder maladies; she is destined once more to new-mould the life of the world and restore the peace of the human spirit.” Thus, “the sun of India's destiny would rise and fill India with its light and overflow India and overflow Asia and overflow the world.”

Dwarka remains to be protected as underwater world cultural heritage site

By RAJESH KUMAR

http://www.indian-express.com/ie/daily/20000714/ina14051.html

NEW DELHI, JULY 13: Old shipwrecks -- like that of the Titanic -- which have been lying buried under the sea with their precious treasure along with the submerged city of Dwarka off the Gujarat coast, for centuries, could soon vie for the status of an underwater world cultural heritage site.

Over 200 experts from 84 countries, who gathered under the aegis of UNESCO in Paris recently to examine a draft convention on the issue, unanimously agreed that underwater cultural heritage was in urgent need of protection from destruction and pillaging.

Currently, structures or properties lying under water can not claim the status of cultural heritage. The absence of any protective mechanism has left them open to pillaging and destruction by treasure hunters and curious deep-sea divers. The experts agreed that the definition of cultural heritage needed to be expanded in order to protect underwater heritage as well.

The submerged city of Dwarka is believed to be an important site having both historical and cultural value for India. Legend has it that the remains -- the wall of a city is clearly visible while the rest is yet to be discovered -- are in fact, that of the ancient city of Dwarka mentioned in stories of Lord Krishna.

The Gujarat government and the Archaeological Survey of India (ASI) are currently toying with the idea of creating a museum and an underwater viewing gallery once the structures have been protected. After that,Dwarka could also stake the claim for the coveted underwater world heritage status, UNESCO's South-East Asia office here said.

Experts agreed that salvaging operations did tend to be a free for all. Robert Grenier, director of the International Committee on Underwater Cultural Heritage of the International Council On Monuments and Sites, said that while salvage action gave people freedom to look for things, it disregarded the aspect of preserving cultural heritage.

Several British and French ships laden with precious treasure that had sunk on their way across the Atlantic ocean during their voyages in the 18th century have been plundered by the sea pirates for valuables. In fact, some of the ships that were believed to be of immense historical and cultural value for future generations have been completely stripped off all their components by pirates for their antique value. ``With rapid advancement in technology, deep-sea diving and gaining access to heavy articles buried with the shipwrecks has become easy and affordable for pirates. In the absence of any effective protection, these properties of immense historical and

cultural value are being looted and vandalised," an expert from Canada said.

The wrecks at Louisberg Park in Nova Scotia off the Canadian coast are held up as a fine example of how the under water cultural treasures can also be protected with help of legislation and political will, much like other structures of the same importance. The French Ministry of culture too has come out with a comprehensive background material on the underwater cultural heritage that needs protection. The document also cites relevant laws under which they can be protected and how.

Representatives of the United Nations Division of Ocean Affairs and Law of the Sea, the International Maritime Organisation, the International Seabed Authority and the World Underwater Federation, along with UNESCO, participated in the meeting.

Earth's Rotation, its Globular Shape and Gravity

By Vinod Kumar

http://www.swordoftruth.com/swordoftruth/archives/byauthor/vinodkumar/ftpoherigsag.html

When we talk of the earth going around the sun as it has always done, its globular shape, the different seasons, different lengths of day and night, mind goes back to Galileo and Copernicus, scared to death, holding the truth back lest the fury of the church falls upon them for letting the world know the reality of nature. When one thinks of gravity one thinks of Newton sitting under an apple tree watching an apple fall to the ground and Newton proclaiming "Lo! there is gravity."

If I were to say Hindu philosophers talked and wrote about gravity and the globular shape of the earth centuries before Newton and Galileo and Copernicus, I would not only be dismissed as a "fanatical Hindu communalist" by our 'all-knowing-secular intellectuals' but also incur their wrath. And who wants that?

In order to state the truth and make it acceptable to our 'all-knowing-secular intellectuals' let me seek the help of a Muslim scholar from Central Asia. Who around 1030 AD wrote a very comprehensive book "Indica" about India -- its literature, its philosophy, its religion, its culture, its languages, its history, its geography, its customs, its sciences including astronomy. I am talking about Abu-Raihan Muhammad Ibn Ahmad Alberuni -- a scholar and a devout genuine Muslim by all standards.

Before I go into what Alberuni wrote let us take some time to find out more about this man -- Alberuni.

In the words of Edward Sachau -- translator of Alebruni's 'Indica':

"Mahmud marched into the country, not without some fighting, established there one of his generals as provincial governor, and soon returned to Ghazna with much booty and a great part of Khiva troops, together with the princes of the deposed family of Mamun and the leading men of the country as prisoners of war or as hostages. Among the last was Abu-Raihan Muhammad Ibn Ahmad Alberuni. This happened in the spring and summer of AD 1017."

"When he (Alberuni) was brought to Ghazna as a hostage, he enjoyed the reputation of a great 'munajjim' i.e. "astrologer - astronomer". By the time he wrote 'Indica' thirteen years later after his involuntary immigration to Afghanistan, he was a master of astrology, both according to the Greek and the Hindu systems.

"Alberuni felt a strong inclination towards Indian philosophy. He seems to have thought that the philosophers both in ancient India and Greece, held in reality the very same ideas, the same as seem to have been his own i.e. of pure monotheism. He seems to have to have reveled in the pure theories

of Bhagavad-Gita. … There can scarcely be any doubt that the Muslims of later times would have found fault with him for going to such length in his interest for these heathenish doctrines" observes Sachau, but "still he was Muslim, whether Sunni or Shia cannot be gathered from Indica. He sometimes takes an occasion for pointing out to the reader the superiority of Islam over Brahamanical India… He dares not attack Islam but attacks the Arabs."

What was the object of his writing 'Indica'?
"The object which the author had in view and never for a moment lost sight of, was to afford the necessary information and training to any one (in Islam) who wants to converse with the Hindus, and to discuss with them questions of religion, science, or literature, on the very basis of their own civilization."

Alberuni came to India with Mahmud and stayed there. He learnt Sanskrit and Hindu literature and sciences and indeed wrote a very comprehensive book about India of those days. As a Muslim he praises the 'wonderful exploits of Mahmud saying: "Mahmud utterly ruined the prosperity of the country, and performed those wonderful exploits, by which the Hindus became like atoms of dust scattered in all directions" but as a scholar he laments "this is the reason, too, why Hindu sciences have retired far away from those parts of the country conquered by us, and have fled to places which our hand cannot yet reach, to Kashmir, Benares, and other places."

It seems from above that his study was done in area which was under Mahmud's control, most likely western Punjab. But still what he writes is very illuminating. Let us now see what wrote about our subject: astronomy in India and gravity and the solar system.

Quoting from **Brahamgupta's Brahamsiddhanta,** Alberuni wrote:

"Several circumstances, however, compel us to attribute globular shape to both the earth and the heaven, viz. the fact that the stars rise and set in different places at different times, so that, e.g. a man in Yamakoti observes one identical start rising above the western horizon, whilst a man in Rum at the same time observes it rising above the eastern horizon. Another argument to the same effect is this, that a man on Meru observes one identical star above the horizon in the zenith of Lanka, the country of demons, whilst a man in Lanka at the same time observes it above his head. Besides all astronomical observations are not correct unless we assume the globular shape of heaven and earth. Therefore we must declare that heaven is a globe, and the observation of these characteristics of the world would not be correct unless in reality it were a globe. Now it is evident that all other theories about the world are futile."

Earlier philosophers like Aryabhata, Vasishtha and Lata had also come to the same conclusion and Alberuni goes on to quote Varahmira:

"all things which are perceived by the senses, are witness in favor of the globular shape of the earth, and refute the possibility of its having any other shape."

On the subject of the rotation of the earth Alberuni writes:

"As regards the resting of the earth, one of the elementary problems of astronomy, which offers many and great difficulties, this, too, is a dogma with the Hindu astronomers. Brahamgupta says in the Brahamsiddhanta: 'some people maintain that the first motion (from east to west) does not lie in the

meridian, but belongs to the earth. But Varahmira refutes them by saying: If that were the case, a bird would not return to its nest as soon as it had flown away from it towards the west.' And, in fact it is precisely as Varahmira says." Alberuni agrees with Varahmira that earth does not rotate.

Alberuni goes on to quote Brahamgupta:

"The followers of Aryabhata maintain that the earth is moving and the heaven resting. People have tried to refute them by saying that, if such were the case, stones would and trees would fall from the earth. Brahamgupta does not agree with them, and says that that would not necessarily follow from their theory, apparently because he thought that all heavy things are attracted towards the center of the earth. He says: 'On the contrary, if that were the case, the earth would not vie in keeping an even and uniform pace with the minutes of heaven, the pranas of the times."

Alberuni does not agree with Brahamgupta and is unable to understand the rotation of the earth and goes on to write:

"Supposing this to be true, and that the earth makes a complete rotation eastward in so many breaths as heaven does according to his (Brahamgupta's) view, we cannot see what should prevent the earth from keeping an even and uniform pace with heaven."

Stubbornly he refuses to accept the theory of the rotation of the earth and goes on to say:

"Besides, the rotation of the earth in no way impair the value of astronomy, as all appearances of an astronomic character can quite as well be explained according to this theory as to the other. There are, however, other reasons which make it impossible."

Alberuni says he also has written a book on this subject in which ' we have surpassed our predecessors' but does not tell what his theories are?

On the question of gravity and other issues like top and bottom, high and low, Alberuni quotes Brahamgupta and says:

"Scholars have declared that the globe of the earth is in the midst of heaven, and that Mount Meru, the home of Devas, as well as Vadavamukha below, is the home of their opponents; the Daitya and Dhanava belong to it. But his below is according to them is only a relative one. Disregarding this, we say that the earth on all its sides is the same; all people on earth stand upright, and all heavy things fall down to the earth by a law of nature, for it is the nature of the earth to attract and to keep things, as it is the nature of water to flow, that of fire to burn, and that of wind to set in motion… The earth is the only low thing, and seeds always return to it, in whatever direction you may throw them away, and never rise upwards from the earth."

Varahmira explains it further:

"Mountains, seas, rivers, trees, cities, men, and angels, all are around the globe of the earth. And if Yamakoti and Rum are opposite to each other, one could not say that the one is low in relation to the other, since low does not exist…. Every one speaks of himself, 'I am above and the others are below,' whilst all of them are around the globe like the blossoms springing on the branches of a Kadamba-tree. They encircle it on all the sides, but each individual blossom has the same position as

the other, neither one hanging downward nor then other standing upright." He emphasized: "For the earth attracts that which is upon her, for it is the below towards all directions, and heaven is the above towards all directions."

Now these were the thoughts of Hindu philosophers as recorded by Alberuni in the early part of the eleventh century and these had not changed for centuries. Alberuni quotes heavily from Brahamgupta whose Brahamsiddhanta was composed in AD 628. But it was Aryabhata, born in AD 476, the first to hold that the earth was a sphere and rotated on its axis and that the eclipses were not the work of Rahu but caused by the shadow of the earth falling on the moon. His Aryabhatiya was composed in AD 499.

It is clear from above that it was over a millennium before Galileo, Copernicus and Newton that the Hindu philosophers had formulated the theories about the globular shape and rotation of the earth and gravity.

A saint vs a patriot

By Arvind Lavakare

http://www.rediff.com/news/2003/mar/06arvind.htm

March 06, 2003

If you're a Catholic, you'll want to get it banned. If you're an atheist, you'll be titillated by it. If you're a truly objective journalist, you'll be shamed by it. If you're an academician, you'll want to award it a Ph D. And if you're a self-respecting Indian, you simply must read it so as to be shocked from stupor into reality.

Yes, it's that kind of a book -- *Mother Teresa, The Final Verdict* (Meteor Books, Kolkata, 2003, pages 427, price not stated) by Aroup Chatterjee, born, bred and educated in what was once Calcutta, who moved to Britain in 1985 and now works as a medical practitioner in London.

The author's rationale for the book lies in the Teresa-induced image of a 'living saint' in his native city being internationally portrayed as one containing an endless number of 'sewers and gutters' where an endless number of dead and dying people lay --- but not for long as they were picked up in smart ambulances by 'roving angels' in the form of nuns belonging to Missionaries of Charity, the multinational body headed by Mother Teresa. (*Page [i] of Introduction*). That Chatterjee is an atheist and a doctor would seem to have fuelled this probe into one who was labeled by the West and its Indian sycophants as the 'saint of the gutters' though 'her only message to the world was that abortion was murder.' (*Page 393*).

The outcome is a virtual demolition job that devastates, to use the writer's own words, 'the intense culture of deception surrounding Mother Teresa' in which 'she herself was the main perpetrator of this deception.' (*Page 387*) Six years of research based on his own video/photographic work, his efforts to seek the truth and published material cited over 15 printed pages are behind Chatterjee's claim that 'Mother Teresa had been a publicity hungry and often hypocritical person…she had not always been honest in her pronouncements' -- (*page 380*) 'she even lied even in her Nobel Prize Acceptance speech' (*page 395*) of December 1979. His disclosure that 'the current Pope has beatified a "person" who never existed -- Juan Diego of Mexico' (*page 400*) and his charge that 'the Vatican is ruthlessly following a well-defined agenda when creating saints' (page 401) form part of the detailed narration of his own mortifying two-year experience of venturing to be a hostile witness to the ongoing process of canonising Mother Teresa.

Charges of Mother Teresa's 'neglect of residents, indifference to suffering, massaging of figures, manipulation of the media and conscious handling of millions of dollars of stolen cash' (*page [iv] of Introduction*) --- are all there in the book that few Indians would have dared to write.

In retrospect, it seems grossly self-demeaning that our country should have awarded Mother Teresa not only the Bharat Ratna (in 1980) but also a state funeral --- gun carriage, cortege and all, including the substantial financial cost. That funeral of September 1997 was attended by the nation's prime minister I K Gujral, by Bengal's veteran Communist chief minister Jyoti Basu as well as by Sonia Gandhi, the Congress' prime ministerial dream.

That same cocktail of political ideology had previously caused President K R Narayanan to sit so long on the Vajpayee government's recommendation of a Bharat Ratna for Savarkar that it was finally forced to wither away. It's the same ideology that recently boycotted the ceremony to install Veer Savarkar's portrait in Parliament and even appealed to the nation's President to refrain from unveiling the portrait.

It was perverse enough that this bunch of democratically elected leaders should have shown total irreverence to the norms of parliamentary democracy by daring to obstruct a decision of a Parliamentary committee that included representatives of that cocktail.

What is worse is that in opposing Savarkar's posthumous entry into Parliament, this bunch of politicking creatures overlooked the totality of the revolutionary and inspiring incandescence of freedom that was lit by him in the early 20th century when the country's British masters were crushing our aspirations and milking our resources.

The life of Savarkar (1883-1966) was so uniquely variegated that it is almost unbelievable that one individual could possess such an intellect, such talent, such intensity as to be a firebrand freedom fighter from childhood, a potential barrister, a writer of history, of poetry and Sanskrit prayers, a social reformer, and a distinctive political ideologue with a prophetic vision on the fate of Kashmir, the formation of Pakistan along with its subsequent hostility, the mass Muslim infiltration from East Bengal into Assam and China's hoodwinking Nehru on his Panchsheel.

He suffered six months of solitary confinement, seven days standing handcuffed, ten days of cross bar fetters and other tortures in the cellular jail on the infamous Andaman islands of old where he was sent in 1911 to serve a total of 50-year life imprisonment for his alleged involvement in two cases: the murder of the English district magistrate of Nashik and efforts in Bombay to 'overthrow the legally formed government of the country.' He was in the Andaman prison till 1921, from where he was shifted first to Alipore jail and then, in January 1924, released from prison but confined in his movements to Ratnagiri district (in present Maharashtra) with stringent conditions. It was in May 1937, when Jamnadas Mehta of the Tilak Democratic Swaraj Party agreed to support the new Cooper ministry in Bombay on the express condition of Savarkar's unconditional release, that Savarkar was finally rid of colonial shackles. And he soon plunged into politics, becoming the president of the Hindu Mahasabha, even as those engaged in the freedom movement sought his views and advice. Included in that lot was Subhas Chandra Bose whom he inspired to make India free through military action.

No wonder there are at least two known biographies on the man: one by Dr Bhagwan Singh Rana in Hindi and the other by Dhananjay Keer, hailing from the 'untouchable' caste, who worked with Savarkar to help build a temple in Ratnagiri, and who was awarded the Padma Bhushan in 1971 by the ruling Congress government. In addition, there is a Marathi book devoted to the social reformation which Savarkar effected during his years in Ratnagiri.

But the Congress and Communists of 2003 are not moved by all that Savarkar did or suffered in trying to win freedom for his beloved country, by how Savarkar kindled the minds and hearts of millions, including Bose and Bhagat Singh. They choose, instead, to complain that Savarkar submitted amnesty petitions to his colonial masters for his early release from the Andaman prison and made promises to them of constitutional conduct instead of willing to suffer pain and all, death included, as the price to be paid for upholding his cause. This bunch of politicking creatures also believe Savarkar was a part of the conspiracy which led to Nathuram Godse assassinating Mahatma Gandhi but was let off by the court on a mere technicality. And, finally, this bunch brands Savarkar as a Hindu fanatic, who must have no niche whatsoever in this oh-so secular country of ours. Therefore, they proclaim, Savarkar has no place on the walls of our august Parliament in New Delhi.

What is concealed in the criticism of Savarkar's pleas for release is the remark that McPherson, Britain's home secretary, put on one such petition. As cited by Shyam Khosla in *Rajasthan Patrika* of February 26, 2003, that note said, 'It will be dangerous for the British Empire to release Savarkar. His pleas are a ruse to get out the jail. Once out he will organise an underground movement against the British. I therefore reject the petition on the ground that it will be a danger to public safety.' Need more be said? And if prison life had, as alleged, transformed him into a pro-British imperialist, why did Bose, Nehru and

M N Roy welcome him to full freedom in 1937? Why did S M Joshi and Achyut Patwardhan want him to join their political party? Why did his Hindu Mahasabha vehemently oppose the Cripps Mission proposals of 1942 and the Cabinet Mission's plan of 1946?

Regarding Savarkar's connection with Godse, the Special Court appointed for the trial did not accept the evidence of Digamber Badge who had turned approver and stated that Savarkar had blessed the assassins in their mission. In Godse's reply to the charge sheet against him -- reproduced fully in *May it Please You Honour* (Surya Bharti Prakashan, New Delhi, 1987) -- he had categorically denied the prosecution's stand that he was guided in his action by Savarkar and that, but for Savarkar's complicity, he could not have acted the way he did. What's more, Godse's reply stated 'I take the strongest exception to this untrue and unjust charge and I further regard it as an insult to my intelligence and judgement.' (*Ibid page 45*). Indeed, Godse's reply indicated his disenchantment with Savarkar's belief that free India having got its own government, all parties should conduct their propaganda on constitutional lines rather through anarchical tactics and undemocratic conduct. (*Ibid page 56*).

In any case, the question remains: Why didn't the prosecution under Nehru's Congress government appeal against Savarkar's acquittal? The answer is in the silence.

There's finally that visceral accusation of Savarkar's Hindutva and his alleged two-nation demand.

The riposte to that is the excerpt below from Savarkar's presiding address to the Hindu Mahasabha's Ahmedabad session of 1937 cited at page 117 of *The Tragic Story of Partition* (Jagaran Prakashana, Bangalore, 1984) by (*RSS leader*) H V Seshadri.

'Let the Indian State be purely Indian. Let it not recognise any invidious distinction whatsoever as regards the franchise, public services, offices, taxation on the grounds of religion and race. Let no cognisance be taken whatsoever of a man being Hindu or Mohammedan, Christian or Jew. Let all citizens of that Indian state be treated according to their worth irrespective of their religion or racial percentage in the general population.'

Even 66 years after Savarkar spoke the above words, have you got a better enunciation of what secularism should mean for the Indian nation? Silence is the answer.

In that silence lies the Indian tragedy of prejudiced and pernicious eyes that see a jewel in a pseudo-saint and a thorn in a true patriot.

Hymns From the Rig-Veda

By Jean LeMee

Excerpts from his book.

Precious or durable materials- gold, silver, bronze, marble, onyx, or granite - have been used by most ancient peoples in an attempt to immortalize their achievements. Not so, however, with the ancient Aryans. They turned to what may seem the most volatile and insubstantial material of all - the spoken word - and out of this bubble of air fashioned a monument which more than thirty, perhaps forty, centuries later stands untouched by time or the elements. For the Pyramids have been eroded by the desert wind, the marble broken by earthquakes, and the gold stolen by robbers, while the Veda remains, recited daily by an unbroken chain of generations, traveling like a great wave through the living substance of the mind.

Whence this extraordinary strength and vitality?
Whence this power to nourish and give form to the religious and philosophical thought of innumerable peoples from time immemorial?

The tradition answers that the Veda itself is the secret of the Veda. The foundation stone that India contributed to civilization, the Veda, is said to embody the regulations, the laws of the universe as "seen" by gifted poets, prophets, or seers, the rishis. Set by them in a special language to be joyfully proclaimed for future ages," it has come down to us through an elaborate oral tradition consciously designed to prevent any distortion. Even today, had we no written record available, it would still be possible to have access to the Veda as it existed when the text was fixed three or four thousand years ago! This supreme monument of an early religion which has left us with no archeological remains, no church, no dogma, no founder, and virtually no history, forms the canon of the Hindu scriptures, the core of which is a collection of over a thousand hymns, more than ten thousand stanzas in all, known as the Rig-Veda.

Hinduism, according to its own tradition and belief, is not a religion belonging to a particular people or country but is what remains of an ancient system of knowledge, the Sanatana Dharma, which, in another age, was the inheritance of the whole of mankind. It therefore sees itself as the holder of a tradition common to all men, encompassing all that revelation and man's effort have produced in terms of knowledge.

Though Western scholarship inclines toward the period extending between the fourteenth and tenth centuries B.C. for the date of composition of these scriptures, the tradition emphasizes their revealed and eternal character, insisting that the seers are expressing that which has always been, is here now, and ever will be as long as this creation lasts. Tradition has it that toward the beginning of the present age, the iron age or kali yuga, about 3000 B.C., when the forces of evil started gathering their momentum and the memory of men began to fail, the great sage Vyasa was entrusted with the task of collecting the hymns. They were compiled under his direction into four different samhitis or collections according to the nature of the hymns and the purpose of the compilation. Thus Vyasa directed the sage Paila to gather hymns of prayer and dedication to the Gods and these formed the Rik-Samhita or Rig-Veda. "Knowledge," "wisdom," science," "vision" are some of the meanings implied in the Sanskrit word veda, while a rik means a verse or a stanza. The compiler organized the various hymns or suktas, the "well-saids," into ten books or mandalas, the "cycles," and it is in this form that they have reached us. These texts had come down to Vyasa from an oral tradition carried on by families of seers whose names are still attached to the hymns. These names, however, including Vyasa's and those of the other compilers, are for us mythical, ahistorical names, each more a description of the stage of realization of a particular rishi than a biographical name. Whoever has this vision or performs this function is called by that name as the tradition affirms it.

Thus, according to the Bhagavata Purana (2.7.36), "Appearing age after age with the True One (Satyavati), Vyasa divides the Tree of Knowledge into parts." The collections of hymns were handed to Vedic schools for safekeeping -throughout the ages, and it is a remarkable fact that since the days preceding the ancient civilizations of Egypt and Babylon, Athens and Rome, they have resounded daily, ever clear, ever new, ever old, without the slightest change. The Rig-Veda text we possess is that of the Shakala school, from the name of the master, Shalaka.

The hymns and texts of the four samhitas are mantras or incantations grouped according to their use in the ritual: the rik or verse collection, the yajus or collection of sacrificial formulas, the seaman or chant collection, and the atharvan, which is chiefly composed of magic spells. Each of the samhitis is the basis of a veda" which, besides the samhiti, comprises related commentaries or treatises among which are Brahmanas and Upanishads. The mystical tradition, however, looks upon the Veda from another viewpoint and establishes only a triple distinction between them, based on the form of the mantras: metrical for the rik in prose for the yajus, chanted for the saman. These three forms are said to correspond to the nature of the cosmos, conceived as a creation governed by a triple force where the yajus stands for the power of rest in the center, the rik for the principle of motion or expansion, and the saman for that of limitation or contraction. Under their mythological forms they are Brahma, lndra, and Vishnu or, in their psychological equivalents, the word of power and right action, the word of I<nowledge, and the word of peace.

The fountainhead of Eastern thought for millennia, the Veda has left a lasting imprint on the West since the end of the eighteenth century, but more particularly during the last thirty years, pervading so much of the Eastern philosophical and religious thought influencing Western society.

It is therefore at first a matter of surprise to observe that though there exist some good English translations of the main Upanishads, no readable translation of the Rig-Veda is available to the general public. All too often the scholarly translations, scattered and buried in learned journals or

anthologies, seem to make little sense, even to the translator himself, Griffith's metrical version, now eighty-five years old, is dated, from both the scholarly and the linguistic viewpoint. A reason for the lack is that the task, of translating the Veda is an exceedingly difficult one and, to quote Sri Aurobindo, "borders upon an attempt at the impossible."

In translating poetry, not only ideas and images but also something of the rhythm and the music of the original should be carried through. When considering the Veda, however, we are confronted with a difficulty of another order of magnitude altogether, due not only to the technicalities of its language, an archaic form of Sanskrit whose principles and usages are very different from those of our own language, but also to its symbolic nature. This symbolism of the language is not simply one of form, relying on images, parables, and myths as other poetic or religious compositions do, but one of substance, based on its mantric character. The language of the Rig-Veda is an extraordinary tool of unsurpassed flexibility and power of expression, richness, and versatility. Claimed as mantra, m-in-d-ins-tr-u-ment, whose rules are the rules of thought, it is said to have the ability to recreate in the prepared hearer the experience of the poet, of the rishi. Thus, the word is not just a sound arbitrarily connected with an object or event, but is, essentially, a voice, a force producing an effect directly on the substance of being. It is a creative, living symbol. It possesses to the utmost the power of any true and genuine poetry or music, to create a resonance in the subtler substance of being and to bring about in the listener a fine attunement to the experience of the seer, poet, or composer. Worked out in great detail by later tantric schools, this view of language is implicit in the utterances of the Vedic seers and forms the basis of their practice.

Sanskrit is a term meaning "perfected," "well-made," "polished." It is the artificial language par excellence, patiently refined sound by sound, bearing in all its details the imprint of conscious work, constructed on the very principle of thought, of creation, in a fashion similar to that of mathematics but more flexible and wide-ranging in its applications. Embracing all the levels of being, physical, emotional, intellectual, and spiritual, instead of the nearly exclusive intellectual component of mathematics, it is ideally suited to describe and govern the nature of phenomena from the spiritual level to the physical. This range of applicability in the realm of nature paradoxically makes this most artificial language into the most natural language, the language of nature.

One of the devices used by the Vedic poets to give their language the kind of wide-ranging generality that mathematics possesses to a degree is the full use of the multi signiflcance of roots. Sanskrit is built in such a way that virtually every word in the language can be derived from a root, a monosyllabic sound unit having a general significance in the sphere of action.

Its meaning is then narrowed down and specialized by addition of affixes and by certain well-defined processes applied to the root itself The wide spectrum of significance attached to a particular root reinforced by the various modes of recitation gives a chordal effect to nearly every verse, making such a language a perfect instrument for double and multiple entendre and endless possibilities for plays on words. The result is poetry at its purest, filled with resonances. In these poems, nothing is left to hazard or given for mere poetic effect, however. Everything is carefully worked out, engineered with the utmost care: "Like a cartwright [at work] I have conceived this hymn," says Vishwamitra, the seer of Hymn 111.38.

And a hymn is a collective endeavor, designed for the common worship of the

"Men-of-the-Word." Each verse is a formula, precisely measured, which carries the directions, the forces, and the illumination required for the work. Hence the importance of the meter and of the quality of the sound to these engineers of the Divine. For the meter which governs the rhythms of the verse is symbolic of the cosmic rhythm itself. There are three such basic meters which by combination give the seven meters representing the seven rhythms, the seven pranas governing the whole process of life. The sounds that these rhythms articulate are the vibrations traveling through the four substances, the four levels of being or of speech, from the absolute state, transcendent, unaffected by anything, to the causal state, where meanings are universal and undifferentiated, to the mental state, where they are formed into separate thoughts, and finally to the physical state of utterance, where they are heard by the ear. It is in the second stage, the causal, that the vision takes place; this is where the mantra is perceived by the seer. With the third stage, the mental, comes the rhythm, and with the fourth, the articulated sound itself The arrangements of these articulated sounds are the creation of the rishis, while the ideas and their truth are simply seen and heard by them.

From the nature of the language and its use it is therefore easy to conceive that there will be levels upon levels of meaning to nearly every verse, depending on the "level of being" or, perhaps more accurately, the "spectrum of realization" of the listener. For within this spectrum a number of points of view will be possible, depending on the particular context. It is common, for instance, in systems of traditional thought to take a threefold view of the universe, creation being looked upon as having a physical, a subtle, and a causal aspect; sometimes a sevenfold, a nine-fold, or even a twenty-one fold aspect is taken, de-pending on the purpose at hand. Each of these folds, each of these layers, is a world, a loka, a viewpoint, in or at which the words have a certain impact, resonance, and meaning and therefore give rise to a particular interpretation. So it is that we may have up to twenty-one versions of a given Vedic text though only one recension in hand! And so it is also that, de-pending on their philosophies, some will see in these hymns a description of the physical forces of nature at work; some, the mental life of "primitive" people; some, the spiritual journey of highly developed souls; and yet others, some historical events told in a naive, mythical way or the statement of mathematical propositions. None of these interpretations is by nature exclusive of any of the others. All that may be said is that some may not be quite so comprehensive as others and, were the Veda limited to them, would hardly justify four thousand years of constant world, by wise men to keep the record.

Besides the symbolism of the language, a symbolism of structure may be shown to exist in the hymns, reinforcing and completing it. All this to suggest to the reader an idea of the power and complexity of the Rig-Vedic hymns and to make it evident that even with a lengthy commentary on each hymn it is not possible to convey all the implications that it evokes. The purpose in presenting the few hymns contained in this volume- less than one-hundredth of the whole Rig-Veda- is simply to make available a sampling of one of the major scriptures of mankind and to suggest something of its profundity and splendor. But the translator is painfully aware that this is like trying to convey the rich texture of a symphony by hesitantly whistling its theme.

The choice of the hymns has been dictated partly by their relative importance to later development of the speculative and philosophical thought of India hence the predominance of the hymns of the tenth mandala partly on the obligation to present some typical hymns addressed to the most often celebrated gods of the brahmanical pantheon - Agni, Soma, and lndra- and partly on the desire to show the wide range of tone and the variety of style of the ancient poets.

In the samhiti, the hymns are generally grouped according to either the families of rishis who originated them or the gods being celebrated. For instance, the fifth mandala is devoted to the hymns of the seers of the house of Atri, whereas the entire ninth mandala comprises the hymns to Soma. The tenth mandala, however, contains hymns by various rishis and devoted to different gods. The majority of these hymns are of a speculative nature and, according to Western scholarship, are of a less ancient origin. In this selection the hymns have been arranged in a natural sequence to mal<e for connected reading, be-ginning with the hymns of creation and proceeding through the "nature" hymns to the Dawn and the Sun to the hymns related to more abstract principles such as Knowledge and the Word, and concluding with the last hymn of the samhita, an invitation to peace and harmony. As previously pointed out, more than thirty centuries have passed since the hymns were collated. In that long period and in spite of many precautions, though the form has been impeccably kept, some keys have been lost, some meanings forgotten. The text abounds in words of doubtful meanings on which commentators and scholars have glossed for centuries. Often the images are obscure because of a lack of clues- ritual, cultural, or psychological- for all we all now about the religion, society, or history of the men who composed this literature has to be gleaned from the hymns themselves. Furthermore, the poets appear to delight in speaking in riddles, in veiling their meanings in metaphors, in using puns, as constant modes of expression, whether to make their point more effectively or to hide it.

In this translation I have availed myself of the work of previous scholars, students, and masters in the field, particularly McDonnell, Griffith, Renou, Agrawala, Gonda, Coomaraswamy, and Aurobindo. The method I have followed is simple: every single word has been referred to its root and the meaning chosen has been that which in my opinion conveyed most adequately the deepest sense of the passage I could construe while maintaining the integrity of the poetic structure.

Thus for the word go, which, among other things, may mean "cow," "milk," or "light," I have not hesitated to choose "light" where other scholars have taken "cow," though the word "cow" may give a coherent physical image, if I thought that the dominant meaning was either psychological or that the image created by using the word "light" was more in keeping with the general sense of the hymn and hence more comprehensible to the reader. In other words, I have tried to follow the spirit of the text as I understood it without doing unnecessary violence to the images. Along the same lines, since the reader cannot be expected to be familiar with Vedic mythology, I have translated all proper names, going back to their etymologies. One should remember, however, that symbolic etymologies, as distinct from grammatical ones, and often completely at variance with them in terms of meaning, are commonly used or implied in Sanskrit philosophical and religious texts. Admittedly, translations of names present hosts of unsolvable problems of interpretation. I have always endeavored to choose a name consonant with the psychological import of the passage and in line with the epithets that have been used traditionally for these gods. Thus, Varuna, the All-Enveloping One, is Lord of Lords, King of Kings.

Soma, the deified nectar, is the sacred potion but may also refer to "Mind." Translating these names gives more unity and helps clarify the general meaning of the text at a particular level of interpretation. As for the form, I have adopted the meter of the original. When translating poetry, the translator is always in a dilemma: whether to follow the form of the original or a form which suggests something of the original qualities but is native to the language of translation. The choice I made is premised on the belief expressed by the ancient singers themselves that the very sounds and rhythms of their poems are important, that these are part and parcel of their message. I have

therefore made a special effort to adhere to their metrical form without impairing the natural flow of the English language. I have kept strictly to the same number of syllables per line, since their meters are syllabic, and not infrequently it has been possible to keep as well the place of the caesura, thus giving to the verse a similar rhythm. In some cases it has even been possible to match the sounds of the English syllables with the sounds of the corresponding Sanskrit syllables from the point of view either of articulation or of vocalic color. However, there are obvious differences between Vedic Sanskrit and English metrical possibilities. For one, the Sanskrit meter depends primarily on quantity - that is, on syllabic duration - rather than on stress, as English does; also, the riks have a tonal accentuation which cannot be introduced into English without artificiality. All this, naturally, conspires to distort the original rhythm in the translation. But the reader is nevertheless encouraged to read aloud and articulate clearly that he may hear an echo of the sounds that were made some forty centuries ago when the ancient seers "came together, sang together, with their minds in harmony."

Perhaps the deeper and ultimate hope of the translator is to persuade the reader, by showing him a pale reflection of the beauty and depth of the original, to take up himself the study of the "Language of the Gods" that he in turn may experience the wonder, the joy, and the knowledge which are within him but need the mantric impulse to be liberated. The Rig-Veda is a glorious song of praise to the Gods, the cosmic powers at work in Nature and in Man. Its hymns record the struggles, the battles, and victories, the wonder, the fears, the hopes, and the wisdom of the Ancient Path Makers. Glory be to Them!

Hymn of Creation

Perhaps no other Vedic hymn equals in depth and **majesty this famous Hymn of Creation** known to tradition as the Nasadiiya Sukta, from its opening words. Its seer, Prajapati Parameshthin, Supreme Lord of Creatures, chants in the "triple-praise" meter his knowledge and his wonder as he recalls his vision and in these seven immortal mantras -seven like the days of creation - plants the seeds of Vedic metaphysics and mathematics. For this hymn, besides being a cosmogony, is also a beautiful meditation on the properties of numbers from one to nine and zero. As the Vedanta philosophy was to develop it later in great detail, and as other traditions also record, the process of creation can be seen as ninefold, each step, each state of consciousness, being characterized by the properties of a particular number.

Thus, creation begins in the Absolute, the one without a second, "where neither nonbeing nor being was as yet." Then duality creeps in, darkness conceals darkness. And so it all begins. In the fifth stanza is a brilliant example of the mathematical and structural symbolism alluded to in the introduction. The vertical and crosswise directions indicated give in words the substance of a sutra yielding a general and elegant method of multiplication and division while keeping the orders separate - the very mechanism of creation itself.

It reveals the inner properties of five, the number for man, but also for the manifestation of creation in the major traditions. Was it not on the fifth day that, according to Genesis, "God created great whales ... and blessed them, saying, Be fruitful, and multiply. . . "? **Pure coincidence?** Hardly, when we know with what care the Vedic poets constructed their hymns.

And then, what of this other coincidence that we find with **Dante's Paradiso?** In virtually the same words as Prajapati Parameshthin, the Prince of Poets sings:

**Order was created and together with it
Were woven the substances;
Those formed the summit of the world In
which pure act was produced.
Pure potency held the lowest place,
In the midst, potency twisted such a mighty
bond With act, as shall never be severed.**

That line, that ray of glory that the vvise stretched between the Will on high and the Potency beneath, that mighty bond, scales all the states of being, uniting in its reach the whole creation.

Yet, from where does it all spring? Who truly knows?

Om-ing in America
The Western Incarnation of Yoga
http://abcnews.go.com/sections/living/DailyNews/omming_000119.html

By Ephrat Livni

N E W Y O R K, Jan. 19 — Stillness is in.

Treadmills are being traded for yoga mats in health clubs across America, and with the help of some pro-bono celebrity endorsement, a 5,000-year-old Indian tradition is taking hold in Y2K America.

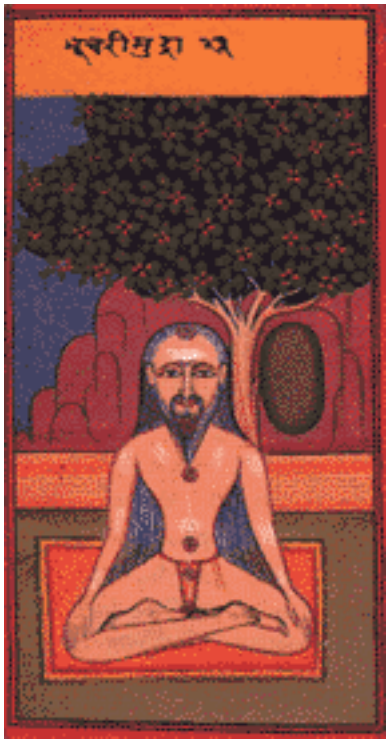
Yoga, which means “to yoke,” is an ancient eight-pronged approach to achieving union with God — only one aspect of which involves contorting into pretzel-like poses — and it has entered the nation’s mass consciousness through the gym door. But as yoga comes of age in the West, some critics say that in a nation obsessed with progress, the very teachings that yoga emphasizes — mindfulness and process — will be lost in a flurry of muscle flexing, calorie counting and ego-driven handstanding.

The Path Is the Goal

“People can only hear what they are ready to hear,” says Beryl Bender Birch, wellness director of the New York Road Runner’s Club and co-founder of The Hard & The Soft Astanga Yoga Institute. Birch, who authored the best-selling *Power Yoga* and now *Beyond Power Yoga*, says she deliberately attached the word “power” to her book titles to attract Americans.

Her students, she explains, come to her with various motivations — injuries and, increasingly, injury prevention, stress and relaxation — but soon incorporate spirituality into their practice.

“A corporate executive type can come in because he is tight from jogging, and he’ll start sweating and start changing, and six months later he will be asking me questions about Zen meditation,” she explains.



Since yoga has long been considered a last resort after the doctor and chiropractor, Bender Birch believes in gentle introductions, leading students in on the physical level. Her books, however, do stress the spiritual, discussing the “moral preliminaries for waking body and mind to meet each day.”

But if yoga is about coming to know the “divine self” through a commitment to practice, is it still yoga when the commitment is to looking good in a bathing suit?

At New York’s mega-gym chain Crunch, spirtuality is served in smatterings, according to taste. The classes range from the more contemplative kundalini to the nouveau-yoga, yoga-plus-trim. Meditation and more esoteric aspects are incorporated, to varying degrees.

"Some people freak out about om-ing," says Crunch yogini Franzi Reider, referring to the requisite chanting that starts her favorite kundalini class. "But I could be going to an aerobics class, if I wanted to just burn calories."

From Calories to Compassion

But David Life, co-founder of the fashionable Jivamukti yoga center in New York, points out that in India too, yoga is now seen as a way to trim inches off the waist. He disagrees with the notion that Americans are taking over, or distorting yoga, saying, "It's not about co-opting culture. It's about cooperating."

"There is a thirst for guidance in this country," Life contends. If Americans are religious about fitness, than what better place to introduce notions like "right action" and "right livelihood" than at the gym?

An average of 350 students a day attend classes at Jivamukti — Woody Harrelson and Sting among them — and Life reminds them, as they flex, bend and breathe, to forget their personal dramas, and extend compassion to all sentient beings.

Wending his way through a room full of stressed-out city folk, he places a hand on a back and introduces his flock of urban truth-seekers to a notion that is radical for our medication nation: *Sit with the discomfort.*

"It gives a greater sense of one-ness," explains Jivamukti student Tanya Mara Miller, who says she has become more giving, more loving, more focused, and more conscious of all other beings in the three years since she started practicing yoga. Miller suggests the world would be a better place if everyone did yoga, but says, "In some ways it's a fad that will pass like aerobics."

Holier Than Who?

Indeed, another "new" fitness craze eventually will sweep the nation, replacing headstands as the path to our ideal of perfection, but Life and Birch both agree that Americans are enriching the practice. As yoga moves into the everyday lives of more and more Americans, they are turning a once-exclusive spiritual practice into something for laypeople, allowing everyone to evolve.

"Some of the fundamentalists are kicking and screaming," Birch says of those who criticize the Westernization of yoga, with ads suggesting nirvana is just one hour away, but she sees the so-called "new yoga" as part of the universal flow of energy, just another incarnation of the ancient tradition: "America is at center of the most exciting developments in yoga. The heart of yoga is here."

Mother Goddess (excerpts)
By Anne Lowenkopf

We catch the Godhead much as we catch light. The very structures that enable us to experience both limit how much of each we can experience. Since we catch God with our human hearts and intellect and will, since we reach out to the Godhead because of our human need and desire, it is not surprising that what we catch – our visions of God – have both points of similarity and points of difference.

We experience anything – everything through ourselves. It is all we have to experience with. And so, not surprisingly because we humans are gendered life forms, often our experience of the Godhead has gender.

God the Father is familiar to those of us who have grown up in the Judeo-Christian traditions; round the globe and in the past various peoples have perceived and worshiped father gods and other male deities in love and terror, hope and dread.

Some of us have caught a Mother Goddess who is all-encompassing, beyond role: " I am alone in the world here. Who else is there besides me? Set these goddesses who are but my own powers entering into my own self!" a flat announcement of monotheism from the Great goddess herself in the famous Sanskrit hymn ***Devi Mahatmyam, Glory of the Divine Mother.*** Again and again the Devi (Goddess) of the Devi Mahatmayam is described as the one without another; ultimately no duality of any kind exists, no division between matter and spirit, no division between created and creator. The Great Goddess contains within herself not only all other deities but existence itself. Her children and all things reside within her, are of her substance, and she indwells inside them. The shortest distance to the Mother is within yourself.

The vision of the Mother is exciting attention today when for the first time in history so many young adults live alone, outside family and organized peer groups. As the constrictions of paternalism break down and are replaced by the bewilderments of choice and lack of structure, the concept of a Mother deity who all alone creates and sustains begins to feel right; young people are feeling they can understand such a deity and such a deity can understand them. A nexus of empathy radiates support, comfort, and understanding in a two-way flow.

This concept of the Mother first attracted me as a young woman who was rebelling against the notion of being born in the need of redemption for the actions of others. I still remember the thrill of excitement at my discovery of a Goddess who did not punish the created for what went wrong in her creation, who took the heat for evil and death and yet was untouched by both.

Empathy for a deity who exists alone and copes alone grows stronger as more and more young

people have been raised by single parents, and more are coping with the difficulties of being a single parent. The Devi of *the Devi Mahatmyam* could aid did act as a warrior queen even though she was *the* monotheistic deity, Its hymns are part of an exciting story in which the Goddess is approached by gods who are being harassed by bandits and neighbors, and she agrees to help them fight off their enemies. No question of damnation and eternal punishement here but of will against will, skill against skill, with the Devi, as one who plays chess with herself, taking all the parts.

An American brought up in the climate of Victorian notions of maternal behavior asked a contemporary devotee of the Devi how he could be drawn to such a fierce deity and was told, "Ah, but you need a strong mother who will go to battle for you when you are in trouble." Single parents who find themselves battling for survival in their work worlds, battling traffic to get home at the end of the day, battling to feed their kids and educate their kids and keep their house reasonably sane resonate to the concept that one can be both and at the same time nourisher and warrior.

The *Mahatmyanm* (sometimes called the *Chandi*), first recorded in writing around 600 A.D, is by no means the oldest of hymns. But the concept of the Great Goddess is ancient indeed.

The *Devi* of the *Devi Mahatmyam* came to us in Sanskrit that was written by Aryan peoples, who worshipped masculine deities. Mystics report that they have glimpsed behind the veil of their deities human forms and personalities, a formless impersonal Godhead. This godhead was called Brahman, Satchitananda, (Existence-Knowledge-Bliss). Some followers of the Devi have encountered behind the Mother's form and personality, a formless, impersonal godhead they named Shakti.

Descriptions of Shakti and Brahman are exactly the same – except in one particular Brahman is eternal and unchanging while Shakti is eternal and always changing. The two are actually are one, Ramakrishna said, "like fire and its power to burn". According to East Indian cosmology Shakti's creative force spews out and develops this universe, which after an "age" draws back into itself to rest in the blissful, unchanging being of Brahman, only to spew out again through Shakti's restless power. This model is now so different from the theoretical model, proposed by some contemporary physicists, which depicts the universe exploding from a tiny and incomprehensibly dense core of existence, which will once again explode and expand.

And come to that, descriptions of Shakti/Brahman are uncannily similar to contemporary physicists' descriptions of the force field which creates and comprises all existence.

Symbol of an awakened civilisation

by Ram Madhav
February 10, 2003
http://www.rediff.com/news/2003/feb/10guest.htm

The real India is waking up to a new, historical reality. This awakening is a result of the unfolding of a mighty creative genius of millions of unknown Indians whose names are not known and whose lives are nothing special to remember otherwise. It is they who can metaphorically be descried as the 'Real Bharat.' They are charting a new course for the future of our country. The historic Ram Janambhoomi movement is but a symbol of that new awakening -- a symbol that reminds the world that India, at last, is becoming alive to its history.

It is not just a movement for a temple. It manifests the innate yearning of a people for self-respect and honour, an urge to unshackle themselves from the humiliations history heaped on it. It happens to every country; in fact it has happened several times in the history of several countries.

'As I have been speaking, some vivid visual memories have been flashing up in the mind's eye. One of these is the picture of the principal square in the Polish city of Warsaw sometime in the late nineteen twenties. In the course of the first Russian occupation of Warsaw (1914-1915) the Russians had built an Eastern Orthodox Christian cathedral on this central spot in the city that had been the capital of the once independent Roman Catholic Christian country Poland. The Russians had done this to give the Poles a continuous ocular demonstration that the Russians were their masters. After re-establishment of Poland's independence in 1918, the Poles pulled this cathedral down. The demolition had been completed just before the date of my visit. I do not greatly blame the Polish government for having pulled down that Russian church. The purpose for which the Russians had built it had been not religious but political, and the purpose had also been intentionally offensive,' says universally acclaimed historian Sir Arnold Toynbee.

In Turkey, they turned the Church of Santa Sophia into a mosque. In Nicosia churches were converted into mosques. The Spaniards spent many centuries re-conquering their land from Muslim invaders.

About India this was what Toynbee had to say: 'Aurangzeb's purpose in building those three mosques (Ayodhya, Kashi and Mathura) was the same intentionally offensive political purpose that moved the Russians to build their Orthodox cathedral in the city centre at Warsaw. Those mosques were intended to signify that an Islamic government was reigning supreme, even over Hinduism's holiest of holy places. I must say that Aurangzeb had a veritable genius for picking out provocative sites. Aurangzeb and Philip II of Spain are a pair. They are incarnations of the gloomily fanatical vein in the Christian-Muslim-Jewish family of religions. Aurangzeb -- poor wretched misguided bad man -- spent a lifetime of hard labour in raising massive monuments to his own discredit. Perhaps the Poles were really kinder in destroying the Russians' self-discrediting monument in Warsaw than you have been in sparing Aurangzeb's mosques.' (*One World and India* (1960, pp 59-60).

Medieval Indian history is replete with instances of wanton aggression on its holy places by Muslim hordes. Innumerable instances of defaced Hindu idols and destroyed Hindu/Jain/Buddhist holy places stare at us everywhere. These destructions were not done just for the sake of fun as some eminent

Indian (read Marxist) historians would want us to believe. These were deliberate acts of religious vandalism perpetrated by intolerant Islamic invaders.

However, one would be grossly and sadly mistaken if he confuses the present day awakening in the form of the Ram Janambhoomi movement to an effort to 'avenge the historic wrongs.' Many so-called liberal (euphemism for Marxist) intellectuals spread this canard either deliberately (most probable) or at times out of ignorance (rare).

The movement for the Ram Janambhoomi is basically a movement for the self-assertion of a civilisation. It is a wounded civilisation trying to re-invent its roots. It has to be understood properly, instead of dismissed with contempt. That is what Sir Vidia Naipaul also says: 'If people just acknowledged history, certain deep emotions of shame and defeat would not be driven underground and would not find this rather nasty and violent expression. As people become more secure in India, as a middle and lower middle class begins to grow, they will feel this emotion more and more. And it is in these people that deep things are stirred by what was, clearly, a very bad defeat. The guides who take people around the temples of Belur and Halebid are talking about this all the time. I do not think they were talking about it like that when I was there last, which is about 20 something years ago. So new people come up and they begin to look at their world and from being great acceptors, they have become questioners. And I think we should simply try to understand this passion. It is not an ignoble passion at all. It is men trying to understand themselves. Do not dismiss them. Treat them seriously.' ('The truth governs writing,' an interview by Sadanand Menon, *The Hindu,* July 5, 1998)

The movement has reached a historic stage after the demolition of the non-mosque in 1992. It was a non-mosque because it was never used by Muslims after 1934. It was never registered as a waqf property by any of the Sunni or Shia boards anywhere in UP or the country. There was no Muttawalli/Imam attached to it. In effect, it ceased to be a mosque at least since 1934. And what is more, it was – and still is – a functioning temple at least since 1949.

Hence, what was destroyed in a very unfortunate incident on December 6, 1992 was a non-mosque and a functioning temple only. The destruction was a result of the pent up frustration caused by the inordinate delays and insensitive approach of a section of leaders.

The dispute reached the Supreme Court in 1993 when the government of the day referred to it the core question of whether a Hindu temple existed at the disputed site before the construction of the mosque or not. Declining to answer the core question, the five-member Supreme Court bench in its judgment in October 1994 said keeping aside the disputed land of 2.77 acres on which the make-shift Ram temple stands today, the remaining land of about 67 acres may be returned to its owners if the government thinks such a step would not hamper the legal proceedings on the disputed site.

It is pertinent to note here that there is no dispute about the ownership of this land or its title in any court anywhere. This undisputed land was acquired by the Union government in 1993 along with the disputed land. There was a move by the central government in 2002 to hand over this undisputed land to its original owners including the Ram Janambhoomi Nyas. The Nyas on its part was willing to give an undertaking to the effect that it would provide a corridor to the disputed site as access in case the judgment on that site went the other way. However, a public interest litigation was filed by a Muslim individual acting upon which a three-member Supreme Court bench asked the Government of India to maintain the status *quo* on the 67 acres.

All that the leaders of the movement are asking at this point in time is that their part of the undisputed site be returned to them. It does in no way affect the judicial proceedings on the disputed site. The Government of India has moved an application in the Supreme Court seeking vacation of the status *quo* order so that it can implement the 1994 judgment.

While the facts of the matter clearly indicate the demand of the leaders of the movement is fully legal and constitutional, -- at no point in time are they demanding that the disputed site be handed over to them -- a campaign of calumny full of falsehood and insinuation has been unleashed by a section of intellectuals.

It is a tragedy that these intellectuals fail to understand the movement in its entirety. This is what Sir Vidia had to say about them: 'Indian intellectuals, who want to be secure in their liberal beliefs, may not understand what is going on, especially if these intellectuals happen to be in the United States. But every other Indian knows precisely what is happening: deep down he knows that a larger response is emerging even if at times this response appears in his eyes to be threatening.'
