And this is the advice he has for those intellectuals: 'It is not enough to abuse them or to use that fashionable word from Europe: fascism. There is a big, historical development going on in India. Wise men should understand it and ensure that it does not remain in the hands of fanatics. Rather they should use it for the intellectual transformation of India.' ('An area of awakening,' interview by Dileep Padgaonkar, *The Times of India,* July 18, 1993)

So much transformation has taken place in the intellectual world after 1993 that a large section of our intelligentsia understands and appreciates the significance of this movement today.

Let me end by quoting Dr Rajendra Prasad during the renovation of the historic Somnath temple in 1950 which was vandalised by a 11th century Muslim invader, Mohammad Ghazni.

'By rising from its ashes again, this temple of Somnath will proclaim to the world that no man and no power in the world can destroy that for which people have boundless faith and love in their hearts... Today, our attempt is not to rectify history. Our only aim is to proclaim anew our attachment to the faith, convictions and to the values on which our religion has rested since immemorial ages.'

Just replace Somnath with Ayodhya.

India is deeply steeped in spiritual values

Samata & the Eternal Nature of Reality

By PURUSHOTTAM MAHAJAN

http://www.timesofindia.com/today/26edit5.htm

India is deeply steeped in spiritual values. Each historical period has its own needs, and these needs demand a contextual revelation of the world that would fulfil the need of the age. The words and teachings of sages in different periods can be experienced as the disclosure of the world in which they lived. Whatever they said, wrote or spoke was redemptory. In each period of history, a sage or saint comes with a mission and the mission discloses the salvific revelation of the world in terms of the convergence of being, samata. It is a state of being where you and I, this and that, remain not. It is a state of absolute knowledge. Being is not only seen or known but experienced in its totality and unity. The diversity which we see and experience in terms of discrete entities has to be viewed against the total background of reality, *Brahman*. In so far as we see reality in terms of discrete entities, we remain deprived of the knowledge of Brahman. But once there is convergence of this and that, you and I, the knowledge of being comes to be. The mission of sages was to point out the way that would lead to the point of convergence whereby the knowledge of being, by overcoming the phenomenal distinctions, could be gained and life's goal achieved.

Redemptory paths advocated by spiritual souls like Vashisht, Kapil, Kanad and Patanjali in ancient times and that of saints like Kabir, Nanak and Meera during medieval times were pointers to developing the aptitude for looking within. In our own times, we had amidst us Ramana Maharishi and Gurudev Mangatramji. Gurudev Mangatramji (1903-54) exhorted us to become wide-awake to understand the true path of dharma and peace. The five cardinal principles laid down by him which can help us to achieve self-realisation are: Simplicity -- innocent and un-self conscious, Service -- of all creatures, Truthfulness, Right assemblies -- association with the seers of sameness and Meditation on the name. Adherence to these principles leads us to redemption. Mangatramji taught nothing that he did not practise to perfection. Revelatory verses welled up from within the depth of his *samadhi* and spilled over for hours on end, where differences and dualities drop, a state where finites melt into infinities, where being thunders into its ultimate -- beyond space, beyond time.

By understanding the transcendent state of emergence and submergence, of expansion and withdrawal, of unity and diversity, human limitations can be overcome. Situated in the transcendent state of absolute gnosis, Mangatramji expressed esoteric wisdom in terms of which freedom from human limitation is experienced at the deepest level of being. He lived on a bowl of tea a day, and did not drink more than 10 draughts of water in his entire life time. He hardly slept for a continuous 25 years. His nights and days were spent in solitary places where silence reigned

supreme. He loved those who came in contact with him. His heart spoke without the use of words, and when he did speak, his words had such depth and grandeur that they brimmed with poetic beauty.

The teachings of Gurudev Mangatramji are the quintessence of *samata* or sameness. The meaning of the word *samata*, according to him, is to remain same in each and every condition. That is, to remain same to all opposites. He did not enunciate a new school of thought, nor did he propound any kind of sectarian religious doctrine; rather he reaffirmed, through his own spiritual enlightenment or intuition, the ancient spiritual truth: that reality or truth suffers not from the fissures of division or difference: it is one. Being one, reality is characterised by evenness, and the relative polarity or duality, at the transcendent level recedes into oblivion. As there is inherent unity and evenness in reality, so it has been referred to as *Brahman* or absolute.

Reality is spoken of as Brahman (absolute) because ``It is eternal and beginningless. Although immanent in everything, yet it is aloof and is affected by nothing. Being absolute, it transcends time, as it remains the same through three periods of time -- past, present and future. They come to know the sameness of reality who recollect and meditate the unnameable name of the transcendent one, God. They alone feel the presence of the Lord, both within and without, who rest in the presence of the ultimate" says Mangatramji.

Body, Mind, Spirit: Strike A Balance

ASHUTOSH JI MAHARAJ

http://timesofindia.indiatimes.com/articleshow.asp?art_id=21288193

Ancient Indian sages have said that human beings are composed of both matter and spirit. Our physical body, mind and intellect are the matter components while our soul is the spirit — the real Self — that radiates and drives the matter components.

We have been blessed with the capacity to discriminate. We are equipped to take decisions using our intellect and by applying acquired wisdom. We have vast potential, but because of our ignorance of Self, these potentials remain largely untapped. That is why all wise men have exhorted us to try and attain Supreme Knowledge of the Self.

Today, we strive for perfection in every field. With the evolution of mind and intellect, worldly knowledge has become easily accessible. So, we have achieved a certain measure of excellence in the physical sciences. We have created for ourselves many facilities that make life more comfortable.

Our scriptures proclaim that the true nature of human beings is absolute tranquillity and peace. But today, we find that with so many worldly possessions at their command, our lives have become far more stressful and unhappy than ever before. We have become totally materialistic and self- centred.

No one has time for either themselves or their families. The so-called industrial and scientific advancements have failed to bring human beings closer to one another.

Many of us have become IT-savvy. But how many of us smile? In fact, we are increasingly isolating ourselves, creating a vacuum around us. In mindless pursuit of worldly possessions, negative emotions like greed, jealousy and hatred have overpowered our minds, creating tensions.

In order to combat stress and tension, we tend to over- indulge ourselves. Some try to find solace in substance abuse. One reason for this could be: Scientific advancement has not travelled beyond the physical level. We have achieved excellence in the physical sciences, but at the spiritual level, we lag far behind.

Physical experiences that are bereft of spirituality fail to connect with our true Self. The stress starts from within; the solution also lies within. The physical body functions with the hidden Spirit, which is the real Self. So it is important for us to gain knowledge of the Self.

Once we are able to do this, with the help of a guru, our hidden inherent potentials come to the

fore.

The seed of the large Banyan tree is tiny, like a mustard seed. It is so small that it can be blown away by a gentle breeze. The seed is however unaware of its hidden inherited potential. But when it is sown, it submits itself to growth — with the right inputs of water, air and sunlight, it grows to become a great big Banyan tree. But even the Banyan tree has limits to its growth.

Jiva or soul is a fragmented part of God or the Supreme Soul; it is, therefore, infinite. When we submit ourselves to the guidance of a spiritual master, we have an opportunity to gain knowledge of Self through which we can fully realise our hidden potential.

Great men are not those who do big things, but those who do small things with perfection, and the perfection comes from within.

Brahma gyan or realisation of truth alone will bring about a reformation, helping to establish lasting peace. Our sages proclaimed that the whole world is a family and they wished everyone well. Let's take the cue.

Let us attempt to know more about our inner Self, by striving for excellence not just in the field of physical sciences, but also in the field of spirituality.

(*As told to* ***K N Sawhney***)

Divine Import of Krishna Leela

SHRI ASHUTOSH JI MAHARAJ
http://timesofindia.indiatimes.com/cms.dll/xml/uncomp/articleshow?msid=137938

It was the darkest hour of the era. The brutalities perpetrated by despot king Kansa had become unbearable. In such a period of crisis, during the Dwapar Yuga, the Divine Power descended on earth in human form as Krishna. He is Raagi as well as Vairaagi; Nar and Narayan; Chakradhar and Murlidhar — all blending into one incarnation, Krishna.

Even the pranks and adventure Balakrishna and his friends engaged in had subtle transcendental messages. Stealing butter from homes, Krishna as makhanchor points out the dualistic nature of the world. This world is an amalgamation of the essential (butter) and the non- essential (butter-milk). By relishing butter Krishna inspires us to abstract the Supreme Essence, mayapati, and enjoy pure bliss.

Likewise, the sport of trampling over the poisonous hoods of the serpent Kalia is also quite figurative. A similar kind of venomous snake is hissing within us. It is our conceited mind. The mind, through its attachment to sensuous desires, incessantly poisons the inner-self. Krishna's feat on the banks of the Yamuna symbolises the initiation of Brahma-Jnana within us. Experiencing the Divine through this knowledge will help us overcome vice. Such a pure heart then proves out to be a perfect platform for Krishna's dance of victory.

Krishna Leela is both divine and transcendental. But many fail to understand the real import of the Lord's leela. This failure, in turn, gives rise to innumerable doubts and even lead to vehement protests objecting to Krishna's leelas — like the rasleela between Krishna and the gopis. Krishna then was hardly 7-8 years old and the gopikas were much older.

Moreover, rasleela was in reality bhavleela, completely devoid of corporeal sensations. It was the celestial, atmic form of a gopi that used to participate in ras. Far above the carnal plane, it was a divine communion between souls (gopis) and the Supreme Soul (Krishna). Krishna Leela is Eko Aham Bahusyama, One manifested as Many.

Critics also condemn Krishna's role in the battle of Kurukshetra. They argue that Krishna with his divine powers could have prevented the war from taking place. Moreover, they point out, Krishna adopted unrighteous means to slay many great warriors of the Kauravas. But the Mahabharata war cannot be analysed like this in isolation — one has to take note of the larger picture. When a limb gets infected and is beyond repair, and there is danger of the patient losing his life because of this, the surgeon has no other option left to save his life than to amputate the infected limb.

Similarly, the Kauravas posed a real threat to society. They, in fact, had turned murderous — they did not hesitate to set aflame the Lakshagriha where the Pandavas were staying; they aided and abetted the disrobing of Draupadi; they rejected all peace-proposals by Krishna and were reluctant to offer even five villages to resolve the dispute. They preferred to go to battle.

To infer and gain know-ledge from the divine actions of incarnations, we need divine vision. This is what Krishna revealed to a confounded Arjuna: "What thou hast to see, this thy human eye cannot grasp; but there is a divine eye and that I now give to thee. Behold Me in my Divine Yoga." On attaining the divine

eye, Arjuna could see the cosmic form of Krishna. Then only, He could know the divine nature of Krishna and His leelas.

Janmashtami merely celebrates the spirit of Krishna, and reiterates the need to cultivate Krishna consciousness and to make efforts to realise Krishna in His elemental form through Brahma-Jnana.

The Right Word
By Uday Mahurkar
http://www.india-today.com/itoday/19991206/offtrack.html

A scholar aims to bring the language of gods closer to humanity.

If Fulaji Turi, A 16-year-old Dalit student from north Gujarat, should meet Bijay Karan, a Kayastha from Shivala near Varanasi, it would be a meeting of minds, so to say. "Namaskaram, kim samacharam (Hello, what's the news)?" they would probably greet each other. And then, like old friends, the Dalit and the non-Brahmin would probably launch into a delighted prattle in a language that was once the pride of the priestly classes.

After centuries, Sanskrit is witnessing a slow and steady revival, specially in Gujarat. The man responsible for this is Chamu Krishna Shastry, 42, a Kannadiga Sanskrit scholar who lives for the day when Sanskrit becomes India's link language.

With a proselytiser's zeal, Shastry argues: "Hebrew was a dead language till 1880 but today it is the official language of Israel. If the Jews could revive Hebrew why can't we resuscitate Sanskrit?" Then the clinching contention: "Popularising Sanskrit is far easier. It is the mother of all Indian languages and up to 60 per cent of the words in the other languages come from Sanskrit." Shastry, organising secretary of Sanskrit Bharati, a voluntary body committed to the cause of Sanskrit, has evolved a simple method that in 14 years since 1985 has enabled nearly 29 lakh people to learn the language, one lakh of whom have decided to use Sanskrit at home in true Vedic style.

The "Ten-day Sanskrit Speaking Course", which Shastry has been implementing through a network of 130 full-time workers and 3,000 Sanskrit Bharati volunteers, has a conversation-based syllabus. Learning Sanskrit can be a forbidding exercise because of its elaborate grammar. To make it easier for the students Shastry's method is to skip grammar and teach Sanskrit as it is spoken. The students thus do not have to wrestle with the nuances of an arcane syntactics. It's then easier to master the language, so much so that even semi-literate people can opt for the course. It also helps that the course is for free.

The Sanskrit of 20th century is, unlike that of yore, more egalitarian. "Our accent is on removing the impression that Sanskrit is the language of the vidhwans (intellectuals)," says Shastry. Traditionalists would be horrified to hear Satish Gajjar, 26, a mere carpenter from Surendranagar district of Gujarat, hold forth in the language. Loosening the tongue also loosens heartstrings.On the last day of a Sanskrit Bharati class recently, an old Dalit participant was in tears; he said he could not believe that a day had come when the untouchables would be speaking in the language

of the gods.

One would think that Shastry, being a Brahmin, was well-versed in the language. But there was no Sanskrit spoken in his family. It was in jail that he found his metier as a language reviver. As a teenaged Rashtriya Swayamsevak Sangh worker Shastry was imprisoned during the Emergency. Alone in his cell, he took to reading biographies. In the writings of Veer Savarkar and Swami Vivekananda he learnt how Sanskrit could unlock scientific, mathematical and medical knowledge buried in ancient Sanskrit texts. He attended the Tirupati Sanskrit Pathshala, after which he plunged into his chosen mission, one of his main goals being to take Sanskrit to the non-Brahmin class, particularly the downtrodden classes. And his logic is impeccable. "Sanskrit is the best tool to remove the five types of social differences," he explains, "linguistic, class, caste, sect and the north vs south division."

His mission can prove crucial. Three crore Sanskrit manuscripts on important subjects are lying unread in musty archives all over the country. Happily, Shastry has begun to inspire people to learn the language. Like Jahanviben Shukla, a schoolteacher in Deesa town, who learnt to speak Sanskrit six years ago. Today, not only has she made Sanskrit the mode of communication in her four-member family, she has also ensured that many of the 400-odd students in her school speak the language without faltering.

Holocaust of human heritage
Taliban worst culprit in history

Inder Malhotra

http://www.tribuneindia.com/20010308/edit.htm#4

No words can be strong enough to condemn what the unspeakable the Taliban regime of Afghanistan has done, not in a fit of blind rage but as an act of cold-blooded zealotry that Mr Atal Behari Vajpayee has rightly described as “barbaric”. Not since the Nazis has anything so vile and horrific as the destruction of the unique and priceless fifth-century giant Buddhas of Bamiyan been heard of. This savagery is comparable not to the orgy of book burning by Hitler and his henchmen but, in terms of culture and human heritage, to their holocaust of six million Jews.

Sadly, the foul deed has already been done. The incomparable works of art, sculpture and architecture that were the proud pre-Islamic heritage of not just Afghanistan but entire humanity now lie shattered to smithereens. Further attempts by sections of the international community, including UNESCO, rather belated in the first place, are now pointless. Prince Sadruddin Agha Khan, in a letter to The International Herald Tribune, had aptly compared the destroyed heritage to the “Pharaonic monuments of Egypt, the Babylonian treasures of Iraq, the pre-Islamic masterpieces of Persepolis in Iran”, the Greco-Roman temples and so on. To point out all this to the medieval and mad mullahs operating from Kandahar and Kabul, however, was like the proverbial playing of the been (a musical instrument) to a buffalo.

Does this mean that the world can only wring its hands and do nothing further about the monstrosity at Bamiyan? Not at all. The international community must unite to pillory Afghanistan’s barbaric rulers at every step and in every manner. They may control most of the Afghan territory. But only three countries — Pakistan, Saudi Arabia and the UAE — recognise the Taliban regime. The UN, UNESCO, other international bodies and the numerous countries that have spoken out agony against the outrage must see to it that the Taliban regime does not get international recognition at all. This is the minimum price the vandals must be made to pay for their villainy. The UN sanctions against it must be enforced rigorously and indeed intensified.

The suggestion for a complete de-recognition of the Taliban has come significantly from Mr Dimitri Loundras, the Greek Ambassador to Pakistan who also heads a UN committee to deal with the Taliban on the archaeological issues. Other Pakistan-based Ambassadors had joined him and UNESCO’s special envoy as well as a representative of the UN Secretary-General, in frantic but fruitless last minute attempts to reason with the Taliban. It is gratifying that a number of Muslim countries have condemned the Taliban. They have also joined a host of Muslim intellectuals across the world, including a large number from this country, in declaring the demolition of the Bamiyan Buddhas as “un-Islamic”.

The rage and the sorrow of the Buddhist countries such as Thailand, Japan, South Korea and Mongolia are limitless. The Dalai Lama also has given voice to deep anguish. The Japanese Ambassador to Pakistan has cried out against "betrayal". These countries ought to be active at the UN even more than India that is, of course, the birthplace of the Buddha. **As Jawaharlal Nehru once said, Buddhism might have taken root in other countries but "India has always lived under the Buddha's umbrella".**

Some have already started arguing that, however, deplorable the action of the Taliban, such vandalism, based on religion or ideology, has been a part of life almost throughout history. They can cite any number of instances beginning from the destruction by the all-conquering Romans of the Second Temple of the Jews in Jerusalem in 70 AD when they crushed a Jewish revolt in their empire. The argument is specious and must be rejected. What happened in medieval times cannot justify its repetition in the present age that is supposed to be enlightened. In any case, in medieval Spain when zealots tried to demolish the magnificent mosque at Cordoba and replace it by a cathedral, King Charles V had intervened to halt the havoc. "What you are building here", he had told the hotheads, "can be found anywhere. But what you have destroyed exists nowhere". Has there been a single such voice of sanity in Afghanistan, a land benighted by the Taliban?

The Taliban's own excuse for their monstrous act has shifted from time to time. At one stage someone had claimed on its behalf that it was pulverising its own heritage in retaliation for the demolition of Babri Masjid in India. The alternative claim to be articulated next was that the Taliban had been driven to act desperately, if also foolishly, by its isolation and even more by the sanctions imposed by the UN at a time when arms were allegedly flowing in to their rivals, the Northern Alliance. The gullible might have swallowed this — as quite a few in this country indeed did — but then the Taliban itself decided to cut out the cackle. It proclaimed from the housetops that the only reason for its despicable decision was that the statues in human form, whether actually worshipped or not, were "un-Islamic".

This has raised other pertinent questions. Muslims have ruled Afghanistan for at least a thousand years before Mullah Mohammed Omar and his wild followers seized power in the nineties. All of them had respected the Bamiyan Buddhas as their heritage. As someone has pointed out, with an appropriate touch of irony, Mahmud of Ghazni was among such rulers. **He did march to Somnath to break the idols there and on the way.** But he left Bamiyan strictly alone.

In the understable angry discussion on the Bamiyan Buddhas a critical point has been generally ignored. What are the Taliban, if not a creation of Pakistan? Pakistan's support to it is vital for its continued hold on power. Full allowance should surely be made of the fact that proteges sometimes do defy their mentors. It must also be recognised that Pakistan did join other countries in urging restraint on the Taliban. But regrettably its intervention was too late and too feeble. It was rather pathetic to watch Mr Shamshad Ahmed, Pakistan's Ambassador to the UN and a former Foreign Secretary, on the CNN fumbling for words and finally coming up with "ill-considered" as the description of the horrendous act in which the Taliban regime was already engaged when he spoke.

The real worry in Pakistan, and among its well-wishers, should be what might happen next. Pakistan may have created the Taliban, nurtured them in its madrassas and sustained them in power with the constant supply of warplanes, tanks and other sophisticated weapons. But now the

roles are getting reversed, ideologically at least. In the words of many Pakistanis themselves, their country is getting "Talibanised". Mr Sadruddin Agha Khan, in the letter quoted above, has asked: "How would Pakistan react if some cleric ordered the destruction of all the Indus Valley Gandhara Buddhas?"

His question is not rhetorical but very pertinent. The sway of the Taliban-like insanity in Pakistan is a regrettable fact of life. Neither the military regime presided over by General Musharraf nor those sections of Pakistani society who are dismayed by the rising tide of fundamentalism seem able to resist. This, especially in the light of what is going on in Kashmir after the third extension of the unilateral ceasefire, must be a source of major concern.

No less dismaying is the role of some sections of the Indian media that have been virtually condoning, if not applauding, the Taliban's barbarity at Bamiyan. Their argument is convoluted to the point of being perverse. Because there are in India elements like the VHP and the Bajrang Dal, they argue, the world has to live with the Taliban. The destruction of the matchless Buddhas, in their view, is justified because of the earlier demolition of the Babri Masjid. Mullah Omar and Acharya Giriraj Kishore are supposed to be the two sides of the same coin.

The destruction of the Babri Masjid was an egregious and unpardonable outrage. It is a matter of shame for this country that it has not yet punished its perpetrators. Instead, the government of the day is trying to fudge the case against some of the alleged culprits who occupy positions of power in the present set-up. But how does this justify the Taliban's savagery? Doubtless, the VHP's threat to avenge the blasting of the Bamiyan Buddhas by some similar idiocy at Ajmer or elsewhere has to be resisted by the Indian State firmly. **But the curious mindset being displayed by the Taliban's Indian apologists can in no way be defended by equating one evil with another. To do so is a perversion, not promotion, of liberal values.**

+++

Defenceless Buddhas

If the two Bamiyan Buddha statues have a voice, they will simply utter the unutterable: we have seen it all and suffered it all. But being the statues of the Buddha, they will simply and painfully smile and tell the Taliban destroyers, "Sons, you do not know what you are doing."

The last person to vandalise was Genghis Khan who cut off the legs in 1221. He also killed all residents of the town on the Silk Route as a punishment for living with two majestic Buddhas. It was the restoration work by Afghan and Indian experts that attracted new migrants and hotels to cater to tourists. In due course, the very tall statues – one 150 feet tall and the other 30 feet shorter – became world famous, being declared a heritage of the entire humanity.

Dedicated sculptors, mostly from India, created the icons out of a rock. In other words, the Buddhas were not built but carved out of a hillside very much like the Elephanta Caves and Ajanta. Again, in other words, there was just a hilltop to begin with and after the chistle and hammer work there stood two stunning figures spreading benediction. Of course the creators used a finely ground paste of limestone to produce the effect of folded robes and the contemplative expression. At one time there were also much gold plating and jewels, now sadly missing.

There are some priceless Buddha statues in the Kabul museum. This is after all the theft and pilferage by successive invaders. The first one was by an Iraqi General, Yakub ibn Layeth who took away many Buddhist treasures from the rockcuts of Bamiyan (some scholars spell it without the “y”). Chinese traveller Hsuen Tsang has said that Bamiyan was a very important Buddhist centre and housed many monks. They all lived in the caves cut out of the rocks. There need not be any greater evidence of Indian influence than this.

One last word. Temple architecture is normally style-bound. Like the tall spires of churches, domes and minarets of mosques. But in India it is bewilderingly different, The tall spires of the Bodh Gaya temple is different from the gopurams of the south. Humpi is a marvellous blending of the northern and southern architecture. The marble Jain temples of Rajasthan and Gujarat are a breed apart as are the temples in Khajuraho and Konarak. Then there are the exquisite designs of small temples in Himachal Pradesh and the grand and richly endowed gurdwaras in Punjab. No doubt, India’s most attractive exportable product in ancient times was religion and temple architecture and it did well.

Did Jesus live in India?

By Iqbal Malhotra
The Indian Express

The New Testament of the Bible is completely silent on where Jesus spent 18 years of his life between the ages of 12 and 30. There is also a question mark on whether Jesus died on the cross or whether he survived the crucifixion and escaped from Jerusalem with the help of friends, to finally settle in India as an itinerant
preacher.

Both history and the Gospels are silent about the life of Jesus before his 30th year when he was baptised by John. A German theologian, Holger Kersten, has published a book called Jesus Lived in India, which contains seminal evidence on the fact that Jesus spent the 18 lost years of his life in India imbibing yoga, Vedic traditions and Buddhism. Thereafter, he returned to Jerusalem and after the crucifixion escaped back to India via Damascus and Persia.

Jesus is believed to have been buried in Srinagar, Kashmir. His graves are intact and points east-west in
the Jewish tradition rather than north-south in the Islamic tradition.

Kersten has provided a wealth of theological, archaeological and historical evidence in defence of his
hypothesis. According to Kersten, the Tibetans believe that Jesus was the 21st incarnation of Padmasambhava, the Buddha; the latter himself being the ninth incarnation of Vishnu. He develops an argument that the three wise men, or the Magi, were really Tibetan monks hunting for the
reincarnated Buddha.

If Kersten's evidence is to be tested, it will shake the foundations of contemporary Christianity as it will set
aside Jesus's sacrifice on the cross to wash the sins of mankind and therefore initiate a process of introspection to assess whether Christianity is indeed based on the teachings of Jesus Christ or whether it is based on the interpretation of the teachings of Jesus Christ by Paul. Paul taught that the whole function of Jesus centres on his sacrificial death, that through the shedding of his blood he absolved the faithful of their sins and released them from chaos and the domination of Satan. According to Paul, a person may be saved merely by the single act of baptism, becoming a child of God and a completely new being. Most Christians are of the opinion that the greatness, the uniqueness of Christianity, stands and falls with this teaching. Yet it may prove to be a fiction far

removed from the ideas of Jesus.

Not even a hint of this so-called Christian doctrine of salvation is to be found in the Sermon on the Mount --the quintessence of Jesus's message -- or in the Lord's Prayer, or in Christ's traditional parables.

Kersten first turns to Russian journalist Nicolai Notovitch who visited Ladakh in the 1880s and wrote a
book called òf40óThe Unknown Life of Jesus Christ. Notovitch discovered the existence of certain ancient
scriptures in the monastery of Hemis in Ladakh about the mysterious prophet Issa, whose life appeared to be similar to the stories of Jesus the Nazarene. According to these scriptures, at the age of 14, Issa, who was born in Israel, came to Sindh in India and from there he travelled through the Punjab to Jagannath Puri, where he learnt the Vedas for six years. Later he travelled via Nepal to Ladakh, where he studied Buddhist scriptures.

Then there is the Natha Namavali, an old Hindu Sutra of the mystical order of the Nath Yogis, which tells of the great Saint Isha Nath, who is said to have come to India at the age of 14. After he returned to his home country and started to spread his teachings there, he fell victim to a conspiracy and was crucified. By means of the yogic powers he had attained in India he was able to survive execution, and finally -- with the help of the supernatural powers of his teacher Chetan Nath, a Nath Guru -- he came once more to India, where he is said to have founded an ashram in the Himalayan foothills.

Shiv Sharan:Not Your Typical French Hindu

By Rakesh Mathur, London

http://www.hinduism-today.com/1995/10/#gen42

"I spent more than twenty years in India in the traditional Hindu world," wrote Shiv Sharan--known in Europe as Alain Daniélou of Paris, France--in Shiva and Dionysus. "I was as far removed from the modern world as though I had been miraculously transported back to the Egypt of the Pharaohs." "On returning to Europe," Sharan went on with characteristic bluntness, "I was amazed at the childishness of theological concepts, and of the barrenness of what ness of what is called religion. I found a rudderless humanity, clutching the dying tree of Christianity, without even understanding why it was dying." He was an author, artist, musician and philosopher and perhaps the first European to boldly proclaim his Hinduness. This son of French aristocracy turned Benaras pundit had a wide effect upon Europe's understanding of Hinduism, though upon his passing in 1994, at the age of 87, only a few circles of scholars and musicians really appreciated the extent of his influence.

In 1987 famed sitarist Ravi Shankar, whom Sharan introduced to Europe in 1958, wrote of him, "Having covered the entire length and breadth of our great heritage during his long span, so deep were his feelings for the Motherland that he embraced Hinduism and took the name of 'Shiv Sharan.' Thus began the incessant flow of his glorious writings on Indian culture especially covering music, philosophy and religion. To this day his continuous contribution to the promotion of India's cultural heritage abroad through his works has no parallel in modern history. His unflinching devotion to our culture and, above all, love for Mother India, defy all expression."

Daniélou's Italian Sanctuary

At the request of Hinduism Today, I visited his simple villa home, the "Solstice of Labyrinth," 30 km away from Rome, set among the vineyards of the village of Zagarolo. This ancient pre-Roman Etruscan settlement is one of those places where the spirit breathes and peace prevails. Here Sharan spent his latter years with Jacques Cloarec, his assistant and disciple. He wrote incessantly on Hinduism. His presence can be felt all the time in the Solstice of Labyrinth. Cloarec makes sure that all visitors to this villa continue the dialogue, which Sharan poignantly started decades ago on the subjects of Indian music, Hinduism and especially Saivism.

Sharan, though he left India in the early sixties never to return, remained a Hindu throughout his life. He wrote in The Way to the Labyrinth, "I have never gone back to India. I know that the world I lived in will always exist but has simply retreated into its shell, waiting for the storms of the modern age to clear away. In order to find it again, I should have to go through the new Europeanized India that is so alien to me. It would take me a long while to readjust to its customs

and rites, to that way of life, eating, and dressing, without which there is no possible access to the traditional world. There would be nothing new for me to find, nothing I did not already know in the former existence I was granted by the Gods in that kingdom beyond time and space--the wondrous and eternal land of India."

Together Jacques Cloarec and I spend several evenings discussing Sharan's life and work. He was born as Alain Daniélou, Jacques related, in Paris on October 4th, 1907. His mother, an ardent Catholic, founded a religious order, as well as the famous "Sainte Marie" teaching establishments. His father was a Breton politician. Sharan spent most of his childhood in the country, with tutors, a library and a piano. Later he studied painting, singing and classical dancing. A great sportsman, Daniélou was a canoeing champion and an expert driver of racing cars.

"He was quite an agitator," Jacques confided. "He refused all limitations on his personal liberties and on his thought. He was very much anti-establishment--most of the time--although he came forth out of very conservative elements. He broke away from his family at a very tender age and became quite a wild person in the artistic milieu. Then he discovered India by chance one day as he was traveling to Afghanistan, and that is when his life changed totally."

With the Sadhus of Benaras

In 1932, together with the Swiss photographer, Raymond Burnier, this adventurous youth departed for the East, finally arriving in India in 1935. Initially he was associated with Rabindranath Tagore, as director of the school of music at Tagore's Shantiniketan academy.

Sharan could never cope with the Anglicized Indians who were ruling the country on Western concepts. He intensely disliked Gandhi and, to some extent, Tagore. "I soon discovered," he wrote, "that I had nothing to learn from English-speaking Indians--not even from such well-known philosophers as Vivekananda, Radhakrishnan, Aurobindo or Bhagwan Das."

His aversion for the India tailored out of English cloth fortuitously propelled Sharan into the depths of Hindu thought. He and Burnier moved to Benaras. There Sharan found a traditional world of writers, scholars, brahmins and monks who were completely indifferent to modern trends of thought. They preserved the traditional ideas, sciences, rites and philosophic systems of ancient India. He realized that these two worlds had practically no contact. They spoke different languages.

Under the guidance of Shivendra Nath Basu, Sharan studied classical Indian music and became an accomplished vina player. He became fluent in both written and spoken Hindi. A famous sannyasi of Benaras, Swami Karpatri, guided his study of Sanskrit and philosophy, and his association with sadhus and gurus.

Initiation into Hinduism

It was Karpatri who initiated Daniélou into Saivite Hinduism, and gave him the name of Siva Sharan ("protected by Siva"). Burnier was also initiated. Both lived as Hindus, including daily baths in the Ganges, a strict vegetarian diet and other observances, many of which Sharan continued the rest of his life.

In his 30 years with Daniélou, Cloarec never heard him speak of this initiation, nor for that matter,

of any other kinds of mystical inner experiences. "He was extremely discrete," he told me, "He would never speak about himself. He did say that just after his initiation he felt things had changed and he was now completely included in the Hindu world. He did puja nearly every day, but refused to allow anyone to watch."

The tradition Sharan adopted was that of the Saiva Agamas. This was really a crucial event, for nearly all modern exponents of Hinduism to the West belonged to the Smarta Sampradaya [tradition] of Adi Sankara. There are numerous differences between the philosophy of the ancient Agamas--which are the primary source and authority for Hindu ritual, yoga and temple construction--and the largely philosophic system propounded by Sankara in the 7th century ce.

As one example, the Agamic tradition does not regard the physical and spiritual worlds as mere maya or illusion, but rather considers them sacred creation, the visible form of the Supreme God. Hindu temple worship based upon this belief is a most important manifestation of the Agamic tradition. Smartas consider temple worship a lesser form of spiritual practice. The brilliance and uniqueness of Sharan's books, such as the encyclopedic Hindu Polytheism, was in his knowledgeable articulation of the Agamic mysticism which embraces the vast majority of Hindus.

In 1949, Sharan was appointed professor at the Hindu University of Benaras and director of the College of Indian Music. He corresponded with René Guénon about the philosophic and religious approaches of Saivite Hinduism. Greatly interested in the symbolism of Hindu architecture and sculpture, of which he made a thorough study, he made long trips together with Burnier to Khajuraho, Bhuvaneshvar and Konarak, as well as to many lesser-known sites in Central India and Rajputana.

In 1954, he left Benaras to take up the post of director of the Adyar Library of Sanskrit manuscripts and editions at Madras. In 1956, he was made a member of the Institut Française d'Indologie at Pondicherry, and subsequently of the Ecole Française d'Extrême Orient.

Impact of India's Independence

Sharan always believed that the foreign occupations of India, first by the Muslims then by the British--created deep rifts in Indian society. Those who were forced to collaborate with the invaders, learn their language and attend their schools and universities still believed themselves to be Hindus, but in fact, had only very vague notions of Indian science, philosophy and cosmology.

Most of the Indians running the administration of India during these occupations, Sharan believed, had to accept so many infractions to the rules of their society, so many moral and dietary compromises and absorb so many points of view foreign to their hybrid culture that they completely cut themselves off from any real knowledge of their traditions.

Sharan found that all the Hindus who ever occupied official functions and university and administrative posts were English-speaking and British educated, not only under British rule, but in the Indian administrative services that followed after Independence. "Men like Nehru and Tagore knew nothing about Hindu culture except through British authors," he observed. "Tagore was very much opposed to the rigors of the traditional society."

A close friend of the Nehru family, and in particular of Mrs. Pandit, Nehru's sister, his sympathies lay with the Independence Movement. But after the independence of India when the new

government attacked orthodoxy, it was suggested that his role would be more useful in the West in presenting the true face of Hinduism.

On Mission to Europe

"Sharan began to appear in Europe again from time to time after World War II," relates Cloarec, "and was somewhat of an eccentric because he had kept the kondu [hair tuft] of a good orthodox Hindu, which made of him a 'hippie' before the fact. But this eccentric person affirmed in a superb manner his knowledge of India from 1960 onward through his great work, Hindu Polytheism, which was printed by the prestigious Bollingen Series of Princeton University Press."

Once in Europe, he wrote prolifically. Among his most popular books were Hindu Polytheism; Virtue, Success, Pleasure and Liberation, The Four Aims of Life; The Ragas of Northern Indian Music; Music and the Power of Sound, plus books on sculpture, architecture, tales, history and yoga. He completed the first full translation of the Kama Sutra just before his death.

His double culture, which was by no means artificial, gave Sharan an outsider's vision of the Western world. In two of his works, Shiva and Dionysus and While the Gods Play--Saiva Oracles and Predictions on the Cycle of History and the Destiny of Mankind, he deals with the problems of a Western culture gone astray, having lost its own traditions and taken man away from nature and the divine. He demonstrates that the rites and beliefs of the ancient Western world before the onslaught of Christianity are very close to Saivism and clearly explains it with the aid of the texts and rites that have been preserved in India.

"My translation work and my attempt to elucidate Hindu conceptions presented many difficulties," Sharan once acknowledged, "because no words in any Western language can express the very subtle notions of Hindu metaphysics or cosmology. I had to express one way of thinking through the bric-a-brac of the vocabulary of another. Everything had to be rethought, no word could ever be translated directly by another."

Sharan's books have been published in twelve countries, in English, French, German, Italian, Spanish, Portuguese, Japanese and more.

Promotion of the World's Music

For many in Europe, however, Sharan is best known for his promotion of the classical music of India and other countries. In 1958 he was the first to produce an anthology of Indian music, which included the Dagar brothers, Ravi Shankar, Ali Akbar Khan and Pattamal, among others. He arranged, against all advice, an international tour for the Dagar brothers in the concert halls of Europe where heretofore only European classical music was played. Similarly he advocated "equal status" for the classical traditions of all cultures. Famed violinist Yehudi Menuhin said in 1981, "It was Daniélou who, more than anyone else, thanks to his gifts of enthusiasm, ardor and communication skills, has furnished many elements of mutual comprehension which brought us closer to one another. The fact that music is today recognized as an essential value of all cultures and a universal discipline is to a large degree thanks to Daniélou." Mrs. Gobeil, director of Arts and Cultural Life at UNESCO, observes, "Daniélou was conscious of the value of traditional cultures 50 years before we were."

In 1963 he created the International Institute for Comparative Music Studies in Berlin and Venice

with the help of the Ford Foundation of America. By organizing concerts for the great musicians of Asia and the publication of recorded collections of traditional music under the aegis of UNESCO, he played an important part in the rediscovery of Asian art and music in the West. Because of his efforts, Indian music's influence can be seen on various established Western artists such as Xenakis, Nadia Boulanger and his friend, Maurice Béjart.

Sharan received numerous awards during his lifetime. President Charles de Gaulle presented him with the Légion d'Honneur, the highest award in France. In 1981, he received the UNESCO/CIM prize for music, and in 1987 the City of Paris honored his 80th birthday.

Shiv Sharan died January 27th, 1994. In accordance with his wish, he was cremated at Lausanne, Switzerland, without rites or ceremony.

Sharan's books, published under the name Alain Daniélou, are available in English translation from Inner Traditions, 1 Park Street, Rochester, Vermont, 05767, USA. Jacques Cloarec may be contacted at Via Colle Labirinto, 36, 00039, Zagarolo (Rome), Italy.

Sidebar: Shiv Sharan on Hinduism

From Hindu Polytheism (1964):

The word "Hindu," used for convenience, can be misleading, for it may convey the idea that Hinduism belongs to a country, to a particular human group, to a particular time. Hinduism, according to Hindu tradition and belief, is the remnant of a universal store of knowledge which, at one time, was accessible to the whole of mankind. It claims to represent the sum of all that has come to be known to man through his own effort or through revelation from the earliest age of his existence. The development of the mutually exclusive creeds which now claim membership of the greater number of human beings seems to be, in the Hindu view, a comparatively recent phenomenon, which appeared only during the Kali Yuga. Whatever value we attribute to more recent religions, we should not attempt to equate Hinduism with them. Hinduism cannot be opposed to any creed, to any prophet, to any incarnation, to any way of realization, since one of its fundamental principles is to acknowledge them all and many more to come.

The Western approach to Hinduism tends to present us with a clear picture of original systems which become confused and mixed in the mass of Hindu thought, while the Hindu approach wants us to see a coherent, all-inclusive, ever-evolving knowledge with its roots in ancient systems which tried to express, more or less successfully, the complex structure of the cosmos, a structure which came to be better and better analyzed in the elaborate mythology of the later ages.

From Shiva and Dionysus (1979):

Life is one. There is no boundary between the vegetable, animal and human worlds. They are interdependent, and their common survival depends on respect of their harmony, whereby none assumes the role of predator, or the right to alter the balance of nature. The Gods and subtle energies are present everywhere in the world and within ourselves. A return to Saivite wisdom would appear to be the only way to ensure a respite to a human race which is running towards destruction at an ever-increasing pace.

Sidebar: Some Personal Reminiscences

By Jacques Cloarec

"When I met Sharan in 1962, he had definitely left India and looked totally European, dressed Western-style and smoked abundantly. There was nothing to make him stand out particularly. Yet, I noticed very quickly that there was a certain bearing in him, a certain inner process going on, a certain way of thinking, that was totally different from those you would find in Europe. He had kept his Indian habits, that is to say ways of doing things, and especially a way of reflecting--the constant questioning of all established concepts. He had a sense of values of good and evil that made him different from anyone else around him.

"Even though he was director of a famous music institute, and making a good salary, he lived simply at that time in a small room. He refused even to give his laundry out to be done, and I found him washing it personally. He cared little about money, but his needs were always amply met, first through the support of Raymond Burnier, then from his well-paying job as director of the music institute. Only in the last few years has any substantial income come from his book royalties.

"A few years later, in the 1960s, he got in the habit of wearing a rudraksha mala, a very Saivite thing, and what surprised everyone most was a little golden Linga that he would wear in a very obvious way over his Scottish neckties.

"He had adopted Indian thinking in a very deep way and without any reservations. He felt that its philosophy and religion had no rival anywhere in the world as to its profundity and its logic. He regarded all other systems as completely wrong.

"Sharan was a secretive person, humble, transparent. For years and years that I lived with him, I never saw him reading or writing Hindi or Sanskrit. So I had some doubts whether he could read them at all. Then when he decided to do the Kama Sutra, he couldn't find any pundits who could help him do that, because the language was so tough. So he really surprised everyone when he started to translate it all on his own. And he worked extremely hard for four years to do a very difficult translation from the very archaic Sanskrit of Vatsyayana. The second commentary in Hindi was a little easier for him. After he completed Kama Sutra, at 85, he began translating the Artha Shastra which he would never be able to finish."

Jacques Cloarec was Sharan's personal assistant for 30 years.

Epic soul-searching

Personality: From young professional to mature priest-author, that's the story of Krishna Dharma

By Mark McClelland

http://www.the-week.com/99oct03/life2.htm

At 25, Kenneth Anderson had acquired the trappings of success: an officer's job in the merchant navy, a girlfriend and a lifestyle that included drinking binges, smoking and the occasional drugs.

But this Ôdream life' was filled with emptiness until Anderson came across the Bhagavad Gita and discovered Hinduism. Now, 20 years later, his transformation from Kenneth Anderson to Krishna Dharma, a Hindu priest, is probably complete: He has authored an English version of the Mahabharata that runs to 1,000 pages.

Krishna Dharma (above left) hopes that his 1,000-page Mahabharata will become the definitive English version of the epic**.**

Dharma, who is the president of a temple which he founded in Manchester in 1986, says that reading the Gita was the greatest thing that happened to him.
"After reading it I suddenly gave up everything I had and went to live in a temple," said Dharma, whose wife of 15 years, Chintamani, also converted to Hinduism after meeting him. "In the temple, I rose at 4 a.m. every day and meditated. Discovering the spiritual side of things improved my life immeasurably. If I hadn't taken to this I might have gone crazy or killed myself."

Dharma, who has three children aged 11, eight and four, had stopped practising Christianity before he discovered Hinduism. After he started believing in Hinduism, he returned to Christianity seeking the answers he had been looking for. All he found was disillusionment. "Christian scriptures have a lot to offer," he said. "But the church has diluted the message, twisted it and misinterpreted it. Not only did I not get anything out of going to church, I actually became an atheist."

Dharma believes that the teachings of Christ and Krishna are not very different from each other and that Hinduism is more about spiritually-centred simple living and high thinking. The dialogue going on between religions and the willingness of people to explore other faiths was one of the factors in his deciding to write the Mahabharata in a simple form. "The Mahabharata is such a wonderful book and I wanted to share it with others," says Dharma. "The spirit of the epic is so different from today's harsh age of science and technology and materialism.

Dharma hopes that his book will become the definitive English version of the epic. "What is available in English is not so easy to read. The language is stilted, written by people for whom English is a second language. In the digressions, one easily lost the thread of the story," says Dharma, who hopes that his book, which contains many coloured and sketched pictures, will be of interest also to readers of fantasy fiction such as Lord Of The Rings.

Dharma has plans for a 300-page abridged version of the book. "A lot of people will balk at reading a 1,000 page book. It's not something you can carry with you to read on the train on the way to work. But, a lot of people may read the smaller version."

While Dharma has laid himself open to criticism of misinterpretation, he has not heard dissenting voices so far. "Everything I have heard has been positive," he says.

The positive feedback began with his American publishers who contacted him when he was looking for an agent. "They offered an attractive proposition, saying they would get behind it and they have," says Dharma. "They're pushing it well out there and the reviews I've had in the States have been excellent."

Although it took Dharma two years to write the book, which is priced Rs. 900 in India and available from Torchlight Publishing, New Delhi, he says that was only a small part of the process. "You need to read the verses a lot to get a good grasp of them and I read them over a number of years. There was a lot of cross referencing and I had to be definite about what I was looking for."

After a lifetime of searching, Dharma has found exactly what he was looking for in the Mahabharata.

INDIGENOUS PEOPLES - Tribal Tribulations
My personal encounter with the impact of Christian conversion on Meghalaya
By Dr. Mihir Meghani, Michigan

I first met the Khasi people of Meghalaya in 1995. A delegation of 30 were touring the state of Maharashtra as part of the Rashtriya Swayamsevak Sangh's project, Bharat Mera Ghar ("India is My Home"). Previously my concept of India's Northeastern States--Assam, Meghalaya, Tripura, Nagaland,Manipur, Mizoram and Arunachal--was that everyone had converted to Christianity and wanted to separate from Bharat. Now I was delighted to meet this delegation of Khasi Hindus who were patriotic to India and proud of their heritage. I resolved to go to this state when the opportunity arose.

By good fortune, the following year was my last in medical school and the curriculum allowed time for experience outside the US. I arranged a position at a clinic with Dr. R. S. Thangkhiew, a Khasi Hindu physician in Shillong, the capital of Meghalaya. As a medical student, I expected to learn a lot about infectious diseases and the consequences of poverty and lack of basic resources on health. I saw those problems, and to some extent could alleviate them through my work as a physician.

As a concerned Hindu, I wanted to experience this state of Bharat that so few people get to experience, learn about the unique culture of the people there and see first hand what Christian missionaries were doing. I was truly shocked by the rampant discrimination that Christians meted out to non-Christians (mostly Hindus, including Khasis, Sikhs, Assamese and Bengalis). Christian denominations control almost 100 percent of the state's educational and health care institutions and resources. Most of them give discounts to those people who identify themselves with the particular Christian sect that runs that institution. Additionally, in many hospitals if an individual cannot pay his bill at the end of his stay, the hospital will offer to waive the full amount if he converts to Christianity. Most top government jobs are given to Christians, and there are barely any non-Christian members in the state legislature.

Aprial Mon Thangkhiew, a resident of Shillong, explained how this all happened. "Missionaries got converts because of education," she told me."Converts got admission to colleges and hostels outside the Northeast while non-Christians did not. Poor Khasis couldn't afford to go outside. Only Christians got scholarships. My cousin was a Presidency College Gold Medalist, but he didn't get a scholarship, because he was not a Christian. Conversion was the price for higher education. People converted because of educational and economic reasons initially. So, the poor, bright people converted, and then the other poor followed. If these preferences were not offered, people would not have converted."

Thangkhiew went on, "The Christians and British tried to teach us to hate our culture--song, dance, religion, everything. If we sang a Khasi song, they would laugh at us. They called us devil worshipers. They preached in our schools and brainwashed Khasis. The converted Khasis were just like them. They laughed at us when we went to our dances. I went to the Presbyterian school. I had many good friends. However, after some of them were converted to Christianity, they told me, 'We'll go to heaven and you'll go to hell.' They didn't realize that they were dishonoring their ancestors. The British policy of sending missionaries didn't do anything for us except weaken our culture. They converted all the Syiems [local rulers] except the Syiem of Nongkrum. Then other people converted."

The 50 percent of Khasis who did not convert are one of the few communities of the Northeast that still maintains their ancient traditions. They believe in one universal God, U Blei, who is the creator of everything. They do not have a written text or scripture, and the heritage verbally passes from generation to generation. The basic principle of Khasi religion is similar to the eternal principles of other tribal faiths. It is to earn righteousness in the world. The basic precept is that to know God, one must first know, love and respect fellow human beings. Prayer, song and dance are important aspects of the culture. Throughout the year, there are community dances where villagers get together. In March and April is the most important, the Shad Suk Mynsiem, (shad means dance, suk means happiness or tranquility and mynsiem means soul or heart), a dance of joy, merriment, gratitude and thanksgiving. Khasis follow a matrilineal system. The wife keeps her mother's last name, children keep the mother's last name and the youngest daughter inherits the family property.

Attempts during British times to resist the Christianization of the people generally failed. Jrin Mon Thangkhiew recalls, "My grandfather, Babu Jeebon Roy, wanted to start a school to promote the Khasi culture and religion and strengthen ties with the rest of India. He approached the British Government in 1875 and was told to get permission from the Welsh Calvinist Mission, which had been entrusted the task of propagating education. The missionaries replied, 'We have only come to educate your people to the extent that they can read the Bible. Anyway, your people do not have enough brains for higher studies.' " Nevertheless, in 1876, the Shillong High School opened with Roy's own money. But the Christian missionaries could not tolerate it because they realized it was a threat to their control of education, a main tool for proselytization. The government was forced to give control of the school to the Presbyterian missionaries, and subsequently, education about Khasi heritage was eliminated. Christianity became the sole religion taught, and the medium of instruction was changed from Bengali to English.

I was shocked to discover that the latest method for gaining converts was simple fear. Missionaries were telling the people that the apocalypse--a time predicted in the Christian Bible when the world is destroyed and only righteous Christians are saved--will occur in the year 2000. I was asked time and again by frightened local people if it was true. "Of course not," I told them, "hardly any Christians in the world believe such a prediction."
It is a version of the old "best bet" conversion argument used for centuries in the West. Dr. Sam Pamei, a Christian from Nagaland who lives in Shillong, gave me the Meghalaya version: "If I have a choice to be a Christian and face no bad outcome from the perspective of my indigenous religion, or to follow my indigenous religion and face eternal damnation if Christianity is the true

way, then the safe bet is to be come a Christian." According to Sunil Deodhar, the missionaries are resorting to such extreme measures because, "Due to the work of Seng Khasi, Sein Raj and RSS, they are gaining fewer new converts and are actually losing many old converts back to the indigenous fold. This threat of eternal damnation is their last-ditch attempt to win converts."

Many organizations have been dealing with these challenges. Since 1899, Seng Khasi has been working to maintain the indigenous Khasi culture and religion and defend it against attacks from Christian missionaries. Seng Khasi and its sister group, Sein Raj, organize Khasi religious and cultural programs, hold regular prayers and meetings and publish material to educate people about the Khasi heritage. The Ramakrishna Mission has been active for decades. More recently, the RSS, Seva Bharati and Vanvasi Kalyan Ashram have assisted Seng Khasi and Sein Raj with their programs and set up many schools, student and youth hostels and medical clinics. However, all these groups encounter constant opposition from Christians.

When I left Meghalaya in 1996, I felt among Khasis a growing sense of pride in their religion, culture and heritage. Two hundred years ago Hindus may have been at a technological, economic and political disadvantage. But today Hindus have all the resources they need to support our fellow brothers and sisters. If the Northeast goes, then many other tribal communities are susceptible to severing ties with the age-old Hindu society. Today, as tribal communities are strengthening their identities, there is a need to reaffirm to them that they are an integral part of Hindu society and that Hindu society will neither take them away from their traditional beliefs and culture, nor swallow them. Each time a Hindu community converts, their unique contribution to the religious and cultural melting pot is lost and Hinduism becomes less diverse.

Our past, our future: Time for action in Elephanta
By Sumita Mehta

Grabbing headlines in Mumbai last week was Intach's benefit event for the Elephanta Caves. Though heritage wasn't the abiding concern of the 300 guests, they did leave with a very different view.

The reason was the heritage experience. Awesome sculptures, vocalist Shubha Mudgal and danseuse Alarmel Valli's moving performances against the backdrop of the lit caves, and the small site museum combined exquisitely to reiterate the relevance of the past.
Elephanta, the world only island's caves, dates back to the 6th century and boasts of some of the country's most magnificent rock-cut sculptures. Says art historian Promod Chandra, "It's perhaps the most significant early Hindu monument in India." Approximately 20 lakh people visit annually.

UNESCO declared the caves a World Heritage Site in 1987, but one adventurous lot even happily perched itself on top of the magnificent three-faced Shiva statue, the Trimurti – and plastic packets were strewn all over. Something, indeed, had to be done in a hurry.

In order to bring Elephanta into greater focus, Intach, the Archaeological Survey and UNESCO have held seminars, prepared plans and organised workshops. All agencies involved with Elephanta's development, such as the departments of culture, environment, tourism, water, etc, as well as ASI and local bodies have worked towards creating a plan to preserve the area and evolve community development initiatives.

The ASI custodian's cottage was restored to house the site museum, showcasing the development of rock-cut sculptures in Mumbai and Maharashtra, the 16 World Heritage Sites in India, the stupa and other Buddhist monuments in Elephanta.

Some of the money collected from the art auction and ticket sales at last week's event will be used to redesign the pathway and ensure that the stalls present a simple, clean, coordinated impact.

But a lot remains to be done. The mangroves on the island's shores are severely affected by pollution from the Mumbai harbour. One mangrove species has already been lost and there is urgent need to rehabilitate the rest.

Elephanta is constantly threatened by the rapid industrial development in its vicinity. A toxic chemical storage terminal has been planned just 400 m away. Bilge from oil

tankers, waste from ship-breaking activities and plastic that is dumped in the sea seriously threatens the marine and bird life of the area. Another threat is the proposed move to put one leg of the eight-lane Sewri-Nhava Sheva highway link on Elephanta. Intach has asked experts to assess the impact of such development.

The place will survive only if the community benefits. Intach is working with Project.

Mainstream, an NGO, to provide loans and business opportunities to the unemployed youth. It plans to involve another NGO to create income-generating avenues for women. When all this comes to fruition, then the validity of last week's theme - Time Past, Time Future - will be proved.

Poison of western economic thought

M.S.N. Menon

http://www.tribuneindia.com/2002/20020322/edit.htm#5

They gave bangles for African slaves, opium for the silver of China and beads for the gold of the Incas and Mayas of South America. **Exploitation — it was natural to the ways of the whiteman. It has not changed to this day.**

Live and let live — this was not what inspired their economic doctrines. **Instead, they talked of "competition". In practice, they used gun powder.** They have been a Cain to the Abels of the world.

Remember, the greatest sport of the Romans was to let the lions tear up human beings: To let gladiators gore each other!

Am I provoked? Indeed, I am, for the whiteman continues to "exploit" the world. He is the cause of much suffering. **And, worse, he sells to the poor of the world what is banned in his own native land and treats Asia and Africa as dumping ground for dangerous toxins.**

Surely, behind these activities is not a civilised mind. It reflects the barbarous past of Europe. The mind is deadened by rapacious greed.

That others too have to make a living — this has never been the concern of white men. Thus, the Manchester textile factory owners saw nothing wrong in destroying the livelihood of millions of Indian handloom workers in order to promote the livelihood of the white workers of Manchester! Of course, profit was the first priority.

Am I taking up the past to denigrate the people of the West of today? Certainly not. One can ignore the black deeds of the past, although that is no easy task. How can the Africans forget the slave trade and the Red Indians the genocide against their race? And these by those who professed Christianity! But one cannot tolerate the continuing criminal activities of the West in our times.

That tobacco is a health hazard was known a century ago. But the Western manufacturers persisted in foisting it on the world. Profit was all. Today they target the young (and women too) of Asia and Africa as tobacco consumption is fast declining in the West. That tobacco causes cancer, that millions go through agony — these are of no concern to them. There is no easy way to block them for they are powerful people.

Liquor has been a killer of a different kind. It causes alcoholism. Over the years, its consumption has gone up by leaps. With a decline in consumption in the West, makers of Scotch whisky are desperately trying to dump the surplus in Asia and Africa, particularly in India, with its copious

market and high purchasing power.

Globalisation has brought McDonald's and its French fries to every corner of the world. We are now told that it has been selling beef-flavoured French fries! How could it have done such a monstrous thing? Insatiable greed — that is the only answer.

And imagine this: a medical device which can see the inside of the lung was found to be causing infection of the lung! Although it is banned in the USA, the company continues to sell it in India.

All these have become possible because the peoples of Asia and Africa have for long been subjected to a feeling of inferiority — of self-hate. And admiration for everything western. Which is why America gives so much importance to the export of its way of life to the developing world. This was the unfinished business of colonialism. It has already prepared the peoples of Asia and Africa for an apotheosis of the market culture.

Of course, Indians are a party to these criminal activities. Thus, highly toxic lead wastes, which can cause blood and neurological disorders, imported from the West are sold in India for re-use in car batteries. At one time there were 250 plants in Delhi alone to re-cycle lead wastes! As India has no regulatory system, these activities have continued and multiplied. Which explains how a US firm planned to dump 20 tonnes of dangerous mercury in India. It was turned back when Indian NGOs got wind of it.

Today, indigent nations accept nuclear wastes for burial against payment. In fact, a new pattern has emerged: a hazardous industry is either transferred to the Third World or its wastes are sold to Third World peoples for reprocessing or disposal. Sometimes free incinerators are provided to burn the wastes, thus polluting the environment.

Can the non-white people object to these things? They cannot, for the whiteman can drag them to the WTO court in the name of "free trade".

Reap where you have not sown. The whiteman is a master of this art. He has done little for the development of the world. In fact, he was opposed to the industrialisation of the developing world. India got much of the help from the socialist countries, above all from Russia. And yet the West wants larger and larger share of the Indian market, as if by right!

It is time to ask: is this the way man should organise his economic life on which his life depends? Does this add to his happiness? Or is the entire system causing a great deal of avoidable sorrow? The answer should be obvious.

In spite of all these, how is it that we are too eager to open up our markets? This is because our business community's concerned with only one thing: its profit. The care of the country is secondary. Only when its own interests are threatened does it make nationalistic noises. And our rulers (whatever their hue) they have shown least interest in changing the ways of the world.

Today the USA champions human rights. It is legitimate to ask: is there a right against economic murder? Have we a right against those who poison our food and environment? It is time to raise these questions.

Return of the Aryans

By: Bhagwan S.Gidwani

Publisher: Penguin Books India; Pages:994; ISBN 0-14-024053 –5

(Reviewed by: Prof. Jagjit Mirchand)

Introduction

Several eminent personalities including Swami Vivekanand, Gurudev Rabindranath Tagore and Shri Aurobindo firmly believed that Aryans were homegrown, born and brought up in India. Many chose to dismiss those views simply as irrational, inspirational or ultra-nationalistic. Yet, the archeological finds being uncovered presently, year after year, supported by continuing historical & scholarly research seem to prove that Swami Vivekanand, Rabindranath Tagore and Shri Aurobindo, and many learned personalities were correct to raise pointed questions against the Aryan Invasion Theory.

The British, in presenting the Aryan Invasion Theory offered no proof. They did not need to. Hundreds of Indian historians rushed forward to earn their doctorates, promotions, patronage and government-aided jobs and positions for supporting the British theory of Aryan Invasion of India. Their Proof? Largely quoting those very hundreds of articles and books –and asking - how could so many learned books and serious articles by countless British and Indian historians be wrong!

Some did murmur that the British-created Myth was aimed at proving to the Indians that they have always been ruled by foreigners, being incapable of ruling themselves and that it was always the foreign invader, like the Aryans (and in later times, other foreigners and finally, the British), who brought progress and enlightenment – and therefore never must Indians aspire for self-rule unless the intention is to bring back darkness, decadence and ruin on themselves.

'**RETURN OF THE ARYANS'** presented in novel form, provides a fascinating story and updates much of the research from scholarly and historical sources, archeological records, oral traditions and memory songs to present facts and evidence to show the Aryan Invasion Theory is flawed. Moreover, it presents the drama of the birth and beginning of Hinduism with elegance and beauty.

MAIN THEMES IN THE BOOK:

Bhagwan S. Gidwani's best-seller, "Return of the Aryans" presents drama of birth and beginnings of the roots of Hinduism (Sanatana-Dharma) prior to 8,000 BCE. The book's other main themes are:

1. Aryans originated from India. They were born, grew up, and died as citizens of Bharat-Varsha, anchored in timeless foundation of Sanatana-Dharma.

2. Theory of Aryan invasion of India from West is false.

3. Equally false is theory of North-South Divide. Ganga, Madhya, Sindhu and Dravidian regions were equal partners of Bharat-Varsha (India).

4. A generation that remains unaware of its roots and heritage is truly orphaned.

TERRITORY OF BHARAT VARSHA IN 5,000 BCE:

'Return of the Aryans' explains that Bharat-Varsha territory in 5,000 BCE was greater than combined territory of India, Pakistan & Bangladesh, as additionally, it included Avagana (Afghanistan), parts of Iran upto Lake-Namaskar; Tibet; Brahma-Lands (Burma); Sadhu-Newar-Lands (Nepal); Bhoota (Bhutan); and Vraon-Land (Sri Lanka). These lands joined Bharat-Varsha not by conquest but by free consent.

Yet wars came and Bharat-Varsha people proved themselves great & gallant warriors. To conquered peoples, they extended rights and freedoms of Sanatana-Dharma. Theirs was firm belief in humane ideals of Sanatana-Dharma and concept of human rights.

ANCIENT IDEALS OF SANATANA DHARMA:

Gidwani approaches Hinduism with deeply-felt respect. He writes about ideals that took shape in those early times, to become foundation of Sanatana-Dharma - and among those ideals were: recognition of spiritual nature of man wherever he is from; acceptance of every culture as expression of eternal values; and man's obligation to protect environment, and all creatures, tame and wild.

Thus the book speaks of beauty and universality of Hinduism; its respect for all faiths to assert "Whatever god you choose, He is that God, and Dharma (Righteousness) is His Will"

STORY OF ARYANS – Their origin and travel to far-distant Lands:

The book presents a fascinating story of the birth & beginning of the roots of Hinduism from 8,000 BCE. Equally dramatic is its account of Aryans originating in India, their exploits and adventures in distant lands, including Iran, Egypt, Mesopotamia, Turkey, Russian-lands, Finland, Italy, Greece, Norway, Sweden, Lithuania, Baltic-States and Germany; and finally their triumphal return to home-town and heritage of India.

ORIGIN OF OM, VEDAS, SWASTIKA, SOMA WINE, CIVILIZATION:

The work covers dramatic stories behind origins of Om, Tat Tvam Asi (That-Art- Thou) Namaste, Gayatri-Mantra, Swastika and Soma Wines . It tells how Sanskrit and Tamil developed - how they influenced world-languages; it has tales of battles and blood-shed, rise of Benaras, Hardwar and many cities; discovery and disappearance of Saraswati River and founding of Ganga, Dravidian, Sindhu civilizations; Besides, Gidwani sheds light on pre-history Hindu Parliament; development of ships & harbors; gold-mining; chariots; Yoga; mathematics; astronomy; medicine; surgery; music, dance, architecture; and material advancement of ancient India.

The book explains how Vedas were composed in 4000 BCE by poets of Bharat-Varsha, along India's rivers.

'Return of the Aryans' is certainly a great book, powerfully presented, with deep insights into pre-ancient history. The story, though in novel-form, is not mere fiction. It is based on enormous research and carries stamp of scholarship and plausibility.

It should make excellent TV Serial, based as it is on theme of national integration, national self-respect and national identity, . Certainly, the book fulfills long-felt need to keep alive awareness of foundation and eternal values of India's culture. Also it presents art, yoga, abstract thought, philosophical and spiritual leanings of pre-history India. Besides, it has suspense and drama, moving at red-hot speed, with thrilling tales of Aryan adventures, courage, rashness, heroic thrusts and triumphs, in various far-away countries of Asia & Europe. TV Serial therefore will have world-wide appeal.

History overtaken by politics

By Bulbul Roy Mishra

http://www.indianexpress.com/full_story.php?content_id=21173

The Hindus do not pay much attention to the historical order of things,'' wrote Al beruni in 1030 A.D. ''They are very careless in relating the chronological succession of things.'' The millennium-old censure of the Hindu's lack of historic sense by a medieval historian appears to still apply, particularly to Indian historians of the present day.

It is bizarre that the eminent historians like Irfan Habib, Suraj Bhan and K.M. Shrimali have opposed the excavation of the Ayodhya site on rather flimsy grounds.

An interview with Professor Irfan Habib, the former chairman of the Indian Council of Historical Research, was published in The Indian Express on March 12, with the headline ''Digging won't resolve Ayodhya dispute''. A historian of the repute of Irfan Habib would be expected to talk about possible historic finds on excavation of the site rather than resolution of Ayodhya dispute.

His apprehension is that ''such a post facto rationalisation of what was done on December 6, 1992, would place in jeopardy the fate of numerous historical monuments all over the country.'' Such apprehension is rather unfounded for two reasons.

First, it is nobody's case that all existing historic monuments should be demolished in order to carry out excavations. The demolition of Babri mosque has been condemned by one and all, including top BJP leaders. The question of excavation of the site has become relevant only because there is no structure at present on the disputed site.

Secondly, excavation is pertinent in the context of the observation by leaders like Syed Shahabuddin that if it was proved that the Babri masjid had been built after demolishing the Ramjanmabhoomi mandir, then a mosque on such usurped land deserved to be destroyed in conformity with the tenets of the Shariat.

Professor Habib has also remarked that the archaeological finds are subject to many interpretations. But given the core issue to find a permanent solution to the age-old dispute, archaeologists will have to only find whether or not a temple pre-existed the mosque. The dating of any such a temple structure can be scientifically attempted by the carbon 14 method. Whether such a temple was a Ram temple or Shiva temple or for that matter a temple for worship of any other deity is irrelevant. In any case, the disputed site has been known for a very long time as Ramjanmabhoomi where Ram has been worshipped in the mosque even during the heyday of the Mughal empire, down to the present day.

The temple, if any, can therefore, be logically taken as Ram temple. Thus it is difficult to understand why Professor Habib was apprehensive that the archaeological finds at the site would be subject to many interpretations. According to Professor Habib, there is no acceptable proof that the Babri masjid had been built at the site of a Hindu temple. This being the case, there is all the more reason for him to seek archaeological evidence.

The shortsightedness of historians like Professor Irfan Habib is patently evident from the fact that they have totally ignored the revelation from the radar survey to Tojo Vikas International, suggesting the

existence of ancient structures at a layer that may be of two to three millennium B.C. These findings of course are not conclusive, but are sufficient to inspire a historian to demand excavation of the site.

If one considers the fact that not a single ancient structure of the early Vedic period has so far been unearthed to establish the antiquity of the much vaunted Vedic civilisation, one will understand the immense importance of the excavation of the Ayodhya site.

According to western scholars, the period of early Vedic civilisation commenced from 1500 B.C. Assuming that an ancient temple structure of 2000 B.C. depicting well-known Vedic deities on its pillars, is unearthed at the disputed site, such a find will at once demolish the existing theories of Aryan invasion around 1500 B.C. and warrant a reconstruction of ancient Indian history. Thus, in view of the radar survey, all historians including the eminent ones like Professor Habib should have welcome the excavation. If the excavation leads to any such find, it will far outweigh in importance the issue on hand, viz. whether or not a temple existed at the mosque site.

The Buddha will forgive. Should we?

Chandan Mitra

http://www.dailypioneer.com/secon2.asp?cat=BKBONE1&d=SUNDAYPIONEER/BACKBONE

The desecration and destruction of the magnificent Buddha statues in Bamiyan, Afghanistan, by Taliban marauders is especially painful and humiliating for Indians. For the rest of the world, they are only heritage sites, but for us they are symbols and surviving artifacts of our own history, culture and civilisation. It is futile to condemn the Taliban for this act: You cannot expect savages to be graced with table manners. And the Taliban have repeatedly and proudly proclaimed their savagery. They have dragged a former President of their own country out of the sanctified premises of the UN mission and hung him by the neck in a public square. They have stoned women to death for allegedly indulging in adultery, besides banishing them from schools and hospitals. They have shot people in cold blood for not sporting a beard. They jubilantly collaborated with the hijackers of the Indian Airlines plane in December 1999, helping them force a humiliating deal out of our Government from Kandahar under the benign gaze of the local commander.

The infuriating part of all this is that the world is so helpless in such situations. Just two decades ago, it was similarly helpless in the face of the murderous Pol Pot regime in Cambodia that went about massacring a few million people for the sheer joy of killing. Of course, the world was equally silent when Stalin and Mao Zedong liquidated "class enemies" by the million in their respective countries, but that was before the age of information dawned upon us. As far as the Taliban are concerned, their barbarism is worse for it is proclaimed with robust audacity. This time too, there was no hide-and-seek about their iconoclasm. They elevated statue-breaking to state policy and justified it on the specious ground of religion. Their arguments are so pathetic that even their sponsor state, Pakistan, has been compelled to plead with them, at least for the record, to desist from such savagery.

Now that the bloodthirsty Taliban have terrorised the local population into cowering submission, they need to find occupation for their unemployed soldiers. Also, the regime must be worried that their tanks and rocket-launchers, bought with money from the narcotics trade, could be rusting. So, what could be better than sending their rag-tag army and artillery for some target practice to the Bamiyan hills? The new recruits to the Taliban ranks will presumably be given less arduous responsibilities like smashing statues inside the Kabul Museum, another heritage site, with pick-axes and shovels. The UN and international heritage organisations shall salve their consciences by issuing condemnations and/or appeals. The US, which sallied into Afghanistan with Cruise missiles to destroy the ever-elusive Osama bin Laden, can be trusted to maintain deafening silence on this issue. Washington's machismo has recently been expended on some hapless Air Traffic Controllers in Iraq!

Not that we can do very much about it, but the Taliban's insane effrontery provides us occasion to introspect and perhaps resuscitate our shrinking concern for India's civilisational heritage. **Once upon a time, Kandahar marked the western frontier of Indian empires. Ruled by local Shaivite kings, much of Afghanistan was in the ambit of the Indo-Gangetic culture. Gandhari, wife of Dhritara-shtra, belonged to Kandahar, underlying the close ethno-cultural links between that region and today's Hindi heartland. The Shaivite kingdoms of Kandahar were eventually replaced by Buddhist monarchies during the centuries when Gautama Buddha's intellectual rebellion against the heavy-handed Brahminical Hindu order won him adherents throughout our vast land. Similarly to the East, Indian culture flourished, reaching islands as far as Borneo and Bali. Some of it survives even today, evident from the quaint proto-Sanskritic names that still prevail in Thailand, Malaysia, Cambodia and Indonesia. Borneo's capital, Bandar Seri Begawan is a colloquialisation of Sri Bhagwan, Bali's headquarters, Jeyapora, is nothing but Jaipur, localised, just as Aranya Prathet in Thailand is simply the jungle province or Aranya Pradesh. Fortunately, much of the structure of the gigantic temple city of Angkor Vat has survived the ravages of the Khmer Rouge, while Borobudur in Java still shines in resplendent glory.**

I am yet to see an Indian documentary on these subjects though. However, the BBC commissioned a masterly serial on Angkor Vat some years ago, detailing the efforts being made now, in association with the Archeological Survey of India, to restore the damaged temple complex at Angkor in Cambodia. **I suppose any effort to educate today's generations of India's cultural heritage, that too outside India's current borders, will invite charges of saffronisation by our learned historians.** Only a few months ago, they kicked up a huge row over the grant of some money for a project to investigate the course of the "mythical" Saraswati. I am amused by their eloquent silence in the aftermath of the Gujarat quake, for satellite pictures have revealed subterranean water channels, leading to speculation that the mighty Saraswati might indeed still be flowing into the Arabian Sea, away from our gaze.

By the time this appears in print, the barbarian rulers of Afghanistan would undoubtedly have succeeded in their mediaeval mission. Having triumphed at home, they might even try their hand at exporting iconoclasm to neighbouring countries. Unfortunately, there are half-witted people across the globe that might well fall prey to the Taliban's grotesque logic. Of course, they need to be asked if the temple of Abu Simbel at Aswan with its gigantic statues, relocated at vast expense when the dam was built there in the 1950s, also constitutes an affront to religious sensibilities. But who's going the engage the Taliban in dialogue? They neither hear nor speak any language apart from that of the gun.

There are times when the world needs to intervene with physical force to stop such inhuman atrocities, whether perpetrated on icons or people. The Taliban represent a far bigger threat to civilisation than Radovan Karadic did in Bosnia. Their passion for destruction does not stop at human lives. The more we acquiesce in their barbarism through our silence, the more they get emboldened. The liberation of Afghanistan from the stranglehold of these diabolical peddlers of death and drugs has to be placed on the international agenda. Some tentative steps were initiated last year jointly by the US, Russia and India in that direction. That needs to be substantially upgraded and a concrete action plan drawn up. The region controlled by the Taliban is too strategic

to be left to them or the Dr Frankensteins in Islamabad. The Taliban must be eliminated today to secure humanity's tomorrow.

(*Buddha is a Hindu god. He is the ninth avatar of Vishnu. Celebrated poets and devotees such as Jayadev of Gitagovinda fame (12th C) sang about this in his composition "Dasavataram.")

Why Hindus Worship The Shiv Ling

By Kartik Mohan

http://www.swordoftruth.com/swordoftruth/articles/readersvoice/readersvoice1.html

A guy named Philip asked me on this forum to explain why it is that Hindus worship the Shiv Ling. I am very glad that he did , not only because it gives me an opportunity to explain, but to expose the truth of what so called "Christian ethics" are all about. Christianity, after all, is hardly a religion - it has always been exactly what it started out as, a political agenda in spiritual guise. Its ends are the imperialistic subjugation of non-Christians, and to achieve them it has relied consistently on the propogation of lies and the falsification of history- not to mention the manipulation of our very notions of what is right and wrong. Unfortunately, Christianity is so widely followed in the world today that these manipulations have even permeated the ethics of non-Christians. Brother Hindus, we had better beware of this, because in surrendering to it we are undermining the worldwide spiritual legacy of an ancient civilised era of which we are the last surviving inheritors.

First, to answer the question. Philip asks, why is it that we worship the Shiv Ling- isn't it Shiva's penis? My reply to that is yes, and that is exactly the reason. The Shiv Ling, depicted in consummate union with the Yoni (vulva) of Shakti, is representative of the most wonderful and miraculous feature of life itself. What distinguishes life from non-life, after all? Above all else, the ability to reproduce its own kind. If we are to revere the concept that life itself is sacred- which even the Christians claim to believe- why is the most characteristic feature of life, the act of progenition, any less sacred? It is not only sex we are talking about here. It is the consummation of the vast and different energies of the male and female universal prerogative, of which the Shiv Ling in union is a symbol- celebrating the fact that humankind has two sexes, each with its unique attributes and qualities, and when they come together, they produce a synergy, they create MORE life, they become more than the sum of their individual parts. Many ancient civilisations recognized the wonder of this concept- including the Chinese, who represent it somewhat more abstractly in the symbol of Yin and Yang. It is a tribute to these ancient and wise people that they were able to perceive true miracles, true wonderment, in the very features of life which surround us in our everyday existence. They did not need to have some man walk upon water to see a miracle, nor see crippled people cured instantaneously- or, worse yet, read about it in some book and call their blind adherence to such beliefs "faith".

Now. My friend Philip was actually horrified, appalled, revolted by the very idea that we heathens could worship something such as a penis. The REALLY interesting question is, WHY?

Have you ever really thought about the assumptions that cause us to think of sex as something "unclean"? Have you ever wondered why a joke about sex, in the English language, is referred to

as a "dirty" joke? Why is a picture of the human body in its natural state thought of as a "dirty" picture? Why do thousands of teenagers, non Christian and Christian alike, go through entirely unnecessary agonies of guilt , bound by the belief that masturbation is a sin? Why does such painful ignorance manifest itself generation after generation, all over the world? The answer is, because we have been conditioned to think of it that way- and here is the pervasiveness of manipulative Christian "ethics" I talked about earlier. When Christians start schools, it is not because they want to teach us, it is because they want to teach us their lies. And the lie that sex is evil, sex is unclean, sex is inherently in and of itself immoral - the lie that is brainwashed into us in spite of our knowing better since childhood- is perhaps Christianity's oldest lie of all. And like all of its lies, it was meant, at the time of its invention, to serve a political agenda in a spiritual guise.

The Bible never says, in so many words, that sex is a sin. In Genesis, though, it contends that Adam and Eve were cast out from the Garden of Eden for committing between them the "Original Sin"- and then shortly thereafter they had a son. Later, in the New Testament, it is one of the cardinal principles of Christianity that "Virgin Mary" was more virtuous than any other human being, because she was "without sin"- i.e., she was allegedly still a "virgin" when she gave birth to the alleged "Jesus". Add to this the superstition that the entire Christian world associates with sex, the way in which Puritanism reviles sex, the sheer guilt that Christianity associates with anything viscerally pleasurable (because "Jesus died on the cross for their sins")- and the conclusion is obvious. The Bible may not ever have spelled out that sex is a sin, but most of the Christian world, including my dear Philip, are hidebound to view it that way. So that today, life is sacred but the creation of life is a sin. A thirteen year old girl who becomes pregnant because she is too young to know any better, is reviled by Christians as having committed the Original Sin. Yet, if she has an abortion rather than bring a child she cannot care for into the world, they will revile her doubly as a murderer. This is the hypocrisy of which Christianity consists to its very core. And it all exists for a reason, as I shall proceed to explain.

More than 4000 years ago, civilised human beings all over the world were essentially polytheistic, essentially tolerant people. The centre of their godhood, though, their primary deity, in almost all cases was not male. She was the Mother Goddess, in one or another of her manifestations. She was the Bounteous Earth, the giver of fertility and nurturance and sustenance to all her children without asking anything in return, the source of all life when it is created and the receiver of all things back into her womb when they die. She was an extremely natural deity to worship- when people had no hangups about procreation being part of the wonder of life. She had female attributes, the wife, the mother, the giver of unconditional love, the bearer of and caretaker of children. Her fertility was what allowed the circle of life to go on, and it was only natural that humans all around the world worship this. And they did.

We in India knew the Mother Goddess - there are representations of her dating back to the Indus Valley Civilisation. Hindus know her as Shakti, and in her manifestations as Durga / Kali / Parvati. In the civilisation of Persia, they knew her as Ishtar. In Babylonia and Egypt, as Astarte. In ancient Greece, as Hecate or Demeter. In Rome, as Vesta. Even in the New World, despite no evidence of any contact between Eurasian and American civilisations of that era- there are temples and representations of a Mother Goddess- it is obvious there would be, because she is the natural object for humanity to worship.

Not, however, for a tribe of desert barbarians 4000 years ago called the Israelites. They had a different kind of god altogether. A Male God, with a Capital G. They called him Yahweh, and he is the direct antecedent of the " Lord Our God " of the Christians, and of Allah of the Muslims. He was not about fertility and caring at all. He was a wrathful, vengeful, jealous , angry god, full of violent hatred and intolerance. He spoke out of a "burning bush" and instructed Moses , saying " I Am That I Am "- if this is unbelievable to you, don't read the Bible, watch The Ten Commandments by Cecil B DeMille, it really is more entertaining. He told Moses, among other things, that his followers must not worship False Gods, that HE was the One True God, and then asked Moses to go with his staff and smite another people who believed in false gods, the Egyptians, with the full force of His power. And there began the first of the imperialism that Christianity embodies today. A belief, stronger than any other, that the nonbeliever is a lesser human being than a Christian, because he is going to hell, and if he cannot be "saved" by being converted to Christianity, he should be killed before he spreads his views any further. A political agenda truly unprecedented. Go forth and multiply, and kill whatever stands in your way, because I Am That I Am and I am on Your Side.

The Jews never went about converting people with the rabid fervour of Christians, but they had a political agenda, certainly. To that end, it was necessary to revile and discredit other peoples, the neighbouring civilisations of Egypt and Babylon , and part of this was achieved by discrediting their principal deity- who was, of course, the Mother Goddess. How was this achieved? Through effecting a remarkable paradigm shift. If men, physically stronger, could be made to despise and subjugate women rather than treat them as equals- that would put an end to the worship of any Goddess . If fertility, and procreation itself, could be defamed as not miraculous but sinful things- though this went against all the natural instincts human beings had followed so far- if people could be made to feel unclean for worshipping these things, they would reject the Mother Goddess, because she stood for fertility and the miracle of life. Hence, sex is the Original Sin. Hence, the human body in its natural state is dirty. Hence, Philip is horrified when we worship the act of procreation.

How was this paradigm shift effected? Very slowly, but with the bitter doggedness of true fanatics. It began with the murder of Queen Jezebel as described in the Old Testament. It began with the razing of the Temple to Astarte in Jerusalem , and the building of a Temple to Yahweh by King David in its place. It carried on for thousands of years, hand in glove with more overt political actions, such as the conversion of Roman Emperor Constantine I to Christianity in AD ca. 300. It was at this time that what we know as the Bible today, was compiled and written- with a very hardcore political agenda already in place laying its foundations. The fall of Rome followed, and was followed by the Dark Ages, which were followed by the Crusades, which were followed by Colonialism and the Inquisition. The faith that had sprung from the Israelites spread like a metastizing cancer over the face of the earth. And it holds most of the earth in its poisonous grasp today. And still, the denigration of women in society that took hold as a result of this agenda continues. Till early this century, Christian countries did not give women the right to vote. Even now, in Islamic countries- where a monotheistic , intolerant God descended from Yahweh holds sway in his most perverse caricature- well, we know how they treat their women.

Brothers, we all knew the Mother Goddess once. We Hindus still know her as Shakti today. We are the only ones who are so lucky as to have survived. Persia, Babylon, Egypt, Greece, Rome, the Americas- all fell to the brutal viciousness of the Christian onslaught...and later, parts of Asia

to the Islamic onslaught. They were tolerant, civilised people, just as we are today. That was why they could be wiped out and replaced by Christians. But we have survived. We are heirs to the true legacy of humanism, and we must never forget this. We must recognize the lies of the Christians for what they are, we must recognize their activities of conversion for the imperialist evil they represent, and we must fight these things with all our efforts to the bitter end. One day, Christianity's mighty edifice will fall under the weight of its own contradictions . Till then, we must bear the torch of the legacy of pagan humanism that will ultimately prevail.

Aum Silence - The ancient silence of Om

By David Gordon

http://www.spiritsound.com/aum.html

Seeking the unstruck sound

Ancient teachings and modern science agree: you, I, all living things, all things in existence are made up at their most essential level of vibrating, pulsing energy.

For millennia, mystics have recounted their experience of this energy, which is said to manifest in our hearing awareness as a humming vibration around and within everything else. In the Sanskrit tradition, this sound is called *"Anahata Nada,"* the *"Unstruck Sound."* Literally, this means *"the sound that is not made by two things striking together."* The point of this particular distinction is that all ordinary audible sounds are made by at least two elements: bow and string; drum and stick; two vocal cords; two lips against the mouthpiece of the trumpet; the double reed of the oboe; waves against the shore; wind against the leaves. All sounds within our range of hearing are created by things visible or invisible, striking each other or vibrating together, creating pulsing waves of air molecules which our ears and brain interpret as *sound*.

So, sound that is *not* made of two things striking together is the sound of primal energy, the sound of the universe itself. Joseph Campbell likens this unstruck vibration to the humming of an electrical transformer, or the (to our ears) unheard hummings of atoms and molecules. And the ancients say that the audible sound which most resembles this unstruck sound is the syllable *OM*. Tradition has it that this ancient mantra is composed of four elements: the first three are vocal sounds: *A*, *U*, and *M*. The fourth sound, unheard, is the *silence* which begins and ends the audible sound, the silence which surrounds it. There are several traditional and allegorical interpretations of this ancient sound.

The ancient tradition of AUM

The loveliest explanation of OM is found within the ancient Vedic and Sanskrit traditions. We can read about AUM in the marvelous *Manduka Upanishad*, which explains the four elements of AUM as an allegory of the four planes of consciousness.

"A" *(pronounced "AH" as in "father")* resonates in the center of the mouth. It represents normal waking consciousness, in which subject and object exist as separate entities. This is the level of

mechanics, science, logical reason, the lower three chakras. Matter exists on a gross level, is stable and slow to change.

Then the sound "U" *(pronounced as in "who")* transfers the sense of vibration to the back of the mouth, and shifts the allegory to the level of dream consciousness. Here, object and subject become intertwined in awareness. Both are contained within us. Matter becomes subtle, more fluid, rapidly changing. This is the realm of dreams, divinities, imagination, the inner world.

"M" is the third element, humming with lips gently closed. This sound resonates forward in the mouth and buzzes throughout the head. (Try it.) This sound represents the realm of deep, dreamless sleep. There is neither observing subject nor observed object. All are one, and nothing. Only pure consciousness exists, unseen, pristine, latent, covered with darkness. This is the cosmic night, the interval between cycles of creation, the womb of the divine Mother.

The Yoga of AUM

It might be said that the ultimate aim of Yoga is to enter this third dreamless realm while awake. Yoga means "yoke" or "join." Through yoga we "join" our waking consciousness to its "source" in the world of pure, qualitiless unconsciousness. Which brings us to the fourth sound of AUM, the primal "unstruck" sound within the silence at the end of the sacred syllable. In fact, the word "silence" itself can be understood only in reference to "sound." We hear this silence best when listening to sound, any sound at all, without interpreting or judging the sound. Listening fully, openly, without preconceptions or expectations. The sound of music, the sound of the city, the sound of the wind in the forest. All can give us the opportunity to follow the path of sound into the awareness of the *sound behind the sound*.

When one really "listens" to this silent sound, this unstruck vibration, one comes inevitably to stillness, to pure and open existence. The poet Gerhart Hauptmann says the aim of all poetry is *"to let the Word be heard resounding behind words."* The sound behind the sound. And, in making the sound of AUM, we hear this unstruck sound most clearly in the instant when the last humming vibrations of the "M" fade away. At that moment, that instant separating audible sound and silence, the veil is thinnest, and our listening awareness is most expansive. At that moment of silence, to use William Blake's words, the "doors of perception" are cleansed, and *"everything would appear to man as it is, infinite."*

Another way to make the AUM sound

One of my favorite exercises with the sacred AUM sound involves a more modern interpretation of its elements. In short: "A" is the sound of infinite expanding energy in the universe, the energy of unity consciousness and Divine Love; "U" is the sound of that very energy manifesting and materializing in our waking reality; with the sound of "M" we absorb and integrate that energy into our own being. In the silence after the sound we give thanks and allow the process to resonate within us.

Try this: stand comfortably, feet shoulder width apart, hands and arms hanging easily at your sides. Prepare to make the "AUM" sound, all three vowels in one seamless breath. Inhale gently,

easily, expanding into your belly as you breathe. Open your mouth fully as you inhale, as if to "inhale" the "A" sound itself, creating the intention of the sound before the sound actually begins. Then, as you begin to make the "A" sound, raise your arms out to the side, as if opening to embrace all the universe. Than as your voice transitions seamlessly to the "U" sound, extend your arms to the front, as if to hold something precious and powerful in your hands. You might wish to visualize some shape, round and energetic, manifesting between the palms of your hands. Then, gliding from "U" to the "M" sound, bring your hands, and whatever they may contain, to your heart center. Finally, in the echo of the silence, bring your palms to your chest, pressing them lovingly to your heart. Breathe gently. Repeat this exercise several times. It is remarkably centering and relaxing.

Find your own way

The most important aspect of this second form of AUM is the combination of *sound and movement.* It really doesn't matter what "images" you create in your mind as you do this exercise, or what specific significance you choose to attribute to each of the individual vowel sounds. The mere fact that you are intoning this ancient sound, and combining it with gentle intuitive movements of the upper body, will have a naturally gentle and balancing effect on your body, mind, emotions, and spirit.

In that state, we can best hear the the *Anahata Nada*, the unstruck sound behind the sound, the very Sound of the Self.

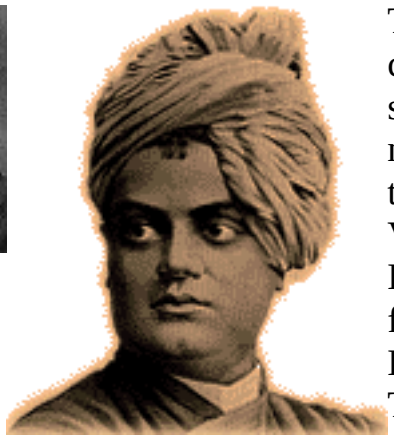
Hindu Contributions to the New Age Movement



By Frank Morales

http://www.hinduweb.org/home/dharma_and_philosophy/dharma/main.htm

As a phenomena which has gained notable attention in the last two decades or so, the New Age movement has been of special interest to those who specialize in the study of religion. The history and origin of this essentially American movement is an especially interesting one. While several historical trends have contributed to the development of this world view, the main impetus for the New Age movement - both since the 1960's, and including its pre-Sixties antecedents - has been the periodic influx of Hindu spiritual and philosophical ideas.

The modern New Age movement had its origins in the explosive interest in achieving maximal human potential and personal spiritual development witnessed in 1960's America. Today, included among many of the more famous New Age leaders are Deepak Chopra, Bernie Seagal and Marianne Williamson. As a social phenomena, this spiritual movement seeks both personal and planetary transformation. The former, most New Age theoreticians would say, leading necessarily to the latter. While this movement has gained great notoriety in recent years, however, the core basis of its ideas are nothing new. Many scholars have, in fact, described New Age ideas as a revival of esoteric and mystical religion traditions rooted in humanity's ancient past. Indeed, the greatest single contributor of philosophical concepts to the American New Age movement has been something neither new nor American, i.e., the ancient religious tradition of Hinduism.

This fact is evident both historically and in more contemporary observations. Historically, there were several 19th Century antecedents of the New Age movement. These include a) the Theosophical Society, b) the New Thought Movement, and c) the arrival of Swami Vivekananda in America. The Theosophical Society of H.P. Blavatsky derived much of its philosophical outlook from the religions of Asia, specifically Hinduism and Buddhism. The source of divine knowledge for Theosophists were the mysterious and elusive "Mahatmas" who supposedly lived in the Himalayas. The New Thought movement - which inspired such 19th century Christian movements as Christian Science and Unity - was also very receptive to religious currents emanating from Eastern sources. The New Thought movement, in turn, owed much of its theology to the ideas of the New England Transcendentalists, such as Thoreau and Emerson, who where greatly influenced by the

Upanishads and the Bhagavad Gita. About the Bhagavad Gita's influence in his life, Thoreau has written, "In the morning I bathe my intellect in the stupendous and cosmogonal philosophy of the Bhagavad Gita, in comparison with which our modern world and its literature seem puny and trivial". Finally, the famous 1893 arrival of Swami Vivekananda, and the subsequent growth of his Vedanta Society in America, helped communicate Hindu religious thought to an eager American audience in a more explicit form.

Building upon these 19th Century foundations, the New Age movement began its modern development in the 1960's. Though other trends certainly contributed significantly to this development, including transpersonal psychology and occultism, it was the new influx of Hindu spiritual traditions which was most responsible for the movement's subsequent development and outlook. Due to changes in the immigration laws in 1965, Asian spiritual teachers (gurus) found entering the U.S. less of a challenge. During this time, many esteemed Hindu gurus began traveling about America on lecture tours, including Maharishi Mahesh Yogi, Bhaktivedanta Swami, Swami Rama and Swami Satchidananda. Consequently, many Hindu religious traditions began to find new and eager adherents in America. Some of these traditions included Yoga, Vedanta, Tantra, Vaishnavism and various Advaitic Hindu teachings. The contributions of these different Hindu schools of thought to New Age thinking was immense.

These include both philosophical and practical contributions. While New Agers currently believe in such concepts as: the interdependence of all life, non-violence, concern for the Earth's environment, and tolerance for diverse viewpoints, it was the ancient Hindu philosophical heritage which first helped formulate these concepts coherently in the mind's of many nascent New Agers. Other New Age ideas which received strong philosophical support from India's religions include the belief in reincarnation and karma, the efficacy of ritual, and the need for compassion towards animals. Indeed, the latter trend within the New Age movement is quite in keeping with the vegetarian and non-violent ethic taught by most Asian spiritual traditions (specifically Hinduism, Buddhism and Jainism).

Possibly the most important component which the New Age movement owes to Hindu spirituality, however, is the practice of meditation. Every tradition of Indian religion teaches one form of meditation or another. Perhaps the most important proponent of meditation in the U.S. has been the Maharishi Mahesh Yogi, the founder of the Transcendental Meditation movement. Other forms of meditation introduced from India include mantra-meditation, visualization and karma yoga. As a result of this influx of Hindu meditational techniques, the practice of meditation has become an integral part of the New Age landscape.

While it is true that many of the beliefs and practices of the New Age movement can also be traced to other sources (for example, Platonic and Hermetic philosophy, as well as Native American beliefs), it is apparent that the movement owes a great deal of its ideas to the much older spiritual traditions of India. From the practical considerations of vegetarianism and meditation, to gaining a more philosophical justification for its belief structure, the New Age movement finds its greatest source of inspiration and ideas from the great religious tradition of Hinduism.

The Post Secular Age
By Frank Morales

The last two centuries have been a conspicuously unique era in the history of the human race. For, unlike any other epoch in our history, the last 200 years have witnessed the systematic and seemingly unstoppable deconstruction of religion as an important element of Western society. So successful has the exorcism of religion from public life been, that many twentieth Century American scholars went so far as to pronounce the imminent death of religion in our age.

As is becoming increasingly apparent, however, religion's obituary may have been written somewhat prematurely. The latter part of the twentieth century is witnessing one of the greatest world wide religious resurgences ever recorded in the annals of human history. And America has not been immune to this trend. Rather than ushering in a new secular age, an age free of the influence of religion, spirituality and contemplation, the evidence seems to indicate that we are actually entering a Post Secular Age: an age wherein religion will necessarily fill up the vacuum created by the failure of twentieth-century secularism.

The idea that religion would meet its eventual demise (and, according to some, should meet its demise) had been espoused by a large number of Western intellectuals in the last two centuries. Perhaps the most famous of these individuals were, what Christian theologian Martin Marty termed, "The Bearded God-Killers" (National Public Radio, 1996). These primarily nineteenth century figures included: Karl Marx, Charles Darwin, Friedrich Nietzsche and Sigmund Freud. Equating all human religious expression with an enslaving opiate designed to keep the proletariat in psychic chains, Karl Marx predicted both the inevitable death of religion and the subsequent emergence of a new atheistic world order. Similarly, Freud saw in religion the greatest threat to humanity's social and psychic development. Indeed, to Freud religion and philosophy represented no more than a "...black tide of mud...," designed solely to keep humanity enslaved in the chains of superstition (Ernest Becker, Denial of Death, p. 94). Overt atheists were not the only individuals to pronounce the imminent end of religion.

Quite a few Judeo-Christian theologians also felt that secularism would ultimately triumph over the human religious impulse. Among these religious leaders were several who felt that the inevitable secularization of the world merely represented a coming of age for homo religiosus (religious man). Included among these were Harvey Cox (author of "The Secular City") and Bishop John Robinson (who wrote "Honest to God"). Succumbing wholesale to the seemingly unstoppable secular tide seen in twentieth century history, some Christian theologians went so far as to declare the death of God in the early 1960's. If God is indeed dead, however, such ongoing phenomena as the belief in the importance of the spiritual dimension of human life and the search

for God seem to be very far from it.

As we approach the beginning of the 21st Century, it appears that religion has made a powerful comeback onto the world stage. Throughout the Third-World, nation upon nation is rejecting the current Western materialistic paradigm. Nations that were traditionally Hindu, Islamic, Buddhist and Jewish are rediscovering their ancient religious heritage and turning to these time-tested spiritual world-views for answers to today's many social, political, economic and ethical dilemmas - dilemmas, many of which were created directly as a result of the failures of secular materialism. Indigenous peoples - peoples ranging from the aborigines of Australia to the many hundreds of Native American tribes in North and South America - are reconnecting with their own, long oppressed, spiritually-based cultures: cultures which have proven themselves to be gentler, saner, and more Earth-centered spiritual outlooks than anything secular materialism had to offer. Moreover, with the failure and consequent collapse of Marxist regimes in Eastern Europe and the former Soviet Union, the people of this region of the world have expressed an unprecedented resurgence of interest in more religious ways of life. Indeed, in today's Russia, two of the fastest growing philosophies of life are Hinduism and Buddhism.

This world-wide rediscovery of the importance of religion has also had a dramatic impact on the American scene. There are several recent trends in American culture which readily reveal this fact. One of these trends has been the explosive popularity of the New Age movement in recent years. As a movement deeply grounded in the belief that personal spiritual development is essential to social and political change, New Age thought has had a deeply penetrating influence on the American public. The rebirth of interest in religion is seen on the popular stage by the amazing number of books with spiritual themes that have become run-away best sellers. These include the works of Deepak Chopra, Bernie Siegal, Thomas Moore and Marianne Williamson.

Coupled with the success of New Age spirituality has been the growing popularity of Asian religions in America. Over the past several decades hundreds of thousands of Americans have joined various Asian religious traditions. Famous actors like Richard Gere and musical performers like Madonna and Sting, among many others, now consider themselves to be practicing Hindus, Buddhists or Taoists. To legions of college students and youth across America, nothing is considered cooler than studying and practicing Hindu and Buddhist philosophy and spirituality. Every major American city has at least several dozen Hindu temples and Buddhist meditation centers. Yoga, Tai Chi and meditation are spiritual techniques which are now practiced by millions of average, middle class Americans.

The recent religious resurgence in America is effecting society not only on a more popular level, but within the realm of academia as well . The latter phenomenon is evidenced by the recent successes of overtly religious scholars in philosophy departments across the land. Such philosophers of religion as Alvin Plantinga and Keith Yandell have begun to make tremendous inroads into an area which, until recently, was almost the exclusive domain of Human skeptics.

On a more ominous note, the new religious resurgence in America has also included a rise in Evangelical Fundamentalism. This new evangelical revival has taken on increasingly political tones in recent years. Beginning with such individuals as Pat Robertson and Jerry Falwell in the late 1970's, conservative Christian activists began to take their theological opinions into the

partisan political realm. Through supporting politicians and ballot initiatives viewed as being pro-family values, Evangelicals have made their views forcefully known and implemented throughout the nation. The success and acceptability of Pat Robertson's Christian Coalition in the Republican Party reveals to us that this is a movement that is immensely powerful and that is here to stay.

That religion, both in America and throughout the world, is becoming an increasingly important factor is well established knowledge. Let us now explore some of the possible reasons for this fact. One reason is certainly the dramatic failure of the most powerful anti-religious ideology in human history: Marxism. First presented as a rational, scientific and humanistic alternative to religion, the fall of Communism in Europe in 1989 revealed Marxism to be a more repressive, inhumane and destructive system than any religion had ever been. As only one of many examples of the failure of Marxism we have the example of Cambodia. A peaceful and beautiful Buddhist nation previous to the Marxist Khmer Rouge shooting their way to power in 1975, Marxist rule led to the genocide of at least 1.5 million of Cambodia's inhabitants - over an eighth of the population - over a three year period. Interestingly, Marxists and secularists throughout our century had repeatedly accused religion of being responsible for all of humanity's many historic sufferings and injustices. As we now know, however, more human beings have been persecuted, murdered, tortured and dehumanized by Marxism in our century alone than have been harmed by all of the world's many religions combined since the beginnings of human history.

Indeed, it could be argued that the failure of secularism, as a whole, is responsible for the new religious renaissance now being experienced globally. The omnipresent human need for meaning simply could not be adequately addressed by the cold, impersonal institutions and ideologies of secularism. Consequently, we are now witnessing an increasing worldwide reaction against all forms of Western materialism - both Marxist and capitalist. America, as we have seen, has been far from immune from this rather dramatic global shift.
Some might argue that it is still somewhat premature to proclaim the advent of a new religious era for humanity. However, the data reveals that there is definitely a current global shift away from institutions and philosophies which have urged the abandonment of the human spirit. Additionally, the currently ongoing rediscovery of humankind's many diverse spiritual traditions reveal to all impartial observers that we are at present experiencing nothing less than the beginning of a Post Secular Age. It is quite apparent that those scholars who earlier this century had predicted - and in some cases, even looked forward to - the death of religion were exceedingly mistaken. Rather than being on the verge of extinction, as we approach the second Millennium, the natural phenomenon of human religious expression seems to have been born anew.

Democracy in Ancient India

by Steve Muhlberger, Associate Professor of History, Nipissing University.
http://www.unipissing.ca/department/history/histdem/indiadem.htm

Returning to it now, in 1998, I find I still believe in my interpretation of the ancient evidence for Indian democracy, and in its relevance to how we understand the world history of democracy. Rather than let it languish further, I am releasing it electronically, for both general and specialist readers. I will be glad to hear your comments. For the reader who wants to look into the question independently, I have posted a bibliography, and of course there are always the footnotes. I should make clear that though this article bears my name alone, I was pointed in the right direction by an unpublished essay on democracy by Phil Paine. I also wish to note that I was aided in my research by the collection of Asian literature at Brock University, St. Catharines, Ontario. My philosopher-colleague at Nipissing University, Dr. Wayne Borody, made some suggestions, but neither he nor anyone else is responsibile for any errors or misinterpretations.

Historians who are interested in democracy often insist it must be understood in context of a unique western tradition of political development beginning with the Greeks. The spread of democratic ideals and practice to other cultures, or their failure to spread, have many times been explained on the assumption that democracy or personal liberty are ideals foreign to the non-Western world -- an assumption at least as old as Herodotus.1 But events since the late 1980s have shown that people both in "Western" and "non-Western" countries have a lively interest in democracy as something relevant to their own situation. The old assumption deserves to be re-examined.

In fact, the supposed differences between "Western" and "non-Western" cultures are in this case, as in so many others, more a matter of ideological faith than of cool, impartial judgment. If we are talking about the history of humanity as a whole, democracy is equally new or equally old everywhere. Fair and effective elections, under adult suffrage and in conditions that allow the free discussion of ideas, are a phenomenon of this century. The history of democracy, properly so called, is just beginning.

The "prehistory" of democracy, however, is scarcely restricted to Europe and Europeanized America and Australasia. A search of world history finds much worth studying. There are no perfect democracies waiting to be discovered, but there is something else: a long history of "government by discussion," in which groups of people having common interests make decisions that affect their lives through debate, consultation, and voting. The vast majority of such groups, it may be objected, are more properly called oligarchies than democracies. But every democracy has

been created by widening what was originally a very narrow franchise. The history of government by discussion, which may be called republicanism for brevity's sake, has a claim to the interest of anyone who takes democracy seriously.2

This article will examine one important case of government by discussion -- the republics of Ancient India. Although they are familiar to Indologists, these republics are hardly known to other historians. They deserve, however, a substantial place in world historiography. The experience of Ancient India with republicanism, if better known, would by itself make democracy seem less of a freakish development, and help dispel the common idea that the very concept of democracy is specifically "Western."

The present article has two goals. First, it will summarize the history of the ancient Indian republics as it is currently known. This survey is restricted to North India and the period before about 400 A.D., when sovereign republics seem to have become extinct.

Second, the article will examine the historiographical evaluations of the Indian republican experience, and suggest that most of them have placed it in too narrow a context. Ancient Indian democratic experiments, it will be argued, are more important than they are usually granted to be. It is well known that the sources of ancient Indian history present considerable difficulties. All the indigenous ancient literature from the subcontinent has been preserved as part of a religious tradition, Brahmanical, Buddhist or Jaina. When the subject is political theory and its implementation, the preselected nature of sources is a distinct handicap to the researcher. The largest and most influential Indian literary tradition, the Brahmanical, is distinctly hostile to anything resembling democracy.

Brahmanical literature gives kingship a central place in political life, and seldom hints that anything else is possible. For moral philosophers and legislators such as Manu (reputed author of the Manu-Smrti between 200 B.C.-A.D. 200), the king was a key figure in a social order based on caste (varna). Caste divided society into functional classes: the Brahmans had magical powers and priestly duties, the ksatriyas were the rulers and warriors, the vaisyas cultivators, and the sudras the lowest part of society, subservient to the other three. Moral law or dharma depended on the observance of these divisions, and the king was the guarantor of dharma , and in particular the privileges of the Brahmans. 3 Another tradition is best exemplified by the Arthasastra of Kautilya (c. 300 B.C.), which alloted the king a more independent role but likewise emphasized his responsibility for peace, justice and stability.4

Both Kautilya's work and the Manu-Smrti are considered classic expressions of ancient Indian political and social theory. A reader of these or other Brahmanical treatises finds it very easy to visualize ancient Indian society as one where "monarchy was the normal form of the state." 5

Until the end of the last century, the only indication that this might not always have been the case came from Greek and Roman accounts of India, mostly histories of India during and just after Alexander the Great's invasion of India in 327-324 B.C. These works spoke of numerous cities and even larger areas being governed as oligarchies and democracies, but they were not always believed by scholars.6 Yet research into the Buddhist Pali Canon during the nineteenth century confirmed this picture of widespread republicanism. The Pali Canon is the earliest version of the Buddhist scriptures, and reached its final form between 400-300 B.C.7 It contains the story of

Buddha's life and teaching and his rules for monastic communities. The rules and teachings are presented in the form of anecdotes, explaining the circumstances that called forth the Buddha's authoritative pronouncement. Thus the Pali Canon provides us with many details of life in ancient India, and specifically of the sixth century (the Buddha's lifetime) in the northeast. In 1903, T.W. Rhys Davids, the leading Pali scholar, pointed out in his book Buddhist India 8 that the Canon (and the Jatakas, a series of Buddhist legends set in the same period but composed much later) depicted a country in which there were many clans, dominating extensive and populous territories, who made their public decisions in assemblies, moots, or parliaments.

Rhys Davids' observation was not made in a vacuum. Throughout the nineteenth century, students of local government in India (many of them British bureaucrats) had been fascinated by popular elements in village life.9 The analysis of village government was part of a continuous debate on the goals and methods of imperial policy, and the future of India as a self-governing country. Rhys-Davids' book made the ancient institutions of India relevant to this debate. His reconstruction of a republican past for India was taken up by nationalistic Indian scholars of the 1910s.10 Later generations of Indian scholars have been somewhat embarrassed by the enthusiasm of their elders for early republics and have sought to treat the republics in a more balanced and dispassionate manner.11 Nevertheless, their work, like that of the pioneering nationalists, has been extremely productive. Not only the classical sources and the Pali Canon, but also Buddhist works in Sanskrit, Panini's Sanskrit grammar (the Astadhyayi), the Mahabharata, the Jaina Canon, and even Kautilya's Arthasastra have been combed for evidence and insights. Coins and inscriptions have documented the existence of republics and the workings of popular assemblies.

The work of twentieth century scholars has made possible a much different view of ancient political life in India. It has shown us a landscape with kings a-plenty, a culture where the terminology of rule is in the majority of sources relentlessly monarchical, but where, at the same time, the realities of politics are so complex that simply to call them "monarchical" is a grave distortion. Indeed, in ancient India, monarchical thinking was constantly battling with another vision, of self-rule by members of a guild, a village, or an extended kin-group, in other words, any group of equals with a common set of interests. This vision of cooperative self-government often produced republicanism and even democracy comparable to classical Greek democracy.

Though evidence for non-monarchical government goes back to the Vedas, 12 republican polities were most common and vigorous in the Buddhist period, 600 B.C.-A.D. 200. At this time, India was in the throes of urbanization. The Pali Canon gives a picturesque description of the city of Vesali in the fifth century B.C. as possessing 7707 storied buildings, 7707 pinnacled buildings, 7707 parks and lotus ponds, and a multitude of people, including the famous courtesan Ambapali, whose beauty and artistic achievements contributed mightily to the city's prosperity and reputation. The cities of Kapilavatthu and Kusavati were likewise full of traffic and noise.13 Moving between these cities were great trading caravans of 500 or 1000 carts -- figures that convey no precise measurement, but give a true feeling of scale: caravans that stopped for more than four months in a single place, as they often did because of the rainy season, were described as villages.14 Religion, too, was taking to the road. The hereditary Brahman who was also a householder, as in later Vedic tradition, saw his teachings, authority and perquisites threatened by wandering holy men and self-appointed teachers.15

There were warlord-kings who sought to control this fluid society, some with a measure of success. But the literature, Pali and Sanskrit, Buddhist and Brahmanical, shows that non-monarchical forms of government were omnipresent. There was a complex vocabulary to describe the different types of groups that ran their own affairs.16 Some of these were obviously warrior bands; 17 others more peaceful groups with economic goals; some religious brotherhoods. Such an organization, of whatever type, could be designated, almost indifferently, as a gana or a sangha; and similar though less important bodies were labeled with the terms sreni, puga, or vrata. Gana and sangha, the most important of these terms, originally meant "multitude." By the sixth century B.C., these words meant both a self-governing multitude, in which decisions were made by the members working in common, and the style of government characteristic of such groups. In the case of the strongest of such groups, which acted as sovereign governments, the words are best translated as "republic."

That there were many sovereign republics in India is easily demonstrated from a number of sources. Perhaps it is best to begin with the Greek evidence, even though it is not the earliest, simply because the Greek writers spoke in a political language that is familiar.

Perhaps the most useful Greek account of India is Arrian's Anabasis of Alexander , which describes the Macedonian conqueror's campaigns in great detail. The Anabasis, which is derived from the eyewitness accounts of Alexander's companions, 18 portrays him as meeting "free and independent" Indian communities at every turn. What "free and independent" meant is illustrated from the case of Nysa, a city on the border of modern Afghanistan and Pakistan that was ruled by a president named Aculphis and a council of 300. After surrendering to Alexander, Aculphis used the city's supposed connection with the god Dionysus to seek lenient terms from the king:

"The Nysaeans beseech thee, O king out of respect for Dionysus, to allow them to remain free and independent; for when Dionysus had subjugated the nation of the Indians...he founded this city from the soldiers who had become unfit for military service ...From that time we inhabit Nysa, a free city, and we ourselves are independent, conducting our government with constitutional order." 19

Nysa was in Greek terms an oligarchy, as further discussion between Alexander and Aculphis reveals, and a single-city state. There were other Indian states that were both larger in area and wider in franchise. It is clear from Arrian that the Mallian republic consisted of a number of cities.20 Q. Curtius Rufus and Diodorus Siculus in their histories of Alexander mention a people called the Sabarcae or Sambastai among whom "the form of government was democratic and not regal." 21 The Sabarcae/Sambastai, like the Mallians, had a large state. Their army consisted of 60,000 foot, 6000 cavalry, and 500 chariots.22 Thus Indian republics of the late fourth century could be much larger than the contemporaneous Greek polis . And it seems that in the northwestern part of India, republicanism was the norm. Alexander's historians mention a large number of republics, some named, some not, but only a handful of kings.23 The prevalence of republicanism and its democratic form is explicitly stated by Diodorus Siculus. After describing the mythical monarchs who succeeded the god Dionysus as rulers of India, he says:

At last, however, after many years had gone, most of the cities adopted the democratic form of government, though some retained the kingly until the invasion of the country by Alexander.24

What makes this statement particularly interesting is that it seems to derive from a first-hand description of India by a Greek traveler named Megasthenes. Around 300 B.C., about two decades after Alexander's invasion, Megasthenes served as ambassador of the Greek king Seleucus Nicator to the Indian emperor Chandragupta Maurya, and in the course of his duties crossed northern India to the eastern city of Patna, where he lived for a while.25 If this statement is drawn from Megasthenes, then the picture of a northwestern India dominated by republics must be extended to the entire northern half of the subcontinent.26

If we turn to the Indian sources, we find that there is nothing far-fetched about this idea. The most useful sources for mapping north India are three: The Pali Canon, which shows us northeastern India between the Himalayas and the Ganges in the sixth and fifth centuries B.C.; the grammar of Panini, which discusses all of North India, with a focus on the northwest, during the fifth century; and Kautilya's Arthasastra, which is a product of the fourth century, roughly contemporaneous with Megasthenes. All three sources enable us to identify numerous sanghas and ganas, some very minor, others large and powerful.27

What were these republican polities like? According to Panini, all the states and regions (janapadas) of northern India during his time were based on the settlement or conquest of a given area by an identifiable warrior people who still dominated the political life of that area. Some of these peoples (in Panini's terms janapadins) were subject to a king, who was at least in theory of their own blood and was perhaps dependent on their special support.28 Elsewhere, the janapadins ran their affairs in a republican manner. Thus in both kinds of state, the government was dominated by people classified as ksatriyas, or, as later ages would put it, members of the warrior caste.

But in many states, perhaps most, political participation was restricted to a subset of all the ksatriyas . One needed to be not just a warrior, but a member of a specific royal clan, the rajanya.29 Evidence from a number of sources shows that the enfranchised members of many republics, including the Buddha's own Sakyas and the Licchavis with whom he was very familiar, considered themselves to be of royal descent, even brother-kings. The term raja, which in a monarchy certainly meant king, in a state with gana or sangha constitution could designate someone who held a share in sovereignty. In such places, it seems likely that political power was restricted to the heads of a restricted number of "royal families" (rajakulas) among the ruling clans. The heads of these families were consecrated as kings, and thereafter took part in deliberations of state.

Our Indian republics are beginning to sound extremely undemocratic by our modern standards, with real power concentrated in the hands of a few patriarchs representing the leading lineages of one privileged section of the warrior caste. A reader who has formed this impression is not entirely mistaken. No doubt the rulers of most republics thought of their gana as a closed club -- as did the citizens of Athens, who also defined themselves as a hereditarily privileged group. But, as in ancient Athens, there are other factors which modify the picture, and make it an interesting one for students of democracy.

First, the closed nature of the ruling class is easy to exaggerate. Republics where only descendants of certain families held power were common; but there was another type in which power was shared by all ksatriya families.31 This may not sound like much of a difference, since the

restriction to the warrior caste seems to remain. But this is an anachronistic view of the social conditions of the time. The varnas of pre-Christian-era India were not the castes of later periods, with their prohibitions on intermarriage and commensality with other groups.32 Rather, they were the constructs of theorists, much like the division of three orders (priests, warriors and workers) beloved by European writers of the Early Middle Ages.33 Such a classification was useful for debating purposes, but was not a fact of daily existence. Those republics that threw open the political process to all ksatriyas were not extending the franchise from one clearly defined group to another, albeit a larger one, but to all those who could claim, and justify the claim, to be capable of ruling and fighting.

Other evidence suggests that in some states the enfranchised group was even wider. Such a development is hinted at in Kautilya: according to him, there were two kinds of janapadas, ayudhiya-praya, those made up mostly of soldiers, and sreni-praya , those comprising guilds of craftsmen, traders, and agriculturalists.34 The first were political entities where military tradition alone defined those worthy of power, while the second would seem to be communities where wealth derived from peaceful economic activity gave some access to the political process. This interpretation is supported by the fact that sreni or guilds based on an economic interest were often both part of the armed force of a state and recognized as having jurisdiction over their own members.35 In the Indian republics, as in the Greek poleis or the European cities of the High Middle Ages, economic expansion enabled new groups to take up arms and eventually demand a share in sovereignty36 If it was not granted, one could always form one's own mini-state. Panini's picture of stable, long-established janapadas is certainly the illusion of a systematizing grammarian. As Panini's most thorough modern student has put it, there was "a craze for constituting new republics" which "had reached its climax in the Vahika country and north-west India where clans constituting of as many as one hundred families only organized themselves as Ganas."37 Furthermore, power in some republics was vested in a large number of individuals. In a well-known Jataka tale we are told that in the Licchavi capital of Vesali, there were 7707 kings (rajas), 7707 viceroys, 7707 generals, and 7707 treasurers.38 These figures, since they come from about half a millenium after the period they describe, have little evidentiary value, despite the ingenious efforts of scholars to find a core of hard fact. The tale does not give us the number of Licchavi ruling families (rajakulas), the size of the Licchavi assembly, or any real clues as to the population of Vesali.39 Yet the Jataka does retain the memory of an undisputed feature of Indian republicanism: the rulers were many.40 The same memory can be found in other sources, especially in those critical of republicanism. The Lalitavistara, in an obvious satirical jab, depicts Vesali as being full of Licchavi rajans , each one thinking, "I am king, I am king," and thus a place where piety, age and rank were ignored.41 The Santi Parva section of the Mahabharata shows the participation of too many people in the affairs of state as being a great flaw in the republican polity:

The gana leaders should be respected as the worldly affairs (of the ganas) depend to a great extent upon them...the spy (department) and the secrecy of counsel (should be left) to the chiefs, for it is not fit that the entire body of the gana should hear those secret matters. The chiefs of gana should carry out together, in secret, works leading to the prosperity of the gana , otherwise the wealth of the gana decays and it meets with danger.42

A Jaina work again criticizes ganas for being disorderly: the monks and nuns who frequent them will find themselves bullied, beaten, robbed, or accused of being spies.43

The numerous members of a sovereign gana or sangha interacted with each other as members of an assembly. Details of the working of such assemblies can be found both in Brahmanical and Buddhist literature. By the time of Panini (fifth century B.C.), there was a terminology for the process of corporate decision-making. Panini gives us the terms for vote, decisions reached by voting, and the completion of a quorum. Another cluster of words indicates that the division of assemblies into political parties was well known. Further, Panini and his commentators show that sometimes a smaller select group within a sangha had special functions -- acting as an executive, or perhaps as a committees for defined purposes.44

The Pali Canon gives a much fuller, if somewhat indirect, depiction of democratic institutions in India, confirming and extending the picture found in Panini. This is found in three of the earliest and most revered parts of the canon, the Maha-parinibbana-suttanta, the Mahavagga, and the Kullavagga.45 These works, taken together, preserve the Buddha's instructions for the proper running of the Buddhist monastic brotherhood -- the sangha -- after his death. They are the best source for voting procedures in a corporate body in the earliest part of the Buddhist period. They also give some insight into the development of democratic ideology.

The rules for conducting the Buddhist sangha were, according to the first chapter of the Maha-parinibbana-suttanta, based in principle on those commonly found in political sanghas or ganas. In the case of the Buddhist sangha, the key organizational virtue was the full participation of all the monks in the ritual and disciplinary acts of their group. To assure that this would be remembered, detailed rules concerning the voting in monastic assemblies, their membership, and their quorums, were set down in the Mahavagga and the Kullavagga .

Business could only be transacted legitimately in a full assembly, by a vote of all the members. If, for example, a candidate wanted the upasampada ordination, the question (ñatti) was put to the sangha by a learned and competent member, and the other members asked three times to indicate dissent. If there was none, the sangha was taken to be in agreement with the ñatti. The decision was finalized by the proclamation of the decision of the sangha.46

In many cases, as in the granting of upasampada ordination, unanimity of a full assembly was required.47 Of course, unanimity was not always possible. The Kullavagga provides other techniques that were used in disputes especially dangerous to the unity of the sangha, those which concerned interpretation of the monastic rule itself. If such a dispute had degenerated into bitter and confused debate, it could be decided by majority vote, or referred to a jury or committee specially elected by the sangha to treat the matter at hand.48

It is here that we see a curious combination of well-developed democratic procedure and fear of democracy. The rules for taking votes sanctioned the disallowance by the vote-taker of results that threatened the essential law of the sangha or its unity.49 Yet, if the voting procedure is less than free, the idea that only a free vote could decide contentious issues is strongly present. No decision could be made until some semblance of agreement had been reached.50 Such manipulations of voting were introduced because Buddhist elders were very concerned about the survival of the religious enterprise: disunity of the membership was the great fear of all Indian republics and

corporations.51 Yet the idea of a free vote could not be repudiated. The Kullavagga illustrates a conflict within the Buddhist sangha during its earliest centuries between democratic principles and a philosophy that was willing in the name of unity to sacrifice them.

Since the rules of the Buddhist sangha are by far the best known from the period we have been discussing, it is tempting to identify them with the rules of political ganas, particularly those of the Licchavis (or Vajjians), since the Buddha made a clear connection between the principles applicable to the Licchavi polity and those of his sangha.52 But from early on, scholars have recognized that the Buddhist constitution was not an exact imitation of any other: for instance, sovereign republics had a small, elected executive committee to manage the affairs of the gana when the whole membership of the gana was unable to be assembled.53 But neither did the Buddha or his earliest followers invent their complex and carefully formulated parliamentary procedures out of whole cloth. R.C. Majumdar's conclusion, first formulated in 1918, still seems valid: the techniques seen in the Buddhist sangha reflect a sophisticated and widespread political culture based on the popular assembly.54

Similarly, the value placed on full participation of members in the affairs of their sangha must reflect the ideology of those who believed in the sangha-gana form of government in the political sphere. The Buddha's commitment to republicanism (or at least the ideal republican virtues) was a strong one, if we are to believe the Maha-parinibbana-suttanta, among the oldest of Buddhist texts.55 As is common in the Buddhist scriptures, a precept is illustrated by a story. Here Ajatasastru, the King of Maghada, wishes to destroy the Vajjian confederacy (here = the Licchavis) 56 and sends a minister, Vassakara the Brahman, to the Buddha to ask his advice. Will his attack be a success? Rather than answer directly, the Buddha speaks to Ananda, his closest disciples:

"Have you heard, Ananda, that the Vajjians hold full and frequent public assemblies?"

"Lord, so I have heard," replied he.

"So long, Ananda," rejoined the Blessed One, "as the Vajjians hold these full and frequent public assemblies; so long may they be expected not to decline, but to prosper...

In a series of rhetorical questions to Ananda, the Buddha outlines other requirements for Vajjian prosperity:

"So long, Ananda, as the Vajjians meet together in concord, and rise in concord, and carry out their undertakings in concord...so long as they enact nothing not already established, abrogate nothing that has been already enacted, and act in accordance with the ancient institutions of the Vajjians as established in former days...so long as they honor and esteem and revere and support the Vajjian elders, and hold it a point of duty to hearken to their words...so long as no women or girls belonging to their clans are detained among them by force or abduction...so long as they honor and esteem and revere and support the Vajjian shrines in town or country, and allow not the proper offerings and rites, as formerly given and performed, to fall into desuetude...so long as the rightful protection, defense, and support shall be fully provided for the Arahats among them, so that Arahats from a distance may enter the realm, and the Arahats therein may live at ease -- so long may the Vajjians be expected not to decline, but to prosper."

Then the Blessed One addressed Vassakara the Brahman, and said, "When I was once staying, O Brahman, at Vesali at the Sarandada Temple, I taught the Vajjians these conditions of welfare; and so long as those conditions shall continue to exist among the Vajjians, so long as the Vajjians shall be well instructed in those conditions, so long may we expect them not to decline, but to prosper."

The comment of the king's ambassador underlines the point of this advice: "So, Gotama, the Vajjians cannot be overcome by the king of Magadha; that is, not in battle, without diplomacy or breaking up their alliance."

The same story tells us that once the king's envoy had departed, the Buddha and Ananda went to meet the assembly of monks. Buddha told the monks that they too must observe seven conditions if they were to prosper: Full and frequent assemblies, concord, preserving and not abrogating established institutions, honoring elders, falling "not under the influence of that craving which, springing up within them, would give rise to renewed existence," delighting in a life of solitude, and training "their minds that good and holy men shall come to them, and those who have come shall dwell at ease." 57 These precepts, and others that follow in sets of seven, were the main point for the monks who have transmitted the Maha-parinibbana-suttanta to us. We, however, may wish to emphasize another point: the Buddha saw the virtues necessary for a righteous and prosperous community, whether secular or monastic, as being much the same. Foremost among those virtues was the holding of "full and frequent assemblies." In this, the Buddha spoke not only for himself, and not only out of his personal view of justice and virtue. He based himself on what may be called the democratic tradition in ancient Indian politics -- democratic in that it argued for a wide rather than narrow distribution of political rights, and government by discussion rather than by command and submission.58

The Pali Canon gives us our earliest, and perhaps our best, detailed look at Indian republicanism, its workings, and its political philosophy. About no other republics do we know as much as we do about the Buddhist sangha and the Licchavis in the time of Buddha -- even though we do know that republics survived and were a significant factor until perhaps the fourth century A.D., a period of over 800 years. Scattered inscriptions, a great number of coins, and the occasional notice in Greek sources, the Jatakas or other Indian literature give us a few facts. But any history of Indian republicanism is necessarily a rather schematic one.

The theme that has most attracted the attention of scholars is the constant danger to republicanism, and its ultimate failure. Much of what we know about the sovereign ganas of India derives from stories of attacks upon them by various conquerors. Yet it is remarkable that for several centuries, the conspicuous successes of monarchs, even the greatest, had only a temporary effect on the sovereign republics and very little effect indeed on the corporate organization of guilds, religious bodies, and villages. The reason is, of course, that Indian kings have seldom been as mighty as they wished to be, or wished to be presented. Conquerors were not in a position to restructure society, to create states as we visualize them today. Rather they were usually content to gain the submission of their neighbors, whether they were other kings or republics.59 These defeated rivals were often left in control of their own affairs, merely required to pay tribute and provide troops for the conquerors next war. The great emperors of ancient India, including Chandragupta Maurya and Asoka, ran rather precarious realms. Once the center weakened, these unraveled very quickly, and society returned to its preceding complexity. Rival dynasties revived, as did defeated

republics.60

As Altekar recognized, the mere existence of warlords was not fatal to the republican tradition of politics. Far more important was the slow abandonment of republican ideals by republicans themselves. We have seen that many republics were content even in the earliest days with a very exclusive definition of the political community. In some, ideas of wider participation gained currency and even implementation. But the contrary movement is easier to document. By the third and fourth centuries A.D., states known to be republics in earlier times were subject to hereditary executives. Eventually such republics became monarchies.61

An evolution away from republicanism is clearly seen in the literature of politics and religion. If we grant that the society depicted by the Pali Canon is the beginning of a new era, one with an economy and culture quite distinct from the Vedic period, it immediately becomes obvious that the most democratic ideals are the earliest. The Pali Canon, and to some extent the Jaina Canon, show us energetic movements that rejected the hierarchialism and caste ideology seen in the Vedas and Brahmanas in favor of more egalitarian values. Buddhism and Jainism were scarcely exceptional: they are merely the most successful of many contemporary religious movements, and left us records. It is clear from Panini that egalitarianism was an important element in the fifth century B.C.: he preserves a special term for the gana where "there was no distinction between high and low." 62

Such Brahmanical classics as the Mahabharata, the writings of Kautilya and the Manu-Smrti, works that promoted hierarchy, are manifestations of a later movement (300 B.C.-200 A.D.) away from the degree of egalitarianism that had been achieved. Kautilya, who is traditionally identified with the chief minister of the Mauryan conqueror Chandragupta Maurya (fl. after 300 B.C.), is famous for his advice to monarchs on the best way to tame or destroy ganas through subterfuge; perhaps a more important part of his achievement was to formulate a political science in which royalty was normal, even though his own text shows that ganas were very important factors in the politics of his time.63 Similarly, the accomplishment of the Manu-Smrti was to formulate a view of society where human equality was non-existent and unthinkable.

Members of ganas were encouraged to fit themselves into a hierarchical, monarchical framework by a number of factors. Kings were not the only enemies of the ganas . The relationships between competing ganas must have been a constant political problem. Ganas that claimed sovereignty over certain territory were always faced by the competing claims of other corporate groups.64 How were these claims to be sorted out, other than by force? The king had an answer to this question: if he were acknowledged as "the only monarch [i.e. raja, chief executive] of all the corporations," 65 he would commit himself to preserving the legitimate privileges of each of them, and even protect the lesser members of each gana from abuse of power by their leaders. It was a tempting offer, and since the alternative was constant battle, it was slowly accepted, sometimes freely, sometimes under compulsion. The end result was the acceptance of a social order in which many ganas and sanghas existed, but none were sovereign and none were committed to any general egalitarian view of society. They were committed instead to a hierarchy in which they were promised a secure place.66 Such a notional hierarchy seems to have been constructed in North India by the fifth century A.D. Even the Buddhist sangha accommodated itself to it -- which led eventually to the complete victory of the rival Brahmans.

This was not quite the end of republicanism, because "government by discussion" continued within many ganas and sanghas ; but the idea of hierarchy and inequality, of caste, was increasingly dominant. The degree of corporate autonomy in later Indian society, which is considerable and in itself a very important fact, is in this sense a different topic that the one we have been following. A corporation that accepts itself as a subcaste in a great divine hierarchy is different from the more pugnacious ganas and sanghas of the Pali Canon, Kautilya or even the Jataka stories.

What have modern historians made of what we might call the golden age of Indian republicanism? We have already distinguished above between two eras of scholarship on the topic. In the first, patriotic enthusiasm and the simple thrill of discovery of unsuspected material characterized scholars' reactions. The former attitude was especially seen in K.P. Jayaswal's Hindu Polity . Published first in article form in 1911-1913, then as a book in 1924, Jayaswal's work was avowedly aimed to show that his countrymen were worthy of independence from Britain. The history of "Hindu" institutions demonstrated an ancient talent for politics:

The test of a polity is its capacity to live and develop, and its contribution to the culture and happiness of humanity. Hindu polity judged by this test will come out very successfully...The Golden Age of [the Hindu's] polity lies not in the Past but in the Future... Constitutional or social advancement is not a monopoly of any particular race.67

In Jayaswal's book scholarship was sometimes subordinated to his argument. In his discussion of ancient republics (which was not his only subject), the evidence was pushed at least as far as it would go to portray the republics as inspiring examples of early democracy.68 A similar, though quieter satisfaction can be seen in the contemporary discussions of R.C. Majumdar and D.R. Bhandarkar.69

In the second period of scholarship, in the years since independence, a more restrained attitude has been adopted by younger scholars who feel they have nothing to prove. Among these scholars the general tendency has been to emphasize that the republics were not real republics, in the modern usage that implies a universal adult suffrage. The clan-basis and the exclusiveness of the ruling class are much discussed. Sometimes writers have bent over backwards to divorce the Indian republican experience from the history of democracy: 70 thus A.K. Majumdar's judgement that because in a gana-rajya "all inhabitants other than the members of the raja-kulas [had] no rights [and] were treated as inferior citizens," people were actually better off in the monarchies, where "if not the general mass, at least the intellectuals and the commercial community enjoyed freedom in a monarchy, which seems to have been lacking in a gana-rajya." 71 The contrast drawn here is not backed up by any real argument, and makes one wonder about the how the author defines "freedom."

The reaction has perhaps gone too far.72 One feels that modern scholars have still not come to grips with the existence of widespread republicanism in a region so long thought to be the home par excellence of "Oriental Despotism." 73 Republicanism now has a place in every worthwhile book about ancient India, but it tends to be brushed aside so that one can get back to the main story, which is the development of the surviving Hindu tradition.74 Historians, in India as elsewhere, seem to feel that anything which could be so thoroughly forgotten must have had

grievous flaws to begin with.75 Most historians still cannot discuss these republics without qualifying using the qualifiers "tribal" or "clan."76 Long ago Jayaswal rightly protested against the use of these terms: "The evidence does not warrant our calling [republics] 'clans.' Indian republics of the seventh [sic] and sixth centuries B.C...had long passed the tribal stage of society. They were states, Ganas and Samghas, though many of them likely had a national or tribal basis, as every state, ancient or modern, must necessarily have." 77 He was equally correct when he pointed out that "Every state in ancient Rome and Greece was 'tribal' in the last analysis, but no constitutional historian would think of calling the republics of Rome and Greece mere tribal organizations." 78

Yet the phrases "clan-" and "tribal-republic" are still routinely used today in the Indian context, and it is difficult to avoid the conclusion that they are being used perjoratively. In both common and scholarly usage, to label a people's institutions or culture as tribal is to dismiss them from serious consideration. "Tribespeople" are historical dead-ends, and their suppression or absorption by more advanced cultures (usually those ruled by centralizing governments) is taken for granted.79 The terminology of even Indian historians demonstrates the survival of an ancient but inappropriate prejudice in the general evaluation of Indian republicanism.

Once that prejudice is overcome, Indian republicanism gains a strong claim on the attention of historians, especially those with an interest in comparative or world history.

It is especially remarkable that, during the near-millenium between 500 B.C. and 400 A.D., we find republics almost anywhere in India that our sources allow us to examine society in any detail. Unless those sources, not least our Greek sources, are extremely deceptive, the republics of India were very likely more extensive and populous than the poleis of the Greeks.80 One cannot help wondering how in many other parts of Eurasia republican and democratic states may have co-existed with the royal dynasties that are a staple of both ancient and modern chronology and conceptualization. This may well be an unanswerable question, but so far no one has even tried to investigate it. If an investigation is made, we may discover things that are as surprising to us as the republics of India originally were.

The existence of Indian republicanism is a discovery of the twentieth century. The implications of this phenomenon have yet to be fully digested, because historians of the past century have been inordinately in love with the virtues of centralized authority and government by experts, and adhered to an evolutionary historicism that has little good to say about either direct or representative democracy. Perhaps the love affair is fading. If so, historians will find, in the Indian past as elsewhere, plenty of raw material for a new history of the development of human government.

Notes for "Democracy in Ancient India"

In referring to classical sources, I have usually not given full citations to the editions, on the assumption that specialists will know how to find them, but that general readers will be more interested in the translations.

Also, references to Indian primary materials will be made to English translations (where

available). Nearly all the secondary literature on the topic is in English.

1. See for example Herodotus, The Histories 7. 135, trans. Aubrey de Sélincourt, rev. ed. (Harmondsworth, 1972), p. 485: the famous reply of the Spartan emissaries to the Persian general Hydarnes. Back to text.

2. For more on this, see Steven Muhlberger and Phil Paine, "Democracy's Place in World History," Journal of World History 4 (1993): 23-45 and the World History of Democracy site, especially Chapter Two -- Democracy at the Basic Level: Government by consent in small communities. Back to text.

3. A.S. Altekar, State and Government in Ancient India, 3rd edn. rev. and enlarged (Delhi, 1958; first ed. 1949), p. 1; the Manu-Smrti translated by G. Bühler as The Laws of Manu, vol. 25 of Sacred Books of the East, hereafter SBE] ed. F. Max Müller (Oxford, 1886). Back to text.

38. Jataka 149, trans. in The Jataka, or Stories of the Buddha's Former Births, ed. E.B. Cowell, tr. by Various Hands, 6 vols. (1895; reprint, London, 1957), 1: 316. Jataka 301 (Cowell trans., 3: 1) also mentions 7707 kings, "all of them given to argument and disputation." Back to text.

39. Every scholar to approach this material has wrestled with this number, none more diligently than Sharma, Republics, pp. 99-104. It is hard to take any of them very seriously once one has examined Jataka 149 itself. Here, as in many other places, 7077 is used as a large, ideal number. Back to text.

40. Similarly suggestive numbers can be found in Jataka 465 (Cowell trans., 4: 94) where 500 Licchavi kings (not necessarily the entire body of kings) are mentioned; in the Mahavastu, which refers to "twice 84,000 Licchavi rajas residing within the city of Vesali," (Sharma, Republics, p. 99; the Mahavastu is yet untranslated into a European language) and Jataka 547 (Cowell trans., 6: 266), which mentions 60,000 ksatriyas in the Ceta state, all of whom were styled rajano (Agrawala, Panini, p. 432). Back to text.

41. Agrawala, Panini, p. 430; Sharma, Republics, p. 101; A.K. Majumdar, Concise History, 2: 140. No translation of the Lalitavistara into a European language was available to me. Back to text.

42. Mahabharata 12.107, trans. by R.C. Majumdar, Corporate Life, 251. Back to text.

43. A.K. Majumdar, Concise History, 2: 140, referring to Acharangasutra II.3.1.10. The SBE translation of the Acharangasutra (vol. 22 (1884), tr. Hermann Jacobi) of this passage entirely conceals the meaning of gana. This is typical of older translations, and some not so old (e.g. the Roy trans. of the Mahabharata, Santi Parva (Calcutta, 1962), c. 107, where Roy insists that gana here must be understood as denoting an aristocracy of wealth and blood). Back to text.

44. Agrawala, Panini, pp. 433-435. Back to text.

45. The Maha-parinibbana-suttanta: Buddhist Suttas vol. 1, tr. T.W. Rhys Davids, SBE 11 (1881): 1-136. Mahavagga, Kullavagga, and Pattimokkha: Vinaya Texts, tr. T.W. Rhys Davids and H. Oldenberg, SBE vol. 13, 17, 20 (1881, 1882, 1885). Back to text.

46. Mahavagga 1.28, SBE 13: 169-170. Back to text.

47. Note complex rules, e.g. Mahavagga 9.4.7-8, SBE 17: 217-272, establishing who has the right to vote (i.e., in such cases, to object). Back to text.

48. Kullavagga 4.9-14, SBE 20: 24-65. Back to text.

49. Kullavagga 4.10.1, SBE 20: 20-26, where it is stated that taking of votes is invalid "when the taker of votes [an elected official] knows that those whose opinions are not in accordance with the

law will be in the majority," or "when he is in doubt whether the voting will result in a schism in the Samgha," or "when they do not vote in accordance with the view that they really hold." Kullavagga 4.14.26, SBE 20: 56-57 shows how the vote-taker was permitted to prevent the will of the majority from being enacted even in a secret vote, by throwing out the results if the winners' opinion went against the law -- or his interpretation of it. Back to text.

50. See Kullavagga 4.14.25-26, SBE 20: 54-57, where the emphasis is on reconciling monks to a decision which they were opposed to. Voting is one method of doing so; manipulation of votes preserves the religious law without splitting the sangha. Back to text.

51. It is commonly accepted by scholars that the regulations we have been discussing are, in the form we have them, the product of a long evolution, though all of them are attributed to the Buddha. See Rhys Davids' and Oldenberg's introduction to the Vinaya Texts, SBE 13: ix-xxxvii, and notes throughout. For the concern with disunity, see the extract from the Maha-parinibbana-suttanta (i.1) below; the Mahabharata, Santi Parva 107, and Kautilya, 11.1 (which despite their monarchist purpose, contain passages of republican thought -- see below, n. 71); Altekar, State and Government, pp. 129-130; A.K. Majumdar, Concise History, 2: 140. Back to text.

52. Maha-parinibbana-suttanta 1.1, SBE 9: 6-7; see below. Back to text.

53. Altekar, pp. 126-127, 132-134; Sharma, Republics, pp. 12, 110-111. Back to text.

54. Corporate Life, pp. 233-234; A.K. Majumdar, Concise History, 2: 137. Back to text.

55. The Maha-parinibbana-suttanta is the story of the "great decease of the Buddha" and as such includes both colorful anecdotes and important last-minute instructions to his followers. Back to text.

56. The Pali Canon uses both the term Vajji (Vriji in Sanskrit) and Licchavi to designate a republican polity based at Vesali. Scholars believe that the Licchavi were the people who lived at Vesali, while Vajji was the name of a confederation that they headed. For a detailed discussion, see Sharma, Republics, pp. 81-84, 93-97. Back to text.

57. Maha-parinibbana-suttanta 1.1, SBE 11: 6-7. Back to text.

58. In this sense R.C. Majumdar was right in calling the Buddha "an apostle of democracy;" Corporate Life, p. 219. Contra, Drekmeier, Kingship and Community in Early India, p. 113. Back to text.

59. Sen, Studies in the Buddhist Jatakas, pp. 60-64. Compare Burton Stein, Peasant State and Society in Medieval South India (Delhi, 1980) for a similar evaluation of South Indian monarchy in a later period. Back to text.

60. Altekar, State and Government, p. 136. Back to text.

61. Altekar, State and Government, pp. 137-138; A.K. Majumdar, Concise History, 2: 144. Back to text.

62. Agrawala, Panini, p. 428. What may be the clearest statement of egalitarian political ideology only comes to us through many intermediaries, as a tantalizing passage in Diodorus Siculus (2.39; Classical Accounts, p. 236) which seems to derive from Megasthenes: "Of several remarkable customs existing among the Indians, there is one prescribed by their [sc. Indian] ancient philosophers which one may regard as truly admirable: for the law ordains that no one among them shall, under any circumstances, be a slave, but that, enjoying freedom, they shall respect the principle of equality in all persons: for those, they thought, who have learned neither to domineer over nor to cringe to others will attain the life best adapted for all vicissitudes of lot: since it is silly to make laws on the basis of equality of all persons and yet to establish inequalities in social intercourse." Megasthenes (who was a contemporary of Kautilya) is often criticized for the good reason that slavery and other forms of inequality did indeed exist among the Indians. But perhaps he correctly presented the views of "their ancient philosophers." Back to text.

63. Kautilya, 11.1, Shamasastry tr. p. 410. The Mahabharata, Santi Parva, a royalist treatise on morality and politics, likewise mentions ganas (in c. 107; cf. c. 81) only to show how a raja who is not yet a true monarch in his state can implement his will -- and as we have seen, eliminating popular participation in government is an essential part of this. It is interesting to note that there are in both works passages that urge the raja to cooperate with the gana and, like the Maha-parinibbana-suttanta, emphasize the dangers to a gana of disunity. R.C. Majumdar (in Ancient India, 7th ed. (Delhi, 1974), p. 159) regarded Mahabharata, Santi Parva 107 as a piece of republican political science reworked for monarchist purposes. Back to text.

64. Altekar, State and Government, p. 124, draws attention to the existence of republican-style local government within the greater republic. Cf. the Italian situation described by Hyde, Society and Politics in Medieval Italy, p. 104: "Government under medieval conditions was always a precarious matter...the Italian cities faced special problems of their own, derived from the fact that the commune was originally no more than one kind of societas in a society that abounded in societates, so that it was an uphill task to assert any special claim to the loyalty and obedience of the citizens." Back to text.

65. Kautilya, 11.1, Shamasastry trans., p. 410. Back to text.

66. See R.C. Majumdar, Corporate Life, pp. 42-59 for the attitude of later Dharmasastra writers to the place of semi-autonomous corporations and kindreds in the monarchical polity of the fifth century A.D. and later. Back to text.

67. Pp. 366-367. Back to text.

68. N.B. the introduction: "To the memory of the Republican Vrishnis, Kathas, Vaisalas, and Sakyas who announced philosophies of freedom from devas, death, cruelty and caste." Back to text.

69. See above, n. 10. Back to text.

70. See esp. Ghoshal's treatment, A History of Indian Public Life, ii, pp. 185-197, which goes almost as far in one direction as Jayaswal went in the other. Cf. Drekmeier, Kingship and Community in Early India, p. 279; A.K. Majumdar, Concise History, ii, pp. 139-144; Burton

Stein, "Politics, Peasants and the Deconstruction of Feudalism in Medieval India," Journal of Peasant Studies, xii, no. 2-3 (1985), p. 62 (discussing South India at a later period). Back to text.

71. A.K. Majumdar, Concise History, 2: 143. Back to text.

72. A similar tendency in recent decades to dismiss democratic elements in classical Athens and republican Rome is now being challenged: e.g. Ellen Meiksins Wood, Peasant-Citizens and Slave: The Foundation of Athenian Democracy, corrected paperback edn. (London, 1989) and much more cautiously by John North, "Politics and Aristocracy in the Roman Republic," Classical Philology, 85 (1990): 277-287 and reply to W.V. Harris's criticisms, pp. 297-298; John North, "Democratic Politics in Republican Rome," Past and Present 126 (1990): 3-21. Back to text.

73. Romila Thapar, A History of India, vol. 1 (Harmondsworth, 1966), p. 19; Bhandarkar, Lectures on the Ancient History of India, p. ix (written in 1918): "We have been so much accustomed to read and hear of Monarchy in India being always and invariably unfettered and despotic that the above conclusion [that republics were important in ancient India] is apt to appear incredible to many as it no doubt was to me for a long time." Back to text.

Beware of the academic fascists

By Saradindu Mukherjee

http://www.hindustantimes.com/nonfram/230102/detpla01.asp

In a genuine academic debate over selection of facts and their interpretation, people should be graceful enough to accept their folly, if and when it is exposed. As Union HRD Minister Murli Manohar Joshi correctly put it (HT December 2): “Who says they are respectable?

They have received government support for 25 years.

There is a large section of people who say they are distorting history — there was a conspiracy to keep out anyone who did not have a Leftist view. I say India is a huge country and these are not the only people. This is academic fascism.”

It must be noted that the ‘academic fascists’ are an ideological front for pan-Islamic fundamentalists, and in this lofty mission they have the support of the Nehruvians.

Hence, they have to flaunt their **anti-Hindu** credentials and that explains their desperate attempt to repeatedly rub the Hindu psyche by referring to their alleged fondness for beef in the nebulous past, or rationalise every indignity suffered by the Hindus. To some extent, it was perhaps the by-product of **a ‘wounded civilisation’** and the resultant slavish mentality but mainly it was nurtured to provide the essential mindset for a political ambience and voting behaviour under the Nehruvian set-up. The Japanese call it the kokutai — the fundamental character of the State.

The post-Independence polity was sought to be nurtured on such a self-defeating mindset to kill the very soul of India. No wonder the ‘academic fascists’ are consistent in their revolutionary role as the foot soldiers of the Islamic ummah.

Hence the centrality of beef in their discourse. Even if we accept that beef was indeed on the menu, what is the big idea talking about it so vociferously aeons after it became a taboo. Besides being insensitive and gross, it has the ulterior motive of encouraging those insisting on cow slaughter.

Look at its political dividend for some. As against this grossness, they take extra care to keep quiet on the seminal concepts of kafir, jehad and ghanimah. While spread of Islam is superlatively described, there is not a word on how it expanded — its ideology and mechanism, not a word on the devastation and degradation of the polytheists and the pagans. Some of these historians are now claiming that they believed in giving ‘different theories’: but why not give at least the basic facts if not different theories about the other credal beliefs? It is this selectivity which exposes them as propagandists.

I have no hesitation in saying that India's hesitant approach to counter Islamic terrorism and grasp the significance of jehad even after being one of its longest suffering victims emanates from this terrorised and confused mindset. If the purpose of studying history is to understand the past, so that it helps us to grasp our present better and also be our guide to act appropriately in future, then history has to be objective. Why then blow up the irrelevant part of proto-history and smother other relevant facts? Is this history?

Leave aside this 'scientific' and 'rational' methodology, no historian can claim that their written words alone constitute the ultimate historical wisdom, and especially if they happen to be public sector historians. As Fernand Braudel says: "History is always being begun anew; it is always working itself out, striving to surpass itself. Its fate is shared by all the social sciences. So, I do not believe that the history books I am writing will be valid for decades to come. No book is ever written once and for all, and we all know it." This is what a historian of Braudel's stature (about whom it is said that he could have been the first recipient of the Nobel prize if there was one for historical studies) thinks of his own work.

As for modern Indian history, one of the textbooks proclaim that "the Mughal empire still commanded respect in the country". In saying that, they certainly ignore the agonies of the kafirs who saw their world crashing before themselves. It fails to record as to how and why the Marathas, Jats, Sikhs and others rose in revolt.

As for the British rule, they are rightly credited with giving us the concept of "rule of law" and "equality before law" while not disclosing the provisions of the Cornwallis Code which stopped the amputation of limbs and provided for the testimony of non-Muslims against Muslims in criminal cases previously prohibited in Muslim law. It goes on to say that, "Previously the judicial system had paid heed to caste distinctions and had differentiated between the so-called high-born and low-born. For the same crime, lighter punishment was awarded to a Brahmin than to a non-Brahmin."

There are serious omissions too. Warren Hastings is mentioned without his most important gift to Indians — the Asiatic Society, Raja Rammohan Roy's Gift to Monotheists has been wrongly dated to 1809 (actually 1804-5). While its 'weighty' arguments against the polytheists and views favouring the worship of a single god are admired, its critique of prophethood — central to monotheistic creed as well as his views on Muslim rule in India are suppressed.

The Hindu-Muslim communal differences are solely ascribed to the "perfidious Albion", while the role of the Wahabists and Faraizis is completely ignored. It is like ignoring the role of Al-Qaeda, Jaish-e-Mohammed etc. while studying Islamic terrorism in our own times. The exclusivist and intolerant elements inherent in Islam are smothered and the "racial arrogance" of the British is highlighted.

A student of Indian nationalism is never told about the stirring message of **Vande Mataram** while Iqbal gets considerable coverage.

Extra-territorial loyalty and obscurantism inherent in the Khilafat and fanaticism of the Moplahs are hidden. Similarly suppressed is the role of the communist party in supporting the Partition and opposing the Quit India Movement. Thus, students are never told about all those forces which are bent on destroying India.

The writer teaches history at Hansraj College, University of Delhi, and is member, Indian Council of Social Science Research

Life after Death

By Deepaknar Mukhopadhyay

Belief in reincarnation is as old as the hills.

http://www.dailypioneer.com/secon2.asp?cat=\fory16&d=Foray

Followers of almost all ancient religions all over the world strongly believed that people returned to life after death and among them were the Hindus, Buddhists, Druids, Gauls, Greeks, many Jewish groups and even the early Christians. Reincarnation became a taboo for the Christians only after the Second Council of Constantinople in 553 ad. Since then, the Church has developed a strong anti-reincarnation stand.

Among the early believers, the most vocal supporter was the Greek philosopher Plato. He had specially referred to the experience of a Greek warrior, Er the Pamphylian, who was fatally injured in a battle but came back to life before cremation. According to him, each soul was given a choice to select the form and type of life for the next birth and nobody was responsible for the choice. After the selection, the souls had to drink water from a river flowing through the Plains of Forgetfulness, so that they could forget everything pertaining to their past lives. Then like shooting stars they came down to start their new lives.

There seems to be a fundamental difference between the Platonian and the Hindu-Buddhist concept. While Plato stresses on free choice, the Indian school insists that rebirth is decided strictly according to the Karma. The Orientals also believe that a man does not necessarily be reborn as a human being he can be an animal, even a plant. Manu-Samhita says the killer of a Brahmin will be reborn an ass, a drunkard a bird that lives on dung, while other sinners will become hyenas, rodents and other abominable creatures. The Westerners, however, believe that once a human always a human. Out of the two, the Karma theory definitely sounds more logical, for if there is a choice, everybody will opt for becoming Dhirubhai Ambani, Sachin Tendulkar or Hema Malini; nobody would like to become a destitute, an orphan or a cripple. The choice factor might be there, but it cannot overrule the Karmic parameter of individual.

Again, the Karma of the individual is instrumental for deciding how long his soul will remain in the outer world. In some cases, it returns quite fast, in others it has to wait for even centuries. There are certain souls who do not have to return at all, but they come back on their own to help other people. The Buddhists call them Bodhisatvas. Tibetans believe that the Bodhisatva called Abalokiteswara is the Dalai Lama. Only such advanced souls can remember their previous lives.

However, people who believe in the free option theory got some encouragement from the unusual research done by a psychiatrist Dr Helen Wambach. In the mid-70s, she hypnotised 750 people all

over the American continent, and commanded them to go back to their status before they were born and also to relive their birth experiences. During this hypnotic state, she asked them some questions, like: Did you choose to be born?; Did anyone help in your choice?; If yes, who?; Why did you choose the 20th century to be born?; Did you choose your sex?; Did you know your parents-to-be?; If so, what was the relationship?; Were you aware of other people whom you should know during your lifetime?

Dr Wambach left a five second gap between each question. After the last question, she brought them back to waking reality, with a command to remember all the answers, and hand them over paper and pencil to write down whatever answers had flashed through their subconscious. Let us pick up one answer at random: `Yes, I chose to be born. Someone did help me choose and it seemed to be some voice that I trusted greatly. It was kind, helpful and wise... I choose this period to be born because it is a great period of change where people need stability within themselves. I am supposed to help them somehow. I did choose to become a male because it is good for my work and I enjoy that sex-role. My mother was my wife in a past life, my father was my son. I got some faint flashes of mates and lovers, but nothing clear.

In the final analysis, 81% of Dr Wambach s subjects state that they have chosen to be born while the remaining 19% feel they either resisted it or they were not consulted. As one of them put it, `it was like a tour planned by a travel agent and one had to accept it. In most cases, a group of counsellors advised the spirits about their next birth. They were either friends and relatives from previous births or even total strangers somebody remembered an old man with a long beard who acted like a big boss. The counsellors adopted different tactics with different individuals; one spirit, not too keen to be reborn was shown his mother-to-be down below, and he liked the woman so much that he immediately agreed to be her son. It is interesting that very few of the subjects 0.1% to be precise ever felt the presence of God or any other religious figure in this process.

A fascinating aspect of the research is the study of human relationship that emerges through various births. Eighty-seven per cent of the subjects admit that their parents, friends or lovers were known to them in their previous births. The relationships are so varied that it is not possible to draw any general inference. One subject even says he wanted to be the son of his jailer of previous birth, who used to whip him everyday. Like love, hatred is also a strong bond.

Although Dr Wambach's work is impressive, we cannot reject outright the Karma theory. She does not reveal anything about her subjects their background, education, or lifestyle. Most are volunteers who heard about her `hypnotic workshop' and wanted to join it. From their datasheets, it is clear that they are well-educated people with a healthy interest in paranormal matters. It is possible that most of them were aware of the Western theory of self option in rebirth and that might have influenced their subconscious. Dr Wambach herself admitted that some of them might have been influenced by Dr Raymond Moody s international bestseller Life after life as some of their pre-birth experiences are surprisingly similar to some post-death syndromes recorded by Dr Moody. It is interesting that Dr Wambach s book, published just two years after Dr Moody s work, is titled Life before life.

I think, the most significant point about Dr Wambach s work is that in the last quarter of the 20th century, a practising psychiatrist of the western hemisphere has accepted reincarnation as a basis

for scientific research. Caught in the crossfire of religious disapproval and scientific disbelief, reincarnation was slowly relegated to mythology. Only during the 60s, there was a serious attempt to dust away the cobwebs gathered around it. Credit must go to Dr lan Stevenson for his pathbreaking work, Twenty cases suggestive of reincarnation. (1966). Please note the shadow of doubt in the title itself, but even today, the book remains a classic. Dr Hemendra Banerjee s work on parapsychology got him international recognition.

Both Stevenson and Banerjee put painstaking research behind each case and turned up with cast-iron evidence. A textbook example is the Swarnalata episode. (A detailed account of the case was recently published in The Pioneer.) An almost identical instance was provided by a Delhi girl Shanti, who declared in her childhood that she happened to be the wife of Kedarnath Pandey of Mathura. She was so assertive that her people took her to Mathura, where she not only correctly identified her erstwhile relatives but even dug out a tin box where she used to keep her savings. Till some years ago, Shanti Devi was teaching in a school in East Delhi, but I have somehow lost track of her. Another illustration from their India file is a slightly eerie story of a boy, Jasbir Singh. The boy died of smallpox at the age of three, but unexpectedly came back to life just before the cremation. After some time, the family noticed some personality changes in that little boy. One day, he announced that he was a Brahmin from a nearby village and would, therefore, not touch the food cooked by his family as they were from a lower caste! He was taken to that village and was soon identified as Shobha Ram, a man who died of smallpox at the same time with Jasbir, although Jasbir vehemently alleged that he was poisoned. But it was obvious that the boy knew all about Shobha Ram and his family. It seems to be a borderline case between possession and reincarnation.

No discussion on reincarnation is complete without mentioning Tibet, because there the concept of rebirth is accepted as a biological truth like life and death. Every major Lama or abbot will leave clear-cut instructions before death to his disciples about where to find his reincarnation (Tulku in Tibetan) after he passes away. The process of locating the Tulku is an extremely interesting one, which has been described by Anagarika Govinda, a German scholar who had spent many years in Tibet and became a Lama. He was a direct disciple of Tome Geshe Rimpoche, an illustrious Lama who was fourth in the hierarchy after the Dalai Lama. After he passed away in 1936, the search for the Tulku started. The Great Oracle of Nachung was consulted and it came out with the description of the town where he was reborn. This was followed by details of the house where he was living, the child s age and even the age of his parents.

After going through all details, the disciples concluded the place to be Gangtok, the capital of Sikkim. So, a delegation of monks landed there and soon they came across the house as described by the Oracle. The house belonged to Enche Kazi, a respected Sikkimese nobleman; he had a four-year-old son. The moment the monks entered the garden even before they had knocked the door the boy went to his father and told him that his people had come to take him back to his monastery! The monks then entered and subjected him to a familiarity test: they displayed a whole range of religious items like bells and rosaries and the boy without any error picked up only those items belonging to and actually used by Lama Rimpoche. After this demonstration, the heart-broken father the moter had died at childbirth had to allow his young son to go with the Lamas. As soon as they entered the monastery, Lama Rimpoche s pet dog came running and

greeted him with great happiness.

One might even ask Govinda, a blue-blooded rational German, what made him believe in reincarnation. His answer is simple: For myself, rebirth is neither a theory nor a belief, but an experience. What is this experience?

Long before he developed his Tibetan connection, Govinda, in his twenties, was living in the Island of Capri. One day, some of his friends invited him to attend a seance. Out of idle curiosity, Govinda asked about his past life, the spirit came out with a Latin name. Nobody had heard this name before. Only Govinda vaguely knew that it was the pen name of a German writer who died some years ago. He had come across the name in a bibliography.

After a few days, Govinda showed a short story which he had written some years ago to a friend who was well-versed in German literature. After reading it, the friend was very surprised and he asked Govinda if he had read the works of the German writer who used a Latin pseudonym he found many similarities.

Govinda was taken aback. He got hold of the works of the German author and found that his short story was virtually a part of an unfinished novel of that author, the novel that he could not complete because of his death. Some of the passages were identical and Govinda felt that not only the language, but his emotions, his innermost feelings were reflected in the writings of the other man. Later, Govinda found out that both of them were inmates in the same sanatorium and somebody even told him that they looked alike!

A secondary evidence of reincarnation is the example of child prodigies. We sometimes come across incidents of children achieving something unbelievable the legendary exploits of Mozart for example, or that of Jean Cardiac who knew six languages before the age of six. There is on record a famous case of a child who spoke only a few hours after his birth, knew the Bible by the age of two, mastered history, Latin and French by three, and correctly predicted his own death at four! No amount of human excellence can explain these events. It seems these children brought with them all their knowledge and expertise of previous existence.

The detractors of reincarnation theory often point out that most of rebirth cases are recorded in India and Tibet where people believe in the concept; fewer cases are reported from the land of unbelievers. This does not seem to be true after the publication of Dr Wambach experiments; we can round off this article with the personal experiences of another psychiatrist from the other side of the Atlantic.

Dr Arthur Guirdham is a well-known British specialist on psychiatry with many years of practice. For some inexplicable reason, he always felt attracted to an obsolete 13th century religious sect called the Cathars. The Cathars refused to accept Christianity and were massacred by the Church near Toulouse in France. The doctor had strong feelings of deja vu whenever he visited that area. (The feeling of deja vu, of being somewhere for the second time when actually it is the first visit, is often found to be a secondary evidence of reincarnation). He also had a recurring nightmare; he was lying on the ground while a tall man was approaching him menacingly. He could not explain this nightmare by any means. In 1962, a woman patient came to him and he was amazed to find

that she was also having an identical nightmare. After she disclosed it, the nightmares stopped. During the therapy, the lady confessed that she had been seeing the doctor in her dreams since the 1940s. Her dreams are invariably centered around her life in the 13th century when she, a young peasant girl, met a young Cathar priest Koger De Grissoles, and they fell in love. They lived together happily but not forever; the persecution started, they were arrested, the priest died in prison and the girl was burnt alive. She claimed Dr Guirdham was Roger.

This seems to be a Hindi movie in the Madhumati-Milan-Mehbooba gharana lovers who met tragic end return after 700 years as doctor and patient! But there is a minor problem. In her dreams, which she saw in the 40s, she saw in great details the background and lifestyle of the Cathars in the 13th century. Those details were documentarily proved only in the late 60s. And the lady was neither a historian nor a sociologist. So it is not easy to dismiss the story outright.

But this was not the end of Dr Guirdham s Cathars connections. Even before this incident, he had a woman patient who came because she could not understand why two strange words, the words with which she had nothing to do, with, were continuously repeated in her head `Albigensian' and `Raymonds'. Dr Guirdham was again puzzled because Albigenses; was another name of the Cathars and Raymonds was the Count of Toulouse who ordered the massacre of the sect. The same patient also saw nightmares of being burnt alive and being hit on the back by a torch in fact, she had a birthmark on her back which had a burnt look. In this way, Guirdham went on meeting more people who were somehow related to the Cathars. This led him to his theory that a group of people who were Cathars in the 13th century were born together in various places during the last two thousand years.

Dr Guirdham s books were published around 1970 and as expected got much flak and derisive laughter, but it may not sound so strange now.

There is only a basic difference between 1970 and 1979, the year of publication of Dr Wambach s book, as I have already pointed out: Dr Guirdham had to retire from practice and give up consultancy work before writing his books, because he knew his professional reputation would be damaged beyond repair, while Dr Wambach could still practice and reveal her studies.

Nothing could possibly illustrate better the gradual, though grudging, acceptance of the basic tenets of reincarnation.

The Ugly H Word

Pritish Nandy

http://www.rediff.com/news/2001/feb/01nandy.htm

President George W Bush, in his inaugural address, made so many references to God, the Bible and Christianity that even the American media sat up and noticed it. No, no one was in the least embarrassed by it. But they noticed it and some of them pointed it out, quite approvingly. For in American politics such references to religion are not seen as anything wrong. A President who flaunts his faith is no zealot; nor is he a Christian fundamentalist. He is a good, decent, God-fearing man.

Bush is not the first American President to be so openly Christian. Many before him have also rooted for a good, strong Christian image. No one doubted their motives. No one disparaged them for doing so. Even when it won them votes, no one accused them of religious bigotry or political opportunism.

Compare this to India. Think of what Prime Minister Atal Bihari Vajpayee goes through every time he mentions the dreaded H word. While many are ready to applaud him when he talks about fresh peace initiatives in Kashmir or making friends with Pakistan, the moment he says anything about being Hindu or defends the cause of Hindutva, he is promptly accused of revealing his true colours as a khaki knicker*wallah*. The very mention of his religious antecedents, however gently, raises the hackles of the Opposition and the media. Forget President Bush; if Vajpayee were to just talk about what being a Hindu means to him, he would be flagellated as a bigot who has emerged from the closet.

So strong is the pressure built up by the secular lobby in India that even leaders like Vajpayee, known for their open-mindedness in matters of religion, are now increasingly embarrassed to acknowledge their Hindu roots. It is as if being Hindu is politically incorrect, something to be ashamed of. The moral of the story is: If you must wear khaki knickers, wear them under your white *dhoti* so that no one can out you as a bigot, a traditionalist, or simply as an old fashioned prig. Secularism today is synonymous with modernity. It is synonymous with human rights. With the spirit of liberalisation, the scientific temper, with globalisation as we aspire to it.

Can you imagine Vajpayee in one of his speeches referring to Ram as the guiding spirit of our nationhood? Can you see him repeatedly quoting from the Bhagvad Gita or the Upanishads to underscore a political point? He would be torn apart. Even *Vande Mataram* is labelled as a Hindu anthem today, not the national anthem. The national anthem is *Jana Gana Mana* which is ostensibly secular. No speech by a prime minister refers to anything Hindu without promptly

balancing it with a cross reference to Islam or Christianity or Sikhism. We are always anxious to show the world how secular we are. If in the process we are regressing from our own faith, so be it.

When President Bush refers to God or Jesus Christ or the Bible, it does not make him a bigot or a fundamentalist. So why should we blame Vajpayee when he sees the Ram Mandir as the collective dream of this nation? His secular credentials are well known. His abiding faith in the peace process has been repeatedly demonstrated and, even though he has been let down again and again by Pakistan, he has refused to give up hope in the possibility of achieving peace in Kashmir. All this, against the wishes of some of his own supporters in the NDA. Yet he has been brave enough to stick his neck out and root for peace. He knows that radical Islam is a dangerous and destabilising force all over the world but he never refers to it. Instead, he has chosen to deliberately secularise our semantics by referring to it as cross-border terrorism even though the whole world knows where this cross-border terrorism comes from, who funds it, and why.

My question is: **Why must we deny Prime Minister Vajpayee his right to be a Hindu?** Bush does not become a fundamentalist when he refers to Christianity or the Bible. No one argues that he is anti-Muslim or anti-secular simply because he flaunts his own faith in public. By the same argument, when Vajpayee speaks of Hindutva or the Ram temple, why should we brand him as a fundamentalist? He remains what he always was: a Hindu at heart, a secular leader in office. In fact, as we all know, the only way to be truly secular is to be (first) a good Hindu or a good Christian or a good Muslim. Unless you respect your own faith you are unlikely to respect the faith of others.

The media and the Opposition are repeatedly arguing that Vajpayee is double-faced. That he hunts with the hounds and runs with the hares. On one hand he is the gentle and liberal face of the BJP. On the other, he keeps using the Hindu card to further his own political ends. That he is actually a wolf in sheep's clothing. A Hindu bigot wearing the mask of secularism to sneakily woo the minority vote.

This is a foolish argument. The prime minister has no reason to be bashful of the H word. **It is possible to be a Hindu without compromising one's secular credentials.** Like Gandhi. He was a good Hindu and a great secular leader too. There was no conflict of interest. In fact, it is just the opposite. Those who speak so passionately about secularism are the ones who barter it away so easily. In their pursuit of easy political goals. Without realising the simple fact that hypocrisy is no substitute for political conviction.

A drain inspector's report
By Pritish Nandy
http://www.rediff.com/news/2000/feb/23nandy.htm

There was a time when everyone frowned on India. Including us.

Everything was wrong with India. We hated her rags and yet, at the same time, we resented the rich and went out of our way to harass those who created wealth. With unreasonable and punishing taxes. With regulations that crushed all initiative and enterprise.

We complained about the roads, the phones, the buses, the trains, the hospitals, the distribution of food grains. Yet we insisted that all these should remain firmly in the hands of the State. A lazy, corrupt, bestial State, as we described it. Yet we allowed it to control everything and become more and more arrogant, more and more corrupt, more and more wicked.

We were bitter about how government servants, from the lowliest peon to the all powerful prime minister, were busy stashing away personal wealth and ignoring the problems of the common citizen. We complained about their callousness, their highhandedness, the sheer brutality with which they treated us ordinary people. At the same time, we wanted our children to grow up and join government service. Even though we were so critical of the government, we applauded when the State hijacked more and more powers, more and more authority in the name of socialism and a welfare society. Of course, the only welfare this society was interested in was the welfare of its corrupt babus and criminal netas.

There was simply no doubt that India was sick, very sick. Yet we were busy hanging up portraits of politicians on our walls and telling our children how wonderful they were, how they had fought for freedom and self reliance, how they were busy building the temples of modern India. And what were these temples of modern India? Big, ugly, polluting factories that churned out rotten, substandard products and employed thousands of untrained people who emerged as vote banks for those who provided them jobs. Jobs which they did badly even as they kept upping their demands, rendering most of the factories sick and inefficient.

There was all round anger and resentment. All round mediocrity. All round disappointment with the way we were going. Those who lived here hated India. Those who came to visit India hated her even more. She was a nation on the skid.

The nineties began to change all that. Economic bankruptcy was no longer seen as fashionable. Liberalisation, slow as it was, slowly began to change our attitude towards the creation of wealth. And even though Narasimha Rao himself got trapped in the vortex of his own corruption and

bribery we were lucky that subsequent governments persisted with the reforms he initiated. Sometimes fast, sometimes slow. But the reforms continued, largely because weak, waffling governments at the Centre made it impossible to roll them back.

India was lucky.

She was even luckier when Atal Bihari Vajpayee came to power and, instead of succumbing to the internal pressures groups within the BJP who were (once again) talking about swadeshi and self reliance, euphemisms for going back to the licence raj where everybody in government could make a fast buck, he pushed ahead with reforms and in fact accelerated the pace of change. Dismantling more and more state controls in the process and returning freedom, as it were, to the people of India.

In retrospect, it is difficult to say which were the worst years of slavery and colonization for India. Three hundred years of Muslim rule or two hundred years of British imperialism? Or, sadly, the 45 years of the Nehru-Gandhi dynastic rule when we lived with the pretence that we were free. Dressed in elaborate chains, we spoke of socialism and non-alignment with the ardor of slaves who were taught that freedom was a dangerous idea that only helped the rich and the powerful.

Thank God, that is all over now. Whatever may be the failures of the Vajpayee era, it will be remembered as that period when India started dismantling a corrupt and lazy empire of crime masquerading as a benevolent, welfare State and returned freedom to her people. It was the time when enormous wealth was created, when taxes were paid because they were reasonable, when people realized that profit was not such a dirty word after all. When excellence entered our lexicon.

It was the time when India began to realize her full potential. When she figured out that she was not a Third World nation, as the Nehrus and Gandhis had preached, equating us with Yugoslavia and Egypt. We realized that we had the talent, the wealth, the ability to be a first world nation if we wanted to and the fact that millions of Indians were still defecating on railway tracks or living below the poverty line was not exactly inimical to change or success.

That is why you see less Indians complaining today. You see them going out and doing things and doing them so well that the whole world has woken up to our talent. Leading international corporates, global banks are now headed by Indian professionals. The sexiest start-ups in Silicon Valley are spearheaded by Indians. Some of them first generation literate. Some of the richest men in the world are, in fact, Indians today. Measured dollar for dollar, wealth for wealth.

The fact that *apna* Azim Premji who lives in Bangalore is richer than the Queen of England or Gururaj Deshpande (having created a new start-up, barely a year old) has acquired wealth faster than the Sultan of Brunei in the past year are indications that Indians are a lot smarter, a lot more hard working and a damned sight more ingenious than most. Give us one more generation of free Indians and you will see how the pattern of wealth changes globally.

What is doubly satisfying is the fact that most Indians who have succeeded overseas are ready to share their ideas, their wealth with people back home. In other words, the Great Indian Diaspora is growing. Give us five more years and you will find an amazing change in our equation with the rest of the world.

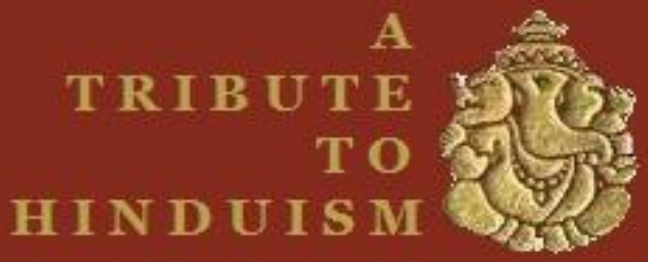
Five years ago when I persuaded Captain Krishnan Nair of The Leela to set up India's first cybercafe little did we realize how quickly and fundamentally dot com would change India. The critics carped and said it would take us a century to catch up with the internet population in the US. Today Indians use e-mail more than any other community in the world. There are more Indians working for the knowledge economy than any other people. Soon all businesses requiring talent, skill, ingenuity, technology, service will not be able to do without us. We can leave making steel and cement to the rest of the world.

All this has happened because we chose freedom and democracy as the key metaphors of change. Unlike our neighbours. This is what set us apart. We did not chase short cuts. We stuck to democracy and the rule of law. Yes, we faltered. We faltered many times. We made many mistakes. We allowed, at times, fundamentalist ideas to flourish side by side with liberal convictions. We banned Rushdie when he hurt Muslim sentiments. We rapped Husain on the knuckles when he painted Saraswati naked.

But whatever our failures may be, we allowed a thousand flowers to bloom, a hundred schools of thought to contend. This is what has now paid off. We are today right in the midst of a flourishing new era, an era of far greater self confidence than we have ever had. That is possibly why we get so worked up with Deepa Mehta. We have nothing against her films but we are sick and tired of a mindset that sees only squalor and disease, pain and failure in modern India and wants to export this image to the rest of the world.

No, George Lucas, this is no lone individual's battle against an insensate, unreasonable, fascist State. It is, in fact, exactly the opposite. It is an attempt to commercially exploit a false, misleading image of India to win encomiums in the West. A West that loves to see us as we once were. A nation of losers.

We are no longer losers. We are no longer a sick nation, teetering on the edge of bankruptcy and shackling its people to a cantankerous, obsolete socialist ideology. We are a free nation today, trying to redesign our future and our lives. There is still much to be done, of course. I am sure there are many lonely wives finding solace in each other's arms. I am sure there are many poor widows in Varanasi whoring for a livelihood. There is no shame in admitting that.



But surely there is much more to India today than its failures, its aberrations and that is why there are many people like me who are neither bigots nor religious fanatics nor supporters of the VHP who feel that Deepa Mehta must stop selling such sick, prejudiced pornography to the world, as Katherine Mayo once did, to make India wince in public.

The idea is not to curb Mehta's free spirit as a creative artist. She is most welcome to peddle her brand of pornography wherever she wants. She is welcome to see India through the eyes of a drain inspector. But, then, she must also be ready for the backlash of public opinion. In a democratic society you have to live with that. You can mock such opinion as traditional, unduly conservative. But it reflects in its own way, as it ought to, what people feel about their country, their society, their religion, their values.

It is fashionable for the creative elite to treat such opinion with contempt. But then they must be also ready to face the consequences. We are poor. Many among us are uneducated. Some of us may even be lesbians and whores. But we still love India and will not allow it to be denigrated by

someone out to make a quick buck.

Why is being a good Hindu politically incorrect in secular India?
By Pritish Nandy
http://www.rediff.com/news/2001/feb/08nandy.htm

Last week I wrote about the inaugural address by the new American President George W Bush and how he referred in it, again and again, to God, the Bible and Christian values.

He sounded almost like a scripture teacher in one of our convent schools. The American media noticed it, even commented upon it. But no one ever suggested that he sounded like a fundamentalist. A good Christian, perhaps. But a fundamentalist, heavens no!

Now imagine if someone like Prime Minister Atal Bihari Vajpayee were to talk so much about Ram or Hindutva in his inaugural address, or flaunt his Hindu education and background the way Bush flaunted his Christian upbringing, can you think of the outrage it would have provoked?

Everyone, including our media, would have flayed him for stoking the fires of Hindu fundamentalism. As it is, the world press keeps referring to the BJP-led NDA as spearheading Hindu fundamentalism.

In other words, being a good Christian is politically correct in free America but being a good Hindu is politically incorrect in secular India. Why? Why is the American President not slandered as a bigot when he speaks about God, the Bible and Christian values while the Indian prime minister is called a Hindu zealot when he refers to Ram or Hindutva?

After all, what are we looking for in our leaders? Denial of religion? Atheism? Is atheism synonymous with secularism? Or is secularism the ability to pursue your own faith with conviction and respect the right of others to do the same?

We are back to semantics here and this is the real difference between secularism as propagated by Mahatma Gandhi and secularism as it has been practised by his political heirs led by Jawaharlal Nehru.

Gandhi saw it as the co-existence of all religions and urged everyone to follow his own faith with even greater conviction while Nehru, a self-professed agnostic, saw it as the gradual erosion of the role of religion in a modern society.

So, while Gandhi pleaded for more faith, better understanding and a bigger role for religion in creating a truly secular state, Nehru idolised the blossoming of the scientific temper, which he believed would eventually diminish if not entirely wipe out the role of religion in our political culture. It achieved precisely the opposite.

But, before that, let me return for a moment to President Bush. On Thursday, I sat with heads of state and leaders from different parts of the world, as well as many of America's most influential senators and Congressmen, listening to the new President explain his vision for a new America at the 49th National Prayer Breakfast in Washington DC. It was an amazing experience, made doubly impressive by his touching faith in the power of religion to resolve social and political conflict.

Bush was not in the least embarrassed by his faith. In fact, he saw it as his strength. He saw it as the strength of his nation. So he dropped all pretences, all hypocrisy and spoke out openly for what he thought was the solution to most of America's problems, as well as the world's. Faith. Religious faith. In

his case, Christianity. But, for others, whatever their faith is.

His argument was exactly what I wrote: It is not religion that exacerbates conflict; it is the absence of religion. When we stop being good Hindus or good Muslims or good Christians, that is when we pick up weapons against each other to fight wars in the name of religion.

All conflict is actually secular. People may raise the banner of faith but they are actually covering up the real reasons for the conflict which are sometimes political and, more often, plain criminal.

The conference was a unique experience and what impressed me most was political America's fierce commitment to its faith. Of course Christianity was there, centrestage. But it was there as a symbol of America's faith in all religions and their right to coexist.

There was Benazir Bhutto arguing for her right to dissent. There was Roshanara Ershad, young son in tow, demanding that her imprisoned husband be given a free and fair trial. There were many heads of state. The president of Congo sitting right next to the president of Rwanda. The president of Macedonia next to me.

On the other side were the prime ministers of the Slovak Republic, Albania and Greenland. On the next table, the presidents of Croatia and Serbia and the governor of the Cayman Islands. My friend, the home minister of the Tibetan government in exile, and his wife, the Dalai Lama's sister were on the adjoining table. It was a *sangam* of all faiths. Christians, Muslims, Hindus, Jews, Buddhists. They were all there, praying for a better, stronger, more compassionate world.

As Benazir pointed out, there are nations in South Asia where politicians are either in power or in prison. As Roshanara Ershad lamented, it is a short distance from being a president's wife to being a luckless refugee. Luckily we, in India, have a strong judiciary that refuses to yield ground to over-ambitious political leaders. We have a democracy that is stubborn, brave, uncompromising.

Maybe it is time to reject cant and hypocrisy, shed this sham of political correctness. Let us, as a nation, admit to ourselves that there is absolutely nothing to be ashamed of when we speak of our religion, our faith.

A good Hindu is no less than a good Christian or a good Muslim and it is time we acknowledged this simple, inescapable fact in a nation that has been the crucible of faith for centuries.

In this acknowledgement lies our future. As Hindus, as Indians. As a nation on the move.

There is, there can be nothing endearing about faithlessness.

An Uncultured Media
Author: Editorial column
Publication: The Navhind Times, Panaji Goa
Dated: February 2, 2001
http://www.hvk.org/

The Controversy over the media coverage of the Maha Kumbh mela continues. The conflict is between two streams of thought, one saying the media should be prohibited from covering scenes of mass bathing at the sangam, the other saying the media has the right to cover them, like it has the right to cover other events. It is not easy to decide which stream is wholly correct. Nevertheless, there cannot be two opinions that the media, especially the television, is guilty of commercialising the event. A section of the print media has joined those in the television in portraying the mela as an exotic event. At the apparent level, the media presented to the world as though it was covering the world's greatest Hindu congregation, but in reality, as their selective reportage and photography showed, they were out to portray the mela as a gathering of mad, eccentric, superstitiously blind villagers and sadhus.

Some of the foreign television channels ran programmes on the mela which had a rich content of seemingly lunatic and incredulous activities and apparels (or none of them) of Indians who came there. The game was to appeal to the subconscious of the European mind which has the image of Indians being an uncivilised and unelightened race, not all of whom the poor Britishers could manage to civilise. That was to improve the viewership (the ratings, on which advertising comes) in a competitive market. The more uncivilised, primitive, lunatic and naked the Indians looked in 21st century the more Europeans were bound to watch the show.

The Indian media was by and large discreet, responsible and respectful. A section of it, both on television as well as in print, however followed the foreign media in order to improve their ratings and readership. This section of media is not known to be very exploratory and outgoing, but in the Maha Kumbh mela case, all bounds were broken in terms of resources and time and space. In the name of special coverage they carried reports and photographs which others avoided. Their unethical content was marked not only by a voyeuristic obsession but also by an unwarranted slant towards the hype and celebrities. One section of the media gave too much spate to the proposed visits of some of the Hollywood stars, as if their coming was more important than the coming of millions of devout Hindu pilgrims.

On the correction side, there is a protest lodged by an official of the Uttar Pradesh government against a British television channel for distorted portrayal of the Maha Kumbh mela. The question is: will it deter this channel or other foreign channels from giving a distorted coverage to the Maha Kumbh mela or such events in India in the future? The answer is a plain no. What

about those sections of the Indian television and print media which also indulged in similar distortions in the name of the freedom of the individual and the freedom of the press? The media coverage of the mela this time was the most commercialised and distorted ever. With the lessons learnt this time, the authorities must place restrictions on the coverage of the mela and such religious events. Under our constitutional safeguards against misuse of the freedom of expression reasonable restrictions can be placed on the media.

The government should also call a meeting of its representatives with those of the television and print media, both domestic and foreign, in order to work out an ethical code for the coverage of religious events like the Maha Kumbh mela. The media must realize that the Maha Kumb Mela is an event of great religious importance to the Hindus. Any religious event demands purity of soul, non-attachment to feelings of desire, lust and greed and dedication to faith. The pilgrim who come to the Maha Kumbh mela from all parts oft the country, both sadhus and commoners, come for a holy bath overpowered by these emotions. It is only appropriate that the media men who come to communicate to the rest of the world what is happening at the Kumbh fully respect the sentiments of the devout pilgrims. To portray pilgrims in snatches of reportage or photography that capture only the weird and the unbelievable is snobbish, uncultured and unacceptable.

Dutch Bhagvad Gita a sellout

By Ranvir Nayar in Paris

http://rediff.com/us/2001/sep/01gita.htm

The Bhagvad Gita, the treatise that encompasses the essential philosophy of Hinduism, has now reached out to the Dutch-speaking people of the Netherlands and Belgium.

Dutch scholars Gerda Staes and Winand Callewaert have translated the holy book into Modern Dutch, or Flemish as the language is called in Belgium.

Their work was released at a function in the Indian embassy in Belgium where nearly 40 Belgian academicians and leading personalities of Brussels were in attendance.

In the first edition, 2,500 copies of the book -- which runs into 158 pages and is priced at 17.20 euros ($15) -- have been printed.

The publisher, Davidsfonds/Leuven, says going by the fantastic response that the book has evoked in the Belgian and Dutch media and among readers, a second edition may soon follow.

Davidsfonds/Leuven has been in the publishing business for 125 years and focuses largely on cultural and scientific works. It is one of the most important publishing companies in the Flanders region of Belgium.

Translator Staes lived in India and Thailand for 14 years and learned Sanskrit -- the language of ancient Indian texts -- at various institutions in the two countries. She even worked for five months at Bombay University, where she organised a seminar on Sanskrit in May this year.

Callewaert, a professor at the Catholic University in Leuven, Belgium, earned his bachelor's degree in Hindi, Sanskrit and history from Ranchi University (Jharkhand) in 1968. He also studied at the Sanskrit University in Varanasi, Uttar Pradesh, and Pune University in Maharashtra. He holds the chair of Sanskrit and Hinduism at the Catholic University.

Callewaert, who has visited India at least 50 times, has already published 32 books in Hindi, English and Dutch. He was among those Prime Minister Atal Bihari Vajpayee honoured during the Sixth World Hindi Conference held in London in September 1999.

Paris bids Ganesh a warm adieu

Ranvir Nayar in Paris
http://www.rediff.com/us/2001/sep/03fra.htm

Thousands of Parisians, among them a Russian Orthodox Church priest, helped pull a chariot of Lord Ganesh through the streets as the festival dedicated to the elephant-headed Hindu god ended in the French capital on Sunday.

People dressed in their best thronged the decorated streets of Paris as loudspeakers blared hymns at the end of Ganesh Chaturthi.

The festival had been going on in the city for the past ten days. Sunday marked the final day, with an idol of Ganesh being taken out in a chariot procession through the main streets.

A priest of the Russian Orthodox Church and several French converts to Hinduism joined the procession. The chariot was preceded by two water trucks, which washed the path before the idol.

Thousands of devotees offered prayers to the god. At the end of the procession, however, the idol was not immersed in a river, as is the custom in India.

The procession began at 11am from Mannika temple. Idols of Ganesh were installed in a five-metre-tall chariot pulled by scores of devotees. Groups of followers danced around it, singing devotional songs.

This year saw a significant increase in the participation of the local population in what is now by far the largest Hindu festival celebrated in France.

Over 10,000 devotees, largely Sri Lankan and Indian Tamils as well as Hindus from other parts of India, Madagascar, Mauritius and some French colonies celebrate the festival.

Organisers attributed the larger French turnout to the wide publicity the festival gets in the local press. This time too the French press was present in significant numbers.

After covering a route of 7km in about four hours, the procession returned with much gaiety to the temple where several thousand coconuts were offered to the god before his idol was returned to the temple.

During the procession, *luddoos* [an Indian sweet] along with holy offerings and milk were distributed to the devotees, most of whom then turned to neighbouring La Chappelle area that has the largest concentration of Indian and Sri Lankan shops and restaurants.

The procession is a boon for shopkeepers in the area, especially restaurateurs. "We get over a

week's business on just one day," said a restaurateur whose 15-table restaurant was packed since morning.

Scientist looks for Jesus' body in Kashmir

http://news.sify.com/cgi-bin/sifynews/news/content/news_fullstory.jsp?article_oid=11142220&page_no=1

An American researcher who believes she has found the final resting place of Jesus Christ is campaigning to exhume a body at a Muslim shrine in Kashmir for scientific tests.

Suzanne Marie Olsson, a New York-based researcher is currently in Srinagar, studying the Muslim shrine of Rozabal.

While Muslims say Rozabal houses the tomb of Yuza Asaf, a Muslim saint, many researchers believe it contains the body of Jesus Christ.

To put an end to speculation Olsson has suggested exhuming the remains at Rozabal for DNA testing and carbon dating.

"This will trace him (the saint) to his origin ... and resolve the raging controversy over the identity of the place forever," she told the Sunday edition of Kashmir's leading daily, the Greater Kashmir.

Olsson has already dug up a shrine at the Murree hill station in Pakistan under the supervision of archaeologists Ahmad Hassan Dani and Saida Rahman.

Muree is believed to be the resting place of Jesus' mother, Mary (Marium). "The exhumed remains have been sent for the DNA testing and the report is awaited," she told the newspaper.

"Now Rozabal holds the key. If the remains there are sent for testing and then tallied with the results of the Murree project, it will either establish the link between the two shrines as being of similar origin and thus authenticate the Marium-Jesus theory or prove it wrong for good."

However, her project has run into trouble with the managers of the Rozabal shrine, who are strongly opposed to its "desecration".

"We will never allow it," said Mohammed Amin, one of the managers. But Olsson, stressing the "purely scientific nature of her work" and her identity as a "seeker of truth", is pleading to be allowed to "verify the origin and identity of the saint" to put to rest wild speculation.

She has even written to Kashmir Chief Minister Farooq Abdullah for help. Olsson also believes Moses is buried in Bandipore in north Kashmir, the Islamic prophet Haroun at Harwan, on the outskirts of Srinagar, and Solomon at Takht-i-Suliaman in Srinagar.

"You have more Christian holy sites than even Egypt or Israel," she said in her appeal to the chief minister.

Olsson says she wants to unravel the truth about the shrines so that Kashmir, ravaged by a decade-long insurgency that has claimed 35,000 lives, can become a pilgrimage centre for Christians and Muslims.

Foreign Correspondents Coverage of India

http://www.newsindia-times.com/usnews09.htm

When reviewing coverage of India, in the mainstream press, Francois Gautier, a South Asia correspondent for Le Figaro (a leading French publication) identified three types of articles:

"Foreign journalists (and photographers) covering India are generally interested in three kinds of India:

a. The macabre and the negative: the widows of Benaras, the caste system as practised in Bihar, Mother Teresa's place for the dying, kidney traffic in Tamil Nadu, the slums of Calcutta, bride burning, etc. These subjects have their own elements of truth. There does exist in India terrible slums, unacceptable exploitation of caste, dying people left unattended, and bride burning. But by harping only on these topics, the foreign press always presents a very negative image of India.

b. The folklore and the superfluous: Maharajas, of whom westerners are avid, are totally irrelevant to modern India, the palaces of Rajasthan, cherished by such magazines as Vogue which regularly sends their photographers and lanky models, who have no idea of India festival: Pushkar, the camel fair, kumbh-melas, dance performances in Khajuraho... all these have their own beauties, but they represent only a small part of our great and vast country.

c.The politically correct: There must be at least 300 foreign correspondents posted in Delhi, which should vouch for a variety of opinions. But if you give them a subject to write about - any subject - say Ayodhya, the RSS, fanatic Hindus, secularism, or Sonia Gandhi, you will get 298 articles which will say more or less the same thing, even if it is with different styles, different illustrations and various degrees of professionalism.

"Our Goal"

Our goal will be to expose the "macabre and negative" the "folklore and superfluous" and the "politically correct". We will also praise excellence in reporting and efforts to cover Indian Americans in the United States.

Invoking the Sun God

http://www.newstodaynet.com/pongal/pn1.htm

Thai Pongal, traditionally called Thamizhar Thirunal is basically worship of the Sun God which has spread to the length and breadth of the world, of course in different names.

Seers of Truth have composed many hymns worshipping Sun God as He is the source of sustenance for all living beings on earth and without the grace of Sun nothing can flourish and no one can imagine a life in the absence of Sun. And the human race which has been drawn its sustenance through the grace of Sun, naturally thanks Him for showering his mercy.

Adi Sankara categorised the worship of Gods and Goddesses into six major categories *Souram, Saktham, Saivam, Ganapathyam, Vaishnavam* and *Goumaram.*

Souram is the worship of Sun God. He is seen as the Light of Wisdom as well as source of livelihood for all creatures. That is why Tamils described Sun God as *kankanda deivam* (God who could be seen with one's naked eyes). Even now, one could see the elders in rural areas worship the Sun as their first duty.

Gayathri or *Sandya Vandanam* which has to be done thrice a day, is nothing but offering obeisance to Sun God. And on Pongal day, i.e., the first day of the month Thai, people offer Pongal to Lord Suryanarayanan (Sun God).

The worship of Sun God has been in the vogue in other parts of the world also from time immemorial.

In countries like Greece, England, Iran, Egypt, Afghanisthan, Japan, Burma, Cambodia, Java and Sumathra people worship the Sun God through various methods Worship of Sun God has an important place in the marriage rituals of Greeks and their mythological stories resemble that of the ones in the India. Like the Greeks, Mexicans also give at most importance to the Sun worship and Japanese kings take pride in calling themselves as the inheritors of *Surya Vamsam* (Sun Race). In Astrology, Sun God is connected with the health of the individual particularly for good vision, Hindus worship Him.

Another aspect of Sun God is courage. Sage Agasthya taught Lord Rama the *Aditya Hridayam*, the hymn to Lord Surya (Sun) when he felt fatigued during the battle with Ravana. And by reciting it thrice, Lord Rama rejuvenated himself and won the battle. In the Hindu system of worship, offering to the deities assumes an important place and it is called *naivedyam*. And the offering is nothing but thanking the Almighty, for providing the food for sustenance.

Sastras prescribe specific flowers and food items as offerings for each God and Goddesses. Among the offerings, 'pongal' is considered as sacred by one and all. Worshippers of Goddess Sakthi, Lord Siva and Lord Vishnu offer a varieties of cooked rice.

A Vedic prayer offered to Sun God goes ...

Asatho ma sat gamaya (Lead us from Falsehood to Truth)

Thamaso ma jyothir gamaya (Lead us from Darkness to Enlightenment)

Mruthyor ma amrutham gamaya (Lead us from Ephemerality to Eternity)

Let us all pray for a prosperous 2003 with a bumper harvest of crop.

Archaeologist too believes Ram temple existed at Ayodhya

http://www.newstodaynet.com/07mar/ld1.htm

NT Bureau
Chennai, Mar 7:

The VHPs assertion through scientific data that a Ram temple existed at the disputed site in Aydodhya now has the backing of archaeologists who dug up the place in the 1980s.

According to an agency story, one of the architects who conducted extensive digging on a half-acre area barely a metre off the site has said the excavations will establish without doubt the existence of an ancient temple.

The observation of the archaeologist is significant as the Allahabad High Court has ordered excavations at the disputed site.

The Archaeological Survey of India (ASI) is already preparing its team to begin excavations within a week at the site to ascertain the antiquity of structures detected in radar tests in January.

But even before that archaeologists are saying that a temple existed there.

The structures we found dated back 3,000 years to 900 B.C., S.P. Gupta, who was among the dozen archaeologists who excavated the site from 1975 to 1980 has been quoted as saying by a news agency.

Gupta described pillars, floors, brick walls and even statuettes uncovered by his team. We covered them up with earth after our studies were complete, he has said.

If these findings were barely a metre away from the actual spot of dispute, then it is obvious that the temple would have covered the disputed site too.

Another expedition was conducted in 1992 just before the demolition of the Babri structure.

According to Gupta, 68 idols had been uncovered in that bout of digging and there were certain indications of a sprawling temple complex that existed before the Babri mosque.

The demolition put a lid on the controversial excavations, and the dispute shifted to the political arena until the Lucknow bench of the Allahabad High Court Tuesday ordered the ASI to excavate the site and submit a report within a month.

Admitting that it would be one of their most sensitive assignments till date, ASI officials said their digging would take off where Delhi-based ground mapping company Tojo Vikas International left off.

An official of the company said their ground penetrating radar technique to map underground utilities had definitely sensed remains of a structure underneath.

Canadian expert Claude Robillard led the team that used radars to study the site. In this method,

an antenna transmits electro-magnetic waves, which penetrate the layers of underground structures and are deflected.

The time taken by the waves to travel can tell the size and shape of structures without any actual digging involved.

The ASI commissioned the radar studies, conducted at the site excluding the spot where Hindus worship the idol of infant Ram, at the instance of the Allahabad High Court.

According to Vishwa Hindu Parishad (VHP) leaders such as Ashok Singhal, the very finding of a structure indicates that the Babri mosque was built on the ruins of an ancient temple.

The spread of the Hindu mosaic

By Vivekanand Ojha

http://www.dailypioneer.com/oped/OPD2.HTM

In the wake of the controversy regarding conversions by Christian missionaries in the country, it has been suggested by a few commentators in the media that the Dalits and tribals are not Hindus.

This assertion, however, is not only erroneous but also presumes a narrow and medieval Brahmin-centric definition of Hinduism. Besides, it appears to be an attempt to twist the ongoing debate on conversions.

To begin with, the word Hindu was not coined by Hindus themselves but was given by the people living on the eastern side of the river Indus. By this definition alone, all Dalits and tribals who have been living here since the beginning of civilisation come within the ambit of Hinduism. This apart, unlike the followers of monotheistic religions like Islam, Christianity or Buddhism, Hindus, as one entity, never followed the teachings of any one prophet or a single book. So it is difficult to have a precise, all-inclusive and concise definition of Hinduism. Though the Vedic society can be considered to be the origin of Hinduism, Vedic culture was composite in nature, based as it was on the collective wisdom of sages down the ages, rather than on the teachings of a single prophet or seer.

Hinduism allows considerable intellectual freedom to its adherents, giving it a certain dynamism. Over the ages, saints and holy men have interpreted the religious texts differently, resulting in many overlapping sects, numerous deities and countless festivals within Hinduism. So, just because the tribal culture and their methods of worship are different from the Brahminical concept, it cannot be concluded that tribals are not Hindus. In fact, tribals also follow a wide spectrum of beliefs and customs, each one of which differs markedly from one tribe to another.

Worship of more than one deity is one of the main characteristics of the Hindu religion; one that distinguishes it from other religions. Hinduism professes that God, essentially One, can be worshiped in any form as desired by the individual. In fact, this freedom is at the root of the composite nature of Hinduism as they worship many deities.

Moreover, Hinduism believes in the concept of noble soul or devta. This means that any individual, through his karma, can be regarded as a noble soul, worthy of worship by a group of his followers. That is why Hindu scriptures claim that there is not one but 84 lakh devtas. This has further resulted in the concept of kuldevatas where every clan has its own deity. This is a kind of ancestor worship. A more direct form of ancestor-worship is the pinda-daan performed by Hindus during a particular period.

Nature-worship is also a unique feature of Hinduism. From the Sun, the Moon, the Earth, mountains, rivers, seas to even rain, every element of nature is worshiped by Hindus. Even different species of flora and fauna find a place of reverence. Similarly idol-worship is another practice followed only by Hindus.

Thus all these features of Hinduism, namely worship of multiple deities, idol worship, ancestor worship and nature worship are found to varying degrees among all the tribal groups in the country. **Moreover, many of the tribal s seemingly eccentric practices are rooted in the great epics of the Ramayana**

and Mahabharata. This establishes beyond doubt that tribals are essentially Hindus.

Further, it has to be noted that Hinduism is the only religion which does not impose any uniform way of worship on its adherents, so those within the Hindu fold can follow their indigenous culture. But once tribals convert to, say, Christianity, they have to give up their original practices and ways of worship in favour of those
followed by Christians. This leads to a marked changed in their way of life, resulting in confrontation between neo-converts and tribals.

The case of Dalits is no different either. They are even more closely related to mainstream Hinduism than are tribals. Although the Dalits were for centuries placed outside the varna-system, and subjected to various discriminations like being denied entry to temples, the fact that they tried to enter temples proves that they considered themselves as Hindus. Of course, there were numerous instances of mass conversions to Buddhism but that was mostly as a protest against the Brahminical stranglehold over Hinduism. Today this stranglehold is no longer what it was and most religious and social institutions are open to all, including the Dalits. Incidentally, the Dalits celebrate almost all Hindu religious festivals.

It would also be incorrect to say that the Dalits and tribals find no mention in the Hindu tradition. In Ramayana, during Rama s foray into the forest, his interaction with various tribes is described in detail. In Mahabharata, **Bhima, the second of the Pandavas, married a tribal woman, Hidimba, and their child grew up to be a great warrior.** Even in some modern traditional festivals, the Dalits find a place. For example, in the Chhath puja, which is the most important festival of Bihar and eastern Uttar Pradesh, it is considered necessary to buy a bamboo-stick bowl (in which offerings are made to the Sun) from the lowest of the outcastes , the Doms, who are engaged in the profession of cremating bodies.

It is true that the Dalits and tribals have been discriminated against in the past. However, thanks to the efforts of numerous religious and social reformers, the situation has changed and, notwithstanding the motivated campaign to prove otherwise, the Dalits and tribals are very much a part of the composite Hindu culture as opposed to the Brahmin-centric Hinduism propagated by Brahmins during the medieval period.

A TRIBUTE TO HINDUISM

articles on hinduism

Nalanda: Testimony to Greatness

By Manish Pant

Source: Indian Airlines - Swagat Magazine

(The red brick ruins of Nalanda seem to echo the footsteps, voices and stories of those who thronged the portals of this once renowned seat of learning. And even 800 hundred years later Nalanda has the power to overwhelm the visitor……)

Students came to Nalanda from all parts of the country, from distant China and South East Asia. But only a few could manage to get in as candidates had to clear a rigorous oral entrance test as the university's gate. The competition must have been intense!

But how did the rise of Nalanda come about? The answer to this question is closely related to the birth and spread of Buddhism and Jainism.

Much before Buddha, the university at Taxila – now in Pakistan – had contributed to learning in a significant way. Still, the hub of all educational activity was the *gurukul* or teacher's home. With the establishment of Buddhist and Jain monasteries a change crept in. The monastery took over from the gurukul. And some like Nalanda developed into prestigious institutions of learning in the medieval period.

Nalanda is located not too far to the northeast of Gaya – the place where Siddharth became the Buddha (the Enlightened One). Buddha is believed to have visited Nalanda on many occasions during his lifetime. The place assumed significance as his first disciple, Sariputra, was born and died here. The famous Mauryan Emperor, Ashoka, later erected a stupa to honour Sariputra's memory. Ashoka also became a patron of the monastery. Nalanda was also visited by Vardhamana Mahavira, the founder of Jainism. So for the followers of both Buddha and Mahavira, Nalanda took on a special importance.

Nalanda, however, flourished into a varsity in 5 AD- the time Kumargupta of the north Indian Gupta dynasty. Nalanda was then meant primarily for the study of Mahayana Buddhist doctrines. With the beginning of the Christian era the orthodox as well as the followers of new ideas among Buddha's followers had parted company. The former were known as the followers of Hinayana or

the Lesser Vehicle and latter of Mahayana or the Greater Vehicle. Mahayana incorporated many ideas current at the time thereby making itself more approachable and popular among a large number of people in the country.

But the Hinayana, and Brahmanical doctrines from Hinduism were taught here too. The syllabus covered mainly philosophy, logic, grammar, medicine and the science of arts and crafts.

Donations poured in from abroad: Balputra of Shrivijaya- modern day Sumatra, Indonesia- funded the construction of a monastery. The monastery was meant for students coming from Shrivijaya. The Pala King Dharmapala (c.a. 770-810) gifted this monastery with five villages towards its upkeep. During the seven centuries of its existence Nalanda came under various dynasties. But the prevailing political climate did not diminish its growth or importance.

The education at Nalanda was free. The iniversity depended on the largesse of its patrons. A school of art was opened in Kumargupta's time. Harshavardhana, the King of Kanauj, is said to have gifted it with a 26 metre high statue of Buddha. Gradually Nalanda acquired, in donations, control over many villages. Revenue obtained from these was utilised in meeting maintenance expenses.

Much of what is known today about Nalanda has come to us through the records kept by one of its well-known products- Hieun Tsang. This Chinese traveller, a comtemporary of Harshavardhana, has described Nalanda in detail in *Si-Yu-Ki* or The Record of the Western Kingdom i.e. India. He puts the student strength in Nalanda at 10,000 trained by a 2,000 strong faculty.

Students were admitted into the university for a period of 10 years. But those who wished to be ordained had to remain for a longer period. The teachers were highly regarded for their learning. Sometimes, their expert opinion was sought in the raging debates of the times. Lively discussions led to active participation from the students. The winner of a debate was honoured by being taken around the campus on an elephant. Many well-known names were on the university's rolls. The logician, Dinnaga and the Brahmin scholar Dharma-pala taught there. Hieun Tsang, an alumini, also served it as Vice Principal. And the 8th century figure Padmasambhava, who converted Tibet to Buddhism, was associated with it. Today, a memorial hall commemorates Hieun Tsang's stay.

The excavated remains of the university campus are spread over 14 hectares bringing to light some temples and monasteries. It was from a raised platform in a monastery that a teacher addressed his students. A pathway running from north to south, separates temples from monasteries. It is claimed that each monastery was four-storey high housing a dozen rooms in each storey.

All the rooms were well-ventilated. Then there was the huge library. Called Dharmaganj, meaning

the Abode of Dharma, the library is thought to have been large enough to be sub-divided into three main sections.

But the most striking landmark in the campus is the Great Stupa which was originally built on an elevated base with small stupas at the four corners. It was successively enlarged, especially during the Gupta and Pala times as is evident from the steps leading to what remains of the pinnacle. Today, in its dilapidated condition it more or less resembles a pyramid.

For almost seven centuries, Nalanda kept the beacon of scholarship burning bright. Then in 1197 AD a mercenary Mudhammed-Bin Bhakhtiyar Khiliji attacked the university. The damage done by man was complemented by nature and soon the place was forgotten and buried beneath foliage and traveller's records. It was only in the initial decades of this century that the first systematic efforts were finally made to bring Nalanda's past to light.

Today, as a result of the excavations a little more is known about the place. In 1951 an international centre for Buddhist studies, Nav Nalanda Mahavihara, was set up near the archaeological site. The center has many rare Buddhist manuscripts in its collection.

Just across the road from the entrance to the university is the museum. A number of objects from different periods of Nalanda's history are on show here.

And so Nalanda lives on – testimony in stone to what once was the greatest seat of learning in this part of the world.

Ayurveda is now the mantra in America too

by Sutirtho Patranobis

http://www.hindustantimes.com/news/181_166763,000600010001.htm

Guess what the Americans are turning to lately after eating all that junk food? Isabgol. A survey funded by the Commerce Ministry and conducted by the Health Ministry has found that Ayurvedic drugs are becoming popular in the United States with more Americans trying to "return to nature".

"Though the market for Ayurvedic drugs in the US is not very big, four to five formulations have already gained acceptance there. Isabgol is very popular. The acceptability for such drugs is growing as well," says Joint Secretary, Indian Systems of Medicine, Union Health Ministry, L. Prasad.

In fact, a delegation of 15 US scientists is likely to fly down in April to interact with Ayurveda experts here. "We are in touch with the National Centre for Complementary and Alternative Systems of Medicine of the US. The scientists are expected in the second week of April," Prasad adds.

The survey, in which the Ayurvedic Drug Manufacturing Association (ADMA) taking part, was commissioned last year and the report was submitted recently. ORG-Marg was hired to distribute questionnaires to doctors and health officials all over the US and collect the data. The thick report at the end of it came at a cost of around Rs 25 lakh.

The report also threw up the problems that plague the fledgling industry. Says ADMA's Dr Narendra Bhatt: "Lack of awareness about is the main problem. Also the formulation of the drugs needs to be done."

Ravi Prasad of an Ayurvedic drug manufacturing company adds the herbs need to identified and analysed and series of tests need to be conducted before being released into a new market. "The US health authorities insist on trials and toxicity studies followed by clinical trials. The drugs would also have to be standardised according to laid down rules," he adds.

That could pose a problem, according to the experts, as there are 4,000 Ayurvedic formulations, combining different herbs, written down in 54 ancient books.

Saraswati Vandana

http://www.pragna.org/Debsaras.html

Saraswati Vandana is a beautiful poem to art, culture and spirituality. It is a praise of learning not the promotion of any church or prophet. "Saraswati Vandana is unsecular," said the Marxists. That is why pure secularists even scorn the idea of lighting lamps at functions - because it is a Hindu symbol. But in the US, the Government declares a whole year as 'Bible Year' - that does not make the Government unsecular. But here a mere suggestion - which would never become a decision unless all the great men, and the greatest woman from Italy agree today - that Upanishads and Vedas should be taught in schools 'is regarded as communal and imposing the 'Hindu Agenda'.

Ronald Reagan was not charged with imposing the Christian Agenda when he declared 1983 as the 'Year of the Bible' in the US.

When he moved the resolution for the declaration, Reagan said: "Now, therefore, I, Ronald Reagan, President of the United States of America, in recognition of the contribution and influence of the Bible on our Republic and our people, do hereby proclaim 1983 the 'Year of the Bible' in the USA. I encourage all citizens in his or her own way to re-examine and rediscover its priceless and timeless message." His appeal was to all citizens - not just to Christians.

The "secularists" have convinced the minorities that secularism means rejecting everything that has a Hindu origin. None of these great men, not to mention the great woman from Italy who pontificates on secularism to India, even know what role the Vedas, Upanishads and the Gita have played in our national regeneration. And in raising a mighty national awakening that transformed into the movement for India's freedom. **Swami Vivekananda and Maharishi Aurobindo who built the intellectual foundation for the freedom movement were influenced by all that our secularists from India and Italy call unsecular - the Vedas, Upanishads and the Gita. Balgangadhar Tilak wrote the Gita Rahasya as the guide for his participation in the independence movement. Mahatma Gandhi said that but for reading the Gita he would have committed suicide. Whether it is Guru Tegh Bahadur or Guru Gobind Singh, who sacrificed everything, including their lives to protect the Vedas and the Cow, or a Ravidas or a Surdas, a Nandanar or Sri Narayana Guru, their inspiration came only from ancient Indian thought.**

In fact, Dr. Annie Besant and Sister Nivedita, with whom the lady from Italy is often compared by her admirers to indigenise her, upheld all that is Hindu in origin as the main

inspiration for them to serve India. Besant said: "Minus Hinduism, India is irrelevant."

There is in it no insistence on any one God, book or savior, salvation for the true believers and eternal damnation for those who think differently. The song projects lofty human ideals and nothing of religious sectarianism or exclusivism. But such a Saraswati must be suspect in modern India.

Among those who approved the singing of Vande Mataram at the Nagpur Congress was Mahatma Gandhi. Today those who claim to be the political heirs of Mahatma Gandhi are boycotting Saraswati Vandana.

The cry against Saraswati is being led by Sonia Gandhi, the last Gandhi one could say, an Italian Catholic who has received the Gandhian mantle by widowhood alone. Sonia should remember the example of Mahatma Gandhi who regularly conducted prayer meetings, praised the Bhagavad Gita and chanted the name of Rama. Though closely associated with the Catholic church, which by its own account is still the only true religion and has an agenda to convert Hindu India to Catholicism, she finds the more liberal expressions of Saraswati Vandana to be offensive.

The anti-Saraswati tirade is naturally promoted by the atheist and communist left, which still rules the state governments of Bengal and Kerala. India's communists, uniquely backward of all in the world, still honor Stalin and Mao, whose pictures adorn all their functions. They routinely preach against Hindu intolerance, oblivious to the fact that their standard bearers are among the most brutal tyrants of history responsible for the murder of tens of millions of people. Such politicians obviously don't have any respect for Dharma or for the Indic spiritual traditions. They are also against the Dalai Lama and the cause of Tibet and go out of their way not only to defend, but to praise the Chinese action in the region, in spite of its genocidal nature. Their hearts are not in India but in the Moscow and Bejing of previous decades! In fact Dharma is another term that is becoming an anathema in modern India.

The West meanwhile is looking to the Dharmic traditions of Hinduism and Buddhism to provide a spiritual alternative to modern materialist culture. If so-called Indian secularists have their way, those traditions would be no more and India great gift to the world would be eliminated. What they want is a new India without Saraswati or Dharma.

Hindus are striving to mesh philosophy and reality

http://www.bergen.com/home/break420000210c.htm

Thursday, February 10, 2000

By OM PRAKASH and ATUL PRAKASH

Hinduism (Dharma) is a very broad and sublime religion, a way of life that sees the world as a single family.

Prayers to God have invocations for health, happiness, and peace on the earth. According to basic Hindu scriptures -- Vedas, Upanishads, Gita, and epics of the Ramayana, Mahabharata, and Puranahs -- Dharma stands for righteousness and the practice of spiritual and moral values. God -- omnipotent, omniscient, and omnipresent -- is one, but people refer to him by different names.

Hinduism imparts social justice in many different ways. Its built-in form of social justice is the idea that the soul is eternal and indestructible, born again and again according to the sum total of past and present actions until one has communion with the Supreme. These actions do not include eating, sleeping, and procreating, but rather actions for others without expectation of reward. The reward is to be left to God.

The Vedas prescribe 16 sacraments to purify and mold the mind in righteousness throughout its cycle of earthly existence. These stages include marriage, which is to be undertaken only upon completion of education of both partners and in the presence of compatibility.

The bride has equal say in accepting or rejecting the match, and may choose her partner in a ceremony called *swayamvar* (self-choosing). The aim of the family is to be a stable and righteous unit of society.

The Vedas prescribe five great duties (*maha yajnas*) to sublimate self-interest to the interest of the society. *Yajna* means self-sacrifice. These noble obligations include *brahma yajna*,a discipline for personal development by acquiring knowledge, including daily reading of the scriptures; *deva yajna*, a symbolic sacrifice required of every head of household to remind the family that they have to share with each other and use wealth for the welfare of others; *pitri yajna*,a commitment to discharge one's responsibility to senior citizens; *athithi yagna*, an obligation toward the entire human race (*athithi* means an unannounced visitor), even at the price of one's own comfort and happiness; and *booth yajna*, a unique contribution of Hinduism to the world that advocates giving a portion of one's meal to an animal.

Hinduism also stands for social ethics and a dedication to society. The Vedic society is divided into four natural groups according to the service rendered by an individual.

Those who pursue the vocation of learning and propagate knowledge are called *Brahmins*. Warriors and those who govern the state are *Kshtriyas*. Traders, farmers, and professionals are *Vaishyas*. Those who serve the society with manual labor are *Shudras*. No vocation is considered high or low; all are deemed dignified and essential to society, working together for the common good.

These four classes form the backbone of the society. Rigveda and Atharveda detail the principles and methodology of governing this society in a way that helps promote righteousness, dispense justice, and establish peace within the state. The officers of the state, including the king, were required to have certain qualities and were chosen by the public. There was full freedom of speech, and any unjust, incompetent, corrupt, or tyrannical ruler could be removed.

Clearly, the Vedas and the other Hindu scriptures encourage equality, freedom of mind, expression, self-discipline, and righteous values for a just and equitable society to provide social justice. Unfortunately, external aggressions, internal strifes, and subjugations have resulted in some of the present-day ignorances, distortions, and aberrations.

Mahatma Gandhi is perhaps the greatest example of an individual's attempt to eradicate these aberrations. Though he is best known for his principles of truth and non-violence, his *ashrams* reflect a perfect example of social justice as defined by the Hindu philosophy.

These Ashrams were small-scale versions of classless community life without any discrimination. Gandhi inducted spirituality and spiritualism in all facets of his own life and the lives of people all over the world. He constantly strived to eradicate the sociocultural aberration of "untouchability," which is against the basic tenants of Hinduism. But socio-cultural aberrations do not by any means undermine the social justice emphasized by Hindu traditions.

Foreigners hail Aryabhata as a genius

PRESS TRUST OF INDIA

http://www.expressindia.com/ie/daily/19981017/29050084.html

MUMBAI, Oct 16: Two western researchers have hailed the fifth century Indian astronomer Aryabhata as a genius in his own right and paid tributes to his mathematical acumen.

James Jacobs Quirinus, an independent researcher in Athens, Greece and a Swedish scholar Bo Klintberg at the London School of Economics and Political Science, have communicated through the internet with the Thane-based Institute of Oriental Study regarding their studies on Aryabhata.

Quirinus, who has created his own Aryabhata web page, has noted that the ancient astronomer born at Kusumapura (now Patna) in Bihar was born in 476 AD and came out with his magnum opus *Aryabhatiya* in verse form around 499 summarizing his concept of astronomy, spherical trignometry, arithmetic, algebra and plane trignometry. ``However some of his formulas are correct, while others are not," Quirinus has noted.

Aryabhata is the first known astronomer to have initiated a continuous counting of solar days, designating each day with a number, theGreek researcher said adding ``his astronomic ratio, which is to the best of my knowledge the earliest recorded one, is so incredibly accurate that it surprises me that this fact has gone unnoticed to this date."

Citing a 1930 translation of *Aryabhatiya* by Sanskrit professor William Eugene Clark of the Harvard University, Quirinus mentions mind boggling calculations such as 1582 million rotations of the earth equalling 57.7 million lunar orbits.

Given January one, 2000 astronomic constants and present day formulas to temporally, adjust the constants, Quirinus has calculated that Aryabhata's ratio would have been exact in 1604 BC.

``The date AD 500 is the approximate epoch in which Aryabhata wrote and while the majority of the ratios presented by him are not equally precise, it is difficult to believe that the earth rotations to lunar orbits ratio, given such large numbers, could be so precise by coincidence," the Greek researcher said.

The concept of the `sine of an angle' appears for thefirst time in Aryabhata's work and he also compiled tables of half chords or sine tables, Quirinus said.

Aryabhata also wrote about axial rotation of the earth being the cause of the apparent motion of the heavens, earth as a sphere rotating on its axis and eclipses resulting from shadows of the moon and earth, the researcher said.

``Though Aryabhata was born in Bihar, he inspired mathematical and astronomical schools of Kerala with Sanskrit then a language medium unifying the country," observes Oriental Institute director Dr V V Bedekar.

``I am convinced that Indian scientists did a lot of important astronomical observations and calculations," avers Klintberg who is finishing his master's thesis on `Aryabhata's significant achievements'. He has authored an essay on Aryabhata for inclusion in his forthcoming `Annotated bibliography of Indian astronomy and mathematics.'

INDIA'S CONTRIBUTIONS TO THE DEVELOPMENT OF MODERN CIVILIZATION
By P. Priyadarshi

The story of origin of knowledge in India and its dispersal to the west leading to development of modern western civilization.

Although Modern Civilization took its shape in the West, its roots are in India and to some extent in China. Modern Civilization is definitely not a product of Judo-Christian tradition but rather it is an anti-thesis of that tradition. In fact, modern philosophy and science are a delayed fruition of the tree that was ancient India. On the other hand, Semitic religions were quite fixed in their ideas about God, heaven and divine will and freethinking against these concepts was not possible. Science had a very poor chance to grow in those societies. India, China and Egypt were the most developed civilizations in second millennium BC. Ancient Greek civilization developed from sixth century BC and was brought to an end, first by Roman invasions and later by Christianity. Ancient Egypt was brought to an end initially by Christian efforts and later by Muslim conquest.

We will briefly review how knowledge grew and developed in the world.

1. Dark Ages in Europe

Up to the sixteenth century, Europe was in the Dark Age. Historians call this period as the Dark Age because there was no knowledge like mathematics, science, medicine etc. in Europe. Long back, there was a brief period of enlightenment in a limited part of Europe, i.e. Greece from sixth century BC for a few centuries by import of knowledge from India. This period is called the first awakening of Europe and the reappearance of knowledge in the 16th century is called the Renaissance (meaning rebirth or re-awakening). We will briefly review how science came to Greece from the East for the first time, then how it was destroyed and scholars killed by the Romans, and then by the Christians and finally Muslim invaders. We will also see how knowledge survived outside Europe during the Dark Ages and finally reached the West to propel Europe into a renaissance.

During the dark ages, people of Europe used the cumbersome Roman numerals, and even the so-called mathematicians would calculate sums by counting on the fingers! Decimals were not known and real calculation was not possible with that type of number system. Science was inevitably bound not to grow. Universities were basically centers of copying religious texts by hand in beautiful letters. Medicine meant blessings of priests. Value of hygiene was unknown and Europe was a permanent home of diseases.

Even calculation of calendar was difficult for them and dates were not able to cope with the sun. Religion was the real ruler. Verdict of the priests would be the final words in any matter. The man was surrounded by ghosts, witches and bad spirits. Churches were permanently busy finding out the witches and sorcerers and killing them: the only way known to them for helping the ailing humanity. National tragedies and epidemics were caused by the non-believer, who was a representative of the devil, and an enemy of the society. Prayer remained the only medicine in most of the hospitals. The priests were the doctors and nuns were the nurses, without any education and training in health and medicine (modern doctors derive their designation of 'doctor' from the priests, doctor being the highest degree of Christian theology). They would go to the beds everyday, in the hospitals, and pray for each of the admitted patients. Hosp itals were essentially an attachment to the churches. And in fact, during the

Dark Ages, it was the responsibility of the theologians to treat the patients. But it was not so, long long back, before the advent of Christianity, when the southeastern corner of Europe was vibrating with knowledge, when Greece was a centre of learning. Turkey was not inhabited by the Turks then and it was called Asia Minor. Its coastal parts were inhabited by the Greeks and the central parts were inhabited by various tribes of Indo-Iranian origin.

2. Indian influence on the West in the early BC period

India has been the birthplace of science over ages. Takshashila University (in Pakistan now) was a great centre of learning where students from Iran and further west came to study. In the first millennium BC, Iran was highly Indianized and could be considered an expansion of Indian culture and civilization. At the western fringe of it was Asia Minor, modern Turkey, which was a place of interaction between Greeks and Iranians. In the 6th century BC, Iran expanded its boarders to include Assyria, Babylon, whole of Asia Minor and major parts of Greece. Egypt also fell to Iran soon after. Thus while Iran was engaged in expansion at its western boarders, its eastern part was in peace, continuously receiving Indian knowledge and religion. Zoroaster, fifth century BC, lived in the eastern reaches of Persia, not far from India, and his belief to wage war on evil, and the idea of con stant struggle between good and bad, light and darkness, is believed by the scholars of history of theology, to be Indian (Upanishadic) in origin. Monotheism had reached a full development in the Upanishad literature much earlier in India, from which Zoroastrianism, Judaism, and also Akhenaton of Egypt (1350 BC) had borrowed it. Upanishadic knowledge did not stay long in Egypt and faded away soon after the death of its only patron Akhenatan. Mithraism was another branch of Vedic religion, which spread widely over Iran, Europe and Egypt. Mithra is a Vedic God (the Sun-God). Mithras celebrated the birthday of God (Sun) on the 25th December, which became adapted by the Christians as the date of birth of God (Jesus). These religions of Indian origin in Middle East, introduced the principle of righteousness and monotheism to Judaism and Christianity and thereby to Islam later. Hence ethical monotheism, the backbone of Judaism, Christianit y and Islam found its origin in Hinduism.

Apart from these, Indian wandering monks traveled the breadth and length of this whole area. From Western sources we know that in the third century BC, a big Indian community lived at Alexandria in Egypt with their Vedic sannyasins as well as Buddhist bhikshukas. Indian sea- traders also dominated the sea -trade up to the period of rise of Islam. It was under this background that the Indian religions, philosophies and science travelled to the West to enlighten it in the ancient times. Indians developed mathematical formulae called '*Sulvasutra'* in 1500 BC. Geometry developed because of its need in constructing specially designed Yajna Kundas, and also because accurate measurement of agricultural land was needed to fix the farm boundaries. Trigonometry was invented to study the locations and the movements of the stars, which was vital for navigation in sea, during sea trade. Hypothesis of atom was made in the field of physics, which we find mentioned in the Upanishad literature. Bacteria were conceived (which have been discussed in the Jain literature in detail) as early as the 6th century BC. Physicians and surgeons like Jivaka were experimenting even craniotomy (operation on the brain) in the 6th century BC.

Human psychology was studied in detail and considered an essential part of academic curriculum (q.v. 'Eastern Psychology' in 'The Theories of Personality' by Hall and Lindsey). There was an all round development in all spheres of learning.

3. Why Indian religions were pro-science - On the other hand, Jewish religion was based on the faith that only their God is real and all others false. Hence it was not only belief in one God but it was also a belief in correctness of only one religion. It was a belief in correctness of only one view of reality. Christians also adopted the same attitude and Islam also asserted the same. The words of the God as revealed to the Prophet are final and anything contradicting them is wrong and has to be destroyed. This gave the concept of heresy. Fighting the followers of other religions/nonbelievers (jihad/crusade) was considered the sacred duty of every truly religious person in these traditions.

4. Dawn of knowledge in the west with Pythagorus turning Hindu

History of knowledge in Europe starts with Pythagoras. Pythagoras, in the 6th century BC was the first

European (Greek) who brought Indian knowledge and mathematics to Greece in an organized way. He was the first European to convert completely to Hinduism also. Pythagoras was born around 560 BC; on Samos an island not far from the coast of the Asia Minor. His mother was probably a native of Samos but his father was probably a Phoenician. His life history was recorded from oral traditions a couple of centuries after his death, and even that information has survived only in fragments. (In fact, the Ancient Greek civilization was not really European. The first Greek city, Miletus was established around 1100 BC in Asia Minor. Samos, an island adjoining Asia Minor was inhabited in 1000 BC. From Milesia, Greeks spread to establish colonies round the Black Sea founding the cities of Sinope, Trapezus and Olbia etc. They also crossed the Aegean Sea to establish colonies in Macedonia and then south of that to the land what is called Greece today. Cyrenaica (Cyrene) and Carthage were other colonies of these people, which was at the coastal Libya in Africa. The famous Troy (of Helen fame) was in the Asia Minor. These colonies were not united into a nation state but were autonomous, and bound to the metropolis< metro, mother; polis, city; in Sanskrit matripuri>. Hence, Greek culture, far from being European, was act ually Asian.).

At that time, Greeks did not have mathematics or sciences. Education was limited to music and gymnastics. After studying the very best available in his country (music and gymnastics), Pythagoras set out for more. He went to Egypt, which had already received Indian Geometry through its contact with Indians as well as with Indo-Iranians and had at that time, scholars teaching geometry and a bit of astrology. During his stay in Egypt, Egypt was invaded by Iran and he was brought to Iran as a captive, where he stayed at Babylon and other cities. Babylon was no more a Semitic city by that time, and it had been thoroughly Indo-Iranized in language, religion and knowledge at least a century earlier, when the Medes and the Persians thoroughly overran the country of Babylon, and it was now a part of Persian Empire and culturally a part of Indo-Iran. It is probable that Pythagoras went to the Punjab and thence to the Himalayas a s well. It thoroughly changed his life style and thinking. He permanently rejected the long Greek robes, and adopted trousers, turning away from Ionian culture and identifying himself strongly with the East. Before Pythagoras, trousers were not known to Europe. Woolen trousers were worn by Indians living at high altitudes in the Himalayas, like people of Nepal, Laddakh, Tibet, and Kashmir etc. (The statue of Indian king Kanishka, found in Afghanistan, is wearing a long double-breasted coat and trousers). Variants of trousers like pajamas and shalwar were worn in the northern plains of Indo-Iran. The costume, which Pythagoras introduced into the Europe, was going to become the ethnic costume of the West!! (Wertheim, Pythagoras's Trousers)

Having lived twenty years in the east, he returned to Greece, and settled in Croton, a Greek-speaking town of South Italy. He formed an order of ascetics devoted to develop a sense of community with the help of religious injunctions and instructions. This was aimed to give the members a real insight into the concordant nature of universe. He preached that the world, like human society, was held together by the orderly arrangement of its parts, and it then became their clear duty to cultivate order in their own lives. It is the order in any system, which sustains it. He was describing the concept of *Dharma*, which means *the order, which sustains the system.* He was now acting as an ambassador of Hinduism to the West. Pythagoreans believed in transmigration of life through different life forms. His contemporary poet Xenophanes writes: Pythagoras was once passing by when a man was beating a dog .He took pity on the animal and said, Stop it; Indeed it is the soul of a friend of mine; I recognized it when I heard its voice. Pythagoras was even able to recall the details of his own previous incarnations. Pythagoras preached the essential unity and kinship of all forms of life, which is the fundamental principle of Hinduism (and also of other later Indian religions). He preached non-violence and banned killing and eating animals in his order of ascetics. He was a firm believer in Karmic law and preached immortality of existence. The human body is temporary; therefore one must purify the soul by abstaining from bodily pleasure. By these means soul would ultimately win release from the wheel of becoming and realize its true divine status. In other words, he was preaching karma, samsara and moksha. Pythagoreans believed that anyone who downgraded his life by immoral and impure acts would be born as animal in his next life. A particular type of sayings, he named akousmata (things heard) which were probably Greek translation of the shruti (Sanskrit, Things heard). In his brotherhood, members were of two kinds. Acousmatics would visit him and seek guidance on how to lead a simple, non-violent and virtuous way of life. Others called Mathematikoi lived inside the math (monastery, mutt) and studied the nature of reality more deeply. From mathematik is derived the word mathematics. Pythagoreans studied and

further developed the science of mathematics and philosophy, which was brought to them from Indo-Iran by their great Guru. The chain reaction started by Pythagoras resulted in a boom of scholarship in Greece and finally we find authorities like Socrates, Plato, Aristotle, etc. The background provided by the Pythagoreans provided sound basis of logic to enable these thinkers to arrive at sound conclusions. During this whole period transfer of knowledge from India to Greece was never interrupted. This may be assumed from the fact that whatever theory was given in India e.g. atomic theory, theory of micro-organism, theory of non-dualism, Brahman, atman, the five elements (the Greeks accepted only four, and did not include space), it appears in Greek literature as well soon after. The three doshas of Indian medicine are present in exactly the same way. It was a good thing. A living and growing civilization is always ready to find out and assimilate whatever valuable it notices in other civilizations.

5. Alexandria university: a center for Indo-Greek learning - After Alexander established the Hellenistic Empire comprising Greece, Egypt, Asia Minor, Iran, Bactria and North -West India (including Punjab and modern Afghanistan), the transfer of learning from India to Greece was very much facilitated. Alexander himself got thoroughly Indo-Iranized. He started shaving beard (fashionable in the East, but considered uncivilized in the Greek world at that time), and started leading life like an Indian monarch. Alexander himself rounded up hundreds of Brahmin scholars and took them with him to increase the wealth of knowledge of his country. He also married several Indo-Iranian women. Tens of thousands of Greek soldiers married Indo-Iranian women and took them to Greece. Many of the children of such mothers would be speaking Sanskrit or Prakrit dialects and Indo-centric in attitude, further influencing flow of literature from India to Greece in successive generations. Trade routs and diplomatic channels were also established which would facilitate flow of knowledge from India to Greece.

The Greeks, who came to India, were highly impressed by the Takshashila University in Punjab. Probably being inspired by that, Ptolemy –the Greek Governor for Egypt, who later became independent ruler of Egypt-- also established a great university at Alexandria in Egypt. This was the first university ever built outside India. In Alexandria, scholars from Greece, Asia Minor (modern Turkey), Iran, India and Egypt would come to study and to teach. Being very near to the centre of Hellenistic world, Greek remained the main language of book writing at Alexandria. A large number of Indian texts were translated into Greek and kept in the library at Alexandria.

ALEXANDRIAN SCOLARS AND SCIENTISTS Some of the most famous scholars of the Alexandrian University are as follows:

Aristarchus of Samos (Asia Minor; 310-230 BC) : Archimedes and Plutarch quoted his book “On the size and distance of Sun and Moon”. The values he gave were inaccurate but he wrote that earth rotates at its axis and revolves round the sun.

Heracledes (390-310 BC), only his name is quoted by others, nothing more is known.

Euclid (? 325-265 BC): Nothing is known of Euclid’s life except that he taught at Alexandria and that he wrote the Elements.

Conon (280-220 BC): Born in Samos, contemporary of Archimedes, lived at Alexandria. Wrote De Astrologia.

Hipparchus (born in Nicacaea, Asia Minor; 190-120 BC): Wrote commentaries on Aratus and Exodus.

Claudius Ptolemy (not the Egyptian ruler called Ptolemy; born in Egypt; 85 AD-165AD). He compiled an encyclopedia of astronomy from available Indo-Greek literature and also discussed trigonometry in this book. This book was translated into Arabic in 827, and from Arabic into Latin in the later part of the 12th century. This book is called *Almagest*, and served the basic astronomical book for the Arabs and the Europeans till the 17th century. (The original title of the book is not known and *Almagest* is just a corrupted form of what could have been the title in Arabic, and that again in turn was a corrupted form of whatever was the original name in Sanskrit or Greek. Given the nature of the contents of the book, which was a monopoly of Indian astronomers, it could have well been a Sanskrit book originally, translated into Greek at Alexandria by Ptolemy. In that case the Sanskrit origina l title of the book might

have been ‘Mahishtha’ meaning ‘around the earth’, and by several changes it became Al magest, which has no meaning in Arabic language. Actually only one dot is needed in Arabic script to change ‘mahishtha’ into ‘magest’ because only one dot is needed to transform the letter ‘hey’ i.e. H into ‘jeem’ i.e. J.)

Diophantus (200-284 AD): Essentially nothing is known of his life. Called father of Algebra, wrote Arithmetica. (See Appendix)

Plotinus (born in Upper Egypt at Lycopolis; 204-270 AD): Received education at Alexandria University. When the Roman Emperor Gordian took a campaign against the Persians, Plotinus accompanied him in order to learn more of the Indo-Iranian cosmological knowledge (The Internet Encyclopedia of Philosophy, www.britannica.com). Again indicating that India was far ahead of Alexandria in the third century AD. These scholars usually called Greek scholars should not be called so because of various reasons. They can at best be called Alexandrian scholars. Firstly Alexandria was in Egypt, and therefore calling them Greek and not Egyptian is not realistic and has a pro-Euro racial bias. Secondly, if we consider the place of birth of these people, most of them barring a few exceptions were born on Asian land like Samos, Nicacaea, or in Africa like Egypt and Libya. Thirdly, nothing is known about majority of the Alexandrian scholars except their names and their work. But even that has survived from Arabic sources and then translated into Latin and thence to English, French etc. In this process the names were changed from Arabic forms to a new Greek sounding form. In fact many of the Greek sounding names were inventions of the Latin translators of the Arabic texts. But actually, at the time of translation of the manuscripts into Ar abic from Sanskrit and Greek, Arabs also had manipulated with the names. Hence we cannot know what were the real names of many of these scholars like Euclid, Diophantus etc. The work of Euclid, Diophantus etc are more similar to Indian tradition of mathematical work. Given the absence of any good number system, non-Indians could not be expected to produce any mathematical work of any good value. Therefore it is more than likely that Euclid, Diophantus etc were Indian scholars working at Alexandria whose actual names were different in the same way as the real name of Sandrocottus was Chandragupta.

It was Thomas Heath (1861-1940), a great believer of White superiority and an Oxford mathematician, who worked on the Alexandrian scholars like Euclid etc. and finally labeled them all to be Greeks, even though nothing was known about the lives of most of these scholars. After him nobody examined this subject. Much of the manuscripts at Alexandria must have been translations of Indian works. We need to study any surviving Arabic scientific texts carefully with a view to deciphering correct possible Sanskrit names of the Indian-Alexandrian scholars, rather than accepting blindly what Latin translators have done with their limited knowledge of Sanskrit and their ethnocentric attitude. When Judaism and Christianity threatened the scientific community living at Alexandria, a fresh surge in Pythagoreanism was generated, which was called Neo-Pythagoreanism. Hypatia was one of the neo-Pythagoreans.

ORIGIN OF CHRISTIANITY AND THREATS TO ALEXANDRIA

Jesus Christ started his religion when Alexandria was blooming. Jesus was very much like an Indian ascetic. Like Hindu saints, he followed renunciation and practiced celibacy, and preached non-violence and love. It is claimed that he had been to India and had received spiritual training in Indian tradition. Whatever be the fact, we find that many of the preaching and parables of Jesus, Pythagoras and the Upanishads are common. When Christianity was taking shape, Hindus inhabited that part of the world as well. When they converted to Christianity, they introduced many things to this new religion e.g. folding hands in Indian style when praying to God; ringing typical Indian styled bells in the churches; introduction of a circular solar halo round the picture of Jesus, burning incense and lamps (or candles) in the church etc. Practice of celibacy, monastic life, renunciation of material life by the monks and asceticism ad opted by Christian saints were Hindu influences on Christianity, because they are not found in other Semitic religions. But the vast majority of people who initially accepted Christianity were Jews. Therefore, they brought in with them the Old Testament (the Jewish scripture) and most of the beliefs and practices of the Jews. Therefore, after the death of Jesus, Christians now believed, as the Jews did, that only theirs’ is the right religion and only theirs’ is the true God. Sorcery, miracle, witchcraft, mysticism, idol-worship, etc. are satanic acts and people accused to be involved in them would be killed. (Little remembering that the Jews had accused Jesus himself of being a sorcerer,

before killing him). Raising any doubt or suggesting modification in religion was termed heresy, punishable with death. Fighting the non-Christians to convert or eliminate them was considered religious duty. This new religion was very anti-science, because science did not support what this religion preached. It was no more pacifist or liberal than the Jews. It hated paganism. It hated heresy. This religion considered the Alexandrian scholarship to be pagan. The applic ation of logic and free discussion of theological questions was considered blasphemous. Man cannot investigate the divine acts, they held. Once Christianity became the state religion of the Roman Empire in the fourth century, the pagan monuments were destroyed and pagan worshippers killed and force-converted in wholesale numbers. Therefore destruction of this Indo-Greek university was the most sincere duty of the Christians of the period.

DESTRICTION OF GREECE AND DEMOLITION OF ALEXANDRIA BY ROMANS, CHRISTIANS AND MUSLIMS

In the third and second centuries BC, Rome rose up as a big power. Having no respect for knowledge, they destroyed much of Greek civilization. They expanded their empire to include North Africa, Asia Minor and South Europe. Greek tradition of learning was disrupted in Europe, scholars killed, cities destroyed, although it continued in Alexandria in Egypt. A few Greek scholars escaped being killed in Europe as well, who continued their pursuit of knowledge although in a low profile up till the Byzantine period. It was Justinian, the Byzantine Emperor who in 529, closed the nine-hundred-year- old Academy of Plato in Athens and completely destroyed the last remains of Greek knowledge in Europe, claiming it was a hotbed of paganism and heresy and therefore it was against Christianity. The scholars were killed or converted into Christianity. Many of these Greek scholars, fearing for their lives and intellectual freedom, fle d to Persia, where they established a kind of Academy in exile.

In 48 BC, Julius Caesar set fire to ships in the harbor at Alexandria and according to Plutarch, burned 40,000 scrolls at Alexandria. Queen Zenobia of Palmyra captured Alexandria in 270 AD. Much of the city was destroyed during a counter attack by the Roman Emperor Aurelian.

In early fourth century Constantine who had already become Christian, acceded to Roman power. Christianity now became the state religion. Nonbelievers (non-Christians) were persecuted, burned and murdered by animated Christian mobs called zealots. Mathematicians, scientists and philosophers were particularly targeted. Europe was entering into an era called Dark Age with complete elimination of all the works of science, mathematics and philosophy. But University of Alexandria was still surviving in Egypt. In AD 389 Christian Emperor Theodosius ordered Theophilus, Bishop of Alexandria to destroy all pagan monuments. Hindus were also called pagan by them. The Christian mobs burned the pagan scholars and the library. This rampage was most fierce in AD 391. Even after this, many scholars survived and continued their work.

BRUTAL MURDER OF A MATHEMATICAL GENIUS

One of the mathematicians who survived the holocaust and continued her work was **Hypatia**, a great scholar of mathematics, and one of the few female mathematicians in history. She was wise, learned, virtuous and beautiful. There was much mistrust among Christians, Jews and Pagans, but Hypatia taught everyone. She wrote commentaries on Euclid, Apollonius and on Arithmetica. She wrote books discussing new mathematical problems and solving old ones. She also wrote books on astronomy, compiled tables of positions of celestial bodies and designed several scientific instruments. It was a time of revival of Pythagoreanism, the Greek form of Hinduism, as a Hellenistic (Greek) alternative of the rising tide of Christianity.

In AD 412 Cyril, a fanatic Christian became the patriarch of Alexandria and began the campaign to rid the city of both Jews and the Pythagorean scholars. Hypatia was asked to accept Christianity several times. But she always refused. That commitment cost her life. “In AD 415, she was set upon a mob of Christian zealots, dragged from her carriage and beaten to death. In the account of a fifth century author: they stripped her stark naked: they raze the skin and rend the flesh of her body with sharp shells, until the death departed from her body: they quarter her body: they bring her quarters unto a place called Cinaron and burn them to ashes...” This is only one out of thousands of such atrocities,

which was going to finish scientific knowledge, as well Indian influence, from the West for a thousand years. (Pythagoras's Trousers)

Even after such attacks, Alexandrian school was surviving for further two hundred years.

CALIPH OMAR GIVES THE DEATH BLOW TO ALEXANDRIA

In AD 642 Caliph Omar overran Egypt. Victorious Caliph ordered, those books that were contrary to Koran should be destroyed and furthermore those books that confirmed the Koran were superfluous and they too must be destroyed. Manuscripts were used to stove the public baths. The University library was torched to ashes. The volume of manuscripts was so large that it kept on burning for six months. Needless to add that all the scholars were slaughtered except those who embraced Islam. All over Egypt and Libya, books were searched out and burned. As a result of this, the history and literature of Egypt was lost forever, only a fraction of it to be rediscovered later by the Europeans out of the Pyramids. Greek literature in Egypt was also lost and the same happened to Babylonian history.

Some of the Greek scholars of Alexandria, who embraced Islam and survived, were able to smuggle some of the manuscripts to their homes. Later they translated these into Arabic language. These translations included Greek medicine (now called Unani after Ionia, a Greek city), much of Greek philosophy e.g. Plato (Aflatoon), Aristotle (Arastu), Socrates (Sukrat) etc. It contained Alexandrian sciences as well as six of the original thirteen volumes of the mathematical text called Arithmetica, seven volumes of it being lost forever. The Arithmetica was translated many centuries later into Latin. (Arithmetica, Elements, Surya Siddhanta and the Indian books on algebra, trigonometry, and arithmetic contained the basic knowledge, which would later propel Europe into modern age.)

It is to be remembered here that all of Greek medicine, all of Greek books of philosophy and science were already burned to ashes in Greece and Europe by Christian zealots. End of knowledge in the West was complete now. When the falsehood fears that it is likely to be exposed, it attacks knowledge, because knowledge is the worst poison for ignorance.

6. Grwoth of Knowledge in India during this period - In India, scenario was different. Science, mathematics, logic, philosophy, art, everything was growing at an unlimited pace. In India, religion's central dogma was knowledge, and experience, experiment and reasoning were accepted as very important means of obtaining knowledge. Arguments were encouraged in religious matters and religious philosophy and metaphysics had to be based on scientific knowledge. This scientific bias of Hinduism had led to the growth of science earlier as well, from which Pythagoras and many other people of the West had been benefited over ages. Hence by the time of Caliph Omar, India was the only place in the world where knowledge was progressing unhindered. It is also worth mentioning that when Islam came to Iran, Zoroastrianism was followed only by a minority (15%) of the Iranian people. Others followed Buddhism, Shaivism, Mithraism, Judaism, Nestorian Christianity, and other religions.

Earth is round was never disputed in India. So much so that you will find Varahavatar lifting the rounded earth on His tusks in many sculpture. You will find a lion (Buddha) fighting with a dragon (ignorance), which is holding a round earth by its tail, in many northeastern Indian Buddhist icons. Every Hindu is aware of the metaphoric story of the demon king Hiranyaksha, who finding the earth as a round ball, seized it to play with it; then Lord Vishnu had to kill him to save the earth. The law of conservation of matter and energy and the law of cause and effect were the two fundamental laws of Hinduism. Anybody not accepting these two laws would be considered a nastic or non-believer. The agnostics and people who refuted the existence of God were considered equally respected as others. The religion or belief was a matter of personal choice and could not be enforced on to anybody by either the State or the family or th e society. Clergy and priests in Western sense did not exist. Priest would come to perform a rite only if an individual requested him. Needless to add that fatwa or religious decree kind of things were beyond imagination in India. There was no place for 'theocracy' in Hinduism. Religion and politics are two different things for the Hindus, and state was never under the control of the priests/clergy in the Hindu/Buddhist period. This institutional difference from the West made India a fertile ground for growth and development of knowledge of all shorts including even sex education (Kama sutra). It is not possible to discuss the achievements of Indian Scholars here. But I will briefly

discuss Aryabhata and name a few others.

ARYABHATA

Aryabhata occupies a central position in the evolution of knowledge. His works were translated into Arabic and then into Latin. These texts were taught in the European universities at the time of Keplar, Copernicus and Isaac Newton. Had it not been, these scientists would not have been able to discover what they did. The Latin version of Aryabhata's work was absolutely needed, which provided a knowledge base for arrival of modern concepts in science.

Most of Aryabhata's work is no more available. What we know about his work is from what has been quoted by later Indian and Arabic scholars.

In 'The Calendar' Duncan writes on Aryabhata, "In 476, far away in the time and place from Charlemagne's dark, imposing castle at Aachen, beyond the Eastern boarder of Frankland… a Hindu genius was born ... A blend of Ptolemy the astronomer, Pythagoras the mathematician and Bacon the rebel, Aryabhata was one of a remarkable group of Indian scholars, and a pivotal figure on one of the stranger journeys ever taken by an assemblage of ideas across time and geography. …..(the ideas) turn to the west, centuries later, landing the great centers of Islamic learning after the Arab conquest of Persia and India. The Arabs in turn carried the knowledge to portals in Spain, Syria and Sicily, where it made its way to Europe (pp150-1)…

…Aryabhata grew up during the final years of Gupta golden age, when India was a world centre of art, science, literature and architecture. Learning was considered a sacred duty, and educated Hindus were expected to know not only the basics of reading, writing and numbers but also to be adept at poetry, painting and music. This was the age of Kama Sutra, the text that treats love as a fine art… .. Excavations attest (presence of).. a large middle class, which enjoyed prosperity on a par with the golden age of Rome (pp 151-2)". Duncan further writes, Aryabhata thought of the heliocentric solar system a thousand years ahead of Copernicus (pp155).

Some of the interesting work of Aryabhata is worth notice here.

1) Value of pi: Aryabhata calculated its value to be 3.1416.

2) Length of Tropical Year: Aryabhata gave a value of 365.3586805 days.

3) Heliocentric solar system: Aryabhata said that earth is a sphere and it rotates on its axis causing day and night. He also suggested that earth revolves round the sun once in a year and it is the sun, which is at the centre of the khagola, not the earth.

4) Incredibly, he believed that the orbits of revolutions of moon and the planets are elliptical and not spherical or circular.

5) He gave the radii of planetary orbits as ratio of earth/sun orbit, which are quite correct.

6) Diameter of earth as 8316 miles (almost accurate to modern measurements).

7) Moon and the planets are not luminous and they shine by reflection of sunlight.

8) Lunar eclipse is caused by earth's shadow falling on the moon. Solar eclipse is caused by moon coming in between sun and the earth.

9) Table of sines: He listed the values of sines of angles up to 90 degrees at intervals of 3.75 degrees for a radius of 3438 measures. The value 3438 is one radian expressed in minutes!

10) He gave calculations of equations based on Fractions, Quadric Equations, Sums of Power Series, Imaginary Numbers (square root of –1), Concept of Version (1 - cos).

Equally notable were the achievements in medicine. Sushruta has described the procedure for many

surgical operations including prostate (trans-rectal route), cataract. Charaka, Dhanvantari and Jivaka were other famous physicians. Plastic surgery was invented and developed in India (ref. Noted in Sabiston's Text book of Surgery, under the History of transplant surgery). Madhavacharya, a 12th century physician, writes in his book 'Madhavanidanam', that vishama jvara (Typhoid fever) is caused by invisibly small organisms, which live in dirty water and infect the body when that water is drunk. It is impossible even to make a brief mention the works of these intellectual wizards and I leave it here.

The last in the glorious tradition of scholars was Bhaskaracharya, who invented the gravitational force also. David E. Duncan writes in his book The Calendar, "After Brahmagupta, India continued to produce noted mathematicians, including Bhaskara (1114--1185), considered by mathematicians to be the most brilliant in his field anywhere during the twelfth century." At this period North India fell to Muslim invaders and Mohammed Ghouri established the Delhi Sultanate. All the great Indian Universities viz. Taxilla, Nalanda, Odantapuri and Vikramashila were burnt down to ashes and all inmates killed by the invading commanders propelling India into darkness. Scholars were hunted down and Indian system of education was abolished being replaced by Islamic Muderssas. All education needs state funding. Once state came under Muslim Rule, all indigenous knowledge vanished except Sanskrit Grammar, a bit of mathematics, logic, medicine and philosophy, which were preserved by individual efforts of practitioners and scholars. To sustain their lives these people had to serve as priests or cooks in the households or face starvation. Hard pressed under excessive land revenue and communal taxes (like jezia, birth tax, cremation tax) common people did not have enough money to donate to maintain the lives of scholars. This led to further demoralization of the scholars. Once the light of knowledge was gone, ignorance and social evils embraced India from all sides. Even the books of History had been burnt down by the invaders and the India of 18th Century had no information about her pre-Muslim history.

But many of the books dealing with religion, philosophy and history had been taken away to Sri Lanka, Burma, Tibet and China before Islamic invasion. From these much of Indian History has been reconstructed by now. It is remarkable to note that soon after the Mughal Empire was gone from India in 1858, a great mathematician was born again (in 1887). David Duncan writes " In 1887 another mathematics genius was borne in India, Srinivasa Ramanujan, who tragically died at the age of 33." Ramanujan solved many disturbing mathematical problems although he never had any Western education.

7. Transfer of knowledge from India to Arabic language - Duncan writes in The Calendar "In **773,** some 250 years after Aryabhata's death, a delegation of diplomats from lower Indus River Valley arrived in the new Arab capital of Baghdad. Dressed in bright coloured silks, turbans and glittering gems, ... Arriving at last outside the gates of **al-Mansur'**s (the founder of the Abbasid dynasty) magnificent city.....

.....This particular delegation also brought with them an astronomer, **..Kanaka**. An expert on eclipse, he carried with him a small library of Indian astronomical texts to give to the Caliph, including the *Surya Siddhanta* and the works of **Brahmagupta** (containing material on **Aryabhata**). Nothing more is known about this Kanaka. An Arab historian named al-Qifti wrote the first known reference to him some five hundred years later. According to al-Qifti, the caliph was amazed by the knowledge in the Indian texts. He immediately ordered them to be translated into Arabic and their essence compiled into a textbook that became known as the *Great Sindhind* (*Sindhind* is the Arabic form of the Sanskrit word *Siddhanta*)."

Incidents like this were necessary "in order to bring the works of India into the sphere of the early Islamic scholars, whence they would travel to Christian Europe through Syria, Sicily and Arab controlled Spain. A version of the *Great Sindhind* would be translated into Latin in 1126. **This was one of the dozens of critical documents that would contribute to the knowledge base needed to propel Europe into the modern age"** Duncan adds. The pre-Islamic Iran had Zoroastrian, Mithraic, Shaivite and Buddhist followers. These religions can be called Hindu or Hindu-like and were not against investigation of truth. Iran also had the privilege of being just adjacent to India. Therefore the knowledge was quite developed in Iran at the time of Islamic invasion. When Iran fell to Islam, people accepted Islam but the undercurrent of Hinduism remained flowing here and there in the form of Sufism and Yoga-Mysticism. Early Sufis were quite vocal of their philosophy. They were persecuted and many killed

by the orthodox Muslims. Most famous of them was Mansur -bin-Hallaz who was killed because of his fancy for Upanishadic statement *'an- al- Haq'* (Aham Brahmasmi; I am the reality/God). Many of the later Sufis adopted all the external features of Islam, but maintained Hindu ideas and attitude of tolerance in philosophy and teachings.

The pre-Islamic Iran had a rich intellectual interaction with India, Greece and Alexandria. It had acted as a transmitter of Indian knowledge to Egypt for two millennia and to Greece for one millennium. When **Justinian** persecuted the **Nestorian** people, they had fled to Baghdad with sacs of Greek scientific texts in the sixth century AD. Nestorian (or Assyrian or Eastern) Christians were the people who believed that Jesus was human as well as divine. Nestorius was a Bishop at Byzantium, contemporary of Cyril whose fanaticism was responsible for killing of pagan scholars at Alexandria including Hypatia. Nestorius was declared a heretic by Cyril and others, because he pleaded that Mary was not a God-bearer, as Christ was born human but only later he attained divinity. Nestorius must have had some background of Indian philosophy, because he was born in Iran of Persia n parents. Nestorians founded the Eastern Church and considered Greek literature as important reservoir of knowledge. Much later after the death of Nestorius, the Nestorians faced a severe persecution and genocide at the hands of Justinian. After persecution, they fled away to Iran, (pre-Islamic) Arabia and south India. In this process they carried the Greek books with them. Indian Nestorians became re-affiliated to the Roman Catholic Church in the 16th century.

Although majority of pre-Islamic literature had been destroyed in Iran by Muslim crusaders, some Pahlawi and Greek literature could survive and got translated into Arabic later. It was at the time of the third Caliph that the capital of Islamic Empire was shifted to the Iranian city of Baghdad (in modern Iraq). After the initial phase of victories and overrunning other nations, which lasted about a century after the death of the Prophet, the Caliphs from al-Mansur onwards started showing interest in science and philosophy. These people had come out of the deserts of Arabia where few were literate; they brought little material culture to the ancient civilizations now under their sway. The initial reaction of the Muslims overrunning these civilizations was that of hatred for the infidel, causing large-scale destruction of lives and knowledge wherever they went. But credit should be given to the early Abbasid Caliphs, who transformed his people into a knowledge-loving nation, although only for a few centuries.

The period of the reign of al-Mansur and his successors, Caliph **Haroun ar-Rashid** (786-809) and his son **al-Mamun** (809-833) was the time when Indian texts were brought to Baghdad in large scale and were translated into Arabic. They were studied along with the Arabic translation of the manuscripts of the Greek Alexandrines and Nestorians, which had escaped destruction, by the army of Caliph Omar as well as surviving bits of Iranian scholarship. Eventually they were synthesized into the forms, which would later reach Europe. Scholars, engineers, scientists and artists flocked to Baghdad and were honoured and well paid. Many came bearing manuscripts. This was a great era of translation. The project was made infinitely simpler when the first *paper factory* opened in Baghdad in 794, using a process the Arabs learned from a **Chinese prisoner** captured during the AD 712 conquest of **Samarkand**, in modern Uzbekistan. This art would be passed on to Europe centuries later in the 12th century (Duncan, The Calendar).

As the translations of Indian manuscripts began to stack up, al-Mamun ordered a museum and library complex to be built which was completed by 833 and became known as the **House of Wisdom** *(Bait al-hikma*). It was now only third in size in the world after the libraries of Taxila and Nalanda Universities. The Zero, decimal system, Indian numerals, astronomy, astrology, trigonometry, ayurveda, chemistry, everything even up to the Hindu dream-analysis, had now reached Baghdad, and the local Irani scholars were now in a position to formulate further theorems. Fascinated by Indian astronomy, Caliph al-Mamun ordered an observatory built in Baghdad in 829 and one soon after outside of Damascus. Another less well known fact is that almost all of the scholars known as Arabic to the posterity were actually Iranian or Iranianized Turks e.g. al-Khwarizmi, al-Biruni etc and some were Spanish but they wrote in Arabic, Arabic being the language of the Emperor. On the other hand not much intellectual activity was going on in Arabian Peninsula, which was still the centre of Islamic religious activities.

The Indian ideas reaching Baghdad sparked off an intellectual revolution. When the Baghdadis came to know from the translations of the works of **Aryabhata** that the *earth is a sphere of a diameter of 8316*

miles, rotating on its axis, many of them believed it and wanted to measure it themselves too. Similar inspirations led to development of experimentation in the Abbasid people and observatories etc were constructed in the Abbasid world as well.

The word for mathematics in Arabic is *'Hindi sat'* meaning the *'Indian Art'*. One of the greatest mathematicians in the Arabic empire was **al-Khwarizmi** (full name, Abu Jafar Mohammed ibn Musa al-Khwarismi, 780-850) who was summoned to Baghdad in 820 by al-Mamun and appointed the 'first astronomer' and later the head of library. He led three scientific missions to India to meet scholars and collect manuscripts. Based on them, he wrote a book 'Kitab al-jabr wa al-muqabalah' (Calculation by addition and subtraction, 'jabr' here is an Arabi-ised form of Apabhramsha Indian language word 'jor' meaning addition, and not the Arabic word meaning 'difficult'; algebra is a short Latinised form of the word). Later, its Latin translation became a standard textbook of mathematics in European universities. He wrote out the oldest surviving *ziz*--set of astronomical tables-- surviving from the Indian charts bro ught to Baghdad by Kanaka. This *ziz* later made the journey to Spanish Cordoba and onwards to the rest of Europe where a Latin translation made in 1126 became one of the most influential works on astronomy in medieval Europe. These are to count just a few of the books al-Khwarismi wrote on mathematics, the Indian art. In 825, al-Khwarizmi wrote on the concept of logarithm (this is a Latinised form of his name itself), zero and positional notation system after learning them from the Indian texts especially **Brahmagupta**, in his book **'Algoritmi de numero Indorum'** (this is the title of the Latin translation). This book (in its Arabic form, which unfortunately is not available any more) reached Spain (which was under Arab control at that time) where, in the 990's, **Gerbert of Aurillac** taught the Hindu numbers to his students, but it could not be very popular in Europe. In c.1100, an Englishman Robert **of Chester** visited Spain and translated al-Khwarizmi's little book into Latin in 1120. This and other translations of al-Khwarizmi, inspired writing of several Latin textbooks on the 'new arithmetic' including description of the decimal system and positional notation. Sti ll it took several more centuries before Europeans entirely abandoned Roman numerals despite their clumsiness and inferiority to Hindu numerals (Duncan, The Calendar).

Another standout at Baghdad was **al-Battani** (c. 850-929), known in Europe as **Albategneus** who studied Indian astronomy and expounded Indian trigonometric methods to show that the distance from the earth to the sun varies during the year (Ibid.). Half a century later another Iranized Turk (but known as Arab) astronomer, Abu ar-Rayhan Mohammed ibn Ahmed **al-Biruni** (call him al-Biruni; 973-1048) was born in central Asia. He extensively studied the Arabic translation of the Indian mathematics and astronomy and by the age of thirty, had written at least eight works. Most important of them was one in which he discussed arguments for and against the earth's rotating on its axis, taking up the debate of Aryabhata versus other Indian astronomers. He went to India with an invading Muslim army of Mehmood Ghaznawi. There he learned Sanskrit and studied every ancient text he could find. He compiled his findings into a book called Kitab-ul-Hind (Kitab fi tahqiq ma li 'l-Hind). This offers a remarkably candid and critical analysis of Hindu mathematics and siddhantas as well as philosophy and religion (Ibid.).

Al-Biruni wrote a note on Patanjali's Yoga sutra, Bhagavad-Gita and Sankhyakarika. But he also seems to be under fear of fanatics and always writes in reference to what Indians believed. Like, the Indians believe that the earth is five billion years old, which is wrong because the Islam says it was created only four thousand and five hundred years back. But overall, he greatly admires Hindu genius and metempsychosis. He discusses in detail the Hindu concept of cycle of evolution and dissolution and re-evolution of universe. He also describes the Hindu concept of geography. He mentions, the Hindus describe an island, which is diametrically opposite Rome on the globe. These ideas would be later translated into Latin from which people like Columbus would gain inspiration to try reach India by going westward and that would lead to the discovery of Americas.

8. Translation of Hindu literature in India - Before Taxila, Nalanda, Odantpuri, Vikramshila and other Indian universities were burned down and their inmates killed by the Muslim invaders, much of Indian science (especially mathematics, astrology, medicine and philosophy) had already reached Baghdad and been translated into Arabic.

The destruction of Indian literature was so extensive that no record of pre-Islamic history remained in India. In fact whatever systemic history of ancient India we know now was reconstructed by the Europeans with the help of the Indian historical books which survived mainly in Sri Lanka and to a lesser extent in China, Myanmar, Tibet etc. plus non-historical religious oriented Puranas, then archaeological remains and the Vedas; and most extensively by imagination. But still there were too many manuscripts scattered over the vast country, which escaped destruction. These related mainly to philosophy and religion. **Amir Khusraw** was impressed by the depth of learning among Indians and their ability to speak any language. He greatly admired the Brahmanas for their ability to teach all subjects, who had devised the numerical system, written Kalila wa Dimma on the art of government and invented chess. Although a Muslim chauvinist, he admitted that the Hindus believe in the unity and eternity of God. **Nakhshabi** translated two Sanskrit texts. Following his conquest of Nogarkot in 1362 **Firuz Shah Tughlaq** acquired 1300 books from Jwalamukhi temple. He commissioned Sanskrit scholars to translate some of them into Persian. On the basis of the translation of works on physics and astronomy, **'Izzu 'd-Din Khalid Khani** compiled the Dala 'il-Firuz Shahi. 'Abdu'l 'Aziz Shams Baha-i Nuri translated Brihatsamhita into Persian (it was earlier translated by al-Biruni into Arabic). **Sultan Zaynu'l-'Abidin** of Kashmir, **Sultan Sikandar Lodi** and several other Muslim rulers ordered the translation of various Sanskrit works into Persian with a view to enriching their language. **Akbar** established a translation bureau (the Maktab Khana) for translation of Sanskrit texts into Persian and Arabic. Yet more Sanskrit books were translated during **Jehangir's** period. **Dara Shukoh** translated Upanishads into Persian. Later **Anquetil Duperron** translated the Persian version into French and Latin. This Latin version influenced many intellectuals in Europe including German scholar **Schopenhauer** who found its study 'the solace to my life' and 'the solace to my death' (Rizwi, The Wonder that was India, vol 2; Basham, The Wonder that was India, vol 1)

Knowledge moves west

The Arabs ruled over a vast area from Indus to Spain in the eighth century when they started getting knowledge from India. As the Arabic schools were established all over the Abbasid empire to produce a regular supply of clergy and teachers, the Arabic version of Indian knowledge spread all over the empire. **Caliph Abd ar-Rahman III** (891--961), a patron of art and learning built a massive new library at **Cordoba** in Spain and filled it with a vast treasure trove of manuscripts brought from Baghdad. The library contained 400,000 volumes. By 976, Hindu numbers started appearing in modified form, which were going to be the forerunners of modern International form of Indian numerals (Duncan, The Calendar). &nbs p;

Some of the earliest translations of Arabic manuscripts into Latin were penned in northern Spain beginning in the mid-tenth century at the monastery of **Santa Maria de Ripoll**. In the tenth century, **Gerbert of Aurillac** (c. 946--1003) learned the Indian counting system from the Moors of Spain who in 999 became the **Pope Sylvester II**. In 990s he taught the Hindu numerals to his students and monks. H e trekked to northern Spain to carry home Latin translations of Arab treatise on abacus and astrolabe. He encouraged adoption of these systems especially by merchants. Needless to say that the new numbers were going to revolutionize accounting which was essential for leading Europe into a successful mercantile community (Ibid.)

Another was **Adelard of Bath**(c. 1075--1160). He journeyed by ship along the new eastern trade routes to the Crusader held coast of Syria, where he translated Euclid into Latin using Arabic translation of the original. Most prolific of all these early translators was the Italian Gerard of Cremona (c. 1114--1187). Fluent in Greek and Arabic, he was leading figure in the new **'College of Translators'** set up by Spanish archbishop Raymond after the capture of **Toledo** (and its library). He rendered into Latin the Arabic texts by Galen, Aristotle, Euclid, al-Khwarismi and Ptolemy, among many others. Some of the works of the ancient Greeks were translated back to Greek from Arabic at this time (Ibid.).

. We have already seen how al-Khwarismi's Algoritmi de numero Indorum was translated into Latin by an Englishman Robert of Chester living in Spain in 1120. The Indian astronomical works as translated by al-Khwarismi was translated into Latin in Cordoba in1126. This brought Indian numbers, arithmetic, algebra and Astronomy to the Latin world. This contained the works of **Aryabhata**. Aryabhata's work

contained enough mathematical knowledge that was needed for further work in physics. The work on astrology was the stuff which was needed for creating a base for more advanced calculations. This knowledge was now in the hands of Europeans who had been counting with their fingers till that time. This was going to provide the knowledge base required for further scientific discoveries to Kepler, Copernicus and Newton.

The translation of Hindu-Arabic literature continued till the end of sixteenth century. Apart from Spain, and Italy, other centres of translation were Syria, Damascus, Palermo and Sicily. The Arab emirs governing Sicily imported texts from Baghdad and had a rich library there. A Christian, **Roger Guiscard** (1031--1101), son of a baron of **Normandy**, conquered **Sicily** in 1072 when he renamed himself **Roger I, Count of Sicily**. His son Roger II ruled over Sicily and southern Italy. These two Rogers and their successor, **Frederick II** encouraged translation of Arabic texts. Frederick was elected the Holy Roman Emperor in 1220. He surrounded himself from philosophers and sages from Baghdad and Syria, dancing girls from India and Iran (Ibid.).

It may be added here that Hindu girls were forcefully taken away from their families by the Muslim rulers. They were trained into expert dancers for prostitution and luxury of the Muslim aristocracy in India and the surplus was sold to the sex-traders in the Middle East. These girls were again sold to the European customers. This brought to the Eastern Europe, Indian costumes and the classical dance dramas of Indian style. This in turn influenced the Western European dances. Such efforts introduced many Indian elements into the classical dances of the West.

Frederick founded the University of **Naples** in 1224 endowing it with a large collection of Arabic manuscripts. From Spain he brought a translator who created a Latin summary of Aristotle's biological and zoological works. The library was endowed with a large collection of Arabic manuscripts of ancient Greek and Indian scholars as well as commentaries of the Arab scholars on them. Copies of Latin translation were sent to universities in **Paris** and **Bologna**. . Frederick also led the Fifth Crusade to Palestine in 1228--1229, successfully and recaptured Jerusalem, Bethlehem and Nazareth. All these efforts brought to Europe the works of Socrates, Plato, Aristotle and the Greek Medicine, which were earlier, destroyed from Europe by over zealous Christian zealots. It also brought to Europe the works of Indian genius in the fields of mathematics, astronomy, medicine, physics, chemistry, philosophy and music. Europeans learned the art of papermaking from the Arabs and printing press from the Chinese. In 1450s **Gutenberg** operated the first European printing press in Germany.

The Europeans were very slow to absorb this much of knowledge and new type of numbers. Much of the work in universities and monasteries was limited to copying the manuscripts or to translating them. They were not able to use decimals until a Dutch mathematician **Simon Stevin** (1548--1620) explained the system in a book called **La Thiende** (The Tenth). After him, **Magini** and **Christopher Clauvius** used them in their works. It was **Galileo** in the late sixteenth century who for the first time tried to understand what was containd in the Latin translation of the *Sindhind of Brahmagupta*. Once he understood the theory of rotation of earth he had to suffer the persecution of the Church. In 1621, **Bachet** published the Latin version of Arithmetica from Arabic (Ibid.). By this time, the era of Europe's Dark Age was over. Understanding of science led to removal of Church's domination in everyday life. People were now able to work further on the subjects of science beyond the works of the Hindus, which was presented, to them after being translated twice-- first in Arabic and then in Latin. The *decline of Christian faith* coupled with *rise of knowledge* ushered Europe into all round development and they came in a position to dominate the world. The power associated with knowledge converted the Europeans into Economic and Military powers. Now supremacy of knowledge is quite established all over the world, except in a few pockets of fundamentalist ideologies. But the contributions that India made to the growth and dissemination of knowledge over several thousands of years will remain the everlasting success of India.

EPILOGUE

It was the story of knowledge. Now are the few appendices discussing isolated topics.

Appendix I - Influence on Western philosophy: The knowledge has survived in spite of all odds against it. Not only in Science, but also in the field of Modern *philosophy*, West has borrowed heavily from India. Europe got all of Indian logic and philosophy through the channel of the Arabs, and earlier through the *Neo-Plutonian* channel. Later when the British came to India they had first hand knowledge of Indian philosophy. **Goethe**, **Schopenhauer** and *most of the German philosophers* had studied Indian philosophy and most of them got influenced by it. They in turn influenced the other students of philosophy by their writings. "The monism of **Fichte** and **Hegel** might never have taken forms they did if it had not been for **Anquetil-Duperron'**s translation of the Upanishads and the works of pioneer Indologists. In English-sp eaking world the strongest Indian influence was felt in America where **Emerson**, **Thoreau** and other New England writers avidly studied much Indian religious literature in translation, and exerted immense influence on their contemporaries and successors, notably **Walt Whitman**" writes A. L. Basham. The list of authors who admitted Indian influence on them is very big and includes such authors as **Carlyle, Richard Jeffries, Edward Carpenter, Stephen Zwig, Romya Rolland, Jung,** etc. Indian influence is visible on all the major authors of **Existential** school as well as the **Humanistic** school of philosophers. The **New Age Dharma** is a new surge of Western interest in Indian way of life and thinking. At the moment the West is trying to understand the **yoga, meditation and transcendental states**. The concepts of kindness to the animals, animal rights, vegetarianism, universal brotherhood, tolerance for differing faiths, etc. are gradually becoming more and more popular. Paganism is another movement to understand reality in a post-modern context. The birth and death of star, the concept of life as a unity etc are recognized more and more by Western people. Indeed, Ancient Indian thoughts preserve enormous potentialities for the future of humanity.

Appendix II Decline of Knowledge in the Arab World

Baghdad was destroyed first by a civil war among the later Abbasids. Then in 1258 the invading Mongol army of Changhiz Khan destroyed it to the last brick. Although the Islamic Empire was reconstructed, the scientific temper of the Abbasids could never be restored to the Arabs. Later when Abdul Wahab started his movement, Muslims would look more and more into religious books rather than investigate the material world.

Appendix III

Why Indians did not pursue their quest of knowledge after 12th century?

India had a several thousand years old tradition of education, research and training. After Delhi fell to the Turko-Afghan rulers, the great Indian universities were demolished. Libraries were burnt down. The village schools spread all over the country got starved of funds. The Govt funds would now go to muderssas, which would teach Koran and Arabic and Persian languages. Even the Indian texts on science and philosophy were translated into Arabic and Persian and were made available to only the Arabic and Persian knowing people, the Muslims who attended the mudrssas. Persian was maintained as the medium of instruction till the British took over the governance of India, so that Hindus could not take benefit of education. A false allegation has been leveled against the Brahmanas that they were not imparting education to the masses. But the fact is that the Brahmanas themselves quickly got deprived of education and became ignorant within a few generation time after establishment of Turkish rule and muderssa system of education. Now Brahmana became a caste and lost the Varna character. Unless they were employed in any educational institution (i.e. muderssas in that period), how can we expect

them to teach the public? People were not ready to pay privately for learning Sanskrit, which would not get them any jobs in a Muslim establishment. As it became a non-sustainable vocation, teaching disappeared from the Hindu people. The few Brahmanas, who had knowledge, freely imparted it to whoever came, even to the Muslims. Al-Biruni and Amir Khusaraw etc were taught Sanskrit language and literature without any consideration of caste or religion by Brahmin scholars.

The Muslim rule converted Brahmanas into priest. This fact can be verified by carefully reading history. In pre-Muslim period we never find mention of a Brahmana who lived in a village doing puja-work (priest craft). They lived as scholars or teachers. They could attend a yajna done by a king as a respected guest. But such occasions were very infrequent. Abolition of education profession compelled the Brahmanas to adopt new professions. Some become village priests. Others became doctors (vaidya), astrologer, farmer or even cooks. But the majority of Brahmanas never adopted the degrading job of priests. Many Brahmanas who hated priest-craft became farmers like the Chitpawan, Anavil, Mohiyal, Nagar and Tyagi Brahmanas etc and survived on agriculture.

Appendix IV A note on Arithmetica:

Six volumes of Arithmetica that could survive were translated into Arabic. Many centuries later this Arabic text was translated into Latin. Nothing is known about its author except that he worked at Alexandria University and that the Latin version of his name is Diophantus. In Arabic it was something like Dwbnt. What was the actual name or country of birth of the author of Arithmetica, nobody knows. Arithmetica itself is a meaningless word in Latin or Greek languages. But in Sanskrit, Arthamitica is a meaningful word meaning calculation (miti) of money matters (artha). It can be inferred that the author of the Arithmetica was an Indian mathematician teaching at Alexandria and this book was a Greek version of a compilation of Indian mathematics .His name was probably something like Devabhuti. This raises a grave question. Almost all of Greek literature was lost. The overwhelming majority of the literature known today to be of Ancient Greece is actually translation from Arabic. In a large number of them, only information available about the author is his name. And these books describe the Indian philosophy in entirely unmodified form. Is it not possible that the Europeans who translated these Arabic texts did not discriminate between what had come into Arabic from India and what had come from Alexandria. Their motive was definitely mala fide is clear from many other facts. They very well knew by very name of the text itself (Algoritmi de numero Indorum) that the decimal system and the new numbers were Indian. But they kept it secret from the masses that started calling them Arabic numbers. It was only after ancient Indian stone inscriptions containing those numerals predating Islam were found, that the Europeans openly accepted the reality. Similarly, the Europeans including the Greek themselves are kept into darkness about the fact the Greek philosophy they are reading was actually translated from Arabic, the original having been lost centuries before. These attempts are done in a very organized way to keep up the morale of their masses but not to let the morale of anyone else go up. Duncan sites one example of mischief by the Euro-centric historians (The Calendar, pp166): “The Greeks of the classic age had no symbol for zero, because their numeral system did not require a zero place…Nevertheless, Euro-centric scholars long assumed that the symbol for zero was invented by the Greeks, with no proof at all, speculating that it came from the Greek letter omicron-O-the first letter in the word *ouden*, meaning ‘empty’. But this unwarranted belief that Indians could not have come up with such a basic concept has given way to recognition that ancient Greeks did not really use such a symbols for zero, and that Indian mathematicians seem independently to have invented the dot and then the round goose-egg symbol.”

Appendix V **Plotinus: A Greek Vedantin** Plotinus (born at Lycopolis, in Upper Egypt in 204 BC).

Plotinus studied the very best of philosophy available at the Alexandria University. He was not satisfied with that and even went to Iran with an Invading Army of the Roman Emperor Gordian. Finally he wrote his books on the subject of Atman and Brahman. His pupil Porphyry edited them in fifty-four treatises. After the destruction of Alexandria University, the books survived as Arabic translation and later translated into Latin by Marsilio Ficino in 1492. It was later translated into Greek by Basel in 1580.

Plotinus writes “Many are the ways by which to reach the goal of spiritual attainment: that love of Beauty which inebriates the poet; that devotion to the one and that cognitive ascent which represent the

aspiration of the philosopher; that love and those prayers by means of which spirits full of devotion and ardour, in all their moral purity, aspire to perfection. There are the Great main ways which lead to the peak, beyond the earthly, the actual and the particular, where we can raise ourselves up into the immediate presence of the infinite which bursts forth in all its radiance from the depths of the soul." (Quoted as the opening page in, Essence & Purpose of Yoga, by Raphael, Element Books Ltd, Dorset, UK, 1996)

This paragraph summarizes what we understand today by Advaita Vedanta. It is clear that Plotinus's understanding of Advaitic philosophy was more profound than that of Plato. He admits the insolubility of human reason of the basic metaphysical problem i.e. how becoming arose out of immutable being (Brahman) and plurality out of Unity. He also asserts that 'the highest principle has neither thought nor consciousness, so the *nous,* which is purely contemplative, has no reflective logical thought. This is the work of the world soul (Paramatma), which is the link between the intelligible and the phenomenal world. Matter is conceived by Plotinus not exactly as an emanation from the world-soul, but rather in the guise of a receptive or passive principle (Prakriti) in contrast to the formative or active (Prusha)."

Plotinus is considered founder of what is called Neo-Platonism. He even conceived of founding an ideal city to be named Plutonia, but it could not materialize. Later his work would be translated into Arabic after the fall of Alexandria. His works along with similar other philosophical works, after translation into Arabic, helped in the growth of Sufi mysticism, which was also inspired directly by Sanskrit texts from India. (www.britannica.com).

Appendix VI Plutarch on re-birth

In the Moralia, Plutarch, the famous Alexandrian scholar, expresses a belief in reincarnation. This indicates the influence of prevailing Hindu ideas on him. His letter of consolation to his wife, after the death of their two-year-old daughter, gives us a glimpse of his philosophy:

"The soul, being eternal, after death is like a caged bird that has been released. If it has been a long time in the body, and has become tame by many affairs and long habit, the soul will immediately take another body and once again become involved in the troubles of the world. The worst thing about old age is that the soul's memory of the other world grows dim, while at the same time its attachment to things of this world becomes so strong that the soul tends to retain the form that it had in the body. But that soul which remains only a short time within a body, until liberated by the higher powers, quickly recovers its fire and goes on to higher things." (www.britannica.com)

Appendix VII Indian Influences on Greece before Pythagoras

Cremation of the dead is one of the most characteristic features of Indian or Hindu civilization. Hindu (Sanatana), Buddhist, Jain and Sikhs cremate their dead. Passages from Homer indicate that Greeks also cremated their dead for some period before 6th century BC. Cremation is more advanced form of disposal of the dead; as the West is advancing, more and more people are now cremating their dead in the West. Therefore it is interesting to note that Greeks did adopt cremation even if for a short period. The following passage has been quoted from 'The Greek View of Life' by G. L. Dickinson; Methuen & Co., London, 18th Ed, 1938.

"Let us take another passage from Homer to illustrate the same point. It is a place where Achilles is endeavouring to light the funeral pyre of Patroclus, but because there is no wind the fire will not catch….'standing aside from the pyre he prayed to the two winds of North and West, and promised them fair offerings, and pouring large libations from a golden cup besought them to come, that the corpse might blaze up speedily in the fire, and the wood make haste to be enkindled.' …'So all night drave they the flame of the pyre together blowing shrill; and all night fleet Achilles, holding a two handled cup, drew wine (madhu) from a golden bowl, and poured it forth and drenched the earth, calling upon the spirit of hapless Patroclus.' …'But at the hour when the morning star goeth forth to herald light upon the earth, the star that saffron-mantled Dawn cometh after, and spreadeth over the sea salt, then

grew the burning faint and the flame died down.' (*Iliad, xxiii,* 193. Translated by Lang, Leaf and Myers.)"

Also interesting to note here is the mention of 'saffron' colour, which has a special importance in Indian culture and is symbolic of Indian culture whether (Hinduism, Buddhism or Sikhism). In fact saffron and red were considered the colour of spirituality in ancient Greek civilization as well (pp. 12, Dickinson, ibid.) The ritual of *pitri-tarpan* was prevalent in the Homeric Greece as well. " The family centered in the hearth, where the father, in his capacity of priest, offered sacrifice and prayer to the ancestors of the house," (p.11, Ibid.). It is a common practice that the head of the family is the *karta* (priest) of major yajnas and rituals along with his wife. The Brahmin who comes to help is actually not the real priest but he comes to help the house-holder in performance of the rites by narrating the steps, e.g. now do this, now do that etc. It is more than likely that the Christian tradition of calling the priest as father came from the Hindu tradition of the father of the family presiding at the religious rites. Hinduism was definitely the principal religion in Europe at the time when Christianity was absorbing the masses. Christian theology strongly asserts that the word father always means biological father and not the spi ritual guide. It is because of this reason that Jesus is considered the biological Son of God, as Jesus calls God his father. But in the case of priests this question of biological father-hood is not raised, and it is a contradiction in Christianity. In fact, Pope also literally means father (papa).

Hindu influences on Greek Gods - Greeks held the same view of nature as the earliest Vedic hymns do. "Every power of nature he presumes to be a spiritual being, impersonating the sky as Zeus, the earth as Demeter, the sea as Poseidon." See this description of Vedic Rudra in Odyssey (v, 282), " With that he gathered the clouds and troubled the waters of the deep, grasping his trident in his hands; and he roused all storms of all manners of winds." (Ibid, p.5).

The ancient Greeks called themselves the Hellenes. This could have been a modification of Sanskrit word 'hiranya' as we see that the Vedic people were highly influenced by the concept of Hiranya-garbha. Zeus was the sky-god (dyuh in Sanskrit). Athene was the goddess of war and wisdom, while by her table sat her favourite bird, an owl (The Story of Greece, by Mary Macgregor; Thomas Nelson and Sons Ltd, Edinburgh, 1960). It seems that the Greeks fused the Durga, Sarasvati and Lakshmi into one as Athena. Poseidon was the sea-god (Varuna in Vedic literature) who lived in a palace beneath the waves of the ocean. Pluto (? Sanskrit preta) was the guardian of Hades, the dark and gloomy kingdom of the dead, beneath the earth (Ibid. p.3). This Pluto could have been none other than the Yama of Vedic literature. Another Greek god Pan was a protector of animals and shepherds and was half man, half goat. Protector of folks means *Prajapati*, and we know from Indian mythology that Daksha was a Prajapati with half man, half goat features after he was punished by Shiva. The god Helios was Vedic Hari. And in the same way we find lots of similarities between Vedic religion and the religion of the Homeric Greeks.

Appendix VIII **Status of Sufism in contemporary Islam**

Sufism contains a lot of spiritual, occultist and cosmological beliefs and practices, which had over flown from India and survived in Egyptian (Alexandrian as well as others), Greek, Persian, Buddhist and Sanskrit (Indian) texts. Orthodox Muslims did not accept these ideas initially and in fact a large number of Sufis were killed for their faith. Most famous of all is Mansur bin Hallaz. He claimed 'an al Haq' (I am the Reality/God), and his claim cost his life. Mainstream contemporary Muslims do not accept Sufism as an Islamic thought and its interpretation of Koran is not considered acceptable by the orthodox Muslims.

Appendix IX A Note on Calendar:

Western scholars have a tendency to ascribe any discovery by the ancients to Greece, and if that is not possible then to ascribe it to Mesopotamia. In that attempt, Western historians have always said that Indians got their calendar from the Babylonians. Important to consider here is that 'A' can borrow something from 'B' only if 'B' had it. We will briefly review the calendars of various civilizations to refute

this false claim of the Western historians.

Points to note regarding Indian calendar: 1) Hindus runs two types of calendars simultaneously. The solar calendar is exactly of the same length as the modern International Calendar and the New Years day falls exactly on the 13th or 14th of April (Vaishakhi) depending on the leap year of the International era. Lunar calendar follows the lunar months, but after about two and a half years an extra month is inserted to restore the synchronicity of the lunar and solar calendars.

There is no drift of solar Vaishakha and lunar vaishakh, and vishakha nakshatra over a long period. 2) One can easily convert any Indian year into Georgian year, i.e. no drift between Georgian and Indian calendars occur over years, going back up to the 6th century BC. Hence the length of year is quite equal to the International year. It also proves that the same length of year was used even in the 6th century BC. Hence any Babylonian influence has got to have come before that. But before that period the Babylonians had a very primitive calendar, which was not accurate in length. We have accurate Indian chronologies only through the Sri Lankan sources, which have preserved Indian history only in reference to Buddha. Indian history in India was thoroughly destroyed by Turko-Afghan invaders. Hence we cannot know any accurate Indian chronology before the time of Buddha. 3) The Indian calendars are widely followed in the South-East Asia and must be quite old. One cannot claim that the SE Asia also had links with Greeks or Babylonians. 4) The claims that the Babylonians invented the modern calendar is false because the Babylonians could not have calculated the exact lengths of time in the absence of any efficient mathematics and number system. India had both and therefore, she is the most likely candidate to have accurately calculated the length of year. 5) We know from the inscriptions that the Pre-Iranian (pre-Medes) Babylonia, i.e. in the 7th century BC, had a very primitive calendar. Hence question of them having invented the modern calendar is imaginary and biased. Therefore, India could not have got it from them. 6) Mesha, vrisha, crocodile, scorpion etc fit well into Indian fauna and naming of zodiacal signs after them is more probably Indian than European. Indian solar calendar is based on the signs of zodiac. When sun enters any new sign of zodiac a new month starts. 7) The word Kalend or calendar itself is of Indian origin. Kala means time in Sanskrit and Tamil. Otherwise, calendar is meaningless etymologically in any European language. (Kala has no cognate word in any of the European languages and Western linguists consider it a Dravidian word.)

Babylonian Calendar Ancient Babylonians followed a lunar calendar of 354 days. Around 432 BC, after they were made a part of the Persian Empire, they developed a calendar, which involved 19 yearly cycles. First 7 years of 13 lunar months was followed by 12 years comprising 12 lunar months. This later became known as Metonic cycle after the Greek astronomer Meton (5th century BC), but had originated in China.

Sumerian Calendar In 21st century BC, Sumerians developed a calendar consisting of a year of 360 days, with 12 months of 30 days each. It drifted against solar cycle by more than 5 days every year.

Jewish Calendar The Jewish year is a lunar year of 354 days. An extra month is intercalated every three years, just before the month of Nisan. But the year still drifts and needs addition of an extra month every now and then by the Jewish elders. (Although this is what Duncan says about the Jewish calendar, I had a word about the Jewish calendar with a Rabbi at Luton, who informed me that the Jewish calendar follows a cycle of twelve years with 12 lunar months followed by seven years with 13 lunar months. It is possible that different Jewish communities may be following different systems.)

Chinese Calendar In c. 2357 BC Emperor Yao began a calendar which was essentially lunar but Seven months were added to the year every 19 years. With further experiments, it eventually became Metonic (vide supra).

Greek Calendar Greeks had a standard lunar calendar of 354 days. To it they added 90 days every eight years as haphazardly inserted months.

Roman Calendar The mythic Roman king Romulus founded the city of Rome and also began the Roman calendar in 753 BC—the first year of Roman calendar, called ab urbe condita (AUC). This year of 10 months totalled 304 days in a year. The names of the months were Martis, Aprilis, Maius, Junius

(these four months were after the names of gods), Quintilis (fifth), Sextilis (sixth), September (seventh), October (eighth), November (ninth), December (tenth). The days of the month were all named and not numbered. This cumbersome Roman system of naming the dates (e.g. 11 March as Five Ides) lasted in Europe till as late as seventeenth century.

King Numa in c. 700 BC added two more months, January and February (the eleventh and twelfth months), to this calendar making it a standard lunar year of 354 days. Then he added one more day to the last month to make the year of 355 days (as even numbers were considered ominous in Rome). But this year was running too fast against the solar cycle. Later they started adding one extra month every two years. This made the calendar too slow. Then the Romans adapted the Greek calendar, adding three extra months every eight years, which gave an average of 365-day year. When Julius Caesar concurred Egypt, he came to know the Egyptian calendar. He introduced this calendar of 365 days and six hours in his empire in 46 BC, although the names of the Roman months were kept intact.

The Ancient Egypt and development of Modern Calendar

In about 4000 BC Egyptians developed a calendar of 365 days. It was a calendar of 12 months of 30 days each and an additional 5 days at the end to commemorate the gods. (Maya of America also had a calendar of 18 months of 20 days, to which they added five days at the end). This year slowly drifted to complete a cycle over 1,460 years. The Egyptians knew that this year of 365 days was short by about one fourth of a day. But because of the resistance by the priests, no change was made. When Alexander concurred Egypt, the new rulers, the Ptolemies adopted the old Egyptian calendar, and did not impose the Greek calendar. In 238 BC, Ptolemy III, the king of Egypt, ordered for introduction of an extra day to be inserted every fourth year—the leap year.

When the Roman emperor returned to Rome after concurring Egypt, he decided to introduce the Egyptian calendar to Rome. Caesar called the best of mathematicians and philosophers, including the Alexandrian astronomer Sosigenes to discuss the calendric reforms. The vernal equinox and the winter solstice, the two most important pagan-Mithraic festivals should fall on the 25th March and 25th December respectively, as per tradition of that time. But they had drifted far away. (Probably these festivals were imported from Indo-Iran, where solstices and equinoxes had fixed dates in the year; and when these festivals came to Rome, in the absence of an accurate calendar, they drifted in the year. By the time of Julius Caesar, they had drifted by about 80 days, indicating that more than 320 years had passed since the festivals were borrowed into Europe.)

Julius Caesar decided to end the confusion. He added two extra intercalary months apart from the one regular intercalary month to the year 46 BC. That year ended up having 446 days and 15 months. This was officially called ‘the last year of confusion’, but public simply called it ’the year of confusion’. When he added two extra months to year 46 BC, Julius Caesar had to bring the beginning of year from March to January for 45 BC in order not to create havoc in the mercantile world and taxations. Thence, December became the twelfth month of the year instead of being the tenth month. Julius Caesar to make changes in the number of days. He organised the 12 months as alternating 31 and 30 days, with the exception of February, which had 29 days in a normal year and 30 days in a leap year. The senate changed the name of the month Quintalis to July in respect of Julius Caesar. After the death of Julius Caesar in 44 BC, people started making leap years in three years instead of four until 8 BC. It was the reign of Emperor Augustus that this fault was detected. He ordered for its correction. The senate changed the name the month Sextilis to August, to honour the emperor. But this month had only 30 days. It was considered disrespectful for the Emperor Augustus to have a month in his name with only 30 days. Therefore one day was snatched from February and added to the month of August. Now it resulted in July, August and September, three in a row having 31 days. Making September and November of 30 days and October and December of 31 days solved this problem.

When the Roman Emperor Constantine accepted Christianity, this pagan Julian calendar was imposed to Christianity. Earlier Christians followed various types of calendars, all lunar. When this Julian calendar was imposed on to them, they did not know the date of birth of Christ in this system. And the Christian mathematics was not developed enough to back calculate the corresponding date from the Jewish calendar. The most popular festival of the pagan Romans, the birthday of sun god, the 25th

December was accepted as the birthday of Christ by the Roman Emperor. Similarly Easter, the day of death of Jesus was decided to be celebrated on the first Sunday after the first full moon after the spring equinox, completely ignoring the existing Judo-Christian tradition's dates of their lunar calendar. This calendar was still wrong by a few minutes every year. It was in the thirteenth century that Indian number system and mathematics reached Europe. Only then it was appreciated that the calendar had drifted by many days over a thousand years. Then the mathematicians and astronomers had to struggle to have calendar reformed. But the Christian orthodoxy considered all such attempts blasphemous. It was as late as 16th century that the Pope Gregory VIII became convinced about the flaws of the calendar and appointed calendar commission in 1581. On the basis of the recommendations, 10 days were lost forever. After the night of 4th October 1582 came the morning of15th October 1582. The February month of the century years e.g. 1700, 1800, etc were to have only 28 days and not 29 days. But years 1600, 2000, e tc, multiple of 400 will be leap years having a February of 29 days. Not every body accepted it immediately. Last to accept the loss of 10 days were Russians, who accepted it after communist revolution and the Chinese Christians, who accepted it in 1949. It is the biggest joke to say that the Indian luni-solar calendar is borrowed from the Babylonians who never had any scientific calendar. Equally laughable is the claim of the Western historians (including AL Basham) that the Indian solar calendar was imported into India during Gupta period from Western contact!! Which West? Which was in its darkest age and still confused about calendar and calculation of time? On the other hand the Indian festivals and months have not drifted against seasons at all over several millennia.

Appendix X Other Indian Contributions to the World We have discussed about mathematics including algebra, trigonometry, geometry, numerals etc. We have also discussed astronomy and cosmology. Linguistics and phonetics is another scientific Indian contribution to the West (The Cambridge Encyclopaedia of Language, David Crystal, Cambridge University Press, 1992, p 405) The studies in Samaveda prove that the seven notes of music is an Indian invention, which was not known to the West before Pythagoras.

We have also noted that trade in Hindu slave dancer girls contributed to development of western dances. A L Basham lists India's contribution to World: rice, cotton, sugar cane, many spices, domestic fowl (chicken), game of chess etc. "The heterodox Jewish sect of the Essence, which influenced early Christianity followed monastic practices similar to Buddhism. Parallels may be traced between passages in New Testament and the Pali (and Upanishad) literature. Similarities between the teachings of western philosophers and mystics from Pythagoras to Plotinus and those of Upanishad have been noticed…We can say that there was always some contact between the Hellenistic world and India, mediated first by the Achaemenid empire, then by the Seleucids and finally under the Romans, by the traders of the Indian Ocean. Christianity began to spread when this contact was the closest. We know that the Indian ascetics occasionally visited the West, and that there was a colony of Indian merchants at Alexandria." (The Wonder That was India, A L Basham, p 485-6)

It has been shown that much of Arabic and Persian fiction literature (like, Arabian Nights, Kissa Chahar Dervish, etc) are translations of Sanskrit and Pali story literature, e.g. Kathasaritsagar, Panchatantra and Hitopadesha etc. This literature was again translated from Arabic to Latin giving rise to Esop's fables etc. In this way Indian literature contributed to the growth of world's fiction literature.

Appendix XI A note on Theocracy (Theocracy has been the most successful enemy of freethinking. Freethinking is essential for exploring reality and thereby growth of knowledge. Hence theocracy usually is inimical to knowledge. It is therefore, appropriate to discuss a few words about theocracy here.) Theocratic state is a state, which is controlled by the priests and theologians. The Egyptian pharaohs were considered the 'god on earth'. The king was helped by a host of priests. Egyptian state was therefore theocratic theoretically, but still the king was more powerful than the priests and could take independent decisions and it was not a total theocracy. Pre-Christian Roman emperors held the title of head-priest (*pontifex maximus*) and performed religious functions as well. Priests had a good say in administrative matters. But the emperor could do many things independently and introduce new things, as Julius Caesar did. On analysis, this was also not a hundred percent theocracy. The Jewish holy-book Torah is translated into English as 'the Laws'. A priest, Rabbi, is an expert on the 'laws' and only he can decide the legal matters. The training in theology or priest-hood involves training in the holy law and

even when the Jews were not formed into a state, the verdict of Rabbi would be a binding to a Jew in most of the matters. This is an example of theocracy where priests administer Judiciary and law. When the Roman emperor adopted Christianity, a mixture of Jewish and earlier Roman system was introduced. The Pope was the emperor as well as the head-priest. But now, the Pope had to be trained in the theology and pass all the theological examination and cross the ladders of hierarchy of the Church before becoming the Pope. Law, justice, administration, taxation and education were all within absolute control of the Church. This system was a complete theocracy. It still exists in the Vatican.

Koran is the word of God and it deals with a lot of matters related to succession, law and criminal justice. The words of God cannot be changed. Therefore the Koranic laws are unchangeable. Hence an Islamic state requires scholars of Islam to administer justice. Wherever a confusion or controversy arises, a decree (fatwa) may be issued by the committee of the Ulema (scholars of Islam). In Islam, state and religion are inseparable. The state has got to be controlled by religion. Hinduism and Buddhism as religions do not control the state. Religion does not prescribe the punishments etc for crime. State and the religion are actually entirely independent. In fact, an organised Church with a hierarchical structure never existed among the Hindus. Priests are more like private practitioners who may be invited for performance of certain rituals by the client. The basic relation between a priest and a householder is that of a specialist or professional and a client. Hence the priest is not entitled to do anything more than what he has been asked to do. He will advise only on those matters for which an advice has been sought and he receives his fee. If the householder does not like his advice, he may consult another practitioner. In other instances, priests are employed in the temples to keep the deity clean and looked after. There is no way a priest can control the state. In this system th ere is no scope for growth of theocracy. This is one of the reasons for development of sciences in ancient India.

The Legacy of Sanskrit

By Dr. S. Radhakrishnan

(source: Our Heritage. Orient Paperbacks 1973 pg 30-38)

संस्कृत A Recent survey of old archaeological relics in China and Central Asia has revealed that Sanskrit has been dominant in those regions for centuries. Some Sanskrit scriptures are reported to have been found on the great wall of China. Sanskrit texts are found also on the scrolls and scarves exchanged between the emperors of China and the dignitaries of other parts of Central Asia in the 16th, 17th and 18th centuries.

Some European and American Universities have chairs for Sanskrit studies. There is a growing interest in Indian thought in many parts of the world, in philosophy and religion; in psychology and psychoanalysis.

We have inherited a legacy, great and precious, but it is fatal to rest in the consciousness of having inherited something unique. The inheritance should be invested in new undertakings; we have to start new achievements. We must be ever engaged in the pursuit of truth. In the different spheres of the Sanskrit language, its literature, philosophy, religion, music, metaphysics, mathematics, astronomy, medicine and surgery, work is being done.

It cannot be said that the culture enshrined in the Sanskrit language is irrelevant to the modern conditions. The higher aspects of Vedic thought, and Buddha, Mahavira, and Ashoka also taught us to build a classless society where men and women, whatever be their status, are treated alike. The saints of different regions, Valluvar (Tamil), Vemana (Telugu), Basava (Kannada), Kabir-panthis, Sikhs, Raja Ram Mohan Roy and Gandhi in recent times, take us back to the essential dignity of man emphasized in the *mahavakyas of the Vedas* and insist on social equality and respect for human dignity. An adaptive culture is incompatible with static social structures. We have suffered in the past by our adherence to outmoded forms and habits. Social changes are necessary if we are to build a unified and progressive India.

The problem facing the world today is that of the conflict or co-operation among the different cultures. We had had a long tradition of peaceful co-operation among the different cultures. From the beginning of our history new groups have become steadily Indianised, the Sakas, The Kusanas, and the Pallavas. The arts and the crafts they brought with them have been respectfully accepted. Varahamihira in his *Brhat-samhita* says, " The *yavanas* (Greek) are verily *mlecchas* but this science is well established among them. Therefore they too deserve our respect even as our own sages."

" *mleccha hi yavanas tesu samyak sastram idam sthitam rsivat tepi pujyah syuh kim punar daivavid dvijah"*

Of the five schools of astronomy, two are known as Romaka (after Rome) and Paulisa (after Paul of Alexandria, A.D. 378). **We had no sense of cultural isolationism or intellectual bigotry which disdains to accept knowledge from different regions of the world.**

On the account of these characteristics, even religion has been perpetually adapting itself to the new challenges. The Vedic *samhitas*, the ceremonialism of the *Brahmanas* and the idealism of the Upanishads could not become popular with the masses. Different tendencies developed. Systems of thought, called heterodox because they did not accept the authority of the Vedas, grew up, like Jainism and Buddhism. In the Upanishads we find traces of free thinking which appealed to the masses. The conservative tendencies grew up on the basis of Vedic *sutras* and *vedangas.* There were tendencies which tried to reconcile the anti-Vedism of the heterodox systems and the revivalism of the conservative schools. The people on general followed their tribal creed. Their gods and goddesses were different from those of the Vedic pantheon. These popular beliefs were encouraged by the followers of the Vedas. The Vrsnis, the Satvatas, the Abhiras and the Yadavas worshipped Krsna who was the temporal head and spiritual preceptor of these tribes. Sometimes a conflict between the Vedic and the non-Vedic prevailed. The struggle between Indra and Krsna is symbolic of it.

Krsna's teachings are epitomized in the *Bhagavadgita*. There is no stress on the phenomenality of the world or the identification of the individual soul with the Supreme. Bhakti to Krsna is insisted on. The *Gita* asks us to work for *lokasamgraha*, world solidarity or progress. An active way of life, karma-yoga adopts renunciation in action and not of action. The Gita religion is one in which all people could participate. Despite geographical, climatic, racial, religious, and linguistic diversities, **India possesses a fundamental cultural unity.**

We talk about modernity. The people are trying to get rid of many of our old standards and ask for modern interpretation. I am also a modernist, but I believe that modernism consists in preserving whatever is valuable in our ancient heritage and discarding whatever is not of value. There are so many things which have come down to us and which do not constitute the glory of our culture or our country. There are others which are vital factors and which sustain our country. **The noted French writer Andre Malraux, said, " The problem of this century is the religious problem and the discovery of Hindu thought will have a great deal to do with the solving of that particular problem."**

We think we are democratic but the basis of democracy is sanctity of the individual, the divine possibilities which he has. The four *mahavakyas*, or great sayings, of the four *Vedas* have been given by Sankaracharya to the four established Mutts at Dwaraka, Puri, Badrinath and Sringeri.

The basis of democracy has come down to us from over five thousand years. The *Vedas* may have been written in 5,000 B.C. but were composed earlier. Anyway, what is called the democratic trend need not be regarded as something which we had to acquire from Western nations. These trends have been there.

The *Mahabharata* tells us:

guhyam brahma tad idam vo bravimi
na manusat sresthataram hi kincit.

There is nothing higher than man in this world. God transcendent is beyond us. God immanent is in man. Every human being must be regarded as sustaining the possibility of rising to the divine state.

Buddhism has its origin in the Upanishads. Kumarilabhatta says: *vijnanavada nairatmavadanam api upanisad prabhavatvam.* Every vijnanavada originated from the Upanishad. It is one resevoir from which, in different directions, things flow, and we have to understand the basis of unity which prevails. It is this reconciliation of all faiths that challenges the modern world. These different faiths are not to be regarded as opposites or contradictories. They are distinct or complementaries. They will enrich the human heritage, if we are able to get them together.

What is secularism - mistakenly called secularism - is really respect for all faiths; it is not giving up of faiths. Everyone should respect whatever is held sacred by any other individual. It is essential that we should not lose our moorings; we should not be absorbed or fascinated by the new-fangled ideas. What is happening today is that even the students do not have a perception of the values of our country. If you get them back to these things and make them understand that the fundamentals of our religion are most scientific, most democratic, most harmonious and most significant, so far as the historic process is concerned, we will be doing a valuable service.

Pan-Islam and Indian secularism

BY GNS Raghavan
August 25 2003

For a whole century now, since the partition of Bengal by Lord Curzon in 1905 to create a new Muslim-majority province in the east, Indian Muslims have been favoured with special treatment. For the British rulers, this was dictated by the Imperial policy of divide and rule. In the case of Mahatma Gandhi who led the national movement for three decades, appeasement of Muslims flowed from his advocacy of unilateral, non-reciprocal love: He would time and again ask Hindus to stand before any Muslim assailants bare-chested and to "die without killing". For the Congress party after Partition and Independence, mollycoddling of Muslims and Christians has been part of electoral strategy to win bloc votes in a system which makes the candidate who wins the largest number of votes, even if much less than a majority, the sole representative of a constituency.

A two-nation theory was implicit in the separate electorates provided for Muslims in the Indian Councils Act of 1909. This theory, promoted by the British, ignored the fact that, as Gandhi was to point out later to Jinnah, the overwhelming majority of Indian Muslims (like Indian Christians) are descendants of Hindu converts. This fact is obscured by the unfortunate habit of Muslim parents giving their children outlandish names derived from Arabia, Turkey or other West Asian country. In contrast, many Christian families have not felt ashamed to bear Hindu names or to retain the surname of their converted forbears. Among notable examples are Brahmabandhav Upadhyaya, a leader of the agitation against Curzon's partition of Bengal in 1905, who proudly described himself as a Hindu Catholic, and Joseph Cornelius Kumarappa of Tamil Nadu, a patriot who was an exponent of Mahatma Gandhi's pro-nature and pro-people economics.

Muslim separatism was unwittingly nurtured by Mahatma Gandhi when he extended support to the Khilafat movement though it was an expression of pan-Islam and a negation of nationalism. So keen was Gandhi on winning the goodwill of Muslim leaders that though he vigorously opposed boycott of British goods during his address to a Khilafat conference in Delhi on November 24, 1919, arguing that it was an expression of hatred, he reversed his attitude under Muslim insistence and made boycott part of his own eleven-point programme of non-cooperation.

When, after the failure of the Khilafat movement (the Turks themselves overthrew the Sultan and formed a republic), Muslims of Malabar known as Moplahs turned on their Hindu neighbours in an orgy of violence and forced conversions, **Annie Besant** commented: "We have been forced to see that the primary allegiance of Mussalmans is to Islamic countries, not to our motherland." **Gandhi, on the other hand, expressed regret that the Hindus of Malabar had failed to win the love of their Muslim neighbours.**

Both Nehru and Gandhi were irresolute in then-attitude to separate Muslim electorates. When the Lahore session of the Congress concluded on 1st January 1930, the time limit of one year set by the Congress for grant of Dominion status had expired. The all-party committee headed by Motilal Nehru had affirmed the

democratic principle of territorial constituencies, and envisaged Dominion status as the immediate goal rather than complete independence. Elated at the lapse of the report known after his father's name because he would not be content with Dominion status (which is what he eventually accepted in 1947), Nehru as Congress president consigned the principle of joint electorates to the waters of the Ravi.

By the time of Partition both Gandhi and Nehru had internalised the Two-Nation theory. This was strikingly demonstrated in relation to Jammu & Kashmir. Apparently finding it unnatural that a Muslim-majority State should accede to India, Nehru made his Government's acceptance of the Maharaja's accession provisional and conditional on ratification by a plebiscite to be conducted under the auspices of the United Nations. As for the Mahatma, he said at his prayer meeting on 25th December 1947: "The maharaja should clearly say that he is no longer the ruler: It is the Muslims of Kashmir who are the real rulers and they may do what they like."

The rest is recent history: Nehru, the founder of Indian secularism, confining the reform of family laws in the mid-1950s to Hindus, leaving Muslim polygamy and instant talaq untouched; his daughter Indira Gandhi - who got the 1950 Constitution amended retrospectively in 1976 to write secularism into its Preamble - drawing up a 15-point programme for religious minorities as if they need to be treated separately from other citizens; his grandson Rajiv Gandhi getting Parliament to nullify the Supreme Court's judgement in the Shah Bano case; and the last Congress Prime Minister, PV Narasimha Rao, conferring statutory status and the powers of a civil court on the Minorities Commission.

The BJP stands for equal rights to all citizens and appeasement of none. Yet such is the hegemony of Gandhi-Nehru minorityism on the Indian polity that the Vajpayee Cabinet decided on February 4, 2003, to continue the subsidy of Rs 12,000 on air travel to nearly 72,000 Haj pilgrims. Abolition of the patently non-secular Haj subsidy is not part of the minimum common programme of the NDA on which the BJP-led coalition rests. Clearly, the emergence of secularism in the true sense, which alone can promote the integration of Indian Muslims with their fellow citizens, must await better times.

Vedacharya from the West

By Gaurav Raina

http://www.timesofindia.com/300300/30intw1.htm

David Frawley**, a grand-disciple of Ramana Maharishi, is widely acknowledged as a Vedacharya. Also known as Vamadeva Shastri, he was conferred the title of `Pandit' for his pioneering research work in Vedic studies, yoga, ayurveda and jyotish in his institute in New Mexico, USA. Author of several books on Hinduism, his writings seek to contrast the generally flippant and dry academic presentations of western Indologists. During a recent lecture-tour of India, David Frawley spoke to **Gaurav Raina:

What do you find unique about India and Hinduism?

India is a greatly favoured land in terms of cosmic beneficence according to the Vaastu aspect of its geographical location. The Himalayas, or Meru Parvat, oversee the whole of India in the likeness of the prime *sahasrara chakra* in the human body. The *tapas* of so many yogis and mystics and the timely appearance of *avataras* and saints over thousands of years have greatly accentuated this spiritual potency. The Hindu religion is like a gigantic banyan tree with its refreshing, ever ramifying growth, change and variegation, which is a contrast to Western religion as a monolithic pillar.

In the Indian ethos the pursuit of consciousness has traditionally been given priority over the need to understand the visible material world. There are various yogic systems for realising this higher consciousness. There is also evidence of a yogic methodology in India's every sphere of learned activity such as in music, dance, poetry, architecture, astronomy and medicine.

Hinduism comprises of a multiplicity of sects and philosophies. Do you think such diversity is a cause for confusion ?

The Indian tradition is pluralistic and has always offered freedom of worshipping the divine in the name and form of one's choice and according to one's individual *samskaras*. It is pluralistic both at the level of religious practices as well as philosophical teachings. For this reason we find more religions inside Hinduism than among all of the world's religions put together.

Pluralism means freedom. It means that we should accept religious differences as a fact of life, like other natural variations. We need freedom to arrive at the truth. The pursuit of *dharma*, the urge for self-realisation and desire for liberation are common to all paths. Rather than as a cause for confusion, I see Indian pluralism as constructively facilitating an individual's spiritual quest.

Can one be rational and scientific and yet be religious and spiritual?

Unlike in the West, Indian sages never perceived science and religion as incompatible. Religion was viewed mainly as a way of knowledge -- *vidya* or *veda*, as a way of seeing, a philosophy. Knowledge is of two types. *Apara vidya* or lower knowledge is necessary for our practical functioning in life and deals with the outer world of name, form and causation. The second, *para* or higher knowledge is concerned with consciousness and the Absolute Reality.

Indian sages regarded higher knowledge as more important, but did not regard lower or outer knowledge as wrong or disharmonious. The science versus religion dichotomy that became dominant in Europe in the nineteenth century, never really existed in classical India. The Indian model therefore seeks to resolve rather than perpetuate the Western conflict between an immoral science versus an irrational religion. Even the different systems of philosophy in India were more like scientific theories meant to be debated rationally or explored and experienced through meditation. Religion can thus be seen as a higher form of science. Anyone who systematically practices prescribed ritual methods, meditation procedures and mantras, can experience higher states of consciousness and thereby validate his or her religious belief.

Why are the ancient scriptures today seen by many as mythical and fantastic?

The Vedas are composed in an ancient language of mantra, myth and symbol and utilise a rich poetic and imagistic expression. The modern mind being conditioned by contemporary thought and language lacks the necessary empathy and insight into the ancient texts. What we tend to regard as mythological in the *puranas* and *itihasas* was never meant to portray the actual state of things in time and space. These texts include not just the visible world in their scope but also the invisible worlds belonging to subtle and astral dimensions of existence.

If there are some apparent chronological inaccuracies in the scriptures, it is because sacred history takes into account the relationship between the temporal and the eternal and is less concerned with the actual dates of various events. This is in sharp contrast to the linear view of time held by contemporary historians who are ignorant of the relationship of time with the eternal. We should not approach the scriptures from the primarily academic standpoint of a historian, archaeologist or linguist; we should exercise an intuitive and meditative insight.

You are a former Catholic. What is your view of the recent incidents of violence against the Indian Christian community?

I do not consider the missionary form of Christianity an enlightened religion. Conversion activity is an assault on intellectual freedom and destroys native cultures as we have seen in Asia, Africa and the Americas. It is more like a sales gimmick which targets the poor and uneducated. Then there is also the history of the missionaries having sub-served European colonisers by providing a justification for their brutalities. The Catholic Church chose to be silent on the excesses of the Nazis and its tacit understanding with Mussolini, and more recently with Chile's Pinochet, are no secret.

Violence against Christians has been exaggerated a great deal by the Western media. Such backlashes have occurred throughout history all over the world. Missionary zeal tends to offend the religious sensibilities of people by denouncing their native religions as false and pagan.

To what extent are India and Indian culture misrepresented in the Western media?

Firstly India is greatly under represented in the Western media. Whatever little news we have emphasises poverty, social problems, human rights abuses and alarmist reports of military and nuclear policies. The entertainment and advertising aspect of the media is on the other extreme and treats everything Indian as ``exotic and erotic''.

Indians have failed to learn the lessons of effective media articulation. Hindu organisations have been labelled fundamentalist and often end up with a far worse image than they deserve. The Indian government too has failed to promote Indian culture and to lobby its case with the Western governments. In fact India's gurus have done much a better job than its politicians and diplomats, in projecting the country's image abroad.

I am concerned at the absence of a dharmic intelligentsia in this country. It is imperative that Indians free themselves from colonial, Marxist and missionary distortions of their culture. They need to stop playing apologist for the genuine cultural and spiritual aspirations of their people. They should reverse their blind and obsequious adulation of the West. The great spiritual traditions of India will be lost if its intellectual kshatriyas fail to wake up to the call of the information war and lay siege to the false apostles of religious freedom.

Krishna: Friend, Philosopher, Lover and Guide

By PARMARTHI RAINA

http://www.timesofindia.com/today/23edit5.htm

IN the month of *Magh* in August-September each year, *Janmashtami* is celebrated to mark the day Lord Krishna appeared on this earth at the end of *dvapara yuga* 5,000 years ago. To all Hindus, irrespective of their sectarian beliefs, Krishna is Almighty God, the supreme person. What sort of God is Krishna? What does He look like and what are His characteristics? How does He relate with us ordinary humans?

Does Krishna fit Michael Angelo's vision of God? Is He tall, strong and solemn, with long hair and a flowing beard, wearing an ankle length robe? Grand and awesome, one who invokes respect and terror; who is simultaneously compassionate and gracious, remote but attentive, benevolent yet impartial; kind but strict; for whom we should feel affection, gratitude as well as fear?

Krishna is the supreme personality of godhead, the absolute truth, the cause of all causes, the one without a second, the creator, maintainer and destroyer of all that be. Yet devotees see Him as the epitome of sweetness and love. They know Him as a beautiful and adorable infant crawling about in the nude; as a naughty child who breaks butter-pots and steals butter from the houses of the beloved inhabitants of Nandagaon; as a dutiful young boy who tends His father's cows; who plays practical jokes on the *gopis*, young women of Vrajadham, by hiding their clothes while they are bathing in the river; one who has amorous affairs with them as they willingly submit to His unsurpassable beauty and charm; and one who has 16,108 wives.

Krishna is known as the one who ever remains a young lad of sixteen even when over a hundred years old. As the one who enthrals the residents of Vrajmandala with captivating melodies from His flute. Who is addressed lovingly by the Vrajavasis by millions of intimate names like Gopala, Govinda, Nandalala, Yoshodha-nandan, Gopinath, Makhan-chor, Kanhiya, Madana-Mohana and so on. He is loved and adored as God, as master, as friend, as son and as lover.

The *Brahma Samhita* contains hymns sung by Lord Brahma in praise of Lord Krishna. Brahma describes Him thus: ``I worship Govinda, the primeval Lord, who is adept at playing on His flute, who has blooming eyes like lotus petals, whose head is decked with a peacock's feather, whose beautiful body is tinged with the hue of blue clouds, and whose unique loveliness charms millions of cupids. Around His neck swings a garland of flowers graced with a moon-locket; jewelled ornaments adorn His two hands in which He hold His flute. He always revels in pastimes of love, and who eternally manifests Himself in the graceful three-way bending form of Shyamsundara".

Rishi Parasrama, a great Vedic authority, has defined *Bhagavan* as the one who possesses completely the six opulences -- power, wealth, knowledge, fame, beauty and renunciation. Among

ordinary persons it is, perhaps possible for a few to possess one, or at most two or three, of these opulences to a large extent, but no one can possesses all six of them. Krishna qualifies as God because He has all the six opulences in infinite measure.

By definition, God must be the most lovable, the most attractive and alluring of all persons; and His abode must be the most excellent and most desirable of all places; and we would not want anything but to be with Him in His kingdom. Liberated devotees of Sri Krishna have attained to just this state of *sat-cit-ananda* or existence-knowledge-bliss, in His abode Gokula Vrindavana in the spiritual world, and of them the *gopis* of Vrajamandal are eternally established in *madhurya-bhava*, the most intimate and ecstatic of the five main possible relationships with Him.

Krishna's activities are mysterious and unfathomable. he abets in the abduction of His own sister, Subhadra, by His friend and cousin, Arjuna, and encourages their elopement. In the Kurukshetra war He breaks His promise by taking up arms to save His devotee Arjuna and persuades Yudhistra to tell a lie for tactical gain. He uses deception to retrieve the five arrows meant for killing Arjuna and his four brothers given to Duryodhana by Bhisma, in order to save the lives of the Pandavas. He is paramour of the *gopis* of Vraja, many of whom, including Radharani, were married. Inexplicable behaviour for one who professes to be God.

Krishna says in the *Bhagavad Gita* that the one who knows His true nature is indeed very rare and even the *devas* or gods, fail to understand Him. But that rare devotee, ``Who knows the transcendental nature of my appearance and activities, does not, upon leaving the body, take birth again in this material world but attains My eternal abode".

LOST TREASURES GONE TO 0

By Ambati M. Rao, Jayakrishna Ambati, Balamurali K. Ambati, Gomathi S. Rao
Rediff On The Net

December 30, 1999

'In science, more than in any other human institution, it is necessary to search out the past in order to understand the present and to control the future.'
- J D Bernal, Science in History

As we hurtle into a new millennium, we would do well to reflect where all those 0s came from. The greatness that was Greece and the grandeur that was Rome started their numeral systems at one. The Arabs brought the modern numerals, including zero, to Europe centuries ago. But while 1, 2, 3, are commonly and mistakenly referred to as the "Arabic" numerals, they actually originated in India, and are but one of many achievements that became treasures lost to the oblivion of history.

India is the epitome of diversity in all respects, geographically and culturally. From such diversity has bloomed the myriad blossoms of science and mathematics.
Indian science flowered long before the classical age of Europe and flourishes to this day.
India must be credited with the primacy of the invention of unaccountably finite principles and theorems that have been granted to later Arabs and Europeans. In celebrating India's contribution to learning we shall find a deep and long-nurtured reverent and respectful love of learning.

There is still much to be learned from ancient Indian science. The depths of the Vedas and other scriptures, as well as more "scholarly" extant work, offer much to the modern world of science. Indeed, we can all profit from an in-depth examination of ancient Indian science. Yet it is a sad testament to our community's inability to transmit our heritage to our youth that most of our youngsters don't know the difference between Brahmagupta and Brahmaputra.

This article focuses on some of the more important and relevant inventions and discoveries of ancient Indians and attempts to analyze the reasons why these scientists never received their due credit.

In the 16th century, there grew a tendency in Europe to trace scientific thought to the achievements of Mediterranean antiquity. This direct link between modern science and ancient Greece is increasingly perpetuated by a flourishing literature in the cause of a simplistic, but false, understanding of the history of science. Most Western historians preach the tale that a Greek miracle led to the dawn of science. The facts of older civilizations are cursorily covered and

mainly for the perverted purpose of showing why there was no real science before the Greeks.

Arnold Reymand echoed these sentiments well: "Compared to empirical and fragmentary knowledge which the peoples of the East had laboriously gathered together during long centuries, Greek science constitutes a veritable miracle."

However, historian Will Durant correctly observed: "Europe and America are the spoiled child and grandchild of Asia and have never quite realized the wealth of their pre-classical inheritance." Most Western study of ancient India has been a tunnel vision dominated by a prefabricated psychology. The parochial provincialism of mindless Eurocentrism has distorted the history of civilization as originating in Greece while summing up India's contribution in a line or two.

However, our own apathy in addition to Western neglect has led to the demise of ancient Indian science from the pages of history. The disguised racism of some historians notwithstanding, we must share the blame for this tragedy. It is imperative that we shed our ignorance and elucidate what for countless centuries has been buried in the recess of history.

India's most important contribution to science is nothing: the concept of nothing, or zero, is central to the understanding of all else. It is time that we raise out scientific heritage from what it is today: nothing.

No ancient civilization possessed more talent or accomplished more feats in mathematics than India. For instance, the most ingenious creation in all of mathematics, the decimal system, of which the famed mathematician LaPlace wrote: "It is India that gave us the ingenious method of expressing all numbers by 10 symbols, a profound and important idea which appears so simple to us now that we ignore its true merit. But its very simplicity, the great ease which it has lent to all computations, puts our arithmetic in the first rank of useful inventions; and we shall appreciate the grandeur of this achievement the more when we remember that it escaped the genius of Archimedes and Apollonius, two of the greatest men produced by antiquity."

These misnomered "Arabic" numerals appeared on the Rock Edicts of Ashoka (256 BC), a thousand years before they appeared in the Arabic literature. Even those few who know this fact know little more about the myriad contributions of Indian mathematics.

India's work in science is young as a secular pursuit but old as an auxiliary interest of her priests. Science started with the priests, originated in astronomy and mathematics governing religious festivals, and was preserved in the temples and transmitted through the generations.

Consider the most famous elementary theorem in mathematics: the so-called Pythagorean theorem, which states that the square of the hypotenuse of a right triangle equals the sum of the squares of the other two sides. The Sulvasutras (collection of rules concerning measurements) of Baudhayana (600 BC) describe this identity almost 200 years before Pythagoras: "The diagonal of an oblong produces by itself both the areas which the two sides of the oblong produce separately."

Aryabhata (476-520 AD), the father of Indian mathematics and astronomy, computed pi to

3.1416, a value not equaled in Europe until Purbach (1423-61). Pi is computed to 11 digits in the Karanapaddhati work (15th century) as 3.1415926535, a value not equaled in Europe until much later. More importantly, Indian mathematicians knew algebra at least as early as the 5th century AD Known as Bijaganitam, algebra (a corruption of the Arabic word Al-Jabr) was used extensively in astronomical calculations and referred to by Aryabhata in his treatise Aryabhattiya. This science was couriered to the West by the Arabs.

Trigonometry too was known to Indian mathematicians and astronomers before their European counterparts. It was used in India from the Gupta period (3rd century AD) onwards, and the Surya-Siddhanta (4th century AD) gives a table of sines.

Indian atomic theory greatly predates Democritus (430 BC). Kashyapa (aka Kanada), in his Vaisheshika Sutra, formulated an advanced theory of atomic structure in the 6th century BC. He also stated the principle of volume displacement long before Archimedes. Pakudha Kayayana (580 BC), a contemporary of Buddha, taught atomic theory by propounding the theory that undifferentiated potential matter (tanmatra) forms the universal energy of the cosmos by forming atoms.

Brahmagupta (598-660 AD) anticipated the gravitational theory: "Things fall to the ground not because of any inherent force within but because of the pull from the earth." A century before Brahmagupta, Varahamihira claimed that objects remain on the earth's surface due to an internal attractive force and that a similar force keeps celestial bodies in their positions. In fact, the ancient Sanskrit has a word for gravity --
Gurutvakarshan.

Aryabhata also proposed the heliocentric theory a millennium before Copernicus, who is generally credited with this revolutionary idea. In poetic form, Aryabhata stated that the earth's diurnal rotation on its axis produced the daily rising and setting of planets and stars. In fact, the Sandhya Vandanam (morning prayers to the sun), dating back to the Vedic age, contains numerous references to the sun as the center of the solar system.

Long before Columbus staked his claim that the world was round, Aryabhata recognized that the earth was spherical and Brahmagupta gave a figure of 36,000 km for the earth's circumference, not far from the actual value.

And a word about the game that is so popular among us Indians -- chess. It is so old that half the world claims it. Archaeologists generally believe it arose in India,where the oldest indisputable appearance in 750 AD. The word chaturanga became transformed into the Arabic shatranj and finally chess.

We hope the foregoing non-exhaustive recital will serve to kindle pride and interest in our collective heritage.
Trying to forge links with the past without teaching about our contributions is akin to planting cut flowers. Parents must pass on knowledge about our past to our youth, much like a relay race, lest our leaders of tomorrow grow bereft of vital knowledge and become rudderless in an information-driven world.

The Ambati family has conducted the Educational Excellence Program, for middle and high school students, for the last decade. These free classes are held every Saturday at the Swaminarayan Temple in Flushing, New York.

A time to fast with faith

By P.V.L.N. RAO

http://www.hinduonnet.com/thehindu/fr/stories/2003022801260600.htm

AMONG THE hallowed trinity of the Hindu pantheon, Lord Siva evokes equal devotion but more fear than Vishnu and Brahma. This is because, when provoked Siva opens his third eye (the Sun, the Moon and Agni are the three eyes) thereby causing widespread devastation. Hence the concern of the devotees to convert the God's fierce temperament into graceful benediction.

Mahasivaratri, which falls on Magha Krishna Chaturti (March 1, this year), is the grand night of Siva's marriage to Parvati. The festival is popular throughout India, especially among Saivites who celebrate it with faith and fervour. People fast the whole day and spend the night keeping awake (gambling which goes on in some places is a misconceived aberration) singing bhajans, playing drums and dancing, thus creating a holy ambience all around. Unmarried girls fast the whole day propitiating Lord Siva (Ardhanareeswarar) for granting them an ideal husband.

The number five has special significance for Lord Siva; while Panchakshari ("Om Namasivayah") is his core mantra, the five Siva lingams corresponding to Panchabhutas (five divine elements) are considered most sacred. They are Kanchi Ekambareswara temple Prithvi (Earth), Thiruvanaikoil (near Tiruchirapalli) — Apa (water), Thiruvannamalai (North Arcot District) — Tejas (Fire), Chidambaram (South Arcot), — Akas (Ether) and Kalahasti (Andhra Pradesh) — Vayu (Air). Siva is always worshipped with Panchamruta — a mix of milk, butter, curd, honey and sugar.

While the sitting and dancing Siva (Nataraja) is the deity in some places, worship of the Lingam is common throughout the country.

Kedarnath, Kasi Viswanath, Sri Saila Mallikarjuna, Draksharama Bhimeswara and Rameswaram are the most popular pilgrim centres.

For Chennai, the Kapaleeswarar temple is a landmark, while the ancient Dandiswarar (Velachery) and Marundiswarar (Tiruvanmiyur) temples also draw huge crowds, especially during Sivaratri.

A German scholar, Gustav Oppert argued that while Saligram represents the feminine aspect, the Sivalingam is symbiotic of masculine energy.

Swami Vivekananda rebutted this explanation and traced the reference to the Atharva Veda: "The worship of the Siva Lingam originated from the famous hymn in the "Atharva Veda Samhita", sung in praise of the Yupastambha, the sacrificial post which gave place in time to the Siva Lingam and was deified to the high Devahood of Sri Sankara".

This stambha represents the Vedic concept of the brightness of Siva's body, his matted hair and blue throat and His riding on the Nandi, the bull.

Along with celebrations, worship and fasting, is *bhang*, the favourite drink of Lord Siva, which is a `must' for many Saivites.

According to a legend, Lord Siva although married to Parvati, is an ascetic living in the forest. It is

interesting to know that at one time Kashmir Muslims took part in the Sivaratri celebrations of pandits.

The festival would begin three weeks in advance and culminate on Sivaratri day. Unfortunately, this major manifestation of communal harmony no more exists.

One can only hope for the revival of this healthy practice not only in Kashmir but throughout the country, highlighting that all festivals are meant to promote brotherhood and harmony and not hatred between religions.

Toilet Seats Sport Hindu Gods

www.rediff.com

Sittin' Pretty, a Seattle-based manufacturer of designer toilet seats, may find itself in the hot seat with the Hindu community in the days ahead.

This morning, the American Hindu Anti-Defamation Coalition stumbled across the fledgling firm's Web site (sittinprettydesign.com) and, much to their chagrin, discovered their Sacred Seats product line.

The seats, which have bold images of Lord Ganesh and Goddess Kali emblazoned on the bottom of the lids, are available for $130 and come in three colors: bright red, royal blue, and black.

"All toilet seats are completely functional," the Web site explains. And "three coats of waterproof clear coat protect the art, as well as make the seats completely washable with a non-abrasive cleaner."

"They should stop doing this at once," Vijay Pallod, a spokesperson for the AHADC said angrily. "This is nonsense. It's absolutely the wrong place to put our gods."

Pallod also pointed out that the product line's exclusive focus on Hinduism is another cause for concern.

"They say the Sacred Seat collection, but when you look at the site only Hinduism is featured," he observed. "That doesn't make any sense to me. If you're going to call it that, why not pick up all the religions? So we don't know why they are doing it."

Repeated phone calls and e-mails to Sittin' Pretty by the AHADC and Rediff.com went unanswered today. But a Dun & Bradstreet business report revealed the company was founded in 1999 and employs two people. Lamar Van Dyke is listed as a partner and the company does not appear to have a distribution presence beyond its Web site.

Pallod said the AHADC will give Van Dyke time to reply to their first overtures. “The first thing we do is talk to the people politely and present our views,” he said. “Many of them stop right there. But if they don’t, we can involve lawyers and begin protests.”

The San Diego-based AHADC has already carried out several successful campaigns to end the insensitive use of Hindu deities in the United States. Most recently it convinced Fortune Dynamic, a California-based company, to stop importing shoes from Taiwan imprinted with images of Hindu gods and goddesses.

Responding to AHADC complaints, a topless dancing bar in Texas ended their use of Radha and Krishna iconography in their advertisements and stage shows this year.

And shlokas from the *Bhagavad Gita* were also clipped out of an orgy scene in the video and cable television version of Stanley Kubrick’s *Eyes Wide Shut* after AHADC protests.

“This has been happening for a long time, but we’re getting more assertive and proactive now,” Pallod said. “We have the tools and the conviction to talk to them and change their minds.”

India to emerge as major regional power by 2015: Report

India will emerge as an unparalleled regional and economic power by the year 2015 and its growth along with China and Russia may form a "de facto geo-strategic alliance" to counterbalance US and western influence, a US National Intelligence Council projection for 2015 has said.

The size of India's population --1.2 billion by 2015 -- and its technologically driven economic growth virtually dictate that India will be a rising regional power, it said.

The report also points out that the international community will have to deal with the military, political and economic dimensions of the rise of China and India and the continued decline of Russia.

The future being contemplated by intelligence officials is part of a long-ranging forecasting endeavour compiled in the National Intelligence Council 2015 Project which seeks to come up with a range of scenarios the world could face then.
The council is made up of senior analysts who advise Director of Central Intelligence George J Tenet. The study was
undertaken in consultation with a wide range of think tanks and non-official experts.

Among developing countries, India will remain in the forefront in developing information technology, led by a growing class of high-tech workers and entrepreneurs, the report says.

"India's relatively strong educational system, democracy and English language skills position it well to take advantage of gains related to information technology," the projections reveal.

India, nevertheless, faces enormous challenges in spreading the benefits of growth to hundreds of millions of impoverished, often illiterate citizens, particularly in the northern states.

"India will strengthen its role as a regional power, but many uncertainties about the effects of global trends on its society cast doubts on how far India will go. India faces growing extremes between wealth and poverty, a mixed picture on natural resources, and problems with internal governance," it warned.

India to be No 1 knowledge hub by 2025

India has the potential to become the number one knowledge producing centre in the world by 2025, going by the way that things are moving. It is a story of lilies in the pond, where intellectual capital keeps doubling," said R A Mashelkar, the director-general of Council for Scientific and Industrial Research.

Delivering the 33rd ASCI (Administrative Staff College of India) Foundation Lecture in Hyderabad, he observed that the winds of technoglobalism (a strong interaction between the internationalisation of technology and the globalisation of the economy) were bringing about a silent revolution in India.

"India is on the march. Interesting transformation is taking place in the country. It is great time to be in India and interesting to see the changes that are unfolded here," he said, adding that the demographic shift in the western world meant that a country like India with relatively favourable demographic profile with a large portion of working and talented young people could become a global innovation hub."

"More than 100 companies around the world have set up their R&D centres in the country in the last five years and India offers real and unique opportunities for becoming a true global R&D platform," he said.

"For a dollar that is invested here you can go so many miles, where you can't go anywhere else in the world. It is going to be the land of opportunity. There is a world-class technical manpower. India's emergence as a global R&D hub has a social, economic, political and strategic significance," Mashelkar pointed out.

Analysing the possible impact of this on 'brain drain,' he said that a normal scientist would love to stay in India, provided he was given a challenging job here and all this would become possible as India became a great R&D hub, with the world's best companies doing their most challenging R&D in India.

"Another implication of this would be that there would be enhanced competition among institutions and firms to seek the best brains to work for them. This will automatically mean that the institutions will really have to create an intellectually stimulating, rewarding and hassle-free environment," Mashelkar analysed.

Mentioning the drugs and pharmaceuticals sector, in which India has the potential to become an R&D destination, the CSIR director-general said: "The increased emphasis on diseases for the poor coupled with the setting up of global health funds implies that there is a scope that India can

become a destination of the creations -- global knowledge for global good through global funding."

The Beauty of the Vedas

By Paul William Roberts - "Empire of the Soul: Some journeys in India." Pg 299 – 325
http://www.amazon.com/exec/obidos/ASIN/1573226351/o/qid=947163138/sr=8-1/103-4559356-3757423

" In the beginning the Divine Will arose,
This was the first seed from the Creator's mind
Those who can see deeper by putting their mind and heart together as one
Found the underlying essence of all existence was deep
beyond all that exists,
Found the non-existent existing in the existent."

- RIG VEDA 10.129.4

The Vedas are the quintessence of classical Hindu philosophy. Thinking with your heart; loving with your mind. All yoga and meditation aim to attain this goal. Anything else is delusion, or worse. And when the heart sees, it sees the unknowable, nameless, formless, limitless, supreme God. He is called the nonexistent because he is eternal, beyond existence. God manifest is the fabric of creation itself. They are one.The heart that learns to think realizes this truth and merges into the eternal oneness. As William Blake put it, " If the doors of perception were cleansed, everything would appear as it is, infinite."

This merging with the Eternal, this inner transformation, this direct experience of Truth – these are the goals of which the Vedic sages speak. They explain the nature of the universe, of life, while admitting that Creation itself is the one unknowable mystery. To the Vedic sages, creation indicated that point before which there was no Creator, the line between indefinable nothingness and something delineated by attributes and function, at least. Like the moment before the Big Bang Theory. These concepts preoccupy high wisdom, the Truth far removed from mere religion.

Recent research and scholarship make it increasingly possible to believe that the Vedic era was the lost civilization whose legacy the Egyptians and the Indians inherited. There must have been one. There are too

many similarities between hieroglyphic texts and Vedic ones, these in turn echoed in a somewhat diluted form and a confused fashion by the authors of Babylonian texts and the Old Testament.

In the **Hymn of Creation,** (Rig Veda 10.129.3)

In the beginning there was darkness,
Utter darkness, darkness upon darkness,
The world then was merely its primordial essence, its formless fabric.
Thus what would become this world was first wrapped within the
All pervading power of the Eternal One
Before whom our material world is but a trifle brought into existence
By the omnipotent force of His will alone.

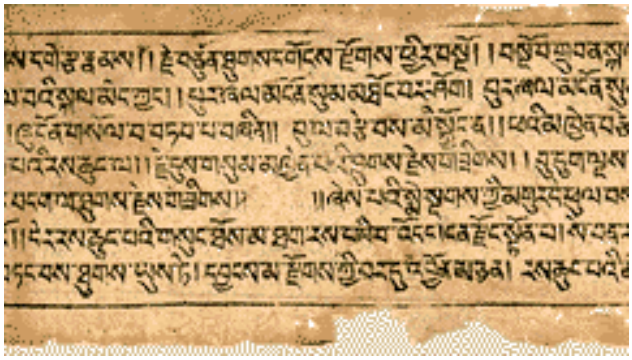
Yet the Vedas go further, being philosophy, or really spiritual sciences, rather than myth.

Who truly knows, who can honestly say where.
This universe cam from
And where it will vanish to at the End?
Those godlike wise men who claim they know were born long
After the birth of Creation.
Who then could know where our universe really came from?
And whoever knows or does not know where Creation came from,
Only one gazing at its vastness from the very roof of the final

Heaven-

"Only such a one could possibly know,
But does even He know? "

The Bible begins with the Creation. Before the Creation, however, there was the Creator, but does even He know what was there before He existed ?Long before such philosophical questions occurred to other historical peoples, Vedism posited the existence of something more ultimate than the one God. Whatever must have created Him. ***That*** is presuming the absolute and basic reality. Or is it? Long before such philosophical questions occurred to other historical peoples, Vedism posited the existence of something more ultimate than the one God. Whatever must have created Him. ***That*** is presuming the absolute and basic reality. Or is it?



This is mysticism that is simultaneously metalogic and the kind of thing those bardic sages living some twenty-five thousand years ago thought about a great deal, according to Hindu tradition. The Vedas are the very first compositions mankind produced dating back at least twenty thousand years. Most orthodox historians and anthropologists strongly dispute such a view. They confuse writing with civilization and deny meaningful history to any people who did not leave a written record. A rich culture does not

necessarily depend on writing, as the Celtic civilization proves. **They are the most sophisticated, most profoundly beautiful, and most complete presentations of what Aldous Huxley termed the "perennial philosophy" that is at the core of all religions. In modern academia, of course, there is not supposed to be any "ancient wisdom".**

The Vedas go much further in outlining the nature of reality than any other religious texts still in use. Some Vedic hymns paint the exquisite glories of the natural world: the preternatural beauty of predawn light, its rosy fingers holding the iridescent steel-blue sky; some celebrate the welcome cool of evening the scented breeze of a calm and refreshing night, its basalt dome studded with shimmering pearls and diamonds.

Beauty permeates them, a reflection of Truth.

The Vedas hold within them enough information to rebuild human civilization from scratch, if necessary. I think someone did believe that might be necessary one day.

The Vedas still represent eternal truth in the purest form ever written. And they are what drew me to India in the first place, what kept me there, and what draws me back still. Technology has certainly evolved at a rapid pace in the last century, when man began to gauge the quality of a civilization according to its level of technological advancement. However, **Arnold Toynbee**, the greatest historian of his age, maintained that the test for a major civilization was its fostering of a major religion. The human race, in fact, reveals a marked deterioration in the quality of its advancement over the past five hundred years. It's made no progress. Yet progress has become a secular religion - even after Progress had advanced to the point of enabling mankind either to blast the planet into a radioactive wasteland or to poison it into uninhabitability. Better health care and global communications cannot be considered worth this kind of cost.

After Darwin, who was, to be fair, misunderstood, the concept undermined those sciences that developed around the same time as the theory of evolution - notably archaeology, evolution -as-progess became intrinsic to the very thinking process of Western man, conditioned into him from early childhood on.

Above all, the notion of advanced civilizations, of "ancient wisdom" existing long before written history even began, was complete heresy in the Church of Progress. The great cultures of Old Kingdom of Egypt and the Indus Valley were admired for the impressive remains they left, yet dismissed as ignorant and superstitious tyrannies dominated by megalomaniacal rulers obsessed with constructing monuments to their egos and subjugating the masses with mumbo jumbo. There is not a shred of evidence to support such a view, say, Old Kingdom Egypt.

The architectural achievements from such civilizations are feats of science and beauty that have never been equaled. Could evolution-as-progress be supported by a look at the Great Pyramid of Giza, the massive Temple of Amon at Karnac compared to ....what? The Empire State Building? Canary Wharf? The CNN Tower? Marshall McLuhan once wisely observed that you could determine a society's major concerns by observing for what purpose its largest building was constructed?

It is at this moment, according to their own internal evidence, that the first hymns of the Rig Veda were composed and passed to this new species, our distant ancestors. **The level of understanding, knowledge,**

and wisdom contained in the Vedic hymns does not just spring out of nowhere. Nor does the language containing these, mankind's loftiest thoughts. The great Rig Veda, in ten thousand verses, contains an astounding stock of some thirty-five thousand words, all of them imbued with great elasticity and enormous potentiality for the coming of new terms.

For the Vedic sages, the three great Realities were Creator, Creation and Language - all sacred, all interlinked.

It is said in Hindu scriptures that the gods themselves envy human birth, because only within time is there free will and movement. Eternity in the Vedas is utter stillness; it exists entirely outside time, conceived of as that point where the future meets the past. There is no stable principle of evil in Vedic philosophy. There is no infernal realm for sinners. Its nondualism is really beyond monotheism - which creates a fundamental duality of God and man. Evil is not envisaged as a quality opposed to good. It is the absence of good, just as darkness is the absence of light, not its opposite quality.

The level of understanding, knowledge, wisdom contained in the Vedic hymns does not just spring out of nowhere. Nor does the language containing these, mankind’s loftiest thoughts. There is no stable principle of evil in Vedic philosophy.

There is no infernal realm for sinners. Its nondualism is really beyond monotheism – which creates a fundamental duality of God and man. Evil is not envisaged as a quality opposed to good. It is the absence of good, just as darkness is the absence of light, not its opposite quality.

Truth behind all ephemeral truths. The Creation leads us to the Creator, to the highest knowledge, which is integrated into one. Like the Creator, human beings create, but humankind's creations are separate from humans themselves. Thus Vedic God is an architect whose structures all exist ***within*** him. Nothing can exist outside the Supreme Reality, and it in turn is within all:

" It is always moving, yet it never moves.
It is infinitely far away, yet it is close,
It is within all of this creation,
And yet it is beyond everything."

- YAJUR VEDA 22.5

Vedic terminology for "creation" implies that it is the steady process transforming ***asat***, the unmanifest, into ***sat,*** the manifest. In this sense, the entire-space-and-time continuum, all the vastness and infinite variety of creation, exists within the existence of the Eternal One - as if it were a concept in his mind. God is also called ***hiranyagarbha,*** the "Womb of Light."

" The Womb of Light existed before there was any other thing. It gave birth to all. It is the sole ruler of all existence, maintaining and upholding everything between earth and heaven. To the Lord alone, and to no others, we should offer all our love and respect."

- RIG VEDA 10.121.2: ATHARVA VEDA 4.2.7

This Supreme Reality is not a mere abstract concept of philosophy, either. It is a reality of the Vedas, whose invocation and evocation are essential for the whole process of spiritual growth and the fulfillment of life. God is a dynamic reality that should concern an individual every moment of his life. we forget this, or ignore it, but many hymns remind us that God never neglects us.

" God is always near. He never leaves. But near as He always is, no one and no thing ever sees Him. Such is the great Art of the Lord - Poetry that is deathless, songs that will never seem old. "

- ATHARVA VEDA 10.8.32

Vedic Invocations, which are deemed animistic and crudely pagan by many scholars, merely invoke God through his attributes and functions. He is the Force behind all of nature's mighty forces, the Light behind the light; the Terror behind the terror; the Delight behind delights' the Ultimate Activity behind all activities. Similarly, God's various names in the Vedas are the one God viewed in terms of his attributes, functions, and nature. There is no real suggestion of anything besides the One.

The Yajur Veda (60.17) states that, removed from the context of its creation and its relationship as the ruler of souls, the Ultimate Reality would have only one name: Om which is written in Sanskrit and pronounced more like ***Aum*** and represents the utterly comprehensive syllable, embracing within it the scope of the complete phonetic alphabet containing the potential to create, sustain, and bring about dissolution.

Saint John's account of the Creation begins at an earlier moment than the Genesis account, and its similarity to Vedic writings is startling.

Comparison between a great deal of Jesus' actual teachings, as recorded in the Gospels, and Vedic spiritual science continues to fascinate scholars. Considering controversies caused by material in the Dead Sea Scrolls, as well as other texts suppressed or even quite clearly falsified, it seems foolish to dismiss any speculations.

But Western scholars have tried to ridicule the Vedas.

To subjugate and destroy a culture, of course, which is a major facet of every imperial adventure, you have to regard it as worthless, savage, and primitive.

" He is without any form, yet dwells inside and outside all things
With form and shape,
Yet He is entirely free of error, faultless and pure.
He is far beyond anything a human body can comprehend.
And being the Divine Poet. He is inspiration itself. "

He maintains peace and harmony because He is both peace and harmony made manifest.

Yajur Veda 10.8

" He is present in all places and rules everywhere.
His power controls utterly all the three regions:
Earth, the Middle-Air, and the highest heavens.
One foot is rooted in things we understand:
But the other rests in a realm of deep, dark mystery,
A place far beyond the knowledge of mankind."

Artha Veda 7.26.4

" He is substance of every great eternal law,
And He can be perceived in the universal forces of life.
His presence is there in the vast seas,

Across the teeming earth,'
And in the soaring mountain peaks."

Rig Veda 4.40.5

Hardly polytheism. Long before the burgeoning Hindu pantheon; long before Siva, Vishnu, Rama, Ganesh, Parvati, Saraswati, Laxmi, and the 35,999,993 others, this is the God of the Vedas, and religion in its most pristine form.

A TRIBUTE TO HINDUISM

articles on hinduism

Touch of harmony
By Bruce C. Robertson
http://www.indiaserver.com/thehindu/1999/08/15/stories/1315079b.htm

It was a momentous event in Maryland when the Greater Baltimore Temple and Community Centre was formally inaugurated. This brings to reality an eight-year dream of the immigrant community there, says BRUCE C. ROBERTSON.

A MAJOR festival in the religious life of Baltimore, Maryland, took place last year. The Greater Baltimore Temple and Community Centre was formally inaugurated in a murti pranapratistha sthapana in which six deities were consecrated - Siva Lingam, Durgama, Ganesha, Saraswati, Nandi and Hanuman. In April this year more deities - Radha, Krishna, Rama, Sita, Lakshman and Balaji - were consecrated. In May, Svetambara and Digambara Jain munis performed pratistha ceremonies installing a murti Mahavira.

These uniquely momentous events bring to fruition an eight-year dream of an immigrant community in Baltimore to define itself by establishing a public place of worship and a cultural centre. Like so many others (African-American, Italian-American, German- American, Korean-American, Muslim, and Sikh, to name only a few), they have moulded this multi-culturally rich, economically vibrant, international, university town as house of worship and community centre - this is the American way.

Americans are a very religious people. We attend church, synagogue, mosque, mandir and gurudvara in record numbers. Conservative religious groups are growing the fastest, largely at the expense of the so-called "mainline" Christian denominations such as the Episcopal (Church of England), Presbyterian, Methodist, and Lutheran. Islam is one of the fastest growing religions.

Religion is "in" among university students. At the John Hopkins University, a group of American-born Indian-American Hindu students study the Bhagavad Gita together once a week. Muslim students read the Quran in a dormitory room. Bible-study and prayer groups meet regularly. The ecumenical chaplain's office is one of the busiest on campus. The other side is that religion in America is big business.

There are over a million Hindus in America, with seven Hindu temples in the Baltimore-Washington-northern Virginia area alone. The Greater Baltimore Temple and

Community Centre may be unique for its latitudinarianism. There is perhaps no Hindu temple in India like it.

A quick glance at the names on the temple committee suggests a profile of the temple congregation (this is the word we use here for religious aggregations) - Andhras, Bengalis, Delhiites, Gujaratis, Maharashtrians, Malayalis, Orians, Punjabis, Tamils, Saiva, Sakta, Vaishnava and Jain, including some of the mid- Atlantic region's most distinguished architects, physicians, lawyers, academics, engineers, managers, entrepreneurs, and private citizens.

Commanding (in symbol and in fact) the high ground overlooking the Finksburg Shopping Centre, the Greater Baltimore Centre is situated among working farms in some of Carroll County's most scenic countryside. This is the trend among many affluent religious communities located outside urban centres, attracted by relaxed zoning laws, favourable local tax and building codes, and low crime environments. In America, a shikhara (temple tower) is an eye-catching backdrop to a Roy Rogers and Pizza Hut.

Mistaken for a synagogue, even a Mexican restaurant, it is unmistakably a mandir blended into the very conservation, nominally Christian rural farming community. The 22,000 sq.ft. building is an eloquent statement of inventive Hindu architectural adaptability that the Vastu Sastra would surely sanction. Chitrachedu Naganna, Praful Vani, Nikhil Sheth, Jaya Bansal, Satyam Chary, Ashok and Jyoti Kumta, as well as other members of the temple committee, have repeatedly emphasised to me that this Hindu-Jain congregation is committed to reaching out to the surrounding non-Hindu community.

Again, like many religious community centres in America, the Greater Baltimore Centre performs a dual role of being a religious education-cultural and a community centre to local non- member organisations, typically groups like the Boys and Girls Scouts, Alcoholics Anonymous, school tutoring, family support agencies, proliferating "Save the whale" or "the Chesapeake Bay" environmental and other special interest groups. The only rules are: no alcohol and no meat.

Uday Purushe, of Laurel Design Alliance architects, a graduate of the J.J. School of Art in Mumbai, who primarily designs retirement communities (some for the aging Indian-American community), described some of the difficulties in designing a Hindu temple in America. Aside from keeping within budget, building codes required separate security, electrical, heating and air conditioning systems for the community hall and the mandapa. Even then homas had to be performed outside the mandapa in five brick-lined homakundas under a specially erected shamiana so that the fire alarm would not go off.

The temple is in the Oriya style, modelled after the Lingaraj temple of Puri. The mandapa

occupies the east wing (in compliance with rubrics in the Matsya Purana, according to P. V. Kane's monumental History of Dharma Shastra), with the garbha griha (sanctum sanctorum) directly under the shikhara. The shikhara itself is high enough to be seen clearly from the highway about a half-mile away, though low by Indian standards. The vimana is also lower than in South Indian temples. Around two front sides of the complex there is a canopy. Windows appear to be dressed in the "Hindu-style" with rajagopuram-like stepped ledges atop columns. The masonry exterior is painted beige with salmon trim and accents.

Distinctly American touches include tinted, plate-glass windows along the front lobby area, a concession to both the vagaries of mid-Atlantic weather and local canons of ornamentation, a circular dirveway leading to the temple entrance, and a well- lighted parking lot, and all within pleasingly landscaped grounds. Purushe has also completed the design of a new Swaminarayan temple in New Jersey.

The three-day sthapana was presided over by six mahants and seemed to follow the general outline that Kane gives for the consecration of immovable (sthirarca) murtis.

The acharya of sthapaka, was Sri Thanga Bhattar, former chief priest of the Meenakshi temple in Madurai, who had come from Thailand where he had presided over another temple opening.

I attended the maha abhishekham on the last day with my oldest daughter and son, Aimee and Andrew. We arrived as a procession of devotees bearing kalashas on their heads was returning from the homa ceremony in the shamiana. It reminded us of the procession of palms last Palm Sunday, another cold and rainy day. In the mandapa, families, many with little children, were gathered, teenagers off by themselves, young women in colourful saris and salwar kameezes, and a few young men dressed, with begrudging congruity, in kurta, docksider slacks and chappals. Coloured pennants were strung connecting the garbha griha with the homa garh outside.

I was mesmerised by the chanting of slokas, the cadences, the retroflex nasalisations, the allitervative, liquid soft, sesquipedalian, civilised sounds, in much the same way I love plainsong in my own tradition, especially when it is a sonorous baritone voice, sound, sabda, the eternal word of advaita vedanta, recalled to mind the words of the Taittiriya Samhita "Vac, Speech, once upon a time escaped from the gods, and settled in the trees. Her voice still resounds in wooden instruments." I have a recording of Jesudass chanting selections from the Bhagavad Gita and Rig Veda. I heard a live recitation of the Quran recently and it was also moving.

The acharya chanted while the assisting pujaris bathed and dressed first the lingam then each of the other deities. Chanting, bells and incense, this was very "high church" as we would say. Sitting at the back I understood about as much of what was being said as I, a Protestant, did back in the pre-Vatican II days of the Catholic Latin mass. Yet, or perhaps because of this (as though sacred processes are profaned by our comprehension) a sense of the sacred, of the holy, was palpable as congregants watched and listened, a few whispering (japa) the chanted slokas. On a cold, damp winter day in central Maryland, U.S., a beautiful wooded hillside was transformed into a sacred grove, hallowed ground.

The singing of bhajans at the end brought me back to an awareness of a community at worship as individuals, then family groups joined in. Worship is contagious and we left reflecting upon the significance of the pageant.

Stone writ could hold key to Ayodhya

12TH CENTURY INSCRIPTION HAS VERSES ON RAM AND REFERS TO 'UNIQUE TEMPLE'
AMBIKANAND SAHAY & VINAY PANDEY
http://timesofindia.indiatimes.com/articleshow.asp?art_id=919876434

NEW DELHI/PATNA: A 12th-century stone inscription recovered from the debris of the disputed structure at Ayodhya could hold the key to the resolution of the temple-mosque imbroglio.

Experts believe the 20-line inscription comprising 30 verses in Sanskrit said to have been embedded in the lower portion of a wall of the structure that was demolished on December 6, 1992 could provide conclusive proof of the existence of a Ram temple at the site in the 12th century and even earlier.

Although little has been heard of the inscription, believers in its "magical" power to resolve the dispute include hardcore Sangh Parivar elements as well as religious leaders among them Puri Shankaracharya Swami Swaroopanand Saraswati who have been working for a solution to the problem outside the VHP umbrella.

A leading proponent of the "inscription as key" theory has been Acharya Kishore Kunal, who took voluntary retirement from the IPS recently and is now vice-chancellor of the Kameshwar Singh Sanskrit University, Darbhanga. In his younger days as an IPS officer working in the Union home ministry, he acted as the Centre's negotiator for the Ayodhya dispute.

Acharya Kunal, who was behind the renovation of the Hanuman temple at Patna, has been arguing that the authenticity of the inscription could be verified by an independent organisation like UNESCO. Once that is done, he says, it would be easier to persuade the Muslim leaders for a solution.

According to an article published in the journal, Itihas Darpan, in 1996, the inscription is written in the Nagari script which was in vogue in the 12th century. The inscription (verse 5) pays obeisance to the "janmabhumi of that incarnation of Vishnu which possesses the highest and most desirable glory in this world and whose splendour was constantly enhanced by performing thousands of brave deeds". There could be little doubt about this incarnation being Ram.

The inscription (verse 21) refers to a temple of Vishnuhari built by King Nayachandra. It says that stone slabs, chiselled out of solid boulders brought from the mountain peaks, were arranged to form "a unique temple the like of which had not been constructed by any other previous king". It adds that the temple was crowned with a golden kalasa (copula) lending great beauty to it.

The inscription refers twice to the Gahadavala king, Govindachandra, who reigned in this part of the country from 1114 to 1154 AD. Nayachandra appears to have been a vassal of the Gahadavala king.

The 1.10m x 0.56m buff sandstone, found broken into two pieces from the debris of the demolished structure, was inspected by a team of experts from the Archaeological Survey of India in March 2000 under instructions from the Lucknow bench of the Allahabad High Court. It has since been kept at the Ram Katha Kunj under the seal of the high court. Ram Katha Kunj, which was the office of the VHP in the Janmabhumi complex, prior to the demolition, is now part of the land acquired by the Central government on January 7, 1993.

Delhi's ancient iron pillar faces a modern predicament

Tara Shankar Sahay in New Delhi

http://www.rediff.com/news/1999/jul/26dilli.htm

White patches have begun appearing on the ancient iron pillar in New Delhi which for over 1,600 years has been regarded as a metallurgical wonder by defying rust and the vagaries of nature.

It stands proud and defiant, an exotic relic of an extravagant past. The iron pillar, located at the centre of the Quwwatul Mosque in the historic Mehrauli area, continues to confound tourists, puzzled at how such a piece of ancient craftsmanship has stayed rust-free. It is said to have been built during the golden Gupta dynasty. The pillar stands next to the world-famous Qutb Minar.

According to A K Khanna, assistant superintendent engineer of the Archeological Survey of India, leading metallurgists from all over the world have paid glowing tributes to the skills of the ancient Hindu craftsmen who had apparently mastered the science of metals.

Khanna revealed how, **baffled by the pillar's capacity to "stave of rust," noted British archeologist Sir Alexander Cunningham sent a sample from it for chemical analysis and it turned out that it was made of pure -- 99.9 per cent -- malleable iron. "But nobody, till today, has been able to establish how the science of metallurgy had reached such heights in the reign of King Chandra II Vikramaditya of the Gupta dynasty," he said.**

Historians also appear foxed about the specific date of the pillar's origin. An inscription on the pillar in the Pali script mentions it as Vishnudhwaj (symbol of the Hindu god Vishnu) on the top of the mound known as Vishnupad (Vishnu's feet).

British historian Vincent A Smith in 1897 studied this inscription but was amazed at another inscription lower down. While the inscription at the top of the pillar indicates it was King Chandra's monument of victory, another further down mentions King Anang Pal II of the Chauhan dynasty who ruled in northern India during the late eleventh century.

This has predictably led to some confusion. A lot of myths have also surrounded the pillar. Dr Munish Chandra, former additional director-general of ASI and noted scholar, has sought to sift legend from reality.

In the previous centuries many devout Hindus came to believe that the mighty Bheem (the mythological strongman of the Mahabharata) lifted the pillar with his right hand and impaled it in the ground. "This grew into a legend and the reverential Hindu masses readily lapped it up," Dr Chandra contended.

The pillar is a solid shaft of iron, 23 feet 8 inches in length. Its diameter varies from 12.5 inches at

the top to 16.4 inches on the ground. **Asked to elaborate on his research, Dr Chandra emphasised that the pillar was surrounded by an image of Lord Vishnu, which was probably removed by the Muslim invaders.** This explains why the Muslim rulers let it remain at the centre of the Quwwatul Mosque.

It was subsequently discovered that the pillar was not cast but painstakingly constructed by a welding process.

British historian Percival Spear, through his researches, was able to determine that there was a statue attached to the pillar but he failed to identify it.

Even after the passage of 15 centuries, the iron pillar remains as much an enigma as it was after King Chandra's reign. However, the widespread Hindu belief that it was impaled there by Bheem has resulted in a peculiar problem.

As each day hundreds of curious Indian tourists try to encircle the pillar with their hands (according to Hindu legend, to do so will bring good luck), white patches have begun appearing on the lower portion. An alarmed Khanna cautioned, "Man has destroyed many historical monuments. We must take care not to damage this iron pillar which is a universal crowd-puller."

One does not know whether Khanna's cry for preservation will go in vain or better sense will prevail. Be that as it may, King Chandra's pillar continues to be a source of edification and mystery: a true tribute to India's powerful heritage.

Need for cultural pride - Revival

Rizwan Salim

Publication: The Hindustan Times
Date: September 20, 1998
http://www.hvk.org/articles/0998/0045.html

India's social problem--rampant corruption to exploding population--can disappear and the nation can become great almost overnight if most Indians, especially the people on top in every domain of activity, are made to undergo just one mental transformation: Acquiring intense cultural pride. Yes, vigorous cultural pride has the power to create great individuals and great nations. Intense and well-informed cultural pride can be a very strong force animating ancient historical civilisations such as India. A people, if intoxicated enough with arrogant pride in their history and culture, can go on to achieve greater glory. The Japanese and the Chinese, the French and the Germans possess a surfeit of cultural pride-and a sense of cultural superiority. Consider their achievements over the centuries and in recent decades.

Given the reality that Hindustan is the longest surviving ancient civilisation and Hindus have to their credit so many unccountable and such astonishing achievements of architecture and painting. music and dance, poetry and drama. epics and narratives, intellectual systems and philosophical doctrines, healing systems and mind-body disciplines, Hindus of every caste and class today should have possessed a well-informed and well-developed, intense and, fully conscious cultural pride. But one of the principal tragedies of contemporary India is that the majority of even the educated and otherwise affluent Hindus do not possess a deep and extensive knowledge of their culture-and do not give evidence of an intensely felt cultural pride.

From the earliest surviving Gupta period temples of the fifth century to the grand Moghul monuments and Rajput palaces, Hindustan has more than a thousand year old tradition of stunningly beautiful and awe-inspiring architecture. Yet so lacking in cultural pride have Indian architects been, that after 1950 they eagerly adopted the European Leftwing architects' Bauhaus style, the architecture of ugly concrete boxes. Now they slavishly follow the currently fashionable West "Post-Modern" style that developed out of the Bauhaus. There has been no authentic Indian architecture now, structures replicating shapes and forms, motifs and decorative elements of ancient Hindu temple and Moghul and Rajput palace art.

India's English as well as regional language novel writers who grew to literary maturity after 1950, had they absorbed the Hindustani cultural tradition in depth and were ambitious for their talent could have written authentic Indian novels that would have been ranked, in time, with the best and most enduring of the British and American, German and Russian fiction-so

overwhelmingly varied is India's human reality and so much potential has Indian life for engendering great novels.

Mentally crippled by their own feelings of cultural inferiority, India's novel writers (in English mainly but also in the regional languages) slavishly follow the Leftist-invented style of writing and themes of the contemporary Anglo-American fiction writing, the most degenerate school in the history of European letters. Western Leftists favour novels with amoral, inhuman and anti-heroic themes expressed in ungrammatical and fractured language. Beautiful prose is repugnant to ideological Leftists.

So complete is the alienation of India's English language fiction writers from their own culture, they seem incapable of creating emotionally satisfying and deeply pleasurable novels. **They write fiction to please influential Leftwing book critics in England and America, not those with good literary tastes at home and abroad. There is nothing genuinely Indian in so many of these "Made for Export" novels.**

Lacking profound cultural knowledge and intense cultural pride, India's intellectuals regard the fashionable ideas and ideologies *>from Europe and America as unquestionably superior to Bharat's* thousands of years old Hindu culture and wisdom. Following the West's dictates in domains ranging from polity to economics, jurisprudence to genetics policy, India's intellectuals do not bother to find out if there might not be ideas and insights in ancient Hindu philosophy, intellectual systems and texts better than the West's. Why must we always let some American or German
argue, for example, that the Mahabharata is as good a guide for a modem business manager and a politician as compared to an ancient
Hindu king? There is no authentic Indian response to the intellectual questions and moral dilemmas of the modem world. There is no genuinely Indian view of world events and trends today. India's politicians in power over the years evidently have never felt a surge of cultural pride to create university programmes and institutions where Bharat's culture, texts and tradition can be rigorously and exhaustively studied to the highest international academic standards. Hindustan does not have enough institutions for the scholarly study of Hindu culture. The
institutions that do exist are not of the first rank because they were never generously funded (by government or philanthropists)
to do excellent work. There are not very many scholars of high ability and international reputation in India today who illuminate Hindu culture and Hindus' past great accomplishments. It is an embarrassing truth that the best Indologists are found in the Netherlands and Sweden, Germany and France, Japan and Italy-not in Delhi and Ujjain, Varanasi and Puri, Madurai and Mysore.

India's big city universities do have resident scholars doing dedicated research in humanities. Instead of educating us - and the world-about the profundity and the originality of Hindu thought, and the imaginative power of Hindu arts, they prefer to research with great seriousness works of second rate intellectual system builders and third rate writers and poets of Europe and America.

An intense cultural pride follows from an intense cultural consciousness: A powerful attraction to one's own culture and cultural practices. An intense cultural consciousness is not evident in most

Indian men and women Performances of India's classical dances and drama, instrumental and

vocal music are not as widely held or well-attended as would have happened had a strong interest in the nation's refined culture of temples and royal courts existed among most Indians. Cultural pride also means guarding against any loss of the culture's vitality. A number of energetic and powerfully affecting village and tribal folk art forms, including festivals and rituals, customs and ceremonies, dances and drama, music, and songs, jatras and trance induction techniques are on the verge of extinction (or have vanished already) from all over the country. There is no extensive and focused national effort to prevent the disappearance of the very vital folk tradition of Hindustan.

Indian society very urgently needs a class of brilliant culture leaders: Men and women who possess a deep knowledge of Hindu culture and the subcontinent's history; who have insights into what is imaginative and profound, what is worth preserving in our culture. These self-chosen culture leaders should go around the country, giving lucid but forceful orations, educating the people about the great qualities of their culture and creating a robust cultural consciousness in the majority.

U.S. Policy Should Acknowledge Hindu Nationalism

By Sarita Sarvate

Sarita Sarvate is a writer for India Currents and other publications, and a contributing editor to Pacific News Service, from which this piece originated.

March 6, 2002

http://www.newsday.com/news/opinion/ny-vpsar062612927mar06.story?coll=ny%2Dviewpoints%2Dheadlines

LONG MARGINALIZED, Hindu nationalism is becoming mainstream in India.

The recent burning of an Indian train headed for Ayodhya, the birthplace of the Hindu god Ram, has once more flared Hindu sentiments in the subcontinent.

During a recent visit, I found liberals and intellectuals, jet-setters and slum dwellers, men and women, Brahmins and untouchables expressing this Hindu pride.

I think it is history's revenge for a land that was subjugated by foreigners for more than a thousand years.

It was Mahmud of Ghazni from Afghanistan who first came roaring through the Khyber Pass around 1000 A.D. to destroy the magnificent Hindu temple at Somnath. These early Muslim rulers of India were soon followed by other dynasties, all with connections to Afghanistan.

Because of its polytheistic, pacifist and non- proselytizing nature, Hinduism became vulnerable to the coming of Islam. Muslims ruled India until the 1600s, when the British took over.

Hindutva, or the Hindu fundamentalist movement, originally began in the back alleys of my hometown of Nagpur in 1925, in the wake of India's struggle for freedom from British rule. Through the recitation of stories of native heroes like Shivaji, who had successfully fought guerrilla warfare against the Mughal despot Aurangzeb, the movement strove to incite nationalistic pride in a people who had lost their identity.

The 1947 partition of the country at independence from Britain created deeper wounds in the Hindu psyche. Later, America's support for military dictatorships in Pakistan and the simultaneous marginalizing of India, the world's largest democracy, kept the Hindutva movement alive.

Now, the war on terrorism has opened these 1,000-year-old wounds once again. Indians, who were hoping for strong American rhetoric against Taliban-incited terrorism in Kashmir in the wake of Sept. 11, were sorely disappointed. Many Hindus today believe that U.S. concern for victims of terrorism is limited only to its citizens, and does not extend to innocent Indians.

Most Indians I spoke to clearly believe that Kashmir - a majority-Muslim region between India and Pakistan - belongs to India.

This nationalistic pride was revealed to me when a Bengali friend - who hails from a cosmopolitan and Westernized

family and whom I had always looked up to during my formative years for guidance on American literature, art, music and pop culture - told me about a recent pilgrimage she had undertaken to the holy city of Varanasi. As she was bathing in the waters of the Ganges, she said, what struck her was not the spectacle of hundreds of little Hindu temples dotting the river bank, but the shadow of the enormous mosque built by Aurangzeb still towering over the holy site.

In that instance, I realized that what Hindus need today from the international community is an acknowledgment of the legitimacy of Hindu nationalism in a historical context. Such understanding is essential for any agreement on Kashmir that will pass muster with Indians.

Indeed, more than 50 years after independence from Britain, many Indians invoke memories of past invasions so that future generations will not be too pacifistic.

"You can turn the other cheek for only so long," a female friend commented during my visit. "Sometimes you have to show the world that you are proud."

Educated women seem to be on the forefront of the Hindu nationalistic movement today. Many now join peasants in their annual trek to the Kumbh Mela and other spiritual gatherings.

Unless future American foreign policy takes Hindu nationalism into account, violence in the subcontinent may well escalate, and might lead to a military, even a nuclear, conflict.

Standing in the visa line at the Indian Consulate in San Francisco recently, I noticed the large picture of the Taj Mahal covering an entire wall. **"Isn't it ironic," I said to a friend, "that the one icon most people identify with India happens to be a Muslim tomb?"**

"I wish they would use a picture of the Minakshi Temple instead," she replied. The temple is Hindu.

And then we both fell silent, surprised by our own non-secular sentiments.

But such sentiments are not uncommon among Indian immigrants, many of whom believe that America needs to take a more favorable stance with regard to India, the world's largest democracy, vis-a-vis Pakistan, a military dictatorship harboring Taliban terrorists.

WOMEN OF INDIA—ANCIENT AND MODERN

—By Hon. Sir C. V. Kumaraswami Sastri

http://www.geocities.com/Athens/Academy/5185/2-2women.html

"There are," observes Fielding Hall in his beautiful book, "One Immortality," "three loves that make and keep the world—the love that binds man and woman into one flesh and soul—the love that draws families into nations—the love that holds the world to God. Each is justified in its own immortality. All our life that is worth living is the expression of one or more of these loves, all our religion is an attempt to explain them, all our hope is in their immortality." The force of these loves is dynamic both in the life of individuals and in the history of nations and their proper appreciation is essential before one can understand a people correctly. The position which women occupy and the part which they play in the East, have been engaging the attention of historians and statesmen. In spite of wars, conquests and revolutions, religious and social, the history of India presents a continuity which strikes the most superficial observer, but it is a great mistake to suppose that social and political life in India has not changed during the progress of centuries. There can be no world without tradition nor any life without movement and in India where the effort of sages, philosophers and poets has been to find a concrete and perfect embodiment of the ideal system of values, we find types of men and women representing changing ideals, from Gargi and Maitreyi, learned in religion and philosophy, to Seeta, Savitri, Damayanti, and Draupadi representing chastity, tactfulness, modesty, devotion, patience, self-abnegation and all those virtues so prized in India.

"Women in Ancient India" aims at presenting a picture of the social and religious life of women and the part they played in Ancient India during the Vedic and the Heroic periods, i.e., women referred to in the Vedas and the Puranas, the Ramayana and the Mahabharata. The scope of the work is thus clearly set out in the preface:

"In discussing women under the different conditions of daughter, mother and widow we shall endeavor to trace the source of each type from the Vedic times and by following the successive development through the ages and commenting on the various episodes drawn from the hymns and poems. We shall avoid the dullness of merely studying the customs and laws taken by themselves. Her national character thus established, we shall further describe the part women was permitted to play in the legendary times which have come down to us, in the mysterious tales contained in the Puranas, in the heroic periods reflected in the Epics and in the Court of Malwa and it customs, revealed to us in drama and in story."

Position of Vedic Women

There can be little doubt that women occupied a high place in the social life of the Early Aryans.

The milder and more beneficent forces of nature were addressed as female deities and invoked with prayers. Loving care and protection were accorded to women both in her parent's and her husband's home. In the marriage Mantras the husband welcomes the wife with tender affection and hopes of a happy future for her and she is asked not to be the submissive slave of her whims but the mistress of the house, shedding joy and comfort all round.

" 'Come,' exclaims the husband, 'Oh deserved of the Gods, beautiful one, with the tender heart, with the charming look, good towards your husband, kind towards animals, destined to bring forth heroes. Let there be happiness in our home both for bipeds and quadrupeds. Oh Generous Indra, make her fortunate. May she have a beautiful family; May she give her husband ten children; May he himself be the eleventh. Reign with thy father-in-law, reign with thy mother-in-law; reign with the sisters of thy husband; reign with their brothers.' "

The value of women in relieving suffering is recognized in the Vedas. "A woman," says a hymn, "is more firm and better than a man who is godless and not charitable. She discerns the distressed, needy and the thirsty; and is godly herself "(Rig Veda, 5, 61, 67). The great law-giver Manu places women on a high pinnacle and describes them as "the ornaments and the light of the house, the very receptacles of grace and glory" and he summarizes the duties of married life by saying "Let mutual fidelity continue till death, this is the law of paramount importance as regards husband and wife."

Vedic Women Learned

The author is mistaken in thinking that "Manu did not recognize woman's right to lift up her soul to God, to strengthen herself by prayer for her duties, to purify herself by penance." The duty of obedience to her husband and to look upon him as almost divine in no way supports the view above quoted and both in the Vedic and Heroic periods we find women learned in the Shastras and seeking salvation by study and contemplation.

A great portion of the book is taken up with the women who figure in the Ramayana and Mahabharata, and though to those who have read the original Sanskrit the descriptions and remarks may appear not to do full justice to the beauties of the originals, the author has given us a very fair description they played. What a wealth of contrast is there between Seeta and Draupadi and how nobly have all the heroines referred to in the book acted in all situations, whether in prosperity or adversity, whether old or young.

The title of the concluding chapter of the book "Women in the court of Malwa" is rather misleading.

The heroines of Kalidasa are women of the heroic age and they can no more be said to be women of the Court of Malwa than Cleopatra can be said to be a woman of the Court of Elizabeth because Shakespeare wrote about her. The author, in ascribing the decadence of the high ideal as to women revealed in the primitive Sanskrit literature to Pantheism, the Krishna cult and the enervating influence of Islam, is theorizing on insufficient data and imperfect knowledge of the various currents of Indian religious thought. Pantheism can no more account for any decadence than monotheism.

The early Christian fathers held women in no high regard and Saint Augustine called them the "gateways to hell." Even so late as the sixteenth century John Knox, the celebrated reformer,

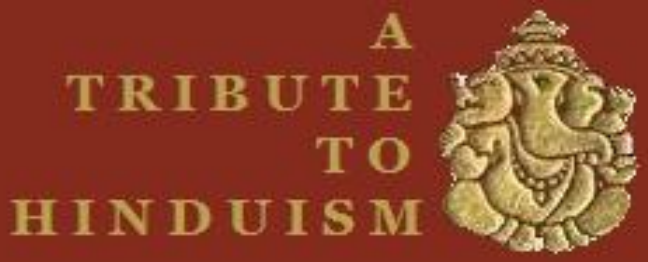
wrote: "To promote a woman to bear rule, superiority, dominion or empire above any realm, nation or city is repugnant to nature, contumely to God, a thing most contrarious to His revealed will and approved ordinance, and finally it is the subversion of good order of all equity and justice. ....Nature, I say, doth paint them forth to be weak, frail, impatient, feeble and foolish and experience hath declared them to be inconstant, variable, cruel and lacking in the spirit of counsel and regiment." Martin Luther advised persons to marry wives who would be good housewives and thought women "a frail vessel, the silliest of God's creatures." Yet these divines can in no sense be said to be pantheists or devotees of Krishna.

Pantheism had developed and taken deep root in Hindu religious thought long before the Mahabharata took the shape it now does, and yet women described in it occupied a high niche in the ideals as to women's status and function in the body social. In the Anusasana Parva it is said: "Respect, kind interest and everything agreeable should be given to the maiden whose hand is taken in marriage. * * * Women, Oh, King, should always be worshipped and treated with affection. There where women are treated with respect the very deities are said to be filled with joy. There where women are not worshipped all acts become fruitless. Women deserve to be honored. Do, ye men, show them honor. The righteousness of men depends on women."

The Ascetic Ideal

It is difficult to find any one cause for the changing values as to social relations between men and women which we find in every nation's history and if any dominant reason for any decadence were to afford a workable hypothesis, the ascetic ideal which gradually found a large place in Indian religious thought would afford a sufficient explanation. The early Aryan conquerors of the Vedic and Heroic periods had little cause for being pessimistic or to regard life as an evil. Their prayers were for more power and dominion, for strength, joy and happiness in the enjoyment of their conquered lands. The period of introspection came long afterwards and the uselessness of material endeavor when sorrow, suffering and sin found so large a place in man's life called for remedies. The chief remedy suggested by Buddhism and adopted by Hinduism on the Hindu revival after the decline of Buddhism was the attainment of bliss through cessation of attachment to material objects of joy—and as woman was, whether as wife, mother or daughter, the greatest obstacle to such detachment, she was gradually regarded as an enemy to emancipation and so to be avoided. This explanation accounts for the low place which women took both in the writings of the monotheistic Christian fathers and divines and the Pantheistic Hindu authors of the later Puranic period.

Bengalee Women



"Women of Bengal" is a study of the Hindu Pardanashins of Calcutta by Margaret M. Urqhart, who displays considerable knowledge of the inner life of Bengal Pardanashin ladies. It deals with the social and religious life of the women of Bengal and affords interesting reading. The Bengalees are a gifted and emotional race and as Western thought and culture gained root in Bengal earlier than in other parts of India and found a fruitful soil there, the Bengalee women are naturally more progressive than their sisters in other parts of India, and the study in contrast between the orthodox and the progressive types is much more interesting. Between the Pardanashin Gosha ladies bound down by tradition and mother-in-law rule and the "reformed" ladies emulating their Western sisters, the difference is wide and sometimes disconcerting. The

book reveals several beautiful aspects of Bengalee orthodox life and manners and one almost wishes that the change that is sure to sweep away the pieties and graces of the old order will be gradual and discriminating.

A study of the two books, while affording interesting reading and useful knowledge, is sure to give room for much anxious thought. Women in the social economy of the East by no means "Fades from the view a cipher of man's changeless sum of lust past present and to come" and the progress of India, social and political, must in a large measure depend on the direction which reforms take as regards the position of the sexes and the part woman plays in the social and domestic economy of the race. It is difficult to accept that the ancient ideals will remain unchanged by long and constant association with the modern progressive tendencies of the West, and the demand for independence and equality both social and political; and the only question is how the change is to be effected so as to retain all that is good in the past and avoid changes unsuited to the genius of the nation. A cynical friend of mine once remarked that if Seeta had been more "manly" and had stood out against the injustice and suffering undeservedly imposed on her, the lot of Indian women through the ages would have been better. Like all remarks of cynics there is no doubt a grain of truth in the remark, but who would wish Seeta, the concrete and perfect embodiment of all that is noble and true in Aryan womanhood, to be otherwise than she was. It is sad to think that in the conflict of the Eastern and Western ideals a great many of those mysteries and pieties of life which have been sanctioned by the reverence of ages will have to give place to the forces of noisy and aggressive ambitions. To such of those who clamor for immediate reversal of the ideals of the East, a study of these two books will supply much room for thought.

Let us hope that whatever changes may be in store for Indian women, they will be based on those ideals which have formed the glory and greatness of Indian women through countless generations.

Politics of Conversion

By Shripaty Sastry

A RETROSPECT CHRISTIANITY IN INDIA BY
http://rbhatnagar.ececs.uc.edu:8080/~archives/hvk/books/Retrospect_of_Christianity/index.htm

Indeed in the whole of the Christian-Hindu strained relationship there has been no greater cause of friction than the Christian campaign of conversion.

When the one who is in an advantageous position seeks to force his conception of God and the Universe on the other who is in a vulnerable position, when the one strikes at that which is deepest and most precious in the heart of the others he invites resistance. The Christians of India are converts or descendents of converts whose conversion had been' secured during some period of history by force or fraud; conversion by persuasion is a rarity. Voluntary change of faith prompted by spiritual motives, nobody objects to. The Rev. Tilak, Pandita Ramabai are of such type. Change of faith did not diminish their love of India's cultural heritage. But how are whole villages converted en mass in no time? Are mass conversions prompted by any spiritual motive? Voluntary change of faith is preceded by great psychological revolution; nobody abandoned Hinduism that way.

Most of the converts have been victims of threats, allurements financial stringency, ignorance, deception and persecution. The less said the better about the role of the sword in securing recruits for the gospel. it is an ugly past. The Hindus who had gladly given asylum to the Jewish wanderers, the exiled Parsis and persecuted Christians found themselves victims of proselytisation by Christians.

For quite a long time there had been a continuous decline of Hindus in number; when under the British religion became the basis of representation, the missionary movement acquired momentum. Even a small increase in Christian population and a decrease among the Hindus would bring in its train a chain of troubles, political and social. What ails India's north-east is this factor. It is the political consequence of the supposed religious conversions.

There is something unhealthy in the whole missionary idea. To go to a people like the Hindus, a race of high culture and a long tradition with philosophical, ethical and religious systems ante-dating Christianity and to go avowedly to save its people from damnation is certainly something grotesque! Humanitarian and philanthrophic works are only excuses to enable themselves to go near their victims to tear out the ancient religion from the simple and trusting hearts.

Gandhiji wrote "Conversion now-a-days has become a matter of business, like any other. I remember having read a missionary report saying how much it cost per her head to convert and then presenting a budget for the next harvest".
He further maintained "If I had power and could legislate, I should certainly stop all proselytising. For Hindu households, the advent of a missionary has meant the disruption of the family, coming in the wake of change of dress, manners, language, food and drink". What Gandhiji wanted to stop, viz. Conversion has been held by the Christian missionary as his basic religious right. The best of them, Mother Teresa, justified it very recently in an interview by saying that, 'Conversion is a change of mind by love' Remove the tapestry of the language, it is aggression an the Hindu society. Therefore, a Hindu cannot condone conversion and he must not.

A large part of Asia has gone Islamic and another large chunk communist. Their doors are closed for Christian missionaries to storm in. So, India has emerged as a fertile grazing ground. Christianity is, now working overtime trying to convert our people, particularly the tribals. The rich white missionary agencies are making use of the country's poverty and social ills to further their ends. They offer temptations, a cardinal sin, in order to effect conversions The Baptist missionary in North-Eastern belt, for example, reward with cheap polyester trousers to those tribals who change their religion; with motor bicycles if they also help their brothers to be converted. In Madhya Pradesh as the Neogy Report showed, the missionaries give small loans of say five or ten dollars to the tribals on interest, loans which they know could not be easily paid back but the payment of which can be waived off if the debtors accepted Christianity.

On more sophisticated levels, they run schools arid dispensaries, asylums and orphanages and engage in so- called social work. Since the basic motive is proselytisation or creating congenial climate for poselytizers, these services are tainted and poisoned. Social work has now become big business. It is not disinterested philanthropy. To a superficial observer the Christianity centres appear not only quite harmless, but as the very embodiment of sympathy and love for humanity. Words like service, human salvation flow endlessly from their speeches. The ultimate objective is to
de-Hinduise. The people of our country, simple and innocent as they are, are taken in by all these things. The sweetest of tongues is accompanied by the sharpest of teeth. Is it not arrogance going in the garb of humility? It reminds me of the story of Pootana, an evil woman who made a show of motherly affection and wanted to breast- feed infant Krishna. But it was not milk but poison.

Unity in Diversity
By Milind Sathye

Introduction

The very foundation of Hinduism is the principle of unity in diversity. This principle of unity in diversity binds India together, despite the fact that it's a huge country with a huge population and with diversity of physical features, races, languages and religions. The population of India comprises of six main ethnic groups namely, the Negrito, Proto-austroloids, Mongoloids, Mediterranean or Dravidian, Western brachycephals and the Nordic Aryans. India has as many as 1652 languages and dialects. The constitution recognises 15 major languages. The major religions of India are Hinduism, Islam, Christianity, Buddhism, Jainism, Sikhism, and Zoroastrianism. The Indian attitude towards all living things grows out of the Hindu view of the unity or oneness of all life. Majority of Indians are Hindus. Hinduism , the scholars say, is not a religion but a way of life. Hinduism respects the right of all living beings to live. This right is brought into practice through the principle of non-violence in thought and non-violence in action. Hinduism therefore shuns all kinds of aggression. Mahatma Gandhi, voted as the man of the century by USA Today, was a living example of this Hindu thought.

Unity and Diversity in The Hindu Thought

The Hindu view of oneness of all life flows from every Hindu Scripture. It must be clarified that Hinduism does not have a founder or a prophet and hence Hindu Scriptures are a collection of the wisdom of many great thinkers of the Indus valley, evolved over thousands of years. The important among these are:

· *The Vedas and the Upanishads:* The oldest of the Vedas, the Rig-Veda, begins with a prayer that let noble thoughts come to us from all sides. Upanishads which form part of the Vedas are the real foundations of Hinduism. Upanishads proclaim that the universal spirit resides in all being, whatever be their form *(Ishavasyam eedam sarvam)*. "The Ultimate Truth or Knowledge" means the realisation that these outer appearances or forms are deceptive and that in essence all living beings are one and interconnected with each other. Ignorance *(maya)* may prevent one from realising this fact. Schopenhauer, the 19th Century German philosopher, remarked 'In the whole world there is no study so beneficial and so elevating as that of the Upanishad…The study of Upanishad has been the solace of my life and it will be the solace of my death'.

· *The Ramayan and Mahabharat:* These two great epics of India also extol the virtues of universal brotherhood and compassion not only towards fellow human beings but towards all living beings. The *Mahabharata* contains *Bhagwad Gita* (the song celestial) which is the gospel of philosophic Hinduism. It is like a manual for human conduct to dispel *Maya* (ignorance) and realise the Ultimate Truth, which is the oneness of all Beings.

Unity and Diversity in the Hindu practice

The thoughts are brought in to practice by Hinduism in several ways. Notable among these are:

· *Not tolerance but fellowship:* As the great Hindu scholar Vivekanand said 'tolerance is blasphemy. It connotes superiority over the one who is tolerated'. Hinduism believes in fellowship, equality, togetherness or acceptance and not tolerance. Through out the ages, Hinduism has abjured exclusiveness and has assimilated the elements of several extraneous cultures.

· *I am OK, you are OK:* Instead of taking a judgemental attitude that says I am OK, you are not OK, Hinduism accepts and respects all religions. The temples constructed by the Ramakrishna Mission wherever in the world have symbols of all the religions of the world depicted on it signifying the respect of Hinduism for all religions.

· *Look not for differences look for similarities:* The Hindu view that there is a single life force that exhibits itself in many forms, insects, animals, trees, and humans (of all hues and colour) tells that the focus needs to be shifted from picking difference to identifying similarities. Those who have seen ABC's documentary on Zubin Mehta televised on Sunday 1st April 2001 would have heard him say that 'it is my Indian heritage that taught me how to co-exist and create a great symphony.'

· *Not 'divide and rule' but unite and progress:* The Hindu view is non-aggressive or non-threatening in all walks of life. Hence the people of Indus valley have never harboured territorial ambitions. The Hindu practice of 'yoga' is very popular in western countries. The word "yoga' literally means 'union' or 'togetherness'.

Conclusion

It can thus be seen that the people of Indus valley advocated inclusiveness and the oneness of all living beings many thousand years ago. Unity in diversity was operationlised by the Hindu's through advocating and practicing of non-violence.

In every Hindu home just before dinner the following Sanskrit prayer is said which sums up so beautifully the Hindu view towards all living beings.

Om Sahanvavatu, Sahanaubhunaktu, Sahaviryam Karvavahai
Tejasvinavadhitamastu Mavisdvishavahai.

(So let us think together, let us act together, let us be victorious together
For we all belong to that great light, where there is no place for hatred).

Writing Indian History

By Dr. Gautam Sen

Date: January-February 2002
http://www.hvk.org/articles/0602/198.html

The current dispute over Indian history and the behaviour of some of its protagonists is little short of hilarious. The sheer arrogance of the implied claim of India's Stalinist historians to some absolute moral and legal title over historical truth is hard to credit. The underlying contention that the raison d'être of historical writing has been accepted universally as the examination of **variegated class struggles** is breathtaking in its impudence, since nothing could be further from the truth.

As the writer V. S. Naipaul has pointed out, it constitutes an arbitrary espousal of some "higher truth" (i.e. the transcendent objective primacy of class struggles over all other forms of ascription) that is parochial, to say the least, if not downright perverse. The manner in which this claim is being put forward also borders on something akin to racist contempt for rival claims. The failure, in turn, of rival claimants, the alleged Hindu fascists, to argue an alternative view cogently does not make it false. Their gut feeling on some basic issues is in fact perfectly defensible, but their failure to argue coherently and scant regard for established scholarly conventions make them easy targets.

I have now thrice heard parroted virtually identical scripts by historians from Delhi University and JNU. The refrain is the incorrigible stupidity of the protagonists of Hindutva and the alleged universal abandonment of earlier historical canons by all right thinking, sane intellectuals. This supercession includes, among other things, the periodisation of Indian history as Hindu, Muslim and British. Obviously, any periodisation involves simplification because it is a form of shorthand that only captures broad contours, but that does not necessarily render it either untrue or useless. The likes of R.C. Majumdar and Jadunath Sarkar are loftily disparaged in scholarly work by innuendo and complacent resort to the latest in fashionable ontologies and methodologies. In public debate their names are dishonestly misused to dismiss a lesser breed of provincials daring to dabble in the antecedents of their forbears. This is evidently a forlorn endeavour for those who have apparently not mastered the Chicago style of footnoting, leave aside the profundities of critical theory and intricacies of deconstruction; deep thought, in other words.

Not wishing to spoil a good story the Stalinists are also apt to regale subliminally racist Western audiences. One leading Delhi historian hysterically denounced the present Prime Minister of India in a seminar at the London School of Economics as, I quote, “a closet fascist” and “Hindu fundamentalism” as anti-Semitic. The latter canard is repeated unfailingly, on the basis of evidence that is so scandalously thin that one wonders about their claims on other issues in which scholarly expertise is claimed. One might be forgiven a sneaking suspicion that the real alarm, underlying all of this hand wringing in the interests of truth and justice by these ethereal cosmopolitans, is the fear of an empowered Indian state resisting the prevailing international political and military order.

The Stalinist insistence that past invasions of India were inconsequential is novel in the extreme since such a belief about the meaning of military conquest is embraced by historians nowhere else. Yet this remarkable fantasy is now an axiom that has taken hold among a majority of American and British academic specialists working on India as well. They are also engaged in a chorus of denunciation of Hinduism and its political manifestations as a calamity only barely exceeded by Nazism. The Islamic conquest of India, by contrast, is regarded as no worse than a temporary cricket pitch invasion, followed by the resumption of normal play. The idea that military defeat and the loss of political power might be a legitimate source of grievance for the losing side is implicitly rationalised because the Hindu upper castes have no redeeming features to justify mourning their passing.

Even if one were to concede the falsity of the claim that iconoclasm by the invaders was rare and motivated primarily by material greed, as well as dismissing their own surviving accounts as unreliable, it is surely unreasonable to expect later generations to recall that past with enthusiasm. But the historians of class struggle and immemorial communal harmony require that the murder, mass slavery, looting and institutionalised rape of one’s ancestors by invaders be viewed with equanimity because, in their considered opinion and against all the available evidence, it, improbably, lacked religious sanction. This sheer perversity heaps additional insult upon injury by disgraceful efforts to prove that the victims of this historical experience were probably themselves the offspring of Aryan invaders at some point in the distant past, who presumably behaved no better. This is what India’s historians today require to be publicly funded and it is only the remoteness of ordinary citizens from this bizarre endeavour that prevents unsparing scrutiny being directed towards it.

How it was possible for greed to be a purely secular phenomenon when social life and political action were synonymous with religion in pre-modern societies, especially Islamic ones, is left to the imagination. Of course, it is much more plausible that looting, abduction, etc. were subjectively experienced as the discharge of religious duty, but this likelihood is ignored by illegitimate imputation of motivations and sentiment that are entirely modern. A passing knowledge of Islamic invasions elsewhere would dispel this unlikely invention with respect to India. Any subsequent sign of Islamic communalism, which, in fact, happens to be one of its essential and proud distinguishing features, is tidily explained, first, by British colonial chicanery and, then, the Hindu renaissance as well. One recent work damns all of the latter, from Ram

Mohun Roy, to the Tagores and Bankim Chandra Chatterjee, as the ultimate cause of partition.

Already a further foretaste of this fifth column epistemology can be found in the failure to come to terms with more recent events, which cannot be quite so easily dismissed, because too many witnesses survive. The genocidal suppression of East Pakistan in 1971, specifically complemented by the massacre of Dacca's Hindu intellectuals on one fateful day, precisely because of their religious affiliation, followed by a considered policy of mass rape and murder on an unimaginable scale, is already being ignored but cannot be denied. The unspoken justification that this amnesia is needed in the interests of communal harmony must be sternly repudiated. No doubt, the erasure of Afghanistan's Buddhist heritage and the tragic destruction of the great Bamiyan statutes will, in time, also find "scientific" and historical rationalisation. However, it is doubtful if these politically inspired Stalinist "cosmopolitans", on the forefront of intellectual genocide against Hinduism, will dare to invent subterfuges to obscure the fate of the twin towers of New York. So much for the courage of their convictions!

Indian power and the threat to the world

By Gautam Sen

http://www.rediff.com/news/2000/sep/11pmus1.htm

If India's economy continues to grow at around seven per cent each year or ten per cent, which is feasible, it will prefigure an end to the dominance of world affairs that white Europeans have enjoyed since Christopher Columbus landed in America. Already, the achievement of sophisticated nuclear weapons capacity has seriously unsettled NATO, the international counterpart of the Ku Klux Klan, and the ultimate inciter of the on-going proxy war against India. If India were to become a country with a per capita income of $ 12,000, the new arithmetic diminishes the overall relative international primacy of the US and the NATO alliance.

Imagine an India with a per capita income of $ 12,000 and the effective capacity to increase its defense expenditure by a corresponding six-fold? At present, US global hegemony as well as the security enjoyed by its subservient European allies are underpinned by massive economic superiority over the rest of the world. This primacy was only reached in 1989 with the collapse of the Soviet Union. The US subsequently unleashed a brilliant campaign to cause political and economic disarray within Russia by sustaining a corrupt, incompetent and drunken Boris Yeltsin in power and infiltrating so-called Western 'experts', actually employed by the CIA.

If a wealthier India achieves great power status, it is likely to set off a chain reaction and international political realignments that will end undisputed US world hegemony. Within Asia, Japan, which has been cowed and diffident since its surrender in 1945, will find India an irresistible prospect as an economic and political partner. The reason will be its traditional dream of leading an Asian bloc to counterbalance the West and the US.

India's massive purchasing power will enable Japan to diversify its economy away from its present vulnerability to constant Western blackmail over market access. An Indo-Japanese understanding will neutralize China's growing belligerence, not only *vis-à-vis* Japan, but also in relation to other Asian countries. At present, fearful of China's growing power and claims they, including Vietnam, uneasily welcome a US presence in the region. But the US has simply taken advantage of the situation and treated these countries as second class.

The glee of Wall Street during the recent Asian financial crisis and the attempt at the virtual theft of Asian assets (owing to artificially low prices after the exchange rate collapse) was a stark reminder of their role as cattle feed for international predators. Singapore, despite its huge successes, remains much less important than Belgium for reasons that are not difficult to guess.

The goal of the US is to retain its hegemonic global pre-eminence rather than merely protect its own security and ensure a tolerable level of influence by participating in an international balance

of power to deny any one country or bloc the ability to dictate. It only acquiesced in China's great power status because its additional weight was useful for curbing the much more threatening military might of the Soviet Union during the Cold War.

The US can afford to continue humouring China because although it is the only major country with an independent voice, it remains relatively weak in relation to the Western alliance. And its goals are likely to remain regional for the foreseeable future.

The US also believes that within the wider global arena, China will remain a supplicant because of the fear of a resurgent Russia and possibly, a revisionist Japan. However, both the US and China have cause to worry if India emerges as a major centre of power and influence simply because its size alone means that it will have large surplus resources to embark on a destabilising, independent path in world affairs.

The emergence of India as a new centre of power will inevitably cause huge uncertainty for the current pattern of alliances and international relationships, predicated on the existing distribution of political and military power. Such Indian aspirations were one of the reasons for the deep earlier US mistrust and dislike of both Nehru and Indira Gandhi, as available US public records confirm.

With the ascent of India, the global political and economic centre of gravity will shift from Europe to Asia. It may even undermine the Western alliance because some historical animosities persist among key European countries. The British and French, for example, were initially staunchly pro-Serb during Yugoslavia's disintegration ("He helped us a lot," said Serb leader and war criminal Radovan Karadic of then British prime minister John Major) unlike the Germans who fomented Croat and Slovene intransigence.

The earlier historical rivalry between Japan and Russia is unlikely to be an issue given the interposition of a powerful Chinese buffer between them and the truncation of Russia itself. Russia will eventually reassert its authority in Central Asia, which has been usurped by the US, and secure its western frontier against a revanchist Germany that has advanced further than Hitler did, under the cloak of NATO. Hitler had only reached the Curzon line before war broke out with the Soviet Union.

But both Russia and Japan will have to deal with US machinations that might range from economic blackmail to military encirclement. The US will enjoy *carte blanche* in Latin America alone because the deracinated, Mulatto local elites of Mexico (through NAFTA), Argentina (which abandoned its national currency in favour of the dollar) and Brazil (bought out by US investment) have already surrendered their economies to the US. India remains a weak country that needs to be deflected from the trajectory of economic growth and political prominence through subversion and direct assault.

The principal vehicle for causing an immediate and decisive setback to India would be a war on two fronts at a moment when Russia is too weak or distracted to respond. China has lately been examining various strategies for demolishing India's military assets in a limited war in the northeast. Recently, it deliberately precipitated floods and destroyed bridges in order to cut Arunachal Pradesh off from the rest of India. It has cultivated the Burmese military regime assiduously in recent years while India has allowed itself to be hypnotised by an egotistical and

ultra-Westernised dissident, instead of engaging in the ruthless calculation its dangerous vulnerability to Burma's geopolitical location demands.

China is also financing and arming dissidents everywhere in the region from Nagaland to Assam, as rebels surrendering to Indian security forces continue to reveal. It is China that has transferred nuclear weapons to Pakistan, with undoubted US government connivance, an inference Congressional investigations have made irresistible, in order to tie India down all along the border, stretching potentially from Gujarat to Ladakh.

India is being forced to only fight defensively against foreign incursion for fear of uncontrolled escalation when the situation it faces constitutes a textbook case for an offensive war for defensive purposes. Infiltration along such a long border by suicide squads will only end when its sponsors make a political decision to desist because they fear severe punishment elsewhere (example: the loss of Lahore).

Finally, India's relations with Nepal have taken a dramatic turn for the worse, partly because of a history of sheer Indian incompetence and stupidity over five decades, but also owing to the decisive intervention of China and the US in recent years. Nepali intransigence is now reinforced by Sino-US reassurances of support against India (including the establishment of a so-called UN peacekeeping academy in Kathmandu at US instigation). Nepal is awash with petrodollars as well and its politicians and bureaucrats, with few exceptions, are not known for refusing money.

India's unimaginative policy makers do not seem to understand that Pakistan's nuclear weapons are no more Pakistani than US cruise missiles on European soil are European. The strategic implication is that they will only be launched if China does not fear retaliation against its own cities, a potent threat that India has failed to insinuate. This is the same reason why Europeans were unconvinced that the US would risk American cities by launching its nuclear missiles in Europe against Soviet cities.

India's politicians (though not defence experts) will also have to come around to the realisation that they are far weaker in relation to the Sino-Pak axis than Pakistan is *vis-à-vis* them. It is India that stands isolated, not Pakistan, notwithstanding the determination of middle class Indians to believe otherwise because they cannot bear to believe their ardent attraction for the US and all its decadent sensuality cannot elicit some pity, if not reciprocity.

Purposive troops movements alone will suffice to tie down most of the Indian armed forces along the Sino-Indian border. In that event, India may have to use the threat of early nuclear escalation against China on the battlefield, exactly as Pakistan is doing despite the secure knowledge of Chinese assistance in the event of a serious encounter with India.

Kargil and the Kandahar hijack were merely US warnings to India to curtail its nuclear programme, no more. Ironically, the successes of the Indian armed forces at Kargil compelled US intervention to save Pakistan from complete rout, although the media, extraordinarily, portrays it as having been for India's benefit! However, the Indian nuclear programme may now be shelved (especially missile development) reverting to a *status quo ante* worse than the pre-Pokhran situation, which should please India's 'peaceniks' too.

Unfortunately, the scale of Sino-Pak and US infiltration in India is growing phenomenally. The US, which has obvious preferences of its own for electoral outcomes in India, has sponsored

detailed studies (overseen by the late Mancur Olson) of every Lok Sabha constituency to examine the changing alignment of forces since the retreat of the Congress. It has numerous assets in the Indian media and some bankrupt newspapers receive Gulf petrodollars through the intercession of the US.

Indian officials are aware of one national newspaper editor who has a relationship with British intelligence and have denied him a berth on the NSB. There is no Indian civil servant above the rank of deputy secretary who does not have a close relative working or studying in the US, creating points of contact and vulnerability to blandishments.

Keeping a fractious India constantly off balance and divided, though actual secession itself would be the real prize, is deceptively easy when caste, region and religion cleave its sense of national purpose and so many Indians are eager collaborators. It is highly probable that many of the bomb makers and subversives being discovered in various parts of India are controlled jointly by Pakistan and the US, which alone has extensive insider knowledge. It need have no other direct involvement beyond the provision of invaluable information to its friends in Islamabad.

The US has been the pioneer in using Islamic radicals (though not in Iran or with its proxies in the Lebanon and the Hamas) against secular, nationalist Arab regimes since the 1950s, as Said Aburish has shown. The US has sought to install and maintain harsh, unpopular monarchical Islamic regimes beholden to it, without so much as a squeak from liberal and feminist America, and nourished their absurd claim to Islamic rectitude when Arab rulers violate every major tenet of Islam. The Taliban Afghan enterprise began before the Soviet invasion and remains firmly tied to the US and the CIA.

The state department also brazenly manufactures stories of anti-US activities by Islamic radicals. These are designed to stop ordinary Muslims, who clearly take a less benign view of the US, from reflecting on the unusual coincidence between the insistence of the alleged defenders of the faith that their political and personal freedoms lack divine sanction with US interests and an enlightened oil policy. That some canny operatives like Osama Bin Laden actually end up becoming anti-American 'rogues' is not particularly surprising, since the scale of the undertaking is so large and complex.

Of course, they also have violent inclinations against conceited pagans deemed to oppress the *umma.* The idea that the US will repudiate its relationship with Islamic radicals and curb their activities to save India's bacon is unrealistic in the extreme, since so much is at stake and US Arab policy depends on the seamless international web of its radical Islamic assets (especially of Pakistani provenance).

India can never provide the invaluable services to the US that Pakistan's elites can, like for example, suppressing popular revolts in the Gulf or entry into Afghanistan and beyond. The relative importance of Indian economic ties for the US, compared to even Thailand, for example, is minuscule.

Pakistan's ruling order (essentially the landlords of the Punjab and the Sindh), in turn, needs the sub-continental imbroglio to resist the democratisation of Pakistani society that they have feared since the pre-independence Congress threatened to abolish the zamindari system, transforming previous landlord indifference towards partition in the Punjab to fervent support. They regard

even a proper census as a threat to stability. State department Islam cannot endure democracy, as the Jamaat's utter electoral failure in Pakistan itself resoundingly confirms and democracy in the Third World has always been the enemy of Western imperialism.

However, it may be anticipated that radical Central Asian Islamic regimes will also find friends in Washington should they seize power. The tragedy of most contemporary Islamic politics is that it is a product of the Cold War and the political economy of oil and originates in Washington, as many Muslim intellectuals themselves have insisted.

The final problem for India's great power pretensions is the slow pace of economic reform, which is an absolute prerequisite for attaining international stature, unmatched by a level of rhetoric that only the Indian polity seems able to generate. In every area, sectional interests and self-serving politicians are failing the Indian economy, its people and especially the poor who are mostly unemployed or underemployed as well as underpaid.

The public sector continues to bleed the rest of the economy, including agriculture (so much for concern about poverty) and supply-side bottlenecks are strangling areas that would otherwise grow rapidly. It is unbelievable that even today garments and knitwear are reserved for the small and medium sector, all of which will simply be blown away after 2005 when the WTO textile accord on free trade is implemented. Despite so much animated high level talk, the urgent problems of India's publicly owned airlines remain unresolved with all sorts of corrupt influences being peddled to ensure that high prices remain no matter who owns them!

Paradoxically, the CPI-M and the RSS have adopted a similar posture with regard to economic reform, defending organised workers who are a small and privileged minority and opposing international economic ties with an unreasoned obduracy that has no historical precedent. It is a source of grave concern that the best policy makers that India can muster, and they compare favourably with any in the world, remain apathetic when it comes to decisive action. But this is India and self-indulgent ideological peregrination a cover for business as usual.

Dr Gautam Sen is a lecturer in politics of the world economy, London School of Economics and Political Science, and a member of the Indo-British Roundtable.

Media suffer from "dhimmi" disorder

By Shankar Sharan, New Delhi, India
http://www.indiacause.com/OL_101502.htm

A B Vajpayee, 14 Apr. 2002:

"It is indeed strange that I am praised as a secular leader when I condemn, as I recently did, intolerance and other negative features exhibited by certain self-styled champions of Hindutva, but criticised as a "communal leader" when I point out the negative aspects of militant Islam. Such double standards do no good to a healthy debate on what is true secularism and what is in the interest of our nation and the world"

The *Outlook* weekly put an online opinion poll asking: "What do you think should be done in the aftermath of Godhra and 'retaliatory killings' in Gujarat?" And gave the following six options: "(1) Narendra Modi and his minisiters should be removed, arrested and prosecuted along with the killers of Godhra. (2) VHP and Bajrang Dal leaders should be arrested and prosecuted for their role in Gujarat and Ayodhya. (3) BJP government at the centre should resign. (4.) All of the above -- 1, 2 & 3. (5) None of the above, they're not to blame for "Newton's third law applies and only so much can be done by the administration". (6) Do not know." The poll began on 5th March 2002, that is, within three days of the Godhra carnage the magazine was sure that the answer lies within these options.

And what ingenious options! In the garb of six there is but one choice. All the differently worded options just condemn Hindus and *Hindutvawadies*. Even the last one leaves no opportunity to say different – it says shut up, if you want to blame anyone else. Please think over this poll design. It is on the line of Stalinist Russia or Musharraf's Pakistan where electorates had only one candidate to 'choose'. The *Outlook* poll structure exposes the mindset of our mainstream especially English media.

This poll is also an example of *dhimmi* mentality (the Arabic word means 'the non-Muslims tolerated by Islam on conditions', one being that *dhimmis* are always required to show subservience and acknowledge the supremacy of Islam and the Muslims). The weekly comprises an overwhelming majority of the Hindus as staff. Yet it refuses any option to blame Muslims in a visibly communal conflict. Which is a manifestation of *dhimmi* state of mind. Explaining all its facets is a separate task. The interested should read a book entitled "Islam and Dhimmitude: Where Civilizations Collide" written by Bat Ye'or, a British scholar. She has really opened a new field in sociology. *Dhimmi* mentality is a very significant concept. Meaning a voluntary acceptance of Islamic superiority by non-Muslims with a sense of dread from Islamic

vehemence. Acceptance by people who lived under Islamic rule for ages as inferior subjects. These subjects, the *dhimmis*, were allowed to live, but granted only a second grade existence. Now the subjects have so internalized this inferior mindset that even being free they continue to revere Islam at the cost of other faiths, traditions and egalitarian theories. This, in short, is *dhimmi* mentality. To understand it, however, one must have at least some gray cells left uncorrupted by the Marxist-secularist dogmas.

***Dhimmi* mentality in India is reflected everywhere in the society. Including the media. Kashmir is the hottest news spot in the country.** Yet it is difficult to find regular correspondents of the mainstream media. Usually the stringers do. What they report, whom they quote and which version they narrate are interesting to watch. They seldom report about local terrorist networks – though at times they *know* about it. Understandable. Who wants to become a Daniel Pearl? But Kashmir reporting is not an exception. Same dread is felt anywhere in the country when it comes to report affairs Muslim. It is NOT about respecting Muslim feelings. Though some scribes genuinely believe doing so by, say, being silent on *Satanic Verses*, *shariat* codes, the contents of Madarsa education etc. Yet respecting feelings is not the whole truth. Large section of the media keep mum because they know the reprisal would be violent. Each time a Muslim mob resort to violence upon newspaper offices, saying 'sorry' is the media custom. Just think – victims say sorry to the lawbreakers! In Bangalore, for instance, all leading English dailies in turn tendered apologies whenever something – anything: a headline, a cartoon or a report - angered certain Muslims. There is no case when a newspaper stood in the name of freedom of expression or constitutional rights. One rarely finds a harsh adjective used by scribes against Muslim offenders – from Kashmir to Mumbai to Hyderabad to Kolkata to Dubai.

Now, please contrast this timid attitude with the manner adopted in the abovementioned **Outlook** options. **What boldness when it comes to disparage Hindu leaders and masses! Here is the key to understand regular Hindu-bashing. Our media - columnists, anchors and reporters - feel free to call Hindus names. Hindutvawadies are repeatedly called fascists, killers, beasts, hate-mongers etc.** Everyday in some write up or analysis these adjectives can be found. Because, the dorks know too well what these 'fascists' really are. The 'Hindu fascists' are anything but dreadful. Hence no fear of violent reprisals while abusing Modis, Sudershans, Vajpayees, Advanis, Joshis, Togadias *et al*. **Why, even Hindu gods and goddesses can be abused freely! Our brave and beautiful - from media to academia – take all liberties when talking matters Hindu. They can openly defend insulting Hindu deities; liberally offer suggestions about making playgrounds or libraries on sites of Hindu faith.** Painting nude goddess Saraswati, Durga was stubbornly supported as an act of artistic expression by these brave and beautiful. Most recently a senior Hindi editor, Rajendra Yadav, called the deity Hanuman as 'the first terrorist'. By no stretch of courage he can call Prophet Muhammad so, who had wreaked havoc on so many cities to clear it from idols and idol-worshippers. Such feats are properly recorded history, and always highly praised in Islamic discourses. But no Yadav (or Jha, Pannikar, Thapar, Habib, Chandra, Sarkar, Roy *et al* , who are permanently *sahmat* with every kind of Hindu-abusing) would point to it in the manner he did to Hanuman. They are all reverence before an Islamic figure. THIS is *dhimmi* mentality. Islamic feelings, figures, arguments are superior; but those of Hindus inferior – so reckons a *dhimmi* by habit. This mindset is here for centuries now. And duly internalised by the terrorized Hindus. Rajendra Yadav is not an isolated case, he is just a good specimen of this attitude.

Another contrast is the attitude of the US media to that of ours while covering national disasters or crises. Take, for instance, their 9/11 and our 12/13. Our brave and beautiful copy the Americans in food, suit, lingo, fashion, slang and everything (mostly useless things); but not in how to keep the national moral, image and strength. Especially when the chips are down. At such times watch the *Time*, *Newsweek, CNN, BBC* etc. at work. They never talk about 'govt failure' until the disaster is overcome. Here every disaster is a godsend to tarnish the govt of the day, be it Kargil, Orissa or Gujarat. Given the contrast, are we to boast that our scribes are more dutiful, intelligent, responsible and wise in contributing to national strength and honour? No, just the opposite! Francois Goutier (the most senior foreign journalist, except Mark Tully, in India) rightly observed that Indian media behave like an enemy to its own government and people. Because, among other things, it suffer from the *dhimmi* disorder. So eager to show – at the cost of one's own brethrens – 'see, how secular, objective etc. I am'. It is a disorder needed to be exposed and remedied. Just think: how the very lot who always steer clear from dangerous individuals and organisations, become so vociferous when it comes to abuse 'Hindu fascists' or the 'fascist govt'? Simple: these fascists are anything but fascist! Hence the valor. As Ghalib had expressed so beautifully: *hamara bhi jor chalta hai gariban par*.

Such feverish and routine Hindu-bashing has done immense harm to the nation, society, economy and polity. By scrupulously avoiding any hard talk about Islamic problems - for instance, effects of *shariat* laws on Muslim women or the anti-national use of scores of madarsas - our media perform its 'social responsibility'. Only bravery it shows in harming the *Hindutvawadis*. Even by resorting to lies, or refusing to report plain truths. A lot of scribes won't report an event or publish a comment if that is likely to benefit, in the dorks' view, the Sangh Parivar. They unwittingly follow the Leftist, anti-Hindu, anti-national political agenda. But do the people living all over country feel like them? Do the countrymen see only what the fanatic secularists want them to see? No. [For example, to the opinion poll mentioned above 60% readers (that is, even secular ones; as Outlook patrons must be different from the Organiser's) favoured the fifth option, while only 2% and 1% supported the options one and two respectively. Thus the Outlook judgement on Modi, VHP, etc. was rejected decisively by its readers as well.] Hence the reactions. We have to recognize, sooner or later, that a Hindu mob violence is **always** an expression of cumulative frustration resulting from injustice done. This is the end result of fanatic secularism. What the secularists do is mostly *raksha men hatya*.

That, at least partially, explains the difference between US public reaction to 9/11 and Indian (in this case Gujarati Hindu) public reaction to Godhra. The commoners, watching for years the farce going on about Kashmir, secularism, terrorism, human rights and all, understood perfectly well, without effort, that there would nothing come by way of a justice (what happened to the Bombay blasts culprits, SIMI bombers, terrorists of all kind?). The burnt *Ram bhakts* of Sabarmati Express would be forgotten in due time (indeed they were forgotten the same day! as the *dhimmis* in all trades, including the edit-writing, blamed the VHP for the train carnage). There was no justice in sight. Hence the law in Gujaratis' own hands - unlike the Americans. Americans took their reprisal through their Govt, to teach a lesson, without caring for morality and justice theories. There was nothing despicable in US action in Afghanistan in the wake of 9/11, was it? After all, big settlements always come by way of a war. Always. Colonialism, communism, fascism, terrorism – in every case the warring sides fought for finish. Godhra, too, raised the stakes too high. The moot question appeared on horizon: would you accept the carnage meekly? No one

asked this aloud, but the question was in every mind. Answer yes, and you will perish. No? Then do something. So they decided, the hapless common people of Gujarat decided. Not some organizations, some leaders, few communalists – as brazenly publicized by secularist media. If that was so, why they opposed assembly elections on the first mention of it? Because they knew that Hindus in general either committed or supported the reprisal, not 'some communalists'. True, the reprisal was horrendous. But please accept: it was also a mad expression of a keen desire to defend Hindus from further killings and repeated humiliations. It can be criticized, rightly, but one should not deny that it was the people who did so.

Godhra and aftermath is a complex phenomenon. *Dhimmi* secularism cannot explain it, much less find a solution. For solution, getting rid of the *dhimmi* attitude is the first prerequisite. Face the hard truth first. Then try to find out the best way. There is no other option. In any case, Hindu bashing is certainly no option. Not any more.

Who is a Hindu?

Contributed By Dr. Shriharsha Sharma

Who is a Hindu ? This question arises all the time in various situations and Hindus are unable to answer it exactly, precisely, satisfactorily and with confidence. I have asked this question to many people including eminent Hindu scholars, Sadhus, religious leaders, professors and Pandits but without a satisfactory reply. Fortunately I have found the most fitting , exact, precise and above all satisfying definition of a Hindu by a great revolutionary, author, orator, poet and patriot **Veer Vinayak Rao Damodar Rao Savarkar.** In 1905 while in the prison at Andamon- Nicobar island he thus wrote :

Asindhu Sindhu Paryanta yashya Bharat Bhoomika,
Pitribhu Punya Bhuschaiva Sa vai Hindu Riti Smritah.[1]

There is a vast land between river Sindhu and Hind Mahasagar called Bharat and those who accept that this is their fatherland or / and a holy land, land of pilgrimage are all Hindu.

This defination includes Sanatanis, Saivas, Vaishnavas, Buddhists, Jains, Arya Samasis, Sikhs, Harijans, members of International Society of Krishna Consciousness or ISKCON, Adibasis, Tribes, Yogis, Sadhus, Dalits, followers of Swaminarayan, atheists and various other sects without exception are all Hindus . This is the first lesson the Hindu parents can give to their children. Teachers and leaders must learn this definition and covey and spread the correct information to unify the Hindu society.

This is worth mentioning that acceptance of the Vedas with reverence, recognition of the fact that the means or ways to salvation are diverse; and realisation of the truth that number of gods to be worship is large, that indeed the distinguishing feature of the Hindu religion.--- Shri **Balgangadhar Tilak**.[Quoted by Supreme Court of Bharat on 2 July 1995.]

Hindus believe in One God. There is no god but God .Hindus are truly monotheist but worship many gods and goddesses and see the same God in them. This needs to be realised at intellectual level by others and all those who have failed to understand this fact. For example snow, ice, icecle, dew, and vapour are all forms of water but we call them by different names similarly Hindus see the same God in all the gods and goddesses as well as in all the living and non living things this is the most simple thing , Hindus understand this and appreciate this. Hindu scriptures say it boldly, clearly, distinctly and most beautifully.

Ekam Sadhvipra Bahuda Vadanti [2] means that He is one but we call Him by various beautiful names.

Further to this it may be appropriate to mention the following verse which also gives clear message that Hindusthan means place[sthan] of Hindus or land of Hindus or Hinduland [e.g. England, land of English people, Ireland, land of Irish people]

Hindusthan's ancient name is Bharatvarsh.

Uttare cha Samudrashya Himadreshu cha Dakshinam,
Tadvarsha Bharat Nama Bharati Tatra Santati. [3]

The land which is north to the Hind Mahasagar[Indian Ocean] and south to the mighty, magnificent Himalayas is Bharat, sons and daughters of this ancient land are called Bharati or Bbharatiya[Hindusthani]

Bharat also means knowdge or Gyan means away from ignorance or away from darkness so Bharat means land of source of light or knowledge.True knowledge is in the Ved so Bharat is also known as Ved Bhoomi.

Bhayam Ratam Bharatam [4] means Bharat is submerged in light or is full of light so foundation and backbone of Bharat is knowledge where life is lead by knowledge therefore ignorance and superstitions have no place in the land of Hindus.

What unites us is our spiritual and cultural heritage and its inner and most powerful strength since beginning of our civilisation.

Our heroes and heroines are supreme who inspire and guide us just remembering their names provide new and instant energy, strength, courage, hope and peace to name a few e.g. Raam, Krishna, Arjun, karn, Mahaveer, Buddha, Sri raamkrishna, Dhruva,Prahalad, Hanuman,Sita, Radha,Tiruvallavur, Adi Sankaracharya, Ramana Maharshi,, Guru Nanak, Samarth Guru Raamdas,Shivaji, Maharana Pratap, Sant Yogeshwar, Swaminarayan Meera Bai, Tulsidas, Guru Tegh Babadur, Guru Govind Singh, Valmiki, Vedavyas, Kalidas, Swami Dayanand, Swami Vivekanand, Soordas, Kabir,Subhas Chandra Bose,Bhagat Singh,Chandra Shekhar, Bankim chadra chattopadhyaya, Sri Arvindo, Sardar Ballabha Bhai Patel, Veer Savarkar, Mahatma Gandhi and Sai Baba there is no end to this list and we are proud of them.

We recite the following Slok while bathing which is so satisfying and unifying us from Himalayas to Hind Mahasagar and all the Hindus living anywhere in the world.

Gange Cha Yamune Chaiva Godavari Saraswati,
Narmade Sindhu Kaveri Jalesminsannidhim kuru.[5]

A Hindu while chanting this Slok prays to sacred rivers e. g. Ganga, Yamuna, Godavari, Saraswati, Narmada,Sindhu and Kaveri to come and join in the water being used for bath or shower. It is a unique and enlightening experience and at the same time so unifying which inspires me to say that one Hindu is for all and all Hindus for one.

Origin of the word Hindu has been traced from an ancient scripture called Brihanardi Puran in which there is a verse.

Himalayan Samabhya Yavat Binusarovaram,
Hindusthanmati Gyatam Hii Antarakshar Ayogatah.[6]

It means the country between the Himalayas and Bindu Sarovar is Hindusthan so combining the first letter Hi of Himalayas and last compound letter Ndu of word Bindu forms Hindu so purely and simply this is a Sanskrit word. Our ancestors wrote so much including two largest epics Raamayan and Mahabharat and foreigners gave us a name cannot be accepted .This verse is also mentioned in the Nardeeya Puran

Which is a short version of original Brihannardi Puran.

Our motherland is also known as Ved Bhoomi, Rishi Bhoomi, Sanskrit Bhoomi, Sanskriti Bhoomi,Sabhyata Bhoomi, Sant Bhoomi, Veer Bhoomi,Raam Bhoomi, Krishna Bhoomi, Mahaveer Bhoomi, Bddha Bhoomi,Tiruvallavur Bhoomi, Guru Bhoomi, Maharana Pratap Bhoomi, Shivaji Bhoomi, Lakshami Bai Bhoomi,Guru Nanak Bhoomi, Hedegewar Bhoomi, Sardar Patel, Veer Savarkar Bhoomi the list is unending.

I am a Hindu, my ancestors come from Hindusthan and my holy places or places of pilgrimage are in Hindusthan.

In Hindusthan over many thousands of years the Dharma,culture, civilisation, traditions, philosophy, Yog vidya, Ayurved,music, literature, arts , fine arts, dance, and languages had developed without outside compulsion and force in total harmony with nature and eternal laws that is why it is so pure and unique and if you approach with open mind then you will love it and you will find vast treasure in it and that is the experience of many so try to know more about it you will be spiritually and culturally richer and peaceful.

Everything in Hindusthan is attached to word Hindu and greatest strength of Hindus has been the freedom of expression in thought, talk and action . The culture of this country is Hindu Culture, the history of this country is the history of Hindus, so is the architecture, literature, sculpture, folklore, poetry, dramas, stories, comics, sorrow and laughter, music, languages and heritage around us is all Hindu. We must go a bit back and deeper and infact it has all its source from Sanatan Dharma. All the religions of Hindusthan are branches of Sanatan Dharma which is generally known as Hinduism ..Hinduism has the capacity and capability to accommodate all those who believe in the freedom of individual in thought, talk and action following the eternal laws of equality, justice and freedom in development of humanity.

The time has come that Hindus must rename India officially as Hindusthan which is long over due, this will bring a new energy in them and make them feel proud, bold, assertive, responsible and courageous . This is the demand of majority Hindus and cannot be ignored anymore.

Avery simple fact I would like to mention is this that anybody can become a Hindu according to the above definition so you do not have to be a born Hindu . **Swami Dayanand Saraswati** first started conversion of Muslims and Christians who were converted from Hindus and later Swami Vivekanand came in favour of this and promoted this and recently **Swami Chinmayanand, Sivaya Subramaniya Swami** came in favour of this. The reconversion work is going on in Hndusthan to get Hindus back where they truly belong. This is a sacred duty of every Hindu to welcome these brothers and sisters whom we had lost and create a society so that we do not lose them to foreign faiths because we have been divided by these foreign faiths as a result our

motherland was divided. Before the arrival of these invaders we were the most prosperous, happy and peaceful this is the fact we must know. I wish quote a speech of Lord Macaulay given in British Parliament in 1835 regarding greatness, superiority and civilisation of Hindus----

I have travelled across the length and breadth of Hindusthan [India] and I have not seen one person who is a beggar, who is a thief, . Such wealth I have seen in this country, such high moral values, people of such calibre, that I do not think we would ever conquer this country, unless we break the very backbone this nation, which is her spiritual and cultural heritage, and, therefore, I propose that we replace her old and ancient education system, her culture, for if the Indians think that all that is foreign and English is good and greater than their own , they will lose their self-esteem, their native self- culture and they will become what we want them, a truly a dominated nation.

This was the most unfortunate strategy adopted by British government and they destroyed everything good in India which had taken her to develop thousands of years.

So India was looted, plundered, cheated, betrayed by British rule. The conversion to Christianity of Hindus and tribes people began by Christian missionaries, moral values declined, people were divided on castes, race and religion for the benefit of British. English schools, universities were started to teach that everything native is inferior to English and a new class of people were trained to help the British to rule over India but none of them ever reached to the highest post.

The British rule further divided the already divided people and created new castes of Anglo-IndiansChristians and Christians who were the most favoured in key jobs and promotions .

Macaulay did the incalculable harm and succeeded in his plan to rule by destroying native way of life through English education in India but his poison is still doing the harm to India so in order to reverse the process and make India great again we have to organise, plan and bring back the lost values, morals by establishing faith in our native culture and spiritualism. It may take time but it is within our capacity and capability. We must take words of **Sri Aurobindo** and save ourselves by saving Sanatana Dharma.

India would rise with rise of Sanatana Dharma, that India would Sink if Sanatana Dharma sank, and that India would die if it were at all possible for Sanatana Dharma to die. ------ Sri Aurobindo.

This is the history that whoever came to our country until 8 th century they all accepted our way

of life and became Hindu without force and wherever we went we took our culture and message of Hinduism they accepted it as a great gift and these countries became Hinduised and this is visible even today the South East Asia.

Buddhism a branch of Hinduism spread and established in Sri Lanka , Burma, Thailand, Vietnam , Bourneo, Java, Sumatra, Cambodia, Japan, Korea, Tibet and Chiana where it established without a single conflict ,war or killing .Taoism Confucianism and Buddhism have lived and progressed side by side for thousands of years without violence , so what is the secret , because they have developed naturally following the eternal laws respecting each other and do not go for violence to convert or prove superiority . This is recorded that Buddhism had established itself in each and every village of China by year 65 A. D. without any force, violence or threat but with love, respect , help and understanding each others concerns for the sufferings around , to reduce or minimise the sorrow in order to make the world more peaceful and trouble free .Now Buddhism has spread in all the continents and so has Hinduism.

The world has changed a lot and for Hindus to survive they have to put a stop to conversion of Hindus to Islam and Christianity which has been going on in Hindusthan by force. First it happened during Islamic invasions and rule and now happening by the force of petrodollars . Later the conversion of Hindus started by Christian [French, Portugguege, Dutch, English] invaders and rulers. These conversions have been going on since arrival of Islam as invaders later joined by Christians destroying everything native. The time has come to pass a law to stop conversion of Hindus.This is a great game of numbers and everyday Hindus are decreasing in number and if this goes on then they will be in minority, this is a grave situation. This process can be controlled and reversed by the followings to make India strong and a developed nation.

I.. One civil law for all without exception.
2. One couple two children without exception.

Jai Hind!

Human Voices
By Gautam Siddharth
The Pioneer, Saturday, January 22, 2000

The beginning of the new millennium should be of a special significance in the context of the Indic civilization. The celebrations heralding it must remind us, in this part of the world, how we have divorced ourselves from our own history and culture. When we observe the onset of the third millennium along with the Western world, we are actually travelling back in time, for the Indic civilisation is a lot older than two thousand years. Then why are we indulging in this exercise in collective self-hypnosis, of willy-nilly tending to believe that we are younger than our age? The answer lies in a complex of loss: The loss of the idea of who we as a people are, and a concomitant failure to relocate our space in the history of time.

It is an engaging irony that the people living east of the river Sindhu, south of the Brahmaputra, spanning more than the entire length of the Ganga, and down to the Vindhyas, were given their civilisational identity due to an error of phonetics. A people who called their land Aryavarta, and later Bharat, and were practitioners of
Sanaatan dharma, came to be recognised as Hindus because the Persians, an equally ancient civilisation, referred to their eastern neighbours by the name of the river Sindhu. Due to an inability to pronounce the first sound Sa in the Sanskrit word Sindhu, they altered it to the convenience of their tongue to say Ha . This is the short exegesis behind the origin of the word Hindu which, of course, is well known.

In this process, that could well have lasted hundreds of years, not only did the land begin being called Hindustan, the religion its people practiced too was given the term Hindu , and later Hinduism. The reason behind this too is clear: With the movement of people from the west and central Asia to the region across the Sindhu, the cultured inhabitants of the land, who knew themselves as followers of Sanaatan dharma and as
inhabitants of Bharatvarsha which was a civilisation, not a nation were caught in a great flux and, faced with the changing ground realities, had to reinvent themselves. Thus was the Sanaatani reborn as the Hindu.

With its fruition, this process led to a momentous happening. The practitioners of a dharma a word which incorporates the Western concepts of religion, duty, law, right, justice, practice and principle were understood to be, or perceived as, followers of an ism. But Sanaatan Dharma was not in the least an ism; it was partly knowledge from the well-springs of deep human antiquity, and partly an unending preoccupation with myths. At its dharmic centre was the Truth as it was revealed to the Vedic seers. There was not one seer; there were seers. Their dharma did not have a

central figure or a single book. The understanding of these people, Vedic people, about man, creation and universe clustered around one central idea. It was not just a credo or a faith; it was a fount with a worldview and conviction about existence, life and human experience. It is this self-knowledge, eternally at the moment of self-actualisation, that has been at the centre of Sanaatani values as consciousness.

If this civilisational continuity gave rise to rituals of the mind-boggling sort, it also proferred the seeker-practitioner ways and means for gnosis, austere, inspired and inspirational. Sanaatani life was wallowing in ideas and verities; it was most notably not an ism. An ism is a closed system of belief, distinct from living out an idea intellectual action which springs from memory and imagination. The institutional structure of Hinduism was gradually devised to keep the historical memory of the deep antiquity behind creation revealed in the Vedas and the Upanishads, alive. It was a Hindu tribute to the memory of creation and human existence, whose one unshakable pillar was intellection. Unfortunately, this intellection has become a thing of the past. The disorientation that we are witnessing today in our civilisation which is played out in people s lives more than mutely captured in monuments is a result of this collective Hindu amnesia.

Our quest to answer for our identity gets obfuscated with the understanding of Hindutva without its central precepts that lie in Sanaatan dharma. (The calcification of the adherents of the dharma on caste and creed lines, for instance, is not Hindutva.) But the singular unifying point with us who are all Bharatiya, or Indians is gradually being located today in what can be called an early phase of Hindutva, or Hindu resurgence. There are, though, people who doubt whether such a unifying point a centrality exists, a point common with all inhabitants of this large and diverse subcontinent. They say that Hinduism cannot be that unifying factor, arguing that Christianity never could unite Europe, and that its nations have till this century fought long and destructive wars.

This argument is specious. Christianity could never have united Europe because it never originated in Europe and Christianity is not ethnic to Europe like Hinduism is to India. Hinduism took birth, as Sanaatan dharma, in the land that is Bharat. In that sense, in the sense of having a defined geopolitical boundary, Hinduism stands alone in the pantheon of the great religions of the world. This alone reveals the truth that if there is any one single factor that unites the people of Bharat, or India, into forming one over-riding identity, it is the civilisational identity steeped in the universalism of Hindu thought. It is in the consciousness of our Hindu civilisation that our collective identity resides. And it this consciousness that has to be recreated. For, the neglect of the search for a locus has wounded the Indian civilisation.

If we are to make the new millennium of any relevance to us, then we must first recognise that the five-thousand year-old civilisational plate has been reinforced with the fifty-year-old national plate both of which form the bedrock of our existence today. And if our historical memory is not too short; if we dissolve small discords and instead look at the vastness of the dharma that binds us as sentient human beings above all, we will have not only paid our debt to the punyabhoomi that is Bharat but also resonated our timeless message: A worthwhile effect is born only out of a noble cause.

'Lord Ram was born in 5114 BC'

AYODHYA, NOVEMBER 10:"Ram was and is for real. He was born on January 10, 5114 BC," says Commissioner of Income Tax Saroj Bala, with the assurance of one who has tangible facts. This tax mandarin, who zealously devotes her spare time to research in history, has taken on the contemporary historical interpretation of Ramayana as a religio-literary text, and Lord Ram as a semi-mythical figure. And she has chosen the unusual combination of astronomy, the Internet and literary texts to provide a startling picture of Shri Ram. This might change the way we look at history and religion. Saroj Bala says that we might refuse to begin reading Indian history from that comma, or hyphen called 'Indus Valley.' We might have to stretch the beginnings by a few thousand years because, for Ram was born on January 10, 5114 BC. When asked what got her started she says, "As an amateur historian, I've always been interested in Indian culture and heritage. I am proud that we're Indians and the products of one of the oldest civilisations".

Saroj Bala goes on to add, "However, British rule changed us; we developed a sense of being somehow inferior. But I could never reconcile to theories like the theory of Aryan invasion to India in 1500 BC. That would make Indian civilization only 3,500 years old. And if you choose archaeology to dig beyond 7,000 years, you'd have to dig more than 60 metres - something not being done in India as yet. So, archaeology is not the only answer. There's a lot of objective research of another kind that needs to be carried out in earnest". The question remains, how can one say Ram was born on January 10, 5114 B.C?

Saroj Bala has a ready answer for that, "My colleague Pushkar Bhatnagar of Indian Revenue Service is the real originator of this theory. He acquired a software named Planetarium, used to predict planetary movements and configurations.By entering in this software, precise details of planetary positions vis-a-vis zodiac constellations described by Maharishi Valmiki in the Valmiki Ramayan, it is possible to determine important dates starting from Shri Ram's birth-date to the date of his return to Ayodhya. More than just Ram's date of birth, the results have not just thrown up Shri Ram's date of birth; it has actually traced the entire sequence of incidents throughout Ramayan. Pushkar Bhatnagar starts with tracing Ram's birth. Then he moves ahead in the narrative. Valmiki Ramayan states Ram was 25-year-old when he went to exile. When the configuration of planets described at this point is fed into the software, the date thrown up matches perfectly with Ram's age at that juncture of his life - 25 years. Again in the 13th year of Ram's exile, during a war with Khar and Dushan, Valmiki describes a solar eclipse. The software proves that on that given day there was indeed a solar eclipse (with Mars in the middle). This solar eclipse and the particular configuration of planets could be seen from Panchavati (longitude and latitude plainly shown in the software). Hanuman Saw 8 Constellations while flying to Lanka... In the Sunderkand, when Valmiki describes Hanuman crossing the sea and returning

from Lanka to Rameshwaram, he gives details of 8 constellations. Usually, one can see not more than 6 constellations at a given point of time. But since Hanuman was flying across, and it must have taken him approximately 4 hrs to get there, he could see 8 constellations - in two hours one constellation would have moved out of sight and another become visible. So, in a period of 4 hrs he saw 8 constellations! Historicising Shri Ram. Man or God... After researching on Shri Ram, I do believe he's a man who walked the earth in flesh and blood. There is an essential difference between the Valmiki Ramayana and the Tulsi Ramayana. Tulsidas was a devotee who looked up to Ram, but Valmiki was a contemporary. Valmiki has written Ram's life-history, as a biographer does - he's a contemporary of Ram, and this is not very different from what happens all over the world. Kings have always had their life- history written".

Did Jesus Christ visit India during his lifetime?

Puri: Did Jesus Christ ever visit the pilgrim city of Puri during his "unexplained twelve years" of life? We would know soon if German scholar Hj Trebst's research to unearth the missing twelve years of Christ's life bears fruit.

Dr Trebst, who had invited the scholars of this ancient city, yesterday said according to some scholars of the Orient and the West, Jesus had visited Puri where he had studied Veda and Yoga before returning home to preach Christianity.

Jesus Christ had also studied Buddhism in the Indian sub-continent, the scholar, who had done extensive research in Ladhakh and Nepal to trace evidence of Christ's itinerary in the Indian sub-continent, said.

A seminar was also organised under the aegis of Jagannath Gabeshana Parishad where eminent scholars like Dr Harekrushna Satapathy, Dr Siddheswer Mohapatra, Jagabandhu Padhi, Dr Debendra Dash and others deliberated over the Hindu religious texts which mentioned the activities of Jesus.

Dr Trebst said 2,000 years ago Puri was a famous seat of learning and history has revealed that over the centuries religious leaders of various sects and cults had visited this holy shrine.

It was most likely that Jesus had also visited this holy seat of learning, he said, though adding that it was a very difficult task to trace the history of his visit to Puri.

The German scholar was, however, optimistic that the scholars of the pilgrim city would be of immense help in analysing the ancient manuscripts and scriptures on the visit of Jesus.

Meanwhile, the local research scholars have suggested Dr Trebst to go through the library of the Jagatguru Sankeracharya, the oldest in the state, which had a large collection of palm leaf manuscripts since the time of Aadi Sanker (about 4th century BC) to find out the missing links in the life of Christ.

***

ACCORDING to the Nilmat Purana, the land of Kashmir was occupied by a vast lake called "Satisara". Modern geological observations have supported this legendary view. On the basis of this fact, the word "Kashmir" is derived from Sanskrit "Kashyapa + Mira" which means the sea lake or the mountain of sage Kashyapa. Kashyapa was the originator of Kashmir. In Kashmiri, it

is called "Kasheer" and "Kashmir" in the Indian languages. Phonetically, "m" is eroded here as we find erosion in the word "Samudra" (ocean). "Samudra" changes into the form of "Sadur" (derived from Sanskrit Samudra in the Kashmiri language and "Samandra" in the Indian languages. "M" is retained in Hindi, Urdu, etc. but not in Kashmiri. Thus "Kashyapa + Mira" = Kashmir in the Indian languages other than Kashmiri and "Kasheer" in Kashmiri. Mir in English means the sea as Mariner. In Latin Marinus (more- sea).

Patal Bhuwaneshwar

Nurturing mysteries of nature

By Sandeep Silas and Satbir Silas

http://www.indiagov.org/perspec/jun00/patal.htm

Here is a story which was written by Time not on the face of earth, but within it mysteriously.

This fable of the world is contained in the womb of earth, inside the deep dark black stone caves, which live to relate the tale of not years but yugas (ages); not of ordinary men, but of those who shaped the destiny of earth, the entire Hindu pantheon. Patal Bhuwaneshwar, 1350 m above sea level, is still hidden from public glare by mountain sentinels and an unaccessed village, 185 km. from the hill station of Nainital in Uttar Pradesh. That the Kumaon hills would contain something so unbelievable, so amazing, and a secret so well guarded, can hardly be guessed till you see it with your own eyes.

The entrance to Patal Bhuwaneshwar cave is ordinary, unpretentious. There are no indications to reveal the mysteries it holds within. There are no claims to glory. It is a simple three feet high opening kept ordinarily barred by the priest. Looks can surely be deceptive! You descend 82 steps into this cave, which is an over 100 feet deep wonder. The descent is sharp, sometimes you have to sit from step to step in your downward journey, sometimes you have to recline and pass the stone-way. As you move you become conscious of descending inside the earth. When you pause to heave a sigh of relief in the first cave enclosure, you realise that it is not one cave but many more. It is actually a cave city. There are caves within caves, caverns clinging to caves, niches peeping our of caves, holes leading to hollows, steps revealing platforms, cave doors unmasking deep secrets, water sources and narrow pathways. All within this cave. It is a natural wonder, not carved or created by hammer and chisel! It is surprising that not many enthusiasts and pilgrims have ventured to discover these secrets held by the nether.

What makes it more interesting is the fact that the cave is not silent, it is a speaking cave. Each stone, each stalagmite, each stalactite, each hollow, each cavern, each doorway, each step, each stone erection, each drip of water reveals the story of Hinduism down the ages. It is believed that King Ritupurna of the Sun dynasty discovered the cave in the Treta era, which has been described in chapter 103 of *Manas Khand* in *Sikandpuran*. The first Guru Shankaracharya in *Kaliyug* (The current age) consecrated this cave, and since 1191 A.D. a Hindu priest performs worship. Each day, from the times of the Kings of Chand and Katyuri dynasties, the priest descends 82 steps down into the cave and performs worship, keeps the incense burning, the flower petals fresh...

The journey inside the cave begins as you let go of the iron chains, which helped you alight and steady your steps to the feeble incandescent light of some electric bulbs. In the cave enclosure you

can make out the massive hood of a snake, in one corner. Do not be alarmed, for it is the *Sheshnaga* holding the earth on its hood as per Hindu belief. You are in *patal*, the world below the earth. The teeth, jaws and poison sack of *Sheshnaga* can be seen in stone. It is surprising how all this shape came to be naturally acquired by stones. It is believed that there are three loks (worlds) - *Patal* (below earth), *Prithvi* (earth) and *Akash* (sky). The *Sheshnaga* performs its relentless duty, holding the earth on its hood, preventing it from sinking into the *Patal*.

The stone body and ribs of *Sheshnaga* escort you to the rocky torso of *Adiganesh*, the son of Lord Shiva and his consort Parvati. Adiganesh had lost his head due to the anger of Shiva in a misunderstanding. To the wails of Parvati, Lord Shiva realised his mistake and gave new life to Ganesha, by placing an elephant head on his body. Ganesha, the elephant headed god is highly revered by the Hindus. The stone commemorates the headless Adiganesha. The *Sastradal Kamal* (lotus flower) rock just above this torso lets water drip into it, regularly. It is believed to be a divine *abhishek* (anointing).

Ahead is seen the *Kali Kamli asan* of Lord Shiva in a rock. This *asan* (meditative pose) is believed to be the supreme. Lord Shiva used to carry a *jhola* (cloth bag), and so we have inside the cave a porous bag like representation. If you knock on it with your knuckles, the sound shall tell you that the rock is hollow inside. Some truth! Next comes the figure of *Patal Bhairavi* with a lion mouth to one side – amazing!

A turning brings you to a curious combination of cave doors. Four cave doors reveal a story of their own – *Randwar*, *Paapdwar*, *Dharamdwar*, and *Mokshadwar*, together called *Chardwar* (four doors). Two of them are closed. The *Randwar* (door to war) was closed after the Mahabharata war. The *Paapdwar* (door to sin) was closed after the slaying of demon king Ravana by Lord Rama. Both *Dharamdwar* (door to path of religion) and *Mokshadwar* (door to salvation) are still open to man. The doorways exhort Man to take the path of *dharma* and achieve *moksha*, which is salvation.

To your left is seen in black rock the *Parijat Vraksha*, the tree that grants wishes. Legend has it that Lord Krishna brought this from Amravati. The stone tree inside the cave started growing and it would have broken the earth, had Lord Shiva not stopped its growth. You look wonderstruck at the tale and the trunk. It looks an actual tree trunk. On top of this trunk is a dense leafy structure, which leaves you stupefied at its shape. How can this be? The marvels of nature are too intriguing to be understood.

The huge stalactites, called the *jatas* (locks) of Lord Shiva are a beautiful sight. They flow down in stony silence and appear a real-life mane of hair. A part of them are white, which adds colour to the black stone cave. Tiny representations of Hindu gods and goddesses in stone eruptions relate how these are in perpetual attendence to the Lord. The famous Pandavas meditated inside this cave, below the *jatas* of Shiva.

As you move past this region the path is narrow and very slippery. Your feet must find stone cuttings and depressions lest you should lose balance. The Patal Bhuwaneshwar Mahadev – shivalinga in a trimurti image, is being anointed by the jatas of Lord Shiva. It leaves you expressionless as you observe that water drops, which drip from the jatas above, fall one by one over all three representations of Brahma, Vishnu and Mahesh in the trimurti linga image. Truth can be stranger than fiction!

All this while, inside the cave city, there was no insect, no bird or flying mammal, not even a whiff of stale odour that is associated with caves. It was most surprising that all life representations within were forzen in stone. Stone was the master of the cave city; it gave it a shape, a meaning and a reason to exist.

You return stunned after a two-hour sojourn. There are still three reminders, which the priest has not yet spoken of. First is the narration in rock of the *yugas* (ages) of the earth – *Satyug* (11,000 yrs.), *Tretajug* (9,000 yrs.), *Dwaparjug* (4,000 yrs.) and *Kaliyug* (4,000 yrs. completed). The stone erection representing Kaliyug has grown to its one-fourth length in 4000 years. Once this stalagmite grows the remaining three-fourth length in years and touches the roof, there would be *pralaya* (deluge) leading to the creation of yet another *yuga*. It is believed that the speed of this growth is determined by sin committed on earth. How rapidly would sin grow and along with it this stalagmite is to be seen. That this is the key to the world's destiny is indeed surprising.

Second is the one thousand feet representation of mythological elephant *Airawat*. The five trunk bearing elephant came out of the churning of the ocean between the gods and the demons. The gods have him and so will those whose deeds are godly. Between Airawat's feet flows the mythical river *Saraswati*, which is seen in white streaks. Third was the priest himself, Dan Singh Bhandari, whose family has been conducting worship here for the past 900 years. He is the 18th in the line of succession. Truly it is said that the meek shall inherit the kingdom of God.

The author, a senior civil servant, is a noted freelance writer.

Hastinapur jewels

By Brajendra Singh
The Pioneer

The epic battle of Mahabharat was approaching its bloody climax. The Pandav had suffered grievous losses, including the death of Arjun's son Abhimanyu, who had been trapped inside the chakravyuh and then been simultaneously attacked by several senior warriors.

However, it was the Kaurav who had the real catastrophes heaped on them. One by one they had lost their mightiest fighters. Bheeshm Pitamah, the clan's patriarch, had been felled. Dronacharya, the preceptor, was dead, as were most of the hundred royal brothers. And it was only on the previous day that Duhshasan, the second eldest among the Kaurav siblings, had been torn apart by Bheem, the mace-wielding wrestler.

The formidable Karn(n), offspring of the Sun god, now took over command of the Kaurav army. Egged on by the eldest Kaurav prince Duryodhan, Karn(n) decided to personally take on Arjun and finish him off once and for all. Seeing his opportunity late that afternoon, Karn(n) cut his way ruthlessly through the Pandav forces, and
headed straight for Arjun. So violent and vicious was Karn(n)'s offensive that Arjun's defences soon crumbled before it. Karn(n) then moved in for the kill.

Arjun's charioteer, Lord Krishna, realised that only a miracle could save his ward now. And so it happened. Krishna caused the sun to set prematurely; and Karn(n), the honourable warrior that he was, postponed the day of judgement since fighting after sunset was banned in those days.

Back in Hastinapur, Sanjay, who had been endowed ad hoc with televisionary ability, narrated the day's events to the blind Kaurav King Dhritarashtr. The latter immediately realised that the Kaurav clan was doomed, since Krishna, despite having vowed not to physically take part in the battle, was obviously using his supernatural powers to help the Pandav.

Dhritrashtra's mind immediately went to the crown jewels of the Hastinapur royal house, a fabulous of treasure trove that had been built up over the centuries since the beginning of the dynasty. Somehow he had to keep the hoard out of the hands of the Pandav, whom he had now begun to passionately hate.

It is at this juncture when he was filled with ominous prospect that a plan came to his mind. One that would not ensure that the Pandav never found the priceless hidden cache, but also guaranteed its easy recovery in the unlikely event that the Kaurav emerged victorious from the battle raging at

Kurukshetra.

That night, a caravan under the command of a trusted aide, was despatched with the royal jewels it proceeded straight to Indraprasth, the Pandav capital. Taking advantage of the darkness and the absence of menfolk away at the battlefield, the treasure was buried at the intersection of two main roads. After all, Dhritarashtr had rightly reasoned, the Pandav (who eventually won the battle and totally destroyed the Kaurav) would hardly
think of the jewels buried in their own metropolis.

It is rumoured that excavations undertaken at the Old Fort (Purana Kila) in the early 1960s brought forth a tablet inscribed with the above story. Unfortunately, time has wrought extensive changes on the landmarks that could lead up to the hoary treasure.

The exact location of the treasure is impossible to ascertain. That is the reason why since then since 1960 the authorities have been continually and furiously digging up the roads of Delhi. In a desperate bid to find the Hastinapur jewels, put away darling by the blind Dhritrashtra's men somewhere in the entrails of Indraprasth's earth.

Sanskrit: Our Crowning Glory
By Karan Singh

THERE ARE at least four good reasons why Sanskrit studies need to be encouraged in this country and given an appropriate place in our educational system.

First, as a classical language, Sanskrit is recognised as being among the most remarkable to have emerged anywhere on this planet during the entire course of human history. Its grammatical structure is so exquisite, and its sonic quality so superb, that it is universally recognised as representing a high watermark of human linguistics. It is not necessary to quote numerous Indian and foreign scholars to support this view. Providing as it does the foundation for most of the other Indian languages, it is to them what Greek and Latin together are to most Western languages.

Secondly it, represents, as it were, the great Himalayas of our cultural life, towering as a magnificent testament to the creativity and genius of the Indian mind. It is rich with unbounded treasures —the Vedas, the Upanishads, the Brahmanas, the Aranyakas, the Puranas, the Ramayana, the Mahabharata and the Yoga Shastras, which represent a cultural and spiritual tradition unique in its scope, depth and vitality, expressing the collective genius and richness of Indian civilisation. It also needs to be noted that Sanskrit has been enriched by people drawn from virtually all the linguistic and regional entities in India, from the mighty Himalayas down to Kerala and from Gujarat to Assam. Though it was never the popular lingua franca, it quite clearly provided the basis of our civilisational unity which has survived incredible holocausts and vicissitudes, and without which there could well have been a dozen countries on the sub-continent in place of one India. In fact, it would be correct to say that Sanskrit is to Indian civilisation what Roman Catholicism is to the Latin American or Islam to the Arabic civilisations. In addition, the impact of Hindu and Buddhist cultures on South and Southeast Asia took place largely through Sanskrit texts which were later adapted to the languages of those areas.

Thirdly, in literature, Sanskrit has produced outstanding figures such as Kalidasa and Banabhatt, Bharavi and Jaideva, Bhartrihari and Kalhan who can be compared to any in the world. It is a misconception that Sanskrit is concerned only with spiritual wisdom. Sanskrit texts cover the entire gamut of human activity including politics, economics, aesthetics, law, grammar, prosody, psychology, mathematics, astrology, astronomy and medicine, to name only a few. Many of these disciplines are of immense importance in our contemporary situation. The discovery of the ‘zero’, which emerged from the concept of shunya (or void), was a defining event in the growth of human knowledge. The very numerals that the world uses today, known as Arabic numerals, flowed from Sanskrit numbers. This is not to take the narrowly chauvinistic attitude that seeks to trace all major concepts back to India, but to single out the incontrovertible contributions of

Sanskrit to human culture and civilisation of which we can be rightly proud.

Fourthly, Sanskrit articulates significant global values. The Vedanta, which represents the apogee of Indian philosophy, is replete with concepts that are of tremendous contemporary significance. Such seminal ideas as the all-pervasiveness of the divine, the potential divinity immanent in each human being regardless of race, religion, caste or sex, the entire human race being an extended family; all religions representing different approaches to the same universal truth; the commitment to the welfare and happiness of the masses and so on are gaining increasing significance as our planet hurtles into an indeterminate future.

These values, which are very much in harmony with the values enshrined in our Constitution, need to be fully understood and interiorised, a process in which Sanskrit has a crucial role to play. The first two stanzas of our national song Vande Mataram are in Sanskrit, as is our national motto Satyameva Jayate. In the West, Latin and Greek are still taught, not to propagate Paganism but because they represent the very basis of Western civilisation. Why should we in India deny to millions of our citizens of their cultural heritage? Sanskrit should be an optional language for those who may wish to explore its many splendoured radiance; while alternate options for studying Arabic and Persian should also be provided, as these too are rich and powerful classical languages.

Modern science echoes Indian sages' insights

By Karan Singh

http://timesofindia.indiatimes.com/cms.dll/html/comp/articleshow?artid=34569012

Following is the full text of the inaugural address by Dr Karan Singh on a symposium ‘Science and Beyond: Cosmology, Consciousness and Technology in the Indic Traditions’.

As this symposium begins with cosmology, I would like to start my address by quoting the famous creation-hymn from the world's most ancient living scripture, the Rig Veda (X.IZ9/1-7- Griffith translation):

Then was not non-existent nor existent:

There was no realm of air, no shy beyond it:

What covered it, and where? And what gave shelter?

Was water there, unfathomed depth of water?

Death was not then, nor was there aught immortal:

No sign was there, the day's and night's divider.

That one thing, breathless, breathed by its own nature:

Apart from it was nothing whatsoever.

Darkness there was: at first concealed in darkness

All this was indiscriminate chaos.

All that existed then was void and formless:

By the great power of warmth was born that unit.

Thereafter rose desire in the beginning.

Desire the primal seed and germ of spirit.

Sages who searched with their hearts' thought discovered

the existent's kinship with the non-existent.

Transversely was their severing line extended:

What was above it then, and what below it?

There were begetters, there were mighty forces,

free action here and energy up yonder

Who verily knows and who can here declare it,

Whence it was born and whence comes this creation?

The gods are later than the world's production,

who knows then whence it first came into being?

He, the first origin of this creation,

whether he formed it all or did not form it,

Whose eye control this world in highest heaven,

He verily knows it, or perhaps he knows not.

It is indeed astounding that modem developments in science, particularly cosmology, seem to echo some of the insights of our great seers and sages which have come down to us for thousands of years through the long and tortuous corridors of lime. It is almost as if, like the background.

Emanations from the Big Bang, the faint echoes of our ancient spiritual luminaries can still be heard in the background of all our post-modern discourses on the human condition.

Some years ago, when I was ambassador to the United States, I called upon the great scientist Prof S. Chandrasekhar in Chicago, and asked him as to how if was that the seers of the Vedas and Upanishads had two astounding insights which have emerged in modem science only very recently. The first is the concept of *Anantakoti Brahmanda* - billions of galaxies or universe. The second is the concept of vast aeons of times through which creation passes, the single day of Brahma being of 4.32 million years with a night of equal duration, so that a year of Brahma closely approximates the age of planet Earth. He really had no explanation and when I suggested that perhaps this knowledge came to our seers in enhanced states of consciousness, he said that was quite possible.

From cosmology, let us then move on to consciousness. In the Indic traditions, consciousness is not merely an epi-phenomenon of evolving matter, rather it is the prime principle which calls forth these millions of worlds. The great icon of Shiva Nataraja, lord of the cosmic dance, beautifully portrays this kinetic universe in which all things, from the majestic movement of the great galaxies down to the persistent agitation of sub-atomic particles, are in a state of flux. The drum in Shiva's left hand represents creation - the original Big Bang if you like, or perhaps a continual series of Big Bangs, while the fire in his right hand represents their ultimate destruction in the great cycles of time. However, if there were only the Big Bangs and the Big Crunches, there would be little space for you and me. Shiva's other two hands, therefore, point to the possibility of individual realisation amidst the cosmic chaos in which we find ourselves. One hand is raised in a gesture of benediction, telling humanity not to fear, while the fourth points to his upraised foot as the path of liberation.

The whole question of consciousness and its evolution is one that has attracted some of the best minds in the world, including the great evolutionary philosopher Sri Aurobindo. In India we have developed over the millennia systems of yoga which are surely the most profound and integral exploration of consciousness ever essayed by the human race. While we also developed path-breaking outer technology in such fields as metallurgy, medicine and mathematics; Indian civilisation took a turn probably unique in the history of thought. Our most creative minds turned the searchlight inwards towards the source of consciousness itself, and built up an entire science based upon this creative introspection. In his classic work on the yoga-sutras, the sage Patanjali has given us a seminal textbook for exploring the deeper recesses of our being.

Post-Freudian movements in psychology in the West have also gradually developed these deeper insights, notably with C.G. Jung and the post-Jungians, and moving on to Transpersonal Psychology.

The study of consciousness has now become a fully respectable and challenging area for intellectual and experiential exploration. I have personally had the privilege of discussing the nature of consciousness with some of the most creative minds of the 20th century — Stanislav Grof with his extended cartography of the mind, Rupert Sheldrape with his theory of morphogenic resonance, Ilya Prigogine with his chaos theory, Jonas Salk the great bio-chemist whose book *Survival of the Wisest* is a classic, Carl Sagan, who brought the mysteries of the cosmos into the minds and hearts of millions, Arthur Clarke, the astonishingly creative space author and many others. Indeed the study of consciousness is now one of the most fertile fields for research and experimentation.

Years ago, when I was minister for health and family planning, I had started here in Bangalore in the National Institute of Mental Health and Neuro-Sciences (NIMHANS) a programme entitled ‘Project Consciousness’ in which I had assembled some of the most creative scientific minds in India as well as, involving Pandit Gopi Krishna whose books on Kundalini awakening are known throughout the world. Unfortunately, as so often happens, the project was wound up almost immediately after I left the ministry, evidently considered a mild eccentricity not worth pursuing. It has always struck me as tragic that we in India, with our unique spiritual and intellectual background in this field, should still be lagging behind. Had the project continued over the last quarter of a century we could well have produced the first Nobel laureates in the field of consciousness research.

Albert Einstein's famous remark that "science without religion is lame, religion without science is blind", makes a very important point. Before him, the Cartesian-Newtonian-Marxist paradigm of thought postulated an unbreachable dicotomy between matter and spirit. This concept dominated Western civilisation for several centuries and did produce spectacular results. However, with the Einsteinian revolution and Heisenberg's Uncertainty Principle, Quantum mechanics and extra-galactic cosmology, the situation has now changed considerably. Science itself is in one of its great creative periods where old barriers are breaking down and some of us - perhaps a trifle optimistically - are beginning to discern the outlines of a convergence between science and spirituality.

I use the term 'spirituality' advisedly, because 'religion' carries a lot of baggage, much of it positive but some of it negative also, despite the work being done by interfaith organisations around the world, including the temple of understanding of which I happen to be chairman, whereas spirituality transcends theological divisions, and cuts across barriers of race and creed, religion and nationality. The seers of all the great faiths of the world have, in their utterances, sought to describe what is essentially an indescribable experience, whether it is the Beatific Vision of the Christians, the Bodhichitta of the Buddhists, the Noor-e-llahi of the Muslims, the Ek Onkar of the Sikh gurus or the Self-realisation of the Hindus. Clearly there are states of higher consciousness which transcend all barriers and which are the heritage of the entire human race. This flows from the persistent tradition of the light that illuminates the universe - the light of consciousness itself, and it is ultimately an awareness of this light in all human beings that alone can become the cornerstone of a sane and harmonious global society.

What is needed today, as the watchword of the emerging global society, is a new global renaissance, an integration between apparently conflicting concepts. We need to develop a benign symbiosis between the various elements of our personality - the inner and the outer, the quietist and the activist, the feminine and the masculine - and in the broader dimension between science and spirituality. It is my sincere hope that this international symposium on science and beyond will help to trigger the process of creative symbiosis whereby alone can the human race survive its own technological ingenuity. It is in this hope that I have the greatest pleasure in inaugurating this symposium.

How the media lost its money - By Tavleen Singh

Introspection. If you were politically interested enough to have remained transfixed by your television set when the results of the assembly elections came out last Thursday you would have heard it a lot. It tripped gaily and recurrently off the tongues of political pundits and psephologists as they advised the Congress Party on its future course of action. I found myself laughing every time I heard the word because if there is anyone who needs to do more introspection, even than the Congress Party, it is the media. Last week, in this column I wrote about media bias against the Bharatiya Janata Party but did not realise then the extent to which this bias should be called dishonesty. Lying.

It was not just the polls that got the elections wrong, it was the media as a whole and where the media is concerned this happened, I believe, because our loyalty to a twisted, bizarre idea of secularism blinds us increasingly to reality. In Madhya Pradesh the writing on the wall was in big black letters and so impossible to misread but throughout the campaign we missed what was happening in Rajasthan and Chhattisgarh. I cannot speak for Chhattisgarh but having traveled through rural Rajasthan can say anyone driving down the same roads would have noticed that the word voters used most to describe what they wanted was parivartan. Change. Even those who said they did not think Ashok Gehlot had done a bad job said that change was a good idea.

My last visit to Rajasthan was before I left for New York in November and I came away convinced that Vasundhara Raje would win. This is what I told Indian friends in NYC and it surprised me when they said I could not possibly be right because according to the Indian newspapers they were reading on the web and according to the polls they carried there was no question of Gehlot losing Rajasthan. He had even been voted the best Chief Minister in India, they said. I remember reading that myself and puzzling over how this conclusion had been drawn. Compared to whom?

When my friends in New York added that one of the reasons for this was because, according to the reports they read, he had ‘handled the drought well’ I reminded them that people died of starvation in Vasundhara Raje’s own constituency. Remember? And, I can remember driving through the state — before the rains came — and everywhere I went people complained about fodder centres that existed in name only and drought relief that came not in the form of grain but in the form of strange promissory notes. Vasundhara Raje herself pointed out during her rath yatra that people could not eat paper. But, us political pundits, we were not listening. **We were too busy sneering at her Rajashtani costume, just as we later sneered at her chiffon saris. I have seen Sonia wearing a headdress of horns and beads in the Northeast but never heard anyone sneer.**

To return, though, to bias. What worries me is that it extends beyond the BJP and the RSS to India itself. **So, many a liberal hack is given to equating Hindu fundamentalism with the Islamic variety and making it sound as if a victory for the BJP is really a victory for Hindu fundamentalism. The result is that the American state department recently did the same and, perhaps, it is because of this kind of reporting that India routinely gets equated with Pakistan**. It is only when this happens that liberal columnists sit up and start pointing out that India is a very different country to Pakistan and the Indian state cannot by any stretch of the imagination be compared to the Pakistani state. But, it is our own fault if comparisons are drawn.

Our fault too that Islamic terrorist cells proliferate across the country because not a single newspaper has made the smallest attempt to investigate what is going on. It is politically incorrect even to call terrorism Islamic. So, it takes a Bernard-Henri Levy to write a book called Who Killed Daniel Pearl and in the process of writing it discover just how deeply the Pakistani state is personally involved in protecting people like Omar Sheikh.

Should at least one Indian journalist not have been following that story? Of course. But, we have all been too busy debating over the nuances of secularism and communalism without bothering to notice that the debate became irrelevant and meaningless long ago. The voter knows this and, to its credit, so does the BJP. So, not only did we not hear about temples and Hindutva during the election campaign but we also did not hear from people like Pravin Togadia. Yet, we had important TV pundits repeat ad nauseam that everything the BJP did was guided by the RSS. Anyone truly trying to analyse this would have discovered that the last powerful RSS chief was Balasaheb Deoras and the RSS has been gradually losing its hold on the party ever since he passed on. The RSS has opposed the Vajpayee government's economic policies from day one and been unable to make the slightest difference.

And, the truth is that neither Vasundhara Raje nor Uma Bharati needed the RSS on their side. It is increasingly the RSS that needs the BJP and if we take our own advice about 'introspection' we could find that it is time for us in the media to move on. The voter already has.

PLATFORM: Ideologically secure

Rakesh Sinha

http://www.hindustantimes.com/nonfram/111200/detOPI02.asp

A debate has been sparked off by Prime Minister Atal Bihari Vajpayee's assertion last week that the construction of a Ram temple at Ayodhya where the Babri mosque once stood was the "expression of national sentiment which remains unfinished". While some political pundits have read this statement as an appeasing gesture to the 'hawks' of the Sangh parivar, others — particularly the intelligentsia from the Left — have questioned Vajpayee's credentials as a 'moderate'.

The 'secularist' strategy to rein in and ruin the RSS and its affiliates by drawing a line between Vajpayee and the RSS has proved to be a failure. Vajpayee has been the best communicator the parivar has ever produced. He has been groomed in the Sangh shakha, spent his days as Sangh Pracharak and edited the RSS mouthpieces, Panchajanya, Rashtra Dharma and Swadesh. Sangh ideology has never been a dilemma for him.

When in 1978 he suggested in an article that the term 'Hindu Rashtra' be replaced by 'Bharatiya Rashtra', it was presumed that he was departing from the traditional RSS line. The inference made by 'secularists' was based on their little knowledge of Sangh dynamics. The then RSS Sarsanghchalak, Balasaheb Deoras, initiated a debate on the change of term within the Sangh itself even before Vajpayee wrote the article. The Sangh treats both terms as interchangeable and synonymous.

A popular story which has been transmitted in the shakhas for decades is RSS founder Hedgewar's disapproval of naming a colony in Mumbai 'Hindu colony'. And one must remember that he preferred the term 'Rashtriya' instead of 'Hindu' when it came to naming the sangh after its formation. It is also an incontrovertible fact that there exists a symbiotic relationship between Vajpayee and the RSS. He has played an important role in the evolution of the RSS ideology.

Unlike the Congress culture, in which organisational discipline precedes ideological discipline, the RSS gives paramount importance to 'ideological purity'. A movement's impact and durability depends on its ideological commitment and its capacity to augur changes. To be a part of the saffron movement, one does not necessarily have to be a part of any organisational mechanism. What is mandatory is the ideological discipline.

Secularists want to treat Vajpayee as a 'secularist with a saffron tilt'. It suits their hypothesis that RSS shakhas are breeding grounds for Godses and Dara Singhs. These self-proclaimed 'secularists' unhesitatingly cooperated with Pakistan against the VHP's claim for an NGO status. While in the past, an anti-RSS campaign was confined to only India, now the movement has

spread to other parts of the world. It is such propaganda which led Singapore's former Prime Minister Lee Kuan Yew to believe that India is now less secular than it was in the past.

Vajpayee began his political activism as a chosen messenger of Shyama Prasad Mookerjee when the latter entered the prohibited land of Jammu and Kashmir to spread his message. He stoutly confronted the dual membership issue during the Janata regime in 1978-79. His exhortation for a debate on conversion and reinforcement that the RSS is a cultural organisation were responded in a strident manner by 'secularists'.

And when Vajpayee described himself as a swayamsevak during his visit to the United States, he didn't reveal anything new about his life. It was only an attempt to squelch secularist propaganda against him. Before embarking on his American tour, Vajpayee — along with Home Minister L.K. Advani and others — attended the gurudakshina function of the RSS in New Delhi. It is considered one of the most important programmes of the sangh where every swayamsevak reaffirms his loyalty and oath before the orchid flag. Thus, Vajpayee has repeatedly proclaimed his association with the RSS loud and clear.

Fear of the Muslim vote bank reacting against the NDA Government is regularly used by the leaders of the invisible Third Front to blackmail the allies of the BJP-led Government. The BJP must stand up to what it believes. It is not a 'post-ideological' phenomenon that it practises. It largely believes in the ideological formations of Hedgewar-Golwalkar. **The present chant of 'secularism' is not only hypocritical but also arises out of pure cynical opportunism with both eyes on the vote bank.**

When Vajpayee says that there is a consensus for a Ram temple at Ayodhya, one recalls the reconstruction of the **Somnath temple in 1950-51. The task was completed with active cooperation from the then President of India, Rajendra Prasad, the then Home Minister, Sardar Patel, and K.M.Munshi. The work on Somnath was carried out during the Congress regime. It does not mean in any way that the Government of the time was keen on a showdown with the Muslim community.**

The exercise undertaken at Somnath needs to be repeated at Ayodhya. A single gesture from the Muslims will unravel a new era in Indian politics and culture.

Finally, Vajpayee's differences over the 1990 rath yatra did not deter him from the real issues at stake. In an interview with *Gentleman* magazine (February, 1991), he frankly stated: "It is important that the temple should come up. It is a vow which is all the more important because there was a temple which was destroyed and a mosque was built in the place of the temple. So if we want Hindu-Muslim unity, then these irritants have to be removed."

No need for any semantic investigation here.

A TRIBUTE TO HINDUISM

articles on hinduism

Reclaiming our story
By Neera K Sohoni
http://www.indianexpress.com/full_story.php?content_id=16640

Notwithstanding reader fatigue, the controversy over the saffronisation of education does not die. As a student of history, **it is amusing to see the jittery stance of earlier interpreters of history.**

At the outset I must offer my credentials for writing this essay not only as a student of History at Delhi University, but more recently and importantly as a parent of three erstwhile school-going children. Teaching and learning is and should be an evolving process.

Claiming sanctity shows an absurd disregard for sifting and re-evaluating evidence. The prime minister makes a valid point in claiming that NCERT is not engaged in re-creating history but in interpreting it more meaningfully.

There is nothing Hitlerite in presenting historical events from the indigenous people's rather than the coloniser's perspective. To paint the above effort at indigenisation as some devious Hindutva act is entirely indefensible.

To denigrate it as 'swadeshi' is inexcusable. (The term swadeshi, a proud epithet otherwise, has been hijacked and given a negative import, which is perplexing to say the least. What is wrong with the swadeshi approach? Why is it a calumny? Should it not be every Indian's prerogative to sift inherited facts and interpretations against the yardstick of indigenous experience and sensibility?)

Even a rapid reading of the much-contested and maligned NCERT Class IX book on Contemporary India is an eye-opener. Undeniably, the textbook contains ungrammatical writing and poor syntax. Some of the facts may even seem questionable or contrived. But in the main its approach appears sound. Its interpretation of British India, for instance, is refreshingly localised to Indian needs.

Earlier books in my own or my children's student days echoed the British, therefore the ruler's, take on events. Here is an effort to interpret British rule in terms of how it benefited the British but harmed India and the people England ruled. The book offers some harsh facts about the negative impact of British rule on Indian economy, agriculture, crafts, and development.

In my time, one had to wait to read Economic History of India at the graduate level before getting an inkling of the exploitative impact of British policies. **The textbook speaks bluntly of the racialism practised by the British, rather than the one-sided 'fair and enlightened rule' gibberish we were fed with.**

Even the foundation of the Indian National Congress is presented in more believable terms, not only as the benign act of well-meaning Anglican friends of Indians to enable Indians to taste and practise democracy, but also as a survival mechanism, to serve as a safety valve for the growing Indian restlessness.

Similarly, the performances of major British administrators (for example, Lords Wellesley, Dalhousie and Curzon) are briefly tackled for their divisive and deceptive nature, not as the earlier sources did, as indicators of great statesmanship and masterly rule. On the Indian side, there is vivid coverage of the

nature and incidence, even persistence, of popular revolt.

Every reader must feel inspired to learn of the heroic resistance put up against alien rule and repression. This is intrinsic to nation-building as much as to building the self-esteem of a people. It is comparable to native Americans and American Blacks re-interpreting US history to account for how events played out differently for them.

The carping about ‘packing’ of educational and cultural institutions and ‘packaging of history’ has to be seen in a historical perspective. The patron’s wealth and power as much as the historian’s personality (name, fame, currency) and the ideational school to which she or he belongs have ever been the more decisive factors than plain ‘facts’ or ‘available evidence’ when interpreting history.

The current effort to plant pro-India historians and culture-ists in key positions is an endeavour to use posts and their personalities to influence the products they command or help produce. This is no novelty. It has been the practice of Hindu, Muslim or British India, as well as Congress-dominated free India, and for that matter, the Communist-led Indian states. **British and other earlier scholars of India had their own agenda in presenting historical ‘facts’ in their terms and shaped by their compulsions.**

Historians under the Indian Marxist and Congress regimes spoke to their covert and overt concerns. The ruling party, but more importantly the swadeshi school of thought, should be expected to do no less. Just because the shoe is not on the radical foot does not mean it should pinch the student body more.

What the Thunder Said
By Rajeev Srinivasan
http://www.rediff.com/news/2001/jan/31rajeev.htm

Cry, the beloved country, yet again. The photographs from Bhuj and other parts of Gujarat after the great temblor are extraordinarily powerful. The magnitude of the disaster is overwhelming: our senses get dulled by the enormity of it all, and our own insignificance in the order of things. I was reminded of Kumaran Asan in Veena poovu (The Fallen Flower):

Kanney madanguka! Karinjum alinjum aasu
Mannakum ee malar vismrtam akumippol;
Enneetuka aarkkum ithu than gathi; sadhyam enthu
Kanneerinal? Avani vazhvu kinavu kashtam!

Withdraw, mine eye! Scorched and withered
This flower will become dust, unremembered;
Truly, this fate awaits all; What can mere
Tears do? The world lives on dreams, alas!

Natural disasters will happen. The real question is how we respond to them. The frightening earthquake in Gujarat which has claimed so many lives and caused so much damage to property is a time for us to rise above our petty day-to-day preoccupations and to address what we owe to our fellow-Indians. After all, it is the contribution of the average Indian, including the urban and rural Gujarati, that has built the infrastructure for all of us to become whatever we have become.

Indians start with some handicaps in disaster relief. One is the perceived, and real, inefficiency of the state. The other is the astonishing and brutal cupidity of those in power who will almost certainly steal and divert the funds and the contributions in kind that are pouring in from all over the world. Why have we become so inured to the public good? Why do we have such a tendency for moral corruption?

Perhaps it is because we have forgotten self-control, the idea of charity, and compassion. **In The Waste Land, T S Eliot quotes from the Brhadaranyaka Upanishad the story of what the thunder said: "datta, dayadhvam, damyata" That is, "Give, Be Compassionate, Be Self-Controlled."** This is a particularly apt metaphor for the earthquake, for Bhuj and Ahmedabad and much of the Rann of Kutch and Saurashtra have become waste lands, and we, the living, are apathetic in our efforts to help.

Eliot has changed the order from the original Sanskrit, which had the story of the Prajapati, the Creator and Preceptor, and his interactions with his offspring, the devas, humans and asuras: the gods, the humans and the titans. (Renuka Narayanan recounted this myth in her excellent Faith Line column in *The Indian Express,* and I liked the way she called asuras 'titans' instead of 'demons'. There is no need to, as it were, demonise them unnecessarily.)

The Upanishadic story is beautiful. The devas, humans and asuras are students who want Prajapati to teach them.

First the gods say to Prajapati: "Teach us, please, sire!" and in response, Prajapati utters a single syllable: "Da". Then he says to them: "Have you understood?". The devas reply: "Yes, we have

understood. You said to us, *damyata:* be self-controlled." Prajapati says: "Yes, you have understood well."

The humans ask Prajapati: "Teach us, please, sire!" and once again Prajapati utters: "Da". He asks them: "Have you understood?" The humans reply: "Yes, we have understood. You said to us, *datta:* give." Prajapati says: "Yes, you have understood well."

The titans ask Prajapati: "Teach us, please, sire!" and yet again Prajapai utters the single syllable: "Da". He asks, "Have you understood?" The titans reply: "Yes, we have understood. You said to us, *dayadhvam:* be compassionate." Prajapati says: "Yes, you have understood well."

And the voice of God, the rolling thunder, repeats: "Da, Da, Da". It says, "Damyata, Datta, Dayadhvam, constantly reminding us. For, it appears that the gods and the titans have remembered, but humans have forgotten their command: "Give!"

In fact, I would say modern Indians have forgotten all three of the commands. We are neither self-controlled, nor giving, nor compassionate. This is perhaps why things have come to such a pass in this *kali yugam.*

I am ashamed that we did not have the self-control to recognise the scale of this human tragedy. 100,000 people feared dead. This is 0.01per cent of the country's population. We did not have the self-control as a nation to declare national mourning and to cancel all the festivities of Republic Day. They should have canceled everything in Delhi. I was in Trivandrum, and I wish they had canceled the dance performance by Mallika Sarabhai: she who might have had no information about her mother Mrinalini Sarabhai in Ahmedabad. *Damyata!*

Eliot stressed "*Datta!*" In this time of trouble, I can only echo that. Give. Be charitable. For it is a characteristic of our civilisation that we have forgotten to give. When a hundred thousand people are feared dead, and untold millions in a state of shock and total helplessness, we have to give. There is no use falling upon the old excuses: that the aid will not go to the deserving. That it will be diverted to the pockets of greedy men.

No, "*Datta!*" Give. For it is Gujarat today, possibly your home tomorrow. I have lived through earthquakes in California, including the Loma Prieta quake in 1989 or so. I know how it feels to be utterly helpless in the face of the fury of nature, as the distant thunder of the quake comes toward you. Even in the well-constructed buildings in California, designed to withstand massive quakes, we cower in primal fear when we face nature's wrath.

Dayadhvam! I know there are those who have given unselfishly. The armymen and the airforce personnel. The RSS volunteers who rushed to the scene. The Ramakrishna Mission. The countless good samaritans who pulled people out from the rubble. The worldwide charitable organisations. Medecins sans Frontieres, and the Red Cross.

But for the rest of us living comfortably in our homes, we must think: it could be our children, our parents, our siblings, our spouses out there buried under the wreckage of fallen homes. In Ahmedabad, it is the solidly middle class citizens living in well-appointed apartments who have suffered the most. People like us. There, but for the grace of God, go you.

I have been thinking of my beloved Kerala. We have lived in the comforting illusion that Kerala is somehow immune to all natural calamities. But in the recent past, the hill areas around Kottayam and Idukky have been rocked by a series of small temblors. Then I remembered, we have had considerable seismic activity in Kerala. For instance, centuries ago, a temblor caused the river Periyar to shift its course, thus spelling the end of Muziris (Kodungalloor) as a great port, and opening up the natural harbor at Cochin.

And untold centuries before that, Kerala arose from the Arabian Sea because of an underwater quake. This is when Parasurama, according to legend, raised the state by throwing his axe out to sea. Yes, Kerala, God's Own Country, too, is susceptible to tectonic shifts.

So are Tamil Nadu, Karnataka, Andhra Pradesh, Madhya Pradesh, the Garhwal Himalayas, the Northeast, in fact the entire country. Can you imagine your home town demolished like Bhuj?

So I repeat, give. If not in cash, then in kind. Rush medicines, water, canned food, blankets, construction material, fuel, tents, if you have the capability to organise all this. Give it to the nearest Army cantonment: they will direct it to the right place. The aftermath of the carnage is the possibility of epidemics. Let us at least help the survivors. If you can, send goods.

Otherwise, give money. There is no tithe in Hinduism, so I suggest that we should all give something that is absolutely fair: one day's salary. This is still much lower than what the traditional Muslim is expected to give in *zakat.* And give this money to the Army, or to the Prime Minister's Relief Fund. The address that I have from *The Indian Express* is:

PM's National Relief Fund
C/o Secretary, PMO
South Block
New Delhi 110 001

Those who live abroad sometimes have a tendency to give a measly sum, say $ 50, thinking of the multiplicative factor of the exchange rate. This is nonsense. Give one day's salary, people! This is the least you can do. Let the pain be equally shared amongst all of us. One day's salary will not bankrupt you, by any means. If you make $ 100,000, give $ 274. Do not scrimp. For, one day, the shoe may be on the other foot. Do unto others…

If you are working for a company that matches employee charitable donations, this is an easy way for you to double your contributions. There are also a number of major corporations that will solicit donations from all their employees whenever there is a tragedy anywhere in the world. So tell your friends and colleagues about the enormity of this human devastation in Gujarat. Get them all to contribute.

In the US, here are some of the addresses to which you can send your money:

IDRF, 4807 Phebe Ave., Fremont, CA 94555-2502

Prime Minister's National Relief Fund
Embassy of India
Attn: Head of Chancery
2107 Massachusetts Avenue, NW
Washington, DC 20008

Wire Transfer Information:

Prime Minister's National Relief Fund (Riggs Bank, Washington, DC)
Account Number - 08115910
Route Number - 054000030

Datta! Give. For, as John Donne said, "No man is an island, entire of itself; every man is a piece of the continent, a part of the main… any man's death diminishes me, because I am involved in mankind, and therefore never send to know for whom the bell tolls; it tolls for thee."

Postscript

The Uttar Pradesh government should be congratulated for managing the enormous undertaking of handling 70 million pilgrims on a single day (*Mauni Amavasya*) at the Maha Kumbh Mela. That a penurious state administration was able to build hundreds of miles of pipelines for water, several hundred miles of roads, and all the other elaborate infrastructure to handle the largest assembly of human beings ever seen on earth for a single purpose is nothing short of wondrous. It is true, if Indians

put their minds to it, the most complex organisational problems can be overcome.

I read an article in the Indian media that alleged that some number of old people have been deliberately abandoned at the Kumbh Mela by their relatives. This may be true; and if so, it is a callous act. But there is an old custom in India and elsewhere that the truly old, when they have reached a stage where they are a burden to their families, voluntarily take *sanyasam* or even in some cases starve themselves to death.

I once saw a stark Japanese film by Imamura Shohei, *The Ballad of Narayama,* which is set in the remote interior countryside, an area of snow-capped mountains, where the peasants led a hand-to-mouth existence. The film is set perhaps two hundred years ago. The carrying capacity of the land is limited: only a fixed number of people can be accommodated. So, when a new baby is born, it is also an indication that some old person has to die.

There is a custom that the truly old are taken to the snow-clad mountains and left there to meet their end. In the film, the old matriarch of the family realises that the time has come for her to go. She forces her loving and reluctant son to carry her to the mountain peak where she will die, peacefully, amongst the snows, composed and prepared for her fate. In many ways, a more dignified end than being forced to live as a vegetable in an old-people's home, ill-treated and abused by some uncouth attendant.

The new crusade: it's about ideology, not oil

By Rajeev Srinivasan

March 28, 2003

http://www.rediff.com/news/2003/mar/28rajeev.htm

Now that the long-predicted Iraq war is a reality, it is worth looking at possible post-war scenarios. What is the driving force behind the war? What is the desired end point? What are the likely outcomes?

There are a number of obvious factors: first, the American desire to mould the world in its own image, a sort of updated 'manifest destiny', with their ideas of democracy, McDonald's and an MTV culture. The US has the will and the means to impose its fiat through a *pax Americana.* The lure of oil is part of the picture, as the Americans would prefer to keep their own reserves in the ground and use up West Asia's supply. It is also true that the military-industrial-media complex needs a good little war periodically to keep its production going and to field-test new weaponry.

But what has become more obvious is the moralising angle. I am astonished at the venom expended on France just because it dared to foil American designs on a UN Security Council mandate. French fries have become 'freedom fries'! Frenchmen and even the hitherto revered French cuisine have become *persona non grata!* This is more than a little pouting, and can only be explained in moral terms

The Americans have always had a moralising streak; after all, the ruling WASP population is derived from the Puritans, who were kicked out of England for being unbending fundamentalists. There is a tendency on the part of Americans to be self-righteous, fire-and-brimstone types who see the world in Zoroastrian black-and-white, good vs evil stereotypes. They are not particularly moral people, but good at moralising and believing, literally, that God is on their side.

A large majority of Americans profess to be Christian believers; many are literalist believers in the Bible. Note the success of apocalyptic books about the so-called Rapture and the coming 'end of the world.' Clever cult leaders such as Pat Robertson and Oral Roberts have taken full advantage of unthinking flocks to build up hugely profitable business empires.

In this Manichean worldview, there always has to be an Evil to balance the Good that America is supposed to represent. When Ronald Reagan talked about the 'Evil Empire,' he meant it literally, and it resonated as such with a lot Americans. For a long time, the Soviet Union supplied the Evil. After its demise, for some time China was the main candidate. Then, fortuitously, along came 9/11 and Osama bin Laden and Islamists. It turns out they are the perfect enemy, and with good

reason: they have the same Manichean worldview, only with roles reversed.

There are a lot of Christian fundamentalists (and neo-conservative Jews) in the Bush Administration. They view with alarm the strategic future of West Asia, and especially the future of Israel. On a tactical level they are also worried about sites viewed as holy, like the Dome of the Rock, the Al Aqsa mosque, the Wailing Wall, the Church of the Nativity, all under dispute between Islamists and Christians/Jews.

A number of leading lights on the American Right put together a plan a while ago that outlined their view of the world: this included massive increases in military spending, an assertive forward approach to bilateral issues, and so forth. Much of this has now become institutionalised in the Bush Administration's policies. Which simply goes to say, Samuel Huntington was right after all: this is becoming a clash of civilisations. It was but a Freudian slip when George W Bush talked about a crusade.

For, despite loud protestations that the 'war on terrorism' is not a war on Muslims, the reality of it is a war on Islam, or more precisely, on Islamism. The unstated objective of the attack on Iraq is likely to be to contain Islamic power, to redraw the map of West Asia and make it a US protectorate, much like Japan after World War II. If so, this has serious implications for India.

West Asia has existed in its current form for only a few decades, as sovereign states mostly ruled by dictators. Previously, they were largely colonies, first of the Ottoman Turks and then of various European powers, especially the British. When these nations were merely inhabited by desert Bedouins, this did not much matter. However, with oil wealth, as well as the dispute with Israel, they have begun to matter.

What if the Americans were secure in the knowledge that Iraq and its oil reserves -- the second largest in the world -- were safely in the hands of a friendly post-Saddam Hussein regime? The US would feel free to uproot the House of Saud, for one thing. They have been treated as sacrosanct, even though they are the moneybags behind a global scheme to radicalise Islam through Wah'abi *madrassas*. Emboldened by an easy victory in Iraq, the Americans are likely to depose the House of Saud.

What if Saudi Arabia were to be taken over by the Americans? This would be a humiliating and bitter defeat for the Islamists, who have been propagating their fierce and triumphalist brand of Islam which glorifies the victories of Islam. There are two possibilities: one is that the 'Arab street,' that is, public discontent in West Asia, will boil over in massive anti-American fury and that these new American colonies will become ungovernable. The other possibility is that the average Arab will just carry on. It is not entirely clear which is more likely but I think it is the latter.

An Arab friend of mine suggests that attempts to bring democracy to Saudi Arabia may be counter productive, for the proportion of Islamists among the population is high, and it may bring to power someone even more retrogressive than the House of Saud. Americans will have to run the country as an occupied state, a colony. They may even redraw the boundaries in the region, for example separating oil-rich provinces in Saudi Arabia from pilgrim centers. They may fundamentally alter the national boundaries, too.

In this scenario, the loss of funds from Saudi Arabia, and the loss of face from an American

occupation of the country, will have a devastating effect on Islamist groups like Al Qaeda. This may lead them to efforts to impose pain on Americans, whereby terrorist attacks on US interests will go up. But unless they are able to mount some truly spectacular attacks on the US, the Americans will endure. They are also taking steps to systematically emasculate 'sleeper' cells in their country; I am sure they will not hesitate to take harsh steps against suspected Islamists living in America.

What does all this mean for India? Plenty on the minus side of the balance sheet. First, energy supplies needed for India's growth will be under the control of the US, which is a dubious ally. Second, there might be unrest among Muslim Indians in the wake of the war in Iraq: remember that the **Khilafat movement,** about the removal of the Caliph in distant Turkey, led to the horrifying **Moplah Rebellion in Malabar.** Third, the demoralisation of Islamist forces may nudge the Pakistanis into a desperation attack on India: as they may well be, as Musharraf has said, a target once the US sorts things out in West Asia.

On the plus side, reduced enthusiasm for jihad is clearly a good thing for India. The defeat of the Islamists will be a setback for our strategic enemy China, which has assiduously cultivated a Sino-Islamic axis and supplied Iran, Iraq, Pakistan, and possibly Libya, Syria etc. with weapons of all kinds. Finally, the destruction of various multilateral power structures where India had no part to play -- NATO lies in tatters, and so does the UN Security Council -- will mean that India will be able to do more bilaterally from positions of some strength, especially as its economic power increases.

All in all, this is a deeply disturbing and volatile situation with highly uncertain outcomes. In addition to the human rights issues associated with the long-suffering population of Iraq, these strategic issues make Gulf War II a watershed. It would behoove the Americans to remember that hubris goes before nemesis. And Indians to remember that this clash between fundamentalists is not our problem: let us keep a very low profile.

Millennium Fuss
Rajeev Srinivasan
http://www.rediff.com/news/1999/apr/15rajeev.htm

In the midst of all the fuss about the new millennium in the Gregorian calendar, most of us missed another centenarian event: the beginning of the 52nd century of the Kali Yuga in the Hindu calendar, on March 18. This is Yugabda 5101. So why should anyone care? Isn't this just another somewhat eccentric calendar like the Saka Era followed by the Indian government?

On the contrary, Indians or at least Hindus should care. The widespread popularity of the Gregorian calendar is a vestigial side-effect of European colonialism, and the fact that Anglo-American business practices have more or less become the default option in much of the world. Although we tend to take these European-derived practices as somehow rational and even pre-ordained, there is nothing inherently scientific about them.

For example, millions of Muslims get along just fine on the Islamic calendar, even given the fact that being a lunar calendar, the length of their year doesn't quite match the 365 or so days in the solar year. They also get by just fine with an Islamic system of banking that doesn't allow for interest payments. Other non-Gregorian calendars and non-Euro-centric practices are used elsewhere.

Therefore the Gregorian calendar is just a convenient device. Although it is supposed to be related to the life of Jesus Christ, it is not quite in sync -- nobody quite knows when the historic Jesus lived, except that it was probably somewhere between 6 BCE and 40 CE. However, this calendar is definitely ethno-centric and religio-centric.

For instance, people ask me why I refer to dates in the Gregorian calendar as CE/BCE (i e Common Era/Before Common Era) as opposed to AD/BC. This is because AD/BC has certain religious connotations -- AD stands for Anno Domini or The Year of Our Lord, which is meaningless unless you are Christian. It was Jewish historians in the US who initially started the use of CE/BCE, which is a non-committal term with no assumptions about religion.

Interestingly, Jews have a rather ancient calendar, wherein this year is 5759. Since Judaism has been around for some time, this calendar must date back to some significant early event in the history of the Jewish people. Similarly, one would assume, the length of the Hindu calendar signifies some early event in the history of Hindus.

However, the earliest known Hindu text is the Rg Veda, dated to about 1500 BCE. Thus the Hindu calendar should date back only about 3,500 years. Therefore, the business about the Kali Yuga and 5,000 years must be some convenient fiction made up by medieval Hindu scholars, right? This is certainly what we have been led to believe by the Macaulayite educational system in India.

According to conventional wisdom, the Hindu texts that state that the Kali Yuga began in 3102 BCE, and that there was some spectacular celestial configuration of planets to mark that event, are merely fanciful mythical accounts. For after all, in 3102 BCE, Hindus were still far from writing the earliest Vedic texts -- and they were not a civilisation until around the 1500 BCE date of the Rg Veda.

But wait, where did the estimate of 1500 BCE come from? Why, it came from Max Mueller, the eminent

German Indologist, who dated the Vedas after considerable study in the 19th century CE. And how exactly did Max Mueller come upon this date? It turns out that he just made it up, based on certain cyclical logic!

You see, Max Mueller, being a Christian fundamentalist/missionary, took it as an axiom that the world was created in 4004 BCE, as some British bishop had deduced from a study of the Bible and related texts. Therefore, argued Mueller, after Adam and Eve, it would have taken a 1,000 years or so to populate Europe (with pure Aryans, of course).

Thereafter, given the Aryan Invasion Theory, it would have taken the Aryans a thousand years to migrate from Central Europe to India, bringing the Vedas with them. So add 2,000 years or so to 4004 BCE, put in a little swag factor of 500 years, and hey presto, you have the Rg Veda dated to 1500 BCE! Impeccable logic, surely.

I exaggerate slightly above, but in substance, this is the ethno-centric and Christian-centric view that has illuminated, so to speak, Indian understanding of its own pre-history. And this has been the state of affairs until scholars such as Dr Koenraad Elst, Dr Subhash Kak, Dr David Frawley, et al began to question both the Aryan Invasion Theory and the dating of Indian pre-history.

I will not get into the wretched Aryan Invasion Theory controversy, but it is surely interesting to look at ancient Indian astronomy. It has long been assumed that Indian astronomy was derived from the Greek -- after all, Euro-centrics pre-supposed that Greek civilisation was the fount of all classical knowledge; the curious fact that the Indian and Greek astrological signs were identical was attributed to Indian borrowing from the Greeks.

It turns out, however, that Hindu texts do fairly accurately describe historical celestial events -- for instance the singular planetary configuration that is supposed to have taken place in 3102 BCE to mark the beginning of the Kali Yuga did in fact take place. This leads to two possibilities: one, that the astronomical events were actually observed then; two, that someone, after the laws of astrophysics became known (say Newton's time) back-caculated and inserted them into texts.

There is a problem with the first hypothesis: ancient Indians were not known to be astronomers, unlike, say the Chinese, who left detailed records of supernovae they observed, for instance in the Crab Nebula in 1054 CE. Second, if Indians were accurate astronomers 5,000 years ago, that presupposes an advanced civilisation by that time, which makes India the oldest of all known civilisations. This does not fit in with conventional wisdom.

But consider the other hypothesis. Given the notorious state of the authenticity of Indian texts, tampering is not out of the question. So let\rquote s say some clever 18th century Hindu mathematician manufactured the evidence and inserted it into allegedly ancient texts.

But there is a flaw in this argument. It turns out that Indian astronomy (and astrology) over the centuries has had an error in it: it does not take into account the precession of the axis of the earth as it rotates around the sun. This is the tendency of the axis itself not to be oriented in space in fixed fashion, but to describe a cone -- it spins like the axis of a top does.

This error has accumulated over time. So for instance, Hindus celebrate the Winter Solstice on Makara Sankranti day, January 14th; however the real Winter Solstice is on December 22nd. Similarly, the Indian astrological months are offset by a couple of weeks from the real dates on which the sun enters those constellations.

Therefore, if an Indian mathematician were to recognise this error in Indian astronomy, take it into account, correct it, and backtrack to 3102 BCE, it would take a prodigious amount of computing power, that was not available until the recent creation of supercomputers. Therefore, the second hypothesis is impossible -- it was not back-calculated. The event was in fact observed in 3102 BCE.

We are left with the possibility then that Indian civilisation was already well-established in 3102 BCE. Which is interesting in and of itself. Furthermore, the Hindu calendar does speak in cosmic terms -- and

it establishes the age of the universe as some 8.64 billion years, which fits in with modern, scientific cosmology (see **Carl Sagan** at **http://www.rediff.com/news/jan/29sagan.htm**).

I understand that the Indian government has denoted this year of the Hindu calendar as the Year of Sanskrit. Maybe in some of those crumbling palm-leaf manuscripts rotting away unsung, unwept, and unhonored, there are other ancient treasures like the astronomical observations from 5,000 years ago.

Blaming the Hindu Victim: Manufacturing Consent for Barbarism

By Rajeev Srinivasan

http://www.rediff.com/news/2002/mar/07rajeev.htm

Now we can add one more cursed date, February 27, 2002, to the black days in the Indian calendar: April 13 (Jallianwallah Bagh, 1919) and the days on which the battles at Panipat and Plassey were lost. **On February 27, a horrific and brutal crime was perpetrated on Hindus: fittingly, it happened at the birthplace of the most fanatical and brutal Muslim tyrant in India, Aurangzeb.**

The facts are indisputable:

- A regularly scheduled Sabarmati Express was carrying, in a few coaches, several hundred Hindu pilgrims, including many women and children, returning from a trip to Ayodhya, where they had participated in some rituals
- The train was leaving the town of Godhra, which has a 30 per cent Muslim population, when someone stopped it by pulling the emergency chain
- A mob of some 2000 people, apparently Muslims, then attacked the train with firebombs and acid bombs, and burned alive at least 57 people inside the locked coaches, including a dozen children

The response in the English-language media in India has been quite intriguing. The editorials and reports generally blamed Hindus for provoking Muslims by the act of wanting to build a temple in Ayodhya. The tone, generally, was: 'We told you that Hindu provocation in wanting to build a temple will lead to a Muslim backlash. So here it is. It's the Hindus' fault.'

Here is an excerpt from an editorial in *The Hindustan Times*:

A number of innocent people have already died and more may suffer if the Centre, even now, doesn't step in to stop the insanity unleashed by the VHP. Right from the time when this outfit of Hindu fanatics announced its provocative plan to begin the construction of the temple in Ayodhya, it was known that trouble was brewing. But the BJP at the Centre, perhaps hoping that the VHP's belligerence will consolidate the Hindu vote behind it, did nothing more than mouth pious platitudes.

Here is an excerpt from a report in *The Washington Post*, with a quote from a well-known

Hindu-baiter and Muslim apologist, whose organisation, for the sake of truth in advertising, should be renamed 'Hinduism Combat':

Teesta Setalvad, head of Communalism Combat*, a group that opposes religious extremism in India, said that 'while I condemn today's gruesome attack, you cannot pick up an incident in isolation. Let us not forget the provocation. These people were not going for a benign assembly. They were indulging in blatant and unlawful mobilisation to build a temple and deliberately provoke the Muslims in India*.'

Even by the standards of the Indian English media and its 'secular' 'progressives', known for their Marxist blinkers, this is astonishing. For they are conveniently pinning the blame on the victim. If I were to take the usual liberal position, this is the equivalent of blaming a raped woman for the crime of wearing revealing clothes, which led to the rapist losing control. Most civilized people would consider it the fault of the rapist, not of the raped woman. No 'provocation', most people would argue, justifies rape. **But not so India's media or 'intellectuals'.**

This issue of provocation is quite illuminating. **What could possibly provoke the cold-blooded execution of a large number of people, including women and children, trapped inside a locked railway carriage and burned alive? What could their sin have been?** It is alleged that there were altercations between those on the train and Muslim hawkers at Godhra station. But notice there was no physical violence between them.

So how does this altercation escalate within a few minutes, and that too in the early morning before many people are up and about, into a large mob of Muslims arriving at the scene equipped with Molotov cocktails and acid bombs? Does this look like a spontaneous response to an act of provocation, or does it look like a pre-planned, well-thought-out plan for mass murder? What kind of 'provocation' leads someone to randomly execute women and children in the most gruesome manner possible, by burning them alive?

This is not a rational response to any provocation; it is pure terrorism. Premeditated violence inflicted on civilian populations with the intent to terrorize them. A good exposition of this is available in *The Quranic Concept of War* (see **N S Rajaram's** review at **www.bharatvani.org/reviews/rev-quranic.html**).

How does this compare with the infamous 9/11 attacks on the World Trade Centre? In both cases, unarmed civilians, going about their daily tasks, were attacked and murdered by a band of ideologically hardened individuals. What was the 'provocation' by the people in the World Trade Centre? Some fantasy that they were part of a Jewish-Zionist conspiracy to take over the world's finances? A recent Gallup Poll shows that 61 per cent of those surveyed in nine Muslim countries accounting for half the world's Muslims refuse to believe that it was Arabs who attacked the

WTC! There is an element of denial among Muslims that their co-religionists could be such barbarians.

It appears as though it takes very little to provoke Muslims. What was the provocation for murdering Daniel Pearl? That he was a Jew? After all, he was forced to say to the camera, 'I am a Jew, my mother is a Jew,' just before his throat was slit, in the macabre video his captors created. What, then, was the provocation by the Hindus in the case of the Sabarmati Express? That they were Hindus? That they were alive? That appears to have been sufficient 'provocation'.

Consider the 'provocation' for similar acts of Islamic barbarism in Kerala in 1921: the Moplah Rebellion in Malabar. There was no provocation by Hindus, who were minding their own business. However, in distant Turkey, Mustafa Kemal Pasha had abolished the caliphate! This was the reason for the murder, rape and forcible conversion of thousands of Hindus -- who were purely convenient bystanders -- and looting, arson and destruction of much property.

What was the 'provocation' by poor Hans Christian Ostro, the Norwegian tourist abducted in 1994 by Pakistani terrorists in Jammu & Kashmir, and later beheaded? That he happened to travel in India? What was the 'provocation' for the Shi'ite Muslims murdered by drive-by terrorists in a mosque in Pakistan recently? What about the 100,000 Algerians massacred, mostly by having their throats cut, by fellow-Muslim terrorists?

No, it is pretty clear that there does not need to be any 'provocation' before sections of Muslims unleash their blood-lust on all and sundry, especially non-Muslims, and if such have already been extinguished, on fellow-Muslims. The entire Muslim world has bloody borders, as Samuel Huntington pointed out. Furthermore, even in their societies, there is incredible violence.

Liberal Muslims should ask themselves why this is so: is there something in their religion that easily turns some people into bloodthirsty barbarians? If so, isn't this something they need to cleanse from their religion? As Edmund Burke once said, 'All that is necessary for the triumph of evil is for good men to do nothing.'

After this latest bout of bloodletting, I am beginning to wonder if Mohammed Ali Jinnah was right, after all. Maybe Muslims cannot live with Hindus, or anybody else for that matter. Maybe the Two-Nation Theory is in fact true. That is an awful possibility: because it would mean that the pluralistic, liberal, tolerant world-view that has been the hallmark of Hinduism for millennia is no longer an appropriate paradigm, and Hindus have to become like Muslims, Christians and Marxists: dogmatic and intolerant, just to survive. I would hate to think this is the future.

Hindu pilgrims massacred; but the show must go on

By Rajeev Srinivasan

http://www.rediff.com/news/2000/aug/18rajeev.htm

It is no great surprise to me that the so-called 'ceasefire' by the shadowy Hizbul Mujahideen in Jammu and Kashmir came to an ignominious end. As I said in my previous column ('Beware of Greeks bearing gifts!') it was a propaganda exercise for the separatists and the Pakistanis to claim that see, they were willing to talk, it was India that was intransigent.

For once, India did the right counter-propaganda by immediately responding to the 'ceasefire' offer. With such alacrity that the Pakistanis (and their puppet, the Hizbul Mujahideen man Salahuddin in Islamabad) were caught on the wrong foot. They might actually have had to sit down and negotiate with the Indians, which they really don't want to do. Therefore, Plan B was put into action.

That was the brutal massacre of a hundred Indians, including Hindu pilgrims on the Amarnath Yatra and Hindu laborers from Bihar and Madhya Pradesh. This was trigger-happiness, intended to a. show the Indians who was boss, b. cause mass outrage and calls to abort the talks. But the Indian government still did not withdraw from the negotiations; the Indian public did not rise up in anger.

Therefore Plan C had to be hastily constructed: add some unreasonable demands. Yes, ask for Pakistan to be included in the talks post-facto -- this is guaranteed to be rejected by India. Thereafter, feigning injured innocence, the Hizbul Mujahideen wrings their hands about Indian 'unreasonableness' and goes back to business as usual, murdering people.

The theatrics have backfired: anybody who cares could see that India acted in good faith, and it was Salahuddin and the Pakistanis that sabotaged the talks. So no little gold stars for the dictator Pervez Musharraf; his propaganda ploy got him no plaudits whatsoever. So it is back to square one -- Situation Normal All Fouled Up.

Except for one small detail -- one hundred innocent people, mostly Hindus, who were murdered. In particular, many were pilgrims, going on an arduous pilgrimage to the ice cave at Amarnath. Pilgrims are always treated with deference everywhere in the world, for their closeness to the Infinite. Yet, the Indian media did not see fit to dwell on them; I don't remember seeing anywhere a full list of the people killed, their family backgrounds, any details about them. I know nothing about who these unfortunate people were. They have already been forgotten.

And I don't remember seeing the professional Human Rights mafia raising a ruckus. Let me pick on the most visible of these 'progressives' -- Shabana Azmi, Teesta Setalvad, Communalism

Combat, SAHMAT. Not to speak of John Dayal and the National Christian Council or whatever. Not one of them, unless I am gravely mistaken, even turned an elegantly coiffed hair. You see, the dead were Hindus, so they were not human. So they had no human rights. QED. Only Muslims and Christians have rights.

Can you imagine the fuss if 50 Muslim or Christian pilgrims were slaughtered in India? Do you remember the breast-beating about attacks on Christians? The god-awful fuss made over exactly one missionary ('Death of a Missionary') burned to death? The mea culpas are still resonating. The manhunt for the perpetrators was most energetic. We get periodic interviews with the missionary's saintly wife who forgives all and sundry for all their sins, whether they committed any or not. I wouldn't be surprised if the Vatican saints Graham Staines any day now, even if he was not a Catholic.

Where are the interviews with the wives of the Hindu laborers and the pilgrims? Why doesn't anybody care if they forgive the killers of their kith and kin? Are they even getting any compensation money? I suppose not. They have already been forgotten. They are only Hindus.

This is what it means to be a Hindu in the great Socialist Progressive Secular Republic of India. You are a second-class citizen. Jawaharlal Nehru must be laughing in his grave -- he has succeeded in what he set out to do: destroy Hinduism. He put in place a perfect system of apartheid, one in which the silent majority is explicitly handicapped and exploited by law; and they believe they deserve it. While the 'minorities' are coddled. How this is different from the erstwhile white-supremacist regime in South Africa I really am not sure.

The Nehruvian Indian Constitution is a discriminatory document, as it expressly curtails the freedoms of Hindus, but not of 'minorities'. For instance, Hindu religious institutions come under government control and grand theft, but not Muslim or Christian ones. Hindus are not allowed to run schools, but 'minorities' are. The list goes on and on. It is apartheid, codified.

Each of these dead Hindus is a victim of Jawaharlal Nehru's megalomania. For it occurred to me recently that Nehru was anti-Lincoln. Whereas Abraham Lincoln gave his life to preserve the American Union, Jawaharlal Nehru gave the lives of several million Indians to destroy the Indian Union; primarily to massage his ego. As I said in my previous column 'Let Us Now Praise Famous Men,' Nehru was the reason for Partition, for the Kashmir problem, for Pakistan. He and his dynasty have been India's sorrow.

As India looks fearfully to August 15 and the mayhem on that day, it is worth remembering Saadat Hassan Manto's words: "There, behind barbed wire, on one side, lay India; and behind more barbed wire, on the other side, lay Pakistan. In between, on a bit of earth which had no name, lay Toba Tek Singh." We in the subcontinent all seem to inhabit an illusory homeland, just like that disappeared village, Toba Tek Singh.

All thanks to the wholly unnecessary Partition. All the other nations that were partitioned in the binge of partition in the mid-1900s have reunited or will reunite: for instance, Germany, Korea, etc. But Nehru's vanity and desire to be king have forever blighted this beloved country. Pakistan will never give up its struggle to destroy India: we will never reunite the old India.

Macaulay must be laughing too. He too has succeeded beyond his wildest imagination. This

country has an entire two generations of Nehruvian Stalinists in positions of influence and power who have been brainwashed into despising themselves and being bilious shadows of others, in this case Chinese, Russians and Americans. Not the British, though, alas for Macaulay.

I read a lot of reports in the worldwide media about this whole ceasefire charade. Most of them scarcely mentioned the massacre. Practically none of them mentioned that these were pilgrims. I suppose the world media also hardly thinks of Hindus as human beings. How can you blame them if the Indian media doesn't? Self-respect is needed before others will respect you.

At best, Hinduism falls in the 'Other' category of religions according to the New York Times. This is the way they reported on the Peace Summit (which His Holiness the Dalai Lama was excluded from): Rev. XYZ, Monsignor ABC, Rabbi XYZ, Mullah ABC, and then 'representatives from the Buddhist, Hindu, Native American, Shinto and other faiths.' Once again, note that these are nameless, un-individualised people. Only the Semites deserve names and individuality. Only the Semites are people. So, naturally, they have human rights. Hindus are mere statistics.

Ramesh Rao in a column on rediff.com suggested that the New York Times has been unremittingly hostile to India in the recent past. I agree, at least from the time Barbara Crossette used to file unvarnished tripe from Delhi. I think this has hurt the Indian propaganda cause quite a bit, as the paper is practically the mouthpiece of the foreign policy mafia in the US. I suggest that India's ambassador to Israel should ask the leaders there to put in a good word with the NY Times, who are after all Jewish and very pro-Israel. This could be a tangible benefit from the growing Indo-Israeli warmth.

What bothers me most is the casual way in which devout Hindus were butchered by Muslim terrorists. Don't they realise the worm can finally turn one day? After all, Muslims do go on pilgrimages too. Or maybe these terrorists are so bloodthirsty that rational thought does not occur to them. They have massacred some 50,000 of their co-religionists in cold blood in Algeria. And god knows how many in Afghanistan.

Look at the list of killings of Hindus in Jammu and Kashmir (from India Today, August 2, 2000). This is in addition to 350,000 Hindus ethnically cleansed from the Kashmir valley. Most of the following are in the Jammu region. These were cold-blooded executions of unarmed civilians by heavily armed mercenaries, often Afghan or Arab.

2000

August 2: 11 in Doda district
August 2: 7 in one family in Kupwara district
August 1-2: 27 labourers in Anantnag district
August 1: 31 Amarnath pilgrims at Pahalgam
February 28: 5 drivers in Anantnag

1999

July 19: 15 in Doda
June 20: 15 in Anantnag
February 20: 11 in Rajouri, 9 in Udhampur

1998

August 8: 35 in Himachal Pradesh (Islamic terrorists responsible)
July 28: 16 villagers in Doda
June 19: 25 in Doda
April 18: 27 in Udhampur

1997

March 20: 7 in Budgam in Kashmir
January 25: 25 in Ganderbal

Who cries for the Hindus? Are we children of some lesser god? Will the world notice us only if we take up the gun in self-defense?

And why is it that explosions do not disrupt Pakistan's Independence Day? What exactly is RAW doing? Pakistan can relate to counter-terrorism: being fanatic bullies they will be able to appreciate pain when it is applied to them. Pakistan is a fairly porous country, as demonstrated by the roving bands of mercenaries: why aren't some of them in India's employ, wreaking large-scale havoc and terrorising people?

India needs to ally with the Israelis to understand both the psychology and the tactics of protracted action against religious terrorism. After all, the Hindus and the Jews have both been victimised for millennia; it is time that both stood their ground. Especially for the Hindu, there is no outside help, at least not until India gets to be a major economic power. We are the Other, those of the frighteningly timeless religion, that which Islam and Christianity must worry about -- for Hinduism was there before they came about; and Hinduism will still be there after they disappear.

Postscript

Thank you to the readers who wrote to the United Nations regarding the shameful blackballing of His Holiness the Dalai Lama. In particular, I liked reader Kaustubh's gentlemanly yet firm note. However, it appears the insult will stand: the Lama is not going to the conference.

I read somewhere that the Pakistani information minister took umbrage to L K Advani referring to 'South Asia' as the 'Indian subcontinent'. "India is only one of the countries in 'South Asia' " quoth the Pakistani. (Quotes mine.) Now you know where all this 'South Asia' garbage is coming from. As I said in my previous column, 'Why I am not a South Asian' it is a desperate Pakistani information warfare attempt to reduce India's brand equity. After all, the only things people associate with Pakistan are "Paki-bashing" and "wild-eyed, bushy-bearded, fundamentalist terrorists including Osama bin Laden."

Children of a Lesser God

By Rajeev Srinivasan

http://www.rediff.com/news/2001/feb/23rajeev.htm

The rantings of one T John, an erstwhile minister in the Karnataka government, are now well known: he claimed that "God was punishing Gujarat and Orissa for attacks on Christians." My first thought on hearing this was that John was logically challenged. For I too can come up with plenty of interesting theories for the earthquake:

1. God is punishing India for allowing that Christian fundamentalist Sonia Gandhi to take a half-hearted dip at the sangam at Prayag during the Kumbha Mela.

2. God is punishing India for allowing the Christian Pope to come here and preach hatred recently, when other sensible Asian countries refused to allow him in.

3. God is punishing India for not controlling those Taleban-like missionaries and their vicious acolytes in the northeast, who are running around killing Hindus and Buddhists.

4. God is punishing India for allowing that missionary, M Teresa, to do immense harm to India's image and self-image, with the sole and lamentable intent of conversion.

5. God is punishing India for having welcomed with open arms the first Christians who came to India, the group of Syrians led by one Thomas of Cana in the 4th or 5th century CE, who were fleeing persecution probably at the hands of other Christians in West Asia.

6. God is punishing India for not having retaliated in kind against that madman Vasco da Gama in 1498 CE. An emissary sent by the Zamorin of Calicut to meet the Portuguese ships was sent back with his ears, nose and hands chopped off and strung around his neck.

7. God is punishing India for having tolerated that Inquisition-happy "Saint" Francis Xavier of Goa who dismembered children alive in front of their parents (whose eyelids were cut off so they had to watch), carefully cut off the extremities of people so they were still conscious when they were nothing but torso and head, chopped off and burned the genitals of men, cut off breasts, and penetrated vaginas with swords, all in the name of his religion.

Good theories, aren't they? I know these are absurd, but then I am merely following in the footsteps of Tertullian, (ca 160 CE), a major figure in early Christianity, who said, *credo quia absurdum est* (I believe, because it is absurd). He also said, "And the son of God died, which is immediately credible because it is absurd. And buried he rose again, which is certain because it is impossible." Thus my absurd theories must be right, true? QED.

There was also the curious case (much like the singular event of the dog in the night-time in Sherlock Holmes) of the sudden silence of the 'secular' 'progressives'. Let us consider the usual suspects. What T John said is patently communalist; but *Communalism Combat's* Teesta Setalvad did not fly into her customary rage. Shabana Azmi was surprisingly silent. **Human Rights Watch and Amnesty International did not wax eloquent. Why? It is as I have said *ad nauseam* before: these people are themselves extremely communalist. According to them, only semites have human rights.**

Similarly, the many Christians in the Indian media were also thunderously silent. Pamela Philipose, B G Verghese, Sevanti Ninan, Amrita Abraham, Gita Abraham, *et al*, all well-known and highly opinionated journalists, expressed no righteous indignation, so far as I can tell. (T J S George did condemn T John, but bracketed the VHP for good measure.) Nor did Christian fundamentalist columnists like A J Philip, Gail Omvedt or *rediff.com's* own Dilip D'Souza, all of whom are quick to condemn Hindu foolishness. From their own texts, I ask them: "And why beholdest thou the mote that is in thy brother's eye, but perceivest not the beam that is in thine own eye?"

Incidentally, none of these worthies condemned the Pope's outrageous statements in Delhi nor the deplorable *Dominus Iesus* document either. Nor do they give any column-inches to the ongoing murders of Hindus and Buddhists by neo-convert Christians, who have become a majority in parts of the northeast. The plight of the Reang tribals, ethnically-cleansed from Mizoram by Christian thugs, does not get their attention. Why? I am forced to conclude that their silence implies agreement, sympathy, or collusion.

There is an eloquent statement in their own scripture: Bible, Mathew 23:13: "Woe unto you, scribes and Pharisees, hypocrites! For ye shut up the kingdom of heaven against men: for ye neither go in yourselves, neither suffer ye them that are entering to go in."

Now what about other natural calamities occurring elsewhere in the world?

1. The 1989 Loma Prieta earthquake in San Francisco: how many Christians were being attacked there?

2. The 1994 Northridge earthquake in Los Angeles: how many Christians were being attacked there?

3. 80 black Christian churches across the US South were burned to the ground by unknown assailants in the recent past. Why wasn't there an earthquake in the South?

4. What about all the hurricanes and tornadoes that hit the US all the time? Are they the result of Christians being attacked there?

5. The great plague that practically wiped out Christian Europe in the Middle Ages: was this the result of attacks on Christians by anybody?

6. The recent landslides and floods in Latin America, a staunchly Christian place: were these the results of any attacks on Christians? Similarly volcanoes and other calamities in the Philippines.

7. Two hundred years of slavery and several hundred years of apartheid (almost all of the victims

were Christians) didn't produce any retaliation for the attacks on Christians?

The obvious common-sense answer to all the above is that they have nothing whatsoever to do with Christians or anybody else. These are just periodic natural things that simply happen with no divine intervention. God, one would imagine, is too busy to be worrying about such piddling affairs as the religious affiliations of his creations.

In point of fact, Christians have been the greatest perpetrators of large-scale holocausts. The Jewish holocaust is well-known; less well-known is the genocide of the Gypsies of Europe. They also committed genocide against the native Americans of both North and South America. They practically wiped out the natives of Tasmania (English sailors simply kidnapped all their women to enjoy them sexually and then throw them overboard). They reduced native peoples in the Pacific Rim and much of Africa to absolute misery. See the the sad state of the once-proud Maoris after Christianization, in the graphic film "Once Were Warriors" (New Zealand, 1995).

There is the horrifying book ***Late Victorian Holocausts*** by Macarthur Fellow Mike Davis (Verso) that shows how Christian greed directly caused the deaths of some 50 million people in India, China and Brazil. For instance, during the great famines in North India in the late 1800s, record amounts of grain were being exported to England from India! Amitav Ghosh's *Glass Palace* (HarperCollins) details how Christian imperialist thievery decimated once-prosperous Burma, ravaged its forests of all old-growth teak, and reduced Burmese to penury.

And Christians moan about "attacks"? Theirs has been a civilisational attack on the rest of the world, their religion no more than a convenient facade for European imperialism.

Furthermore, what exactly are these loudly trumpeted "attacks on Christians" in Gujarat? The Sarvodaya leaders who reported on this last year were clear: it was Christian missionaries who created the problem, by getting the tribals to dishonor their gods. I understand that they even went to the extent of urinating on images of Hanuman. I remember one reader writing to me in high dudgeon about how she, as a Christian, would be attacked in Gujarat. Reader dear, you will be just fine in Gujarat if you simply keep your fly buttoned: just don't pee all over the place. The same holds good for all the other missionary types. Have some self-control.

There is also the belief some Christians have held that the year 2000 of their calendar would see the end of the world. In 1999, I publicly made an offer to wager US $ 1,000,000 with any Christian fundamentalist that the world would not end in the year 2000 CE. My rationale was that the alleged anniversary of the birth of Jesus Christ had absolutely no significance in the large scheme of things.

I was right; alas, no fundamentalist chose to take me up on my offer, or else I would have been a million dollars richer. So much for the courage of their convictions. Clearly, they don't themselves believe in the Christ legends, or in the literal truth of the Bible. All that is for marketing purposes, strictly for the consumption of the gullible targets of their conversion machinery. Did I ever mention they were hypocrites?

There really is nothing unique about Christianity. Jesus was yet another preacher, of which there have been many; Christianity is just one of many religions that have come and gone; it will also disappear when its time has come. The only thing unusual about it is the

remarkable amount of havoc -- cultural and environmental -- its adherents have been able to wreak all over the globe.

On further thought about T John's statement it occurred to me that I was looking at this whole thing from the wrong frame of reference. I was thinking about God as a Hindu would: God as the omnipotent One, Lord of all Creation, It that pervades the Universe and is the Universe. I have a lot of Christian Indian friends and most of them share the same definition for God. But T John's definition of God is different: he is looking at the God of the Fundamentalist Christians (GOF for short). In that frame of reference (odd though it may be), his statement is internally consistent.

For T John's GOF is only the God of Christians -- not a Universal God. The GOF is a limited god, a tribal god. A tribal god has no existence without his tribe, and is therefore a lesser god, a second-class god: one dependent on the tribute of his flock. He is afraid of losing his tribe, and is most jealous about their affections. He is a pathetic and neurotic God, whom his tribe can only fear, not love. Notice that, significantly, Christians never talk of themselves as "God-loving", only "God-fearing". This God is not worth loving, it appears, only worth fearing.

So T John's GOF, this God only of Christians, may be unhappy at anything that affects the attempts of his tribe to dominate. But then, I wonder: being a second-rate god, would this tribal GOF be able to produce earthquakes? I understand he once parted a sea, a pretty good special effect indeed, but earthquakes? Are they within his powers, this old man with a long, flowing beard?

This GOF is roughly like one of the *devas,* demi-gods, in Hindu mythology: like Indra, always insecure about his position, always trying to convince people to pay him obeisance. This is one of the many things that makes Christian theology unsatisfying: they have not progressed beyond this idea of a second-rate, jealous GOF. They have not figured out that beyond the many demi-gods lies a Formless, Absolute, One, that which is beyond all attributes. Their monotheism is naïve when compared with Absolute Monism.

The GOF is merely a desert god, one invented for desert people: in the desert, you must follow a few simple rules, or else you die. Therefore he is the god of a few simple rules. He is also known as the God of the Israelites: a parochial God, who only looks after the welfare of his tribe. For instance, there is the story of the Canaanites. These people were unfairly harassed and hounded and destroyed by the Israelites, with their partisan GOF cheering from the sidelines.

This narrow-minded GOF is only the God of humans even in the broadest interpretation of Christian texts. For it is said that the Christian God made man in his image. And therefore, obviously, animals and plants are inferior creations, made for the exploitation and pleasure of humans. This concept works today, because humans are more intelligent than other flora and fauna.

But what if there is a day when we discover there is indeed extra-terrestrial intelligence, and those intelligent beings are nothing like humans? Maybe they are like spiders, or cockroaches? Since they are not in the image of the Christian God, then they must have a different God. And what if, horrors, these creatures are more intelligent than humans are, and can exploit and enslave humans like we have the other animals? Then that God, the God of the spider-creatures, would be clearly a greater god than the GOF.

So it is up to Christians to decide: are they children of some lesser, second-rate GOF, like T John is? Or are they children of the real God, the One who created everything? If they are the latter, then they must know that the One True God would not discriminate against any of Its creations: It doesn't care about their religions. It does not send calamities indiscriminately to hurt Its children, all of whom are equally dear to It because they are all part of It.

As Albert Einstein said famously, "God does not play dice with the Universe". The God he was referring to was the One, the Absolute, the True God, not the GOF. Most Christians do not believe they are children of this lesser god; but there are some like T John who, alas, believe they are. Only they make inane statements like T John's.

108 buried Siva temples found

By M. V. Subramanyam

http://www.hinduonnet.com/stories/2002060301550400.htm

SIDDAVATAM (Cuddapah dt.) June 2. The surfacing of five ancient Siva temples partly in sand dunes along the Pennar river in Jyothi village in Siddhavatam mandal has led to the discovery that as many as 108 Siva temples have been buried under sand at the place.

Besides the rare presence of 108 Siva temples dating back to 1213 A.D., a silver chariot and a diamond crown said to have been presented to the Jyothi Siddhavateswara Swamy temple by Kakatiya Rudrama Devi were present in Jyothi village, according to inscriptions discovered.

The 108 Siva temples were said to have been constructed by King Rakkasi Gangarayadeva and his aide, Jantimanayakudu, in the 12th century and were buried under sand during the Muslim Kings' rule, says Pothuraju Venkata Subbanna, a retired headmaster and chairman of several temples in Siddhavatam mandal, who has been conducting a study for the past eight years and has authored a voluminous book running to 1,200 manuscript pages, which he hopes to publish shortly. The king's nephew, Nachalappa, is said to have constructed the "Aleru Katta", stairs leading to the Pennar from the group of temples, he stated. The main temple called Jyothi Siddheswara Swamy temple, in which the local people have been performing pooja of late, has a big Sivalingam and a gaping hole to the right of a Sivalingam is a very long tunnel, presently inhabited by bats. A handful of villagers who ventured into the tunnel at the behest of Venkata Subbanna have returned after crawling barely for a few metres due to suffocation. A life-size inscription in the temple has Swastik symbol on the left and the Sun, Moon and a sturdy bull on the right. The sculpture in the main temple, a temple gopuram and a mantapam, which partly surfaced, depicted that of the Vijayanagar Kingdom, Venkata Subbanna told *The Hindu*. The "Vaanara" king, Sugreeva noted in an inscription that during his search for Goddess Seetha, he entered Siddhavatam which has countless Siva temples, whose architectural splendour were a feast to the eye. Aghorasiva, a Mathadhipathi of Pushpagiri Math, stated in an inscription dating back to 1313 A.D. now present in Vaidyanatha Swamy temple in Pushpagiri Matham, that Siddhavatam had several Siva temples of significance, Venkata Subbanna said.

Women of Jyothi village have been entering one of the temples, having Goddess Kamakshi icon, whose entrance is partly opened up, by crawling in and performing pooja of late. A gopuram built with bricks and a very long 11-feet high and two-feet wide compound wall, said to be encasing the 108 temples, partly surfaced in October last year, thanks to the floods, Satya Sai Lakshmi Reddy of Cuddapah, studying MBA at Chennai, who spent a fortnight doing a project work on the ancient temples, told this correspondent. In all half a dozen temples partly surfaced from the sand

dunes so far.

The second Vikramarka King, who ruled with Alampur in Mahabubnagar district as capital, has visited the Siddheswara temple and impressed by it, constructed Nava (nine) Brahmeswara temples on the northern side of Pennar, according to an inscription, he said. There is a mantapam built with huge rock boulders, which has partly surfaced. The rich ancient cultural heritage and temple of historical importance at Jyothi village needs to be unravelled by planning excavation of the temples under expert guidance, to prevent their damage.

RAMAJANMA BHUMI: AYODHYA - NEW ARCHAEOLOGICAL DISCOVERIES

http://www.sulekha.com/hoppercomments.asp?cid=180125

Below I am producing a report on the archaeological findings in the Ramjanambhoomi complex during the ground-leveling operation undertaken by the UP government in April-June this year. The report was submitted to the Home Ministry, and then subsequently was published by the 'Historian Forum' New Delhi in the form of a beautiful booklet with colored pictures on glossy paper to demonstrate the original colors of the objects unearthed during this operation. Totally there are 32 pictures of these startling objects of a Hindu temple, which conclusively prove that there was a Hindu temple dedicated to Lord Rama/Vishnu at the site where now the dilapidated Babri structure stands. To ask any further proof is to degrade one's own intelligence.

RAMAJANMA BHUMI: AYODHYA - NEW ARCHAEOLOGICAL DISCOVERIES

ON THE 18TH OF JUNE 1992, when the ground near the Ramajanma Bhumi was being levelled, a most startling archaeological discovery was made at Ayodhya. At a depth of about 12 feet from the ground level near the Ramajanma Bhumi temple, towards the south and beyond the fencing, a big hoard of beautifully carved buff sandstone pieces was located in a large pit, dug down below the old top level.

A careful study by a group of eight eminent archaeologists and historians found that all these objects are architectural members of a Hindu temple-complex of the 11th century A.D.

The group comprised Dr. Y.D. Sharma, former Deputy Director General, Archaeo logical Survey of India, Dr. K.M. Srivastava, former Director, Archaeological Survey of India, Dr. S.P. Gupta, former Director, Allahabad Museum, Prof. K.P. Nautiyal, Vice-Chancellor, Avadh University and former Head of the Ancient History and Archaeology Department, Garhwal University, Prof. B.R. Grover, former Director, Indian Council of Historical Research, Shri Devendra Swarup Agrawal and Dr. Sardindu Mukherji of the Delhi University, and Dr. (Mrs.) Sudha Malaya of Bhopal.

The Temple: The experts who visited the site on behalf of the academic organization, "The Historians' Forum", on the 2nd and 3rd of July 1992, are unanimously of the view that the temple, to which these fragments belong, is of the developed NAGARA style of ancient temple architecture which was current in northern India during the later part of the early medieval period i.e. the period after 900 A.D. and before 1200 A.D. The temples of this style are characterized by a distinctly imposing Shikhara, which is a tall and tapering spire over the Garbha-griha or sanctum sanctorum, which houses the main deity.

The Shikhara Amalaka: The developed Shikhara is like a mountain with several tiers of subsidiary Shikharas, rising one above the other and projecting partially from the main Shikhara. The Shikharas are crowned with a very distin- ctive circular piece of stone, called amalaka, which is shaped like a cogged wheel, with bead-like mouldings along the periphery. It is so very typical of the tepmles of northern India that no one in the world who knows even a little about the Hindu temples can cast any doubt about its position in the temple structure. There are two examples of half-amalakas, in the present hoard of objects, evidently used on the top of the subsidiary Shikhra, called Shikharas of Karnas, i.e. fringe spires.

The Shikhara Jala: The second most significant find is the curvilinear part of the Jala mouldings present on the Shikharas. It is beautifully decorated with scrolls. It also belongs exclusively to the north Indian temples of the period after 900 A.D. since the technique of its carving involves the method of scoop- ing out of the areas around the floral elements so that the art-motifs are framed with surface absolutely plain. It is called 'Stencil' technique.

The Capital: The third most noteworthy sculptured piece of stone in this collection is a rectangular capital of a piller with beautiful mouldings in the form of highly stylised lotus petals arranged as narrow parallel strips carved in low relief around the capital.

The Cornice: The fourth example of stone sculptures belongs to the most characteristic member of the Nagara style of temples -it is called Chhadya, and in Hindi Chhajja, sun-shade, where the straight wall over the high plinth meets the base of the Shikhara. It is carved and shaped like rectangular Mangalore tiles to serve not only as a sun-shade but also allow the rain water to run off quickly and protect the structure. It is a corner-stone of the cornice.

Floral frieze: There is one frieze of continuous leaf-moulding which decorates one of the top lines of the plinth of the temple.

Door-Jamb: There is one example of a door-jamb or dvara-shakha of the main entrance of the temple. It is decorated with a meandering floral design, carved in 'Stencil' style.

Images of Vishnu's Incarnations: There is also a fragment of a stele embellish- ed with the most significant sculptures of a number of Vaishnavite gods, viz. a Chakrapurusha, i.e. a youthful male figure standing gracefully at an angle (tribhanga) and holding vertically in the palm of the right hand the character- istic wheel or Chakra of Vishnu.

Another image is that of Parshurama, sitting cross-legged and holding a battle-axe in the left hand. Below him is the image of Balarama, the elder brother of Krishna, with a canopy of serpent-hoods and having a wine-cup in his hand. Still below him is the image of a mother godess (matri-devi), the bestower of all good luck.

As per the iconographic stipulation, there should have been an image of Dashrathi Rama, i.e., the son of Dasharatha, above the image of Parshurama, in order to complete the trio of three Ramas in the full set of ten incarnations of Vishnu. Evidently, the temple to which this stele belongs has necessarily to be a Vaishnabite one.

Shiva-Parvati: Besides the above, there are several other images. One is of Shiva-Parvati, also called Uma-Maheshvara. It was found from a shallow mound called Nala, located some 200 meters away from the site of the above hoard of art and architectural pieces. Though Shiva's head is now lost, his hand hold- ing a Trishula or trident is fully intact. Similarly, although Parvati's face is not extant, her hand from behind Shiva's neck is found resting on his right shoulder in an embracing position. Stylistically, it is also datable to the 11th century.

Terracotta Figurines: Art objects of burnt clay belonging to the earlier periods, such as the Kushana (1st-3rd century) have also been found. These images belong to various Hindu gods and godesses.

EXPLORATIONS

From 4th July through 18th July 1992, Prof. B.R. Grover camped at Ayodhya, during the period when the ground acquired by the UP Government was being levelled up. It is during this operation that he came across towards the east and south of the Ramajanma Bhumi, large floor-areas, in the pre-Islamic levels, which were carefully paved with burnt bricks. These places were then systemati- cally exposed and photographed in situ for permanent record. He located some brick-walls as well. He noticed similar flooring and also brick-walls at the so-called Janmasthan area, across the modern road, built by the British after cutting the Rama Kotmound. The floor covered with burnt-bricks spreads over thousands of

square metres now largely encircled by the newly constructed Rama Divar. During that period Prof. Grover had released as many as three reports of his findings to the press which prompted the Historians' Forum to send two eminent field-archaeologists to examine the reported discoveries.

FRESH EXCAVATIONS

Huge Brick Walls: On the 22nd and 23rd of July Dr. K.M. Srivastava and Dr. S.P. Gupta went to Ayodhya and scraped the section facing east and also dug at least two feet still deeper in a small area along this section. They discovered a huge burnt-brick wall of more than a dozen courses running along the section and beyond it. Below this, after a little break, the remains of another brick- wall have been found. At two different pre-Islamic levels, there are the remains of brick-laid floors.

Mass Destruction: There are clear cut marks of massive destruction of the huge wall mentioned above since brick-debris and large pits have been located here. Further, there are two hard rammed floors of Chunam and Kankar, laid one above the other with a significant break in between but over the level of the brick- wall.

There is therefore, enough new archaeological material which conclusively proves what Prof. B.B. Lal, the previous excavator of this site, has been repeatedly saying that here at the Ramajanma Bhumi there was an impressive structure of the 11th-12th century built on pillers standing on a series of parallel burnt-brick bases which was destroyed in the early 16th century, in all likelihood the bases carried on them the same temple-pillers which are fixed in the 'mosque'.

These new archaeological findings also confirm the views expressed earlier in 1990 by Dr. S.P. Gupta that the 16 black stone pillers and one piece of door- jamb with carvings of gods and godesses existing in the so-called 'Babri Mosque structure' and also the adjoining areas, belong to a 11th century Hindu temple, possibly Vaishnavite.

Muslim Testimony: The new discovery further confirms the claims of all early Muslim authors, like the grand-daughter of Aurangzeb whose writing was cited in Sahifa-i-Chihal, Nasaih Bahadur Shahi, Mirza Jan, the author of Hidiqa-i- Shahada and a large number of other 18th, 19th, and even 20th century scholars like Shri Abdul Hai, have repeatedly mentioned that anciently here, at this very site, called 'Janmasthan', there was an imposing Hindu temple which was destroyed by the Muslims and a mosque was built over its debris.

Mir Baqi's Claim: Indirectly though, the newly acquired archaeological evidence also equally confirms the statement made by Mir Baqi in his inscriptions, still found fixed in the structure of the 'mosque', that at this very place he built a structure for the angels to descend, specifically at the command and permiss- ion of Babar.

The Hindu Testimony: And finally, it lends full support to a long standing Hindu tradition of the Valmiki's Ramayana, the Vishnu and other Puranas and a host of other works of the Sikhs, Jainas and Buddhists as well as the Sanskrit classics like Kalidasa's Raghuvamsham, according to which for thousands of years this ancient settlement with Rama Kota was occupied and reoccupied following desertions and destructions, the story of which has, however, been recollected in two important monographs, one is entitled Ayodhya by Hans Bakker and the other is Ram Janmabhoomi vs. Babri Masjid by Koenraad Elst published in English in recent years.

HISTORICAL BACKGROUND OF THE CONTROVERSY

Babar Stayed at Ayodhya: The so-called 'Babri Mosque' was built in 1528 A.D. The Babarnama, Babar's diary of everyday events and autobiography, mentions that on March 28 in the year 1528 Babar came to Ayodhya, called 'Oudh' in those days, and camped on the river-side of a tributary of the Saryu, flowing near the township. Here he stayed for a few days, till April 2nd, 1528, after defeat ing the then Afghan ruler of this place who had rebelled against him. He may have stayed longer, but no one knows exactly how long since the original pages of his hand-written diary pertaining to the period between April 2nd

and Sept. 18 of 1528, were lost in a storm that overtook Babar's tents in 1529.

After Aurangzeb: The successors of Babar continued to rule over this place till the early 18th century. After Aurangzeb's death (1707 AD), the territories of Awadh were marked by lawlessness. During the reign of the Mughal Emperor Md. Shah and the tenure of the governorship of Burhan-un-Mulk Saadat Ali Khan, a serious riot took place between the Hindus and the Muslims (1735 AD), the former claiming their right over Ramajanma Bhumi. This is the earliest judicial reference available in this regard so far.

What the Europeans Saw and Wrote?:In 1767 itself, a Jesuit missionary, Joseph Tieffenthaler, who stayed at Ayodhya for a number of days and left behind his account written in Latin, found that in spite of the Mughal Kings' efforts to prevent them, the Hindus had re-occupied the courtyard, raised a 'Rama Chabuta- ra' thereon and worshiped there by circumambulating it three times and finally prostrating before it. On the Rama Navami day they congregated here in lakhs. Significantly, they continued to worship under the domed structure as well. More details are available in the accounts of Montgomery Martin, Edward Thorn- ton, P. Carnegy and others.

Serious Riots: In 1855 once again a big clash took place in which scores of men were killed; such riots and killings never subsided: there are several historical, judicial and revenue records to prove their occurrences.

During the British Raj: After the establishment of the British rule in Avadh in 1856, the battle for Janmabhumi was primarily fought in the courts of Law. How- ever, in 1934 a very serious riot took place in which the domes were destroyed to a very large extent. After this, it is common knowledge that the authorities repaired the structure and closed it down for some time. However, it was opened in favour of the Hindus, step by step, after 1949 under various judicial orders

New Evidence: In continuation of its earlier efforts, the Historians' Forum feels happy to place in the hands of the public and the government this new uncontrovertible archaeological evidence which proves that there did exist at this very site a magnificient temple, from at least the 11th century, which was destroyed to build a mosque-like structure over the debris of the temple in the 16th century. There is every possibility that there existed at this site one or more temples of still greater antiquity, some of which were built with burnt-bricks in which images of gods and goddesses made of terracotta were installed

***

That mosque there stood as a symbol of atrocities of Babar and his commanders. No one liked to see a that being considered as a "place of worship". That certainly can not be a holy place, which stands there after razing a nice temple down.

Given that everybody knows this (assuming that it is proven with sufficient evidence that there was a temple once upon a time), the question is very simple : Why do Muslims want a mosque there?

The platform is humanity, screw the constitution. From the humanity point of view, that mosque sucks! it is was a tyrannical thing.

Second question is : Do Muslims love Mosque or do they love Baber? If they love Mosque then it can be relocated, no problems. If they love Baber then we got some problems honey. That man killed 1000s and converted people and destroyed temples. Some one who is criminal in our eyes can not be hero in others' . We needs synchronization of opinions to coexist peacefully.

Secularism means upholding human values, it does not mean not hurting other religious feelings. Ayodhya issue is a reflection of a deeper malaise in elite Indian society - macaulay putra...

A TRIBUTE TO HINDUISM

articles on hinduism

A fine blend of religion and culture

By V. Sundaram

http://www.the-hindu.com/stories/13180611.htm

FREEDOM OF worship is one of the fundamental rights our democracy offers. It is postulated in the preamble to our Constitution and several Articles define the scope and extent of the right. We are a people with deep religious moorings. At the same time, we have a living tradition of religious tolerance - result of the broad outlook of Hinduism that all religions lead to the same God. It was this tradition that brought about a happy co-existence of the different religious groups in the country.

True, the forces of secularism, socialism and science in post- independent India have released the people from the clutches of meaningless tradition of superstitions, but at the same time they have created in them a certain moral and spiritual vacuum that has not been filled by any substitute.

The violent disturbances that take place at the slightest provocation bear ample testimony to this trend. The remedy lies in the proper understanding of our religion and culture. Religion brings about a certain discipline which touches our conscience and helps us tackle evil and sordidness, saves us from greed, lust and hatred, releases moral power and imparts to us courage in the enterprise of fighting for a better social order. This discipline implies the surrendering of our thinking and conduct to the truths of the spirit and the generation of a binding force that strengthens the solidarity of human society.

Religion is not to be associated with meaningless dogmas and creeds, rights and ceremonies but with the deepest wisdom of the ancient seers of the Sanathana Dharma which can safely guide us through the bewildering chaos of modern thought. Religion is to be associated with that ancient wisdom of ours which is universal in feeling and intention and which, by virtue of its vitality, has affected men of all races and has been able to survive political and social changes through the ages, and which must remain forever even while other achievements of man change or perish.

One should remember that religion is not in any way opposed to secularism. On the other hand they are closely inter-related. Indian secularism is not alien to Indian culture, despite the

mischievous and vicious attempts of several politicians and irresponsible journalists in recent years to prove it to the contrary. Secularism is part and parcel of Indian culture.

In modern India, ``secularism'' has been converted into a mischievous slogan by unscrupulous politicians and their journalistic cohorts. Secularism as the concept is commonly understood today is a force contrary to moral and spiritual values. Secularism is capable of three distinct meanings, spiritual, rational and materialistic.

There is a common ground for all these interpretations. It is that in the political and economic life of India, parties and policies and loyalties should not be based on religion but should cut across religions and be based on the objective of national welfare. While this may appear to be satisfactory for practical purposes, the more fundamental attitude towards secularism will have in the long run a decisive impact on national outlook and behaviour.

The spiritual interpretation of secularism is that all religions spring from the primary human craving to understand and feel God or the Infinite in which the entire universe in general and man in particular has his being. Therefore, it is far more important that one should recognise and feel its presence than the manner in which it should be named, described and worshipped. Hence the truly spiritual human being will respect all religions while clinging to his own. He will not allow differences of religion to come in the way of fullest cooperation in those fields where reason and science should prevail. This in essence was Gandhiji's view on secularism. According to the rationalistic view of secularism, religion is essentially irrational and superstitious and it should be progressively eliminated through scientific education. Till then it should be prevented by all possible means from intruding into the social, political, economic and cultural life of the people. It should be strictly relegated to the home for the present and ultimately expelled from that refuge also. In trying to prevent the intrusion of religion in national and public affairs, coercion and physical force should be avoided to the extent possible, but wherever necessary the help of coercive legislation may be taken. This was the policy of the Congress(I) under the leadership of Indira Gandhi and Rajiv Gandhi.

According to the materialistic interpretation of secularism (Karl Marx), religion is essentially an evil and has been instrumental in enslaving the masses by the classes. Therefore it is necessary to suppress it by organised propaganda if possible and by force if necessary. In India, except for the small number of communists the general public opinion is vaguely divided between the first two interpretations.

Under the leadership of Jawaharlal Nehru, the rationalist meaning of secularism come to prevail generally among the politicians and the Central and State Governments have during the past 50 years tried to function as if religions did not exist in India or at least they should not be given any quarter or recognition unless they came under the category and label of `minority faiths', such as Christianity and Islam. Any religion or faith coming under the category of ``Minority faith/religion'' becomes automatically `secular' and `cosmopolitan'. Applying this thumb rule, `Hinduism', by virtue of the fact that it is the faith of the majority, automatically becomes a `communal and non-secular' faith.

Nehru's agnostic and rationalistic thinking had a disastrous impact on the philosophy and working of several academic institutions established by the Government of India, for instance the Indian Council of Historical Research (ICHR), the Institute of Advanced Studies in Shimla and the

National Council of Educational Research and Training (NCERT). All these institutions were packed with intellectuals who were all inducted as part of ``Jawahar Employment Programme". As Arun Shourie brilliantly puts it: ``These intellectuals and their patrons have worked a diabolic inversion: the inclusive religion, the pluralist spiritual search of our people and land, they have projected as intolerant, narrow-minded, obscurantist; and the exclusivist, totalitarian, revelatory religions and ideologies - Islam, Christianity, Marxism-Leninism - they have made out to be the epitomes of tolerance, open-mindedness, democracy and secularism."

In India today, in the name of ``secularism", anti-religious forces sponsored by the so-called `secular' humanism or communism, condemn religious piety, particularly in the majority community. Privileged minorities are immune from such attention and have succeeded in getting their demands, however unreasonable, accepted. In its name again, politicians in power adopt a strange attitude. They condone the susceptibilities, religious and social, of the minorities but are too eager to brand similar susceptibilities in the majority community as communal and reactionary. These unfortunate postures have created a sense of nihilistic frustration in the majority community. If, however, the misuse of this word ``secularism" continues; if Sanskrit, the bond of unity, is not given its due place in our language formula, if every time there is inter-communal conflict, the majority is blamed, regardless of the merits of the question; if our places of pilgrimage such as Benaras, Mathura, Dwaraka, Haridwar, Rishikesh, etc., continue to be converted into secular ghettos through mindless enforcement of pernicious, unimaginative and soulless Government policies, the springs of traditional tolerance of the ages will soon dry up.

Distorted view

I am convinced that this distorted view of secularism has been at the root of deterioration in the standards of probity, decency, decorum, dignity, integrity and honesty in all walks of national life in India. I think it is also at the root of the general frustration and discontent among all sections of our people and more particularly the youth. It is certainly possible for a rational agnostic to be a highly moral and responsible person. But for a people whose moral life derives its strength essentially from an ancient religion, indifference to the latter inevitably means the decay of the former. The unnatural bifurcation of the spheres of life into the secular and the spiritual has had its bad effects on the minds of men in India. It has tended to slacken moral standards in the name of efficiency and expediency. It has worked for a colourless anaemic religion to which men pay lip homage.

We have created a generation of men and women who are smart, superficial, trim and alert, but have no moral earnestness or love of the truth. Our knowledge is diffuse, directionless and we are all distraught in mind and tired in body and listless in our manner. We have given up the strife against lusts of the flesh, and rationalised it with the help of the behaviourist psychology of Freud and others from the West. In our behaviour, there is an increased insensibility and a frightening decrease of civility, decency and sense of justice. We just shift and drift and erect defence machines to hide our real nature. All this is the result of the dethronement of faith and the enthronement of ``sham secularism" of post-independent India.

The only way out is a call back to religion and the influence of religion not only on the individual but also on the public. Mahatma Gandhi in his speeches and writings preached that politics, to be useful or popular or true, must be founded on religion. He stood for the spiritualisation of politics.

He had found politics in the rut of Western materialism and opportunism and he wanted to save it from the low state into which it had fallen. ``Back to religion'' was his exhortation. And India today must listen to his call, if it is to save not only its soul but its body, that is, its physical well-being.

According to Sudhanshu Ranade (author of the articles in The Hindu `The great betrayal' (February 7, `99) ``Religion and Politics'' (August 1, '99) and ``Religion and Politics'' (August 15, '99) the linkage between religion and politics during the Vedic Phase of the Hindu religion ended in a total disaster 2500-3000 years ago. **Eminent men including Raja Ram Mohan Roy, Keshab Chandra Sen, Ramakrishna Paramahamsa, Swami Vivekananda, Sister Nivedita, Anne Besant, Aurobindo and Mahatma Gandhi** (whose academic and other credentials can be considered equal to that of Mr. Sudhanshu Ranade) **have all passionately underlined the man-making soul-elevating and nation-building impact of Hinduism through the ages on the people of India. Mahatma Gandhi** had professional intellectuals like Sudhanshu Ranade in mind when he observed: **``Rationalists are admirable beings; rationalism is a hideous monster when it claims for itself omnipotence. Attribution of Omnipotence to reason is as bad a piece of idolatry as is the worship of stones believing them to be God. I do not plead for the suppression of reason but for the recognition of `that' in us which sanctifies reason.''**

Instrument of integration

Especially as a means and instrument of national integration, religion will prove more dependable than `secularism'. Religion holds people together while secularism is divisive; religion is constructive while secularism erodes; religion inspires while secularism criticises; religion builds while secularism dissolves; religion unites the people while secularism makes people look at one another with doubt if not suspicion.

True and positive secularism derived from the timeless culture of India should keep all religions in India at peace. It should care for religion so intensely as to validate every pathway to God without any hindrance. In short it should regard all religions as sacred. **Radhakrishnan** dealt a blow to all the self-styled pseudo practitioners of ``secularism'' (including politicians and our ill-informed journalists) when he observed: **``The ideal of secularism means that we abandon the inhumanity of fanaticism and give up the futile hatred of others and other faiths. In a secular state, there will be the true spirit of religion, and the environment necessary for the development of a gentle and considerate way of life.''**

Are we going to be brave enough, wise enough and mature enough to accept this great challenge of the future?

Leadership Qualities In Vighneshwara

By SWAMI SWAROOPANANDA
http://timesofindia.indiatimes.com/cms.dll/xml/uncomp/articleshow?msid=153219

Ganesha, the elephant- headed God, combines within himself all the essential qualities of a successful leader. Pati means master or leader. Gana stands for the attendants. Hence He is also called Vinayaka, the supreme leader of the ganas, one who attends upon and follows at all times Lord Shiva. He is also Vighneshwara, Lord of all obstacles.

Ganapati has two spouses: Buddhi or intellect and Siddhi or achievement. Ganesha represents perfect leadership. He is the possessor of perfect wisdom — a fully realised being. To a student of Vedanta, the "path of knowledge" is the prescribed path, which is essentially intellectual. So, a leader must have a 'great head' to conceive and understand the logic of spiritual thought. The truth of Vedanta can be comprehended only through listening to a teacher. Therefore, Shravanam or listening is depicted by Ganapati's large ears. Difficult and thorny issues are resolved by intelligent listening. Quarrels and conflicts come up in an organisation, at the workplace, or in the family — all because no one is ready to listen.

After listening, the individual must independently reflect (manana) upon what he has heard. For this he needs to be sensitive enough to be aware of all creatures. His intellect must have the depth and width to understand the entire world of plurality. He must have the subtle discriminative power, viveka, to distinguish the changing perishable matter from the Eternal. He must be able to filter all information, and retain only the good and the noble in his mind.

A cool, clear head is a necessary attribute of a powerful leader. The trunk coming down the forehead of the elephant is an instrument which can bulldoze a massive oak tree; equally, it can perform the subtle task of picking up a needle from a haystack. A capable leader must be aware of the grossest aspects of a job as well as its minute, meticulous details. Like the elephant's trunk, the discriminative faculty of a leader with an evolved intellect can help solve gross problems as well as settle subtle issues. Good and evil are represented by the two tusks of the elephant. A strong leader must discriminate between right and wrong and all other dualities, and then form his judgment before taking action.

Ganesha has a wide mouth and a large belly, indicative of a healthy appetite and enthusiasm for life. Similarly, a successful leader is ready to stomach all types of experience, whether auspicious or inauspicious. The mouse is a tiny fidgety creature that darts from one food to another, nibbling a little from everywhere. This denotes a mind full of desires, ever-hovering from one longing to another. There is a mouse with - in each of us, capable of eating away all merits. The mouse is surrounded by an assortment of enticing sweets but it looks up at Ganesha, seeking His

permission to eat. A competent leader must check all temptations, and rise above selfish desires, personal ambitions and aspire to work for the welfare and happiness of all his followers.

Vighneshwara has four arms representing the four inner equipment, antahkaran. In one hand, he has a rope and in another an axe. With the axe he severs the attachments of his devotees and with the rope he pulls them closer to the Truth, and ultimately binds them to the highest goal. In his third hand, he holds a riceball (modak) representing the rewards of the joys of devotion to God. With his fourth hand he blesses all his disciples and protects them from all obstacles.

(Tomorrow is Ganesh Chaturthi)

THE COLONIAL GENESIS OF ANTI-BRAHMINISM

Ram Swarup on the oppression of Hindu priests

http://www.hindu.org/publications/ramswarup/brahminism.html

Ram Swarup, Nayee Dillee, is a leading thinker in the contemporary dynamics of Hindu renaissance ideology. Here he recounts the tragic decimation of Hinduism's religious leadership -- its priestly brahmins. He reveals the motivations and historical forces underlying the continuing propaganda against, and oppression of, Hindu clergy.

A country is never fully defeated as long as its martial and intellectual leaders exist. A self-conscious imperialism undertakes to reduce them as its first important task. Muslims coming to India found brave, armed men and a brahmin class providing cultural and spiritual leadership. Dr. Ambedkar, quoting Muslim historians, says the first act of religious zeal by Mohammad bin Qasim, the first Arab invader, was circumcision of brahmins. "But, after they objected, he put all above the age of seventeen to death."

When the Portuguese came, St. Xavier wrote to the king of Portugal, his patron, "If there were no brahmins, all pagans would be converted to our faith." He hated them with hatred that evangelists alone are capable of. He called them a "most perverse people." Brahmins became a persecuted people. Next the British came. They physically disarmed India. Then missionaries and orientalists led an ideological disarmament.

Rev. C. Buchanan said Indians should be baptized because "it attaches the governed to the governors." They thought that brahmins came in the way of their dream of a baptized India. They started blackening and discrediting them. A brochure called The Book of Wisdom in 279 verses was widely circulated by missionaries under William Carey, touted as the father of the Indian press. It was one of the first he printed and is addressed to the "mean, despicable Brahmins." The brochure promises hell for heathens and salvation through Christ.

The administration found brahmins to be the only "national" caste, held in much respect and capable of providing political leadership. This was enough. They fomented anti-brahmin movements in different parts of the country which are still very powerful in today's secular India. Their fears were well-founded. Brahmins were the intellectual leaders of the Independence struggle. Thus anti-brahminism was a construct of the last two centuries. And though learnt under the colonial- missionary aegis, it became an important category of future social thinking and political action. Brahmins began to be described as cunning, parasitic exploiters and authors of the iniquitous caste system. Much scholarship and intellectual labor was put into this thesis before it acquired its present momentum and currency. Anti-brahminism originated in, and still prospers in

anti-Hindu circles. It is particularly welcome among Marxists, missionaries, Muslims, separatists and casteists of different hues. When they attack brahmins, their target is unmistakably Hinduism. They know their only chance is a disintegrated India.

The success of their mission is seen today in the brahmins' new poverty. Sorokin describes brahmins as "world's poorest aristocracy," as a "caste of priests without church organization; teachers without state educational institutions; moral and social leaders without wealth, army and support of state organization." It is a faithful description. In the past, their poverty was voluntary--renunciation was their way of life; but the old glory has gone. Their new poverty, not chosen but imposed by circumstance, is also ideological and cultural. In the past, brahmins were connected with temples which were also great centers of learning. When these were destroyed, brahmins became poor as well as illiterate. A nation bereft of fighters now lost its teachers and thinkers. When the British came on the scene, they were already destitute. Independence brought no relief; they remained the poor est section in the country, followed probably by Rajputs. A Government study of incomes was made in Karnataka State. The figures given in its Assembly in 1978 show that brahmins were the poorest, poorer than scheduled castes and scheduled tribes. Among the brahmins themselves, the poorest are those connected with Vedic learning, temple service and religious functions. At Tamil Nadu's Ranganathaswamy Temple, priest's monthly salary is Rs.3 (us8 cents, from Census Department studies) and a daily allowance of one measure of rice. The government staff at the same temples receive Rs.250 plus per month. But these facts have not modified the priests' reputation as "haves" and as "exploiters." In Marxist-secular social sciences, social facts do not change social theories. The destitution of Hindu priests has moved none, not even parties known for Hindu sympathy.

Traditional India is long-suffering and used to neglect. But how will a nation fare which treats its temples and priests so shabbily? And brahmins themselves should take up this challenge -- not in any narrow spirit, but by recovering their old vocation, by fearlessly speaking for dharma and by again becoming brahma-vadins, God beings. The world needs it, and needs them.

Indo-Romanian Cultural Confluences

By Daniela Tane

http://www.indiagov.org/perspec/dec99/indo-rom.htm

Lying at the crossroads that link the Orient and the Occident, Romania claims to belong to both. If modern Romanian literature is the offspring of Romanian culture grafted onto Western cultural trends, the old Romanian legends and beliefs lie under the sign of another spiritual zodiac, that of myth and ancient sages.

Since time immemorial, the *Getae*, a branch of the *Thracians*, believed in the immortality of soul and considered the body an obstacle which should destroy itself at the moment of death. According to them, humans should aim at freeing themselves from the body so that the soul could lead its life in the kingdom of *Zamolxis* (a god similar to *Varuna* of the Vedic mythology), This is similar to the Hindu concept, according to which when the body dies, the human soul returns to the infinite spring of life, to *Brahma*. The history of the Dacian-Getic invasion by the Roman conquerors is somewhat similar to that of India's invasion by the Aryans (a theory now in dispute). In both cases, there was a native background, characterized by a passive, dormant resistance to the new spiritual forms imposed by the conquerors, whose traces are extremely difficult to identify at present.

Similarities do not stop here. "Miorita", the most widespread Romanian myth, has been found to practice a doctrine resembling *ahimsa* - non-violence. Folk books like "Alexandria", "Sindipa" or "Panchtantra" helped Romanians become familiar with Indian literary, philosophical and moral values.

Interestingly, in Romanian religious art - in Voronet monastery, for instance - we can see saints sitting on lotus flowers just as Buddha and some mythological characters are represented in the Indian sculptures and miniatures. All this made Lucian Blaga, one of the greatest poets and the philosophers of the Romanian culture, state: "Taking into account the level, dimensions and internal proportions of the Romanian culture, I think that nowhere else in Europe has the Indian thought had a greater influence than in Romania." It may not come as a surprise then that some of the greatest names of the Romanian literature - Eminescu, Hasdeu, Cosbuc, Brancusi, Blaga, Mircea Eliade - have been deeply marked by the encounter with the Indian thought, an initiation experience that was bound to reflect in their works.

The continuity of the archaic thought made India preserve the symbolic dimension of the spirit and of the world. India's greatest masterpieces, both artistic and theoretical, must be related to the dialectics of symbol. We deal here, as Eminescu so nicely put in a famous line, "with a world that thought in terms of legends and spoke in rhymes."

Except for old Romanian literature - which came to a close with Dimitrie Cantemir - before the early 19th century, and before Romanticism reached Romania, the Romanian spirituality was deeply rooted in the universe of folk culture, which was loaded matter emerging from the remotest archaic springs. Romanticism, which marks the transition from the ancient to modern culture, does not contradict other cultural ideas; on the contrary, it unveils the tradition it claims itself from and takes farther on. Under the circumstances, India's reception was made in a space related to it in its very core. This explains why with Eminescu, India became, as Blaga puts it, "the inalienable presence of our culture", the cosmic and cosmogenic pathos - with its symbolic and sacred significance. It can be simultaneously related both to the Indian view of the world and to that of the Romanian national folklore.

After Eminescu, Lucian Blaga discovered the magic of the Indian symbolical forms. One can certainly state that Romanian literature has two *kavis* - poet-sages - to use the Indian term. Like all great Indian poets, from the Vedic sages to Rabindranath Tagore, they clothed their philosophical view in the veil of poetry. Mircea Eliade, the reputed historian of religions, has also stated that India taught him what symbolism meant. By discovering the archaic roots of Indian culture, he came to understand the deep structures of his own national folklore. Mircea Eliade emphasized that what is characteristic to Romanian culture and differentiates it from the European one is, in fact, its affiliation to the ancient background of universal values.

In 1937, the same year when Mircea Eliade was trying to highlight the importance of India in the context of symbolical thought in Romanian folklore, Constantin Brancusi, the Romanian sculptor, left for India, to Indore. This is where his artistic works, inspired by Romanian folklore were to be a part of a funeral monument, a fact in perfect harmony with the sacred traditions of Indian architecture. Brancusi's sculptures display primeval cosmogenic symbols - The Egg, The Bird, The Pole/Column, The Couple which diminish eventually the manifestation of forms to their essence. What can be more relevant than his "Endless Column" which is also found in the Vedic texts as the World Pole that separates the Heaven from the Earth? The entire work of Brancusi, inspired from the endless source of ancient Romanian folklore, represents the reiteration of India's cultural ethos through the centuries. It is an attempt at conceiving the new in compliance with the old and which becomes richer and richer owing to the ever more fresh torments of creation. This similitude reveals the undeniable affinities between the two cultures, owing to the similar manner in which they perceive the sacred.

As Lucian Blaga said about Romanian spirituality: "Through a total assimilation, the motifs of Indian origin have so deeply penetrated our being that they can be taken away only by tearing off vital tissues." The Indian values which reached Romania directly or indirectly have represented for the Romanians a world in which they have re-discovered their own cultural vitality.

Sadhus, sand, chillum and three Americans

By Vinay Tewari
The Times of India News Service
http://www.timesofindia.com/today/10kumb2.htm

ALLAHABAD: It was just past 5 am and not dawn yet. Justin Gooding sat silhouetted against the river bank, gaping at a bunch of Naga sadhus smoking *chillum*.

A first-timer in India, Gooding is a clothes designer in New York. ``I have seen nothing like this before. It's sad Americans back home know nothing about this country, what to say the size and atmosphere of the Kumbh mela," he said on Tuesday.

Gooding next made the most blasphemous of statements. ``You know, I am sitting here wondering how it would be to dress up these sadhus," he said, without realising the import of his words.

``I think nudity is a faux-pas in India...it's okay only if it's religious," he said. ``In fact, I had expected Indians to have a more relaxed attitude towards it," he added.

Thanks to the Kumbh, Gooding managed his very own *triveni*, meeting two other New Yorkers - Ken Cooper, a social worker, and Keith Gemerek, a carpenter, - here.

But what attracted three Americans to a land which few know about in the US? ``Well, I was clearly in awe of these people the last time I came here (1989). It was hard for me to imagine what motivates them (the devotees) to come here in such numbers," said Cooper, who works for a support group for the elderly.

But varied as their backgrounds may be, Cooper, Gemerek and Gooding were chanting a common mantra...the devotees all seemed so happy. **``You know, we Americans are basically miserable people and life is so insecure there. We are just not happy...not as engaged as you guys. May be it's the rat race, I don't know,"** Gemerek said.

But they had a complaint. **``You guys seem to be going our way. This Kumbh seems far more commercialised than the last one. The corporate, urban influence is very visible this time around,"** Cooper said.

The trio are now keenly awaiting the next big day, January 14. ``We basically want to see the processions being taken out by the *akharas*...that should be good fun," Gooding said, trying to avoid a mass of devotees gaping at the three spread out on the sand.

Secularists to blame

Author: Editorial

Publication: The Free Press Journal

Date: March 2, 2002

http://www.hvk.org/articles/0302/7.html

The naked dance of death in Gujarat must stop forthwith. If the frenzied mobs do not stop, they must be made to stop. That is the least the administration in Gandhinagar can do. For, whatever the provocation - and, we must grant, it was indeed great - no government worth its salt can allow marauders to take the law into their own hands. Chief Minister Narendra Modi owes it to himself as he does to the people of the State to restore order at the earliest. Already, the alleged laxity of the authorities on Thursday caused anarchy-like conditions in large parts of the State. In particular, Ahmedabad, that old cauldron of religious hatreds, bore the brunt of violent attacks. Incensed by the horrendously inhuman attack on the train bringing back 'kar sevaks' from the Ayodhya, on Wednesday morning, tens of hundreds of people in the Gujarat capital took to the streets, targeting shops, homes and other establishments of the minority community.

In the surcharged mood of anger -when reason goes out of the front window - these mobs torched men and materials belonging to the minority community. Over one hundred people were reportedly killed in this macabre death of dance. The forces of law and order were found wanting in taming the tempers of the mobs who were provoked into action by the killing in cold blood of their co-religionists a day earlier in Godhra.

While the reaction of the mobs in Ahemdabad and elsewhere in the State could be ascribed to the red-hot passions generated by the torching of the two compartments of the Sabarmati Express, the insanity behind the torching itself was hard to understand. **What kind of a human being can set fire alive to young women, children and unarmed men in cold blood. And without any provocation. That of the 60-odd people killed at the Godhra station over 40 were women and children speaks of the barbaric mindset of the perpetrators.**

They were more like biped cattle than human beings. They had deliberately chosen to target the

particular compartments because these were mostly occupied by women and children. And there was no denying a pre-meditated plan to torch them.

After all, you cannot produce cans of incendiary material like petrol, diesel, etc. at the spur of the moment. A deeper conspiracy to cause a wide-spread communal conflagration in the country cannot be ruled out. The ISI finds it easy to penetrate sections of our people precisely because it uses the Islamic card to the hilt and deploys currency notes, genuine and counterfeit both, to turn Indians into traitors against this country.

Unfortunately, this seditious compact between the ISI and a section of the Indian Muslims is wittingly or unwittingly aided and abetted by our misguided secularists. **Notice the muted criticism of the horrific incident of cold-blooded massacre at Godhra by the so-called secularists and compare it with the hue and cry raised by the same people at the doubtless gruesome killing of the Christian missionary Graham Staines a couple of years ago.** Nobody in his right mind could have justified the killing of Staines. No, nobody. But, then, can anyone in his right mind justify the dastardly attack on 'kar sevaks' at Godhra? **It seems our secularists have two sets of standards to gauge human tragedy.**

One is for people like Staines and other members of the minority community. **And the other is for the large majority community.** The cold-blooded massacre of the 'kar sevaks'does not evoke angry comment from the secularists and their accomplices among the editorialists precisely because they were 'kar sevaks'. **That would explain why the secularists did not stall proceedings in Parliament on the Godhra outrage though they were foremost in creating a nation-wide shindy over the tragic killing of Staines.**

In this context, the statement issued by the AIADMK Supremo, **J. Jayalalitha,** is most apt. Chastising political leaders for making a crass differentiation between violence perpetrated against the majority and minority community, she said the Godhra outrage should be viewed as a crime against humanity. "

It is very strange and saddening to see that when such acts are perpetrated against the minorities, all political leaders rush to issue statements of condemnation. But when persons belonging to the majority are subjected to similar perpetration of heinous crimes, not a single political leader has so far issued a statement condemning this barbaric crime. Such acts of senseless violence should be condemned no matter who is responsible for them and no matter who the victims are..." For once, we whole-heartedly endorse Jayalalitha's sentiments.

Indeed, the failure of the secularists to condemn unequivocally the Godhra incident may well have exacerbated further the feelings of the majority community in Gujarat. Ordinary people felt so angry that they took to the streets to wreak vengeance on members of the minority community some of whose members had perpetrated the foulest of foul deeds in Godhra.

The secularist argument that the minority community needed special treatment and protection has over the years created a Hindu backlash. The secularists with their blind opposition to anything which respects the sentiments and wishes of the majority community have only helped to justify the rise of militant Hinduism. The mealy-mouthed arguments of the secularist establishment fail to convince ordinary Hindus when they contemplate the grisly wreckage of the Sabarmati Express. Given the fact that Muslim communalism has acquired a sharper edge in recent years thanks to the

influx of petro dollars, the ISI penetration and the general misuse of madrasas to foment anti-national sentiments, our secularists should pause and ponder the folly of their deeds.

They have inflicted untold damage by wittingly or unwittingly providing succour to those who mastermind heinous crimes like the burning of innocent women, children and men in the Sabarmati Express. They need not have died merely because they were 'kar sevaks.'

Hinduism & Semitic faiths

Publication: The Observer
Date: February 2, 1999
http://www.hvk.org/articles/0299/0041.html

The fellows excerpt has been taken from Shri Ram Swarup's chapter, 'Hinduism vis-a-vis Christianity and Islam', in Politics of Conversion edited by Devendra Swarup (Deendayal Research Institute, New Delhi: 1986)

In a world suffering from so much unnecessary conflict, the truth of unity and harmony has to be emphasised. If a man is the same in his more common sensibilities, he must also be the same in his spiritual ones. If he laughs when he is tickled and pained when he is pricked, he must also be filled with a sense of awe, wonder and holiness in the presence of the profundities and, mysteries of life.

Mile this truth comes naturally to a Hindu or Buddhist, it is denied both in theory as well as in practice by Christianity and Islam. They believe that not only are they different, but they are also superior. From the start, they believed that the god they worshipped was superior to the gods of their neighbours and
their religion was invested with truth while others wallowed in falsities.

The scriptures of Semitic inspiration are hortative, admonitory; they urge, they re. prove, they enjoin, they warn, they even enforce. There is a note of feverishness in them. But the atmosphere of the Hindu scriptures is unhurried, relaxed and expositional. The first variety seem to goad you; the second
one to lead you step by step.

The first one is passionate, zealous, the second one calm and detached. The first one plays on your hopes and fears; it threatens you with a hell and promises you a paradise; while the second one aims at opening up your understanding.

There are other differences as well. Christianity and Islam are religions of faith; Hinduism and Its powerful offshoot, Buddhism, are religions of Prajna, wisdom. The former deal with Intensifies of feelings, the latter aim at awakening the mind. The former have been religions of piety with a strong tendency to deny reason. The latter are religions of 'understanding', giving due place to reason though it will have to be purified and separated from the dross of desire before It becomes an instrument of a higher life. In Hinduism, faith is rendered by the world shradha, that which lies hidden in the recession of
the heart; so, faith means faith in the hidden truths of the soul, faith in the unrealised possibilities of the mind.

In Christianity and Islam, faith means belief in the established dogmas of the Church, or belief in the external authority of a particular book, or a prophet. Similarly, the word 'reason', too, has different connotations here.

In Islam, reason was overpowered by faith from the very start; In Christianity when eventually it earned some kind of uneasy place, it had to become the handmaid of faith. It was apologetics.

In the West, people had to wage a grim battle against Christianity in order to liberate reason from its shackles.

The Islamic world has yet to learn to evaluate its religious dogmas, its history, its book, its Prophet, his personality and his revelation in the light of reason, both secular as well as spiritual.

There are other very important differences. Christianity and Islam are built round historical personalities; Hinduism round the truths of man's own higher nature.

So if there was no Jesus or no Mohammed, there would have been no Christianity and no Islam. But according to the Hindu approach, man's religion does not depend on any such exigency. There is a dharma for all times, sanatan dharma, because it lies there always in the soul.

According to Christianity and Islam, God has given his truths finally and once for all through his favourite, intermediary and these are now deposited in a book.

The other revelations and books are either denied or they are considered as merely preparatory: They exist merely to confirm the truths of the new revelation. Subsequent revelations become false or redundant.

Hinduism also does not teach a God who reveals himself only to a chosen individual, letting others receive their truths from this exclusive channel. It speaks of truths which are revealed wherever there is seeking, purity of aspirations and motives, necessary preparation.

It believes that all nations share God's grace. It does not believe that there are pagans and infidels waiting to be converted to a particular system of beliefs and ideas or a race of the damned waiting to be saved. Hinduism respects differences and seeks God's working in different races and peoples.

One can see for oneself that in this kind of approach, there is no place for 'conversion'. True religion can neither be borrowed nor lent. A man carries his religion with. in himself wherever he goes and he has to be his own lamp. The conversion one experiences at this level is inner and it is very different
from the conversions that the countries have known under the aegis of Christianity and Islam. These conversions are political and military acts, acts of aggressive hard sale.

Discovering the Indian Self

The Pioneer Edit Desk

http://www.dailypioneer.com/edits/EDIT1.HTM

Although it might not consciously occur to us, there is a crucial difference in the way India greets the new millennium and the rest of the (western) world celebrates it. For the young nation-states of Europe and America, which emerged only over the last 400 years, the year 2000 is a cataclysmic event for a very important reason it lends them an awareness of continuity, a link with antiquity. Much of the frenzied millennium festivities in the West are, therefore, a heady assertion of being, of having been. But for India, the rites of passage into 2000 are not as epochal. Because we in India are not looking to the turn of this millennium for a sense of history. After all, the Indian civilisation has been there for 5000 years, if not more. Let us not forget that we began at Harappa and Mohenjodaro.

By the time the western nation state crystallised, India had already travelled a long way in its evolution. We had established an urban culture in the subcontinent as far back as 2500-1800 BC when a complete civilisation grew and flowered in the Indus Valley. Our turbulent civilisational journey continued through vast empires and petty kingdoms ruled by short-lived dynasties, through monarchies, oligarchies, chieftainships and republics to the modern nation-state. The road has been uneven there have been only brief moments of consolidation, and long periods of scatter and fragmentation. There have also been recurring ruptures in this continuous history when the civilisation was forced to confront the outside world through border skirmishes and deep invasions, when raiders and conquerors brought with them dislocation and dispossession.

Yes, many milestones in this journey have brought shame too. Down the ages, there has been a hardening of ritualism, a widening of disparity and inequality. Many waves of repression, and religious bigotry have also been unleashed, stifling creative energy. The millennial moment, then, should not become the pretext for lapsing into a self-indulgent nostalgia, for glorifying and romanticising a golden past. It is certainly the opportunity, however, to relive the grand historical sweep of the Indian civilisation, to celebrate its unique resilience and survivability. There must be a reason why India has lived on through the millennia, why it has had a stable and manifest existence through time despite its chronic inability to erect a persistent and coherent political center. The explanation lies in the perfecting of a remarkable social order and in the development of traditions and values that have had a lasting effect on all subsequent periods. Basically, the Indian system has been a loose accommodation between a stable social order and a transient and unstable political order.

Underpinning the stability of the Hindu social organisation has been, paradoxically, its openness to change. It is its flexibility and permeability that helped it to assimilate even the many

movements of internal dissent. A whole line of dissenting and reformist movements through history followed Buddha and Mahavira, the great dissenters of Hindu society be it the Bhakti movement in North and South India or the Arya Samaj and Brahmo Samaj during British rule. It was this open-endedness again that helped it to survive hostile collisions with alien systems like that of Islam and Christianity. In fact, these encounters gave birth to unique cultural forms that draw their life and energy from the confrontational tension they embody. It is a function of that same openness that no sharp cleavages can be sighted between the traditional and the modern in India. Models of social change that conceive of modernisation as a rejection of tradition and a transformation on modern lines do not apply to India. Indian reality eludes even those models that deny potency to modern institutions and values and simply assert the durability of tradition. The fact is that modernity and tradition are not polar opposites in present day India. The fact is that older differentiations of caste, religion, language and region have taken on new organisational forms in the modern nation state. Despite a great degree of differentiation and complexity, the traditional Hindu social order has shown great resilience and adaptability making Indian society a unique mix an ancient society coming to terms with the demands of a new age, and achieving a new identity without destroying older identities. At the same time, however, there is danger in overemphasising the apparently seamless continuity in the Indian civilisation. It is necessary to remember that this has not always been easy, and that it has extracted a heavy price. It has also been an incomplete process. Many unresolved tensions still fester in modern India. They threaten to sabotage its integrity, and undermine its attempts to consolidate itself for the first time under a common political centre.

As it deals with the continuing birthpangs of a nation-state, what India lacks most, perhaps, is a sense of its self. Ironically, the civilisation that has continued through millennia lacks pride in its own history, and faith in its future. Hopefully, as we stand at the joining moment between two millenniums today, that lofty vantage point will enable us to look back and retrieve some of the scattered fragments of our lost identity. The truth is that without a sense of the past, we cannot step into the future.

Vedantic Flavour in Puranic Literature

http://www.timesofindia.com/articleshow.asp?art_id=2501108

THE Puranas are among the most widely read religious scriptures in India. The word purana literally means "narrative of ancient times". The puranas are said to be contemporaneous with the Vedas.

The Chandogya Upanishad calls them the fifth veda.

Eighteen major (maha) and eighteen subsidiary (upa) puranas are recognised. The authorship of all the puranas is attributed to rishi Vedvyasa, who also compiled the four Vedas, the Mahabharata and the Vedanta Sutras.

The puranas deal with a variety of Gods, mainly Vishnu, Shiva and Shakti, catering to the diverse human temperaments and their varied approaches to spirituality.

The puranas are sectarian in that each one glorifies its own particular chosen deity, considering him to be supreme among all the deities and whom one can worship, communicate with, pray to, love and serve. In ancient times, whereas the accessibility of the Vedas was restricted to the upper castes, the puranas were read by everyone.

The puranas present Vedanta philosophy in a simplified and attractive literary style, making it reader-friendly. Puranic ethics are founded on dharma or duty, which embraces all the factors that contribute to the progress and well being of the individual and society.

The Bhagavata Purana also known as Srimad Bhagavatam, containing 18,000 verses, is universally accepted as being supreme among the mahapuranas. It is wisely studied and commented upon by scholars of all Vedic sects.

No other purana inculcates loving devotion with such sublimity, fervour and comprehensiveness. The conciseness of its language and the lyrical beauty of its poetry are unequated and it is recognised as one of the greatest literary and spiritual productions of India.

The story goes that after having completed the vast range of Vedic literature, Vyasadeva was still dissatisfied and despondent, not knowing why. Sage Narada appeared before him and told him it was because he had not yet written about the transcendental glory and greatness of Krishna, the son of Devaki and Vasudeva. Thus Vyasadeva wrote the Srimad Bhagavatam, which, in its own words, "Glorifies Bhagavan Sri Krishna in every word of it".

The Bhagavatam contains Vedanta's metaphysics and philosophy of the Upanishads. It tells us how we should follow a life of dharma (righteousness) in kaliyuga, the evil age of Kali.

To the layman it is full of wonderful stories and anecdotes that unfold spiritual and philosophic truths with simplicity for them to be understood easily.

To scholars and serious spiritualists, however, it is one of the most profound and difficult scriptures to understand in all its nuances and esoteric spiritual wisdom, and they deem the Bhagavatam to be a touchstone of their erudition.

Though Vaisnava and therefore sectarian, its philosophic import is neither narrow nor exclusive. It inculcates loving devotion to Lord Krishna, and extols Him and the bhagavata dharma propounded by him.

It recognises Krishna as the Supreme Brahman (Bhagavan swayam), the supreme personality of godhead, depicts Krishna's majesty and greatness as Bhagavan, and narrates the Krishna saga in a wonderfully endearing manner. Because of this matchless masterpiece, to this day Krishna remains the beloved supreme God to millions of Hindus.

In India the Bhagavatam is traditionally recited in the course of one week in emulation of the way Sukudeva Goswami narrated it to Maharaja Pariksit while awaiting his impending death.

The theme is pure, unalloyed loving devotion to Krishna. In its lower forms bhakti is based on the three gunas of prakriti or modes of material nature. Devotion in tamoguna propitiates asuric (demonic) deities for acquiring the power to control and destroy others; in rajoguna such deities are worshipped who ordain material welfare and prosperity, and in sattoguna, understanding the miseries associated with material existence, one worships the deity who can give mukti (liberation).

While the Bhagavatam accepts these three forms of bhakti, it goes beyond mukti. Its devotee does not lose his individuality by merging with God, and, even on attaining mukti, continues to serve Krishna with unalloyed selfless love.

Monist thinkers consider mukti as the highest goal of human life and bhakti as merely a means to this end, but the bhakti of the Bhagavatam is the highest end itself. Bhakti is elevated to the fifth purusartha (objective in life) above the four accepted purusarthas — dharma, artha, kama and moksa.

US and them

http://timesofindia.indiatimes.com/articleshow.asp?art_Id=5402256

Indians, both within India and outside, often cringe at many of the stories about India in the foreign media – mostly the western press – that show the country in poor light. There is an assumption, not entirely correct, that foreign reporters are fixated about India's social maladies such as dowry and casteism, and that they never lose a chance to write about the sores and pustules of benighted India.

Anecdotally though, it appears there has been more positive coverage of India over the past decade than negative writing. Stories of Indian energy, entrepreneurship, and achievement in areas such as entertainment, science, engineering, literature and the arts are frequent and copious in the western press now as the famine and flood stories of the 1970s and 1980s.

Still, Indians never lose an opportunity to fulminate about the occasional negative coverage and the latest round of religion bloodletting in Gujarat has had many of NRIs frazzled, when they were not hiding in embarrassment. Indian officials have expressed (in private) their resentment at the reporting by western journalists. They are even more incensed that some Indian-American reporters based here, and sent to India by their papers to cover the events, have been far more critical in their reportage than their western colleagues. "They probably know India even less than their western colleagues, who at least make an honest attempt to learn about the country," one diplomat fumed after reading dispatches by Indian-American reporters in the *New York Times*, *Washington Post* and other prominent publications. In his mind, they were doing great disservice to the country of their origin.

In contrast, Indian reporters are often accused of not reporting on the negative aspects of American life and society. **After all, one NRI community leader bristled recently, if American reporters can incessantly describe India as "largely Hindu India" or the BJP as a "Hindu Nationalist" Party, then Indian journalists should be describing the United States as "largely White Christian America" and Republican Party as the "White, Christian, Nationalist Party."**

Besides, he argued, the United States has almost every malady India is stricken with. There are droughts (one right now in much of the East Coast), floods, hunger, disease (even outbreaks of plague). Planes crash, trains derail, and there are false alarms over hijackings. There are also similar societal woes, especially discrimination based on gender and race. So how come foreign reporters in the US spend so much time and energy covering piffle from the American entertainment world and what the state department spokesman says?

There is some validity to this criticism. Mostly understaffed and under-resourced, and largely based on the East Coast or West Coast, foreign publications (and not just Indian) in the US rarely go out to report on the hinterland. **Out there in Middle America, there exists discrimination, fundamentalism, violence and degradation that seldom make it to the front page of newspapers in the United States, much less outside America.** In a crime as revolting as Roop Kanwar being burnt on her husband's funeral pyre, a black man was dragged to death in Texas some years back. A gay youth was shot to death in Wyoming because of his sexual orientation. And gun violence in schools is endemic.

In one of the more egregious cases of hate crime, a 17-year old girl in Denver was attacked early this week and the word "dyke" (lesbian) was carved into her forearm with a razor, according to the *Rocky Mountain News*. April Mora was walking to a store through an alley near her house at about 2 pm last Tuesday when she encountered three teen-age white males in a black Honda. The teens ragged her, began calling her dyke, and when she protested, they slashed her face with a razor blade. They then carved out the letters "RIP" on her stomach and "dyke" in inch-high block letters on her forearm.

Indian nationalists here say such incidents are as common in the United States as the burning of missionaries or the raping of nuns in India, which is to say it is fairly uncommon and cannot be seen as a pattern. Yet there is no human rights report originating from any other country in the world chronicling such gristly events.

There is one big difference though between societies such as India and Pakistan, and the United States. In each of these cases, it is inconceivable that the guilty parties will get away with their crime. The state does not dilute or dissemble the gravity of the act. The criminals are prosecuted and justice is usually swift and severe. Now look back and count how many of perpetrators of the most horrendous atrocities in our part of the world have been prosecuted. Perhaps that might answer why the "negative" reporting hurts so much.

The Purity of Agni

http://timesofindia.indiatimes.com/articleshow.asp?art_id=1020697191

VENERATION of nature is characteristic of Indian tradition. The *Rig Veda*, the oldest Hindu scripture focusses on nature worship such as that of air, water and fire.

In a world ridden with squandering of natural resources, pollution and greed, the Rig Veda teaches us to respect nature and to live in harmony with the biosphere. Natural phenomena are personified as different divinities; yet they are inter-linked into a holistic oneness, a supreme power.

Indra, armed with lightning and thunder, stands for rain, cattle and destruction of evil. *Varuna* is the God of sky and waters. *Rudra* symbolises fury of nature. Thunder that reverberates through the firmament is his roar; he is the father of *Maruts*, the storm deities, who rage through the skies, sending rain, whose approach makes the Earth fertile.

The waters from the mountains carry the powers of healing herbs and have a purifying quality. The Indian tradition attaches great importance to *theerthayatra*, literally pilgrimage to holy waters. The sun God or *Surya* gives us day and night and seasons.

Agni, the fire God is an important Rig Vedic divinity. The use of fire, which started 400,000 years ago, is the most important step in the progress of the human race. Voluminous mythology was woven around fire. Greek mythology says Prometheus stole and brought fire from heaven to the Earth. The Tasmanians and the Koreans never let their house fires go out. The Russian peasant carries fire to his new house and says, ``Welcome grandfather, to the new home".

As times changed, most Vedic deities underwent transformations; but *Agni*'s sway over us continues. The Hindu household keep a lamp burning before the gods. The Hindu marriage is solemnised before the sacred fire. At funerals, the sacred fire is carried to the burning ground. The spirit of the dead person is believed to rise with the smoke to the heaven.

Agni is prayed for food, cattle, prosperity, happiness, progeny and for destruction of evil.

The Vedic religion preserved the fire cult of the ancient inhabitants of Earth who gazed with awe at fire-seething volcanoes and brilliant streaks of lightning that ignited primeval forests into fast-spreading flames. Rig Veda refers to the fierce and radiant woodland fires accompanied by Maruts, which ``roared like lions".

The notion of fire as a purifier is universal. Christianity believes in the purificatory fires of the purgatory, and the eternal fires of hell. Sita's fire walk, to prove her purity shows that such practice existed in ancient days. Fire-walking exists to this day in many parts of India.

To the devotees, passage through the embers unharmed signifies purity and undiminished faith. The Rig Veda says, ``Burn away from us the sin, flame out on us the bliss. When the fire is kindled we speak indeed the truth". Agni dispels darkness or *tamas* that fills the world. Spiritual yearning of the ancient Hindus is evident when they prayed to Agni, for discriminating between virtue and vice.

Agni strides forth in his golden chariot drawn by red horses. Wild fires blow away burning fragments that set off spot fires miles away. Vivid images of this particular aspect of Agni can be seen in the modern times.

The report of the British Royal Commission examining bush fires in Victoria in 1939, said: "The spread of the fires was appalling. They leapt from mountain peak to mountain peak, far on to the lower country, lighting the forests six or seven miles in advance of the main fire."

The Vedic bard appeals, "Grant, brilliant Agni, happiness to our sons and grandsons...to ourselves". Fire is the intermediary between people and gods and receives oblations from the humans. It sends up to the skies whatever is burnt at the altar. Judicious use of the energy of fire is the key to human progress.

Lord of the dwelling and friend of Man, Agni needs to be approached reverentially. Agni is "mortal, divine, all-wise" truly a divinity that is worshipped by us.

The Hindu temple is the continuation of the Vedic fire altar, that was in the open air. The innermost sanctuary of the temple, the *Garbagraha*, is built on a square plane, the basic shape of the Vedic altar. Indiscriminate dealings with Agni will be catastrophic and is the main cause of human woes. Let Agni lead mankind from darkness to light.

Just as fire, though one, entering the world
Adopts the shapes of the different objects it burns,
Similarly, the one atman of all living things, though one,
Assumes the forms of the various objects He enters
And exists also beyond.

Krishna, Lord of Love and Life

http://www.timesofindia.com/articleshow.asp?art_ID=381530155

THE eighth incarnation of Vishnu, Krishna, has evolved into a distinct and composite persona over the millennia. Krishna devotees ardently look upon him as the Godhead, more emotively evocative than most of the other avatars.

His birthday on the eighth day in the dark fortnight of Sravana, in or around the month of August, is still celebrated with great joy and enthusiasm every year as Janmashtami. In many places, especially in Mathura, where he was born, *jhankis*, comprising glimpses into his childhood episodes, are displayed with lights and images of the divine child.

In Maharashtra, pots of curd and buttermilk are hung high in the streets and human pyramids are formed to go up and reach out for their contents, reminiscent of the child Krishna's playful exploits for wresting milk and butter from the pots kept beyond his reach. A similar ceremony is observed in south India, where people climb up poles to win the prize money.

The Jagannath temple at Puri has wooden images of Jagannath (Krishna), a Balabhadra (Balaram) and Subhadra, their sister.

The popular Rathayatra from the temple to the countryside, about two km away, is a ritual enactment of the journey of Subhadra to Dwarka in a chariot, escorted by Krishna and Balaram; the festival is celebrated on Asadha Sukla dvitiya, around June.

According to another legend in the *Bhagavata Purana*, Akrur was sent by Kansa, the king of Mathura, to Gokula to ask Krishna to visit Mathura.

Krishna and Balaram, therefore, travelled in a decorated chariot to Mathura, followed on foot by the gopis (milkmaids) and the cowherds on this day. Hence the Rathayatra procession today.

The festival of Holi heralds the advent of spring and a new world of colour and gaiety, recreating somewhat the ambience in which Krishna played with the gopis, splashing colour all over.

Since the venue was Vrindavan, the most lively celebration of the festival takes place in this region. It is during Holi that effigies of Putana are burnt every year in parts of northern India.

Putana, as the legend goes, was a female friend sent by Kansa to Gokula to suckle the infant Krishna and poison him to death. But the omniscient Lord sucked her blood out, killing her in the process. Her death symbolises the destruction of evil despite heavy odds.

Holi is called *dol* (swing) *purnima* or *dol yatra* in certain parts of eastern India.

An image of Krishna is kept on the swing and worshipped.

Central to Krishna's childhood was his dance with the gopis, called *raasa-lila*, which later became the object of worship by many of the devotional sects. Scenes from raasa-lila are now enacted with great verve not only in the Mathura-Vrindavan region but also in Assam and Manipur, sometimes in the Manipuri dance style.

But the intensity of feeling portrayed in such episodes in the Puranas and Harivamsa is an outgrowth of bhakti, a form of religious sentiment enunciated comprehensively for the first time by Krishna in the *Gita*, on the eve of the battle of Kurukshtra in the *Mahabharata*, an earlier text. Rig-Vedic hymns did allude to the nature of devotion but not so cogently. Bhakti, as advocated in the *Gita* entailed total self-surrender to the supreme Lord in the form of Krishna, shorn of the wasteful accessories of costly rites and rituals, as a simple way to salvation, without displacing the methods of moksha through karma and gnyana which evolved out of the Vedic religion.

As for the theophany in the eleventh chapter of the Gita, Arjuna has a vision of Krishna's awesome cosmic form and feels overwhelmed. The Lord assures him that those with an unswerving devotion to him, in the true spirit of bhakti, can see him. A complex amalgam of the human and the Divine, he is seen differently by different people. To the Pandavas he was their true friend and guide, to the cowherds he was just one of their own, to the Vrajagopis the highest object of love and the yogis saw him as the absolute truth. While his concept of bhakti as preached in the Gita has undergone changes, developing more passionate and even sensuous overtones in the hands of poets like Jayadeva, the philosophic message of the Gita has remained a perennial source of inspiration for all.

He's a Muslim, but heads Ganesha temple panel
http://timesofindia.indiatimes.com/articleshow.asp?art_id=3802253

Shivaratri celebrations were a tad different at Nagarabhavi this year. At Varasiddhi Vinayaka temple in Canara Bank Colony, Muslim resident T. Rahaman was at the helm of activities, distributing *prasad*, taking part in the worship and offering prayers till the last devotee left around 11 p.m.

The Shivaratri celebration began at dusk and continued till 11 pm. Over 500 people attended the ceremony from areas as far as Koramangala. *Bhajans* were sung and a bharatanatyam dance performance symbolising Lord Shiva was the highlight of the evening. All throughout, Rahaman was in charge.

He has been managing the temple as its committee president for four years. ``When nobody came forward to take over the temple administration, Rahaman offered to step in," S.K. Rao, one of the trustees, said.

For Rahaman, religion has never been a hurdle: ``I don't differentiate between Hinduism and Islam."

Vedanta's Version Of the Big Bang

http://www1.timesofindia.com/articleshow.asp?art_id=1100502

N Vedanta, the second capsule of the Brahma Sutras is the most fundamental, cardinal, sacrosanct, and is also the most famous. Janmadyasya yatah — Brahman is that from which the birth and the evolution of the universe follow.

It says Brahman is that ultimate 'world' which we gain access to by distilling the world down to its inmost content, or the furthest stop from where we get off by travelling backwards in time-space. Astronomical observations have confirmed more or less beyond doubt that stars, galaxies and clusters of super galaxies are receding from the earth and from one another.

The clinching evidence comes from the Doppler Effect or the Red Shift. The shift in the spectral lines towards the longer wavelengths identified by the red colour in the spectrum confirms that the source of light is moving and is not at rest.

What is more, even the speed of the recession can be easily calculated with the help of high school maths.

If the whole universe is expanding at a rate that is calculable, then by regress, we can go back to the starting point of this expansion.

That is, we can go back in time to meet janmadyasya yatah. And when we do, we meet this janmadyasya some 14 billion years away in an extremely dense and absolutely inconceivable concentration of time-space-mind-matter-energy.

It is now established more or less beyond doubt that the world started out from a big bang. The most clinching evidence comes from the prediction of the existence of a sea of background microwave radiation in the universe and its subsequent detection.

At the beginning of time, and at the beginning of space, all the matter-energy and its container, the time-space-mind, were concentrated in a primeval 'fireball' of extreme inconceivable density and temperature.

From a massive explosion, the big bang, the universe started and has been expanding ever since. So this is that Inmost Content and the Furthest Stop — janmadyasya yatah — this primeval 'fireball'.

There is nowhere to progress from here, for the three-dimensionality of being collapses here. Where the 3-D of the world crumbles is the zero point of the world — the final content and the last stop.

Prior to the big bang there was nothing existing. Absolutely nothing. To exist, a thing needs space around it to exist in. To be is to be in space. Prior to the big bang there was no space and therefore there was nothing existing — not even a God or heaven.

The primeval 'fireball' which exploded to become the universe was not existing in a space, but, on the contrary, space was existing within that 'fireball' in extreme inconceivable density or concentration. This

zero degree of being is absolutely unimaginable.

Thus in that primeval ‘fireball’, we meet God face to face, and look Him in the eye. God is that primeval ‘fireball’ which blew up this sea of time-space-mind-matter-energy through the big bang.

The janmadi or birth and evolution of the world is the blow-up of the God-stuff. The world stuff and God stuff are one and the same that is, ‘The creator is in the creation and the creation in the creator’ (Kabir) and world stuff-God stuff is the primordial ‘fireball’ which ‘existed’ before the big bang and which suffuses the universe after the big bang. After the big bang, whatever is there within that blow-up is its own distortion — vikara as Vedanta puts it.

Perhaps ‘fireball’, ‘big bang’, and ‘explosion’ are not the exact words for it. Perhaps our insight and terminology need to be something finer, but anyway we are with the substance. We have identified God. His identity mark is the point where the 3-D of the world collapses.

In Vedanta the big bang is vak sphota from which AUM originates first and from AUM, the whole world. The constituent three sounds A, U and M make the three dimensions of space and from their interaction the whole ‘audio’ and ‘video’ of the world follow. The evolution of the world from Brahman and AUM is called vivarta meaning unfolding or opening out.

Its opposite is avarta meaning folding, closing in. The world is the vivarta or parinama (atmakriteh parinamat, B S-1.4.26) of Brahman of the world stuff through the medium of vak sphota, and what existed before the big bang, janmadyasya yatah, is its avarta or avarana.

Waking & Dreaming, Both are Illusory

http://www1.timesofindia.com/articleshow.asp?art_id=1002060

HE world is a dream. **Diogenes of Sinope** lived on this one idea. In bright daylight he moved with a lantern, looking for an honest man.

During moments of extreme physical pain someone asked him whether he still thought that the world was a dream.

He replied, ‘‘Yes, it is a painful dream’’.

The Mundaka Upanishad tells us that both the waking state and dream state of our life are ultimately illusory.

These two states are a mere creation of our ordinary consciousness. The highest level of our consciousness is the stage of Turiya, when we cease to see the world of matter and feel only one consciousness everywhere.

The views of many famous philosophers of the West about this world and the life therein are frustrating besides being sceptical to the core.

Bruno said, ‘‘The world is an eternal enigma, and our only connection with it is that we form part of it when we live. At our birth we are ushered into a world whose origin is unknown and with which we come into contact for the first time then. A man is no more than an ant in the presence of the infinite. Man, petty creature, may measure the heavens, sound the ocean depths and calculate the movements of the distant stars, but he is himself a phenomenon among the phenomena of the universe. He must finally quit the scene to reappear no more. Death annuls all the features of life and life after death has supervened as an exercise of pure imagination possible only in life. Truth, God, immortality are delightful concepts, it is true, but standing on no verifiable basis’’.

How would Vedanta tackle the position of the sceptic? Before examining his conclusion Vedanta would dispute the correctness of the premises.

It would point out the initial error in assuming that world and our waking state are different entities. The world perceived in our waking cannot be logically separated, from the state of waking because the world without it is a mere abstraction.

The conception of a world by itself existing independently of the mind that perceives (seer) does not accord with experience. The world is only a determination of the waking state.

Vedanta turns the pessimism of the sceptic into a permanent bliss. The three main principles of Vedanta are — Brahman is real (satya), the world is unreal (mithya) and the ego (jiva) is none other than the real (Brahman).

The third one, the identity of jiva and Brahman is considered as the most important. The Vedantic stance is that time, space and objects are not real entities. They are super impositions upon Brahman. The whole universe of things and beings is a long dream.

Atman or Brahman has been called eternal, all pervading. But one feels that Atman is born and dies. This is because of one's wrong identification with one's own body and mind, while Atman is pure consciousness, the inner self. The illusion exists in the vision of one who is seeing it.

The non-apprehension of the real creates mis-apprehension. Everything gets superimposed upon consciousness, me. Nothing can ever destroy me, who is of the very nature of awareness.

If one incessantly contemplates upon this idea — ''nothing can destroy me; nothing can ever destroy me'' and gets really convinced of it, then one can rid oneself of the fear of death, the fear of all that is known here.

If anyone threatens such a man, he will be able to retort: ''Whom are you threatening? At the most you can destroy my body, but I am not that''.

There have been great saints and mahatmas in the past, who replied thus even to emperors and monarchs.

The emperor would threaten 'I will kill you'! The mahatma would peacefully reply, ''You are going to kill me? That is the greatest joke I have heard. Even Bhagvan cannot kill me, who are you to kill me? And when you kill me, I too will see my body falling here. And when you cut off my head, I too will see it falling down; because I am that which is in you, which is holding that sword. Thus when you have killed me, I shall still remain and survive in you as you''.

The unique experience of a man of realisation is described as: ''That effulgent conscious am I, which is self-established, all full without beginning and end, and in which the illusory ideas of the worlds, the individual, the disciple, the teacher and God, are all extinct.

Physics is the New Bhashya of Vedanta

http://timesofindia.indiatimes.com/articleshow.asp?art_id=6008770

VEDAS are four in number: the Rig Veda, the Sama Veda, the Yajur Veda and the Atharva Veda. Each of these four Vedas has four parts: the Samhita, the Brahmana, the Aranyaka, and a number of Upanishads. The first three parts of all the Vedas are collectively called the Vedas, and the fourth and the last, the Upanishads, are collectively called Vedanta.

VEDAS are four in number: the Rig Veda, the Sama Veda, the Yajur Veda and the Atharva Veda. Each of these four Vedas has four parts: the Samhita, the Brahmana, the Aranyaka, and a number of Upanishads. The first three parts of all the Vedas are collectively called the Vedas, and the fourth and the last, the Upanishads, are collectively called Vedanta.

These four parts of the Vedas represent the historical order of their development over millennia. The Samhitas are the most ancient, and of them, the Rig Veda Samhita is the earliest. The Samhitas are considered the Vedas proper; the Brahmanas, the Aranyakas and the Upanishads are periodic additions, made by way of growing with the changing times.

The Samhitas are hymns addressed to gods representing the forces of nature, followed by rites and sacrifices to propitiate those gods. The famous Nasadiya Sukta occurs in the Rig Samhita. The Brahmanas were added to the Samhitas by way of updating. The Satapatha Brahmana and the Aitareya Brahmana are well known.

The Aranyakas are so called because they were composed in the forests. During this period the sages and seers took to the practice of retiring into the forests to contemplate ‘the cream of all and what takes place’.

In the fourth and the last stage, the Upanishads appeared. There are 10-12 principal Upanishads: the Chandogya, the Brihadaranyaka, the Aitareya and the Kaushitaki, forming the end part of the Rig Veda. The Kena concludes the Sama Veda, with the Taittiriya, Isha, Katha and Shwetashwatara topping off the Yajur Veda, and the Mundaka, Mandukya and Prashna signing off the Atharva Veda. These terminals of the Vedas are generally called Vedanta or Shruti.

The Brahma Sutras and the Bhagavad Gita make post-Vedic literature, and are called Smriti as opposite to Shruti.

Together, Shruti and Smriti (the Upanishads, the Brahma Sutras and the Gita) are called Prastana

Traya meaning the 'Threefold Movement', and this Prastana Traya is said to be the scripture of the Hindus.

The Prastana Traya has a self- perpetuating spirit and mechanism by which it adapts itself to periodic reinterpretations in order to fit in with the changing times. These periodic reinterpretations are called Bhashyas. The latest Bhashyas to the Prastana Traya are by Shankara, Ramanuja and Madhwa. These Bhashyas have now lost their edge because of the passage of time. The Prastana Traya needs a new Bhashya to be in tune with the present age. The Prastana Traya looks for a new Shankara for a new Bhashya.

In the Samhitas, the Vedic literature starts with a passion for the truth — 'truth in clay, truth in iron'. It grows in search of this truth through the Brahmanas and the Aranyakas and ultimately in the Upanishads, that truth is arrived at and declared to the world.

What is that truth? The ultimate essence of the universe is space (akasho ha vy brahma). Consciousness is but a condition of space (prajnanam brahma). The content of the world is the distortion, vikara, of its container, consciousness-space. The distorted 3-D space is Saguna Brahman and space minus its vikara or distortion, that is the unified field, is Nirguna Brahman. Brahman-space is the ultimate reality underlying all existence: it is the biggest 'I' that contains all our small 'I's. Our small 'I's can be merged in the Big 'I' through contemplation or tapas and that is salvation or moksha.

Modern physics takes us to the same conclusion. Physics is the study of how and why the Nirguna distorts to become Saguna. Shruti lives in Smriti which is the progressive knowledge and understanding of Shruti over ages. Physics is the new Smriti; Physics is the new Bhashya of Vedanta.

There is talk in the air of introducing Vedic studies in schools and colleges. However, what should be taught there is not the traditional Vedic studies, but Vedanta as the anta (omega) of not only the Vedas but also of modern science, and as an intellectual and spiritual force capable of enlightening, inspiring and bettering the modern global village. Introducing mere traditional Vedic studies will further only narrow agendas, and will not serve the meaning or purpose of modern public education. We need to widen our vision by looking beyond the written word; and for this, it is essential that we rise above mere dogma.

Everest Cleaners
http://www.timesofindia.com/today/06edit3.htm

It has got to be the highest paid clean-up job in the world, in more ways than one. In a month from now, climbers from Japan, Nepal and South Korea will be traversing the northern slopes of Mount Everest to retrieve garbage dumped by previous expeditions. Japan's Ken Noguchi is quoted as saying the plan is to collect between 2.5 to three tonnes of garbage. He will be heading the team on the Tibetan side of the world's highest mountain, some 29,028 feet tall though there have been reports of some diminishing of height, presumably due to geological factors which the layman cannot quite comprehend. The cleaning is supposed to start between the advanced base camp at 20,997 ft and the final camps which are pitched at 27,230 ft. Noguchi is not the first to take note of pollution on Everest which has been described as "the world's highest garbage site". He is the first to do something about the estimated 100 tonnes of garbage up there, including empty oxygen cylinders, ropes, plastic bags, canisters, ladders, tents and faecal matter, all left behind by previous expeditions. The reports do not, however, mention whether Noguchi & Co will, during the course of their clean-up, also attempt to climb the summit or return empty-handed with not-so-empty plastic bags.

It is intriguing that the members of this team are all Asian.

There are no members of the Caucasian race involved in this unprecedented exercise. In the good old days when the likes of Bishop Heber carried the white man's burden, the right reverend prelate even wrote a poem ending with the words "Where every prospect pleases, but only man is vile".

Hopefully, Everest, or Chomolungma to give it the native name for Mother Goddess, will one day become the point to which man can once again raise his eyes in respectful worship instead of being completely degraded into another stepping stone for unsatisfied over-achievers who, like the proverbial bear, climb every mountain just to see another mountain they can climb up. "Because it's there" cannot be an alibi for abandoning junk on the once pristine slopes of the highest mountain in the world.

In retrospect, it would have been far more in the fitness of things if the first clean-up expedition had been a truly multilateral one representing every country whose mountaineers had climbed or sought to climb Everest. This summer's all-Asian team can only mark the beginning of the highest cleaning operation in the world.

Monsoon Magic: Creating Rivers of Hope in India

Timesofindia.com

It is no secret why floods and droughts occur in India — because some parts of the country receive much more than normal rainfall leading to floods, especially in the Ganga and Brahmaputra rivers.

At the same time, large chunks of peninsular India receive less than normal rainfall, leading to droughts. We cannot control rainfall in India. But we could manipulate the manner in which rainwater is allocated. It is a distribution issue; and like most distribution problems, it has to be solved by removing the demand and supply side bottlenecks.

That is why I am so upbeat about the recently announced river interlinking plan for India's peninsular and Himalayan rivers. The government's grand proposal, which seeks to retrieve floodwater going waste to the sea and distributing it to water-scarce areas, will link 37 rivers through 31 links and 9,000 km of canals.

This is necessary because water resources in the **Brahmaputra and Ganges** basin make up 60 per cent of the country's total resources. In contrast, water resources in Gujarat's Sabarmati basin account for only 0.2 per cent of India's total resources. The result? The **Brahmaputra** region is the most flood-prone region; and Sabarmati the most drought-prone.

If we add to this the problem of shifting patterns of precipitation and run-offs associated with climatic change, as well as an inability to predict and manage the quantity and quality of water, we have a king-sized crisis during bad years. In 2002, for example, India incurred a loss of Rs 250 billion just on account of crop loss because of the drought.

Relatively speaking, lack of water is a bigger problem than excess water in India. The country's annual requirement of water is projected to increase from 634 billion cubic metres to 813 billion cubic metres by 2025. Unlike floods, which are restricted to eastern India, droughts persist over a much bigger geographical area. As a result, the impact on the economy because of a lack of water is much more severe.

This is why the project is so significant. Take its impact on food security. The Planning Commission estimates that the country will need 450 million tonnes by 2050. At the current growth rate of production, India will have to import heavily to meet this forecasted demand. On the other hand, once river interlinking enhances India's irrigation potential by 140 million hectares, foodgrain production could double from the current level of 212 million tonnes to 450 million tonnes.

In other words, India could continue to retain its food security 47 years from now, even if population grows at the current pace to 1.8 billion by 2050. Or consider the impact of the power sector. The project is estimated to produce up to 35,000 megawatts of hydroelectric power, and meet the increasing energy demands of an expanding economy.

So far, we've only looked at the benefits of the project when it is completed. Actually, the physical task

of creating a network of water storage reservoirs across the country will also have a huge multiplier effect on the economy. Every once in a while, the country needs a big push to make it roll forward, and then gather a special momentum on its own. The Golden Quadrilateral Project is one such project: The government kick-off, linking India's metropolitan cities, has created thousands of jobs for India's rural landless, besides giving a fresh lease of life to India's steel, cement and automobile industries.

India now needs another heave to keep the growth momentum going. This is where the river networking project could fit in nicely. There will be huge requirements of steel, cement and other construction materials.

Hundreds of feasibility reports and geological studies will require a large number of consultants, and hundreds of housing agencies could be involved in rehabilitation work. But the most positive impact of the project, however, will be in the number of jobs it manages to create: 10 million through direct employment and ano-ther 10 million through outsourced contract jobs.

The big question: Will this mega project work? There is no reason not to hope. China has begun work on a $59 billion project to divert water from the damp south to the arid north. Scheduled to be completed by 2010, the first phase of the project will deliver water through two massive aqueducts. Each as big as a medium-sized river, the two aqueducts, up to 1,300 km long, will bring water from the Yangtze river to Beijing and the nearby industrial towns.

In fact, we needn't even look outside India for inspiration. Drought conditions in western Rajasthan are now virtually history, thanks to the transfer of surplus water from the Ravi-Beas to the deserts of Jaisalmer in Rajasthan through the Indira Gandhi Canal.

But here's the bigger question: Will divergent interest groups allow this project to work? Will there be political issues to be resolved? Will the government be able to win over environmental sceptics who are already voicing concerns about degradation?

Equally important, will the government be able to hardsell the financial viability of this project to potential investors? Most important, of course, the project will have to be sold to the people. Sure, the road ahead won't be easy, but river interlinking is an idea whose time has come.

Hinduism through Western Glasses
A Critique of some Western views on Hinduism
By Gaya Charan Tripathi

Source : **Hinduism Reconsidered**. Editors Gunther-Dietz Sontheimer and Hermann Kulke. Pp-123.

The easiest and the most common way in the West to deny a non-European people an achievement or a phenomenon whih the Europeans are proud of calling as their own and which they wish to lay their exclusive claim on, is to define it in such a way and so narrowly, that only the Western pattern of this phenomenon would fit into it.

It is widely thought that true philosophy is a prerogative of ancient Greece and the modern West, and that India has not given rise to any philosophy because the definition of the philosophy is ….this this this…and the Indian philosophy obviously does not fall within this definition.

India does not have any true religion, in the true sense of the term should be defined as….such such such…. And that these characteristics do not apply to Hinduism nor, for that matter, to Buddhism or Jainism. As illustration to this mentality the reader is referred to the book Hinduism and Buddhism by Monier Williams in which he denies the status of "true religion"to Buddhism because according to his self-invented definition, a "true religion must have a belief in one single personal God which Buddhism does not have."

Some Commonly held Views of the West on Hinduism

Let us now examine some of the most common misconceptions of the Western scholars about Hinduism.

They represent a sort of *communis opinio,* general opinion of the people at large, who may or may not have had the occasion to come into direct contact with Hinduism.

It is obvious that these views have been generated and propagated in the West basically and in the first instance through the writings on Hinduism by the Indologists and the Historians of Religion.

The Caste System

Those who wish to criticise Hinduism hardly ever fail to highlight the point that Hinduism breeds social inequality and, tries to justify it with its religious code.

I donot think that it is proper to see and evaluate the caste system exclusively in terms of social inequality or social injustice. The system is so complex and multifaceted that it usually defies its

comprehension in totality to an outsider. No social system, especially a system which is based on or which aims at exploitation of a group of its members can last so long and be so firmly rooted in the psyche and behavior of the people as the Indian caste system has been, withstanding all historical changes and strong and social upheavals; nor can it be said to be only negative and disadvantageous to the society. Its role in preserving the social and ethnic identity of a group, in building resistance against foreign religious and cultural influences has also to be taken into account.

It is not widely known that a sort of strong "family relationship" transcending the caste barriers existed and still exists among the members belonging to different castes and different castes and different social groups in the village society where the persons belonging to different castes are brothers and sisters, maternal and paternal aunts, uncles, nephews, nieces, etc, to each other and this relationships is zealously maintained in personal behavior and in social interactions.

The myths of the "other worldly" character of a Hindu.

Following the views of certain Indologists of the earlier generations, it is very common with the Western scholars (e.g. Albert Schweitzer) to stress the "world-fiendly" (weltfeindlich" = hostile or inimical to the world) character of Indian religions, especially of Hinduism. According to the opionion of these scholars Hinduism is "Weltabgeneigt", i.e. averse to the worldly affairs and is primarily and mainly concerned with the problem of salvation or getting rid of the cycle of life and death since it considers the human life on this earth so burdensome and the material world as an illusion. Now this is an over-exaggeration of the Hindu view of life and does not represent the true nature of Hinduism.

A normal Hindu is as much concerned with the world and its affairs as his Western counterpart. He is in no way less practical and in no way less involved in the material world than the followers of any other religion.

We should not forget that besides *moksa*, to a Hindu, there are two other very important *purusarthas* ("aims of life")to be achieved in this life namely *artha* (wealth) and *kama* (fulfillment of desires), which have precedence over the final *purusartha*, which is *moksa*. The illusory nature of the World and the idea of *moksa* may be of relevance to a handful of *sannyasins* who live away from the society, much like the Christian monks in the monasteries of medieval Europe, but when a common Hindu thinks about the life after death, he thinks of and aims rather at going to ‘heaven’ and does not strive towards ultimate salvation leading to the complete dissolution of his personality.

The picture of a Hindu as a person averse to the pleasures of life and as the one who does not accept the realities of this world has been generated by overemphasizing (or should we say:misinterpreting"") the Advaita branch of Vedanta Philosophy which is but one school of Vedanta besides at least five others.

Lack of Charitiable activities and social responsibility

Some Western critics of Hinduism, especially those inspired by missionary spirit, highlight the charitable activities of Christianity, and point towards its absence in Hinduism. To my mind this is neither kind nor fair to a people whose knings (eg. Karsavardhana of Kanauj, 606-47 A.C.) are known to have distributed the entire collections of their treasury to the poor and needy every five

years at Prayaga as attested by Xuanzang (Hsuan-tsang) in his memoirs (cf. Also *Raghuvamsa of Kalidasa*, Canto 5.15).

Charitable activities are parts of every high religion because they constitute the core of their social philosophy. In India, too, charity or danam has been praised directly and through a number of myths and legends right since the time of RigVeda throught the Upanisads, to the Mahabharata, Puranas, and Dharmasastras.
The much publicised caritative activities carried out by an organized Church, especially in Asian and African countries, with the money received from its Western followers as church tax, revolve round the idea of presenting a superior picture of Chrisitianity and ultimately aim at luring "heathens" to the Christian fold.

The polytheism of Hinduism

The tendency to see and judge all Indian religious, cultural and philosophical phenomena in the light of Western ideology is also seen in the strong condemnation of the Hinduistic polytheism by Christian writers, espeically missionaries of the nineteenth century. The presence of a large number of gods and temples dedicated to them in India annoyed them and the belief in many gods instead of a single, the most exalted one, was depicted as something primitive, a stage preceding the emergence of a high religion. It was neither properly understood nor properly represented that the existence of myriads of temple as well as faith in and worship of a multitude of gods for various worldly purposes does not affect or impair the belief of a Hindu in the Highest Divine Substance, which is but one and which alone is the creator, sustainer and destroyer of the universe.

Further, to regard polytheism as something inferior to monotheism is an undue imposition of a semitic religion on Indian culture. Why should monotheism be regarded as a sort of philosophical advancement over the polytheism?

The monistic/monotheistic character of Hinduism is of late origin.

Europeans often take pride in contending that the Jewish folk was the first to resort to monotheism and feel proud that the religion which they follow and which believes in one single God has its origin in the cultural background of Judaism. First of all it is not a historical fact that the Jews were first with a religion with a monistic system of thought. A number of references may be cited right from the Rgveda through the pages of the Upanishads to show that in spite of directing their prayers to a multitude of gods, the Vedic Aryans, basically believed that there is only one single abstract source of the origin of this world which is beyond the categories of sat (existent) and asat (non-existent). This one substance holds the world, destroys it in the end and is the only one which/who is to be worshipped and amired.

The " idolatry" of Hinduism.

Hinduism came under heavy attack in the tracts of many western writers of the nineteenth and early twentieth century. In the first instance it would look rather strange because Christianity all along its long and glorious tradition has been excessively friendly and favorable to the "cult of Images" and has produced some of the best religious art of the world in all possible mediums. And when we add to this the fact that the Christian churches in a number of South-European countries have the same type of cult images in their sanctum and the ritual of offering worship to them

consisting of sprinkling of holy water, offering of flowers and lamps and distribution of "prasada" (in the form of wheat wafers) is not much different from the ritual practised in Indian temples, the strong condemnation of Hindu "idolatry" by some Western writers seem neither logical nor reasonable.

In spite of this, some western scholars, driven by the Anglican-Protestant ideology whetted by missionary zeal launched a scathing attack against the "monstrous" cult images of Hinduism – especially those having semi-anthropomorhic features – ignoring their subtle symbolism. It was strongly projected that the practice of having images as cult-objects and of worshipping them represents the beliefs and practices of culturally backward and unadvanced social groups and those who worship abstract symbols are religiously far more advanced.

Western scholars also miserably failed to appreciate the aesthetics of Indian art. Biased in their opinion by the aesthetics of Greek and Christian art and basing their opinion on the canons derived therefrom they could never come to terms with the Indian deities having some unanthromorphic features like multiple arms and multiple or animal faces. They either remained blissfully ignorant about the deep symbolism of these images or deliberately ignored it. They also failed to properly understand the subtle ritual of the ceremony of *Puja* underlying the worship of these images.

ARYA – INCAS

By Swami B.V. Tripurari

Excerpts from "Ancient Wisdom for Modern Ignorance."
By Swami B.V. Tripurari. Clarion Call Publishing 1994.

Here is a fascinating piece of information about Hindus and Mayans connection.

According to Ambassador Poindexter, in his two volume 1930s treatise "The Arya-Incas", called the Mayan civilization was 'unquesionably Hindu' in origin.

Alexander von Humbolt (1769-1859) an eminent, European scholar and anthropologist, was one of the first to postulate the Asiatic origin of the Indian civilizations of the Americas. What mysterious pyschological law would have caused Asians and Americans to both use the umbrella as a sign of royalty, to invent the same games, imagine similar cosmologies, and attribute the same colors to the different directions?

The Aryan civilization of India is a logical choice for the beginning of the diffusion of our planet's civilization. American historian Will Durant, in his book 'Our Oriental Heritage', described India as the most ancient civilization on earth, and he offered many examples of Indian culture through out the world. He demonstrated that as early as the 9th century B.C. E. Indians were exploring the sea routes, and reaching out and extending their cultural influences to Mesopotamia, Arabia, and Egypt.

Most modern day historians prefer to accept ancient Egypt and Babylon, as the most ancient civilization. Because they have no living representation and thereby pose no threat to the status quo.

But India is alive and kicking. Prominent traces of ancient Vedic civilization can still be found today not only in India but outside her borders as well. If we recognize ancient India as a spiritual giant, we will have to reckon with her modern-day representations. This poses a threat to modern civilization and the current world-view. Vedic literature and spiritual ideology loomed as the greatest threat to the British in their imperialistic conquest of India.

The Aryans' footsteps are found throughout neighboring Southeast Asia. They were skilled navigators and pioneers of many cultural developments. According to several sources, these Aryans ruled in Java, Bali, Sumatra, Borneo, Philippines, Cambodia, Vietnam, Annan, Burma, and Thailand until the 14th century. Even today, the kings of Thailand bear the title of Rama after the Indian epic of Ramayana. The story of Ramayana is depicted on the palace walls of Bangkok.

Cambodia, the ancient Kamboja, boasts the largest temple complex in the world, named Ankor from the Sanskrit language meaning 'the capital city'. It was built in honor of Lord Vishnu. The

complex extends over an area more than twice the size of Manhattan and took 37 years to complete.

Vietnam once called Champa, figured prominently as a stepping-stone of India's cultural expansion. The Hindu state of Java was founded by the King of Kalinga (Orissa) in the 1st century C.E. Java is said to be the ancient Yava-Dveepa mentioned in the Ramayana. The Indonesian national flag flies the symbol of Garuda, the bird carrier of Vishnu.

In 1949, two scholars, **Gordon Ekholm and Chaman Lal**, systematically compared the Mayan, Aztec, Incan, and North American Indian civilizations with the Hindu-oriented countries of Southeast Asia and with India herself. According to them, the emigrant cultures of India took with them India's system of time measurement, local gods, and customs. They found signs of Aryan civilization through out the Americas in art (lotus flowers with knotted stems and half-dragon/half -fish motifs found commonly in paintings and carvings), architecture, calendars, astronomy, religious symbols, and even games such as our Parchesi and Mexican Patolli, which have their origins in India's pachisi.

Both the Hindus and the Americans used similar items in their worship rituals. They both maintained the concept of Four Yuga cycles or cosmological seasons, extending over thousands of years, and conceived of 12 constellations with reference to the sun as indicated by the Incan sun calendar. Royal insignias, system of government, and practice of religious dance and temple worship all showed remarkable similarities, pointing its strongly to the idea that the Americas were strongly influenced by the Aryans.

Another scholar, **Ramon Mena, author of the "Mexican Archeology**" called the Nahuatl, Zapoteca, and Mayan languages of Hindu origin. He says that ' their writing and their personal adornments.. their system and style of construction clearly indicate the remotest antiquity....they all speak of India and the Orient.'

Caste System – Excerpts
BY MARK TULLY

Although all men may be equal in God's eyes, they can never be equal in the eyes of other men, and because of that basic flaw in the doctrine of egalitarianism we in the West now talk of "equality of opportunity". The pursuit of equal opportunities for all has many achievements to its credit, but this ideal too is going to be realized only if there is another life after this one.

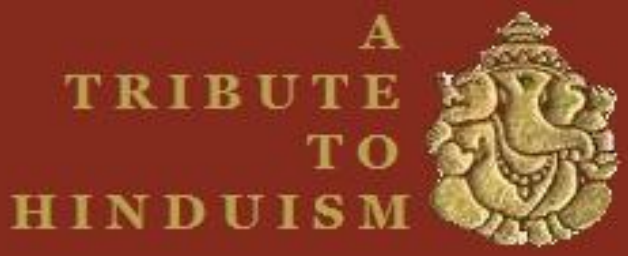
Our differences of opportunity start the moment we are conceived. The gap widens as we live in different families, go to different schools, are inspired or bored by different teachers, discover or fail to discover our individual talents and are given or not given the resources to develop those talents. So it goes on throughout our lives. There will always be winners and losers.

The alienation of many young people in the West and the loneliness of the old show the suffering that egalitarianism inflicts on those who do not win, the superficiality of an egalitarianism which in effect means equal opportunities for all to win and then ignores the inevitable losers. Imagine how many losers there must be in a country like India where many children have their physical and mental growth stunted by malnutrition.

Imagine also what would happen if egalitarianism and its companion individualism destroyed the communities which support those who start life with no opportunities. For all that, the elite of India have become so spellbound by egalitarianism that they are unable to see any good in the only institution which does provide a sense of identity and dignity to those who are robbed from birth of the opportunity to compete on an equal footing –

Caste is obnoxious to the egalitarian West, so it is obnoxious to the Indian elite too.

One way to discredit any system is to highlight its excesses, and this only adds to the sense of inferiority that many Indians feel about their own culture. It would lead to a greater respect for India's culture, and indeed a better understanding of it, if it were recognized that the caste system has never been totally static, that it is adapting itself to today's changing circumstances and that it has positive as well as negative aspects.



The caste system provides security and a community for millions of Indians. It gives them an identity that neither Western Science nor Western thought has yet provided, because caste is not just a matter of being a Brahmin or a Harijan: it is also a kinship system. The system provides a wider support group than a family: a group which has a social life in which all its members participate.

In the **September 1989 issue of Seminar** magazine, **Madhu Kishwar**, one of India leading feminists, wrote, " The caste system provides for relatively greater stability and dignity to the

individuals than they would have as atomized individuals. This is part explains why the Indian poor retain a strong sense of self-respect. It is that self-respect which the thought-less insistence on egalitarianism destroys."

Rediscovering Rabindranath Tagore
Jan 15, 2000
The Forgotten Genius
India's celebrated champion of East and West
By Jon Spayde, Utne Reader
http://www.utne.com/bBooks.tmpl$search?db=dArticle.db&eqheadlinedata=The%20Forgotten%20Genius

Given the torrent of books and tapes and classes that draw on Asian wisdom (real or spurious) to help us meditate or levitate or find our lost Western selves, it's easy to forget that the coming together of East and West goes a lot deeper, and is a lot older, than the contemporary New Age.

Ever since greedy and energetic Europeans began to colonize, convert, and trade their way into Asia in the late Renaissance, Western values (from the sublime to the unspeakable) have been thrust into the faces of Asian people. Their responses have varied from angry rejection to ecstatic embrace to wary sifting. At the same time, the colonizers have interpreted Asia for the home market, in ways that have ranged from the starkest racism to the most conscientious scholarship.

While every Asian culture had its inspired leaders who faced the Western challenge in their own way, two figures were able to absorb the Western impact, find a living relationship to their own traditions, and then become world famous for bringing this mix to the West in the form of wisdom. They were the Indians M.K. Gandhi and Rabindranath Tagore.

As Krishna Dutta and Andrew Robinson point out in the introduction to their splendid book, **Rabindranath Tagore: An Anthology (St. Martin's, $30),** Gandhi is very much alive in the West today and Tagore is all but forgotten. That's a major shift of taste. Between winning the Nobel Prize for his poetry in 1913 and his death in 1941, Tagore was simply one of the most famous men on the planet. His poetry and prose, deeply colored by his reformist, highly philosophical Hinduism, had a serene weightiness that appealed to Westerners who were being hurtled from one World War toward another.

Both cosmopolitan and deeply Indian, he seemed like the perfect bearer of Eastern wisdom into the modern world. He was received by kings and presidents, discoursed publicly with Albert Einstein on the nature of the world, and mixed with the West's literary elite: William Butler Yeats was a friend, and Ezra Pound not known for low self-esteem confessed that he felt inferior to Tagore.

Yet, by one of the ironic rules of our shrinking planet, the longevity of an Asian writer on the world scene depends on the quality of translations into English. Once the photogenic, prophet-bearded poet/philosopher was gone from the scene, his poetry in stiff English renderings from the Bengali made mostly by Tagore himself just couldn't stand the test of time. Dutta and Robinson are helping revive interest in Tagore by downplaying the poetry (which, as they point out, still awaits a great translator) and making fresh translations from the many other literary genres that Tagore mastered: theater, the short story, the polemical essay, memoir, travel writing, and especially the familiar letter, which he handles as powerfully as Keats.

In the process, the editors also reveal the power of a personality that transcends his specifically literary achievements. Tagore, scion of one of the richest and best connected families of 19th-century Calcutta, never suffered feelings of inferiority before the "sahibs" the English masters of India. He was a leader of the pre-Gandhi Swadeshi (self-rule) movement in Bengal at the turn of the century, but turned away from nationalist politics in disgust at the violence and bitterness that came with it. His wary friendship with Gandhi never prevented him from

expressing grave doubts about the wisdom of Gandhi's advocacy of "nonparticipation" with British rule while the British still, in Tagore's view, had modern lessons to teach India.

But Tagore was no political fence sitter. His 1919 letter to Lord Chelmsford, viceroy of India, protesting a British massacre in the Punjab region and handing back his knighthood, is a masterpiece of icily correct invective.

Tagore comes closest to us, though, when he calls on his Western friends to imagine a world in which East and West give each other spiritual gifts free of imperialistic coercion, a world in which science is honored but spiritual and humane values rule. "When our universe is in harmony with man, the eternal, we know it as truth, we feel it as beauty," Tagore told Einstein in 1930. Coming from a man with few illusions about either East or West, this noble sentiment sounds less like pure idealism than a hard-won way of living decently in a violent century.

Tagore's gift for us today, splendidly presented in this anthology, is his insistence on speaking for the highest human values and loftiest human aims. At a time when our public discourses have descended into the mud of marketspeak and realpolitik, we need Tagore's courageous and undeceived conviction that we were born for something wildly and brilliantly better.

Why frame Veer Savarkar?

by Ved Pratap Vaidik

http://www.hindustantimes.com/news/181_217494,00120001.htm

Vinayak Damodar Savarkar was sentenced to two life imprisonments running into 50 years when he was 27 years old. When he escaped from a British ship in 1910, the world came to know for the first time — much before Gandhi and Nehru joined the mainstream freedom movement — that India was trying to free itself from the clutches of the British. Savarkar internationalised the Indian freedom movement by being the first person whose case was fought at the International Court in the Hague.

Considering all this, why have there been objections over Savarkar's portrait being installed in the Central Hall of Parliament? Three reasons are advanced: One, that he was involved in the conspiracy of Gandhiji's assassination; two, that he is the father of Hindu communalism; three, that he wrote an elementary petition to the British government while he was in the Andamans and thereby grovelled at the feet of the British for clemency.

Savarkar, no doubt, was implicated and prosecuted in the case involving Gandhi's murder. He was, however, duly exonerated. A comparison between Savarkar and Gandhi is totally uncalled for. Luminaries like Gandhi are born only once in centuries.

But Gandhi was by no means the sole spokesman of Indian nationalism, a fact borne out by the presence of stalwarts such as Subhas Chandra Bose, B.R. Ambedkar, Bhagat Singh, Periyar and Savarkar. Can the nationalist strands represented by these leaders be written off so easily? Hegemonic claims of secular nationalism have always attempted to marginalise the alternative voices as much as the Right-wing has contested the legitimate claims of a secularist agenda. In this battle, whoever is in the position of power begins to wield the stick of historiography. What the BJP and the Shiv Sena are doing at the moment is what the Congress did when the latter was in power. Take the example of Ram Manohar Lohia. Attempts were made to write off Lohia as a credible leader. But as soon as his disciple Rabi Ray became the Lok Sabha speaker, he had a portrait of Lohia installed in the Central Hall of Parliament.

Now the prime minister is a member of the BJP and the speaker of the Lok Sabha is a Shiv Sena member and they wish to accord a status due to a national hero to Savarkar. Could there be a more opportune time for the installation of the portrait of Savarkar in Parliament? Imputing to the BJP motives other than this would be wide off the mark.

Coming to the question of Hindutva, the small book Hindutva, written by Savarkar in 1922, presents facts, arguments and conclusions. Eighty years ago, when the Khilafat movement was at its peak, Amanullah, the king of Afghanistan, was being invited to rule over India by Muslim leaders just because he was a Muslim. Muslim communalism was beginning to raise its ugly head and instead of joining the bandwagon of the Congress, Savarkar preferred to plough his lonely furrow. Gandhi and other leaders were also finding it difficult to stand their ground — either out of goodwill or helplessness. Savarkar shook Hindu society out of its slumber by writing Hindutva.

His actions are very much in line with what Ambedkar did for the Dalits and what Periyar accomplished for the Dravidian movement. Although the majority of Hindus went with Gandhiji, it was Savarkar who

was the first to oppose the rising tide of Muslim communalism by calling it so.

Another much criticised aspect of Savarkar has been his support to Jinnah's 'two-nation theory'. Savarkar, in fact, was a votary of 'Akhand Bharat' — United India. He did recognise that the Hindus and Muslims were living like two nations during those unfortunate times. But he always argued the case for an Akhand Bharat which never relegated Muslims to second-rate citizenship.

This idea of second-rate citizens was a later insertion into the Hindutva ideology. In his presidential address to the Hindu Mahasabha in 1937, Savarkar spoke of giving special guarantees to Muslims for protecting their language, culture and religion. He reiterated on several occasions: "Nobody would be discriminated against on the basis of religion, caste or creed. Absolute equality for all would be ensured and no one would be allowed to dominate others." He opposed not the Muslims, but the 'blackmail' being practised by the Muslim leadership.

There is no doubt that his articles and speeches created an 'anti-Gandhi' atmosphere and sharpened the lines of India's Partition unwittingly. But the Muslim leaders did not even touch the 'balm' proffered by Gandhi and Nehru. The cleavages of Partition had already been dug up much before Savarkar came to the scene.

One does not know which brand of 'Hindutva' India would have accepted — Gandhi's 'soft' Hindutva or Savarkar's 'hard' Hindutva — if Savarkar had not remained interned for 27 years and had returned to India in 1910 having qualified as a barrister. Gandhi's 'soft' Hindutva failed and Pakistan was born out of the appeasement of the Right-wing Muslim leadership. Even Lohia, in The Guilty Man of India's Partition, holds Nehru and other Congress leaders responsible for Partition. Savarkar, instead, consistently opposed Pakistan.

Savarkar's Hindutva was very different from the one being touted by the BJP and their allies today. Can anyone imagine that the 'Father of Hindutva' advocated beef-eating (in special circumstances), rejected the divinity of the Vedas, denounced the sanctity of the caste system and launched a virulent attack on the hypocrisy of the priests? It was not easy for the RSS to digest and appropriate such a revolutionary.

The acrimonious verbal duels that took place between the Hindu Mahasabha and the Sangh parivar till 40 years ago were more raucous than the current battle between the Congress and the parivar. If the unveiling of the statue of Savarkar reveals the desire of the Sangh parivar to claim a new icon for itself, it should only gladden the hearts of the opposition parties that Savarkar's India is rooted in the rationalistic philosophy of life and not on some theological rockbed.

As far as the question of Savarkar tendering an apology to the British is concerned, whose version should one accept as authentic? The one propagated by our know-all politicians or that of the British officer to whom the petition was addressed? In 1913, Reginald Craddock, representative of the then governor-general, had gone to Port Blair on Savarkar's pleadings to look into the most inhuman conditions prevailing in the cellular jail.

The petitions were submitted to Craddock by five revolutionaries — one of whom was Savarkar. These were petitions for clemency and not apologies. In these petitions, all the five revolutionaries had mentioned the inhuman atrocities being perpetrated against them and were demanding civilised behaviour from the government.

In these petitions, they had resorted to a sugar-coated phraseology for securing their release. It is true that Savarkar gave the assurance of eschewing the path of bloody revolution and violence and of following the constitutional norms and loyalty to the British government. But this was in consonance with Shivaji's tradition of 'one step backward, two steps forward'. As far as loyalty to the British raj was concerned, one comes across several such letters by Gandhi in his early phase. It is also noteworthy to see what Craddock had to say about Savarkar's petition.

In his secret note of December 19, 1913, he noted that Savarkar was shamming his 'change of heart' and that he did not express the slightest remorse or regret for what he had done. Craddock further said: "In the case of Savarkar, it is quite impossible to give him any liberty here and I think he will escape any

Indian jail. So important a leader is he that the European section of the Indian anarchists would plot for his escape, which would, before long, be organised." When the petition did not convince the British, why are our politicians today so eager to accept it as a symbol of national betrayal?

Hare Jesus: Christianity's Hindu Heritage

By Stephen Van Eck

http://www.mantis.co.uk/sceptical/3hare94.html

"Can one go upon hot coals, and his feet not be burned" (Prov. 6:28)? But of course!

Objective and open-minded scholars long ago conceded that Christianity is at heart a revamped form of Judaism. In the process of its development as something distinct from its mother religion, it became hybridized with so much pagan influence that it ultimately alienated its original Jewish base and became predominantly Gentile. The source of this pagan influence is varied and vague in the minds of most advanced Bible critics, but it may owe more to Hinduism than most people suspect.

The average person does not connect India with the ancient Middle East, but the existence of some trade between these two regions is documented, even in the Bible. Note the reference to spikenard in the Song of Solomon (1:12; 4:13-14) and in the Gospels (Mark 14:3; John 12:3). This is an aromatic oil-producing plant (*Nardostachys jatamansi*) that the Arabs call *sunbul hindi* and obtained in trade with India.

It is axiomatic that influence follows trade, and the vibrant culture of India could not help but impact on anyone exposed to it. The influence on Judaism came for the most part indirectly, however, via the Persians and the Chaldeans, who dealt with India on a more direct basis. (Indeed, the Aryans, who invaded and trans- formed India over 1500 years before Christ, were of the same people who brought ancient Persia to its greatest glory. Persia's name today--Iran--is a corruption of *Aryan*.) The ancient Judeans absorbed much of this secondhand influence during the Babylonian captivity of the sixth century B. C., and during the intertestamental period, when Alexandria became the crossroads of the world, intellectuals both Jew and Gentile were exposed to a variety of ideas, some of which originated on the subcontinent.

The precise pattern of influence was neither observed nor documented, but it can be inferred from the numerous uncanny similarities in concept and expression, not all of which can be coincidental. Let us examine the telltale evidence (none of which, it may be added, depends upon any apocryphal account of the alleged "lost years" of Jesus in India).

Most Christians are familiar with Galatians 6:7, "Whatsoever a man soweth, that shall he also reap." Less known is Proverbs 26:27, "Whoso diggeth a pit shall fall therein, and he that rolleth a stone, it will return upon him." Both express the Hindu principle of karma (the sum and the

consequences of a person's actions during the successive phases of his existence), but since no direct connection can be deduced, we'll merely consider it an interesting coincidence and move on.

The concept of a soul that is distinguishable from the body and can exist independently of it is alien to Judaism. It is first known in Hinduism. Only after the Babylonian captivity did any such concept arise among the Jews, and it is in the epistles of Paul, the "debtor to both the Greeks and the Barbarians," that the notion receives its first clear expression. (See 2 Corinthians 5:8 and 12:3.)

The Brahmin caste of the Hindus are said to be "twice-born" and have a ritual in which they are "born in the spirit." Could this be the ultimate source of the Christian "born again" concept (John 3:3)?

The deification of Christ is a phenomenon often attributed to the apotheosis of emperors and heroes in the Greco-Roman world. These, however, were cases of men becoming gods. In the Jesus story, the Divinity takes human form, god becoming man. This is a familiar occurrence in Hinduism and in other theologies of the region. Indeed, one obstacle to the spread of Christianity in India, which was attempted as early as the first century, was the frustrating tendency of the Hindus to understand Jesus as the latest avatar (incarnation) of Vishnu. It is in the doctrine of the Trinity that the Hindu influence may be most clearly felt. Unknown to most Christians, Hinduism has a Trinity (or Trimurti) too: Brahma, Vishnu, and Shiva, who have the appellations the Creator, the Preserver, and the Destroyer (and Regenerator). This corresponds to the Christian Trinity in which God created the heavens and the earth, Jesus saves, and the Holy Spirit is referred to as a regenerator (Titus 3:5). It is interesting to note, furthermore, that the Holy Spirit is sometimes depicted as a dove, while the Hebrew language uses the same term for both "dove" and "destroyer"!

The Trinity was a major stumbling block for the Jews, who adhered to strict monotheism. The inherent polytheism in the Trinity doctrine cannot be explained away with the nonsensical claim that three is one and one is three. Besides, Jesus himself undermined any pretense of triunity (or omnipotence, for that matter) in Matthew 19:17, "And he said unto them, Why callest thou me good? There is none good but one, that is God...." Matthew 20:23; Mark 14:32; John 5:30; 7:16 and 14:28 also contradict the Trinitarian concept. The Hindu scriptures, which are the oldest in the world, contain a number of astonishingly familiar expressions. The Upanishads mention things like "the blind led by the blind" (Matt. 15:14) and God's being "the same yesterday, today, and tomorrow" (Heb. 13:8). The path is said to be "narrow and difficult to tread" (Matt. 7:14). They also make reference to "a voice from out of the fire" (Ex. 3:4) and a man's face shining after en- countering God (Ex. 34:29). They refer to those who are "wise in their own conceits" (Prov. 34:29; Rom. 12:16), warn against "fleshly desires" (1 Pet. 2:11), and advise that "it is not by works alone that one attains the Eternal" (Gal. 2:16), and "to many it is not given" to know of metaphysical truth (Matt. 13:11). They describe the Self as "smaller than a

mustard seed" (Matt. 17:20), and they speak of "the highest knowledge, having drunk of which, one never thirsts" (John 4:14). And how about this: "Man does not live by breath alone, but by him in whom is the power of breath" (Matt. 4:4)?

Sounds a little too familiar, I'd say!

Then there is the Hindu epic, the Bhagavad-Gita, a story of the second person of the Hindu Trinity, who took human form as Krishna. Some have considered him a model for the Christ, and it's hard to argue against that when he says things like, "I am the beginning, the middle, and the end" (BG 10:20 vs. Rev. 1:8). His advent was heralded by a pious old man named Asita, who could die happy knowing of his arrival, a story paralleling that of Simeon in Luke 2:25. Krishna's mission was to give directions to "the kingdom of God" (BG 2:72), and he warned of "stumbling blocks" along the way (BG 3:34; 1 Cor. 1:23; Rev. 2:14). The essential thrust of Krishna's sayings, uttered to a beloved disciple, sometimes seems to coincide with Jesus or the Bible. Compare "those who are wise lament neither for the living nor the dead" (BG 2:11) with the sense of Jesus' advice to "let the dead bury their own dead" (Matt. 8:22). Krishna's saying, "I envy no man, nor am I partial to anyone; I am equal to all" (BG 9:29) is a lot like the idea that God is no respecter of persons (Rom. 2:11; see also Matt. 6:45). And "one who is equal to friends and enemies... is very dear to me" (BG 12:18) is reminiscent of "love your enemies" (Matt. 6:44). Krishna also said that "by human calculation, a thousand ages taken together is the duration of Brahma's one day" (BG 8:17), which is very similar to 2 Peter 3:8.

In fairness, however, one purported similarity needs to be discredited. Skeptics sometimes cite Kersey Graves in *Sixteen Crucified Saviors* or Godfrey Higgin's *Anacalypsis* (which Graves drew from) in asserting that Krishna was a crucified deity. No such event occurred in the Gita or in any recognized Hindu scripture. Given the pronounced syncretic tendency of Hinduism, it is safe to assume that any odd tales of Krishna's being crucified arose only *after* the existence of Christian proselytism, in imitation of the Christian narrative. It is neither authentic to Hinduism nor is Hinduism the source of that portion of the Christian narrative. The same may be said for most of the purported nativity stories. In my opinion, both Higgins and Graves are highly unreliable sources and should be ignored.

That notwithstanding, the existence of uncanny similarities in concept and phraseology in those Hindu writings that *are* both ancient and authentic leaves Christians in a difficult quandary. With the historical reality of Indian influence on the Middle East being an established fact, how can they account for these similarities with anything less feeble than coincidence, or less bizarre than the notion of "Satanic foreknowledge and duplication," which is sometimes invoked to explain the similarities of Judeo-Christian precursors?

I'll close with Ecclesiastes 1:10, another inconvenient and uncomfortable passage: "Is there anything whereof it may be said, See, this is new? It hath been already of old time, which was before us."

The empire strikes back
Author: Suma Varghese
Publication: The Free Press Journal
Date: December 5, 1997
http://www.hvk.org/hvk/articles/1297/0061.html

I know this is a slightly delayed reaction, but I cannot resist making it. I refer to the much-publicised British Golden Jubilee Banquet held in London a few weeks back. It was here that Cherie Blair, the PM's wife, stole all our hearts by turning up in a sari. But I refer to a more momentous event than that. Namely, Prince Charles speech.

The Prince made some remarkable disclosures. First, he thanked India for "its civilising influence over Britain", then proposed a toast for "real India, the enduring and everlasting India", an India that had preserved its identity through its experience of colonisation, and which must now fight the invasion of satellite television.

This is amazing. India having a civilising influence over Britain? Where does that leave the white man's burden? Imagine, the crown prince of Britain admitting that the civilising had been as much from the invaded country to the invading country as vice versa. **What a volte face for a nation that systematically during its 300 years of rule, denigrated every aspect of the 'native' culture, including its philosophy and spirituality, and supplanted it with its own imperial values, attitude and approaches. The prince of a nation that has done more than any other to alienate us from our traditional culture and way of life, today acknowledges the "civilising influence" of such a tradition.**

In the same vein, he went on to congratulate us for having withstood the experience of colonialism, a 'colonialism' his own country imposed! Here is an implicit acknowledgement of the less

than salubrious impact of colonialism; a concession that their conquest may have damaged us. Considering that his mother did not have the bigness to apologise for the Jallianwallah massacre, this is downright handsome of the son.

And to think he should have the sensitivity and depth to penetrate into "the real India, the enduring India."

There is, in the Prince's speech, a profound shift from the popular perception of the Indo-British relationship. Instead of seeing India as a former imperial colony and a Third World nation, he sees it as a perennial civilisation, one nothing can vanquish, and which can, in rum, not vanquish, but transform its invaders.

We can see this happen in the case of the Prince himself If the British conquered us yesterday with their superior strategy and physical might, today we seem to have conquered them with the force of our philosophy. On the same occasion, **the Prince quoted Vedic hymns, revealing his acquaintance with the heart of India's philosophy and spirituality. His fondness for Indian classical music, which derives its aesthetics from the same philosophy, is yet another indication of the Prince's attraction and affinity for our culture.**

Nor is he the only one in the Royal household to feel the lure of the East. His late ex-wife, the Princess Diana, was also attracted to the sub-continent -- mostly Pakistan, and had an active interest in spirituality. The Duchess of York, who came recently to India for a homeopathic cure, is reportedly an admirer of India's holistic therapies.

Our ancient hoary land has wrought its magic once again. It's as the sages and philosophers have always maintained. By constant transformation, India remains her essential self; in turn, this essential self is the instrument of the world's transformation.

Listen to Vivekananda, for instance. "What may be that force which causes this afflicted and suffering people, the Hindu... to survive when other nations perish? The cause can only be their spiritual force."

Says Sir Jagdish Chandra Bose, "By continuous living tradition and a vital power of rejuvenescence, this land has readjusted itself through unnumbered transformations."

Asks Dr S. Radhakrishnan: "By what strange social alchemy has India subdued her conquerors, transforming them to her very self and substance..... ? Why is it that her conquerors have not been able to impose on her their language, their thoughts and customs, except in superficial ways?"

So what indeed is the secret of India'a enduring vitality? How do we account for its transformatory power? What did Prince Charles mean when referring to the 'real India, the enduring and everlasting India"?

The tragedy is that while the prince of an alien nation could see this aspect of India, most of us in contemporary, urban India are out of touch with it. Caught in the maelstrom of change, it is difficult for us to step back far enough to see the continuity of our culture. At the most, the Prince's words will conjure up some vague images of our Vedic past, but of its real relevance to our present life, we have little or no notion.

Yet that "real" India survives, and even thrives. Indeed, if we continue to exist despite our manifold problems, it is her we have to thank.

The real secret of India's survival is its tolerance, its inclusion. What has kept it from being swallowed whole by its conquerors, or warped beyond recognition, is its limpid ability to accept the cultures, tradition and above all, the religions of alien rulers. The Muslims came, and we accepted them. Islam began to flourish in all corners, but if it did not become the dominant religion, it is because we did not resist its spread. The same
with British rule and the spread of Christianity. The number of Christians in the country are certainly not enough to threaten Hinduism, and that is because Indian coexisted with them, rather than trying to wipe them out.

There is a profound lesson for all of us in this approach. Indeed, now that personal growth has become such a mainstream activity, it is one of the first principles of transformatory technology.

What we resist, persists; what we accept, can he transformed. Almost all of us will have had occasion to encounter the truth and wisdom of this observation.

Make the mistake of hating someone, and you will forever be yoked

to thoughts of that person. You cannot get away from them. Wherever you go, his presence pursues you; no matter what you think, eventually, your mind wanders back to the hated object. Had you loved him, you would not have been so much possessed by your feelings as you become in hate. The same is true of any vice we attempt to give up. The more we resist it, the greater the urge. The more we hate ourselves for giving in to it, the greater its power over us. It is only when we accept ourselves implicitly. weakness and all, that it loosens its hold over us. From a larger context, if we were to stop protesting against the manifold flaws of the country and moved towards accepting it instead, we would be in a position to solve them.

Awareness and acceptance, as anyone interested in personal growth will tell you, are the twin mechanisms of transformation. They will also tell you that they are about the most difficult and challenging aspects to attain. How then, did our country, which is to say, all of us as a whole, achieve this feat?

Here is where we glimpse the continuity that binds us, and which makes us uniquely Indian. The answer lies in the Vedic heritage, with its belief in the unity of all creation. Believing as we did that all is one and all is holy, we naturally inclined towards interconnection and a sense of reverence towards all that exists. If this has made us respect and serve all forms of life, our traditional pursuit of self-realisation as the purpose of life, has given us respect for all forms of religion, which we see as different paths to the same truth. Little wonder then, that we are tolerant and open-minded, and accepting of diverse viewpoints.

This catholicism is part of our heritage, and whether we are conscious of it, of our personality. Moving consciously towards it, and making it a part of ourselves will give us an untold edge in effective living. It will also ensure, as the Prince solicitously advised us, that we don't lose our essential selves to the satellite revolution.

Of Cosmic Wakes and Humbler Heavens

An essay on India's contribution to the world in terms of basic sciences and spirituality

By Gopal Venkatesan

Lo, the poor Indian! whose untutored mind
Sees God in clouds, or hears him in the wind;
His soul proud science never taught to stray
Far as the solar walk, or milky way,
Yet simple nature to his hope has given,
Behind the cloud-topped hill, an humbler heaven.

Alexander Pope

India's contribution to the world, in general, is manifold. Over the centuries she has shared generously all her treasures (material and otherwise) with her guests - travelers, missionaries, traders and conquerors - without distinction, expecting little in return, in the spirit of this verse from the Upanishads - "the cow drinks water and gives milk." Yet her pivotal role in the history of civilization has been overlooked, forgotten and misinterpreted. The "Father of History," Heredotus (ca. 500 B.C.), at a time when Buddhism was holding its sway across the length and breadth of India, mentions India as being a land where people killed and ate their enfeebled parents to save the trouble of caring for them in their old age! Today, to many Westerners, India is nothing more than a nondescript part of the East with elephants, snake charmers and the Taj Mahal. Alexander Pope, in the above excerpt from his poem *An Essay on Man* may have been addressing either the Indian of the East or of the West. Regardless he summarizes quite nicely the popular view of the West towards the people of India. Using two phrases from the poem as my theme, I hope to give, in this essay, a brief introduction to certain key contributions through which India has influenced the world.

His soul proud science never taught to stray
Far as the solar walk, or milky way

India, over the centuries, has been far ahead of the West in many basic sciences. An appreciable part of this knowledge has been disseminated around the world over the course of time and survive even today with their source being grossly misinterpreted.

In my opinion, the most important contribution that India has made to the world in the basic sciences is the decimal number system and the so-called Arabic numerals that can be seen on the rock edicts of Ashoka (ca. 250 B. C.) found all over India. It is worthwhile to note that the simplicity of the decimal system in associating the value of a number with an absolute value as

well as a value by position escaped the genius of men like Archimedes and Apollonius (try writing the current year 1997 in Roman numerals!).

Less than four hundred years ago Johannes Kepler infuriated the Church by proving the earth was not the center of the universe. He formulated quantitatively the elliptical orbit of the earth around the sun. This fact was known in India to a group of astrologers/astronomers known as the Siddhantas before the Christian era. The implications of this fact are very profound. First of all, to work with elliptic equations requires a mastery of simple algebraic equations, but for algebra to work the existence of negative numbers and the concept of the number zero has to be understood. Invention of negative numbers and the concept of zero lays the basic foundation of abstract mathematics, which is the mathematics beyond simple manipulations of positive numbers that can be easily interpretable as counting experiments in the real world. In fact, from Vedic mathematical texts available it is clear that the properties and behavior of numbers were clearly understood from ancient times. Aryabhatta (ca. 400 B.C.), after whom India's first satellite is named, discusses in verse mathematical concepts such as quadratic equations, sines, cosines and the value of zero. He explained eclipses, solstices and equinoxes, announced the sphericity of the earth and its diurnal revolution on its axis. Indeterminate equations of the second degree were solved (unknown in Europe until Euler's work a thousand years later) and the square root of two was computed as early as the eighth century in India.

Contributions in the basic sciences were not limited to mathematics alone. Indians were masters of calcination, distillation, sublimation and preparation of metallic salts, compounds and alloys. For example, the art of tempering steel was practices to near perfection. The secret of manufacturing these "Damascus blades" was offered to Alexander the Great in place of gold and silver. To this day an iron pillar dated to be at least 1800 years old stands close to the Qutub Minar. Its purity has prevented it from rusting over the centuries, a level of perfection that cannot be emulated even with today's technology. The magnetic field of the earth was discovered in India at least 2500 years ago and records exist as early as the first century of Indian ships navigating the seas using a compass made of an iron "fish" floating in a vessel of oil. **Vachaspati** (ca. 150 B.C.), like Newton did almost 1500 years later, interpreted light as composed of minute particles emitted by substances and striking the eye. Brahmagupta (ca. 300 B.C.) wrote about the gravitational force of the earth - "the earth owing to its force, draws all things to itself." Nagarjuna (ca. 160 A. D.) devoted a whole volume to the properties of mercury. The design of stringed musical instruments, wherein the pitch of the note varies inversely as the length of the string between the point of attachment and the point of touch, was quantitatively known in the second century. Anticipating Weismann 2400 years earlier, Atreya (500 B. C.) deducted the basic tenet of genetics and wrote that the parental seed is independent of the parent's body, and contains in itself in miniature the whole parental organism.

Yet simple nature to his hope has given,
Behind the cloud-topped hill, an humbler heaven

Humble heavens, a heaven within one's reach, can be more appealing than an undefined paradise in an after-life beyond comprehension. Can heaven be within one's reach before death? Can paradise be a place on earth? Various Indian philosophies have expounded over the centuries that questions such as these can be answered in the affirmative. Some such schools of philosophical thought, in my opinion, are futuristic even by today's standards. The doctrine of the Upanishads is

my favorite philosophy in this context and I will touch upon it briefly.

The Upanishads have no parallel in the history of thought. They propound a philosophy of life, that does not touch the realms of divine intervention or salvation. In the words of Shri Aurobindo who wrote a commentary on the Upanishads,

"The Upanishads are the supreme work of the Indian mind, and that it should be so, that the highest self-expression of its genius, its sublimest poetry, its greatest creation of the thought and word should be not a literary or poetical masterpiece of the ordinary kind, but a large flood of spiritual revelation of this direct and profound character, is a significant fact, evidence of a unique mentality and unusual turn of spirit."

Proposed, nurtured and promulgated in the first few centuries of the early Christian era by individuals drawn from all levels of society, it attempts to apply abstract truth to practical life.

In this body, in this town of the Spirit, there is a little house shaped like a lotus and in that house there is a little space. There is as much in that little space within the heart as there is in the whole world outside. Heaven, earth, fire, wind, sun, moon, lightning, stars; whatever is and whatever is not, everything is there ... What lies in that space does not decay when the body decays, nor does it fall when the body falls. That space is the home of the Spirit. Every desire is there. Self is there, beyond decay and death; sin and sorrow, hunger and thirst; His aim truth; His will truth.

from the *Chhandogya Upanishad*

In time the world will progress enough to embrace its philosophy in an undiluted form.

Another poet, **Walt Whitman,** comes much closer to the truth.

The nest of languages, the bequeather of poems
The race of old
Florid with blood, pensive, rapt with musings, hot with passion,
Sultry with perfume,
with ample and flowering garments,
With sunburnt visage,
with intense soul and glittering eyes
The Race of Brahma comes!

In India there is a word - "Dharma," which has no equivalent in English. It is too difficult to translate. Dharma loosely means Code of Duty - Duty towards God, Duty towards others in one's family, Duty towards society, Duty towards birds and animals, every living thing, Duty to give without expecting anything in return. It also means love for all creation. India has preached this message of love for over fifty centuries.

In writing this article, I have borrowed generously from the information in Chaman Lal's book *India, mother of us all*, and also from a quotation by Annie Besant on the word Dharma.

Monotheism and its discontents (excerpts)
By Gore Vidal - author and critic has written numerous books.
Lecture given at Harvard University.

"The great unmentionable evil at the center of our culture is monotheism.

From barbaric Bronze Age text known as the Old Testament, three anti-human religions have evolved - Judaism, Chritisianity and Islam. These are sky-god religions. They are literally, patriarchal - God is the omnipotent father - hence the loathing of women for 2,000 years in those countries afflicted by the sky-god and his earthly male delegates.
The sky god is a jealous god, of course. He requires total obedience from everyone on earth, as he is in place not for just one tribe but for all creation.Those who would reject him must be converted or killed for their own good.
Ultimatley, totalitarianism is the only sort of politices that can truly serve the sky-god's purpose. Any movement of a liberal nature endangers his authority and that of his delegates on earth. One God, one King, one Pope, or master in the factory, one father-leader in the family home.

The founders of the United States were not enthusiasts of the sky-god. Many, like Jefferson, rejected him altogether and placed man at the center of the world. The young Lincoln wrote a pamplet against Christianity, which friends persuaded him to burn.

Although the Jews were sky-god folk, they followed Book One, not Book two, so they had no mission to convert others, rather the reverse. Also, they have been systematically demonized by the Christian sky-godders.

Many of the Christian evangelists feel it necessary to convert everyone on earth to their primitive religion, they have been prevented- so far- but they have forced most tyrannically and wickedly - their superstitions and hatred upon others. So it is upon account that I now favor an all-out war on the monotheists.

Monotheism and its discontents
http://eserver.org/govt/monotheism.txt
This article (in a somewhat different form) was originally 'The Lowell Lecture' at Harvard University given April 20. Gore Vidal is an author and critic. He has written numerous books and

has appeared on many TV and Radio news and talk programs. Gore Vidal is the grandson of Oklahoma's blind Senator T. P. Gore, son of a West Pointer who became an FDR administration member, stepbrother of Jackie Kennedy Onassis, cousin to Al Gore.

Remains of history

By Chitra Viji

http://www.the-hindu.com/2000/03/19/stories/1319049d.htm

Located a little off Chennai, the ancient port town of Mamallapuram reclines unnoticed on its legendary past. Perhaps underwater archaeology may provide answers about some of the sunken structures and our maritime heritage, writes CHITRA VIJI.

THE PALLAVA king, Narasimhavarman I, had the title "Mamalla" and ruled in the early part of the Seventh Century A.D. and is credited with creating Mamallapuram. This historic site is referred to in early literature in the hymns of the Alvars as Mallai. In the 17th and 18th Centuries, European travellers and seafarers, who viewed the pagodas or spires from the sea, mention seven of them which presumably include the five rathas, the old Vijayanagara towers and the Rajasimhesvara temple.

Marine archaeology might answer a few questions on the ancient port town and clear doubts on sunken structures, if any. We know that Mamalla, who had a successful reign, kept the Chalukyas of Vatapi under check and sent envoys abroad and maintained a successful naval presence in the Bay of Bengal and Indian Ocean. Mamallapuram would reveal its seafaring past, if underwater or ocean archaeology is initiated seriously.

When we approach Mamallapuram, wending our way by keeping the Buckingham canal to the West, we would notice the abandoned monolithic rathas with their unfinished carvings. On scrutiny, one understands that all the rock carvings start top down. The rathas have superbly finished crowns but with an unfinished rock base bearing rough chisel marks. One is tempted to view the abandonment as the result of a cataclysmic past but in truth the advancement of building technology freed our sthapathis from being confined to sites where rock was available and to move freely to create temples where required.

From here we arrive at the site of the five exquisite rathas or monoliths popularly known as the Pancha Pandava Rathas. The first rock structure is delicately executed in the shape of a thatched village home. Inside is portrayed an astonishing incident of a young man holding a machete to his head, ready to sacrifice himself. This cult of sacrifice is eulogised in a number of inscriptions on tablets called the hero-stones found in this part of the country and these glorify the warrior clans and their valor. However, in this instance, the event is scripted in an elegaic form on the wall of a shrine dedicated to the most powerful mother figure - Devi or Durga. A statue of the lion associated with her is carved independently and positioned in front of this shrine.

The Arjuna ratha has great similarity in style and form to the Dharmaraja ratha, which bears the

king's inscription and portrait. There is similarity in the idiom of architecture as both are derived from the style of the Rastrakutas with whom this king had close family ties. Stone architecture of the Chalukyas and of Mamallapuram bear remarkable similarity and arise out of a common shared tradition. The artisans, profoundly influenced by the woodwork, create pillars with corbelling, showing tenon joints and exhibiting the style of wood carvers in their detailing.

On Arjuna's ratha, a portrait of Siva leaning nonchalantly on the Nandi is the iconic representation of the Vrshabadevar. This imagery is further developed by the Cholas, who cast this concept in exquisite bronze. Further on, there is Indra on the elephant Airavata and

Vishnu on Garuda.

The Bhima ratha would have been a temple for Vishnu in his form of Sayanamurthy, as is evident from the elongated rock bed, that is so hewn to create just such an image. Since the public has no access to view the vimana or tower where the rock work is better finished, it would be educative, if the site museum could have an audiovisual unit to explain the architecture and show the finer details. This need becomes critical at the Dharmaraja Ratha for it is the tower that carries the most exquisite carvings revealing a pantheon of gods. Working on a challenging stone such as the granite, the Pallava sculptor has hewn a wondrous ratha with its beauty partly concealed from us. The selection of a hard rock in the first place has preserved these monuments from the constant battering of salty winds and the Archaeological Survey continues to strive to maintain them for posterity, this being a Heritage Site.

Dharmaraja ratha that should perhaps be named Mamalla ratha, in honour of its creator, is a charming piece of architecture. Notice the waterspouts, shaped like monkeys with their mouth wide open, introduced to bring levity to the serious aspect of a royal temple. The calligraphically written Grantha inscription gives two titles of Narasimhavarman i.e. Sri Megha and Trailokyavardhanavidhi. The Ardhanaresvara image is a composite of Siva and Parvati and is an early representation of this form. There are also icons of Harihara, Brahma, Siva and Skanda and in the upper tiers, we have Siva as Gangadhara, that is when he unties his matlocks to receive the Ganga and ease her descent to the earth, a picturisation popular with the Pallavas. Then you have the image of Natesa, which is the dance form of Siva followed by Vrshabadevar. The Pallava kings were celebrated for their scholarship, their consummate understanding of the fine arts and the icons of Siva as Vinadhara and of Dakshinamurthy and Gangadhara are a reflection of that culture. The aesthetics of the Dharmaraja ratha is pleasing.

Moving to the Nakula-Sahadev ratha, which is fashioned in the apsidal idiom, the architect has carved a lovely free standing image of an elephant by its side. Here he teaches you to look at the evolution of the gajaprishta form that was particularly popular in the early phase of architectural evolution in India.

In the rock outcropping, you notice grooves and wedge-shaped holes of varying sizes. These were meant to hold the chisels, which would have been arranged according to their blade size. The largest would be used to prise or split large chunks of rock while the finer and smaller chisels were worked to create finer shapes and moulding, the sculptor wielding them to shape the rock to yield the form he desired. Proceeding to the rock face depicting Arjuna's penance, you are a witness to a landmark in art in which the largest sculptural canvas has been created in Mamallapuram, that was never attempted by the artists once they abandoned the rock cut carvings

in favour of developing friezes and relief that could be worked into structural temples. The contents of this magnificent panel have gone through endless debate - is it the legend of the descent of the Ganga in which case it is Bhagirata's penance? Or it could be Kirartajunya, an episode where Arjuna prays for some powerful weapons to help bring an end to the battle in Mahabharatha. The large expanse of relief carved with attention to detail and with the sense of the quotidian is a delight to observe. The central split, through which the rain waters course, and the spatial balance of the panels being centred around this channel leads us to believe that this relief is related to Bhagiratha's penance. The image of Siva as Gangadhara is reworked many times in the Pallava scheme of portrayal. The large sculptural frieze is an attempt to portray a stringent penance witnessed both by heavenly hosts and the denizens of the netherworld. The frieze is dynamic and draws you into observing the grouping and as each one is recognised, you tend to wonder "Ah, that's what this is all about." The light touch of the sculptors is found here more regularly than anywhere else. The ascetic with his hands in obeisance in the eka pada tapas is drawn with his ribs showing, indicative of an arduous penance. Making light of such practice, is the cat in a similar pose standing on its hind legs mimicking the ascetic.

In the upper panels, the devas, the kinnaras and other heavenly hosts witness the proceedings with bhakti and reverence. In the real world called earth, cats, monkeys and elephants go about their grooming, monkeys de-licing one another.

The mastery of the artist entices the spectator to watch the tableau unfold before him. In such a vast canvas the eye focuses on each cluster without fatigue or boredom. At the end you are mesmerised by the linear rhythm and the counterpoise of the relief. You are fascinated at the understated subtleties and come away admiring the excellence in workmanship.

Leaving this panel to wend your way behind the hill or rock, you go past a small temple for Ganesha. In the course of the walk you will see the spectacular work of the royal craftsmen, who have created cave temples for the enjoyment of the royal family perhaps in their privacy. You have steps carved out to make the climb easier. There is a Royal bed, even if it is a hard one being carved in granite, a water-tub to meet the demands of the Pallavas and their gods and a storeroom with steps, peg holes and markings which indicate that the imperial family took shelter and pitched camp in this area. Certainly the ground reveals the existence of brick structures and holes for tents poles.

The Varaha cave or mandapa with Gajalakshmi and Durga has Vishnu in his avatar of Trivikrama. You then walk past a dilapidated Vijayanagara Gopura to enter the Royal enclave, where the sculpture of the lion stands guard. There is a modern lighthouse and a structure of the Vijayanagara age, often referred to as the old lighthouse, that is, in fact, a temple sans its tower. It is at this point, that your mind traverses the horizon and dwells on the possibility of a royal Pallava naval force waiting in the harbour, quite capable of venturing forth to Sri Lanka, Khmer and such other countries. Mamalla, the port town, has not received our focus and it is time to rediscover our seafaring past and our maritime history.

Walking towards the stretch of sand, the striking silhouette of the Rajasimhesvara temple complex bathed in ocean spray beckons you to visit and sit awhile, soaking in the ambience of this unique site. King Narasimha II, also known as Rajasimha, had a passion for the arts and was a creative genius, who took the art of building to new heights. This is further revealed on visiting the

Kailasanatha temple at Kancheepuram where the king's creative genius is evident.

The west facing shrine on the approach to the complex is the one dedicated to Somaskanda, that has a bas-relief, which is a group portrayal of Siva in the company of Uma and Skanda, their young son, seated between them. This theme has found particular favour with the Pallavas and we do not find the continuation of this practice spilling into other areas or dynasties. In all probability these friezes would have been coated with plaster covered with fine painting, to create charming images. Adjacent to this shrine is an icon of Durga vanquishing Mahisasura.

Behind this shrine, is another one for Vishnu reclining on the Sesha in the primordial ocean. An inscription of the Cholas identifies the shrine as Jalasayanamurthi. The larger shrine facing the rising sun is dedicated to Siva. Within this shrine is a fluted Linga that has high polish and may not be contemporaneous to the shrine.

In recent years, to create a pleasant ambience and to keep the shifting sands in check, the land around the complex was turfed. In the process of digging, new structures, a lot of artefacts and a well with a wonderfully designed well-ring has been unearthed. The restoration work on the main temple complex, undertaken years before this discovery, needs to be reassessed in the light of the new finds, as the stones unearthed obviously belong to the structure, that we see at the shore temple today.

The effect of erosion on the shore temple has been debilitating and the problem has been compounded by the soft laterite rock, which has been used in the construction. Central agencies use blotting paper and distilled water to remove the salt accretions and clear the micropores on the rock tablets, which is why visitors see a creamish mush plastered on the walls. The friable nature of the stone leads to rapid deterioration. The constant chemical clearing and stabilisation work done to strengthen the structure and slow down the process of erosion helps us enjoy this national heritage site. A large number of Nandi images scattered and parked like sentinels around the enclosure must have adorned the enclosure to the temple. Mamallapuram in its entirety has maintained the aesthetic beauty and refinement from the period of Mamalla and Rajasimha. The administrators of this heritage site need to understand the ethos of protecting the past for future generations, so that Mahabalipuram does not fall victim to modern intrusions.

The Hindu Way of Awakening

By J. Donald Walters (Swami Kriyananda)

excerpts from his book The Hindu Awakening: Its Revelation, Its Symbols

Hinduism is often omitted from rosters of the world's great religions. Everyone knows of course, that Hinduism exists. Even so, it is confused in many people's minds with what they think of as Buddhism. For Buddhism fits into their concepts of what a religion ought to be. For one thing, it is founded by one individual, Gautama Buddha, who was a historic personage like Moses, Jesus, Lao Tse, Mohammed, and Zoroaster. Buddhism, moreover, like most other religions, has an organized structure, a set of specific dogmas, and an officially recognized way.

Hinduism, in its plethora of symbols and images, is endlessly complex and therefore endlessly misunderstood, but its true mission is both simple and universal: soul-enlightenment. In other words, its focus is the ultimate attainment, Self-realization in God.

Even today, thousands of years since they were first expounded by the ancient rishis (spiritual sages), the religious teachings of India nourish what continues to be the most spiritually grounded civilization in the world.

Scriptures based on true revelations are never melancholy, pessimistic, or depressing. True scriptures conveys a spirit of infinite hope.

The insights of which the Hindu teachings are based were revelation in the highest sense of the word. An aspect of the greatness of the Indian scriptures, indeed, lies in their own claim to universality. In this Vedic revelation is in the words of the American philosopher Ralph Waldo Emerson, " sublime as heat and night and a breathless ocean. It contains every religious sentiment, all the grand ethics which visit in turn each noble poetic mind….: eternal necessity, eternal compensation, unfathomable power, unbroken silence.

Symbolism in India:

Symbolism, for two reasons, plays a greater role in the religion and art of India than in those of other nations. For one thing, India's is the oldest continuous civilization in the world. Its traditions extend back long before recorded history. For another, the Indian mind, having established itself firmly in the belief in a transcendental reality, is completely comfortable with an exuberance in its expression of images and allegories that comes from knowing and accepting that everything is illusory anyway. The profusion that has merged from this cheerful "come one, come all!" attitude

might be compared to an old tree, grown gnarled and twisted with age, its branches of tradition spreading outward in all directions with abandon. Thus, the lofty teachings of the Vedas and Upanishads had to be clothed in symbolism and presented in allegories. The purpose of concealing them was in part to protect the truth from profanation, and in part also to ensure their endurance during centuries of spiritual darkness.

Dating Indian Civilization:

Archaeologists reject out of hand the rapidly growing body of evidence that advanced civilizations existed in ancient times, for it contradicts their neatly framed picture for prehistory: Primitive hunters settling down eventually to till the land, then building cities, and only slowly and reluctantly renouncing superstition with the dazzling appearance on the scene of Galileo, Newton, and the rest of the gang of scientific ghost busters.

The new myth is that primitive man evolved from the ape a few hundred years ago, and from then onward grunted and clubbed his way through the vaces and backwoods of what is called the ‘Stone Age, to emerge somewhat awkwardly a mere 3,000-4,000 years ago into the relative sophistication of the Bronze Age. Since then he strode, increasing self-confident, into the modern age, where he now stands proudly in the full glory of his bulldozers, tractors, skyscrapers, and spreading pollution.

If anything can that tickle the Divine sense of humor, it must surely be man’s presumption at setting the standard of perfection at his own level of material "accomplishments". This attitude must seem comparable to an ant’s airy dismissal of descriptions of an elephant as "absurd exaggeration". To judge civilzation by man’s ability to create tools, merely because modern man has achieved some skill in this regard, is too typical of human arrogance to be accepted without the raised eyebrow of skepticism.

In ancient India, the criteria of cultural advancement were far more refined than those of present-day Western culture, which might justifiably be termed "toolism." Advancement in those far-off days was judged by *what every human being really wants from life.* The ancients realized that human desires will never be satisfied by material fulfillment alone. The goal of life, they understood, is Self-Realization. That is indeed why the human race was created: to realize the essence of all being in Infinite Consciousness.

Material tools can never fulfill the heart’s innermost desire. Nightclubs, a rising stock market, a traffic-clogged highways can’t fulfil it. Nothing outside ourselves can ever satisfy us for long. Everything disappoints, in the end. Excessive reliance on "toolism" as the means of fulfillment has brought mankind to the brink of self-destruction, whether through atmospheric pollution, global epidemics, or nuclear warfare.

Archaeologists object, " if mankind was highly advanced in prehistory, why haven’t our excavations unearthed the tools that his advancement should have produced?" Their question simply betrays a materialistic prejudice.
Wet cell batteries have been found among ancient artifacts in Baghdad, Iraq. They were recognized as such by Wilhelm Konig, a German engineer, during a visit to the Baghdad museum. A hole, perfectly round, was discovered in the skull of an antelope dated circa 100,000 years ago.

Such a clean penetration could have been caused only by a high speed projectile, such as rifle bullet. Any primitive weapon – a spear or an arrow, for instance, would have shattered the bone.

Evidence has been found of the possibility that nuclear explosions occurred in ancient times. Large areas of vitrified sand have been discovered in the Gobi desert and elsewhere, evidence of such intense heat as might not be explicable otherwise.

And records have been found in India detailing the ancient existence, and construction, of flying machines.

Archaeologists, being human like everyone else, deny this abundance with a sneer. "It can't be so, therefore it isn't so". Napoleon, no bit-part actor on the stage of time himself, described history as " a lie agreed upon ".

My present point, then, is to re-state without apology an age-old belief in India that in ancient times mankind reached a stage when civilization was far more highly advanced than it is at present. Indeed it is amusing to reflect on Mahatma Gandhi's reply to the question, "What do you think of Western civilization?" With a smile Gandhi remarked: "That is a wonderful idea!"

Philosophy, Religion, Science, or – What?

The Hindu Way of Awakening, emphasizes experience over theory, and intuition over logic. Its aim is to inspire the longing for blissful union with God.

When Western missionaries first arrived in India and tried to familiarize themselves with its ancient teachings, they were bewildered by such seemingly impious and presumptuous declarations as, "I am Brahman(God)." Where, in these sentiments, were the traditional sentiments of humility and self-approach? The rishis didn't lament their lives as sinful! They didn't beg for God's mercy. Beg! Quite the opposite, they seemed to expect grace as their divine right. Besides-a lesser point to be sure-where were their religious institutions? their hierarchies of priests? Who, in short, was in charge? In the end, the missionaries decided that those rishis abstractions belonged, not to theology, but more properly to the realm of philosophy. Philosophy, then, surely was the safest category in which to file away their teachings and, hopefully, to forget them.

But India's teachings were not speculative. They were based on divine revelations. Because the statements were so categorical, a few Indians have proposed that they belong in the realm of science. Indeed, the revelations are so cosmic that they approach more closely the findings of physics and astronomy than the pious pronouncements of preachers.

Scientists, however, unlike the ancient rishis, claim no absolute knowledge of anything. Their knowledge is intellectual, and is based on outer experiment rather than on direct inner experience. Science doesn't even consider the heart's feelings and the intuitive aspects of consciousness, without which human understanding, limited to intellection, is like a man hopping along the street on one leg.

The greatest difference between the ancient rishis and modern scientists is the rishis' apparent lack of dependence on tools and technology. True, the rishis made claims so cosmic that even modern physics seems only to be catching up with them, (and realizing, after every scientific break-through, that the ancients were there long before them)". Even as recently as a century ago, the West was still reeling under the impact of the discovery by geologists that the earth was formed eons ago, and not in 4004 B.C. as theologians had determined.

It is human nature to accuse others of any faults one possesses in himself. They accused the rishis of arrogance and presumptuous for claiming to have realized oneness with God. They also concluded, that the Hindus, are a hopelessly pagan people, amazingly resistant to conversion: they hold bizarre beliefs to which no pious person ought to listen.

The missionaries wouldn't face that, when Jesus Christ made the same statement, and the Jews accused him of blasphemy for making it, he answered them that the scriptures themselves make this claim for *everyone."* (* "Is it not written in your law, I said, Ye are gods?" John 10:34) Mystical experience, however, lies outside the power of priests and organizations to control.

The Gnostics of early Christendom believed in seeking personal spiritual experience. For this reason, they were branded as heretics. The Church succeeded at last in suppressing the entire Gnostic movement. So did the Sufi mystics who were persecuted by their Moslem co-religionists.

India, alone, among the great world religions, preserved the deeper spiritual teachings undisguised and undiluted. It was able to do so precisely *because* religion in India was never formally organized. It had no priest hierarchy.

The result has been an excessive diversity in the outer aspects of the religion, but it has also been an extraordinary development of the inner.

India, has accomplished in the field of spirituality what, in the world of finance, the free market (as opposed to a controlled economy) has succeeded in doing: The individual seeker has been left free to explore and develop his own spiritual potentials. Other scriptures have hinted at the deeper truths of inward religion. But the priests in every religion seldom quote those passages, which they rightly see as threatening to their institutional preeminence.

India concealed deep truths behind a veil of symbolism, and offered only the tip of the iceberg, as it were for those earnest seekers to see who might want to know more. Symbolism and outward religion are synonymous. Few people are capable of even imagining transcendental truths. Symbols, for the majority, take the place of that which lies above rational comprehension.

Even the rocks, according to the ancient teachings, manifest a certain glimmering of awareness. This claim has been made by famous scientists such as India's Jagadis Chandra Bose and Germany's Karl Bonhoeffer, both of hwom succeeded in stimulating a response in apparently "inanimate" matter. Their conclusion is that no clear dividing line exists between "animate" and "inanimate" matter.

"God sleeps in the rocks," proclaims the Indian scriptures, "dreams in the plants, stirs toward wakefulness in the animals, and in mankind is awake to his own ego-individuality." God is beyond all possibility of definition. The Bhagavad Gita, the best known scripture of India, states this point clearly: "Though I manifest Myself in all things, I am identified with none of them.

A Hindu Quest for Some Holy Water

http://www.washingtonpost.com/wp-dyn/articles/A10141-2003Feb14.html

Attempt to Unearth Ancient Waterway May Affect Indian History and Politics

KATGARH, India -- In a verdant valley amid the foothills of the Himalayas, Hindu villagers prayed in silence and piously threw petals into a small puddle they believe was a mighty river some 4,500 years ago. Not far away, an archeologist leaned over a trench to examine freshly excavated pieces of broken pottery.

"We have found remains of so many ancient settlements here. There must have been a very important river flowing," said Sanjay Manjul, 35, squinting as he held up a piece against the sun. "It must have been our holy Saraswati River."

Manjul is not the only one looking for the Saraswati, which was mentioned in the oldest Hindu religious text, the Rig Veda and which devout Hindus believe disappeared mysteriously thousands of years ago. Dozens of archeologists like him have fanned across the northern Indian state of Haryana in the last seven months to look for traces of the river. A group of geologists and glaciologists, armed with satellite imagery maps and remote sensing data, are studying rocks, glaciers and sediments in the Himalayas, seeking any trace of the river's course.

A heady mix of religion, politics, science and archeology drives their efforts, and the results of the search may not only challenge some fixed notions about the earliest civilization on the Indian subcontinent, but could also confirm fears among India's secular historians that the country's Hindu-nationalist ruling party is trying to rewrite history to suit its agenda.

For decades, history books have maintained that the Indus Valley people, who settled an area that straddles modern India and Pakistan about 3000 BC, were the subcontinent's earliest civilization, preceding the birth of Hinduism. Historians have held that the Aryans, said to be the descendents of an Indo-European race who came to India from near the Caspian Sea around 1500 BC, gave birth to Hindu thought.

Hinduism became the region's predominant religion. Today, 84 percent of India's 1 billion people are Hindus.

That predominance, however, did not prevent India from embracing secularism when it achieved independence in 1947 and enshrining it in the country's first constitution. Ruled by the staunchly secularist Congress party for most of the past five decades, India pursued policies designed to ensure equality for Muslims, Christians and followers of other minority religions.

Nevertheless, many Hindus regarded their religion and culture as supreme. A political force since the 1920s, Hindu nationalism reached the peak of its influence in 1998, when the Bharatiya Janata Party (BJP) formed a coalition government with several other parties. The BJP-led coalition set about a slow but systematic program to place historians sympathetic to Hindu-nationalist ideology in charge of research institutions and to introduce changes in history textbooks in schools.

Last summer, the Culture Ministry appointed a special committee of experts to prove that the Saraswati

was not merely a mythological river, dismissed by historians as nothing more than a figment of the imagination of Hindu sages who praise it as the "greatest of mothers, greatest of rivers and greatest of goddesses" in the Vedas. If the panel succeeds, the birth of Hinduism would be pushed back at least 1,000 years by establishing that the ancient Indus Valley civilization was Hindu in character.

"Saraswati is not only a matter of Hindu faith, but also fact," said Ravindra Singh Bisht, director of the Archaeological Survey of India, who supervises excavation along what is believed to be the course of the river. "The overwhelming archeological evidence of ancient settlements along the course of what was once the Saraswati River proves that our earliest civilizations were not confined to the Indus river alone. Those who wrote the Hindu Vedas on the banks of the Saraswati were the same as the Indus Valley people."

The BJP-led government already has taken steps to make these findings official. In October, it ordered several significant changes in the history textbooks, one of which was to change the name of the Indus Valley civilization to the Saraswati River civilization.

The first real boost to the Saraswati believers came in the 1970s, when American satellite images showed signs of channels of water in northern and western India that disappeared long ago. When popular folk memory was matched with the images, some historians ecstatically claimed they had cracked the riddle of the revered river. In 1998, groundwater experts dug wells along the dry bed identified in the images and they found potable water, even under vast stretches of desert.

"We still need to study the sediments to prove the origin of the river was in the Himalayan glacier like our Vedas claimed," said Baldev Sahai, a member of the Culture Ministry's expert committee, who was the first, in 1980, to use remote sensing data to study the course of the river. "After that, we can proudly claim to be the oldest living civilization and culture with an unbroken link to our past."

Once the entire course of the river, "from the Himalayas to the Arabian sea" is established, the Culture Ministry plans to turn archeological sites of lost cities along the Saraswati into tourist hubs. And water specialists in the government wish to give new life to the Saraswati River, by reviving old water channels.

The Hindu-nationalist government's quest for the Saraswati has split historians along political lines, with some accusing the government of giving a deliberate Hindu slant to Indian history and others alleging that much of Indian history was written from a Eurocentric perspective by British colonizers and needed to be "Indianized."

"Hinduism was not brought to us by a foreign race called Aryans. It was born here on our land. The Rig Veda was composed here on the banks of Saraswati by indigenous people around the time of the Indus Valley period," said Arun Kesarwani, professor of ancient history at Kurukshetra University. "That is why the quest for Saraswati is important. It will shatter all the prevalent theories to pieces."

But many say that history is being distorted to suit the ruling political ideology.

"This is an assault on history," said historian Arjun Dev. "This version of the past is crucial to their political and religious ideology of Hindu supremacy. They will go to any lengths to achieve this -- even put forth a fake, invented past."

"It is propaganda work," said Suraj Bhan, a retired archeologist. "The quest for Saraswati is not about history, it is myth-making."

For the devout Hindus who pray at tiny ponds and puddles, the Saraswati is both a real river and a deity.

"In our hearts we know this is the water of holy Saraswati," said Prem Vallabh, 75, head priest at a Saraswati temple. "We don't need any scientific proof."

comments on sulekha.com

This is comparable to what Romilla Thapar said in the BBC Channel 4 radio programme on Mystic River Sarasvati: Sarasvati river was there, but then it is hijacked by Hindutva!

Sarasvati is the very embodiment of divinity, a river and a mother who had nourished a civilization. She is va_k, the divinity of knowledge, arts and crafts.

How pathetic these marxists and p-secs are, that they have lost all sense of perspective in evaluating evidence of archaeologists and geo-hydrologists and glaciologists like Prof. Valdiya and Dr. VMK Puri; Hindutva is the big stick which can be used to deny everything about the cultural heritage of a civilization. Blinkers on, the p-secs refuse to face the ground-truth.

I am amused at the intellectual contortions that these eminent historians will go thru to deny historical and archaeological reality. In India the standard of discourse has fallen to such an extent that no longer is it a question of 'is it true, is it plausible ?' but a question of 'who supports it'. Forgotten is the fact that no Hindu (even extreme right wingers) is suggesting that because there was a Sarasvati, that non-Hindus are Children of a lesser God or that India should revert to an era when tehe Sarasvati flowed. The search for the Sarasvati is a search for Indic roots and what is so 'Hindutva' about that ?

Eons of Hinduism

By Heinrich Zimmer. Edited by Joseph Campbell. "Myths and Symbols in Indian Art and Civilization". Pg 11-21)
http://www.amazon.com/exec/obidos/ASIN/0691017786/o/qid=944273421/sr=8-3/103-4559356-3757423

India's treasure of myths and symbols is immense. In the teeming texts and multitudinous architectural monuments eloquent details so abound that, though scholars since the end of the eighteenth century have been editing, translating, and interpreting, it is by no means an infrequent experience to come across tales hitherto unnoticed or unknown, images undeciphered, expressive features not yet understood, esthetic and philosophical values uninterpreted.

From the second millennium B.C. the Indian traditions have been handed on in unbroken continuity.

Since the transmission have been mainly oral, there is left to us only an imperfect record of the long and rich development: certain periods, long and fruitful, are barely documented; much has been irretrievably lost. Nevertheless, though tens of thousands of pages remain in manuscripts still waiting to be edited, the great works already published in printed Western and Indian editions are so many that no individual may hope to cover them in a lifetime.

This inheritance if both prodigious and fragmentary.

The wonderful story of the Parade of Ants opens before us an unfamiliar spectacle of space and throbs with an alien pulse of time. The time and space conceptions of India will at first seem to us of the West unsound and bizarre. The fundamentals of the Western view are so close to our eyes that they escape our criticism. They are of the texture of our experience and reactions. We are prone, therefore, to take them for granted as fundamental to human experience in general, and as constituting an integral part of reality.

The astounding story of the re-education of the proud and successful Indra plays with visions of cosmic cycles-eons following each other in the endlessness of time, eons contemporaneous in the infinitudes of space-such as could hardly be said to enter into the sociological and psychological thinking of the West.

In "timeless" India these extensive diastoles give the life-rhythm of all thought. The wheel of birth and death, the round of emanation, fruition, dissolution, and re-examination, is a commonplace of popular speech as well as a fundamental theme of philosophy, myth and symbol, religion, politics, and art. It is understood as applying not only to the life of the individual, but to the history of society and the course of the cosmos. Every moment of existence is measured and judged against the backdrop of this pleroma.

According to the mythologies of Hinduism, each world cycles is subdivided into four yugas or world ages.

Krita - 1,728,000
Treta - 1,296,000

Dvapara - 864,000
Kali. - 432,000

For the Western mind, which believes in single, epoch-making historical events (such as, coming of Christ, or the long development of invention during the course of man's mastery of nature) this casual comment of the ageless god has a gently minimizing, annihilating effect. It vetoes conceptions of value that are intrinsic to our estimation of man, his life; his destiny and task.

The Wisdom of Life:

It is easy for us to forget that our strictly linear, evolutionary idea of time (apparently substantiated by geology, paleontology, and the history of civilization) is something peculiar to modern man. Even the Greeks of the day of Plato and Aristotle, who were much nearer than the Hindus to our way of thought and feeling and to our actual tradition, did not share it. Indeed, St. Augustine seems to have been the first to conceive of this modern idea of time. The Augustinian Society has published a paper by Erich Frank, in which it is pointed out that both Aristotle and Plato believed that every art and science had many times developed to its apogee and then perished. "These philosophers," writes Frank, believed that even their own ideas were only the rediscovery of thoughts which had been known to the philosophers of previous periods.

This belief corresponds precisely to the Indian tradition of a perennial philosophy, an ageless wisdom revealed and revealed, restored, lost, and again restored through the cycles of ages.

The Greeks had great historians who investigated and described the history of their times; but….the history of the universe they considered as a natural process in which everything recurred in periodical cycles, so that nothing really new ever happened.

This is precisely the idea of time underlying Hindu mythology and life.

The history of the universe in its periodic passage from evolution to dissolution is conceived as a biological process of gradual and relentless deterioration, disintegration, and decay. Only after everything has run its course into total annihilation and been then re-incubated in the boundlessness of the timeless cosmic night, does the universe reappear in the perfection, pristine, beautiful, and reborn. The perfection of life, the human capacity to apprehend and assimilate ideals of highest saintliness and selfless purity-in other words the divine quality or Dharma – is in continuous decline. And during the process the strangest histories take place, yet nothing that has not, in the endless wheelings of the eons, happened many, many times before.

This vast time-consciousness, transcending the brief span of the individual, even the racial biography, is the time-consciousness of Nature herself. Nature knows, not centuries, but ages, geological, astronomical ages-and stands, furthermore, beyond them. Swarming egos are her children, but the species is her concern, and world ages are her shortest span for the various species that she puts forth and permits, finally to die (like the dinosaurs, the mammoth, and the giant birds).

India – as Life brooding on itself-thinks of the problem of time in periods comparable to those of our astronomy, geology, and paleontology.
India thinks of the species, not of the ephemeral ego. The latter becomes old: the former is old, and therewith eternally young.

We of the West on the other hand, regard world history as a biography of mankind, and in particular of Occidental Man, whom we estimate to be the most consequential member of the family. We think of egos,

individuals, lives, not of life. Our will is not to culminated in our human institutions the universal play of nature, but to evaluate, to set ourselves against the play, with an egocentric tenacity.

As yet our physical and biological sciences – which, of course, are comparatively young-have not affected the general tenor of our traditional humanism. So little, indeed, are we aware of their possible philosophical implications that when we encounter something of their kind in the eons of the Hindus, we are left, emotionally, absolutely cold.

The Dance of Shiva
By Heinrich Zimmer

Shiva, the lord of the Lingam, the consort of Shakti-Devi, also is Nataraja, “King of Dancers”.

Dancing is an ancient form of magic. The dancer becomes amplified into a being endowed with supra-normal powers. His personality is transformed. Like yoga, the dance induces trance, ecstasy, the experience of the divine, the realization of one’s own secret nature, and, finally, mergence into the divine essence. In India consequently the dance has flourished side by side with the terrific austerities of the meditation grove- fasting, breathing exercises, absolute introversion. To work magic, to put enchantments upon others, one has first to put enchantments on oneself. And this is effected as well by the dance as by prayer, fasting and meditation.

Shiva, therefore, the arch-yogi of the gods, is necessarily also the master of the dance.

The dance is an act of creation. It brings about a new situation and summons into the dancer a new and higher personality. It has a cosmogonic function, in that it rouses dormant energies which them may shape the world. On a universal scale, Shiva is the Cosmic Dancer; in his “Dancing Manifestation” (nritya-murti) he embodies in himself and simultaneously gives manifestation to Eternal Energy. The forces gathered and projected in his frantic, ever-enduring gyration, are the powers of the evolution, maintenance, and dissolution of the world. Nature and all its creatures are the effects of his eternal dance.

Shiva-Nataraja is represented in a beautiful series of South Indian bronzes dating from the tenth and twelfth centuries A.D. The details of these figures are to be read, according to the Hindu tradition, in terms of complex pictorial allegory. The upper right hand, it will be observed, carries a little drum, shaped like an hour-glass, for the beating of the rhythm. This connotes Sound, the vehicle of speech, the conveyer of revelation, tradition, incantation magic and divine truth. Furthermore, Sound is associated in India with Ether, the first of the five elements. Ether is the primary and most subtly pervasive evolution of the universe, all the other elements, Air, Fire, Water, and Earth. Together, therefore, Sound and Ether signify the first, truth-pregnant moment of creation, the productive energy of the Absolute, in its pristine, cosmogenetic strength.

The opposite hand, the upper left, with a half-moon posture of the figure (ardhacandra-mudra), bears on its palm a tongue of flame. Fire is the element of the destruction of the world. At the close of the Kali Yuga, Fire will annihilate the body of creation, to be itself then quenched by the ocean of the void. Here, then, in the balance of the hands, is illustrated a counterpoise of creation and destruction in the play of the cosmic dance. Sound against flame. And the field of the terrible interplay is the Dancing Ground of the Universe, brilliant and horrific with the dance of the god.

The “fear not” gesture (abhaya-mudra), bestowing protection and peace, is displayed by the second right hand, while the remaining left lifted across the chest, points downward to the uplifted left foot. This foot signifies Release, and is the refuge and salvation of the devotee. It is to be worshipped for the attainment of union with the Absolute. The hand pointing to it is held in a pose imitative of the outstretched trunk or “hand” of the elephant (gaja-hasta-mudra), reminding us of Ganesha, Shiva’s son, the Remover of Obstacles.

The divinity is represented as dancing on the postrate body of a dwarfish demon. This is Apasmara Purusha, “The Man or Demon (purusha) called Forgetfulness, or Heedlessness (apasmara). It is symbolical of life’s blindness, man’s ignorance. Therein is release from the bondages of the world.

A ring of flames and light (prabha-mandala) issues from and encompasses the god. This is said to signify the vital processes of the universe and its creatures, nature’s dance as moved by the dancing god within. Simultaneously it is said to signify the energy of Wisdom, the transcendental light of the knowledge of truth, dancing forth, from the personification of the All. Still another allegorical meaning assigned to the halo of flames is that of the holy syllable of AUM or OM. This mystical utterance stemming from the sacred language of Vedic praise and incantation, is understood as an expression and affirmation of the totality of creation.

A – is the state of waking consciousness, together with its world of gross experience.

U – is the state of dreaming consciousness, together with its experience of subtle shapes of dream.

M – is the state of dreamless sleep, the natural condition of quiescent, undifferentiated consciousness, wherein every experience is dissolved into a blissful non-experience, a mass of potential consciousness.

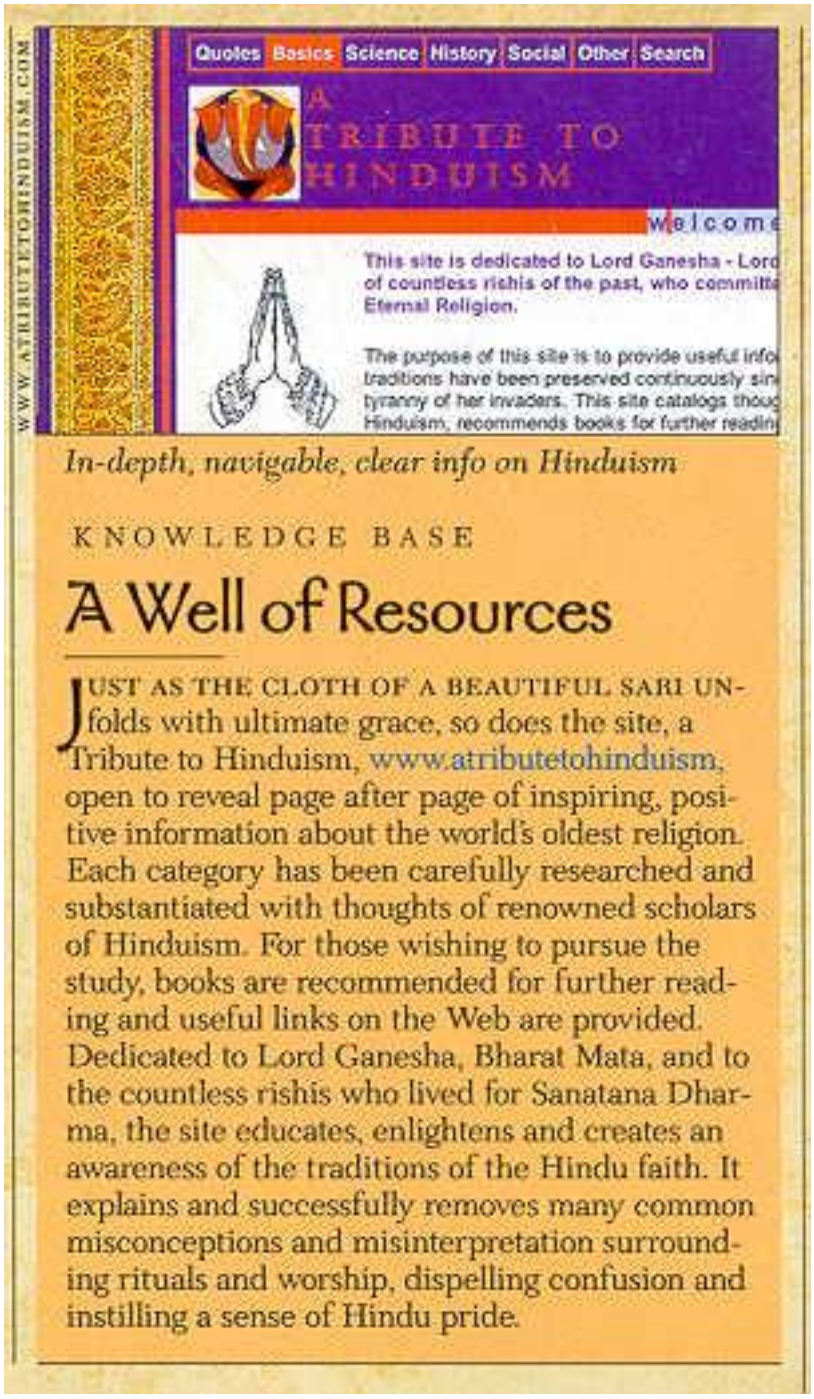
The silence following the pronunciation of the three, A,U, and M, is the ultimate un-manifest, wherein perfected supra-consciousness totally reflects and merges with the pure, transcendental essence of Divine Reality – Brahman is experienced as Atman, the Self. AUM, therefore, together with its surrounding silence, is a sound-symbol of the whole of consciousness-existence, and at the same time its willing affirmation.

Shiva as the Cosmic Dancer is the embodiment and manifestation of eternal energy in its “five activities” (panch-kriya)

1. Creation (sristi) – the pouring forth or unfolding
2. Maintenance (sthiti) – the duration
3. Destruction (samhara) – the taking back or reabsorption
4. Concealment (tiro-bhava) – the veiling of True Being behind the masks and garbs of apparitions, aloofness, display of Maya,
5. Favor (anugraha) – acceptance of the devotee, acknowledgment of the pious endeavor of the yogi, bestowal of peace.

In the Shiva-Trinity of Elephanta Caves we saw that the two expressive profiles, representing the polarity of the creative force, were counterpoised to a single, silent, central head, signifying the quiescence of the Absolute. And we deciphered this symbolic relationship as eloquent of the

paradox of Eternity and Time: the reposeful ocean and the racing stream are not finally distinct; the indestructible Self and the mortal being are in essence the same. This wonderful lesson can be read also in the figure of Shiva-Nataraja, where the incessant, triumphant motion of the swaying limbs is in significant contrast to the balance of the head and immobility of the mask-like countenance.



Shiva is Kala, "The Black One" "Time"; but he is also Maha Kala, "Great Time", "Eternity". As Nataraja, King of Dancers, his gestures, wild and full of grace, precipitate the cosmic illusion; his flying arms and legs and the swaying of his torso produce –indeed, they are-the continuous creation-destruction of the universe, death exactly balancing birth, annihilation the end of every coming-forth. The choreography is the whirligig of time. History and its ruins, the explosion of suns, are flashes from the tireless swinging sequence of the gestures. In the medieval bronze figurines, not merely a single phase or movement, but cyclic rhythm, flowing on and non in the unstayable, irreversible round of the Mahayugas, or Great Eons, is marked by the beating and stamping of the Master's heel.

But the face remains, meanwhile, in sovereign calm.

Shiva is the personification of the Absolute, particularly in its dissolution of the universe. He is the embodiment of Super-Death. He is called Yamantaka. "The Ender of the Tamer" , He who conquers and exterminates Yama the God of Death, the Tamer. Shiva is Maha-Kala, Great Time, Eternity, the swallower of Time, swallower of Ages and cycles of ages.

Shiva is apparently, thus, two opposite things, archetypal ascetic, and archetypal dancer. On one hand , he is Total Tranquility-inward calm absorbed in itself, absorbed in the void of the Absolute, where all distintions merge and dissolve, and all tensions are at rest. But on the other hand, he is Total Activity-life's energy, frantic, aimless, and playful.

In-depth, navigable, clear info on Hinduism

KNOWLEDGE BASE

A Well of Resources

JUST AS THE CLOTH OF A BEAUTIFUL SARI UNfolds with ultimate grace, so does the site, a Tribute to Hinduism, www.atributetohinduism, open to reveal page after page of inspiring, positive information about the world's oldest religion. Each category has been carefully researched and substantiated with thoughts of renowned scholars of Hinduism. For those wishing to pursue the study, books are recommended for further reading and useful links on the Web are provided. Dedicated to Lord Ganesha, Bharat Mata, and to the countless rishis who lived for Sanatana Dharma, the site educates, enlightens and creates an awareness of the traditions of the Hindu faith. It explains and successfully removes many common misconceptions and misinterpretation surrounding rituals and worship, dispelling confusion and instilling a sense of Hindu pride.

Comments: Thank you for going to a lot of trouble to make an education in history available to those who have been raised in the shadow of the book burners. I would be very interested in any further revelations of parallels between the Vedic and Hebrew scripts/history (www.viewzone.com/abraham.html www.veiwzone.com/noah.story.html). Or revelations of codes in the Vedic scripts, do you know if any ones ever looked for them?

Comments: I am inarticulate to put my words for this tremendous work done by you. Here I have one thing more to add (though you have to read and think a little bit deeply as I am expressing what I have concluded and not came across anywhere).This seems more real and an addition to this page. You think of the Einstein's special theory of relativity, and think of Lord Krishna and Arjun's conversation on the battle ground. He (Arjun) said that if you are God, a real God then why don you show me your true face and true you. Then he said that for that you need special vision and eyes, which I am going to give you now. He gave him and what he saw was astonishing...a huge figure of Krishna, and everything (Horses, elephants, chariots, battalion.....what not) was entering in his stomach. Now you think of special theory of relativity which is very impossible to realize but needs special instruments to prove it or you can prove it with the motions of moons. It means that in ancient times it was well known to the Indians about length elongation and mass expansion and traveling ahead of present.(Either you increase your mass, which is by law impossible. You will collapse, or you decrease your mass and size to an electron) and feel the theory. Similarly Hanuman's(monkey God)eight skills in which one is Laghima enables him to reduce to a size of electron and fly or reach anywhere in a blink. This is quite in

consensus with what you have written in the page "Who sees me in all things, and all things in me, he is never far from me, and I am never far from him." Aum.

Comments: I hope this would be an useful information to share with you. U.S. adopts catamaran technology
http://www.hinduonnet.com/thehindu/2003/05/29/stories/2003052904851200.htm
The Hindu International Edition Washington May 28. The United States adopted ancient Indian catamaran-making technology to construct fast ships which were used with dramatic effect in the Iraq war, says a media report. Among the equipment the Americans used to win the Iraq war were 100-feet catamaran ships to ferry tanks and ammunition from Qatar to Kuwait. The ships, built with technology adapted from ancient Tamil methods to make catamarans, can travel over 2,500 kms in less than 48 hours, twice the speed of the regular cargo ships, and carry enough equipment to support about 5,000 soldiers, the Wall Street Journal reported yesterday. Having a shallow draft, the boats can unload in rudimentary ports, allowing troops to land closer to the fight. - PTI. (Note: For more on this topic please refer to chapter on Seafaring in India).

Comments: Wish you all a very happy Diwali. I just moved to Louisville a few weeks ago and was really impressed to be at the Diwali celebrations at the local Hindu temple. I must commend the work of all the people who have taken efforts to build such an impressive structure and are making constant efforts to keep the community together - their work makes us feel proud. *** This is in response to the comments by Bharat and Avinash Rai on 9/9/03. Hey, friends, I appreciate you holding the Sikhs in high esteem and feel honored - however I have to make some corrections to your comments: A) Sikh religion is distinct from Hinduism and has not branched out from it. B) Sikhs were not created to protect Hindus from Moslems - as you bluntly put it - rather Sikhs were created to protect the right from wrong irrespective of whether you are a Hindu, Moslem or even for that matter a Sikh. By the way I am not a Hindu but am proud to be a Indian and of India culture and heritage. No offense intended. God bless. With warm regards and best wishes Kanwarjeet and Sonal. (Note: for Sikh-Hindu relations, please refer to chapter on Glimpses IX).

Comments: Absolutely fantastic. Over the years the true meaning of our scriptures and idols has been shrouded with so many theories but finally this web site clears all of it and helps us understand the true and indepth origination of hinduism. one cannot express the amazement one feels when you begin to comprehend the brilliant genius of the rishis and sadhus who actually put this together so many thousands of years ago. superb job. keep up the good work and I hope this web site makes a difference to the world.

Comments: This site simply made me ecstatic. It is vindication of all that I have known for long. Everything about our glorious Hindu past, our contributions to the world (which have conveniently been forgotten or has been claimed by other cultures) and especially Islam's despicable effect in India. Regarding the present...the following says it all - (from Islam's Other Victims: India By Serge Trifkovic FrontPageMagazine.com | November 18, 2002) "Nowadays, the Indian equivalent of political correctness downplays Moslem misdeeds because Moslems are an "oppressed minority" in majority-Hindu India. And Indian leftist intellectuals always blame India first and hate their own Hindu civilization, just their equivalents at Berkeley blame America and the West." This thought has affected so much of our younger generation, it is devastatingly sad to see that they do not understand that thinking like a leftist intellectual will surely see the decline of our great religion, Hinduism. I, as a young man, educated and raised in countries outside India, will do everything I can to ensure that this does not happen. Personally I feel that we must unite with Christians and Jew and other 'sister' religions like Buddhism, Jainism, Sikhism, etc. to save India and the world from Islamic extremism. I hope with the blessings of all our Gods and Goddesses, we can all, someday, accomplish the restoration of the greatness of India. Jai Hindustan!

Comments:

In response to Mina... right on young lady... anybody who read the excellent letter in Asian Voice recently, by a Hindu youth about the goings on in Bradford and the victimization of Hindus there has to ask themselves one question... are we, descendents of a culture that predates any other, going to stand for the offense that is propagated against us each and every day?. Or do we use our educational, economic and cultural clout to show those guys in Government that Gandhi did not suffer in jail for nothing. That enough is enough, the time of the Great Saint is over, he has done his part and the time of Arjun is upon us. And Arjun was a divine warrior. Our youth, especially the girls, have to resist the cultural genocide that is being carried out by the Muslims and the Christians. On God's earth there is a place for us all – let's us not forget that, but do not, turn away from your own kind just because your parents have no idea of what Hinduism means. To the parents, stop trying to keep up with the Patels and start teaching your kids the grandness of our divine culture (and you might have less head holding when your precious little daughter runs away with a Muslim/Christian whatever, who has paid her more attention then you have), to the Hindu young men (and I include Sikhs in this, as Guru Nanank founded the Sikh religion to protect us from the Muslim hordes... we owe the Sikhs a great deal), stand up throw away your backward base ball caps and your patois, that is not your culture, research and rejoice in a culture that has endured over 10,000 years and given the world so much (look at this site itself) - 50 Cent and TuPac are not gonna teach you anything new... and to the Indian middle class professionals... put down your wine glass and stop the wholesale criticism of your heritage, and have the courage of not being a coconut and aping the White Man's ways (too many Indians died in the World Wars - oh did you not know that Indian solider were the first to storm Italy and were massacred by the Nazi's - and the struggle for independence for you to insult them in this way) Be proud of your own culture. A lot of you might hate me for what I have written, even more will not care and write me off as just another fanatic - but you know what - I could not care less. I am a Hindu, I am English (I was born in England, I even had an English nanny and God forbid... I have white and Muslim friends), I am proud of my culture and my religion, I love football and I listen to rock music... but when the chips are down, when the words have been spoken and the music has ended... I stand alone in the darkness and I realize who I am and I am proud I am product of my Mother, Bharata-Mata and no one will ever take that way from me. Jai Hind! and let the message of peace (that is inherent in the Vedas) reach around the earth. Many people say that religion is the cause of war, no its man's ego-driven interpretation of religion that is the cause of war.

Be Proud; Be Hindu: Be the best that you can be!!!!

Comments: I like coming to this site to clarify information especially after reading the garbage churned out by those with ulterior racially biased motives. We are witnessing the 'westernising' of hinduism in all its forms. You have books on yoga which now state that yoga has nothing to do with Hinduism, the buddha was from the west and dravida is a race...! I think India has been hijacked by the various ego maniacs over centuries; this time around it is Mcdonaldization and Gates coupled with the punjabization (mughal mentality) of India. We hear about the aryans as if they were a 'race' of people...not so...most likely the explanation for the differences in people in India is due to the equator,climate and geographical location. The hindus of the punjab and kashmir may actually not be the offspring of hindu ancestors but of muslims who converted to hinduism from neighbouring countries and mixed with the locals thus accounting for their lack of pigmentation and culture. We need to break free from the shackles of ignorance and endeavour to seek out the truth.

Site:

Location: Ottawa, Canada.

Comments: Thank you for your hard work. I enjoyed your website. I am a political and social scientist, and while I was conducting my research, I came across your website. Your website has valuable wealth of well referenced information in which should be recommended to all seekers of knowledge. I am conducting my research on similarities between cultures, and amongst many things that I do my research on is discovering the similarities between philosophies, religion, customs, and behaviours. I am not a religious person, but I have my own way of spirituality in which is unique to me. However, although I lack the fellowship of belonging to a particular religious front, I have discovered my own philosophy of life. Certainly some aspects of Hinduism philosophy is imbedded in my values as do other philosophies values can be found in my own way of understanding of things. I am in a belief that we as human beings all share one-thing or another in common with each other; and thus to end the conflict and prejudice amongst ourselves we have to focus on those similarities rather than the differences. My research is about gathering scientific evidence on the historical links amongst the contemporary nations, and interestingly your site provided me with some unique information that I was searching for. You website is well organized and maintained. I wish to thank you for your hard work and valuable information that you have put together. Sincerely, Seyed Amir Mahmoud Assadollahi.

Comments:

Thank you for such a beautiful and knowledgeable website. I am a 41 year old, single, American woman of Native American Heritage and have been studying and living Hinduism for the past 3 years. A detailed and systematic history of Indian Culture remains yet to be written. But there is hardly any doubt that. before it can be successfully undertaken continued spade-work is necessary in various fields of study. The cultural history of a people is no less complex than its political one, and it becomes all the more so when it extends through long centuries and represents the outcome of diverse currents and cross-currents of forces. The study of Natha and Siddha sects is a preliminary to a thorough study of mediaeval Indian Thought. Even this study has its different aspects. And it may be hoped that the subject, will be taken up for investigation and an attempt will, be made to throw light on the many obscure issues involved. My own recent writings include those on the chakra systems in the tantrik traditions. There are more systems of chakras in the tantrik tradition than most people realise. One of the most ancient appears in chapter nine of the Kaulajnana Nirnaya, attributed to Siddha Matsyendranath. Said to be the progenitor of the Kaula school of tantra, this chakra system is eightfold. Each of the lotuses has eight petals and these represent the 64 yoginis, famed in Kamarupa. "The letter ksa is in the Brahmarandhra, la in the forehead, ha between the eyes, sa in the mouth, sa in the throat, sha in the heart, va in the navel, and ha in the genitals. Dear One, listen to the collective meditation in these chakra places. "The first of the eight is a celestial eight petal lotus of pure crystal effulgence, a heavenly fire or flame, completely without stain, free from all duality, from the fires of cruelty, devoid even of nothingness. One should avoid perturbation and practise equipoise (Sama) consciousness. One my see even beyond the future, one with the endless circle of time, having knowledge of what is spoken at a distance, able to both grant boons and to paralyse, with the ability to seize and subjugate pashus, or to destroy or to kill them, mortal, always truthful, and in equipoise, becoming eloquent, a Siddha, and able to do anything. "One should meditate on the second as having eight petals, as bright as a beautiful pure flame. One conquers death and becomes the cause of great excitation. Meditating one-pointedly on this multi-fold form one becomes an emperor amongst kings, doing whatsoever one wills, and may destroy all in the three worlds, whether animate or inanimate - like Kruddha, the cause of both creation and dissolution, always engaged in love. "The third great chakra is the deliverer from the nine tattvas. After meditating on the Guru in that chakra for six months, one my achieve whatever is wished for, destroy old age, be able to see at a distance, able to obstruct, even if one hundred yojanas distant. In a

lonely place one should meditate on that multi-fold form. "The fourth chakra is the cause of peace, increasing happiness and pleasure. By always meditating on it, afterwards one becomes immortal, eloquent, victorious over death and disease. Practising it daily, one causes death to flee. By continual practice for a period of sixteen seasons on this great chakra, one becomes able to destroy in a day and a night. "O Surasundari, the fifth great lotus has eight petals. One should always meditate on it as being of a smoky colour, then one my shake the three worlds. It causes eloquence and avoidance of untimely death, and allows one to both enslave and paralyse. "If one should meditate devotedly on the sixth royal chakra, fiery, with a pericarp of eight petals, as bright as liquid gold, the cause of Iccha Siddhi, it enables one to see into the future, giving Anima and the other seven siddhis - of this there is no doubt. "Dear Mahadevi, the seventh is as bright as the full moon, auspicious, within the body, bestowing both enjoyment and liberation, destroying fever and death, enabling one to enter into another's body. what may not be done? One becomes the best within a circle of people. "Pretty-Eyed One, the eighth great chakra, adorned with eight petals, gives Dharma, Artha, Kama and Moksha." It is inspiring to meet someone of your ability and knowledge. Will visit this portal often. Namaste, Erin Diane Jackson (Anuradha) New Mexico, USA.

Site:
Location: Madison, WI USA.

Comments: Dear Ms. Londhe -- I am sure you have noticed this curious fact, but I thought I'd spell it out anyway: Indians living outside India are VERY enthusiastic about your site, and do not hide their encouragement or excitement at having discovered it; however, Indians living inside India do not seem to appreciate it very well, or, in the very least, are not all that enthusiastic about it. I wonder what this says about us. Maybe we do not learn to appreciate ourselves until we lose touch with our heritage? I would very much like to say that I would not have said anything differently had I been living in India, but I guess it isn't worth a discussion. I must say that I need to visit your site ever so often to remind me of Sri Aurobindo's dream, simply because the reality of India today just makes me angry. I do not have Mahatma Aurobindo's Vision, and perhaps that is why I cannot see anything going right for the one country that has the potential to both save humanity and take it up to its potential. In essence - WE NEED THIS SITE BADLY to remind us. Siddharth.

Comments: Excellent site, made me feel proud about being a Hindu. The unopinionated nature of the site must be pointed out . It is a real eye opener, more so for us the Hindus, of our prodigious past and our majestic roots and at the same time our humbleness. I hope the same golden age returns for the good of the world. Incidentally, I would like to point out that the art of "cloning" was known to the Kuru dynasty and there is mention of some kind of a container to split the embryos , which could only have been an incubator (in modern biotechnological terms). This is believed to be the source of 100 sons of Gandhari (clones , split froma single embryo), as no human female is capable of conceiving 100 times(or so) and each time have a successful delivery. So the Ancient Hindus knew the "Cell Theory"!! Pity they did not have a "Nature" magazine to publish in!!

Comments: Very exhaustive and thouroughly prepared contents. But at certain places there has been an unnecessary effort to correlate all the findings of the west with the those in Hindu scriptures. For eg: The evolution theory. No hindu scripture supports it. Dasavatharam does not represent theory of evolution. According to the famous Srimad Bhagavatha purana, Varaha avatar is the first avatar and not matsya avatar. So, the evolution theory has no ground or foundation in any of our ancient scriptures. Moreover the contents at some places have to edited further for correctness. Overall a good site which sheds light on ancient India.

Comments: Thank you so much for recommending this resource. I will have much to research. My quest is to learn all that I can about the Telangana as my little girl is from the Telangana and I want her to have a complete picture of her proud heritage. I have much to lean and will study these resources and any others that I can find.

Comments: This is wonderful endeavor to put the facts in place. Our history and facts have been battered more brutally by invaders than our lives and souls. It calls for a great effort to put the facts in place and let the coming generation of our country know what great a culture they belong to. Lots of people are doing this work, who will never come to light. We need more collective efforts from our Archeologists, Historians and Media to work on this with zeal. Some suggestions: 1. I too like red colour but I agree with one of the entry that you should avoid using RED colour as this represents is very strong emotions and is not comfortable to eyes. Probably a blue font or a yellow highlight can be good idea. 2. Add some topics on Prehistoric India i.e. new discoveries on Human establishments dating back to 30,000 years to 100,000 years. I am sure this will better support the fact that our culture and values has flourished with time.

Comments: The site is very informative. But I would like to suggest a few things. The red colour is the font is not pleasant for eyes. Instead of that, some light colour like blue can be used. Also it's very vast, so please divide it into more logical chapters.

Comments: Thank you soooooooo much for this web site. I am a practicing Hindu and have been called upon by my anthropology class to do a report on the Hindu culture. The text that we use in the class is a copyrighted 2000 collection of things from the 1800 to the 1980's. So many discoveries and acknowledgements of Hindu culture has happened since then. I wanted to write a report on how the culture practiced in India today is different from ancient India, and how it is different and most importantly WHY. Textbooks don't like to say people were so much more humane around the world before British colonialism. I wish there was a site like this about African culture that I could draw off of.

Comments: WOW. Awesome!!! Fantastic, Superb. It is hard to believe that this was an achievement of a single person and out of personal interest, service and hobby. This site is fit to be a Ph.d thesis or even more a literature that will be cherished and revered forever. My personal compliments and regards for this great achievement. Needless to say you have done a great service to mankind by bringing out the right perspective of Hinduism, as it is known today and hopefully this will be a catalyst to inspire the great minds out in the universe to rise above the human imposed boundaries of religion and awaken to the one truth, The ekam Sat, that will ring peace happiness and prosperity to all mankind. Sushama, I wish you success in your endeavours and may Ganesha bless you.

Comments: My My My!!! What a site! Pity that I came across it by accident. I have yet to go thru fully, but I couldn't help but noting in the guest book. I wish each and everyone Indian, irrespective of their religious affiliation, to go thru your site and understand it's meaning. I wish you should mark it all VHP, RSS and Bajrang Dal leaders. They will do a great service by teaching the rich Indian tradition and about the REAL Hinduism. It is a shame on us that our children are not able to grasp this. a small gesture (the least i can do right now) from me is to recommend ur site to all my friends. God Bless you to do more research and enlighten all of us. I will write to u later, after going through ur site fully.

Comments: Dear Sushamaji, Even though I am yet to completely go through the site, the data collection and the systematic arrangement of the same is just great. Very soon when we are able to recognise the real colours of people, we shall truly value the Supreme Court of India's ruling that Hinduism is a way of life rather than an organised religion as being potrayed. Your site shall go a long way in correcting many misconceptions which many people have. My suggestions shall reach you after a thorough study of the site is over. With Light and Love, Alex Varghese.

Comments: The 'war'...I think it is more like murder should be stopped before we plunge into darkness. I do not believe the false doctines of judaism, christianity and islam have anything to offer humanity as a whole. .... As money is more important to people now a days, should we strike at the root cause of evil? I think answers can be found in sanatana dharma but only for those who are objective and clear headed. Keep up the good work.

Comments: I come to this site often to enrich my knowledge. It is a great source of inspiration. I do hope others will benefit but I sincerely feel that it will be a long time coming. I recently had a converstaion with a Indian friend who was talking about the marriage of a relative. I asked for description of the male party and her first word was 'fair' ...apparently he was very very fair and as was the bride they would 'look good together'. All the other superlatives followed later. This is a sad reflection of the Indian diaspora in the west but a true one.

Comments: Namaste, I just wanted to say that I am a scientist working on the field of theatre and film dramaturgy - I was researching the last two years on Natyasastra - the holy knowledge of theatre and dance as given from Lord Brahmadeva to Bharatamuni - and I enjoyed your page very much!! It is clear, well structured, offers a deep insight into the Sacred culture of India plus gives a wide range of sources and links. Although I am an European scientist I am a great admirer of Bharat Mata, Mother India. I am truly convinced that time will show that India is the primordial culture, the source of all civilisations, cultures, languages, arts and sciences, that Sanskrit is the primordial language, the Vedas the primordial knowledge, and India not only the Mother of Indians but of mankind. I realized long time ago that the myth of Greece as source of theatre, medicine, philosophy, mathematics etc. is nothing else than a subtle form of imperialism and racism because it was hard for the Western childish Ego to give the appropriate respect to its own Mother. The excavations in Dwarka were an important step in the process of setting things right. I found the kind of tribute European scholars were giving to the Ramayana and the Mahabharata always most cruel. The Ramayana and Mahabharata are the reports of the miracle of God becoming human. This is their unique quality. But Western scholars were praising these two works always as aesthetically absolutely interesting fairy tales. But that would be like telling a devoted Christian that the New Testament is really a very interesting piece of literature, and that, by the way, Jesus

Christ of course never lived. I feel that we are now entering a time were religion and science get agian integrated into each other and that west and east should now - as rabindranath tagore formulated it in his philosophic work sadhana - perform the marriage of humanity.

Comments: I read this article on the BBC website with disbelief. What is happening in India when Hindus cannot express themselves ? http://news.bbc.co.uk/2/hi/south_asia/2743881.stm There needs to be discernment between what is right and what is wrong. Would you find the reverse hapeening in Islamic countries ? Highly unlikely, in fact would you be allowed to live in peace in these countries ? How about banning the cross because of the Ku Klux Klan?

Comments: Ladies and Gentleman, we are indebted to our friend Sushma for bringing us together in this forum. After my first posting with regards to creating a TV series on the Impact of Ancient India on the modern world, I have received quite a few emails with offers of help and suggestions. Too all of you I thank you. Now it is a time to take a stand. Are we happy with the way the Hindus and the religion is represented in the world's press? Are we going to stand around and watch the western media print and broadcast one sided rubbish about our great religion to the great unwashed? Are we so tolerant (weak) that we sit by and do nothing but talk?

Comments: Dear Sushmaji, I have visited your magnificent site after a long time,and I am so pleased to see that so much of information has been added to it. I had forgotten the exact name of the site, but I just typed in "hindu culture" in google, and lo, your site popped up, second on the list. This is what I had wanted when I had come to your site, more than a year back. I am so happy that you introduced me to your site. I suggest that you create a group mail, so that new info can be passed on to interested persons. I believe that spirituality is the foremost contribution of India to the world. While all of us involved in so many things , we hardly know about our true self. I think it would be great if you publish on this web page, information related to yoga, meditation, spiritual chakras etc. as well. This wonderful site would then truly reflect the ethos of Indian culture and at the same time, inspire visitors towards self introspection and knowledge. God bless you. Indranil.

Comments: Simply superb and wonderful website which could match and excel the totally sponsored non hindu religious sites. You have done the greatest of jobs yourself scientifically, academically, spiritually with proofs from the east, west, known and unknown scholars and sources. Tens of millions of hindus have been slaughtered thorougout history because they refused to convert or give up their religion of truth . Money, power and women bought the cowards but thank God there are people like you to bring truth to the doorsteps of the sleeping children of god. Keep up your most wonderful work. Its totally amazing that there are souls who are preserving, protecting and promoting Hinduism with utmost enthusiasm and energy.

Comments: Namaste Sushmaji, I really wondered at the great job and research you have done. Especially when I was reading the article on ancient vimanas, it is simply enthralled me. But I believe if someone builds those vimanas now and shows to the world, it would be a miraculous effort. I believe many innovations in modern science are having the basis of vedic knowledge, as many of our forefathers were migrated to different parts of the world with the some vedic knowledge. I would like to know the names of different continents in sanskrit. Dhanyavadh... Vandemataram, Ramakrishna.

Comments: I like your website very much. I want to bring your attention an extract from "Unfinished Journey", the memoirs of Yehudi Menuhin, the great Western Classical violinist about the superiority of Hindustani and carnatic music when it comes to creativity. It is great reading and I think must be a part of your site. http://www.msci.memphis.edu/~ramamurt/icm.htm Thanks Swami.

Comments: Res. Sushama Londhe, I am very happy to know about your site. Thanks. Your Brother - ashok. Please Save Hindu woman and Sign the Petition. Recently, in Bihar, a woman, Kanchan Mishra, who has a 4 year old child, was abducted by local Muslim Gangster Sultan Mia, and forcibly "married" in a mosque. The local party (Rashtriya Janata Dal's) muslim MP later "blessed" the "couple". The husband and the brother of the woman have been threatened with dire consequences if they tried to rescue her. This incident was reported in one paragraph news item. Thats the importance of the Hindu honour for these liberals. www.outlookindia.com/fullpopuptop.asp?fodname=20021202&fname=State+Gazat te&sid=6 Note: please Sign the Petition ; http://www.petitiononline.com/abd45621/petition.html

Comments: Dear Sushmaji - accept my pranamams for I determined that the right words did not exist to express minimal gratitude for undertaking and continuing to excel in this monumetal work. Your systematic peeling of the many layers of inferiority driven stench soaked covering rags fabricated by 18th and 19th century neanderthals exposing little by little the essence of 'Sanatana Dharma' is beyond value to the shattered pysche of Bharat progeny. Live long and prosper.

Comments: Namaste Sushamaji, A wonderful site on Hinduism. I accidently came into contact on the web. Your work is superb and removes all the delusions on our sacred beliefs and culture which has survived even after immense of brutal foreign attack. No other country has been invaded in the history of the world by foreigners like ours and still the sanatana dharma survives is a msytery. Our tolerance is misunderstood as our weakness, but there is limit for everything and the time has come up to rethink at this time where our sheer existence itself in our own home is questioned. Good luck and God bless you.

Comments: There is so much misinformation on Hinduism nowadays that this site is a sight for the sore eyes. Sushmaji, there are people with diabolical plans and hidden agendas who have been tarnishing the image of Hinduism and also denigrating the entire community. Particularly repulsive is the site http://www.aiccindia.org. I wanted to post a message in their guestbook but was either refused entry or there was some error. Anyway here is the text of that message. I hope all your readers would take the time to peruse the site and get to know first hand the sinister design that runs through the site and it's links. "Sir, up until now I was quite amused whenever anyone talked of Christian conspiracy, but having perused your website I have become convinced of it. Your selective quoting of news, incendiary articles and provocative analysis runs contrary to your claims of peace loving Christian community. Our country is very ancient and has a rich cultural heritage. Instead of spending time and effort to study and understand it you paint the entire majority community with the communal and right wing insinuations. Missionary and welfare work is not the sole prerogative of the church. Philanthropy and altruistic individuals existed in India much before the birth of Christ. Particularly repulsive was your coverage of the dalit conversion in Delhi. Anyone who watched it knows that it had more political overtones than just social reasons. You have proceeded to scandalize even the IDRF. Do you feel that IDRF should not help the downtrodden? Or are you suggesting that the collected funds should be handed over to you for proselytizing activities under the garb of welfare work. I was under delusion till now, but now am able to comprehend the full contours of the diabolical venture. I am not a nationalist but feel that your heart should bleed more for the country than for anything else."

Comments: Re - Vimanas: It is fascinating the way humans have forgotten by some collective amnesia all thing that should have been kept either by written or oral traditions. Did it happen when humans constructed the tower of Babel (either a high landing port for airships or for avoiding being covered by the waters of another flood). Is it possible that someone has gone to great length to erase all this knowledge from humans? How many ancient civilization, previous to the Adamic era, has been terminated either by war or selectively eradicated to eliminate certain stocks of human? I will like to have those visiting the site to comment on the above. Probably this is the beginning need to step out of the shadow and move toward the light.

Comments: nodoubt abt the amount of hardwork on this site and it's good .But i would like to say ..that how abt introducing ... free emails which send every day/weekly: quote or triva or any other kind of information from hinduism .i'm sure this will really get many many out there to know abt hinduism. secondly at times sinlge page is so long or big that mind wants to venture into another different area .. and also there are some pic/s anavus is on trivia page the map of india .. maybe a link which should lead to a larger and a clear picture. i think these will make the site more assesible instead of only giving lot of infomation abt hinduism.

Comments: Excellent job! Our dear country and religion are so misrepresented and maligned in the West; each of us needs to do our bit in combatting this negative brainwashing, psychological warfare of the West. Frequently our youth are not well equipped to fight such mud-slinging with valid arguments or rebuttals. **I applaud your efforts and thank you for being a 'jyoti'**. Best wishes:)

Comments: Congratulations on a great effort. The Hindu theology is one of the most profound philsophies of human civilization. This website is an extensive resource on this ancient philosophy and culture. Wish i could contribute some way to extend it further :) All my best wishes for the continued success of this effort.

http://www.hindunet.org/hindu_history/ancient/aryan/aryan_frawley_1.html
The above link better describes the myth of the aryans. The whole problem is global because of the false superiority attached to 'being white'...the power, the money, the control...It has even found its way into bollywood thanks to the divide and conquer mullahs. The fact is that 99.9% of Indians are brown/black to varying degrees; face it and learn to love it. And punjab is just one part of India where peoples features also show the australoid connections;face it and learn to love it. The fact that Indians are so colour conscious now shows how backward we have become. Fair and Lovely cannot work miracles...it can't hide the truth for long.

It is very surprising that Hindo people (Hindu, Buddhist, Jains, Sikh, Muslim) themselves do not know the great contributions of Hind that deeply influenced the Western civilization. I would like to share some very interesting information about Nalinda University: Most of the people of Hind do not know that Nalinda was the first University in the world. (1) In 1986, in a library in West Haven, CT, I was reading Fodor's Travel book on India. On 'ancient Indian History' page, in one place it says, "There are no Greek scholars who became famous in the Western world, that they themselves did not came for learning in Nalinda University (in Bihar), or their teachers did not travel to Nalinda for education." "Students from all over the world used to come to Nalinda for education. Students felt proud to be the graduate from Nalinda, and not from Oxford" (2) In the same year, in Hamden Public Library, Hamden, CT, I was reading a History book on Greece, written by a Greek writer (I did not note down the name, and I do not remember now). In one page, I found a list of twelve Greek scholars (out of hundreds) who graduated from Nalinda University. Since I was reading for curiosity, and not for research, I did not even think of making a copy of the page, or note down the book reference. However I remember the following names that were among the list who graduated from Nalinda University: 1. Socrates 2. Pythagoras 3. Achilles 4. Archimedes 5. Megasthenes 6. Plato (3) We had a house tutor in our home in Dhaka, Bangladesh. At that time we were school going teens. His grand father

Comments: migrated from Patna, Bihar to Bengal during late 19th century. One day he told us that Socrates, the Greek scholar, graduated from Nalinda University. One day during summer time, he went home in Greece and brought back with him a Greek student who was 12 years old. He told us the name of this 12 years kid, but I do not remember the name now (it may be Plato or Cynics, or somebody else. Our house tutor also told us that during Turkish conquest of Bihar and Bengal in 1299AD -1300 AD, the defeated Hindo solders took shelter inside Nalinda and in all it's dormitories. Entire University was wooden and was occupying a huge area. Turkish army started cannon and mortar fire and the whole university was burned to ashes, along with all students' registry books, books of arts, science, mathematics, music, dance, philosophy, psychology and Buddhist scriptures. Very few that survived were removed to Tibet and China for safety. (4)I read the following narratives in Dhaka University Library in 1979: When Alexander's gelerals refused to advance into India, Alexander send emmesery to Emperor Chandragupta MoArya that he wanted to visit Nalinda university where so many of Greek Scholers had their education. Emperor sent a grand reception party to welcome Alexander. But there was a condition that Alexander and his men will be allowed only light wepons (like sords), and nothing else. Emperor himself pledged protection to the Greek guests. Though Alexander accepted the terms, all his generals refused for security reason. India should spend a considerable amount of money for research and revival of Nalinda University.

Comments: Your web site is sure great! I have learnt so much and it seems to be no end! I will use this site for reference to all my friends. Hinduism is sure a great religion with it's rich cultural and religious heritage. I am so proud to be a follower of the world's most ancient religion in my own simple way. Sushmaji, something to think about -If your web site could cover some testimonials of people's conversion to Hinduism, it would make it even better. Sometimes I think, if only the west had more exposure to Hinduism through the media; TV, cable, movies (a challenge you may want to explore!), I am sure many would follow its ways and the world would be a better place. May all your efforts be richly rewarded! Much appreciated and God Bless you.

Comments: I really enjoy the site and come back at least once a week. Easy as anything getting around. I have found that some links do not quite work. I am a Hindu by birth and often wonder if I say this because I need to have a faith. However, I do not believe that one should dwell on past atrocities or glories nor should these be forgotten. Hindus have no serious dogma and this can (but hopefully not) force the religion, philosophy into the dungeons of history. Hinduism needs a reawakening (directed at people like me). Maybe as technology progresses life gets faster and living more complicated, we spend less time on who we are and happily accept to be told what to do think and feel. It requires too much work for us to do this purselves. Some of your commenters have said the same. A minority in a minority can be quite overcoming (esecially) the guys outside India. Thank you for the site.

Comments: The site is simply excellent. It will definitely help to remove the wrong notions about Hinduism and the Indian Heritage, as a whole, and throw ample light on the treasures of Hinduism. Being an engineering student, I took great interest in the chapters devoted for vimanas, ganita, cosmology etc. Of course, all the sections are nice and writeen systematically, with the references. I think it is the duty of every Hindu to know the reality about his own religion. India once had a vast storehouse of knowledge, which today's western world is rediscovering. My best wishes to you for this great work.

Comments: Dear Sushma, I do not have words to appreciate the efforts you have put in this website. Once-in-a-while people come across such excellent websites!!. I was lucky to go through this website. A year back I was researching about the saraswathi valley civilisation, and, by chance I happened to see this site and this is one of my favourites. A zillion thanks to you for educating an ignorant Indian about his ancient roots and culture. I very sincerely request you to post some online books like Subhash Kak's "The Astronomical code of Rg Veda" and Dr. Rajaram Mohan Roy's "Vedic Physics", etc. so that the people across the world will know that our's was not a by chance culture, but a culture with utmost maturity and which is still being followed to this day. Zillion thanks again Regards Mohan http://mohan.freewebtools.com/

Comments: This site has a wealth of information and I am really pleased that you have put in so much effort in gathering it. It is a brillinnt work and you have done a great service to Hindustan by puting up this site. The distortion of our culture by the European historians for their petty objectives could be understood but what was more distressing was the way our culture was demeaned by our own Leftist intellectuals even after independence. We were creating youths who felt inferior because of this distortion of history and had no national pride. Under such circumstances this site comes as a place where Indians could find out the facts about our history and past and feel proud. You have done a great service to the country. Thanks.

Comments: I just want to say that this site is fascinating.... I really had no idea that Hinduism and it's tenets were so complicated, thorough and advanced. It is through the understanding of other people and their religions that leads to greater relations between faiths - this site is a shining example of how to help others understand things they knew nothing about. I will freely admit, I was quite ignorant as to the philosophy and accomplishments of Hinduism. This site however, has helped open my mind and further increase my knowledge and understanding of this great and ancient religion - and all of its accomplishments. Thank you for broadening my mental horizons and allowing me the luxury of partaking in the vast body of knowledge that is Hinduism. Sincerely, Dave Jones

Comments: It was a pleasure to view your very thorough and beautiful website. You offer a treasure of information regarding the glory of India and her true history as the greatest civilization. I was however disappointed not to see any reference of the works of A.C. Bhaktivedanta Swami, founder-acarya of the Hare Krishna Movement, through which he spread Vedic dharma around the entire world. His authoritative and voluminous translations of the Bhagavat Purana, Chaitanya Caritamrita, Bhagavad-gita and more, are now translated into more than 30 languages, and these offer access to and understanding of the deep spiritual knowledge of the Vedas. I hope that you will add these important books to your recommended books section.

Comments: This site represents an outstanding effort and insatiable love for ones 'Hindu roots'. In my opinion, Ms. Sushama earned a place in the small gallery of 'people who live by the Ancient code' - in so far as 'service to mankind'. I find the content and organization of that content to be excellent. This is certainly one of the very few Hindu Community Sites which every Hindu must visit just to get reacquainted with ones own roots. Please, keep up the good work and do call on the community for help when the load becomes too much for you to carry.

Comments: Congratulations !. Sushama. The site has forest of factual notes and wealth of information on Hinduism. My heart felt thanks goes to your good self for the time, effort and money spent on providing this service not only to Hindus but to our other brothers and sisters who have not fathomed the depth of Hinduism. My prayers to Almighty God to bless you and give you all powers to carry out this mammoth task that you have undertaken. My appeal to others, please give her all the support and help.

Comments: Nice Site. Indian culture is truly great. My German fiancee is highly impressed by India and also has studied Sanskrit. How about that!However my fiancee had a Korean freind who told me once of a legend of an Indian Hindu princess who fell in love and married a Korean prince ages ago. I hope you can do some reserch on the matter and provide some information.

Comments: Excellent. More than the entire humanity the Indians need knowing, understanding and identifying their origins. My efforts has been since the day I became a born again Hindu to make people aware of the manipulation and deliberate distortion of Hindu history by the English, and then by our own Indian historians (leftiest leaning -dittoing - Western views) accepting and expanding European views further. Our schools teach Greek and European histories but negleting our own rich civilization. Your website is enhancing my own effort in the direction and I pray you keep it up. I shall also add link in my website www.bornagainhindus.org. OM SHANTI

Comments: Dear Mrs. Shushama, While appreciating the great effort that you have taken i would like to inform you that the word "Brahmam" or "Bramh" meaning the true eternal god himself is being spelled as "Brahman" in a few places. As you are aware, Bramh - is the eternal god, Brahma is the god of creation and Brahman is the priest class person. Kindly correct it since it is slightly misleading.

Comments: an excellent hypothesis and one which many classically trained historarians (including Indian ones !) will have trouble refuting (though they will try hard) As we go towards evidence based verification of hypothesis -- the evidence is there -- but the imperialist mindset to accept the wonderful heritage and legacy of ancient India will take many generations. After all , the imperialists colonised TO loot the world under the guise of " civilising these cultures " I hope that your paper is widely read -- knowledge is to be shared as our forefathers many millenia ago understood and did Best Wishes bn

Site: http:///

Location: Kochi, Kerala, Bharat

Comments: You have done a great service to our great religion. Salutations to you. Instead of killing people in the name of a temple, the hindu organisations could have gone to educate the new generation about the heritage and the achievements of our forefathers. The invaders, be it muslims or europeans have destroyed our culture and have caused severe damage to our thought process. Our present educational system is not teaching the children the greatness of our ancient heritage. We should come out withsuch websites to benefit the coming generations about the knowledge of our great history.

Comments: Prajapati vai idam agra asit Tasya vak dvitiya asit Vag vai paramam Brahma I found this (Vedic?) hyme under "Introduction to Hinduism (Under OM)". Can you give me a specific reference to this hyme? I have read this verse somewhere on internet and also in a book "Lost Years of Jesus" by Elizabeth Prophet, but no specific reference given. I hope you have realized that the Gospel of St. John (either chapter 1 or 4) opens with this: "In the beginning was the Word and the Word was with God and the Word was God." This is an exact translation of above Sanskrit verse. Keep up the good work.

Location: , California, USA

Comments: You have done a very good job. You have a wealth of information. However, you give no dates, or hardly any, to show that Hinduism is indeed the most ancient religion, even though you have a section named Hinduism the ancient religion, and another section called contributioin of Hinduism to the world (or words to this affect). This is a defficiecy. Since ideas flow from more ancient to the less ancient, you must give dates and prove that Hinduism is indeed the most ancient to claim its contribution to other religions and cultures. So, you must give dates for some major event about Hinduism. It is common for other civilizations to claim more and more ancient origin to claim their contribution to the world, since ideas flow f

Comments: Hi In United States all the televison channel broadcasting and always described big things about the egypt and european civilization. They don't know about our Indian Culture,Civilization and history. We are the best and we need to prove our history and achivement to the world. The only way to do is, preparing a television programme and broadcasting in U.S. television channel. This web site is the best and base for developing such programmes. Using the information in this web site we can produce such a great programme to prove our hinduism and its greatness. Thanking you all the people those who involved in developing the web site. thanks ram.

Comments: First of all let me congratulate you for your wonderful idea of a web page encompassing various aspects of Indian history that have hitherto been completely excluded from our European-era texts, whether they were the books we studied at school or the literature that has selectively been recorded in books and encyclopaedias. That trend of glorifying and exaggerating anything concerning European history and civilization while minimising and even denying the enormous influence of other parts of the world is being continued today, as can be witnessed by reading any of the regular "international" journals on the market - TIME, Newsweek, etc. You have a better chance in these "august" journals of closely following such and su

Comments: Your site is commendable effort to put up a brave face on Hinduism.Sometimes back ,there was discussion on Hinduism in the columns of Times of India as to what is Hinduism and the answer was it's a composite culture.I hope your site inspires Hindus to have one voice." Ekta mein bal hai," needs to be put into action.Living in USA,the prevalent feeling,"Akela chana bhar nahin phor sakta" dawns upon you.

If any further explaination of my remarks is asked for (though e-mail), I shall be just feel proud of myself of having the honour. Here are my bulleted comments: - 1. The term "hindu" needs to be explained very clearly and profoundly.Let us not forget that the term was coined after 325 B.C. to refer communities living in a given geographical location. How can religoin got incarporated, what happened to Ancient Bhagwats,what is panchayatan or panchtantra religion and a lot more need to be explained. 2.For cronological purpose marksist scholers like Dr. D.D. Kosambi, Rom

Comments: Hi Thats a cool site that you have maintained and a service rendered to modern society. Its sad to know that many of our own people know very less about the history and culture of the holy motherland. While many a visiting foreign traveller wouldknow much more. Its like the paradox of grass is greener on the other side. The Americans, The Europeans Japanese throng our cities and sites while we like fools go to other countries forgetting the richness of our own past. The Past is like an window to the futute and each one of us has to shoulder some responsibility if the oldest religion among mankind is to maintain its unique position. Vande Mataram!! Jai Hind!! Chetak.

Comments: Dear Mrs. Sushma, Your effort is laudable. However I would like to point out that the term "hinduism" itself is a misnomer coined by the arabs to refer to people on the other side of the river sindhu. We true to our tolerant nature have accepted it. The sanatana dharma is the vedic dharma. While you have dedicated this site to the demi-god ganesha perhaps you should also mention about the bhagawad gita and who god really is. Why dont you check out these sites to educate yourself a bit more about hinduism. www.iskcon.org www.stephen-knapp.com

Comments: Namaste Sushmaji. After going through your life-history I pretty much feel that all of us Indians have come far in life when they come to think of our heritage and civilization. Believe me, I got interested in my civilization after viewing a French movie in a French channel which shows how the French value anybody who has a great civilization to boast of . The story was about a French couple adopting a boy from South America of Inca descent. Their own son who is biologically their own at first dislikes the adopted boy, but once when he is taught (which is done by his teachers, relatives and the like) how civilized the Incas were, all his dislike vanishes into thin air!! This is not to say that we should start thinking th

Email: bornagainhindus@hotmail.com

Site: http://www.bornagainhindus.org/

Location: London, , United Kingdom

Comments: Keep up the good work. Spread the knowledge of Hinduism - Vedic Hinduism - in the form of message of love and peace. I have dreamt of a concept of 'born again hindus' from my own experience of life. I was born in a poor Brahmin family but had lived most of my adulthood as a socialist (pink communist)and an athiest - a non-believer. After my 13 years stay in India I have returned to England a year ago. The last five year of my Indian life and one single visit to Shri Aurobindo Ashram in Vadodara and a miracle happened for me and there I was - A Born Again Hindu... My website is still under construction... Jai Shree Krishna Jai Gurudev Vedant

Comments: Excellent! A Noble Effort. We, the Aarya People, have to re-write the History Books. How can these so-called Westerners claim to even Understand this Great Culture, when all their views are biased. One has to BE a Sanaatana to know the Sanaatana Dharma. We were, for 1000 years, under Foreign Rule. We were (and still are by Our so-called secular government) opressed, and forcefully "influenced" by these foreign invaders who claimed their ways as "superior". What is past is past. Like Swaami Vivekaananda said- "Arise, Awake, and Stop Not till the Goad is Reached", let Us all, together, re-establish Our Great Heritage. We were, are, and always will be, tolerant and receptive people. But it does not

Comments: I just recently visited your website, after a quick glance i am impressed by your articles in regard to Cambodia. The one thing that stand out the most is the term that you used to describe the region east of India. It is Southeast Asia, it is notIndo-China. The Chinese have no influence in the region, but until recently; a mere fraction of a second when compare to the history of cambodia. I agreed that cambodia is strongly infulence by India. No, we are not historically influence by Chinaand definitely not Vietnam. Vietnam is nothing but a loose group of Chinese minority. Present day North vietnam is occupying the Champa "State" while South vietnam is occupying Southern Cambodia. This fact make me very bitter. Wasn&#

Comments: Sushma, Superb site, inspirational info. "Hindu", a label given to us by "those who looked at our culture in primordial awe". Nowhere in our scriptures is the word Hindu mentioned. Rightly, we are the upholders of the SanatanaDharma, "eternal way of life". The wisdom of the "drishtas", the seers of immortal truths will forever keep the individual, independent souls free of conditioning, free of dogmas and free of limitations. Tat twam asi; -you are that!

Comments: Excellent work. This site makes me very proud to be a Hindu. And Mr. Venkataswaran, Hindus did record their history and religion as meticulously as the Chinese. We don't have any records of such acts though because the Islamic invaders burned and destroyed all of our libraries, universities, and books. The Chinese still have theirs because China was never attacked by the Muslim invaders.

Comments: Thank you for putting together the information which you have done, so painstakingly. Unlike the Chinse who have through the ages recorded everything meticulously, certainly atleast from the time of Confucius, Indiand have been lackadaisical in thisregard. Your effort will go some way to correct this dismal picture, so that our children and their children in turn can get some idea of India's glorious past and balance it against our dismal present!

Comments: It's a wonderful effort to support our great and ancient religion "Hinduism",with views and articles as a support from great personalities. I suggest you to add a seperate page to know how hindu's are progressing and maintained our religion from all over the world country wise.It would also be better if have description and address of each temple in each and every country. This i personally feel inspires each and every hindu,India and abroad.

Comments: Haribol! The greatest and oldest religion in existence is this sanatana dharma! More and more the world needs to learn the glories of Lord Krishna. So many people have insulted and distorted facts about Hinduism to portray their religion as better. But, Vedic sanatana dharma is above mundane sectarianism. The darkness of ignorance is cleared away with the light of Bhagavata. Jai Sri Krishna!

Email: babadas@babadas.org

Site: http://www.babadas.org/

Location: Flagstaff, Arizona, USA

Comments: Dear Ones, This is one of the best sites I have ever visited period. As far as hinduism, it is a great resource. Meher Baba said that 100,000 years ago there were kings in India. I am interested in the ancient past of India, especially sincegeologic evidence exists that the subcontinent of India was once a free floating continent that colided with southern Asia, and formed the Himalayas. Also, I have written a version of Ramayana at http://www.babadas.org/Ramayana.html and would love feedback from anyone who has a few moments to read this poem. It is only about 50 pages and covers the entire life of Lord Rama. Jai Ram! Laurent

Name: Ashok Menon

Email: vinga@tm.net.my

Site: http:///

Location: Petaling Jaya, , Malaysia

Comments: This is a wonderful site, and provides more history on the influence of India on Asia in days bygone, than any other source I've seen. Its credible as the sources of the information are also chronicled. An extremely useful reference, perhapsironically to Indians themselves, many of whom are hopelessly mired in Eurocentric world-views that blatantly discount India's contributions to the world.

Comments: I know how proud I am to be a Hindu. The older I get the more Hindu I want to become. Only lately have I gotten into Yoga and Ayurveda and it has made me sad that I never knew about these areas when I was in India. Strangely, my adventures into Yogamake me come across more Westerners than Indians. My only hope is that India will act up on some of the wisdom that you site here. Indians don't walk the talk and hence give a very conflicting message to our kids who is torn between two cultures.

Comments: (part 3 - final) Did you know there is a strong ancient Jewish tradition that patriarch Abraham founded a college to study the ways of God and how to live a good life and that he sent scholars to the East to spread these teachings. It is possible that the similarity between names in Hindu and Jewish tradition arose in this way. By the way, Sarah was Abraham's neice, daughter of his brother who died prematurely. Best wishes

Comments: (part 2) I will mention a few of the things Jews and Hindus have in common and why we should be proud of our heritage. We both believe in a Supreme Being but emphasise how to live a good life in this world. We are tolerant of religions of other people and do not try to forcibly convert them to our beliefs. We have strong attachments to our ancestral homelands. Independence and freedom for Israel and India followed the end of WW2 after suffering centuries of invasions and occupation. Our diasporas are spread across the world. In the countries we have lived in we have been law-abiding citizens, playing an active part in all walks of society, business, medicine, science, law, politics, etc.

Comments: Very informative site, keep up the good work. Would be useful if you include a chronology on Hindu history. I am a Jew and my family fled a difficult life in Bagdhad Iraq to live in Calcutta where they stayed for two generations. They left India in the 1950s to emigrate to Israel, United States and Great Britian. My parents told me many times of the peaceful and pleasant life they had in India and how Indians and Jews lived in harmony side by side. Here in London we have excellent relations with Indians. I have also visted India myself many times on vacation and for business. I will mention a few of the things Jews and Hindus have in common and why we should be proud of our heritage. We both believe in a Supreme Being but emphasise ho

Comments: Thank you for providing a beacon for all of us who form the "Hindu" diaspora. I emphasize the term "Hindu" because there is no clear concept of an "Indian dispora". I have known Indian students of the Islam faith, whoassociated more with students from other Islamic countries, during my schooling days at Clemson. I find that neither comfortable not offensive...I merely stated that as a point to my preference to the term "Hindu" dispora. Please make this site RICH in its intended content (Hindu faith) and not a hideout for opinions and literature that maligns other faiths. p.s. I have often wondered why we address our homeland as "Hindustan" and not Bharat. Bharat Mat

Comments: NAMASTE!! I just wanted to thank the creater of this site. I was raised methodist (Christianity), and was fortunate enough to befriend a beautiful person who's parents were born and raised in India. Throughout life I never really felt the spiritual connection to Christianity or any western religions, for that matter. When I was exposed to Hinduism I finally felt complete. I was judged more by my white counterparts, then my loving and exceptionally warm Hindu family. I have become complete. And finally, thank you, thank you, thank you, for your segment on women. So often, westerners (Christians), see very little, if any difference between culture and religion. And feel that all Hindus and Indians for that

Comments: ABSOLUTELY INCREDIBLE SITE ! Amount of work that must have gone in to putting this ssite together is well appreciated by your readers. If you come out with a book (revision each year) of the entire site's contents, that will be very useful to many. A section to teach kids about Hinduism (or links targeted at kids) will be veru useful. This can become an e-commerce site that can make available Hindu books, cassets, CDs, etc. available to the readers. Congratulations again for the great work!

Comments: The following is the mail posted by me to my friends. Have a look at and let me know your idea. Thanks. Hi Friends, I got a mail from you, which are interesting (reg. Afkanistan human rights) and solemnly appreciate you for caring humans. I have a question here. If some of the Indians are caring for some one else, why do they do not see how Indians are suffering. In Our country there are lot of problems. Do you know why we become slaves to whites? Because of our innocence. How we become innocence? Because, majority of the Indians are refused to get proper education. We are refused to grow more. Why majorities of Indians were ignored? You think and try to understand your self. I am sorry to say the past lif

Comments: Namaskar, Very enlightening collection of information! I have one suggestion, while I can think of more. Please include a link on Hindu spiritualism and philosophy. Basically stress on the crux of Krama Yoga as preached by Lord Krishna through holy Bhagavadgita - it basically tells us to practice Karma with full devotion (SHRADDHA) and diligence but keep complete detachment from its results!! The western religions, which are based on materialism to a larger extent are now focussing on this aspect. I have watched some Christian channels and found to my surprise that they are stressing on "leaving the results to GOD" and "detachment"!! Actually, the amount of maturity one can fi

Comments: All missionaries are bad - christian, muslim or hindu... without exception. However, when I read ur site it seems like Hinduism is all hunky dory and without problems. In the section on missionaries, it would be in the service of truth if you simply added a line that the single most important reason for the success of missionaries of Islam and Christianity (and Sikhism) is the oppressive caste structure which is just about as old as Hinduism. If you don't state such an obvious fact then the very legitimacy of the site is under question. We can cry ourselves hoarse about it and allow the votaries of Hindutva to murder a few more missionaries but the problem ain't going to go away till you address caste head on.

Comments: i loved your site...very knowledgeable! They say there is no difference in the kuran and the geeta. but my only wish is that hindus and muslims will stop this war. they dont know what there forfathers want. what gandhiji wants. gandhi ji wanted us to be together. lets keep it that way. Ther are many religions in india (bharat) hindus,muslims,jains,buddhists,cristians,sikhs. lets put others aside ...but lets not forget that the hindus and muslims are and were and will be brothers and sisters. its only that some people dont see that, because there eyes are covered in maya and greed. just think of what india and pakistan could be like if they were together. Mandirs and masjids...is the home of every hindu and muslim and its going to be a time when we will gie up this war. thank you for a wonderful site!

Comments: Very informative site. I enjoyed the content. Some how the bias is only to give what is good in Hinduism. If Hinduism is that great why is India in such a mess? We can't live in the past alone. Majority of Indians are Hindus but the country is so corrupt nd so environmentally polluted. How about some action plans for India to revive its past glory. It looks like Indians are trying to copy the West. We who have left the country are more Hindus that the Hindus in India.

Comments: I have seen only the first page. I have decided to read each of the detailed articles every time I have a few minutes leisure. But even before I read further, I find the page most interesting. I agree with all that the author finds bad about the myths spread about Hinduism, India. However, since, by definition and in practice, we are more objective and large-hearted than our detractors, I suggest that we talk about the goodness of Hinduism rath r than harp on less than charitable acts of others. Keep up the good work.

Comments: Dear Sushma, Your have embarked upon an Excellent Venture true to the spirit of: Krinwanto Vishwaryam i quote the Views of Annie Besant: "After a study of some forty years and more,I find none so perfect,none so scientific,none so philosophical and none so spiritual as the Great religion by the name of Hinduism.The more you know it,the more you love it and the more you try to understand it, the more deeply you will value it. Make no mistake,without Hinduism India has no future...Her History,her literature,her art,her monuments all have Hinduism written across them. And if Hindus do not maintain Hinduism,who shall save it? If India's own children do not cling to her Faith ,who shall guard it?... India alone can save India and India and Hinduism are One." May the God Almighty extend choicest of His Blessings to you and we all. OM-TAT-SAT

Comments: Namaste. You have put together a truly impressive website. I have spent quite a bit of time on the material and I have barely scratched the surface. As a devotee of Sanatana Dharma myself, I found your site to be a precious gem. May this site serve as a g eat ocean, from which the winds of the Sanatana Dharma may blow deep in to the heart's and mind's of the world. Om shanti.

Comments: Congratulations Sushma, for making such a great site. This is a great service to the Hindus and friends of the Hindus. The subject and purpose of the site is same as my site Panchajanya. You have mentioned vimanas. You may also mention that the theory of relativity of Albert Einstein was also known in ancient Vedic times. Srimad Bhagavatam has a story of King Revat who went to another planet and waited there a bit. In that bit of time, more than a millenium passed away on the Earth. You may choose background color of the pages a bright one. I like light yellow because Krishna's pitambar is yellow. Blue is gloomy and sad for many people. You know the phrase - Hospital blues. Jai Sri Krishna! -sv

Comments: There certainly has been a grave injustice done to India, with regard to the interpretations of its history. While we have always been accustomed to accept the view of the west to be accurate one, we seldom questioned their motives. The Aryan Invasion Thoery is an example of systamatic devaluation of the importance of what is probably the greatest civilazation of all. This has had a shattering effect in terms of national pride and esteem.Sadly we Hindus still continue to hold on to t e vicious theory. It is needless to say that only Hindus can correct the wrongs and redeem the past glory.It is going to be a tough ask, considering how the communists and the pseudo-secularists would want to have their own way, in preventing anything coming to light that ould enhance India's pride and which would foster a sense of unity among the Hindus.

Comments: I am truly greatful for you to provide us with such great facts and possibilities regarding our history and our culture as well as our relegion. I am one of the people whose family for unknown reason converted to christianity, yet many of my relatives are still Hindus. I am proud to be a HINDU.Proud to be Indian. But I am not as concerned as you are regarding the conversion in India. Our relegion and culture survived many of horrible acts by many barbarians such as the Mughul and British. I am confident th t it will go on as long as there is life on earth. Once again i was really happy to read about the AIT was false. Even as a young boy I had trouble beleivng that theory. I am not an activist. But I will defend Hinduism with my life, if i have to. Jai HIND

Comments: I'am a freelance television documentary director from the Netherlands. At the moment I'am doing the first research for a documentary I like to make on the changing perspectives off Indian people on Hinduism (and Sadhus) due to the changes that are taking lace in India. The 'background idea' of the documentary is that due to the 'civil revolution' the Indian middle class has grown tremendously. The big question is if this, together with the spreading of the media and education, leeds to a different perspec ive of Indian people on their religion ? And what is the impact/role of young, western tourist in this all ? To do more research I plan to go to Delhi, Rishikesh, Uttarkand, Pushkar, Dwarka, Bombay and Goa early authem this year. I hereby like to get in c ntact with people who can inform me about this subject, who can inform me about the changes that are taking place within the culture and brotherhood of Sadhus, who can inform me about the changes and the increase of (Indian and Western) religious tourism o places like Gangotri, Badrinath and Kedarnath, to the Kumbha Melas, who can inform me about the increase of western Sadhus and the impact of young western tourist on the Sadhu culture and community. Also I like to get in contact with Indian journalist, ociologist etc who are well informed on this subject and who are working and living in Delhi and/or Bombay. I like to thank all at forehand who can help me any further.

Comments: the Jewish bible says that Abraham and Sarai went to the Middle East to escape a terrible flood that had taken place in their original homeland, at approximately the time that Dwarka sank under the sea. I think it significant that Sarai was the half sist r of Abraham and that Saraisvati was the half sister of Brahm. Sarai had a handmaiden named Hagar. Ghaggar was a rributary of the river Saraisvati. It would not surprise me if the tombs of Abraham and Sarai at Hebron, Israel are also those of Brahm and Saraisvati. There are even those who think that Jerusalem's Temple mount could be the resting place of Krishna. There is no doubt. The Yadavas founded ancient Israel. The real name of the Jews, Yahuda, seems to suggest this. See the article at www.viewpoint.com. It would be good if Israel and India could realize that they are related. Both are under the threat of the Moslems. An alliance would benefit both nations.

Comments: Hey! this is a great site which i'm going to tell everyone about. Our recent past was definitely painful when the Westerners $ Mughals invaded us. But our culture and heritage is so rich that our generations to come will be proud to call theselves Hindus. I only wish the world learns a lesson from our culture to live peacefully and respect all beings. Long live our culture!!!! and hats off for a great effort..

Comments: You wrote "Mahabharat" instead of "Mahabharata", and you wrote "Dwarka" instead of "Dvaraka". I know that modern Indians speaking Hindi & such modern languages do not pronounce the inherent short "a" vowel finally and medially. But to have proper respect for the Sanskrit language, when writing Sanskrit words in transliteration, please always incl de the inherent "a" vowel. This is not your colloquial Hindi. This is Sanskrit!

Comments: I enjoyed very much the incisive and deep observations of eminent personalities. However, I'm afraid that a large % of Indians have no idea what the basic philosophy of Sanathana Dharma is nor are they willing to explore it even for curiosity's sake. And et they would not hesitate to condemn it immediately when confronted with issues like the profusion of idols, many of them with animal links and issues like the 'caste system' etc. (may be a quiet reading of the 11th Chapter, or the stanza in the 4th open ng with 'Chathurvarnyam maya shrushtam gunakarma vibhagashaha' may remove the cobwebs of ignorance and centuries of oppertunistic misquoting). Questioning the statements or concepts of scriptures is welcomed and even encouraged by Krishna in the 4th chapt r; but first at least give it a careful read even if it is for critisizing it later! Keep up the good work and please provide periodic updates as well.

Show in alphabetical order

301. **Mary Baker Eddy** (1821-1910) founder of the **Christian Science Movement**. She published **Science and Health With a Key to the Scriptures** in 1875. She had imbibed some of the teachings of the **New England Transcendentalists** (**Ralph Waldo Emerson**, **Amos Bronson Alcott** and **Henry D. Thoreau**) who made their influence widely felt through books, magazines and newspaper articles.

"Christian Science founded in the little town of Lyn, MA in 1815 by Mrs. Mary Baker Eddy. Yet when we read in texts of **Science and Health** up to the 33rd edition there are quotations from the sacred Hindu text **The Bhagavad Gita**, **as well as allusions by Mrs. Eddy to Hindu philosophy. These were omitted in later editions, causing modern-day Christian Scientists to be unaware that their founder gleaned from Hindu philosophy."**

"There was a similarity between **Advaita Vedanta Hinduism** and Mrs. Eddy's view of God and the material world. **She makes reference to Bhagavad Gita in page 259 of the 33rd edition.** She says:

"The ancient Hindu philosophers understood something of this principle, when they said in their **Celestial Song**, according to an old prose translation:

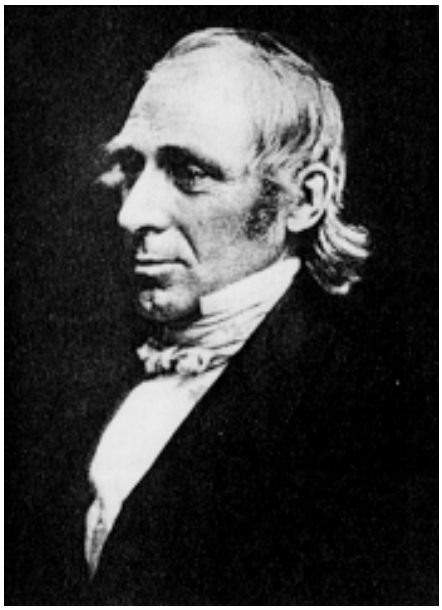
"The wise neither grieve for the dead nor for the living. I myself never was not, nor thou nor all the princes of the earth; nor shall we ever hereafter cease to be."

Both these quotations from the Bhagavad Gita, or Song Celestial, which contains the essence of the Vedas or the Hindu Bible, are to be found in Mrs. Eddy's 7th chapter on "Imposition and Demonstration." This whole chapter has been omitted from later editions of Science and Health. That is why many Christian scientists are not aware that their great leader Mrs. Eddy was familiar with Hindu thought, and in her bigness did not hesitate to acknowledge it in point..."

"It seems clear also that Christian Science has certain historical connections with Hinduism through Mrs. Eddy's use of the Gita, through the New England Transcendentalism, and through the very indirect influence of a certain Hindu view of **Phineas Parker Quimby** (1802- 1866)."

Yet when we read this Christian Science Bible we find that it out-Sankara Sankara with its doctrine of cosmic illusion.

Mrs. Eddy must have imbibed some of the teachings of the New England Transcendentalists who made their influence widely felt through books, magazines and newspaper articles. Bronson Alcott, who was one of them attended her services. Now most of the Transcendentalists, like Emerson, Alcott and Thoreau, were profoundly influenced by Hinduism, with its spiritual breath and tolerance and unity.



(source: **Hinduism Invades America - By Wendell Thomas** p. 230 - 233 published by The Beacon Press Inc.

New York City 1930). For more on Wendell Thomas refer to chapter **GlimpsesVI**).

302. **Emile Burnof** (1821-1907) author of **La science des religions** and **Dictionnaire classique sanscrit-français** and **Essai sur le Veda, ou Introduction a la connaisance de l'Inde** says:

The Bhagavad Gita was "probably the most beautiful book which has ever come from the hand of man."

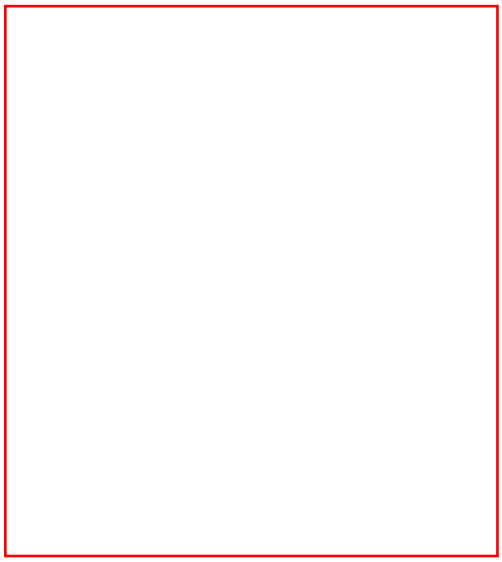
(source: **The Fragrance of India - By Louis Revel** p. 163).

303. **Amos Bronson Alcott** (1799-1888) writer, philosopher, schoolteacher, visionary. Born in 1799 to an illiterate flax farmer in Wolcott, Connecticut, Amos Bronson Alcott was singular among the **Transcendentalists** in his unassailable optimism and the extent of his self-education. He is also the author of **Orphic Sayings**, **Tablets**, and **Concord Days**. Louisa May Alcott, portrayed him as the grandfather in her novel **Little Women**. His second daughter, **Louisa Alcott**, became a world-famous writer, and his youngest daughter, May, was a critically acclaimed artist. When **Ralph Waldo Emerson** met Amos Bronson Alcott in Boston in the late 1830's, he was so impressed with his intellect and innovative ideas that he convinced him to move to Concord and join his circle of friends.

Early in his life he was interested in the Quaker concept of "inner light" which is closer to the Hindu concept of the in-dwelling spirit in every man, the Atman or the Brahman. John T, Reid remarks: "As a young man....**he was to identify the 'inner light' with Brahma."**

The Bhagavad Gita impressed Alcott. He read it in 1846, during which he also read the writings of Carlyle, Coleridge, Goethe, Swedenborg and Behmen who were all idealists and mystics. On May 3, 1846, he wrote in his journal:

"In the evening I had an hour of quiet reading of the Oriental wisdom in the chapters of the **Bhagavad Gita**, on 'Works' and 'Performing of Works.'



On May 10, 17, and 19 the same year, he wrote in his journal:

"I read more of the Bhagavad Gita and felt how surpassingly fine were the sentiments. These, or selections from this book should be included in a Bible for Mankind. I think them superior to any of the other Oriental scriptures, the best of all reading for wise men."

"Best of books - containing a wisdom blander and far more sane than that of the Hebrews, whether in the mind of Moses or of Him of Nazareth. Were I a preacher, I would venture sometimes to take from its texts the motto and moral of my discourse. It would be healthful and invigorating to breathe some of this mountain air into the lungs of Christendom."

Alcott, was a **strict vegetarian**. One of his interests in the Bhagavad Gita was Gita's emphasis on Satwik food and vegetarianism. This strict vegetarianism led Alcott to establish a Utopian community called Fruitlands. In '**Orphic Sayings**' Alcott talks about immortality and divinity of the soul - as in the Gita.

(source: **Hindu Scriptures and American Transcendentalists - By Umesh Patri** p. 143).

304. **Amaury de Riencourt** (1918 -) was born in Orleans, France. He received his B.A. from the Sorbonne and his M.A. from the University of Algiers. He is author of several books including **The American empire** and **The Soul of India**, he wrote:

"The boundless riches of the Hindu faith, its universal appeal, its tolerance, the profundity of Hindu philosophy and its enduring roots among the Indian people all this made India a poor soil for the sowing…"

"there can be no doubt that the **Upanishads** are based on the **most profound study and understanding of human nature ever achieved,** one with which we twentieth century Westerners, in spite of our vast present day knowledge, have not yet fully caught up."

"**The Vedas were the brilliant product of intuitive insight**, not of the logical intellect. The essence of the Upanisadic teaching, to the extent that it can be coherently summarized, lies in the thesis that the Absolute is not separate from man and nature but immanent in both. The transcendent outlook of the Vedas (an outward projection of Vedic man's unconscious) becomes an insight into the immanent nature of the Absolute: "The infinite is not beyond the finite but in the finite. Man's goal is not so much union with the Divine (as in Atman) and the Absolute or Divine (Brahman), which is the basic principle of monism. Already, we can detect in Indian Culture an emphasis on the recovery of a latent Being, rather than the striving to Become – Becoming being unreal since the process of time has no reality whatsoever. "

This spiritual and religious ethos of India is less vulnerable to scientific criticism than the Western creeds (Christianity, Islam and Judaism) because it is not connected with history - because spiritual symbolism of history has no meaning for it. Its emphasis on psychology rather than theology, on the inner man rather than on man's relations with the external universe, shields it from the corrosive impact of our modern world.

(source: **The Soul of India – by Amaury de Riencourt** p 194 and 38 - 39 and 126 - 136 and 399). **India Rediscovered - By Dr. Giriraj Shah** p. 29 Abhinav Publications New Delhi 1975).

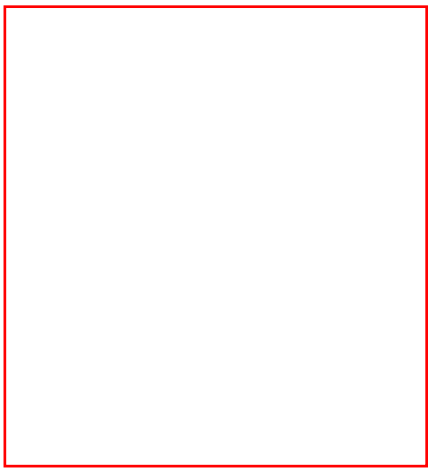
"The East incorporates all that derived basically, from Indian culture: Hinduism, Buddhism and their extensions in the Southeast Asia. **The complementary unity-in-diversity of that vast area springs from the fact that while Indian philosophy and wisdom is the most profound,** its most perfect means of expression are to be found in Southeast Asia (Angkor, Borobudur).

"It does matter a great deal to the West whether Christ rose bodily from the dead, multiplied bread of loaves or even existed at all; it does not matter one whit to the East whether Rama, Shiva or Buddha ever existed since their importance is neither factual or historical but purely symbolic...because in the East there is **no conflict between fact and faith**, since Eastern faith (sraddha) aims basically at subjective cognition rather than the objective "believing to be true" of the Westerner. **The West has always attempted to impose dogmatically its various viewpoints because, imbued with Biblical, Catholic, Koranic sense of God-given historical mission and the conviction of having the monopoly of literal religious truth,** it felt that it was objectively in the right - regardless of the increasing conflict, within its own cultures, between the spiritual messages (often mutually contradictory) of its "revealed" religions and scientific knowledge."

Thus, the **"Eye of Shiva" that is the eye of pure consciousness in Hinduism."** **"Many Greeks fell under the spell of the Hindu or Buddhist philosophers and life-styles**. We know, for instance, that Pyrrho of Ellis, who founded the philosophic school of "pure scepticism" (Pyrrhonism) in Greece around 330 B.C. joined Alexander's expedition to India and was strongly influenced by the various saddhus he encountered and by that serene indifference to external circumstances for which **Greek philosophers yearned but almost never achieved."**

(source: **The Eye of Shiva: Eastern Mysticism and Science - By Amaury de Riencourt** p. 54-68 and 80-82).

"Out of this immense creation emerged one of the most famous and moving poems, the Bhagavad Gita, whose soaring beauty makes it one of the monuments of world literature."



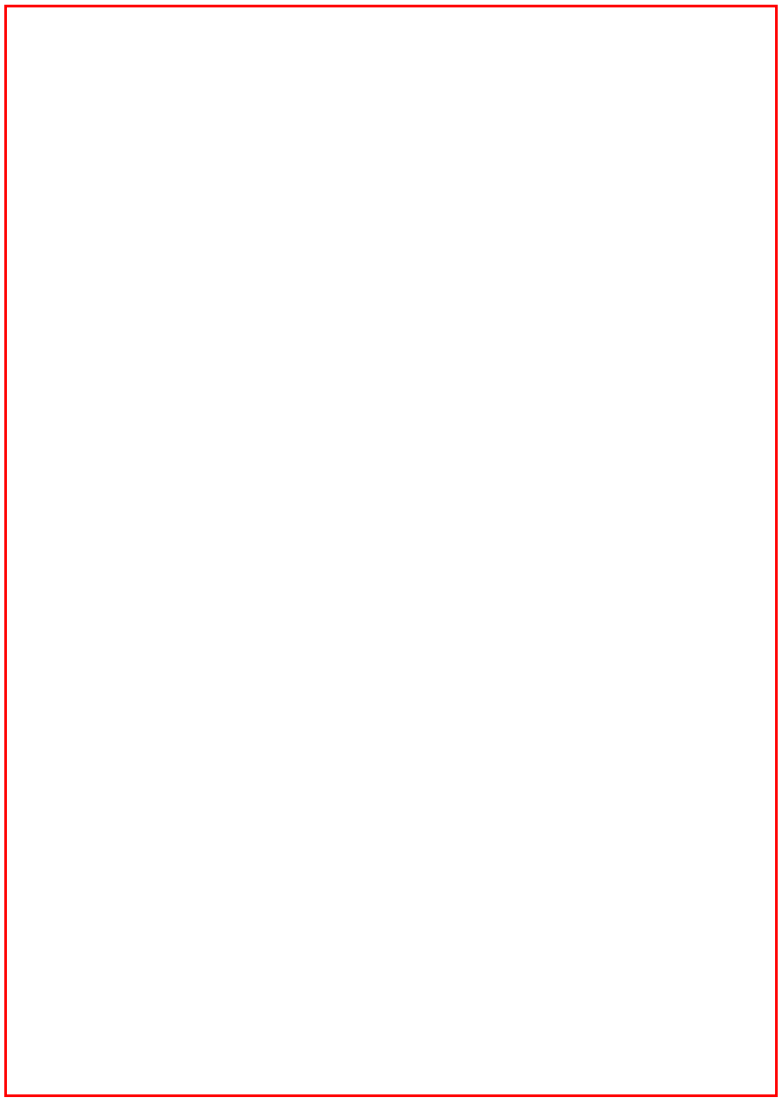
"The **Bhagavad Gita** is both supremely realistic and extremely idealistic, certainly the most acute, penetrating depiction of human nature and true morality, however remote it may seem from our own: "give thought to nothing but the act, never to its fruits, and let not thyself be seduced by inaction. "The Bhagavad Gita emphasizes all the basic contents of the Indian world-outlook with remarkable vividness. **Lord Krisna**, for example, symbolizes the principle of Divine Incarnation (avatar), the supreme spirit become flesh, pouring into the world during the evil phases of the cosmic cycle in order to check evil - but in a spirit of complete detachment and indifference. The supreme thought of the Bhagavad Gita is concerned with **tolerance**: "Whatsoever devotee seeks to worship whatsoever divine form (rupa) with fervent faith, I, verily, make that faith of his unwavering."

"**Mysticism has its place in all great religions, but never has it had such a field day as in India, where it never came into conflict with frozen dogmas or the prophetic impulse."**

"**Yoga – is Indian Civilization's finest product, the ultimate perfection reached by India's best men.** And because nothing is so difficult as to rationalize and discipline mysticism, Indian Civilization deserves full credit for having devised the best system for reaching the goal. Yoga is essentially a neutral, well-tried technique, compatible with any philosophy or religion, with Buddhism as with all forms of Vedantism. Yoga is a civilization-technique, an expansion and systematized, scientific development of the early tapas of the Arthava Veda. Yoga doctrine is at one with Vedanta, which claims that the world is not different form (ananya) and non-independent of (avyatirika) Brahman. **Becoming is the great cosmic illusion – that is the supreme expression of the Indian mind.**

The wealth of psychological insight revealed in the Upanishads and their various commentaries cannot be adequately summarized. But there can be no doubt that they are based on the most profound study and understanding of human nature ever achieved, one with which we twentieth-century Westerners, in spite of our vast present day knowledge, have not yet fully caught up.

(source: **The Soul of India - By Amaury de Riencourt** p. 39 and 50 - 51and 123-129). For more by Amaury de Riencourt refer to chapter on **GlimpsesX**).



305. **Dick Teresi** (?) author and coauthor of several books about science and technology, including **The God Particle**. He is cofounder of **Omni** magazine and has written for Discover, The New York Times Magazine, and The Atlantic Monthly.

"The big bang is the biggest-budget universe ever, with mind-boggling numbers to dazzle us – a technique pioneered by fifth-century A.D. **Indian cosmologists, the first to estimate the age of the earth at more than 4 billion years.**

The cycle of creation and destruction continues forever, manifested in the **Hindu deity Shiva, Lord of the Dance,** who holds the dream that sounds the universe's creation in his right hand and the flame that, billions of years later, will destroy the universe in his left. Meanwhile Brahma is but one of untold numbers of other gods dreaming their own universes.

The 8.64 billion years that mark a full day-and-night cycle in Brahma's life is about half the modern estimate for the age of the universe. The ancient Hindus believed that each Brahma day and each Brahma night lasted a kalpa, 4.32 billion years, with 72,000 kalpas equaling a Brahma century, 311,040 billion years in all. That the Hindus could conceive of the universe in terms of billions.

The similarities between Indian and modern cosmology do not seem accidental. Perhaps ideas of creation from nothing, or alternating cycles of creation and destruction are hardwired in the human psyche. Certainly **Shiva's percussive drumbeat** suggests the sudden energetic impulse that could have propelled the big bang. And if, as some theorists have proposed, the big bang is merely the prelude to the big crunch and the universe is caught in an infinite cycle of expansion and contraction, then ancient Indian cosmology is clearly cutting edge compared to the one-directional vision of the big bang. **The infinite number of Hindu universes is currently called the many world hypothesis,** which is no less undocumentable nor unthinkable.

Shiva: Lord of the Dance

The Indians came closest to modern ideas of atomism, quantum physics, and other current theories. India developed very early, enduring atomist theories of matter. Possibly Greek atomistic thought was influenced by India, via the Persian civilization. **The Rig-Veda, is the first Indian literature to set down ideas resembling universal natural laws. Cosmic law is connected with cosmic light, with gods, and, later, specifically with Brahman."** It was the Vedic Aryans... who gave the world some of the earliest philosophical texts on the makeup of matter and the theoretical underpinnings for the chemical makeup of minerals. Sanskrit Vedas from thousands of years before Christ implied that matter could not be created, and that the universe had created itself. Reflecting this, in his **Vaiseshika** philosophy, **Kanada** (600 B. C) claimed that elements could not be destroyed. Kanada's life is somewhat a mysterious, but his name is said to mean "one who eats particle or grain" likely referring to his theory that basic particles mix together as the building blocks for all matter. Two, three, four, or more of these elements would combine, just as we conceive of atoms doing. The Greeks would not stumble on this concept for another century."

"In India, we see the beginning of theoretical speculation of the size and nature of the earth. Some one thousand years before Aristotle, the **Vedic Aryans** asserted that the earth was round and circled the sun. A translation of the **Rig Veda** goes: " In the prescribed daily prayers to the Sun we find..the Sun is at the center of the solar system. ..The student ask, "What is the nature of the entity that holds the Earth? The teacher answers, "**Rishi Vatsa holds the view that the Earth is held in space by the Sun."**

"Two thousand years **before Pythagoras**, **philosophers** in northern India had understood that gravitation held the solar system together, and that therefore the sun, the most massive object, had to be at its center." "Twenty-four centuries before Isaac Newton, the Hindu **Rig-Veda** asserted that gravitation held the universe together. The

Sanskrit speaking Aryans subscribed to the idea of a spherical earth in an era when the Greeks believed in a flat one. The Indians of the fifth century A.D. calculated the age of the earth as 4.3 billion years; scientists in 19th century England were convinced it was 100 million years."

(source: **Lost Discoveries: The Ancient Roots of Modern Science - By Dick Teresi** p. 1 - 8 and 159 and 174 -239). For more on Dick Teresi refer to chapters **Hindu_Culture**, **GlimpsesVI** and **GlimpsesVII**).

306. **Sir Yehudi Menuhin** (1915 – 1999) Born to Russian - Jewish parents who migrated to America. One of the greatest violinists of the 20th century revered an Indian Yogi as his teacher. He was famous for his affiliation with renowned Hatha yoga teacher **B K S Iyengar** and legendary sitarist **Ravi Shankar**. The more he learned about India and Yoga, the more he loved it. He was among the first in the West to espouse yoga and the principles of organic food.

He said: **"India is the primal source, the mother country."**

He acknowledged India, Yoga, Indian music and his teacher Iyengar in three books he authored - **Life Class**, **Unfinished Journey** and **Violin: Six lessons with Yehudi Menuhin**.

Yoga touched every dimension of Yehudi Menuhin's life.

He wrote about Yoga:

"Yoga made its contribution to my quest to understand consciously the mechanics of violin playing." "Yoga taught me lessons it would have taken me years to learn by other means. **Yoga was my compass."** He was a genius at peace - a peace, he said, that came from yoga.

A yoga lesson with his guru, B. K. S. Iyengar

In his book Six Lessons, he devoted an entire chapter to specific **yogasanas** he had learned. These practices, he asserted, "should form an important part of the practice routine of any aspiring or performing violinist."

“We in the Western world have grown to understand matter as imprisoned light, and light as liberated matter, yet this has had no influence on our spiritual thought. In practical terms it only led to the creation of the atom bomb. When I was a boy no one seemed to ask where the energies come from. Land, oil, coal, air seemed inexhaustible. Now we are realizing how our very life depends upon restoring not only our balance with nature, but also the balance within ourselves. We are depleting our reserves of spirit, health, courage and faith at an alarming rate. **The quiet practice of yoga is, in its humble yet effective way, an antidote.”**

(source: **Hinduism Today** - July/August/September 2003 p. 40-41).

"The practice of yoga induces a primary sense of measure and proportion. Reduced to our own body, our first instrument, we learn to play it, drawing from it maximum resonance and harmony."

(source: **Yoga and the Bhagavad Gita - By Tom McArthur** p. 12-14).

"Yoga" means "union." Its goal is union with the infinite, a goal which can be reached by any number of routes; but just as there is one ending, so there is one beginning, the asanas of Hatha Yoga, which are the precondition of every advance. It would be possible to make yoga a life's occupation, giving up more and more of one's time to its refinement. For me yoga is primarily a yardstick to inner peace. **In my life yoga is an aid to well-being, permitting me to do more and to do better."**

"That India should offer me at once a homeland and a new-found land with lasting power to astonish seemed only right, for it is precisely the reconciling of contradictions within an all-accepting unity that is the country's genius and its abiding appeal to me. **India, I feel, has softened my Talmudical adjudications between right and wrong, upheld innocent acceptance of the lovely things of life, given me much that was new yet welcome, understandable, waiting to experienced."**

He wrote about **Indian music**:

"Despite predisposition in India's favor, I have to acknowledge that Indian music took me by surprise. I knew neither its nature nor its richness, but here, if anywhere, **I found vindication of my conviction that India was the original source."**

"Its purpose is to unite one's soul and discipline one's body, to make one sensitive to the infinite within one, to unite one's breath of space, one's vibrations with the vibrations of the cosmos."

(source: **Unfinished Journey - By Yehudi Menuhin** p. 250 - 268). For more on Yehudi Menuhin, refer to chapters **Hindu Music** and **Yoga and Hindu Philosophy**).

307. **Sir William Wilson Hunter** (1840-1900) He was educated at Glasgow University (B.A. s86o), Paris and Bonn, acquiring a knowledge of Sanscrit, and passing first in the final examination for the Indian Civil Service in 1862. Author of **A Brief History of the Indian Peoples** and editor of **Imperial Gazetteer of India**.

He says **"The Astronomy of the Hindus has formed the subject of excessive admiration."**

(source: **Hindu Superiority - By Har Bilas Sarda** p. 332 - 348).

"The various theories of creation, arrangement and development were each elaborated, and the views of the **modern physiologists at the present day are a return with new light to the evolution theory of Kapila, whose Sankhya system is the oldest of the Darsanas."**

(source: unknown).

"The Hindus attained a very high proficiency in arithmetic and algebra independently of any foreign influence." The romance of the composition of **Lilavati** - the standard Hindu text book on Arithmetic by Bhaskaracharya - is very interesting and charming. It deals not only with the basic elements of the science of arithmetic but also with questions of interest, of barter, of permutations and combinations, and of mensuration. Bhaskaracharya knew the law of gravitation. The **Surya Siddhanta** is based on a system of trigonometry. Professor Wallace says: "In fact it is founded on a geometrical theorem, which was not known to the geometricians of Europe before the time of Vieta, about two hundred years ago. And it employs the sine of arcs, a thing unknown to the Greeks." The 47th proposition of Book I of Euclid, which is ascribed to **Pythagoras was known long ago to the Hindus and must have been learnt from them by Pythagoras."**

(source: **Indian Culture and the Modern Age - By Dewan Bahadur K. S. Ramaswami Sastri** Annamalai University. 1956 p. 67).

He observed:

"The grammar of **Panini** stands supreme among the grammars of the world, alike for its precision of statement, and for its thorough analysis of the roots of the language and of the formative principles of words. By employing an algebraic terminology it attains a sharp succinctness unrivalled in brevity, but at times enigmatical. **It arranges, in logical harmony, the whole phenomena which the Sanskrit language presents, and stands forth as one of the most splendid achievements of human invention and industry.** So elaborate is the structure, that doubts have arisen whether its complex rules of formation and phonetic change, its polysyllabic derivatives, its ten

conjugations with their multiform aorists and long array of tenses, could ever have been the spoken language of a people."

(source: **The Indian Empire - By Sir William Wilson Hunter** p. 142).

308. **Tom McArthur** (?) author of **Yoga and the Bhagavad Gita** has observed:

"If all the forms of Christianity from voodoo in Haiti to Christian Science in Boston were penned up – and had for centuries been penned up – in one peninsula, however large, then the results would be much the same as the Hinduism we see today. Vishnu and Shiva are no more at odds than Calvin and the Papacy; the Hare Krishna movement and the Ramakrishna Mission are no further apart than the Pentecostalists and the Jesuits."

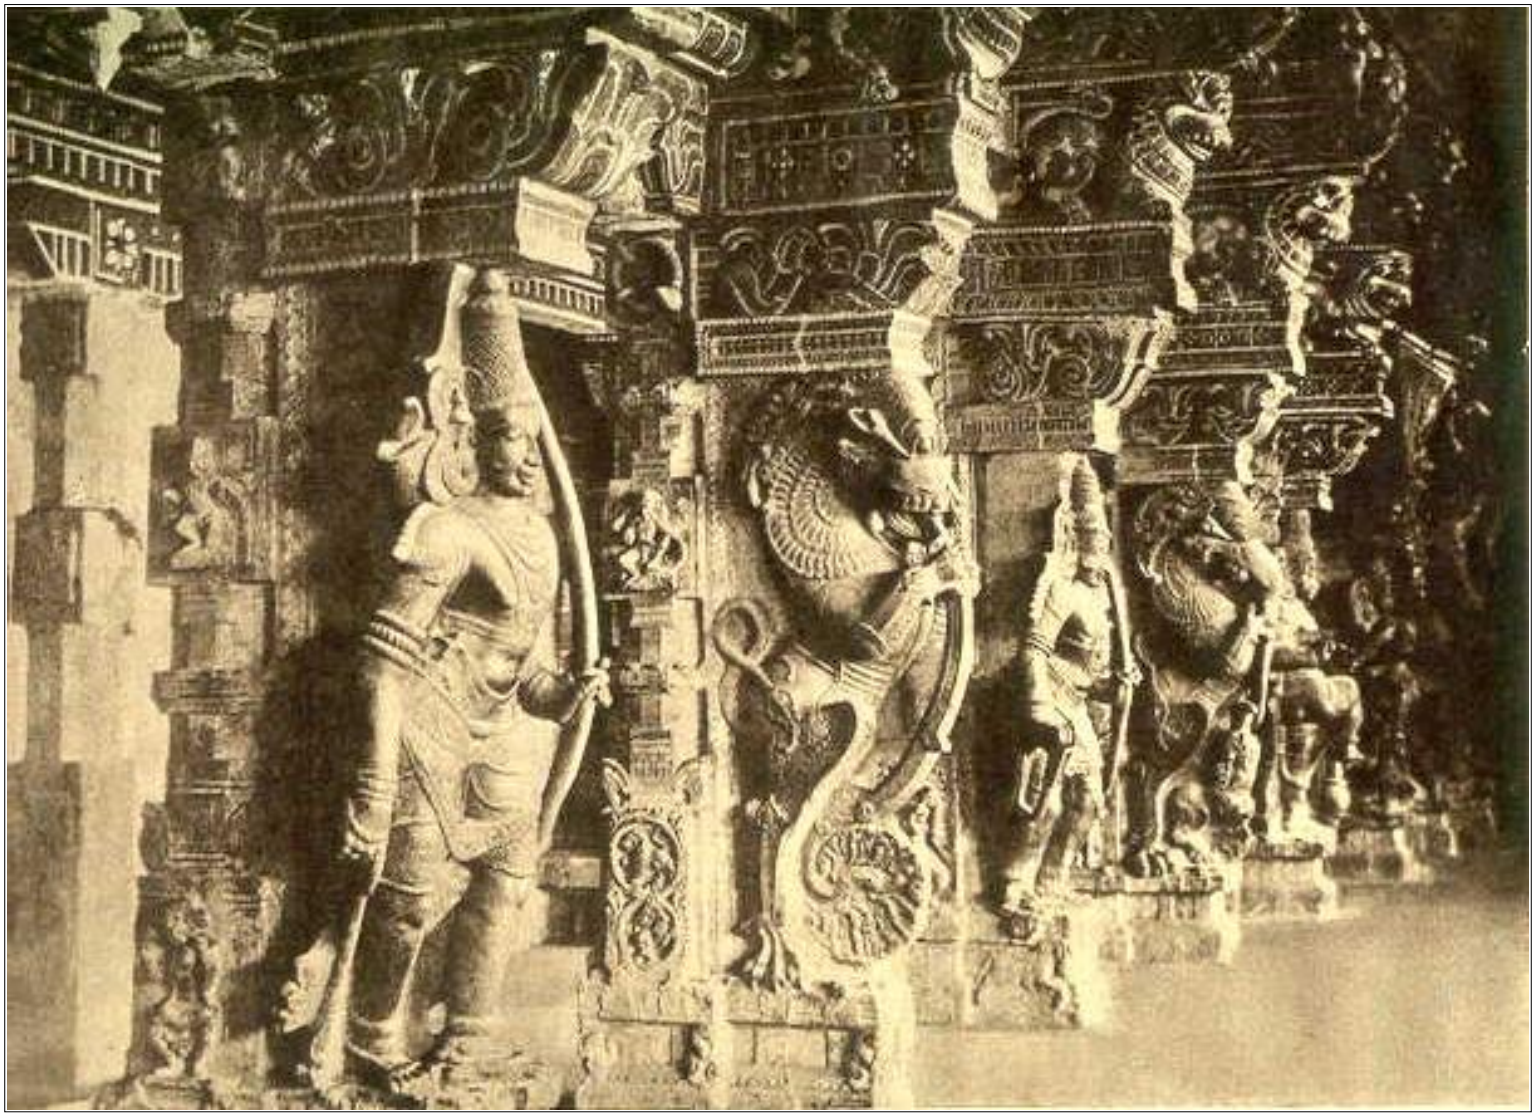
"Hinduism is India's response to what the German philosopher of religion Rudolf Otto has called 'the numinous', **that mystery all around us that fascinates and inspires awe.** The universe into which we are born –thrust, thrown, whatever, weak and dependent as kittens – is only ever partly explicable, often hostile, and always awesome, whether we want to feel the awe or not.

Hinduism demonstrates the interplay of seven factors over at least 3,000 years. Natural disasters are a constant in the collective Indian experience, part of the Wheel of Rebirth. Mountains, rivers, cities, and shrines have all been turned into focuses of supernatural powers; they are the bindus or 'points' where the gods meet us or this world touches the Other.

Hinduism combines in its **gigantic tapestry** the threads of both fantasy and logic, where some centuries ago the Western world severed the two fairly thoroughly. In the West, rationality and fantasy live uneasily together in divided minds; in India at large, the division was never even attempted, at least not until the coming of European education."

There are no Egyptian pharaohs now, but when Cleopatra lived there were **yogis,** and there are yogis still. The Greek philosophers and the Roman legions are no more, the Arab-Muslim expansion has come and gone, and the European maritime empires on which the sun wasn't supposed to set have all been dismantled. Some kind of yoga was there when all that was happening, and many kinds of yoga are here now - some even being considered for use abroad starships. That is continuity and it is worth a little thought. **Yoga is embedded in the literature of the Hindus as well as in their age old practices, and that literature is in turn one of the richest seams of recorded language anywhere on the planet. The sheer volume of stories, treatises, and commentaries challenges the imagination. "**

(source: **Yoga and the Bhagavad Gita - By Tom McArthur** p. 1 - 14). For more on Tom McArthur refer to chapter **Yoga and Hindu Philosophy**).



309. **Frithjof Schuon** (1907-1998) was born in 1907 in Basle, Switzerland, of German parents. He was a philosopher, poet and artist author of **Language of the Self. Many of his ideas are taken from Vedanta**.

Schuon often expressed a deep appreciation for Advaita-Vedanta and characterized his perspective as that of the Sanatana Dharma, the "eternal religion."

Schuon considers **yoga as a spiritual exercise** which results "not from a human willing, but from the nature of things," thus applying to the substance of the soul principles that are quasi-geometrical in their objectivity.

"The **Vedanta** appears among explicit doctrines as one of the most direct formulations possible of that which makes the very essence of our spiritual reality. (...) The *Vedanta* of Shankara, which is here more particularly being considered, is divine and immemorial in its origin and by no means the creation of Shankara, who was only its great and providential enunciator. (...) According to the **Vedanta** the contemplative must become absolutely 'Himself'; according to other perspectives, such as that of the Semitic religions, man must become absolutely 'Other' than himself --or than the 'I'-- and from the point of view of pure truth this is exactly the same thing."

(source: **Spiritual Perspectives and Human Facts - By Frithjof Schuon** chapter 2 and **Dharma, India and World Order - By Chaturvedi Badrinath** p. 261).

The great temple in South India

"Because of its vast complexity, Hinduism is inherently perplexing and its philosophies inherently paradoxical; indeed, this is part of their strength. They won't tamely co-operate and fit; they tease the mind and force it to go further. "

(source: **Yoga and the Bhagavad Gita - By Tom McArthur** p. 38-42).

310. **Madame Helena Petrova Blavatsky** (1831- 1891) HPB, as she was known, was a cultured and widely traveled woman. Brilliant, fiery and witty; able to attract the attention of the highest minds, she was in the frequent company of scientists, philosophers and scholars in many fields. She wrote many books-Isis Unveiled, The Voice of Silence and Key to Theosophy. But her magnum opus, **The Secret Doctrine**, published in 1885, is her most profound book-a bible of Theosophy.

She traveled to India and entered Tibet via Kashmir and Ladakh. In the 19th century, imperialism had reached its height. Western nations were so convinced of the superiority of the white races that they had no compunction about exploiting their colonies. In this environment, Mme. Blavatsky taught the first principle of occultism-the brotherhood of all humanity, the unity of all races.

With its strong resemblances to Eastern mysticism and spirituality, Theosophy has an intertwining relationship with Hinduism-especially the Upanishads and Advaita Vedanta-and also Buddhism. The establishment of the Theosophical Society in 1875 in New York proved to be a precursor and harbinger of Hinduism in the West.

Mahatma Gandhi reports further that the two Theosophists who introduced him to the **Bhagavad Gita** also took him on one occasion to the Blavatsky Lodge and introduced him to Madame Blavatsky and Mrs. Besant.

Theosophy was Woven From and Into the Fabric of Sanatana Dharma

The small 19th century Theosophical movement impacted Hinduism in diverse ways, from India's independence from the British to the widespread acceptance of Hindu thinking in the West. The Upanishads and Bhagavad Gita translations of Swami Prabhavananda with Theosophist Christopher Isherwood were singularly successful in clearly conveying Hindu thought to the West. Leadbeater's books on occult sciences, such as chakras and auras, reinforced Patanjali's Yoga Aphorisms. Aldous Huxley's book, Doors of Perception, promoted mystical experience and also psychedelic drugs, leading directly to the explosion of interest in the East in the 60s. **The Secret Doctrine is saturated with Hinduism and Sanskrit terminology, and the bulk of this was copied from Wilson's Vishnu Purana**

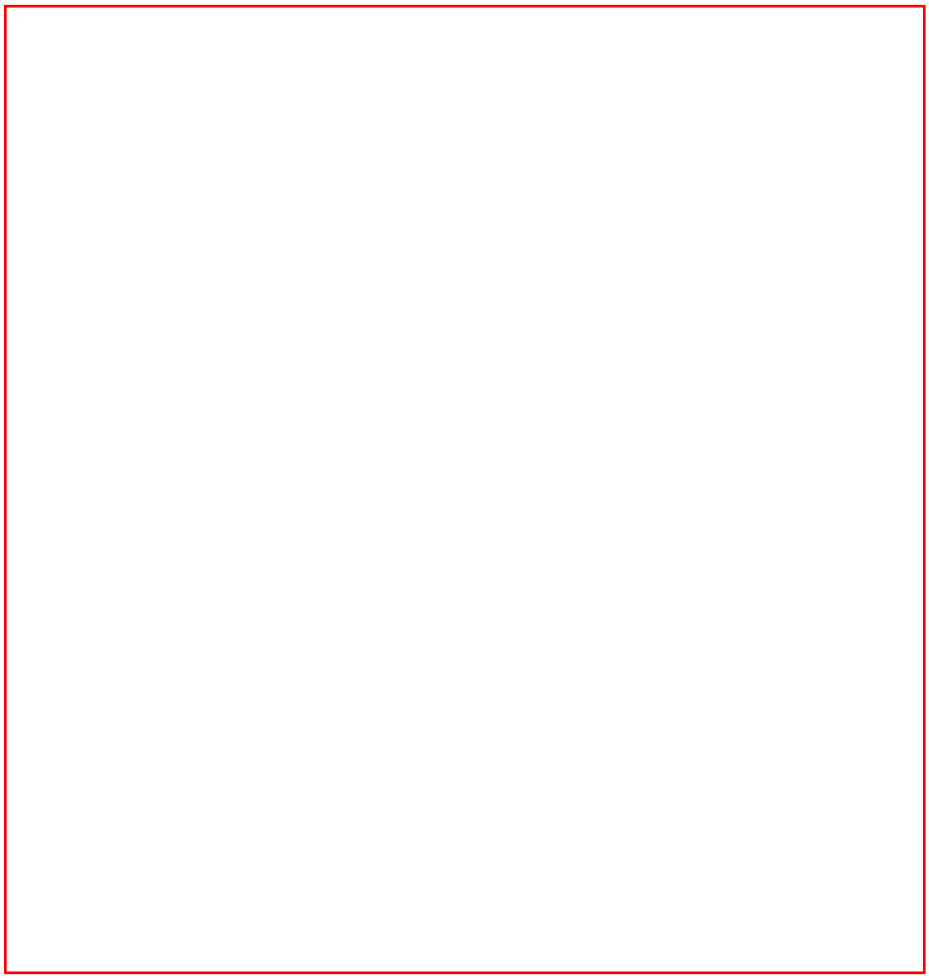
(source: **Theosophy - By Archana Dongre - Hinduismtoday.com -** June 1995).

311. **Karl Jaspers** (1883-1969) the famous Austrian existentialist philosopher

Regarding Shankara's commentary, once told Professor K. Satchidananda Murthy that, **'there is no metaphysics superior to that of Shankara.'**

(source: http://www.vedanta-newyork.org/articles/vedanta_influence_2.htm).

312. **Paul Thieme** (1905 -) German Indologist University of Tuebingen has observed:



"**Vedas are noble documents** not only of value and pride to India, but to the entire humanity because in them we see man attempting to lift himself above the earthly writing of epics."

(source: **India Rediscovered - By Giriraj Shah** p. 39).

313. **Kewal Motwani** (1899 -) author of several books including **Manu Dharma S'satra: A sociological and historical study**

"Environmental, biological, ethnological, psychological and spiritual forces have gone into the making of an Indian culture of amazing virility and continuity."

"One idea runs through all the modes of thought and segments of social reality, and that is the Vision of the One, while India's history is a continuous attempt to make this Vision a living reality in the life of every man, woman and child. This enduring quest and its realization have imparted to Indian culture a continuity, universality, humanity, and spirituality that have placed it beyond the challenge of time. This Vision emphasized **integration, synthesis, dharma, gathering up of the many into the one, in every phase of life of the individual, the group and the nation."**

"Science was woven into philosophical thought - The study and cultivation of exact sciences in India was a part of search for truth and reality. From Vedic times onwards, investigations into the realm of the spiritual included those of the physical. The whole of the philosophical literature is replete with and based on some of the tenets of science as we understand it today. **It has been an unmitigated calamity for India that it were the philologists, both eastern and western, who became the first interpreters to her ancient Sanskrit literature. India's Sanskrit literature came to be interpreted in an apologetic tone and from the standpoint of the western achievements. Some of the sublimities of the Hindu thought, far ahead of the prevailing times, were considered as oddities belonging to primitive past. The great Orientalists were philologists, not philosophers."**

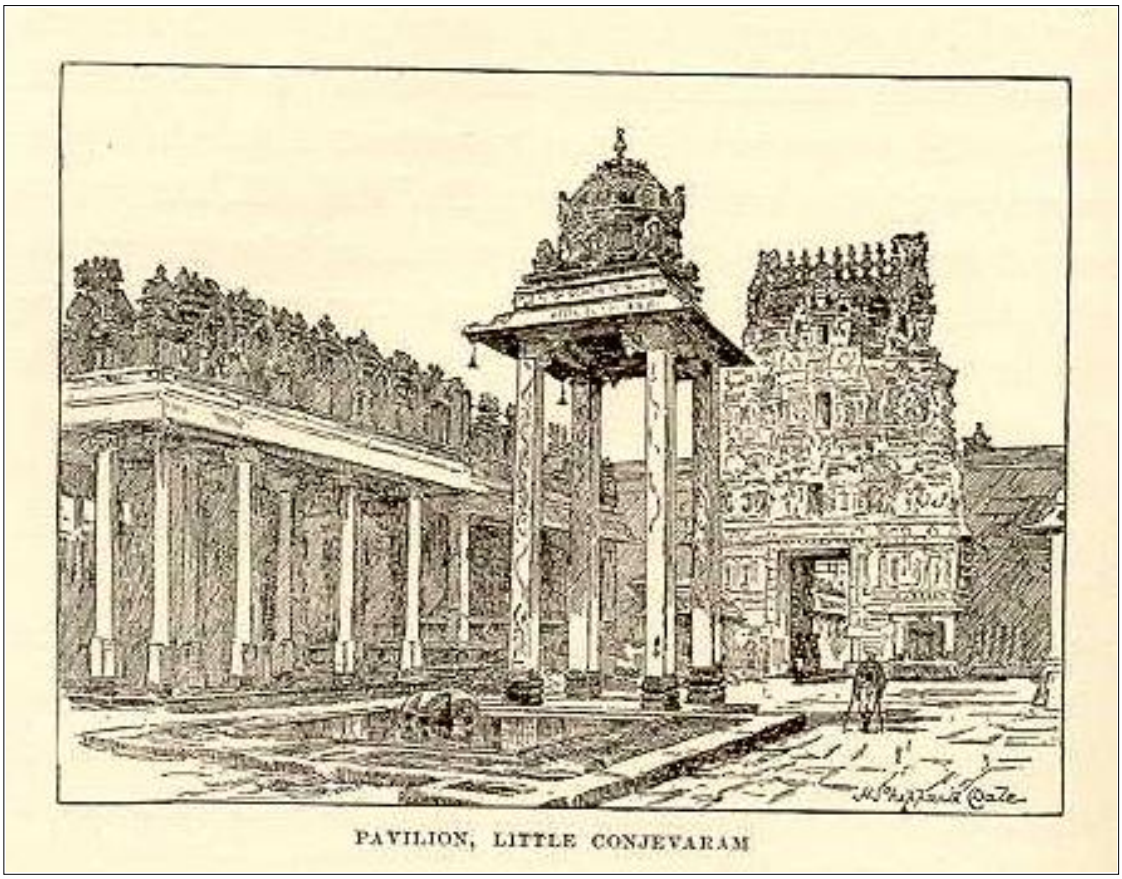
"India was called the Bharat Varsha, the "country that embraces all in one bond," and she was selected to become the embodiment of that immutable, eternal, law of the universe, Santana Dharma - dharma is that which "holds together" - which makes the universes run in their orbits. It was this principle of dharma, synthesis, balance, harmonious relationship between various forces and factors, between various individuals and groups, that came to be the corner-stone of her civilization." "India has been known as the **moksha-bhumi** and karma-bhoomi, the Land of Liberty, spiritual and temporal, gained through service of fellowmen. India was not thought of as a bhoga-bhumi, a pleasure-resort for a single life-time allowed to the mortals. India is the only country in the world where civilization has revolved round this fundamental spiritual nucleus, where the greatest concentration of intellect has centered round the basic human problem of existence..."

"From the ancient past to the present day, this spiritual quest of the One has received India's continued homage. There have been alternating periods of quiet and intense philosophical activity, but the search has continued. The lights have flickered, but never faded, so that even today, attempts are made to penetrate the esoteric sublimity of India's sacred teachings."

"In India, religion became scientific and philosophical; science received religious sanction and philosophic support, and philosophy became religious, with a practical bearing on the problems of daily life. Here lies the secret of India's uniqueness and greatness. India saw Reality as a whole; there was no partition walls in the world of the One. With this universality, humanity and sublime idealism India offered a challenge to time."

(source: **India: A synthesis of cultures – By Kewal Motwani** p. 9 - 46 and 71- 75).

314. **Sir William Wedderburn Bart** (1838 - 1918) He left for India in 1860 and began official duty at Dharwar as an Assistant Collector. He was appointed Acting Judicial Commissioner in Sind and Judge of the Sadar Court in 1874. In 1882 he became the District and Sessions Judge of Poona. At the time of his retirement in 1887, he was the Chief Secretary to the Government of Bombay. As a Liberal, William. Wedderburn believed in the principle of self-government.



"The Indian village has thus for centuries remained a bulwark against political disorder, and the home of the simple domestic and social virtues. No wonder, therefore, that **philosophers and historians have always dwelt lovingly on this ancient institution** which is the natural social unit and the best type of rural life: self-contained, industrious, peace-loving, conservative in the best sense of the word...I think you will agree with me that there is much that is both picturesque and attractive in this glimpse of social and domestic life in an Indian village. It is a harmless and happy form of human existence. Moreover, it is not without good practical outcome."

(source: **Hindu Swaraj or Indian Home Rule - By M. K. Gandhi** p.110).

315. **Robert Earnest Hume** (1877-1948) Christian missionary. He says in his book **The Thirteen Principal Upanishads**

"The earnestness of the search for truth in one of the delightful and commendable features of the **Upanishads**

(source: **The Thirteen Principal Upanishads - By R. E. Hume** p. 36 and http://www.vedanta-newyork.org/articles/vedanta_influence_2.htm).

PAVILION, LITTLE CONJEVARAM

316. **G. Le Bon** (?) commenting on **Hindu philosophers:**

"Their philosophical daring remains unequalled to this day; indeed, one has to admit that, 2,000 years ago, **India had begun pondering on the great issues which have been raised in the West only in within the last century,** and that, in doing so, it did not shrink from the most drastic solution."

(source: **The World of Ancient India - By G. Le Bon** p. 100).

317. **James Young** (1782-1848) officer, Bengal Horse Artillery, and twice sheriff of Calcutta Secretary, Savon Mechanics Institutes

"Those races (the Indian viewed from a moral aspect) are perhaps the most remarkable people in the world. They breathe an atmosphere of moral purity, which cannot but excite admiration, and this is especially the case with the

pioneer classes, who, notwithstanding the privations of their humble, lot, appear to be happy and contented. Domestic felicity appears to be the rule among the Natives, and this is the more strange when the customs of marriage are taken into account, parents arranging all such matters. Many Indian households afford examples of the married state in its highest degree of perfection.

This may be due to the **teachings of the Shastras...."**

(source: **Hindu Swaraj or Indian Home Rule - By M. K. Gandhi** p. 108 - 1-09).

318. **Abraham Kaplan** (1918 -) American professor of philosophy, has commented that the **Upanishads** are:

"remarkable in literary quality as well as in content."

(source: **The New World of Philosophy - By Abraham Kaplan** New York: Vintage Books, 1961 p. 203).

319. **Anant Sadashiv Altekar** (?) author of several books including **Education in Ancient India** and **Sources of Hindu dharma in its socio-religious aspects**, wrote:

"Hindu religion, philosophy and social structure are nothing but the records of a glorious and instructive struggle of the human mind to free itself from limitations that become meaning less in the course of time, and to attain to more and more glorious heights that are revealed by man's ever expanding vision. **There is no doubt that Hinduism will become once more a great world force, the moment this consciousness becomes a part and parcel of the modern Hindu mind and begins to mold and influence its activities in the different spheres of life."**

(source: **Hinduism: A Static Structure or a Dynamic force? - By A S Altekar** p. 425).

320. **Cyril Edwin Mitchinson Joad** (1891-1953) British philosopher, author, teacher, and radio personality. He was one of Britain's most colorful and controversial intellectual figures of the 1940s. He became head of the department of philosophy at Birbeck College, Univ. of London, in 1930. As a rationalist, he was a successful lecturer and writer. Author of several books including **Guide to Philosophy** and **The Story of Indian Civilization**.

"Hinduism developed from the very first a wide tolerance, Hindus do not proselytize, they do not lay exclusive claims to salvation, and they do not believe that God will be pleased by wholesome slaughter of those of his creatures whose beliefs are mistaken. As a result, Hinduism has been less degraded than the most religions by the anomaly of creed wars."

The civilization of the East are very old; their roots stretch back into the past to a time when Europe was still a cockpit of fighting savages."

(source: **India Rediscovered - By Dr. Giriraj Shah** p. 23 -24 Abhinav Publications New Delhi 1975 and **Counter Attacks From the East - By C E M Joad** p. 23-24 Hindu Kitabs Ltd. Bombay1933).

Regarding the **Upanishads**, he observed:

"The thought of the Upanishads is bold and free, and their general conclusion is that mystical experience is the pathway to reality."

He made the following observation regarding **Hindu philosophy**:

"Perhaps the most outstanding achievement of Indian civilization is Indian philosophy, or rather Indian philosophy and Indian religion. Indian philosophy is quite unlike that of any other people; it is distinguished by three characteristics.

The first is continuity. Indian thinkers have been enquiring into the nature and meaning of the universe more or less continuously for a period of some three thousand years.

The second is unanimity. Broadly speaking, all Indian thinkers have concurred in holding that the universe in its real nature is in an important sense a unity, and that this unity is spiritual. Now that universe, as it appears, is certainly not a unity but a heterogeneous diversity. It contains, that is to say – it apparently is – a collection of an enormous number of people and things. Hence, there must be a distinction between the universe as it really is and the universe as it appears, a distinction which may be expressed by saying that the universe is a reality which manifests itself in diversity, just as the leit motify or underlying theme of a piece of music manifest itself in the diversity of individual notes which all express the same musical idea. Now, it is broadly true that all Indian thinkers have concurred in making this distinction.

Thirdly, and here we come to the link between philosophy and religion – Indian philosophy has never been confined to the activity of the intellect. Formally, no doubt, it is a search for truth; but philosophy in India does more than search for truth; it also seeks and prescribes a way of life. In fact, in the last resort it is a way of life, a way of life as well as a way of believing. This practical effect of Indian philosophy follows inevitably from the doctrines of Indian philosophers.

Arthanari Shiva

For the Westerner, a religion is a body of doctrine consisting of certain affirmations about the nature of the universe and about God, the creator of the universe, divinely revealed to the mind of the believer, and therefore, absolutely and eternally true. From the assurance that the doctrines of any particular religion are absolutely and eternally true, it follows that the doctrines of any other religion, is so far as they differ from them, cannot be true. Hence, the persecution and intolerance which have so continuously accompanied the practice of religion in the West are in a large part the offspring of the persecutors' conviction of the absolute truth of the beliefs in the interests of which he has persecuted, and of the wickedness of the contrary beliefs which he has sought to stamp out. Now in Indian philosophy, while teaching that reality is spiritual and is one, was not prepared to make a detailed and dogmatic specification of the nature of "the One". In the absence of detailed and dogmatic specification, men were at liberty to conceive it very much as they pleased. **Thus, the doctrines of Hinduism were never reduced to a set of formal creeds and Hindu religion has always been willing to receive new experiences and to incorporate new knowledge. "**

"Indian history has been distinguished throughout by a tendency towards toleration. Other peoples' faith have been preserved, other people's customs respected; and not only preserved and respected, but assimilated. **Such toleration is a very rare thing in the history of mankind, as rare as it is invaluable.** Throughout the whole course of Indian history, the characteristic Indian endeavor has been to look for the common element in apparently different things, the single reality that underlies the apparently many appearances. It is interesting then, to note this same insistence upon unity, the same endeavor to unite many into one as exhibited by the very early lawgivers and administrators of India. At the very beginning of Indian history, we find men trying to reconcile the conflicting ideas held by different people with regard to the right way of living together in society and the right way of conceiving God." **"Whatever the reason, it is a fact that India's special gift to mankind** has been the ability and willingness of Indians to effect a synthesis of many different elements both of thoughts and peoples, to create in

short, unity out of diversity." **"They are cosmopolitan in outlook, tolerant in behavior, and open minded in thought."**

Copyright © 2001 - All Rights Reserved.

From the beginning of her history, India has adored and idealized, not soldiers and statesmen, not men of science and leaders of industry, not even poets and philosophers, who influence the world by their deeds or by their words, but those rarer and more chastened spirits, whose greatness lies in what they are and not in what they do; men who have stamped infinity on the thought and life of the country. To a world given over to the pursuit of power and pleasure, wealth and glory, they declared the reality of the unseen world and the call of the spiritual life. This ideal had dominated the Indian religious landscape for over forty centuries. Hinduism has thus had a long and continuous evolution and in the process has influenced all other major world religions.

India, which is, in a sense, representation of the Asiatic consciousness, has never been isolated from the Western continent in spite of geographical, linguistic, and racial barriers. A large part of the world received its religious education from India. In spite of continuous struggle with superstition and theological baggage, India has held fast for centuries to the ideals of the spirit. Its influence or, at any rate, connection with Western thought, though not constant and continuous, has been quite significant. Commenting on the teachings of Christian missionaries as Plotinus, Clement, Gregory, Augustine and the like, Dean Inge observes: "They are the ancient religion of the Brahmins masquerading in the clothes borrowed from the Jewish, Gnostic, Manichaen and Neo-Platonic allegories. That is why Mahatma Gandhi told Romain Rolland in Switzerland on his way back to India from the Round Table Conference (1911) that Christianity is an echo of the Indian religion and Islam is the re-echo of that echo."

Jules Michelet (1789-1874) French writer, the greatest historian of the romantic school, affirms this: " Follow the migration of mankind from East to West along the sun's course and along the track of the world's magnetic currents; observe its long voyage from Asia to Europe, from India to France.....At its starting point in India, the birthplace of races and religions, the womb of the world...."

Introduction

Dr. Arnold Joseph Toynbee (1889-1975) the great British historian. His massive research was published in 12 volumes between 1934 and 1961 as `A Study of History'. Toynbee was a major interpreter of human civilization in the 20th century. He has said:

" India is not only the heir of her own religious traditions; she is also the residuary legatee of the Ancient Mediterranean World's religious traditions." "Religion cuts far deeper, and, at the religious level, India has not been a recipient; **she has been a giver.** About half the total number of the living higher religions are of Indian origin." he said.

(source: **One World and India - By Arnold Toynbee** p. 42- 59).

Volney, Constantin Francois de Chasseboeuf, comte de 1757-1820) historian and philosopher and French scholar. His principal work, **Les Ruines; ou, Méditation sur les révolutions des empires** (1791), which popularized religious skepticism, was influential not only in France but also in England and the United States; it went through many translations and editions and stimulated much controversy.

Volney of France was perhaps the first to propound in the 18th century that **"Jesus was a solar myth derived from Krishna' of Hindu mythology."** Buddhism existed at least four hundred years before Christianity. Another French theologian, **Ernest Havet**, did the same in his study of primitive Christianity published in 1884. A

He was followed by **Ernest Renan**, the famous Catholic theologian from France, who pointed out **Buddhist parallels in the parables of Jesus** in his **Life of Jesus** published in 1863.

Max Muller noted "startling coincidences between Buddhism and Christianity in his **India - What It Can Teach Us** published from England.

A stronger case along the same lines was made by **Rudolf Seydel**, Professor in the University of Leipzig (Germany), whose first book, **The Gospel of Jesus in relation to the Buddha Legend**, published in 1882, was followed by a more elaborate one, **The Buddha Legend and the Life of Jesus**, published in 1897. Finally, **J. M. Robertson**, a British scholar and a Member of Parliament, revived the Volney thesis in 1900 by stating in his **Christianity and Mythology** that **"the Christ-Myth is merely a form of the Krishna-Myth.**

(source: **Jesus Christ: An Artifice for Aggression - By Sita Ram Goel** p. 53).

In the past, the West and India were immediate neighbors. Before the Islamic civilization came between the two, the empire, which was first Persian, then Greek and later Roman,

stretched from the Mediterranean to the Indus. The commercial ties between India and Europe were more direct than they have ever been over the last ten centuries. Indian monks and their disciples lived and taught for several hundred years in the Middle East and founded large monasteries, the traces of which can be seen mainly in Antioch and Alexandria. In the 4th A.D. Saint Jeremy fulminated against the fake prophets from India. **But his protest came to late, for the men from India had already left their mark on the Mediterranean mind in search of holiness.**

The Bhagavad Gita, Buddhism and Christianity

The Bhagavad Gita doctrine of l*okasmgraha* (good of humanity) and of Divine Incarnation influenced the Mahayana or the Northern school of Buddhism. The Buddhist scholar Taranath who wrote the history of Buddhism mentions that the teacher of Nagarjuna, who is regarded as the chief originator of the Mahayana school of Buddhism, was Rahulabhadra who **"was much indebted to sage Krishna and still more to Ganesha…..This quasi-historical notice, reduced to its less allegorical expression means that Mahayanism is much indebted to the Bhagavadgita and more even to Shaivism."**

(source: **Dr. Kern's Manual of Buddhism**).

Dr. S. Radhakrishnan has said: " Buddhism which arose in India was an attempt to achieve a purer Hinduism. It may be called a reform within Hinduism. The formative years of Buddhism were spent in the Hindu religious environment. It shares in a large measure the basic pre suppositons of Hinduism. **It is a product of the Hindu religious ethos**."

(source: **Religion and Culture - By S. Radhakrishnan** p. 29).

The origin of Christianity is due also to Buddhist influence. The teachings of the Buddha got woven into Greek, Egyptian and Hebraic theology, giving rise to the new Christian religion. Renan sensed this when he wrote in his Life of Christ that 'there was something Buddhist' in the Word of Christ. **Flavius Joseph observed that the Pharisees of Alexandria had taken from the Indians the belief in resurrection of the dead.** Though this idea was alien to the Hebrew dogma, it gradually got absorbed into it, which probably explains the resurrection of Jesus Christ. At a more mundane level, Christians who venerate relics, ring bells and burn incense are unwittingly imitating Indian rituals that were established many centuries before Christianity. Ironically in the 19th century, some Christian missionaries expressed their indignation at Indian pagans ringing Christian bells and burning Christian incense when in point of fact it was the Christians who were imitating the Indians.

These influences from India may come as a surprise to many Christians. Yet they were often discussed in the early 19th century when Europe discovered the Vedas and the Upanishads in translation. European philosophers, especially **Soren Kierkegaard,** were amazed by the evangelical tone of these holy books from India. More recently, with the discovery of the Dead Sea Biblical manuscripts, some archaeologists who specialize in

religion have spoken once again of an Indian connection between Buddhist monks and the Essenian community which lived next to Jerusalem.

(source: **The Genius of India - By Guy Sorman** ('Le Genie de l'Inde') p.189-195).

The Hindus venerate Christ as an Incarnation, and they see that his essential message is that of the Sanatana Dharma (the Eternal Religion). The special ethical and religious ideas contained in the teachings of Christ have no antecedents in the religious traditions in which he was born. Non-resistance to evil, love of enemies, monasticism, love of death, the assertion of man's innate perfection (kingdom of heaven is within you), universalism are principles not to be found in the religion into which he was born.

John the Baptist, who belonged to the monastic sect of the Essenes, was a Buddhist. **Dr. Moffatt**, in his book, **Encyclopedia of Religion and Ethics,** vol. v, p.410, remarks, "Buddhist tendencies helped to shape some of the Essenic characteristics." King Ashoka of India (third century B.C.) sent Buddhist missionaries to different parts of the world, from Siberia to Ceylon, from China to Egypt, and for two centuries before the advent of Christ, the Buddhist missionaries preached the ethics of Buddha is Syria, Palestine and Alexandria. The Christian historian, **Mahaffi,** declared that the Buddhist missionaries were forerunners of Christ. " Philosophers like **Schelling** and **Schopenhauer**, and Christian thinkers like **Dean Mansel and D. Millman** admit that the sect of the Essenes arose through the influence of the Buddhist missionaries who came from India.

(source: **Complete works of Swami Abhedananda**, vol.2, p.120).

Professor Friedrich Heiler (1892-1967) German scholar of religion, writing during and after the First World War, in an important article on 'Christian and Non-Christian Religions' writes: " The doctrines of the Trinity and Incarnation as well as the Virgin Birth, belief in the Divine Sacrifice of love, the conception of irresistible Grace and justification by faith alone, prayer prompted by the grace of God, petition for forgiveness of sins, all-embracing love towards every creature, heroic love of enemies, belief in everlasting life, in the judgment and the restoration of the world - there is not a single central doctrine of Christianity which does not have an array of striking parallels in the various non-Christian faiths." (Hibbert Journal, January 1954)

(source: **Religion and Culture - By S. Radhakrishnan** p. 67).

A European version of the Buddha story; Barlaam and Josaphat

(Josaphat sees a blind man, a cripple and a dying man. from Barlaam and Josaphat - Augsburg, 1477
source: East-West Passage: the travel of ideas, arts and inventions between Asia and the Western world
- By Michael Edwardes).

Many incidents in Christ's life as well as the organization of the Catholic Church and its rituals suggest their Buddhistic and Hindu origin. The Gospel stories of the immaculate conception of a virgin mother, the miraculous birth, the story of slaughter of the infants by Herod, and the chief events of Christ's life seem like repetitions of what happened in the lives of Krishna and of Buddha. The idea of Incarnation is purely and Indian idea. It was not known among the Jews. The star over Buddha's birthplace and the prophecy of the old monk Asita are repeated in the Gospel story of Simeon. The temptation of Buddha by Mara, the evil spirit, the twelve disciples, with the beloved disciple Ananda, and the many miracles recall the stories in Christ's life.

Under cover of the legend of **Barlaam and Josaphet,** Buddha has found a place among Catholic saints and has his saint-day in the calendar of the Greek and Roman churches. The story is a Christianized version of one of the legends of Buddha, as even the name Josaphat would seem to show. This is said to be a corruption of the original Joasaph, which is again corrupted from the middle Persian **Budasif (Budsaif=Bodhisattva).**

The rosary, the veneration of relics, asceticism, baptism, confession, etc. are also of Indian origin. The name Josaphet is **Bodhisattva** in the corrupt form. The story of the Buddha's life underwent an extraordinary transmutation as it moved west and became what is one of the most widespread legends ever told -- the story of Barlaam and Josaphat. More than sixty translations, versions, or paraphrases have been identified. It

was altered to fit the religious climate of each language and culture. As it moved westward, the story was adopted and adapted by Manicheans in central Asia, and then it became Christianized. In its new version, Barlaam was a Christian monk who had converted Josaphat (the name was a linguistic development from the word Bodhisattva -- one capable of Buddhahood). It may be that Georgian Christians in the Caucasus were the first to give the story a Christian cast, in the sixth or seventh century.

There are innumerable similarities between Hindu-Buddhist practices and doctrines and those of Christianity.

The Russian author, **Nicholas Notovitch** translated in 1894 a biography of Christ found in Nepal in a Buddhist monastery which said that Christ went there during the thirteen years of his life of which there is no record in the Gospel. Notovitch author of a book, **The Unknown Life of Christ,** asserting that during his long period of obscurity Jesus had stayed with Brahman and Buddhist monks, who had initiated him into Indian religions. The book was first published in French and edited, abridged, and translated into English by Violet Crispe in 1895. This study was based on the materials Notovitch had collected during his travels in India and Tibet, particularly on the records of Saint Issa discovered by him at the monastery Himis. Inevitably the book excited fierce controversy and reproach from some theologians. Max Muller disputed Notovitch's assertions and questioned the authenticity of the latter's evidence. Despite this, Notovitch reaffirmed his views when the English version was published. The German scholar **Faber-Kaiser's** more recent book entitled **Jesus died in Kashmir'** also supports Ahmadiya sect in Islam that Jesus did not die on the Cross, but came to India and died near Rozabal not far from Srinagar in Kashmir.
(**http://www.tombofjesus.com/AcharaS.htm#Yuz**)

French historian **Alain Danielou** had noticed as early as 1950 that "a great number of events which surround the birth of Christ - as it is related in the Gospels - strangely remind us of Buddhists and Krishnaites legends".

Danielou quotes as examples the structure of the Christian Church, which resembles that of the Buddhist Chaitya; the rigorous asceticism of certain early Christian sects, which reminds one of the asceticism of Jain and Buddhist saints; the veneration of relics, the usage of holy water, which is an Indian practice, or the word 'Amen', which comes from the Hindu 'OM'.

There are some indication that Christ came to India for spiritual initiation and borrowed from Buddhism for his teachings. According to **Alain Danielou**, who wrote the **Histoire de l'Inde,**

"Many sects which developed in the first century before Christ in Palestine, had a strong

Hindu and Buddhist influence and a great number of legends surrounding the birth of Jesus Christ, are strangely similar to Buddhist and Krishnaites stories. He adds that the structures of the church resembles those of Chaitya Buddhism and that the early Christian asceticism seems to have been inspired by Jainism."

(source: **Rewriting Indian History** - **By Francois Gautier** pg 9-10)

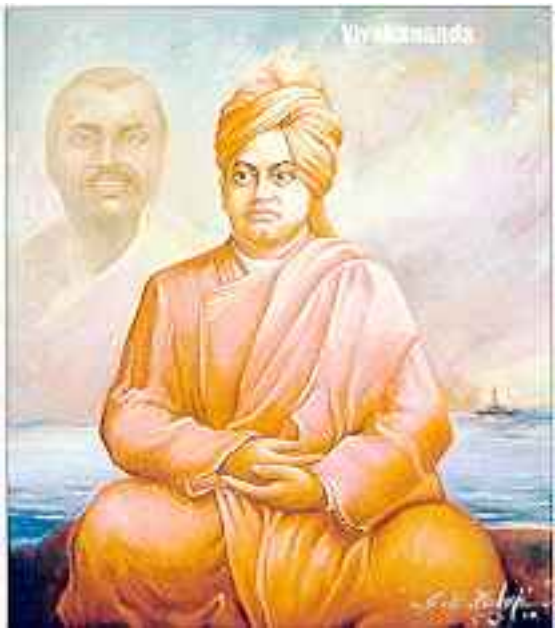
Belgium's historian Konraad Elst also remarks "that many early Christian saints, such as **Hippolytus** of Rome, possessed an intimate knowledge of Brahmanism." Elst even quotes the famous **Saint Augustin** who wrote:

"We never cease to look towards India, where many things are proposed to our admiration".

Unfortunately, remarks American **David Frawley**, "from the second century onwards, Christian leaders decided to break away from the Hindu influence and show that Christianity only started with the birth of Christ". Hence, many later saints began branding Brahmins as "heretics" and **Saint Gregory** set a future trend by publicly destroying the "pagan" idols of the Hindus.

It is unknown as to how Christianity arrived in India during the first century. If Christianity could reach India during the first century and find a sanctuary why could not Indian religions, especially Buddhism which was equally proselytizing reach western Asia and the Greco-Roman world and find a footing there? The road surely must have been open both ways.

Lamas at a prayer meeting



In 1842, two French missionary travelers to Tibet, **Hue and Gibet,** were shocked at the close resemblances between Catholic and Lamaistic rituals. They wrote, "The crozier, the exorcism, the censer with the five chains, the blessings which the lamas impart by extending the right head over the heads of the faithful, the rosary, the celibacy of the clergy, their separation from the world, the worship of saints, the fasts, processions, litanies, holy water – these are the points of contact the Buddhists have with us."

(source: **The Legacy of India - edited By G T Garratt** Oxford At The Clarendon Press).

Indeed, **Lamaistic Buddhism,** which did not follow the serene metaphysical teaching of the Buddha closely, represented demons and torments of hell as lurid as those of mediaeval Christianity. Even in the most Judaic of the epistles in the New Testament the phrase **"the wheel of birth"** occurs, which **Schopenhauer** ascribed to Indian influence.

In an interview in Detroit in 1894, **Vivekananda** said, "Our religion is older than most religions and the Christian creeds came directly from the Hindoo religion. It is one of the great offshoots. The Catholic religion also takes all its forms from us, the confessional, the belief in saints and so on, and a Catholic priest who saw this absolute similarity and recognized the truth of the origin of the Catholic religion was dethroned from his position because he dared to publish a volume explaining all that he observed and was convinced of" (Swami's reference was no doubt to **Bishop Brigandet's Life of Buddha**) (From **Vivekananda, New Discoveries by Marie Louise Burke,** 2nd ed, p 208). For more refer

to **Resurrection of the Dead In the Nag Hammadi Codices & Its Relationship to the Buddhist Doctrine of 'Rebirth**).

Great Indian sages, such as Sri Aurobindo or Sri Sri Ravi Shankar, the founder of the Art of Living, which is practiced in more than 80 countries, have often remarked that the stories recounting how Jesus came to India to be initiated, are probably true. Sri Sri Ravi Shankar notes, for instance, that Jesus sometimes wore an orange robe, the Hindu symbol of renunciation in the world, which was not a usual practice in Judaism. "In the same way", he continues, "the worshipping of the Virgin Mary in Catholicism is probably borrowed from the Hindu cult of Devi." **Bells too, which cannot be found today in synagogues, the surviving form of Judaism, are used in church and we all know their importance in Buddhism and Hinduism for thousands of years.** There are many other similarities between Hinduism and Christianity: incense, sacred bread (prasadam), the different altars around churches (which recall the manifold deities in their niches inside Hindu temples); reciting the rosary (japamala), the Christian Trinity (the ancient Santana Dharma: Brahma, Vishnu and Mahesh), Christian processions, the sign of the cross (Anganyasa), and so on.

The Catholic Church, however, developed with dualistic principles of God in heaven and creation below which have created an insoluble conflict between faith and reason. The conflict has reached its ultimate acuity in our day of scientific development. Hindus believe that the non-dualistic teachings of Christ have not been generally understood in the West.

Christianity's Hindu Heritage

Commenting on the teachings of Christian missionaries as Plotinus, Clement, Gregory, Augustine and the like, **Dean Inge** observes: "They are the ancient religion of the Brahmins masquerading in the clothes borrowed from the Jewish, Gnostic,Manichaen and Neo-Platonic allegories. That is why **Mahatma Gandhi told Romain Rolland** in Switzerland on his way back to India from the Round Table Conference (1911) that **Christianity is an echo of the Indian religion and Islam is the re-echo of that echo."**

(source: **India in Primitive Christianity - Arthur Lillie**).

Objective and open-minded scholars long ago conceded that Christianity is at heart a revamped form of Judaism. In the process of its development as something distinct from its mother religion, it became hybridized with so much pagan influence that it ultimately alienated its original Jewish base and became predominantly Gentile. The source of this pagan influence is varied and vague in the minds of most advanced Bible critics, but it may owe more to Hinduism than most people suspect.

The average person does not connect India with the ancient Middle East, *but the existence of some trade between these two regions is documented, even in the Bible.* Note the reference to spikenard in the Song of Solomon (1:12; 4:13-14) and in the Gospels (Mark 14:3; John 12:3). This is an aromatic oil-producing plant (*Nardostachys jatamansi*) that the Arabs call *sunbul hindi* and obtained in trade with India. It is axiomatic that influence follows trade, and the vibrant culture of India could not help but impact on anyone exposed to it. The influence on Judaism came for the most part indirectly, however, via the Persians and the Chaldeans, who dealt with India on a more direct basis. (Indeed, the Aryans, who invaded and trans- formed India over 1500 years before Christ, were of the same people who brought ancient Persia to its greatest glory. Persia's name today--Iran--is a corruption of *Aryan*.) The ancient Judeans absorbed much of this secondhand influence during the Babylonian captivity of the sixth century B. C., and during the inter testamental period, when Alexandria became the crossroads of the world, intellectuals both Jew and Gentile were exposed to a variety of ideas, some of which originated on the Indian Subcontinent.

From Pythagoras, who believed in the transmigration of souls, apparently because of his contacts with religious teachers from the east. Pindar, who believed in metempsychosis, Plato, who could not have been ignorant of Karma, through Klaxons, the Indian sage, who accompanied Alexander, Apollonius of Tyana, who came to Taxila to study under the Brahmins, Clement of Alexandria, the early Christian teachers of the second century A.D., who refers to Buddhists and Brahmins in his work and Plotimus, who went to Persia to meet the Brahmins, the Contacts between India and Greek thinkers seem to have been continuous.

According to **Klaus K. Klaustmaier,** in his book **A Survey of Hinduism** pg 18-19

"The kings of Magadha and Malwa exchanged ambassadors with Greece. A Maurya ruler invited one of the Greek Sophists to join his court, and one of the greatest of the Indo-Greek kings became famous as the dialogue partner of the great Buddhist sage Nagasena, while in the opposite direction, Buddhist missionaries are known to have settled in Alexandria, and other cities in the Ancient West. It is evident then, that Indian thought was present in the fashionable intellectual circuit of ancient Athens, and there is every reason to suppose that Indian religious and philosophical ideas exercised some influence on early and classical Greek philosophy. Both Greeks and Romans habitually tried to understand the religions of India by trying to fit them as far as possible into Greco-Roman categories. Deities in particular were spoken of, not in Indian but in Greek terms and called by Greek names. Thus Shiva, was identified as "Dionysos," Krsna (or perhaps Indra) as "Heracles." The great Indian epics were compared to those of Homer. Doctrinally, the Indian concept of transmigration had its counterpart in the metempsychosis taught by

Pythagoras and Plato; nor was Indian asceticism altogether foreign to a people who remembered Diogenes and his followers."

Parallels have also been found between the Biblical account of the creation of man by God in his own image and the creation of woman out of man (Genesis I :27) and the statements in the Hindu scriptures in the Hindu scriptures that God became man and created woman (Brihadaranyaka Upanishad(1:3 and 1:4) and Brahma as God divided himself into svayambhu Manu (man) and Satarupi (Woman the Bhagavata purana). There is a further parallel between the temptation of Adam and Eve, Who ate of the apple (Genesis III) and the references to two birds "beautiful of wing, inseparable friends, dwelling together in the same tree (the universe) of whom one (the individual being) eats the fruit of action, while the other (universal being) looks on and Svetesvatara Upanishad(4:6). The Indian scriptures, far from being in conflict with Western thought, seem very often to contain the same or parallel ideas as in Biblical literature. The ascent of man in the Books of Enoch is said to match a similar account in the Kausitaki Upanishad and even the concepts of the kingdom of God and the son of man have been discovered in the Rig Veda.

The precise pattern of influence was neither observed nor documented, but it can be inferred from the numerous uncanny similarities in concept and expression, not all of which can be coincidental. Let us examine the telltale evidence (none of which, it may be added, depends upon any apocryphal account of the alleged "lost years" of Jesus in India).

The Brahmin caste of the Hindus are said to be "twice-born" and have a ritual in which they are "born in the spirit." Could this be the ultimate source of the Christian "born again" concept (John 3:3)?

The deification of Christ is a phenomenon often attributed to the apotheosis of emperors and heroes in the Greco-Roman world. These, however, were cases of men becoming gods. In the Jesus story, the Divinity takes human form, god becoming man. This is a familiar occurrence in Hinduism and in other theologies of the region. Indeed, one obstacle to the spread of Christianity in India, which was attempted as early as the first century, was the frustrating tendency of the Hindus to understand Jesus as the latest avatar (incarnation) of Vishnu.

It is in the doctrine of the **Trinity** that the Hindu influence may be most clearly felt. Unknown to most Christians, Hinduism has a Trinity (or Trimurti) too: Brahma, Vishnu, and Shiva, who have the appellations the Creator, the Preserver, and the Destroyer (and Regenerator). This corresponds to the Christian Trinity in which God created the heavens and the earth, Jesus saves, and the Holy Spirit is referred to as a regenerator (Titus 3:5). It is interesting to note, furthermore, that the Holy Spirit is sometimes depicted as a dove, while the Hebrew language uses the same term for both "dove" and "destroyer"!

In the **Bhagavad Gita**, a story of the second person of the Hindu Trinity, (Vishnu) who took human form as Krishna. Some have considered him a model for the Christ, and it's hard to argue against that when he says things like, **"I am the beginning, the middle, and the end" (BG 10:20 vs. Rev 1:8).**

With the historical reality of Indian influence on the Middle East being an established fact, how can the Christians account for these similarities with anything less feeble than coincidence, or less bizarre than the notion of "Satanic foreknowledge and duplication," which is sometimes invoked to explain the similarities of Judeo-Christian precursors?

Christ spend his youth in India?

The celebration of the birthday of Christ might lose a little sheen if we seriously pursue the question, where did Jesus spend 18 years of his life, between the ages of 12 and 30? Both history and gospels, are completely silent about the life of Jesus before his 30th year.

A Chilean diplomat **Miguel Serrano** in his book, "**The Serpent of Paradise: The Story of an Indian Pilgrimage** (1963) has written of his rich and varied experiences among yogis and sadhus of India. He was looking for great mystics who he believed were living in the Himalayas guarding a magical science. **During his sojourn in Kashmir, Serrano came across evidence to suggest that Jesus Christ had come to India and that the tomb of Yousa-Asaf in Srinagar was in fact the tomb of Jesus.** He quotes a legend, according to which he was in Kashmir, the original name for Kashmir, Ka means "the same as" or "equal to" and shir means Syria. Manuscripts in the Sharda language, which is derived from Sanskrit, seem to bear close relationship to the biblical story. According to this Kashmir legend, Jesus came to Kashmir and studied under holy men, who taught him mysterious practices. Later the legend says, Jesus returned to the Middle East and he then began to preach among the ignorant masses of Israel the mystical truths he had learned in Kashmir. To impress and to convert them he often used the powers he had acquired through the practices of Yoga, and these were then referred to as miracles. Then in due course Jesus was crucified, but he did not die on the cross. Instead, he was removed by some Essenes brothers, restored to good health and sent back to Kashmir, where he lived with his masters until his death. There is yet another theory, which holds that the Jewish

race originated in India centuries ago and some of them came back almost by instinct in search of their roots. This theory ties in with the legend of Jesus Christ also came to live in India at the age of about 13. This legend asserts Jesus spent 17 years in India, finally returning to the country of his birth to preach the doctrine of salvation and to assert that he was the Son of God.

(source: **India Post - By Vinod Dhawan**. vol. 6 December 29, 2000. p. 44). For more refer to **Did Jesus die in Kashmir - by Abu Abraham**).

Divine Incarnations

We find mention of prophets, messengers and messiahs in the different religions of the world. In Hinduism, Buddhism, and Christianity we have the doctrine of Divine Incarnation. The Christian religion as organized is dualistic. The Christian have a doctrine of incarnation fitting into their theology and their partial view of history and creation. They have only one incarnation.

According to the Eternal Religion (Sanatana Dharma) taught in the Gita, there are many divine incarnations. An incarnation is a special manifestation of the Divine in history. Such manifestations take place in response to special needs of the time, in the altered circumstances of life and history. They come in times of decline of civilizations due to materialism which causes disintegration of man and society.

Krishna in the Gita makes the classic declaration about incarnation.

"O Descendant of Bharata! Whenever religion becomes tarnished and irreligion prevails, I create myself. I incarnate myself in every age for saving the good, for the destruction of the wicked and for the establishment of religion. "

The birth of an incarnation, like the birth of the universe, is a mystery. In Sanatana Dharma incarnation is periodic manifestation in time of the power of the Divine. It is a mystery, but the power play of the Divine in history is a fact of experience. Krishna says in the Gita that incarnations start rolling anew the wheels of religion. Buddha also spoke of his movement as starting the wheel of religion.

Interesting Parallels between the Hindu/Buddhist temple and the Catholic Church.

Buddha and Jesus

Alexander's invasion of India in 327. B.C. starts a closer interchange of thought between India and the West. Buddhism must have been prevalent in India for over a century before Alexander's time, and he made an effort to acquaint himself with Hindu and Buddhist thought. He succeeded in encouraging an ascetic called Kalanos to join his entourage. He himself married a princess from Bactria, and a hundred of his superior officers followed his example and took Asiatic brides.

Pyrrho is said to have taken part in Alexander's expedition to India and acquired a knowledge of Indian thought.

Pliny tells us of a certain Dionysius who was sent to India from Alexandria by Ptolemy Philadelphus (285-247). Asoka, who ascended the throne of Magadha in 270.B.C., held a Council at Pataliputra, when it was resloved to send missionaries to proclaim the new teaching throughout the world. In accordance with this decision Asoka sent Buddhistic missions to the sovereigns of the West, Antiochus Theos of Syria, Ptolemy Philadelphius of Egypt, Antigonos Gonatas of Macedonia, Magas of Cyrene, and Alexandria of Epirus. From Asoka's statements it may be inferred that his missions were favorably received in these five countries. Between 190 and 180 B.C. Demetrius extended the Bactrian Kingdom into India and conquered Sind and Kathiawar.

The Greeks who settled in India gradually became Indianized. Of the monuments which survive of the Indo-Greek dynasties is a pillar discovered at Besnagar in the extreme south of Gwalior State (140B.C.) The inscription on it in Brahmi characters says:

" This garuda column of Vasudeva (Vishnu) was erected here by Heliodorus, son of Dion, a worshipper of Vishnu, and an inhabitant of Taxila, who came as a Greek ambassador from the great King Antialcidas to Kind Kasiputra Bhagabhadra, the saviour, then reigning prosperously in the fourteenth year of his kingship."

The greatest of the Indo-Greek kings was **Menander**, who was converted to Buddhism by the Buddhist teacher Nagasena (180-160 B.C.) His conversion is recorded in the famous work **Milindapanha** (questions asked by King Milinda)

During all this period India and the West had extensive trade relations. When Alexander chose in Egypt the site for a city which was destined to perpetuate his name, the preparation for the blending of Eastern and Western cultures started. For a thousand years Alexandria continued to be a center of intellectual and commercial activity because it was the meeting-place of Jews, Syrians, and Greeks. **Milindapanha** mentions it as one of the places to which the Indians regularly resorted.

Two centuries before the Christian era, Buddhism closed in on Palestine. The Essenes, the Mandeans, and the Nazarene sects are filled with its spirits. (The Mandeans flourished in Maisan, which was the gate of entry for Indian trade and commerce with Mesopotamia. Indian tribes colonized Maisan, whose port had an Indian temple. Mandean gnosis is full of Indian ideas.)

Nearly five hundred years before Jesus, Buddha went round the Ganges valley proclaiming a way of life which would deliver men from bondage of ignorance and sin. In a hundred and fifty years after his death, tradition of his life and passing away became systematized. He was miraculously conceived and wondrously born. His father was informed by angels about it, and, according to **Lalitavistara,** the queen (Maya) was permitted to lead the life of a virgin for thirty-two months. On the day of his birth a Brahmin priest predicts his future greatness. Asita is the Buddhist Simeon. He comes through air to visit the infant Gautama. Simeon came by the apirit into the Temple. Buddha grew steadily in wisdom and stature. Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. His enlightenment was marked by thirty-two great miracles. The blind receive their sight, the deaf hear, and the lame walk freely. He set out to establish the kingdom of righteousness. He has twelve disciples. Buddha has his troubles with his disciples. Devadatta, Buddha's cousin, was the **Judas** among his followers. On the last day before his death, Buddha's body was again transfigured, and when he died a tremendous earthquake was felt throughout thee world.

Many of the parables between Buddha and Jesus are common. Buddha is a sower of the word. He feeds his five hundred brethren at once with a small cake which has been put into his begging bowl, and a good deal is left over, which is thrown away. In **Jataka** 190 we read of an eager disciple who finds no boat to take him across and so walks on the water.

Max Muller remarks that mere walking on water is not an uncommon story, and we must remember that the date of the Buddhist parable is chronologically anterior to the date of the Gospel of St. Luke. Between the language of Buddha and his disciples, and the language between Christ and his apostles, there are strange coincidences. When some of the Buddhist legends and parables sound as if taken from the New Testament, though we know that many of them existed before the beginning of the Christian era.

Richard Garbe assumes direct borrowing from Buddhism in the matter of Simeon, temptations, and the miracles of walking on the water, and loaves and fishes. **We have many parallels between Krishna and Christ.**

- A marvellous light envelops Mary when Christ is born. a similar light envelops Devaki before Krsna is born.
- There is universal gladness of nature at their birth.
- Herod inquires of the wise men, " Where is he that is born King of the Jews? "(Matthew ii 40
- Narada warns Kamsa the King that Krsna will kill him (Harivamsa ii 56)
- Herod is mocked by the wise men (Matthew, ii 16) and Kamsa is mocked by the demon that takes the place of Yasoda's infant (ibid ii 59).
- The massacre of the infants in found in both.
- Joseph came with Mary to Bethlehem to be taxed: Nanda came with Yasoda to Mathura to pay tribute.
- The flight into Egypt is similar to that into Braj.

Dr. S. Radhakrishnan says:

"The curious may find matter for reflection in these coincidences in the lives of Buddha and Christ. But those trained in European culture find it somewhat irksome, if not distasteful, to admit the debt of Christian religion to non-Christian sources, especially Hindu and Buddhist."

" In these cases, **Max Muller** writes, "our natural inclination would be to suppose that the Buddhist stories borrowed from our Christian sources and not vice versa. But here the conscience of the scholar comes in. Some of these stories are found in the Hinayana Budddhist Canon and date, therefore, before the Christian era." It is not unnatural to suspect that some of the prominent ideas traveled from the older to the younger system. As Christianity arose in a period of eclecticism, it is not impossible for it to have adopted the outlook and legends of the older religion, especially as the latter were accessible at the time when intercourse between India and the Roman Empire was quite common. Let us realize that Christianity was in a formative stage and Budhhism was both settled and enterprising.

Speaking of the Apocryphal gospels, such a cautious critic, as the late **Dr. Maurice Winternitz** says: " We can point to a series of borrowings from Buddhistic literature which are absolutely beyond all doubt"

(source: **Visvabharati Quarterly** Feb. 1937, p.14).

Sir Charles Eliot, a famous scholar and linguist of Oxford observed, " A number of Buddhist legends make their appearance in the Apocryphal gospels and are so obviously Indian in character that it can hardly be maintained that they were invented in Palestine or Egypt and spread thence Eastwards."

(source: **Hinduism and Buddhism - By Sir Charles Eliot** vol. iii (1921), p. 441).

" The similarity of Roman Catholic services and ceremonial to the Buddhist is difficult to explain. "When all allowance is made for similar causes and coincidences, it is hard to believe that a collection of practices such as clerical celibacy, the veneration of relics, the use of the rosary and the prominent ideas traveled from the older to the younger system.

T. W. Rhys Davids, the famous Pali scholar and author of " **Buddhist India**," wrote,

"It is not too much to say, that almost the whole of the moral teaching of the Gospels as distinct from the dogmatic teaching, will be found in Buddhist writings, several centuries older than the Gospels; that for instance, of all the moral doctrines collected together in the so-called Sermon on the Mount, all those which can be separated from the theistic dogmas there maintained are found again in the Pitakas."

"There is every reason to believe that the Pitakas [sacred books containing the legends of

Buddha] now extant in Ceylon are substantially identical with the books of the southern canon, as settled at the Council of Patna about the year 250 B.C. As no work would have been received into the Canon which were not then believer to be very old, the Pitakas may be approximately placed in the forth century B.C. and parts of them possibly reach back very nearly, if not quite to the time of Gautama (Buddha) himself.

Albert Schweitzer, who is regarded almost as a modern Christian saint, declined to accept the historicity of the traditional view of Jesus. Both A.. J. Edmonds, and Richard Garbe, have insisted on the Christian indebtedness to Buddhism.

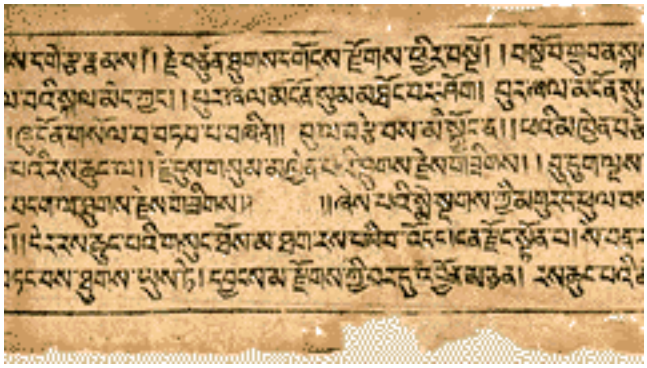
Count Keyserling noticed a great affinity of spirit between Mahayana Buddhism and Christianity; and although he considered Mahayana Buddhism to be far superior to Christianity.

Otto Pfleiderer in his **Chrisitan Origin,** E. T. (1906), p.226, says: " These Buddhist parallels to the childhood stories of Luke are too striking to be classed as mere chance; some kind of historical connection must be postulated." **M. Labbe Huc**, Nineteenth century: " The miraculous birth of Buddha, his life and instructions, contain a great number of the moral and dogmatic truths professes in Christianity."

T. W. Doane, Nineteenth century, ...nothing now remains for the honest man to do but acknowledge the truth, which is that the history of Jesus of Nazareth, as related in the books of the New Testament is simply a copy of that of Buddha, with a mixture of mythology borrowed from other nations.

Scholars have been profoundly struck and at times perplexed by the remarkable similarities between the Gospel story and the life and teachings of the Budhha, as told in the Latitavistara, and between the Budhhist and Christian parables and miracles. Both the Buddha and Christ are miraculously conceived and wondrously born and angels rejoiced at both births. He was miraculously conceived and wondrously born. His father was informed by angels about it and the queen - mother Maya (Mary in case of Christ) was permitted to lead the life of a virgin for thirty-two months. Christ was born in the royal tribe of Judah, Buddha was born in a royal household. On the day of his birth a Brahmin (Asita) priest predicts his future greatness. **Asita is the Buddhist Simeon.** Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. Both reveal their unusual wisdom at about the same age, twelve. **Asita is the Buddhist Simeon.** Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. Both reveal their unusual wisdom at about the same age, twelve. **Asita is the Buddhist Simeon.** Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. Both reveal their unusual wisdom at about the same age, twelve.

Nothing is known of Jesus' life during the next seventeen years and there have



developed a variety of legends suggesting that he traveled to India, lived with the Essenes at Qumran. The Gospels, however, refute these suggestion by implication. Whether Jesus traveled abroad or not, that he chose to remain unknown after having revealed himself and his wisdom causes some surprise. As Jesus claimed to be God, it could not have been a period of preparation. In contrast, more is known of Buddha's life his childhood, youth, marriage, increasing discontent with the world, renunciation, quest of Enlightenment, and finally his attainment of the Buddhahood, followed by a long period of missionary activity until he died.

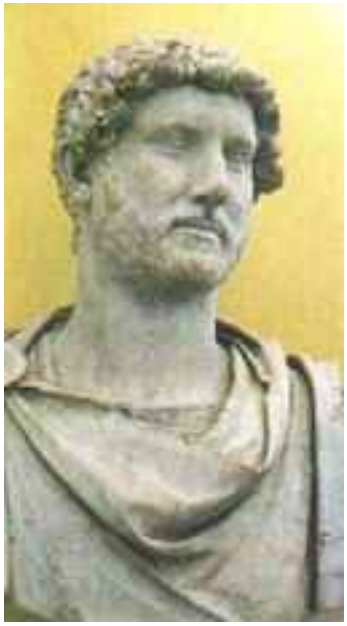
The Vedas, Mithraism and Christianity

"These two are the Almighty of the Gods, they are noble.
They will make our people full of vigor.
May we attain you, Mitra and Varuna, wherever Heaven and the days overflow."

- Rig Veda vii.65 (Mitra and Varuna are in all hymns to the Sun as the Divine Lord and Friend)



The contact between India and the West were more frequent in the period of the Roman Empire especially in the reign of Augustus, Trajan and Marcus Aurelius. The Jatakas contain many references to Buddhist merchants and their adventures in distant lands. India had a reputation for high philosophy and religion in the middle of the second century A.D., for Lucian makes Demetrius, the Greek philosopher give up his property and depart for India, there to end his life among the Brahmins. **Clement of Alexandria,** who died about A.D. 220, knew the distinction between Hinduism and Buddhism. " There are, he says, some Indians who follow the precepts of Boutta,(Buddha) whom, by an excessive reverence, they have exalted into a god." Clement mentions that Pythagoras learnt from Brahmins among others.

The vast development of material prosperity in the Roman Empire had no spiritual purpose behind it. Its ultimate end seemed to be the satisfaction of selfishness, individual and corporate. The ancestral cults had ceased to hold the large part of the population in the Roman Empire. The religious-minded, for whom the Roman gods had lost their meaning and served only as occasions for civic ceremonial, sought to find spiritual solace outside the life of the society in an esoteric ideal of individual salvation. The people were attracted by the Eastern cults, which were streaming into the Empire, the cults of Isis or Mithras. Mithraism was a religion with roots in India and Iran spread into the Roman world. **Mithraism** was the first officially recognized monotheistic cult of the Roman world. By the third century Mithra had evolved in the Roman world into the sun-god, Sol Invinctus -- So far as is now known, Mithra appears as the bull-slayer only in his Roman manifestation. Mithraism was a formidable competitor of early Christianity. Renan's observation has often been quoted that if Christianity had failed, the whole of Europe would have been Mithraist.

First appears as an Aryan sun-god in **Sanskrit** (**Rig Veda**) and Persian literature circa 1400 BCE. The cult was introduced into the Roman empire in the 1st century BCE. The Mithra traditions and doctrines are collected in the Persian **Avesta** and a yasht, a special hymn of praise, is dedicated to Mithra. Mithra is the Persian name of the **Vedic Mitra**, the deity of light and truth, warring against the powers of darkness in association with **Varuna.** In India he was, in fact, regarded as the sun. In Vedic texts, the connection between Mithra and the bull, which later became the focal point of Mithraism, is perhaps more clearly found than in the **Avesta.** The cult of Mithraism appears to have come to the Roman Empire from Persia (Iran), having introduced to Rome by Cilician seamen in about 68 B.C. Mithras is a Greek form of the name of an Indo-European god, Mithra or Mitra. Mithra was conceived as the intermediary between man and the Supreme God and the redeemer of the human race. Mithraism was carried to the remotest corners of the empire. But despite these opportunites, circumstances conspired against Mithraism, and " the ultimate success, permanent and undoubted, fell to the combination of Jewish and Greek worship called Christianity."

There are however, many similarities between Christianity and Mithraism. Besides sharing faith in a divine mediator and the hope of resurrection, both taught the efficacy of prayer, sacramental union with God, and his providential presence in all the events of daily life. Baptism, Confirmation, and the Eucharist of the Christians are analogous to certain rites of Mithraism. It was when Christianity spread into the pagan world that the idea of Jesus as a savior God emerged, emulating already existing concepts. It was only in 324, several centuries later, that the Church at the council of Nicaea, called by Emperor Constantine, formally accepted by a majority vote Jesus Christ as the Savior God. The coming of Christianity under state control was to preserve it as a religion, and was the death knell of all other sects and cults within the Roman Empire.

Had Constantine decided to retain Mithraism as the official state religion, instead of putting Christianity in its place, it would have been the latter that would have been obliterated.

"If Christianity was somehow stopped at its birth, whole world would be following Mithraism today." - Ernest Renan (1823-1892) was an important French theorist who wrote about a variety of topics. His famous essay **"What is a Nation?"** (Qu'est-ce qu'une nation?) was first delivered as a lecture at the Sorbonne in 1882.

To Constantine however, Christianity had one great advantage, it preached that repentant sinners would be forgiven their sins, provided that they were converted Christians at the time of their Passing, and Constantine had much to be forgiven for, He personally did not convert to the new religion until he was on his death bed, the reason being that only sins committed following conversion were accountable, so all sins committed by a convert, prior to conversion, didn't matter, and he could hardly have sinned too much whilst he was lying on his death bed. Mithraism could not offer the same comfort to a man like Constantine, who was regarded as being one of the worst mass-murderers of his time.

It was the birthday of Mithra, 25 December (winter solstice), that was taken by the early Christians as the birthday of Jesus. The need and urgency by the early Christians to compromise with existing traditions were further illustrated by the fact that even the Sabbath, the Jewish seventh day, Saturday, appointed a day of rest by God in the Mosaic Law and hallowed by his own resting day after the work of Creation, was abandoned in favor of the Mithraic first day, the Day of the Conquering Sun, Sunday. The worshippers of Mithra were called "Soldiers of Mithra" which is probably the origin of the term "Soldiers of Christ."

The most frequent theme of Christ as the Good Shepherd is reminiscent of a similar identification of Mithra, who was often called the Good Shepherd. And it is interesting to note that since Mithra was addressed as Dominus, Sunday must have been " the Lord's Day" long before Christian times. Concepts such as " the blood of the Lamb" or "Taurus the Bull" were similarly borrowed from Mithraism. The Last Supper (the Eucharist) was taken from Mithraism to combine with the sacred meal of Palestinian Christianity. The ceremony of eating an incarnate god's body and drinking his blood is of remote antiquity, with its origin in cannibalistic practices, and there could have been several sources for the Christian rite, but its connection with the Mithraic Eucharist is most apparent. The Mithraic Eucharist is the commemoration of Mithra's Last Supper in a cave with Sol Helios before ascending to Heaven. Some scholars believe that the Resurrection of Christ derived from the Vigil of Mithra, who after his death reappeared to watch continuously over the faithful. The Mithraic high priest's title, Pater Patrum soon became the title for the bishop of Rome, Papa or Pope.

Thus, the extent of the indebtedness of Christianity to pagan religions (Hinduism, Buddhism, Mithraism) is very great indeed.

Christianity and Roman Decline

Whether the rise of Christianity with its train of bitter religious conflicts and persecutions was a contributing cause of the Roman decline or not, the two certainly coincided. During the following hundred years, Roman authority gradually weakened, Roman armies suffered defeats, and Rome was sacked. By the end of the fifth century there was nothing left of the Roman Empire in the West.

Europe lapsed into the Dark Ages for centuries. Total and devoted acceptance of the authority of the new faith, as interpreted by its priests or guardians on earth, inculcated amongst the people an attitude of surrender and they handed over the right and responsibility of thinking to others. Passive submissions suppressed scientific inquiry and academic integrity, the main characteristics of the preceding age of Alexandrian syncretism. Intellectual stagnation, religious intolerance, and racial and regional exclusiveness characterized Europe for the next thousand years.

Buddhism and its relation to Hinduism - Some information

Buddha is recognized as the ninth avatar (incarnation) of Lord Vishnu. It was several hundred years before the time of Lord Buddha that his birth was predicted in Srimad-Bhagavatam. **Buddhism is an offshoot of Hinduism and is considered one of the heterodox schools of Hindu philosophy.** The teachings of Buddhism are not significantly different from those of Hinduism, but are essentially the same as the teachings of the Jnana Yoga (path of knowledge) school of Hinduism.

Following are the major views:

Buddhism and Hinduism both aim at transcending the phenomenal existence. Buddha rejected the ritualistic aspects of the Vedas, but DID NOT deny the higher teachings of the Upanishads. The Vedic rituals in Hinduism are recommended for a beginner for attaining concentration and meditation on the spiritual path. This position is very clearly conveyed in the Bhagavad Gita in the following words:

" To the knower of Truth (God), all the Vedas are of as little use as a small water-tank is during the time of a flood, when water is everywhere." (BG. 2.46)

For both Hinduism and Buddhism religion is salvation. Bodhi or enlightenment, which Buddha attained is an experience. Perfect insight (sambodhi) is the end and aim of the Buddhist eightfold path.

Both believe in theory of KARMA and REBIRTH with one major difference. Hinduism believes that the atman (individual self or spirit) transmigrates from one birth to another, Buddhism holds that nothing transmigrates from
one birth to another. In Buddhist view, karmas of one individual give birth to another, but no identity is retained between the two individuals.

Buddha declared the Self and the World are both unreal. To a Hindu, the Self is immortal

and the world is an illusive appearance. However, behind the illusive appearance of the universe lies the Ultimate Reality which is the
seed of all things and beings in the world.

Buddha advocated a monastic life for attaining nirvana, Hinduism teaches that truth can be realized by all people from all walks of life, including householders.

Buddha refused to discuss topics, such as the science of the soul, the creation of the universe and the existence of God. These are questions which occupy the center of interest in the Upanishadic literature.

Christmas' Hindu Roots
D. Parsuram Maharaj (Trinidan & Tobago, West Indies)
http://www.swordoftruth.com/swordoftruth/articles/readersvoice/readersvoice3.html

Last year Christmas Trinidad & Tobago's Archbishop Pantin in his weekly column repeated what scholars have been asserting for years on the origins of Christmas. Archbishop Pantin essentially officially confirmed the celebration of Christmas was 'borrowed' from pre-Christian religions. This type of 'borrowing' was not new to Christianity that aggressively practised a process of inculturalisation in order increase its mass appeal and thereby win as many converts as possible. The practice is still employed by missionaries in Asia and even in Trinidad. What Archbishop Pantin did not develop was the celebration of the birth of the divine being was borrowed from a Hindu Deity. It is time that Hindus re-claim this celebration and its Hindu roots rather then to let continue to be hijacked by Christian mythology.

The festival that is now known as Christmas was actually a celebration for the Vedic Deity Mitra. According to "A Classical Dictionary of Hindu Mythology and Religion" by John Dowson [1998] the Hindu Mitra was connected to the Persian Mithra which later was adopted by Rome. Mitra was a form of the sun, and in the Vedas he is generally associated with Varuna. Will Durant's "The Story of Civilisation, Volume III. Caesar and Christ" [1944] wrote "as far back as the second century the Eastern Christians celebrated the nativity on January 06th. In 354 some Western churches, including those of Rome, commemorated the birth of Christ on December 25th; it was ALREADY the central festival of Mitraism, the natalis invivti solis, or birthday of the unconquered sun".

The Christmas date of December 25 was originally the celebrated birthdate of the Roman version of Mitras. The 4th-5th century Church decided to 'borrow' that date for the sake of establishing a national holiday. The Iranian version of Mit(h)ra was called the "Light of the World" is another interesting fact to note. Mithraism explained the world in terms of two ultimate and opposing principles, one good (depicted as light) and the other evil (darkness). Human beings must choose which side they will fight for; they are trapped in the conflict between light and darkness. Mithra came to be regarded as the most powerful mediator who could help humans ward off attacks from demonic forces.

In the religions of antiquity the vast majority of the pre-modern world was syncretistic, meaning that one religion would often incorporate the myth and ritual of other cults with which it came in contact. Often the deities would simply change names. This suggests that we may be comparing Jesus (one individual) to the combined characteristics of multiple agents that are all called by the SAME NAME. Mitra--he is a mixture of Hindu Iranian, Greek, and Roman religious beliefs. Both Hindu and Iranian Mithraism predates Jesus .

Hindu thought was filtered to the West via Greek colonies which are known to have existed in India prior the time of the Buddha in the 6th century B.C.E. The Buddha actually refers to the Greeks in a discourse in the Middle Length Sayings. Alexander the Great's invasion brought Hellenism to India during the rise of the brilliant Mauryan empire (322-185 B.C.E.) in Northern India, and had significant impact on the upper class and urban segments.

After Alexander died, his empire divided into several pieces--one of which was called the Seleucid dynasty. In spite of the fact that the Seleucid and Mauryan dynasties were border-competitors, they still had a great deal of friendly interchange between them, and the first two kings of the Mauryan dynasty are referred to in Greek sources.

The peace treaty between them in 303 BCE included a marriage alliance, and Seleucus' ambassador Megasthenes lived for 10 years and travelled extensively in the Mauryan empire during the reign of the founding king Chandragupta (Sandrocottos in the Greek). Megasthenes gathered huge amounts of information about India and wrote a book (which is lost), many parts/information of which are preserved in the writings of Strabo, Arrian, and Diodorus.

One of the most famous of the kings of this dynasty was Ashoka. Although he is not mentioned in any Greek sources, he "records having sent missions from India bearing his message of the victory of the Dharma to the Greek kings Antiochus II of Syria, Ptolemy II (Philadelphus) of Egypt, Antigonus Gonatas of Macedonia, Magas of Cyrene and Alexander of Epirius."

Until his death in 232 BCE, he maintained frequent communications with the south and the west, even sending missionaries to Ceylon and to the West. Historical data and quotes shows, there was information about the religious content of proto-Hinduism transmitted to the West, and even about Buddhism. The last two centuries B.C.E saw the rise of the Parthian empire, which quickly became a barrier to cultural exchange.

There are material, significant, and pervasive similarities between Jesus Christ and other Savior-figures, and that these similarities are best explained by the hypothesis that the figure of Jesus is materially derived from or heavily influenced by these other Dying God/Savior-figures. The similarities between Jesus and the other relevant Savior-gods are material, significant, and pervasive enough to suspect a liberal borrowing. Scholars have proposed several theories to account for the obvious similarities between Christianity and the mystery religions. The birth and celebration of Christmas as a Christian festival is merely an example of one such borrowing.

Buddhism in Christianity
http://www.hindunet.org/alt_hindu/1995_May_2/msg00015.html

A few months ago, I heard Jesus quoted "even to have an angry thought" was as punishable as actually murdering someone. This idea seemed to have a direct correlation with the Buddhist idea of "mental volition", that even our thoughts create karma. This seemingly obvious connection poses the question: what other teachings of Jesus Christ could be found mirrored in the teaching of Gautama Buddha?

There are three main types of literature on the subject: First, books that date from the end of the nineteenth century which attempt to show that there was Buddhist influence in the fertile crescent and in Greece during the years before the birth of Jesus. This speculation arose as a result of the translations of Buddhist texts into European languages that occurred during the British colonialism of India. Scholars recognized the similarity in the stories of the births and life styles of Jesus and Buddha. It was also noted that many of their teachings were parallel. In these seminal works there is much speculation about Buddhist influence in early Christianity. These books are often scholarly works that use sources such as the records of historians who were roughly contemporary with Jesus, and other texts: Biblical (Christian, Jewish), Greek and Arabic, in an attempt show an historical connection between the two religious traditions.

The second type of literature is the New Age genre books that attempt to tie the two masters together as emanations from the same cosmic divine source. In this group there is even a fairly extensive body of literature that claims that Jesus went to India and there studied from Hindu and Buddhist masters between the age of thirteen and thirty. These are referred to as the "lost years of Jesus".

The third type of literature, which could be called, "Creating a Christian-Buddhist Dialogue", seeks to compare and contrast the teachings of the two masters in an effort to

bridge the gap between cultures and make to the world a better place. This type of literature usually denies any borrowing or Buddhist influence in Christianity but does admit that certain elements within the two doctrines are similar..

Much of the early academic research that was done tended to center around the possibility of Buddhist influence in Palestine and in Greece during the two centuries prior to the birth of Christ. In India, around 270 B.C., the great king Ashoka ascended the throne, and after his conversation to Buddhism, he sent missionaries around the world to preach the word of the Lord Buddha. There are records, left by Ashoka, that indicate that "his missions were favorably received" in countries to the West. There are also records from Alexandria that indicate a steady stream of Buddhist monks and philosophers who, living in that area, which was at the crossroads of commerce and ideas, influenced the philosophical currents of the time.

There are strong similarities between Buddhist monastic teachings and Jewish ascetic sects, such as the Essenes, that were part of the spiritual environment of Palestine at the time of Christ's birth. The Essenes were a monastic order that did not marry. They lived in the desert and were very simple in their life styles. They did not believe in animal sacrifice and were vegetarians. They believed in the pre-existence of the soul and in angels as divine intermediaries or messengers from God. They were famous for their powers of endurance, simple piety and brotherly love. They were interested in magical arts and the occult sciences. John the Baptist was an Essene. His time of preparation was spent in the wilderness near the Dead Sea. Jesus was greatly influenced by his stay with John the Baptist. Many of the basic tenets found in the teachings of Jesus can be traced back to the ideas flourishing among groups such as the Essenes. Were these groups indeed influenced through several centuries of dialogue with Buddhist monks who traveled through Palestine?

Before, during, and after the death of Christ, there were Buddhist missionaries who visited Greece, Egypt and other countries in the Mediterranean area. One such visit is documented in 20 B.C. in Athens. In this account an ambassador from India was accompanied by a Buddhist philosopher who burned himself (to prove some point of impermanence?). His tomb became a famous tourist attraction and is mentioned by several historians. It has been argued that in St. Paul's first letter to the Corinthians, he alludes to this well known event when he writes that "though I give my body to be burned, and have not love, it profits me nothing."

The fact that there was commercial trade between the Indian Subcontinent and Mesopotamia, Syria, Egypt and the countries of the Fertile Crescent, for almost 2500 years before the birth of Christ is well documented. Cuneiform records dating from 2400 B.C. describe shipments of cotton cloth, spices, oil, grains, and such exotic items as peacocks from the Indus Valley region. Ideas as well as merchandise had been exchanged between the Middle East and India for centuries. Pythagoris is said to have been influenced by Oriental ideas and a Greek prince, Seleucus Nikator, shortly after the time of Alexander the Great, gave his daughter in marriage to the Indian sovereign and sent an ambassador, Megasthenes, to the court of Chandragupta, who was the grandfather of Ashoka. There were practitioners of Buddhism, living in the western parts of Askoka's empire who were from Greece and also from Palestine. This is known because one of the famous edicts of Ashoka, carved on a pillar in what is now the country of Afghanistan, is written in both in Greek and Aramaic, the languages spoken in Palestine at the time.

Stories of Buddhist origin, and some of the basic concepts of Buddhism, were known in the West prior to, during, and after the time of Jesus. The most famous Buddhist story that made its way into Christendom, is the tale of "Barlaam and Josephat," which enjoyed considerable notoriety during the Middle Ages and ultimately resulted in the canonization, in the sixteenth century, of Buddha, as a Catholic saint. In the story of Barlaam and Josephat, Josephat, which is a corrupted version of the word "Boddhisattva", was an Indian prince who was heir apparent to a throne occupied by his father, a tyrannical idolater who persecuted Christians. At Josephat's birth prophets predicted his future greatness as successor to the king, but one wise man said that the prince would achieve greatness not as a worldly king, but because he would convert to Christianity. To shelter his son, and prevent his conversion, the king kept him locked in the palace. Eventually, the young prince was allowed to leave the palace and saw a crippled man, a blind man and a senile man, and so learned of life's darker side (that life is suffering?). Josephat soon met a monk named Barlaam, who converted him to Christianity. The story continues that when Josephat went to search for Barlaam he had to suffer austerities and was tempted by the devil to give up his faith. He eventually found Barlaam and the two

lived as hermits until their deaths. Relics of these saints were worshipped in Europe and there were several churches built to Josephat in Russia, one in Vienna and in Portugal. As I said, they were canonized by the Catholic Church in the 16th century... Saint Josephat, the Boddhisattva.

Anyone who knows the story of the life of the Buddha will see the exact repetition of the tale in the story of Barlaam and Josephat: The fact that he was an Indian prince even provides the correct setting, the predictions at his birth of spiritual greatness, his early life spent locked in the castle and finally his exposure to people in pain and old age which led, in the case of the Boddhisattva, to enlightenment and in the case of Josephat to conversion. Even the austerities and temptations that they had to endure are parallel. There is no doubt that this is a Buddhist story transplanted and retold within a Christian context. The Buddhist origins of the story were obscured when the tale was retold in Europe, but earlier versions of the story exist in Arabic, which do not refer to Josephat's conversion, but which testify to the story's Buddhist roots. The fact that Saint Josephat was very popular in Europe, where his relics were worshipped, is an ironic aspect of this borrowing theory of Buddhist influence on Christianity since some scholars theorize that relic worship is a Buddhist implant into early Christianity. There are other Christian stories that have their origins in the Buddhist Jatakas Tales such as the conversion of the Roman general Placides, who was converted while hunting a beautiful deer.

There are numerous elements in Christian practices that could have originated from the many Buddhist missionaries who traveled from India spreading the teachings of the Buddha. Philosophically, Alexandria in Egypt was the center of early Christian thought. There is mention of a teacher called Ammonius Sakka, who had a great influence on the thinkers of the first century of the common era. Some scholars speculate that Ammonius Sakka could be a reversed form of "Sakya - Muni", one of the names of the Buddha, which means "the sage of the Sakya clan". (Sakya was Buddha's family name.) This philosopher-teacher who believed in reincarnation, has been called a Neo-Platonist. He was the teacher of Plotinus and Origen. Origen who was one of the early philosophers of the Christian church whose writings were later expunged at the Council of Nicea.

What are some other points of convergence between the practices of Christianity and Buddhism? There are a wealth of similarities: shaving or cutting of the hair of monastic initiates, ringing of bells, domed basilicas, shared legends, the practice of confession, relic veneration, celibacy, rosaries, monasticism, and the burning of incense. A comparison of the Sermon on the Mount with verses from the Dhammapada, yields a rich collection of interconnections and similarities. Even if some of these similarities are synchronistic in nature and are not borrowed, nonetheless, there are still many elements that have distinctive Buddhist overtones and which are not found within the predominant Jewish practices of the time. There are many stories about the life of Jesus and Buddha that are so similar that it is hard to believe that there was not some borrowing or merging of myths that occurred.

The story of the conception and birth of Christ in the Gospel of Luke has an uncanny resemblance to the birth stories of Buddha. In both cases the mother was a pure woman who had a vision and from this vision became pregnant with a extraordinary child, without the help of sexual intercourse. At their birth, each baby was surrounded by persons and events that marked them for greatness. Each was delivered outside while the mother was on a journey. Their births were

both announced by angels in the heavens. It may be hard for us creatures of the twentieth century to appreciate the role of angels, but previously, they played an important part in the scheme of things: bringing messages, making great spiritual announcement with pomp and splendor. After the birth of Buddha a hermit sage, who had heard the celebrations of the angels, was told by them with great rejoicing that "In the city of Kaplilavastu, to king Suddhodana, a son is born. This boy will sit on the throne of enlightenment and become a Buddha." In the Christian story, the angels appeared in great awe-inspiring beauty and told the shepherds that a child was born that day who is Christ the Lord. The story of the conception and birth of Christ in the Gospel of Luke has an uncanny resemblance to the birth stories of Buddha. In both cases the mother was a pure woman who had a vision and from this vision became pregnant with a extraordinary child, without the help of sexual intercourse. At their birth, each baby was surrounded by persons and events that marked them for greatness. Each was delivered outside while the mother was on a journey. Their births were both announced by angels in the heavens. It may be hard for us creatures of the twentieth century to appreciate the role of angels, but previously, they played an important part in the scheme of things: bringing messages, making great spiritual announcement with pomp and splendor.

After the birth of Buddha a hermit sage, who had heard the celebrations of the angels, was told by them with great rejoicing that "In the city of Kaplilavastu, to king Suddhodana, a son is born. This boy will sit on the throne of enlightenment and become a Buddha." In the Christian story, the angels appeared in great awe-inspiring beauty and told the shepherds that a child was born that day who is Christ the Lord. Both narratives stress the fact that at the birth of the infant, along with the angels, holy people came to pay homage to the savior who had descended into the world of humans. In the Bible there is a story about the righteous man Simeon, who was informed by the Holy Spirit that he "should not see death before he had seen the Lord's Christ." Inspired by the Spirit, he came to the temple on the day that Jesus was brought in for his naming ceremony, where he took the child into his arms and said that he was destined for greatness. Mary and Joseph marveled at the words of this old sage. In the Buddhist story the hermit Asita performed the same role in announcing to the amazed parents that this child was destined for spiritual greatness. In both stories an elderly wise man was the first to inform the parents that their sons were no ordinary boys.

The Biblical accounts of the birth of Christ are somewhat different in Luke and in Matthew. In Matthew the account of the visitation by the Magi is dealt with in great detail. These Magi were astrologers from the East, where astrology had been a developed science for centuries. They represented the pinnacle of foreign scholarly achievement; and it was they, rather than the Hebrew, who were able to discern that the baby who lay in the manger in Bethlehem was a very special child. The word "Magi," is a Persian word that named a class of learned men who sought to master the occult sciences. This is the root of our word, Magic. Only later were they referred to as kings, initially they were called Holy Men. References to Magi in the Palestine of Jesus's day usually had negative connotations, but in Matthew's account, the reference is quite positive. Similarly, the infant Gautama was first adored by four divine archangels who presided over his birth in the wooded grove near Lumbini. Later, sages came to pay homage to the child and amazed

his father. In both stories there is a reference to a star that announces the birth of the great child.

There are other similarities in the lives of these two great beings. Some may say that this type of comparison is inevitable when great spiritual leaders come into the world. However, some of the events in their lives have quite a resemblance. Both Buddha and Christ were precocious youths who confounded their teachers with their gifted knowledge. Both began their spiritual quest at about the age of thirty. Both fasted and prayed in the wilderness and both were tempted by the devil while practicing these austerities. The setting of these two accounts is almost identical as are the events. Both men were fasting when tempted by the devil who tried to entice them into worldly pleasures and trick them into using the magical powers that they possessed. Both men overcame the temptation and soon left their seclusion and took up the mission of a life of teaching and traveling. Jesus's life at this time seems very much like the age-old life of an Indian mystic or holy man. He traveled from village to village and lived off the hospitality of the people of the village. There are some differences, but, nonetheless, both Buddha and Christ got into trouble with the ruling aristocracies by their deliberate blindness to social status and by taking food and refuge from courtesans and prostitutes.

Both masters told their disciples to leave behind their homes and families and to follow him. Both sent his followers out to preach their message. Both were social revolutionaries who reacted against the conservative elements of their time. Both put an end to animal sacrifice which was popular in both Hinduism and Judaism. As you can see there are great similarities in the lives of these two great beings. Both forgave evil doers, both conquered death in a metaphysical sense. The earth shook when each of them died. Their messages are also similar: they told their followers to overcome anger, to practice non-violence, to "turn the other cheek" to be pure of mind and body.

There is, as well, the school of thought that says that Jesus traveled to India during the lost years of his youth. There is a temple in the state of Kashmir that is dedicated to Saint Issa. The priests say that Jesus traveled there two thousand years ago. Many of the miracles performed by Jesus are similar to miraculous powers possessed by holy men in India. Jesus even taught his disciples to perform these miracles such as Peter walking on the water. There is a work by a Russian who lived at the end of the 19th century, Nicolas Notovitch, who claims to have seen an ancient document that told the story of Saint Issa and his return to his home in the West and his subsequent violent death. These tales are unsubstantiated and somewhat fanciful, however the priests at the Kashmiri Temple to Saint Issa are devout and completely believe in the story. There are also visionaries such as Edgar Casey who had similar visions of Jesus. Jesus did adopt a remarkably Indian-like approach to wandering, begging and preaching immediately upon beginning his public career. There is, however,

documented evidence that Buddhists traveled to the region where early Christianity was developing. It must be remembered that Christianity did not become the established religion for several hundred years and actually it was not the accepted religion of the European masses for almost a thousand years. During this period, when church theology was being formulated, there was much discussion about the true nature of the savior and many of the early ideas of the church were discarded in favor of ideas that would support the establishment of a centralized Church. These factors are a discussion for another time, but suffice it to say that many scholars have tried to prove that the Councils at Nicea expunged all references to reincarnation from the words of Jesus. He was after all, influenced by the Essenes, who did believed in transmigration of souls.

I realize that these ideas are heretical to some people. However to me, they are fascinating. That Jesus was divine, that He was God made man, I do not deny. I call Him an AVATAR, a Boddhisattva... but, I do not say that He is exclusive in this role.

Christianity: a naive beginning to a Buddhistic peace movement...(excerpts) The Will To Power

1888 By Nietzsche (1844-1900) the great German Philosopher, poet, classical philologist, who became one of the most provocative and influential thinkers of the 19th century. He was deeply influenced by Schopenhauer in his youth. One of the great European philosophers, **Friedrich Nietzsche's** beliefs were best expressed in his **Thus Spake Zarathustra,** in which his teachings are put into the mouth of the wandering prophet Zarathustra.

" Christianity: a naive beginning to a Buddhistic peace movement at the very seat of resentment - but reversed by Paul into a pagan mystery doctrine, which finally learns to treat with the entire state organization -wages war, condemns, tortures, swears, hates.

Paul starts from the need for a mystery felt by the broad, religiously excited masses: he seeks a sacrifice, a bloody phantasmogoria which will stand up in competition with the images of the mystery cults: God on the cross, blood-drinking, and unio mystica with the "sacrifice."

He seeks to bring the afterlife (the blissful, atoned afterlife of the individual soul) as resurrection into a casual relationship with that sacrifice (after the type of **Dionysus, Mithras, Osiris)**.

He needs to bring the concept of guilt and atonement into the foreground, not a new way of life (as Jesus himself had demonstrated and lived) but a new cult, a new faith, a faith in a miraculous transformation ("redemption" through faith).

He understood what the pagan world had the greatest need of, and from the facts of Christ's life and death made a quite arbitrary selection, giving everything a new accentuation, shifting the emphasis everywhere – he annulled primitive Christianity as a matter of principle.

The attempt to destroy priests and theologians culminated, thanks to Paul, in a new priesthood and theology - in a new ruling order and a church. The attempt to destroy the exaggerated inflation of the "person" culminated in faith in the "eternal person" (in concern for "eternal salvation"), in the most paradoxical excess of personal egoism.

This is the humor of the situation, a tragic humor: Paul re-erected on a grand scale precisely that which Christ had annulled through his way of living. At last, when the church was complete, it sanctioned even the existence of the state."

Vedic Links to Judaism
Brahma/Saraswati - Abraham/Sarah?

According to **Dr. Venu Gopalacharya** " Abraham and Sarah (Sarai) refer to the Indian version of Brahma and Saraswati. This indicates that this is an abridgement of some of the versions in the Indian Puranas .

Dr. S. Radhakrishnan has informed in his book, **Pracya Mattu Paschatya Sanskriti,** that the Greeks asserted that the Jews were Indians whom the Syrians called Judea, the Sanskrit synonym of which is **Yadava** or Yaudheya, and the Indians called them Kalanis, meaning orthodox followers of the scriptures.

**

" The Jewish bible says that Abraham and Sarai went to the Middle East to escape a terrible flood that had taken place in their original homeland, at approximately the time that **Dwaraka** sank under the sea. I think it significant that Sarai was the half sister of Abraham and that Saraswati was the half sister of Brahma. Sarai had a handmaiden named Hagar. Ghaggar was a tributary of the river Saraswati. It would not surprise me if the tombs of Abraham and Sarai at Hebron, Israel are also those of Brahma and Saraswati. *There are even those who think that Jerusalem's Temple mount could be the resting place of Krishna.* There is no doubt. The **Yadavas** founded ancient Israel. The real name of the Jews, Yahuda, seems to suggest this." (refer to **www.viewpoint.com**.)

The Jews spell the name of the city of 'Yerushalayim,' of which the Sanskrit synonym is Yadu Ishalayam, which means the temple of the Lord of the Yadus (the descendents of Lord Krishna's clan.)
Star of David - the Jewish emblem consists of two interlocking triangles, one pointing up, the other down, which is a Trantic Vedic symbol or **Shri Yantra.**

Did You Know

Got the Time?

According to Astrophysicist **Carl Sagan**, the age of the universe is somewhere around 12 billion-years-old. The Hindu tradition has a day and night of Brahma in his range, somewhere in the region of 8.4 billion years.

Dr. Sagan said, "As far as I know, India is the only ancient religious tradition on the Earth which talks about the right time scale. In the West, people have the sense that what is natural is for the universe to be a few thousand years old, and that it is billions of years is mind-reeling, and no one can understand it. The Hindu concept is very clear. Here is a great world culture which has always talked about billions of years."

"The Hindu religion is the only one of the world's great faiths dedicated to the idea that the Cosmos itself undergoes an immense, indeed an infinite, number of deaths and rebirths.

It is the only religion in which the time scales correspond, to those of modern scientific cosmology. Its cycles run from our ordinary day and night to a day and night of Brahma, 8.64 billion years long. Longer than the age of the Earth or the Sun and about half the time since the Big Bang. And there are much longer time scales still."

There is the deep and appealing notion that the universe is but the dream of the god who, after a Brahma years, dissolves himself into a dreamless sleep. The universe dissolves with him - until, after another Brahma century, he stirs, recomposes himself and begins again to dream the great cosmic dream.

Carl Sagan further says: " The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation **Nataraja, the Dance King.** In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."

These profound and lovely images are, I like to imagine, a kind of premonition of modern astronomical ideas."

(source: **Cosmos - By Carl Sagan** p. 213-214).

Guest Book

Updated - December 19, 2003

251. **Sir Vidiadhar Surajprasad Naipaul** (1932 -) Nobel Laureate, was born in Trinidad into a family of Indian origin is known for his penetrating analyses of alienation and exile. Writing with increasing irony and pessimism, he has often bleakly detailed the dual problems of the Third World: the oppressions of colonialism and the chaos of post-colonialism. His grandfather had emigrated there from India as an indentured servant. He is the author of several books including **Beyond Belief: Islamic Excursions Among the Converted Peoples**, **India: A Wounded Civilization**, **Among the Believers: An Islamic Journey**, **India: A Million Mutinies Now**.

"The key Hindu concept of dharma - the right way, the sanctioned way, which all men must follow, according to their natures - is an elastic concept. At its noblest it combines self-fulfillment and truth to the self with the ideas of action as duty, action as its own spiritual reward, man as a holy vessel."

(source: **The Treasury of Hinduism - By Harischandra Lal Singh** p. 199).

Recently, he was in India to attend the Pravasi Bharatiya Divas and discussed some of his controversial ideas about rewriting Indian history. **He has starkly reminded us time and again that India was ravaged and intellectually destroyed by invasions that began in about 1000 AD.**

"How do you ignore history? But the nationalist movement, independence movement ignored it. You read the Glimpses of World History by Jawaharlal Nehru, it talks about the mythical past and then it jumps the difficult period of the invasions and conquests. So you have Chinese pilgrims coming to Bihar, Nalanda and places like that. Then somehow they don't tell you what happens, why these places are in ruin.

They never tell you why Elephanta island is in ruins or why Bhubaneswar was desecrated.

You see, **I am less interested in the Taj Mahal which is a vulgar, crude building, a display of power built on blood and bones.** Everything exaggerated, everything overdone, which suggests a complete slave population. **I would like to find out what was there before the Taj Mahal.**

I'm actually more at ease with the epics, the Ramayan and the Mahabharat, and the stories from the Panchantantra. But I would like to see this past recovered and not

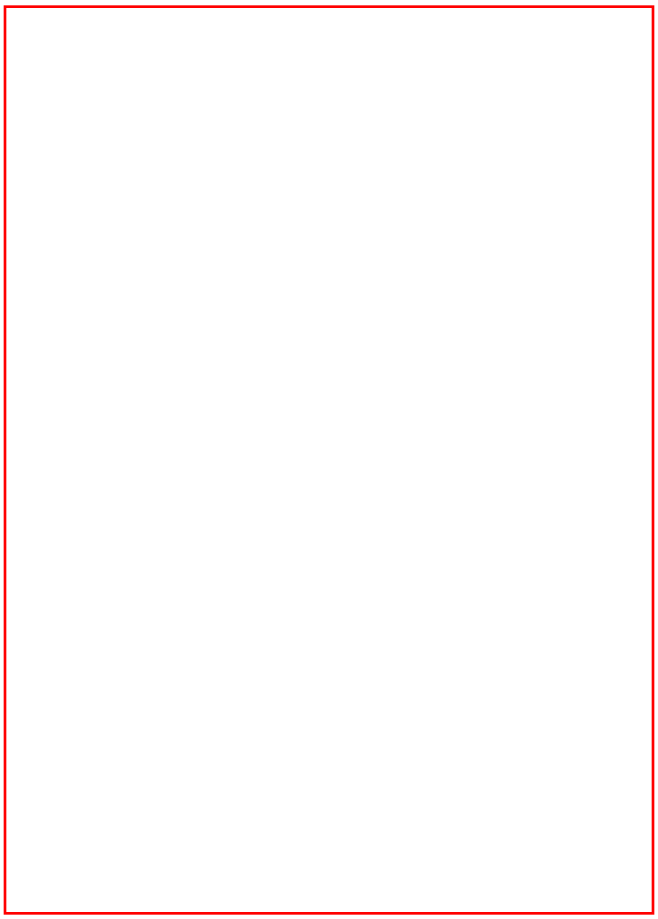
dodged. That foolish man Nirad Chaudhuri, who wrote one good book, then went into kind of absurd fantasy, he built a whole book around somebody who came with the invaders, Al-Beruni, who said, “the Hindus are very violent and aggressive people”. Their land is being taken away from them, they are being destroyed and enslaved and he says this. This foolish man Chaudhuri builds a book around this statement; that is the kind of absurdity we have to avoid."

(source: **How do you ignore history?** - interview - **economictimes.indiatimes.com** - January 13 ' '03).

He sees India as a vast and ancient civilization that successfully met its own challenges centuries ago. It was first disconcerted, then subjugated, and finally released by the West in a damaged condition. Islam, he claimed, had both enslaved and attempted to wipe out other cultures. He has touched upon the consequences of a series of Muslim invasions of India beginning in the 10th century--and remarked on how these invasions had "shattered" Indian (at that time almost exclusively Hindu) civilization. "There probably has been no imperialism like that of Islam and the Arabs,"

He has supported the Ram Janmabhoomi movement and the idea to build a temple at Ayodhya and expressed his sympathy for Hindu Revivalism.

"India was trampled over, fought over. You had the invasions and you had the absence of a response to them. There was an absence even of the idea of a people, of a nation defending itself. Only now are people beginning to understand that there has been a great vandalizing of India. The movement is now from below. It has to be dealt with. It is not enough to abuse these youths or use that fashionable word from Europe, 'fascism', There is a big, historical development going on in India."



(source: **carribeanhindu.com**).

He has pointed that **India was one of the cultural basins of the world** till about 1400 AD or so, but it had declined since then.

(source: **Pravasi Bharatiya Divas - rediff.com**).

“India has been a wounded civilization because of Islamic violence: Pakistanis know this; indeed they revel in it. **It is only Indian Nehruvians like Romila Thapar who pretend that Islamic rule was benevolent.** We should face facts: Islamic rule in India was at least as catastrophic as the later Christian rule. **The Christians created massive poverty in what was a most prosperous country; the Muslims created a terrorized civilization out of what was the most creative culture that ever existed.”**

(source: **OutlookIndia.com**, 15 November 1999 and **http://www.indpride.com/vsnaipaul.html**).

Naipaul described the mosque's destruction as being part of a **"mighty creative process"** unleashed by Hindus. The people who say that there was no temple there are missing the point. Babar, you must understand, had contempt for the country he had conquered. And his building of that mosque was an act of contempt for the country. Today, it seems to me that Indians are becoming alive to their history. **Romila Thapar's book on Indian history is a Marxist attitude to history** which in substance says: there is a higher truth behind the invasions, feudalism and all that. The correct truth is the way the invaders looked at their actions. **They were conquering, they were subjugating. And they were in a country where people never understood this.**

"What is happening in India is **a new historical awakening**....**Indian intellectuals, who want to be secure in their liberal beliefs, may not understand what is going on. But every other Indian knows precisely what is happening: deep down he knows that a larger response is emerging even if at times this response appears in his eyes to be threatening."**

(source: **An Area of Awakening - Interview with V.S. Naipaul – By Dileep Padgaonkar** Times of India July 18, 1993).

He says Hindu militancy is a 'creative force'. "Dangerous or not, it's a necessary corrective to history and will continue to remain so." He feels that India was renewing herself, yet again, from her own inexhaustible stream of history and civilization, her native genius.

"Indian intellectuals have a responsibility to the state and should start a debate on the Muslim psyche," **To speak of Hindu fundamentalism, is a contradiction in terms, it does not exist. Hinduism is not this kind of religion. You know, there are no laws in Hinduism.** And there are many forces in Hinduism.... My interest in these popular movements is due to the pride they restore to their adherents in a country ravaged by five or six centuries of brutal government by Muslim invaders. These populations, in particular the peasantry, have been so crushed, that any movement provides a certain sense of pride. The leftists who claim that these wretched folk are fascists are wrong. It's absurd. I think that they are only reclaiming a little of their own identity. We can't discuss it using a Western

vocabulary."

‘‘I think every liberal person should extend a hand to that kind of movement from the bottom. One takes the longer view rather than the political view. There’s a great upheaval in India and if you’re interested in India, you must welcome it’’

"What is happening in India is a new, **historical awakening.** Gandhi used religion in a way as to marshal people for the independence cause. People who entered the independence movement did it because they felt they would earn individual merit. Only now are the people beginning to understand that there has been a great vandalising of India. **Because of the nature of the conquest and the nature of Hindu society such understanding had eluded Indians before."**

(source: **indolink.com**).

"I think when you see so many Hindu temples of the tenth century or earlier time disfigured, defaced, you know that they were not just defaced for fun: that something terrible happened. I feel that the civilization of that closed world was mortally wounded by those invasions. And I would like people, as it were, to be more reverential towards the past, to try to understand it; to preserve it; instead of living in its ruins. The Old World is destroyed. That has to be understood. **The ancient Hindu India was destroyed."**

(source: **Interview by Sadanand Menon** - The Hindu, 5 July 1998).

"The older I get, the more Hindu I become."

(source: **Hinduism Today** August 1999). For more on Naipaul, refer to chapter **Islamic Onslaught**).

252. **Glen Peter Kezwer** a physicist from Canada. He lives in Himachal Pradesh and is author of the book **Meditation, Oneness and Physics** writes:

" Spirituality is an intrinsic part of Indian culture and life. For the worshipper, this aspect of Indian culture serves as a constant reminder that behind the material forms which constitute our daily world, there is an unchanging consciousness which permeates everything.

From times immemorial India's message has been promulgated by her saints, sages, gurus and rishis and transmitted by them to those who were desirous of knowing the truth. The essence of this message is simple: **Behind the eyes of every living being on earth there shines a light. This light is one and the same in all beings. This light is immortal, blissful, eternal and indestructible. This is the light of consciousness which makes each and every one of us alive and alert and gives us the power to breathe.**

It is written in Chapter II, verse 30 of the **Srimad Bhagavad Gita** that Dayhee nityamavadhyoayam / Dayhay Sarvasya Bhaarat: The spirit which dwells within the body is eternal and indestructible. It dwells in the bodies of all, and is therefore the selfsame spirit in every living human being or creature. This spirit, which can also be called Aatmaa or Self, is the true nature of all. It is indivisible, being one and one alone, and is the unchanging reality behind the changing world which we experience every day through our senses. To know or realize this Self is the quest of every spiritual seeker throughout history, and **the means to achieve this loftiest of goals can be found in the spiritual heritage of India."**

(source: **India's Spiritual Heritage - By Glen P Kezwer**).

253. **Swami Chinmayananda** (1916-1993) founder of Chinmaya Mission. He was not satisfied with degrees in literature and law or with other worldly aspirations pursued the spiritual path in the Himalayas under the guidance of his Gurus Swami Tapovanam and Swami Sivananda.

Swami Chinmayananda was appalled by the fact that majority of Indians had no appreciation of their religious heritage, and that spiritual learning was given to only the privileged classes. From then on his only mission in life was to take religion from classes to the masses, and to "**convert Hindus to Hinduism**". He told his guru, "I feel the immense urge to go down to the plains and share the wealth of the holy scriptures with my fellow countrymen. I want to run down like a Ganga which nourishes and inspires with its refreshing waves. "If he thought the task was going to be an easy one, he was wrong for he faced stiff opposition from the orthodoxy. But he was not the man to be baffled by such obstacles, and he carried on with his goal of the democratization of religion

Has written several books including **Self-Unfoldment (The Self-Discovery Series).**

"Hinduism is not bound by any rigid text book or commandments, orders, declarations and revelations; but it is **a storehouse of scientific facts and has in it healthy impulses of a growing tradition.** The Hindu religion or Sanatana Dharma, is the way of life of perfect living and of gaining mastery over oneself. This religion reveals the secret process which brings forth an effective personality out of a shattered man of despair and disappointment."

(source: **Hinduism: The Eternal Religion - By M. D. Chaturvedi** p. 3-5). **Swami Chinmayananda - Tribuneindia.com**).

"Hinduism is the religion for our times," Unlike the other scriptures, the methodology followed by the Gita appears to be more conducive to the modern, scientific mind and the educated classes. For they don't believe in anything. They want everything to be rationally proved, intellectually defensible. And the approach of the Gita is very rational because Krishna had to address a dynamic, young, educated, intelligent man who was a born skeptic. Arjuna did not believe or understand that Krishna was an intellectual giant. It is only in the eleventh chapter that he got a glimpse - and, thereafter, his attitude changed. But till the eleventh chapter he was absolutely rational. He did not believe a word of what Krishna said. Krishna had to make him believe it by the strength of logic."

(source: **Chinmaya mission UK**).

In his book, **Vedanta: The Science of Life**, he states:

"The Gita is very intimately connected with the life of everyone of us, whether it be in the market place, at home or in the political field, Bhagavad Gita not only indicates theories of the Hindu way of life, but also reveals certain definite scheme by which every individual can work out his own self-improvement."

(source: **Hinduism: The Eternal Religion - By M. D. Chaturvedi** p. 52).

254. **Robert R. C. Zaehner** (1913-1974) British historian of religion who investigated the evolution of ethical systems and forms of mysticism, particularly in Eastern religions. The son of Swiss parents who had immigrated to England, Zaehner studied Oriental languages at the University of Oxford. Author of several books including **Hindu Scriptures**, and **Hinduism**.

It was the sublime ancient tolerance of Hinduism that he often stressed, that was the true proof of the wisdom and mature dignity of the Hindu tradition.

"In the family of religions, Hinduism is the wise old all-knowing mother. Its sacred books, the Vedas, claim, 'Truth is one, but sages call it by different names.' If only Islam, and all the rest of the monotheistic 'book' religions, had learned that lesson, all the horror of history's religious wars could have been avoided. **Which other religion has its God say, as Krishna does in the Bhagavad Gita, 'All paths lead to me.'**

"If only the Church had the sense to allow so many different and seemingly contradictory approaches to God, how much saner its history would have been!"

He also observed that all traditional poems and meditations and philosophical texts of Hinduism are "different-shaped peaks in one vast, grand, interconnected mountain chain, like the Himalayas."

(source: **Teachings of Hindu Mystics - By Andrew Harvey** p. xv - xviii).

255. **Vecente Avelino** (?) who was the Consul General for Brazil in India in 1930 belonged to the inner circle called **Tattva Shri Chaitanya**. He was a devout Vaishanava and an ardent admirer of Shri Ramakrishna. In an address at Panihati, near Calcutta, on the occasion of a religious festival organized by the Shri Gauranga Grantha Mandir to commemorate Shri Chaitanya's visit to that place, he said:

"India is the only country which has known God and if anyone wants to know God he must know India."

(source: **The Vision of India - By Sisirkumar Mitra** p.207-208).

256. **Claude Arpi** (?) French dentist-turned-Tibetologist, author of **Fate of Tibet: When Big Insects Eat Small Insects** has written:

"Though I am still a French man, I adopted this country as my own long ago However, today, I am sad. When I left France for India, I came with a dream: I was going to the **land of the Vedas, of the Buddha, a continent with an eternal religion.** I thought everyone in this country was turned "inwards", seeking a higher light; I believed India would soon be able to guide the world towards a more meaningful tomorrow. Why I am sad now? I can't help feeling a terrible divide between this dream and today's reality (at least the one depicted in the English media).

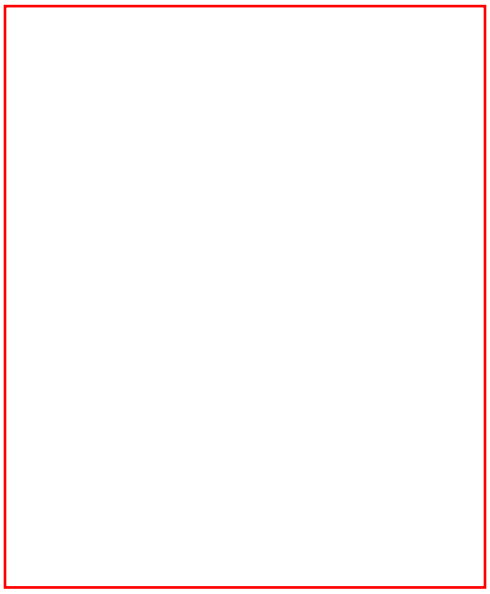
I still believe in "India of the ages", but I cannot grasp why Indians themselves still refuse to acknowledge the greatness of their culture.

Is it not disheartening that historians base their judgment on press reports and not on their own scholarship? Then why do they spend three days discussing text-books when there are so many more important subjects related to history to be discussed? What about the **neglected discoveries of Poompuhar or the new sites in the Gulf of Cambay?**

It is estimated that 12 million Americans are today practicing **yoga** and that 450 yoga centers are blossoming in the US. The same tidal wave is submerging Europe. In France alone, more than one million people are practicing Buddhist meditation. **What is sad and shocking is that these historians, like many intellectuals in India, are not at all concerned by what has always made India great, they prefer to denigrate India. "**

(source: **India of old-new dreams - by Claude Arpi** - **dailypioneer.com**).

257. **Jean Michel Varenne** (?) the distinguished French Orientalist wrote in 1976:



“The only remaining testimony to the prestigious civilization of ancient Egypt lies buried in archaeological remains; which meant that the inhabitants of the Nile valley, converted to Islam thirteen centuries ago, had to wait for Champollion to decipher the hieroglyphics before they could know anything of the beliefs of their distant ancestors. **Yet during all this time Hindu families continued, and still continue today, to venerate the selfsame Vishnu who is celebrated in the archaic hymns of the Rig Veda…”**

“It would be impossible to overemphasize this exceptional durability of a civilization that is extremely difficult to conceive of as mortal. And certainly the Hindus themselves would be the last to subscribe to the notion that all cultures have a limited life-span. That is the product of Western minds trained at an early age to write essays

on “The Causes of the fall of the Roman Empire,” of a Christian or a Moslem faith proud of the fact that its first believers once repudiated pagan polytheism, and therefore prone to assume that all civilizations are perishable the same way as human beings themselves. To the traditional minded Hindu, on the other hand, such revolutions are inconceivable, for him, the religion he professes has no beginning and no end; it had no founder, and it lies in no one’s power to attack or breach it. **It is the eternal norm (in Sanskrit, sanatana dharma), the universal law, the supreme religion. Being absolute, it cannot be modified in any way and remains identical to itself down through the ages.”**

Traditional India knows that nothing in the universe is chance, that everything is necessity. In the infinite multiplicity of the real it reads a reference to unity, and perceives the rule of a sovereign order even where complexity seems in danger of lapsing chaos and incoherence. The All, in itself and in each of its parts, is governed by an immutable, unbreakable law that supports the world while at the same time transcending it absolutely."

(source: **Yoga And the Hindu Tradition - By Jean Varenne** p. 1-15).

258. **Count Louis Hamon** aka **Cheiro** (1866-1936) author of several book, **Language of the Hand** and **World Predictions** published in 1926. Born in Ireland as William John Warner, Cheiro also went by the name Count Louis Hamon. He had a wide following of famous European and American clients like Mark Twain, Sarah Bernhardt, Mata Hari, Oscar Wilde, Grover Cleveland, Thomas Edison, the Prince of Wales, General Kitchener, William Gladstone, Bernard Shaw and Joseph Chamberlain.

He spoke of the Hindu race and the remarkable sciences for foretelling future, (The **Bhavishya Purana**) which the Hindus, have, as prophetic sciences:

“To consider the origin of this science, we must take our thoughts back to the earliest days of the world’s history, and further more to the consideration of a people the oldest of all, yet one that has survived, and who are today as characteristic and as full of individuality as they were when thousands of years ago the first records of history were written.

I allude to those children of the East, the **Hindus, a people whose philosophy and wisdom are every day being more and more revived.”**

“Looking back to the earliest days of the history of the known world, we find that the first linguistic records belong to the people under consideration, and date back to that

far distant cycle of time known as the Aryan civilization. Beyond history we cannot go; but the monuments and cave temples of India, according to the testimony of archaeologists, all point to a time so far beyond the scant history at our disposal, that in the examination of such matters our greatest knowledge is dwarfed into infantile nothingness – our age and era are but the swaddling clothes of the child; our manhood that of the infant in the arms of the eternity of time."

"Long before Rome or Greece or Israel was even heard of, the mountains of India point back to an age, of learning beyond, and still beyond. From the astronomical calculations that the figures in their temples represent, it has been estimated that the Hindu understood the Precession of the Equinoxes centuries before the Christian Era."

(source: **Hinduism in The Space Age - By E. Vedavyas** p. 233-235).

In a book called **You and Your Hand** by the late Count Louis Hamon, known better as Cheiro, this statement is found: "people who in their ignorance disdain the wisdom of ancient races forget that the great past of India contained secrets of life and philosophy that following civilizations could not controvert, but were forced to accept. For instance, it has been demonstrated that the ancient Hindus understood the precession of the equinoxes and made the calculation that it [a complete cycle] took place once in every 25,870 years. The observation and mathematical precision necessary to establish such a theory has been the wonder and admiration of modern astronomers. They, with their modern knowledge and up-to-date instruments, are still quarrelling among themselves as to whether the precession, the most important feature in astronomy, takes place every 25,870 years or every 24,500 years. **The majority believe that the Hindus made no mistakes, but how they arrived at such a calculation is as great a mystery as the origin of life itself."**

(source: **Antiquity of Indian Astrology**).

259. **Richard Lannoy** (1928 -) author of **The Speaking Tree: A Study of Indian Culture and Society** has written:

"The Kailash temple at Ellora, a complete sunken Brahmanical temple carved out in the late seventh and eighth centuries A. D is over 100 feet high, the largest structure in India to survive from ancient times, larger than the Parthenon. This representation of Shiva's mountain home, Mount Kailash in the Himalaya, took more than a century to carve, and three million cubic feet of stone were removed before it was completed. **An inscription records the exclamation of the last architect on looking at his**

work: “Wonderful! O How could I ever have done it?”.

In Europe’s middle ages, the great cathedrals, including the one of Chartres, rose from the ground upwards to the sky, supported not so much by stone as by the powerful religious symbolism that drove the Christian church. In India, the craftsmen did not build, but removed the earth and stone to discover space in the service of a different religious symbolism, not one identified with any religious monolith, but instead, one to which different religious groups owed allegiance. Here Lannoy is more precise:

“A hollowed-out space in living rock is a totally different environment from a building constructed of quarried stone. The human organism responds in each case with a different kind of empathy. Buildings are fashioned in sequence by a series of uniformly repeatable elements, segment by segment, from a foundation upwards to the conjuction of walls and roof; the occupant empathizes with a visible tension between gravity and soaring tensile strength. Entering a great building is to experience an almost imperceptible tensing in the skeletal muscles in response to constructional tension. Caves, on the other hand, are scooped out by a downward plunge of the chisel from ceiling to floor in the direction of gravity; the occupant empathizes with an invisible but sensed resistance, an unrelenting presence in the rock enveloping him; sculpted images and glowing pigments on the skin of the rock well forth from the deeps. To enter an Indian cave sanctuary is to experience a relaxation of physical tension in response to the implacable weight and density of solid rock.”

(source: **Decolonizing History: Technology and Culture in India, China and the West 1492 to the Present Day - By Claude Alvares** p.72-73).

260. **Michel Danino** (1956 -) Born in 1956 at Honfleur (France) into a Jewish family recently emigrated from Morocco, from the age of fifteen Michel Danino was drawn to India, some of her great yogis, and soon to Sri Aurobindo and Mother and their view of evolution which gives a new meaning to our existence on this earth. He has been settled in Tamil Nadu for 25 years and has given many lectures in India and is author of **The Invasion That Never Was**, **The Indian Mind Then and Now** and **Kali Yuga or The Age of Confusion**. He is also the convener of the **International Forum for India's Heritage**.

He talks about Indian culture:

"The so-called “New Age” trend of the 1960s owed as much to India as to America; a number of Western universities offer excellent courses on various aspects of Indian civilization, and if you want to attend some major symposium on Indian culture or India’s ancient history, you may have to go to the U.S.A; some physicists are not shy of showing parallels between quantum mechanics and yogic science; ecologists call for a recognition of our deeper connection with Nature such as we find in the Indian view of the world; a few psychologists want to learn from Indian insights into human nature; hatha yoga has become quite popular."

He has shown the reverence with which nature is held in Hinduism.

"In fact, since the start of the Judeo-Christian tradition, the West broke away from Nature and began regarding her as so much inanimate matter to be exploited (a polite word for plunder). The contrast with the ancient Indian attitude is as stark as could be. Indian tradition regards **the earth as a goddess, Bhudevi ; her consort, Vishnu, the supreme divinity,** incarnates from age to age to relieve her of the burden of demonic forces—sometimes of humanity itself. This he does out of love for the earth, his companion. Sita means “furrow,” and she returned to the earth whence she came. Shiva too is bound to the earth through Parvati, daughter of Himavat, i.e. the Himalayas. Earth and Heaven are therefore inseparable: “Heaven is my father; my mother is this vast earth, my close kin,” says the **Rig-Veda** (I.164.33)."

(source: **bharatvani.org** and **Nature and Indian Tradition - By Michel Danino**).

"Western civilization, not even three centuries after the Industrial Revolution, is now running out of breath. It has no direction, no healthy foundations, no value left except selfishness and greed, nothing to fill one's heart with. India alone has preserved something of the deeper values that can make a man human, and the world will surely be turning to them in search of a remedy to its advanced malady."

Once India's ancientness is recognized, we can understand the strength that enabled her civilization to survive through all those ages. Whether she will survive her present phase of degradation and lead the world to a new phase is the question."

(source: **Sri Aurobindo and Indian Civilization - By Michel Danino**). For more on Michel Danino, refer to chapter on **Aryan Invasion Theory**).

261. **Jack Sarfatti** (?) Physicist of the **Physics/Consciousness Research Group** writes:

"I suspect that general relativity and quantum theory are two complimentary aspects of a deeper theory that will involve a kind of cosmic consciousness. The cosmic consciousness or the Mahat of India's **Samkhya Philosophy** is the basis of entire creation".

(source: **Science and Vedanta - By H M Ganesh Rao**).

262.**B B (Braj Basi) Lal** (1921-) On joining the Archaeological Survey in January 1946, he held charge of the Excavations Branch and participated with Sir Mortimer Wheeler in the excavations at Harappa, now in Pakistan. In 1951 he was deputed for advanced studies at the Institute of Archaeology, London. In 1961, under a UNESCO project, he conducted excavations in Nubia, Egypt, and brought to light valuable evidence relating to prehistoric and protohistoric periods of that country.

He was the Director General of the Archaeological Survey of India from 1968 to 1972. He writes:

"The great civilization of the Indian subcontinent, has had its roots deep in antiquity, some seven to eight thousand years ago, and its flowering in the third millennium B.C. still lives on. In contrast, when we look round the world we are surprised by the fact that the Egyptian and Mesopotamia civilizations that flourished alongside this Indic Civilization have all disappeared, leaving hardly any trace behind. Why? The Indian psyche has indeed been pondering over this great cultural phenomenon of 'livingness', and this quest.."

" What is that ‘something’, some inherent strength? Doubtless it lies in the liberal character of the Indian civilization, which allows for cross-fertilization with other cultures, without losing its own identity. Even time **(kala)**, the great devourer, has stood testimony to the fact that the deep foundations of Indian culture could not be shaken either by internal upheavals, however great may have been their magnitude...." **" the soul of India lives on!"**

Speaking about the **River Saraswati**, he writes:

"Western linguists and historians and their, more vociferous, Indian counterparts claim that the Rigvedic Sarasvati was the Helmand of Afghanistan. The **Rigvedic Saraswati**, according to what is stated in the Rig Veda (RV. 10. 75. 5) itself lay between the Yamuna on the one hand and the Sutlej on the other. These two rivers do not exist in Afghanistan.

(source: **The Saraswati Flows on: The Continuity of Indian Culture - By B. B. Lal**. p. Chapter V p. 136).

Lal is **critical of ‘‘Western scholars and their Indian followers’’** for not accepting the unity between the Indus Valley and Vedic Civilizations.

‘‘Most likely, the authors of the Indus valley civilization were the Sanskrit-speaking Vedic Aryans,’’ Lal asserted. Lal invoked the **Rig Veda** to prove his thesis. **“To say the Vedic people were nomads is either ignorance or due to a willful twisting of facts,”** he alleged.

(source: **Times of India** 12/26/02).

He has dubbed the hypothesis of “Aryan invasion of India” a myth. He alleged that it was still accepted for reasons other than

historical.

"The theory that there was an Aryan invasion of India is completely wrong," Lal stressed in a seminar in New Delhi and alleged that political reasons were behind its being in the textbooks. "Do the proponents of this theory expect us to believe that urban Harappans, on being sent away to south India, shed overnight their urban characteristics and took to a stone age way of living?" asks Lal.

(source: **Aryan invasion a myth, argues former DG of ASI - indianexpress.com**). For more refer to chapter on **Aryan Invasion Theory**).

263. **Sir John Woodroffe** aka **Arthur Avalon** (1865-1936) the well known scholar, Advocate-General of Bengal and sometime Legal Member of the Government of India. He served with competence for eighteen years and in 1915 officiated as Chief Justice. He has said:

"Ages before Lamarck and Darwin it was held in India that man has passed through 84 lakhs (8,400,000) of birth as plants, animals, as an "inferior species of man" and then as the ancestor of the developed type existing to-day. **The theory was not, like modern doctrine of evolution, based wholly on observation and a scientific enquiry into fact but was a rather (as some other matters) an act of brilliant intuition in which observation may also have had some part**."

"Indian thought with its usual profundity and avoidance of arbitrary divisions, regards Philosophy as religious and Religion as philosophical."

The **Vedanta does not speak ill of any religion,** but assigns to each its place....I however was concerned with the religion of the "Idolatrous" "Heathen"...The point was this,...how could such a grade people have principles so excellent that the Western Religions also laid claim to them? It is clear that God has revealed Himself at all times and to all peoples according to their capacity to receive knowledge of Him. "It is Official Christianity which has been slow to recognize the merit of Indian teaching and to give credit for anything to the "Heathen." **Vedanta kindly tolerates even the most ignorant of its detractors. "**

" It is Official Christianity which has been slow to recognize the merit of Indian teaching and to give credit for anything to the "Heathen. The European man of a "religious" turn of mind is too often over-beset with sectarian notions."

Attacks on Indian culture however have led and will lead to its defense and appreciation. **Kalidasa** says:

"Jvalati chalitendhanah agnir viprakritah
pannagah phanam kurute
Prayah svam mahinmanam kshobhat pratipadyate hi janah."

"When the faggots are stirred the flame leaps. When the Snake is stirred it rears its hood. Through being stirred to action people mostly attain their proper greatness."

In writing then of Indian Culture I have in mind not any soiled or hybrid developments of the time, but **the principles of the civilization of old India, with its Dharma, Devata and Gomata - a civilization in its depths profound, on its surface a pageant of**

antique beauty - the civilization of India of the Hindus." In India there has been intellectual and spiritual freedom - the most valuable of all. The history of Europe on the contrary is marked by intolerance and abominable persecutions."

"If, as is finely said in India, Satyannasti paro dharmah - there is no religion higher than truth. As the Veda says, "Truth will conquer." (Satyam jayate).

(source: **Is India Civilized: Essays on Indian Culture - By Sir John Woodroffe** p. xiv - 22).

"An examination of the Vedic thesis shows that it is in conformity with the most advanced philosophical and scientific thoughts of the West and, where this is not so, it is the scientist who will go to the Vedantist and not the Vedantist to the scientist."

(source: **Hinduism: The Eternal Religion - By M. D. Chaturvedi** p.16-17).

A judge, an educator, a Hindu scholar and translator as well as an author. During his multifaceted career, he practiced and taught law in India. Aside from his successful career in law, which lead to his appointment as Chief Justice of the high court in 1915, he had a a prolific output as a scholar of Tantra. Had it not been for him, we might still share that general prejudice regarding Tantra. At the beginning of the twentieth century, Woodroffe boldly disregarded the hostile attitude towards Tantra.

Sir John Woodroffe's achievement in the exposition of Tantrik thought cannot be over estimated. Himself a follower of Tantric cult, this great Englishman edited in a masterly way a number of Tantric texts and most of his views on them are regarded as authoritative. It is mainly through his writings - a rare combination of insight and scholarship - that the ideas of the Tantras began to enter the mind of the West in modern times.

(source: **The Vision of India - By Sisirkumar Mitra p. 209).**

In his views, **Tantrism represents the full flowering of the religious spirit of India.**

(source: **Religions of Ancient India - By Louis Renou** p. 84).

Writing under the pseudonym, Arthur Avalon seemed to be an ‘An Indian Soul in a European Body? His books **challenged the dominant Western understanding of Tantra** as a primitive and demonic cult. His emphasis was on the philosophical aspects of Tantra and his conclusion that textual descriptions of rites should be read as deeply spiritual symbolism. Author of several books including **Bharata Shakti, The Serpent**

Power he has written:

"I believe that the East and particularly India possesses that which is the highest value. I wish to see this preserved for the mutual benefit of East and West. "

"...India has Panini, Patanjali's Mahbhashya, Supadma, Kalapa, the Vakyapadiya, Bhopadeva, Sangkshiptasara, Siddantakaumudi, Laghukaumudi, amongst the ancient, while the Vyakarna Kaumudi, Upakramanika of Ishwara Chandra Vidyasagara, and the ashubodha of Taranatha Vachaspati head the moderns. How is it that all these have been displaced? "

Indian tolerance is not merely a matter of temperament. It is based on the doctrine of the relativity of ordinary human knowledge and, in part, of morals and on the doctrine of Adhikara, that is the teaching that all people are not fit for the same beliefs and practices, and that what is suited to the capacity, intellectual, moral, and spiritual, of each person is that which he may and should accept, follow, and practice.

Hinduism has no word for "pessimism," a European conception, nor for optimism either. The universe according to it is a Dvandva or duality of good and evil.

(source: **Bharata Shakti: Collection of Addresses on Indian Culture - By Sir John Woodroffe** p. xxi-xxvi. For more information, refer to chapter on **Yoga and Hindu Philosophy**).

264. **Prof Klaus Klostermaier** (1933 -) Distinguished Professor in the Department of Religious Studies at the University of Manitoba in Canada. He is author of several books including **Hinduism: A Short Introduction**

"Hinduism has proven much more open than any other religion to new ideas, scientific thought, and social experimentation. Many concepts like **reincarnation, meditation, yoga** and others have found worldwide acceptance. It would not be surprising to find Hinduism the dominant religion of the twenty-first century. It would be a religion that doctrinally is less clear-cut than mainstream Christianity, politically less determined than Islam, ethically less heroic than Buddhism, but it would offer something to everybody.

It will appear idealistic to those who look for idealism, pragmatic to the pragmatists, spiritual to the seekers, sensual to the here-and-now generation. **Hinduism, by virtue of its lack of an ideology and its reliance on intuition, will appear to be more plausible than those religions whose doctrinal positions petrified a thousand years ago..."**

"Hinduism will spread not so much through the gurus and swamis, who attract a certain number of people looking for a new commitment and a quasi-monastic life-style, but it will spread mainly through the **work of intellectuals and writers,** who have found certain **Hindu ideas convincing** and who identify them with their personal beliefs. **A fair number of leading physicists and biologists have found parallels between modern science and Hindu ideas.** An increasing number of creative scientists will come from a Hindu background, will consciously, and unconsciously blend their scientific and their religious ideas. **All of us may be already much more Hindu than we think."**

(source: **A Survey of Hinduism - by Klaus Klostermaier** p 475-476).

265. **Swami B V Tripurari** (?) American born has spent over 30 years as a Hindu monastic, Awarded the sannyasa order in 1975, Swami Tripurari has studied under several spiritual masters in the Gaudiya lineage, notably AC Bhaktivedanta Swami Prabhupada. He is the founder of the **Gaudiya Vaishava Society** in 1985, author of several books, most recently **Bhagavad-Gita: Its Feeling and Philosophy.**

"For those now disenchanted with industrialization and scientific materialism as well as pseudo spirituality, India's ancient spiritual heritage provides a rich alternative. **Eastern philosophy, and the devotional heart of India's Vedanta in particular, can fill the empty shopping bag of our Western accomplishments.**"

'Whoever reads the Bhagavad Gita for the first time will be struck by the beauty and depth of this work."

"Our present environmental crisis is in essence a spiritual crisis. We need only to look back to medieval Europe and the psychic revolution that vaulted Christianity to victory over paganism to find the spirit of the environmental crisis. Inhibitions to the exploitation of nature vanished as the Church took the "spirits" out of the trees, mountains, and seas. Christianity's ghost-busting theology made it possible for man to exploit nature in a mood of indifference to the feelings of natural objects. It made nature man's monopoly. This materialist paradigm has dominated the modern world for last few centuries. The current deplorable condition demands a spiritual response. A fundamental reorientation of human consciousness, accompanied by action that is born out of inner commitment, is very much needed. **One of the measures that could help a great deal to fulfill this need is to regenerate and rejuvenate basic values of Hindu culture and propagate them."**

(source: **Ancient Wisdom for Modern Ignorance - By B V Tripurari** p ix -xii and 13). For more on Swami Tripurari refer to chapter on **Nature Worship**).

266. **Madeleine Biardeau** (?) was professor of Indian Religion at the Ecole Pratique des Hautes Etudes in Paris, author of several books, including **Studies in Hinduism: Vedism and Hinduism** and **India.**

She wrote about the interchange that is continually occurs in Indian philosophy and which can even be experienced by the more prosaic foreigner if he is willing to attune himself to the Indian atmosphere. She writes that, as well as being 'a personal loving God in the form of Krishna in the Bhagavad Gita, divinity is at the same time referred to in the Bhagavad Purana divinity and in many other texts as supremely impassive - none other than the cosmos itself.

"The God of Indian devotion - bhakti who responds to the same eternal needs of the human heart as exists anywhere else, never detaches himself wholly from the immanence of the world. He is personal and endowed with feelings only in the eyes of popular piety; to thought he reveals himself both far beyond and within at the same time; he reveals it as much as he hides it; and each man is in himself in some sort a manifestation of God."

(source: **The Music of India - By Peggy Holroyde** p. 36).

267. **Navaratna S Rajaram** (1943 -) is a mathematician, computer scientist and linguist and historian of science. He has taught in several universities in the United States. Since 1984 he has been an advisor to the National Aeronautical and Space Administration (NASA). He has written several books including **Politics of History, Aryan Invasion Theory and the Subversion of Scholarship**

''Hindu God is not an external God who reveals himself only to a chosen prophet to be then imposed as the ultimate authority on others. God is something that anyone can know through one's own effort and seeking. Remember Krishna's words: "All creatures great and small - I am equal to all; I hate none, nor have I any favorites." The different yogas are pathways that can lead one to knowledge of God. This is similar to ancient Greek mysticism as practiced by sages like Pythagoras. **There is no dogma that an external agent enforces upon everyone in the name of One God.** Thus, the Hindu God like the Greek God is a personal God - as diverse as the individual. The multiplicity of Gods one sees in Hindu and Greek pantheons is a reflection of the multiplicity of pathways explored by sages. **It is a natural consequence of the spiritual freedom that is the right of every Hindu. "**

(source: **A Hindu View of the World: Essays In the Intellectual Kshatriya Tradition - By N S Rajaram** p. 8).

268. **Swami Dayanand Saraswati** (1824-1883) Rightly described as a human dynamo, Swami Dayananda shook the structure of established Hinduism to its foundations and infused into it new blood and fresh vigor. The founder of **Arya Samaj,** was a prophet with a difference. Dayanand is the father of both Renaissance (he brought to life world's supreme knowledge, the Vedas, with his slogan 'Back to Vedas) and Reformation. In 1849, the British annexation of Punjab, introduced the **aggressive conversion of faith of Christianity.** In time, Christianity threatened each of the coexisting religions. Christian missionaries brought with them new forms of organization and techniques of proselytism. He created a psychological revolution and gave tremendous self-confidence to Hindudom. Swamy Dayananda took the Christian and Muslim converts back into the Hindu fold by performing purification rites for them.

The British rulers sought to consolidate their rule by instilling inferiority complex among the then 90 per cent majority community. The British called Indians "most backward, barbaric, without the gift of scientific inventions and discoveries, the worst and most pitiable creatures, to whom we brought the light of learning, blessings of science and modernism"

Dayanand thundered: **'Our Vedas are the earliest books, Hinduism is the most ancient of all the religions that have survived".**

(source: **The prophet with a difference - tribuneindia.com**).

Another very important contribution of Swami Dayananda is his work, **'Satyartha Prakash'** (The Light of Truth). It contains fourteen chapters. It is a great book. It explains the true meaning of the Vedas and therefore is 'Satyartha Prakash'. And it is based solely on the Vedas.

(source: **freeindia.org**). For more on Dayananda Saraswati, refer to chapter **Unknown**

Hindu Revivalists).

269. **Peggy Holroyde** (?) British author of several books on India including **Indian Music: a vast ocean of promise** and **East comes West: a background to some Asian Faiths**, writes:

"The sparkling energy of India lies in Hinduism. Without the framework of Hindu belief India would fall apart. Without Hinduism India is not herself.

"Because Indian society has, like the Chinese, been a unitary one where science and religion have never been in conflict, there has been no basic split as has happened with our own Christian background. Our own antagonism between the two disciplines of theology and science has created chaos in our thinking and a curious dichotomy during the past two centuries. In India I found a thankful release from our restricted vision of the creation of God."

"Hinduism has remained in constant, replenished usage throughout this tremendous stretch of time, impervious to outside influence, as onward flowing as the imperturbable Ganges itself. Not even Moghul invasion and Muslim supremacy for 700 years, nor the arrival of the British, Dutch, French and Portuguese with their own civilization and standards, penetrated into the imperious core of this steadfast faith. Hindu thought took and absorbed according to its own will, folding itself inwards at the sense of approaching danger like some gigantic sea-anemone drawing up all its tentacles, only to stretch outwards and flourish when the danger was past. One continues to hope that this will remain so, **that modern Indians will realize that this is their enviable strength despite all their understandable yearnings for the material advantages of technology which they have seen give power and monopoly of advantage to the Western world. But their quality of synthesis, of intelligent absorption, may still save them from the sterility of urban life and the monotonous obsession with quantity and things, rather than with quality and life-perspective."**

(source: **The Music of India - By Peggy Holroyde** p. 44-52)..

270. **Fritjof Capra** (1939 -) Austrian-born famous theoretical high-energy physicist and ecologist and the author of **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism**, He is co-director of the Center for Eco-Literacy in Berkeley. **Capra** who studied with Werner Heisenberg says:

"Hinduism cannot be called a philosophy, nor is it a well defined religion. It is, rather, a large and complex socio-religious organism consisting of innumerable sects, cults, and philosophical systems and involving various rituals, ceremonies and spiritual disciplines, as well as the worship of countless gods, and goddesses. **The many facets of this complex, and yet persistent and powerful spiritual tradition mirror the geographical, racial, linguistic and cultural**

complexities of India's vast subcontinent. The manifestations of Hinduism range from highly intellectual depth to the naïve ritual practices of the masses. If the majority of the Hindus are simple villagers who keep the popular religion alive in their daily worship, **Hinduism has, on the other hand, brought forth a large number of outstanding spiritual teachers to transmit its profound insights.** "

The **Upanishads** contain the essence of Hinduism's spiritual message. They have guided and inspired India's greatest minds for the last twenty-five centuries, in accordance with the advice given by their verses:

Taking as a bow the great weapon of the Upanishad,
One should put upon it an arrow sharpened by
Meditation.
Stretching it with a though directed to the essence of That,
Penetrate that Imperishable as the mark, my friend.

Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but is also the very essence of inorganic matter. Modern physics has thus revealed that every subatomic particle not only performs an energy dance, but also **is** an energy dance; a pulsating process of creation and destruction.

"I saw cascades of energy coming down from outer space, in which particles were destroyed and created in rhythmic pulses; I saw the atoms of the elements and those of my body participating in this cosmic dance of energy; I felt its rhythm and I heard its sound, and at that moment I knew that this was the **Dance of Shiv, the Lord of Dancers."**

"The metaphor of the cosmic dancer has found its most profound and beautiful expression in Hinduism in the image of the dancing Shiva."

"The dance of Shiva is the dancing universe, the ceaseless flow of energy going through an infinite variety of patterns that melt into one another''.

For the modern physicists, then **Shiva's dance is the dance of subatomic matter**. As in Hindu mythology, it is a continual dance of creation and destruction involving the whole cosmos; the basis of all existence and of all natural phenomenon. Hundreds of years ago, Indian artists created visual images of dancing Shivas in a beautiful series of bronzes. In our times, physicists have used the most advanced technology to portray the patterns of the cosmic dance. The bubble-chamber photographs of interacting particles, which bear testimony to the continual rhythm of creation and destruction in the universe, are visual images of the dance of Shiva equaling those of the Indian artists in beauty and profound significance. The metaphor of the cosmic dance thus unifies ancient mythology, religious art, and modern physics. It is indeed, as Coomaraswamy has said, 'poetry, but none the less science."

Lord Shiva's dance is the dance of subatomic matter.

"The idea of a periodically expanding and contracting universe, which involves a scale of tome and space of vast proportions; has arisen not only in modern cosmology, but also in ancient Indian mythology. Experiencing the universe as an organic and rhythmically moving cosmos, the Hindus were able to develop evolutionary cosmologies which come very close to our modern scientific models. **The Hindu sages were not afraid to identify this rhythmic divine play with the evolution of the cosmos as a whole.** They pictured the universe as periodically expanding and contracting and gave the name kalpa to the unimaginable time span between the beginning and the end of one creation. **The scale of this ancient myth is indeed staggering; it has taken the human mind more than two thousand years to come up again with a similar concept."**

"..the two foundations of of twentieth-century physics - quantum theory and relativity theory - both force us to see the world very much in the way a Hindu, Buddhist...sees it."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p. 85 - 245 and 17).

SIX THOUSAND YEAR BARRIER

by Glenn R. Smith (Durgadass)

http://www.hawaiian.net/~durgadas/Barrier/6000yb.html
http://www.hindunet.org/hssworld/hindutva/hindu_calendar/index.html

This article on Hindu Calendric system was originally available at http://www.hawaiian.net/%7Edurgadas/Barrier/6000yb.html However, it is currently non-functional.

Western archeologists have a curious notion that although human beings have been around for hundreds of thousands of years, civilization itself is a recent invention of only six thousand years ago. It is believed and taught that the cradle of civilization began in the fertile crescent of the Mesopotamian valley and from there spread to Egypt, India and beyond. But there seems to be reason to believe that as one becomes free from cultural and religious bias one may discover that important accomplishments of mankind may be traceable to far beyond that time barrier.

The problems in tracing origins back through time are many. First is the fact that great periods of time have a tendency to erase traces of cultures. When all traces decay then the culture is effectively obliterated. Whatever is left undestroyed by time becomes subjected to the cultural and personal opinions of archeologists. Such opinions may destroy and obliterate knowledge of the culture much more effectively than time ever could. Another problem is in the epistemology or method of knowledge used by countries foreign to the country or culture being studied. In the west we have a tradition of trying to understand life by studying corpses or trying to know health by studying disease. Archeology becomes an exercise of the imagination when trying to reconstruct a living culture based on remains of pot shards, bones and bricks.

Prior to the nineteenth century, it was piously believed in western civilization that the earth was created in seven days at around five thousand years ago. The Biblical version of creation was challenged by the dual developments of Darwinism and the discovery of dinosaur fossils. Even though the gradual acceptance of these new ideas forced a revision of geological time scales, a corresponding revision within archeological studies lagged. Part of this may have been due to another emerging ideology of the nineteenth century called progressivism. Progressivism is the idea that human beings are in a progressive march towards a goal of better living and greater knowledge. This seductive ideology had its roots in earlier centuries but had its greatest impact in the second half of the nineteenth century where it influenced the thinking of such great men as Darwin and Marx. Although it is easy to accept and defend this way of thinking as logical and sound, it does have some devious implications. In a simplistic way it implies that we as a species are infinitely more cleaver than our ancestors. Since it is possible to measure our advancement in linear terms, there must be a point beyond which in the past human beings were infinitely stupid and not clever. Such human beings were incapable of civilization and they must have lived just prior to six thousand years ago.

These ethnocentric blinders that some western thinkers unconsciously wear before venturing into the past have resulted in the tunnel vision view of history as we know it today. The western tradition of writing history may be traced to the Judeo-christian scriptures wherein one group of people with shared beliefs write about the happenings of that group and the people outside that group. The six-thousand year barrier seems to be a common trait to that tradition. Other cultures, the Hindus for example, regard the earth in terms of billions of years old and civilization in terms of hundreds of thousands of years. The Hindus do not think of time in linear terms with a beginning and an end. Rather, they think in terms of great cycles of thousands and millions of years. The archeological method of digging, study and dating of artifacts may be ill-suited to understanding different cultures that don't share similar attitudes towards time scales.

Hindu scriptures were routinely disparaged by early British indologists as exaggerated stories an myths. Biblical stories on the other hand where accepted by the same indologists as being somewhere between salient fact and articles of faith. German indologists Max Mueller proposed the theory about Aryan invaders colonizing India from the north. This implies that the Indians are so inferior that it is unlikely, if not impossible, for them to civilize themselves without outside help. Native versions of the Indian origins found within living tradition and culture were totally ignored and thought to be unreliable. The British occupation of India produced scholars who's pious duty was to discredit the Hindu tradition and culture. Dates of events given in Hindu scripture based thousands of years ago were redated by the English to have

occurred after the birth of Christ for no other reason than one could never rely on the version of a Hindu; the speculations of an English nobleman being wholly preferable. It remains ironic, however, that even if the dates given by the English be accepted at face value, the Hindu accomplishments in art, architecture, science, mathematics, literature, medicine and philosophy were made at a time when the English and all of Europe were still living a neolithic lifestyle.

To diminish this embarrassing fact, the European scholars have held up ancient Greece as their cultural champion even to the point of making ridiculous claims that the Hindus borrowed all the salient features of science and civilization from them. In no uncertain terms we are lead to believe that the Hindus were incapable of any high scientific reasoning on their own and therefore depended upon help from outside sources for further development. Contrary to this point of view, it can be shown that not only did the Hindus develop a mature culture independent from western influences, the western cultures borrowed from the Hindus more often than otherwise.

One thing to point out is that each major culture of the ancient world had calendars that were unique in themselves. Calendars are dependent upon the accurate observation of heavenly phenomenon. In this endeavor the ancients were not lacking. The five major time schemes of the ancient world are of the Mayan, Egyptian, Mesopotamian, Indian and Chinese cultures. The Jewish calendar is based upon an earlier Babylonian system and has nothing uniquely original. The Greeks had no calendar that possessed characteristics different enough to place them in a separate and distinct category for they also followed the Mesopotamian standard. The Romans, who borrowed heavily from the Greeks, found it necessary to borrow from the Egyptians in order to improve accuracy. This demonstrates that the Romans considered the Greek chronography incomplete and lacking.

Hindu astronomy, their method of observation and the resulting calendrics differs considerably from the Greeks. Now the question arises that if the Hindus borrowed from the Greeks why didn't the Hindus also modify their calendar with the Greek calendar? Remember that ancient astronomy and calendrics were inseparable. Another point: It is a usual occurrence that a borrowed concept takes along a borrowed technique. The methods of observation usually accompanies the knowledge of the things observed. Why is it that the Hindus have a totally unique system of measurement and observation indigenous to their astronomical lore? The champions of western culture would have us overlook these details.

It seems highly evident that the co-existing Indian and Mesopotamian cultures exchanged ideas long before the Greeks learned how to civilize themselves. Any similarity between Greek and Hindu sciences is either co-incidental or due to Greek plagiarism of Indian and Mesopotamian concepts. Yet the bias regarding Greek primacy in all things ancient persists in western educational institutions today. Cultural bias is as destructive of fact as is the passage of time erasing artifacts. What is often passed off as profound knowledge and discovery is nothing more than the reinforcement of bias.

The main concern that would indicate the existence of civilization long before six thousand years ago is that of time measurement or calendrics, the study of which reveals much of what is missing from the digging and dating of bones. The calendar is a vital point of focus for any organized culture or society. Religious, economic and agricultural activities revolve around the calendar. To construct accurate tables of heavenly cycles, a culture must observe the sky for many centuries or at least borrow tables from another culture that has spent centuries studying the heavens. The amount of accuracy derived from observing the heavens over a long period of time suggests that the roots of civilization and some of its earliest accomplishments are much older than six thousand years. Specifically the Indian and Mesopotamian cultures.

BASIS OF THE SEXAGESIMAL SYSTEM

The sexagesimal system of measurement is based on the number sixty. There are sixty seconds in a minute, sixty minutes in a hour. When we measure angles, we use the sexagesimal to express units in degrees, minutes and seconds. This method of measurement familiar to both the Indian and Mesopotamian cultures. It may be that one culture borrowed from the other or that both developed the system independently. Or it could be of such antiquity that both cultures shared a common origin. Whatever the case, it seems quite evident that the sexagesimal system may be based in large part upon the observation of the planets, specifically Jupiter and Saturn.

After every sixty years, Jupiter and Saturn will return to the same relative place in the zodiac. Even though they conjoin every twenty years, it is every third conjunction that they will be in the same zodiacal position as they were sixty years before. Jupiter takes twelve years to complete one circuit of the zodiac. It takes thirty years for Saturn to complete a similar circuit. Consider the following:

* Jupiter takes twelve years years to transit the zodiac. The zodiac has twelve signs. Jupiter travels an average thirty degrees or one complete sign in one solar year.

* Saturn takes an average thirty years to transit the zodiac. Each zodiacal sign has thirty degrees and Saturn travels

one degree per month. Thirty months for Saturn to travel one sign. Three hundred and sixty months for Saturn to transit the entire zodiac. Jupiter divides the zodiac into twelve parts or signs. The number derived from Saturn's motion suggests the division of each sign into thirty parts or degrees.

- Jupiter and Saturn take sixty years between conjunctions to reach the same place in the zodiac. This joint motion suggests the third and fourth division of the degree into sixty minutes and each minute into sixty seconds.

The sixty years cycle of Jupiter and Saturn gives rise to another interesting number. In a sixty year period, Jupiter will complete five circuits of the zodiac and Saturn will complete two circuits. The combined individual cycles equal seven which is also the total number of visible planets plus the two luminaries.

SEVEN DAY WEEK

The primacy given to Saturn and Jupiter becomes apparent by the study of the origination of the seven day week which, contrary to common opinion, was not followed by everyone in the ancient world.

The ancient Egyptians had a ten-day week. The Vedic Indians had a six-day week. The ancient Babylonians who started the month on the day after the new moon, had the first, eighth, fifteenth and the twenty second day marked out for religious services. This was a kind of seven-day week with sabbaths, but the last week might be of eight or nine days duration, according as the month, which was lunar, had a length of 29 or 30 days. The ancient Iranians had a separate name for each day of the month, but some days, at intervals of approximately seven, were marked out as Din-i-Parvan, for religious practices. The pattern followed appears to have been similar to the Babylonian practice.

The continuous seven-day week was evolved on astrological grounds by unnamed Chaldean astronomers at an unknown epoch, but at least, long before the first century A.D. The Jews adopted it as a cardinal part of their faith during the days of their contact with the Chaldeans.

Chaldean astronomers flourished between the seventh century B.C. and the third century A.D. They gave particular attention to the study of the movement of the Sun, the Moon, and the planets, which they identified with their gods. They believed the destiny of kings and states were controlled by the gods, (the planets), and attached the greatest importance to the observation of their positions and movements. They attached magical value to the number seven which was the number of planets or gods controlling human destiny. The two outermost planets, Jupiter and Saturn, moved slowly and solemnly and therefore determined the measured boundaries of all planets within. After every sixty years Jupiter and Saturn meet in the same general area of the zodiac. During that sixty years, Jupiter completed five circuits of the zodiac and Saturn completed two circuits. The combined number of circuits for these ponderous planets is seven.

Jupiter and Saturn along with the Sun, Moon, Mercury, Venus and Mars, were identified with the chief gods of the Babylonian pantheon.

Notice that the order of the planets in table 1 coincides with the apparent average daily motion of the planets from the slowest, Saturn, to the fastest, the Moon.

These seven gods, sitting in solemn conclave, control the destinies of kings and countries, and it was believed that their will and judgment with respect to a particular country or its ruler could be obtained from an interpretation of the position of the seven planets in the heavens, and the nature of the motion of the planets (direct or retrograde). Part of the divinatory practices included knowing what part of the day or night was being ruled or watched over by the gods. Occurrences during a particular watch was believed to forebode particular events consistent with the nature of the watching god.

TABLE 1

PLANET	GOD - NAME	FUNCTION
Saturn	Ninib	God of Pestilence and Misery
Jupiter	Marduk	King of Gods
Mars	Nergal	God of War
Sun	Shamash	God of Law and Justice
Venus	Ishtar	Goddess of Fertility
Mercury	Nabu	God of Writing
Moon	Sin	God of Agriculture

The day was divided into 24 hours, and each of the seven gods was supposed to keep watch on the world over each hour of the day in rotation. The particular day was named after the god who kept watch at the first hour at Sunrise. Thus on Saturday, the watching god on the first hour was Saturn, and the day was named after him. The succeeding hours of Saturday were watched by the seven gods in rotation as follows: SEE FIGURE 1

Above shows the picture for Saturday. On this day Saturn keeps watch at the first hour, so the day is named after him. The second hour is watched over by (2)Jupiter, third by (3)Mars and so on. Saturn is thus seen to preside at the 8th, 15th and 22nd hours of Saturday. Then for the 23rd, 24th and 25th hours come in succession (2)Jupiter, (3)Mars and (4)Sun. The 25th hours is the first hour of the next day, which is accordingly named after the presiding planet of the hour, viz, (4) which is the Sun. We thus get Sunday following Saturday. If we now repeat the process, we get the names of the week days following each other, as follows:

Saturday, Sunday, Monday, Tuesday, Wednesday, Thursday, and Friday.

The Jews, it may be mentioned, reckon the days by ordinal numbers---the first, second, third.....seventh day. Although they derived their calendar almost entirely from the Babylonians, they eschewed the god names as being inconsistent with their monotheistic religion. the ordinal first day is Saturday, which is their sabbath.

The ancient Indians did not use the seven day week. The most ancient usage of day names used in India was that of the Nakshatra. There are twenty seven lunar asterisms or constellations in the old lunar zodiac. This number was derived from the average number of days it took the Moon to complete one circuit of the heavens in relation to any particular star (one sidereal revolution). Since the Hindus didn't use hours to divide their day, the natural consequence of using a seven day week would not follow. Instead they divided a day into 60 equal parts called ghatikas. Each ghatika is equal to 24 minutes. The word "ghatika" means little jar and thus the use of water clocks suggest itself. A ghatika is further divided into 60 vinadikas. So between the two cultures, it was the Hindus who made direct use of the sexagesimal system whereas the Chaldeans used an indirect method of 24 hours.

It wasn't until much later in the third century AD where we find the first usage of the seven day week in India. Indeed much of the rest of the world had not adopted it until after the first century AD. It was unknown to the writers of the New Testament who did not mention anything about the day of the week on which Christ was crucified or the the week day which he is alleged to have ascended to heaven. The fixing of Friday and Sunday for these incidents is a later concoction, dating from the fifth century after Christ. All that the New Testament books say is that he was crucified on the day before the Hebrew festival of Passover which used to be celebrated and is still celebrated on the full-moon day of the month of Nisan. The continuous seven day week was unknown to the classical Greeks, the Romans, the Hindus and early Christians. It was introduced into the Christian world by an edict of the Roman emperor Constantine, about 323 AD, who changed the Sabbath to the Lord's Day (Sunday), the week day next to the Jewish Sabbath. Its introduction into India is about the same time and from the same sources. The week days are not found in earlier Hindu scriptures like the Vedas of the classics like the great epic Mahabharata. They occur only from 484 AD, but not in inscriptions of 300 AD or earlier. Even now, they form but an unimportant part in the religious observances of the Hindus which are determined by the Moon's phases and lunar asterisms.

In the schema of the Moon's phases we see a repeated pattern to that of Jupiter and Saturn. (See page 4). A lunar month is made up of 30 tithis. Each tithi is determined when the moon moves in advance of twelve degrees ahead of the Sun. Here we see the numbers 30 and 12 that are common with Saturn and Jupiter. A complete synodic period (a complete revolution around the zodiac in relation to the Sun) of the Moon, however, takes only 29 civil days. (A civil day for the Indians is reckoned from sunrise to sunrise). It is quite a regular occurrence for a tithi to be expunged from the consecutive civil day count. This characteristic of the Hindu calendar is not found in the Greek, Chinese or Mesopotamian calendars. Other cultures, without exception, use solely a civil day count of 28, 29 and 30 days for their lunation cycles and had not even considered a pure lunar day count independent from the civil reckoning. The consistency of the Hindu astronomical methods make it unlikely that they borrowed their knowledge from other sources. And the repeated usage of the sexagesimal measurement makes it more like that they were the inventors of the system.

The lunar asterisms (nakshatras) are derived from the average daily motion of the Moon's mean sidereal cycle, which is 13° 20' of arc. In a circle of 360 degrees this would make twenty seven nakshatras. Each nakshatra has a planetary ruler and they are shown as follows:

NAKSHATRA	RULER	NAKSHATRA	RULER	NAKSHATRA	RULER	NAKSHATRA	RULER
Ashvini	Ketu	Pushyami	Saturn	Svati	Rahu	Shravana	Moon
Bharani	Venus	Aslesha	Mercury	Vishakha	Jupiter	Dhanishtha	Mars
Krittuka	Sun	Magha	Ketu	Anuradha	Saturn	Shatabhisha	Rahu
Rohini	Moon	Purva Phalguni	Venus	Jyestha	Mercury	Purva Bhadra	Jupiter
Mrigasira	Mars	Uttara Phalguni	Sun	Mula	Ketu	Uttara Bhadra	Saturn
Ardra	Rahu	Hasta	Moon	Purva Ashadha	Venus	Revati	Mercury
Punarvasu	Jupiter	Chitra	Mars	Uttara Ashadha	Sun		

In the above table you may have noticed the two strange words "Rahu" and "Ketu". These are the nodes of the moon and their usage in astronomy is important for predicting the eclipses of the Sun and the Moon. Although they possess no mass or density, they are treated as planets in the sense that they have an effect on human affairs.

NAKSHATRAS

Whatever constellation (nakshatra) the Moon was in at sunrise, the entire day was named after it. The nine rulers of the nakshatras are repeated three times in sequence. So in this sense you can say that the Hindus followed a nine-day week. The same effect as a weekday is thereby achieved in terms of socio-religious significance. Whereas the Chaldeans used an unbroken consecutive day count of hour and day rulers. The Hindus used a more concrete system of the observable Moon in a group of stars. But there is a common thread that is stitched between both the seven-day week and the twenty seven nakshatras. It is this: As we look back to figure 2 we see a seven pointed star indicating the weekday lords. Saturn is placed at the top because he is the slowest planet and the week was deemed to start with Saturday. Lets rotate that star and place the Sun at the top.

Now in figure 4, *lets make room for two more planets:*.... SEE FIGURE 4

This figure appears in a book by Chiero the famous palmist in which he refers to this as the "Seal of Solomon." If this is true then the Jewish king probably obtained it from sources during their contact with the Chaldeans and Babylonians. If we were to add two more planets to this seal the obvious place would be in the areas vacated by the points of Jupiter and Mercury. Their placement in the seal is shown in figure 5. SEE FIGURE 5

Hindu astrology treats the nodes as planets even though they possess no mass and density. They are sensitive points where the path of the Moon crosses the path of the Sun. Being invisible, it is quite fitting that they should not have a point of the star aiming at them in the diagram shown above.

But note the general position of the planets and see how they are unchanged from the Chaldean star order. Now, the next diagram, figure 6, will show the connection with the Hindu nakshatra order. SEE FIGURE 6.

Compare this diagram with table 2, the nakshatras and rulers. Here the order is clockwise starting with Ketu, going to Venus, the Sun, down to the Moon, back up to Mars, over to Rahu, Jupiter, Saturn and finally bypassing over to mercury. The detour down to the Moon doesn't seem so strange when you consider that the nakshatra reckoning is entirely dependent upon the Moon's position in the constellations. In fact, this diagram may taken as a single pointed star with the significant planet being at the single point.

It seems that the similarities between Hindu astronomy and Chaldean magical seals are too great to be a mere coincidence. It is quite likely that the two share a similar origin or that one was derived from the other. But since ancient Hindu tradition and current usage make more consistent usage of a direct base sixty system of counting, and the other cultures use a derivative of that, it seems more likely that the sexagesimal is of Hindu origin.

It may be argued that the sexagesimal was not founded upon the joint cycles of Jupiter and Saturn but upon some other measurement such as the average number of three hundred and sixty days in a year. This, of course, is assuming that ancient man was incapable of counting the correct number of days in a year and that he was infinitely unclever. For the sake of argument, lets accept that position. There still remains the problem of dividing the year into parts that would yield a base sixty system of counting. The Babylonians divided their year into three seasons. The Hindus, however, divided their year into six seasons. Of the two cultures which do you think would arrive at a base sixty system?

But judging from the rest of Hindu astronomical techniques it is clear that they knew precisely how long the solar year was. All the other planetary cycles were also studied with great scrutiny. From this it may be tempting to think that the sexagesimal was arrived at in order to provide the great average mean of measurement for celestial phenomena just as today the binary mode of counting is most convenient for computer science. Three hundred and sixty, which is a multiple of the sexagesimal, is the midpoint number between the 365 day solar year and the 354 day lunar year. One synodic period of mars is 780 days which is equally divided by 60 thirteen times. Between two consecutive conjunctions of Saturn and Jupiter in a twenty year period, Mercury will go retrograde a little over sixty times. The Hindus also based their knowledge of breath control, Pranayama, upon the sexagesimal system. In one twenty four hour period, or between two consecutive sunrises, a person takes an average of 21600 breaths, each breath being four seconds long. This number, 21600 divided by 60 equals 360.

To all but the harshest critic the above may be evidence enough to form an opinion on the origin of the sexagesimal system. But the critic may remain unconvinced for various reasons. The above is only circumstantial. One can apply any number of coincidental facts to any ancient culture and come up with some pretty amazing things. After all, no ancient text were quoted giving support to Hindu origins. To quell these doubts we present final evidence that not only shows the superiority of Hindu astronomy but also proves damaging to the theory that the Greeks were the greatest in all matters of the ancient world.

HINDU COSMOLOGICAL TIME CYCLES

The structure of Hindu astronomy is built upon the foundation of their unique concept of cosmological time cycles. No

other culture on Earth has or is known to have such a unique system of cosmology. The only other culture to come close to the vast scale of time conceived by the Hindus are the Mayan. Western scholars have completely misunderstood the value of the Hindu cosmological time cycles and believed them to be nothing more than crude number speculations. In their translation of the Surya Siddhanta, the editors Burgess and Whitney routinely disparage the Hindu authors:

The system of periods is not of astronomical origin.....Its artificial and arbitrary character is apparent. It is the system of the Puranas and Manu, a part of the received Hindu cosmogony, to which astronomy was compelled to adapt itself.....The arbitrary and artificial method in which the fundamental elements of the solar system are here represented is not peculiar to the Surya-Siddhanta; It is also adopted by all other text books, and is to be regarded as a characteristic feature of the general astronomical system of the Hindus.

Not only is this opinion in error but the astronomical quantities derived from these cosmological time cycles are vastly more accurate than anything achieved by the Greeks. And they were in use at a time when the British were still living a neolithic lifestyle.

OUTLINE OF HINDU COSMOLOGY

Prior to the creation of the universe, Lord Vishnu lies asleep on the ocean of all causes. He rests upon a serpent bed with thousands of cobra-like hoods. While asleep, a lotus sprouts from His navel. Upon this lotus is born Brahma the creator of the universe. Lord Brahma lives for a hundred years and then dies, while Lord Vishnu remains. One year of Brahma consists of three hundred and sixty days. At the beginning of each day Brahma creates the living beings that reside in the universe and at the end of each day the living beings are absorbed into Brahma while he sleeps on the lotus. On day of Brahma is known as a KALPA. Within each KALPA there are fourteen MANUS and within each MANU are seventy one CHATUR-YUGAS. Each CHATUR-YUGA is divided into four parts called YUGAPADAS.

From the first chapter of Surya-Siddhanta, the most revered authoritative source of Hindu astronomy, we have the following passage:

11. That which begins with respirations (prana) is called real.....Six respirations make a vinadi, sixty of these a nadi:

12. And sixty nadis make a sidereal day and night. Of thirty of these sidereal days is composed a month; a civil (savana) month consists of as many sunrises;

13. A lunar month, of as many lunar days (tithi); a solar (saura) month is determined by the entrance of the Sun into a sign of the zodiac; twelve months make a year. This is called a day of the gods.

14. The day and night of the gods and of the demons are mutually opposed to one another. Six times sixty of them are a year of the gods, and likewise to the demons.

15 & 16. Twelve thousand of these divine years are denominated a chatur-yuga; of ten-thousand times four hundred and thirty two solar years is composed that chatur-yuga, with its dawn and twilight. The difference of the krita-yuga and the other yugas, as measured by the difference in the number of the feet of virtue in each is as follows:

17. The tenth part of a chatur-yuga, multiplied successively by four, three, two, and one, gives the length of the krita and the other yugas: the sixth part of each belongs to its dawn and twilight.

18. One and seventy chatur-yugas make a manu; at its end is a twilight which has the number of years of a krita-yuga, and which is a deluge.

19. In a kalpa are reckoned fourteen manus with their respective twilights; at the commencement of the kalpa is a fifteenth dawn, having the length of a krita-yuga.

20. The kalpa, thus composed of a thousand chatur-yugas, and which brings about the destruction of all that exists, is a day of Brahma; his night is of the same length.

21. His extreme age is a hundred, according to this valuation of a day and a night. The half of his life is past; of the remainder, this is the firsts kalpa.

22. And of this kalpa, six manus are past, with their respective twilights; and of the Manu son of Vivasvat, twenty seven chatur-yugas are past;

23. Of the present, the twenty eighth chatur-yuga, this krita yuga is past.....

Now to make plain what is stated above. Commentaries are very clear on the fact that in verse 12 the "sidereal day" refers to a revolution of the Earth relative to any fixed star and is the true revolution reference point of the Earth. Verse 13 refers to "a day of the gods" means one sidereal year. A night of the gods is half a sidereal year. Verse 21 mentions "his extreme age is a hundred refers to the lifespan of Brahma and consists of one hundred years of 360 days. Each of these days being two kalpas long. Verse 23 shows that the Surya-Siddhanta was composed right after krita-yuga and during the treta-yuga. The present yuga we are in right now is the kali-yuga which is said to have begun on Friday February 18th 3102 B.C. of the Julian calendar. This becomes clearer when represented in a tabular form.

TABLE 3 INFRASTRUCTURE OF THE CHATUR-YUGA PERIOD

PERIOD	DIVINE YEARS	SOLAR YEARS	PERIOD	DIVINE YEARS	SOLAR YEARS
dawn	400	144,000	dawn	300	108,000
KRITA YUGA	4000	1,440,000	TRETA YUGA	3,000	1,080,000
twilight	400	144,000	twilight	300	108,000
TOTAL	4,800	1,728,000	TOTAL	3,600	1,296,000

PERIOD	DIVINE YEARS	SOLAR YEARS	PERIOD	DIVINE YEARS	SOLAR YEARS
dawn	200	72,000	dawn	100	36,000
DVAPARA YUGA	2000	720,000	KALI YUGA	1,000	360,000
twilight	200	72,000	twilight	100	36,000
TOTAL	2,400	864,000	TOTAL	1,200	432,000

CHATUR YUGA TOTAL **12,000 DIVINE YEARS** **4,320,000 SOLAR YEARS**

INFRASTRUCTURE OF THE KALPA PERIOD

Two kalpas make a day and night of Brahma. The kalpa is 4,320,000,000 sidereal years made up of 1,000 chatur-yugas or 10,000 kali-yugas. An additional dawn and twilight of 1,728,000 years each is made to fit the kalpa.

TABLE 4

1 CHATUR YUGA = 4,320,000 sidereal years

1 MANU = 71 CHATUR YUGA plus a twilight the length of one krita yuga

71 Chatur yuga = 306,720,000 sidereal years
1 krita yuga as introductory dawn = 1,728,000 sidereal years
1 Manu = 308,448,000 sidereal years

1 KALPA = 14 MANUS plus introductory dawn of one krita yuga

14 Manus = 4,318,272,000 sidereal years
1 krita yuga as introductory dawn = 1,728,000 sidereal years
1 Kalpa = 4,320,000,000 sidereal years

The entire life-span of Brahma may be measured thus :

day of Brahma	4,320,000,000 sidereal years
night of Brahma	4,320,000,000 sidereal years
Total	8,640,000,000 sidereal years

days in a year	x 360
one year of Brahma	3,110,400,000,000 sidereal years
one hundred years	x 100
Brahma's life span	311,040,000,000,000 sidereal years
time before Brahma's rebirth	311,040,000,000,000 sidereal years

After Brahma dies it takes a period of time equal to his lifespan until he is reborn and the cycle starts over.

ASTRONOMICAL VALUES DERIVED

Now that the Hindu cosmological time cycles are completed we can derive useful astronomical values from them. The first is the measurement of the day which begins with the breath. One respiration is a prana. Six prana equal one vinadi. Sixty vinadis equal one nadi, (also known as a ghatika). Sixty nadis equal one sidereal day. A sidereal day equal the time it takes for the earth to make one complete rotation on its axis in relation to a fixed star. A sidereal day is slightly shorter than a civil day of 24 hours. A sidereal day is equal to 23 hours, 56 minutes and 3.4446 seconds.

1 SIDEREAL DAY	23h 56m 03.4446s
60 NADIS	23h 56m 03.4446s
1 NADI	23m 56.06s
VINADI	23.93s
1 PRANA	3.99s

It is clear in the text of Surya-Siddhanta and the current practice of Indian astrology that SIDEREAL measurements are of primary importance. Tropical measurements are also used but in a secondary way.

THREE MEAN MOTIONS OF THE SUN

The three mean motions of the Sun used to construct the Cosmological Time Cycles shown above are as follows:

1 sidereal year = 360.....days.....(I)

_____ 6.....days.....(II)

_____ 0.2563795.....days.....(III)

_____

366.2563795.....sidereal revolutions of the Earth

Remember we are not talking about civil solar days here, we are talking about the total number of times the Earth rotates on its axis in relation to a single star during the course of one year. This happens to be one greater than the mean solar days in a year which is.....

1 sidereal year = 365.2563795...mean solar days.

These three mean motions of the Sun may be compared to the hour, minute a• nd second hands of a clock. Each cycle is counted and completed separately. Using this system of the three mean motions, the ancients reckoned time that put the day, year and longer periods of time into exact correspondence with each other.

PROOF OF THE SEXAGESIMAL NUMBER SYSTEM

The first two mean solar motions, that of 360 + 6 Earth revolutions, generate the sexagesimal number system

completely. A count of six for every 360 is the same as one for every 60. This is the basis of the six seasons of the year observed by the Hindus. Counting six days per year, the second mean motion of the Sun completes a cycle of 360, the number of degrees in a circle, after 60 years which correlates with the Babylonian sossos period and the cycles of Jupiter and Saturn.

YEAR	1st MEAN MOTION	2nd MEAN MOTION	TOTAL
1	360	6	366
2	720	12	732
3	1080	18	1098
4	1440	24	1464
5	1800	30	1830
*	*	*	*
*	*	*	*
*	*	*	*
10	3600	60	3660
*	*	*	*
*	*	*	*
*	*	*	*
60 (sossos)	21,600	360	21,960
*	*	*	*
*	*	*	*
*	*	*	*
600 (neros)	216,000	3600	219,600
*	*	*	*
*	*	*	*
*	*	*	*
3600 (saros)	1,296,000	21,600	1,317,600

In the same interval that the first mean motion completes a count of 21600 it has done so at a rate 60 times greater than the second mean motion 360 X 60 and represents the number of arc minutes in a circle. The number 21600 is also the same average number of breaths (prana) a person will make in a 24 hour period.

VEDIC EVIDENCE OF THE SIDEREAL YEAR

The Rig Veda, the earliest of the Hindu scriptures says the following:

Twelve spokes, one wheel, navels three.

Who can comprehend this?

On it are placed together three hundred and sixty like pegs.

They shake not in the least.

(Dirghatama Rishi, Rig Veda 1.164.48)

A seven-named horse does draw this three-naved wheel....

Seven steeds draw the seven-wheeled chariot.....

Wise poets have spun a seven-strand tale

around this heavenly calf, the Sun.

(Dirghatama Rishi, Rig Veda 1.164.1-5)

The number seven related to the Sun has much significance when understanding the third mean solar motion (0.2563795). The Kali-yuga of 432,000 years is the unit of reference for determining the length of the sidereal year in Hindu cosmological time cycles. During the course of 10,000 years there are seven rotations of the third mean solar motion. For a single year the count is 0.2563795 diurnal revolutions of the earth. For two years it is .512759 and so on. One complete rotation (to equal 366.2564...) of the third motion takes 1428.571429 sidereal years. Or you can reduce it to a fraction of 1428 4/7 sidereal years.

The integer of this sidereal interval, 1428 years, multiplied by the number of years in a Kali-yuga and then further multiplied by seven equals the number of years of fourteen Manus. (see table 4).

1428 X 432,000 X 7 = 4,318,272,000 = 14 MANUS

The fractional part of this sidereal interval, 4/7 years, multiplied by seven and further multiplied by the number of years in a Kali-yuga equals the time of an introductory dawn (see table 4).

(4/7) x 7 x 432,000 = 1,728,000 years = introductory dawn.

Relating the Vedic verses above to what we have just demonstrated it is clear that the "navels three" refer to the three mean motions of the Sun and "seven-wheeled chariot" to the rate of precession of the equinoxes. Thus, there can be no doubt that the cosmological time cycles were already an established conclusion at the time of the Vedic era and not in the formative stages.

PRECESSIONAL CONSTANT DEMONSTRATED

Before demonstrating the unmistakable fact of the precession inherent in the cosmological time cycles, let us show the readers how the British translators of the Surya-Siddhanta made fools of themselves when they wrote:

To make such a division accurate, the year ought to be tropical, and not the sidereal; but the author of the Surya-Siddhanta has not yet begun to take into account the precession.....The earliest Hindu astronomers were ignorant of, or ignored, the periodical motion of the equinoxes.....

Again this opinion is in error. If Burgess and Whitney were not so blinded by arrogance and conceit they might have been able to improve their knowledge by careful study of the Surya-Siddhanta. The precession is clearly derived from the cosmological time cycles as shown below. The chatur-yuga of 4,320,000 years is the unit of reference for determining the rate of precession used in the construction of the Hindu cosmological time cycles.

The constant rate of precession is 50".4 = 0° .014 = 7/500 degrees or precession per sidereal year.

This is the same as one degree of precession in 71 3/7 = 71.42857.....sidereal years.

This correlates to the cosmological time cycles as follows:

In the interval of 1/14th kalpa there are:

(71 3/7) x 4,320,000 x 0°.014 = 4,320,000 degrees of precession = 12,000 precessional years

From table one we see that a period of one chatur yuga is 4,320,000 years and is equivalent to 12,000 divine years.

Other related values of interest are:

1 precessional year	= 25,714 2 / 7 sidereal years
7 precessional years	= 180,000 sidereal years
7 x 24 = 168 precessional years	= 1 chatur yuga
168,000 precessional years	= 1 kalpa
(4,320,000 /168) x 0.014	= 360 degrees

DERIVATION OF THE TROPICAL YEAR

In a chatur yuga, there are :

4,320,000 sidereal years = 4,320,000 + 168 tropical years

where 168 is the number of precessional years. Therefore,

1 tropical year = (4,320,000 x (366.2563795... - 1)) / 4,320,168

= 365.2421756... mean solar days

It has been shown conclusively that the Hindu Cosmological time cycles are based upon the diurnal motion of the Earth in reference to any particular fixed star, hence it is purely of sidereal origin. The later practice of adopting the ahargana or "heap of days" is based upon solar and civil day reckoning which is of obvious practical value for calendrics. The sidereal basis of the cosmological time cycles is without question the oldest known positive proof of the origin for the sexagesimal number system.

COMPARISON WITH MODERN SCIENCE

The standard values for the tropical year and annual precession in longitude determined by Simon Newcomb for the epoch 1900.0, mean noon at Greenwich December 31st 1899 are:

1 tropical year	= 365.2421988
precession in one year	= 50".2564

The sidereal year and its precessional constant may be derived from these values. 1 sidereal year (1900.0) = (360" / (360" - 50".2564)) x (365.2421988) + 1

= 366.2563627 diurnal revolutions of the Earth

precession in longitude in one year = (365.2563627 / 365.2421988) x (50".2564)

= 50".2583

The following shows the astronomical quantities used in the construction of Hindu cosmological time cycles with those of Simon Newcomb for the epoch 1900.0

QUANTITY	HINDU	NEWCOMB	DIFFERENCE
constant of precession	50".4 / yr	50".2583 / yr	0".1417 / yr
sidereal year (solar)	365.2563795	365.2563627	1.4 sec / yr
tropical year	365.2421756	365.2421988	- 2.0 sec / yr

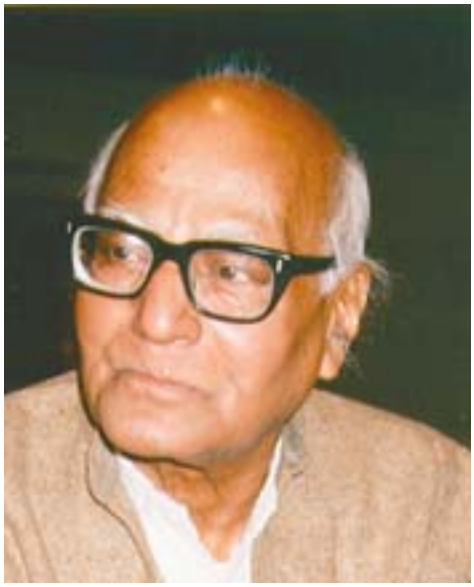
The sidereal year in the above table refers to the number of solar civil days it takes for the earth to orbit the sun in relation to any particular star. The former is a sidereal-diurnal relation and the later is a sidereal-solar relation. The very close agreement between the length of the year as measured by Hindu cosmological time cycles and that determined by modern science, together with the demonstrated great antiquity of the cycles, shows that the rotation of the Earth is not being sensibly retarded by "tidal friction" or any other cause. Astronomers today would do well to look for lack of accuracy in their measurement of the Sun's mean motion and to the variations of long periods in the rotation of the Earth to explain the so-called slowing down of the earth.

BREAKING THE BARRIER

The question may be asked how could such accurate constants of precession, as that of the Hindu cosmological time cycles, have been obtained without modern instruments and techniques? At least one thing must be allowed for and that is a very long period of uninterrupted observation.

Naked eye observations are accurate up to 1/6 of a degree. In the case of observing the precession moving uniformly on the celestial sphere, it would then be possible to obtain an accurate rate up to three decimal places in not less than 50" x (72 years / 1°) or 3,600 years. Measuring the precession is not as simple as that, however. Before attempting to measure the precession, the exact times of the equinoxes must be measured first. Ptolemy, the Greek astronomer,

speaks with pride in the Almagest of "very accurately" observing the equinox to within a quarter of a day! That is, to within at best one quarter of one degree of arc. Add to this the difficulty presented by the proper motion of the stars. The star Sirius, for example, has a very large proper motion of -0".553 ecliptic longitude per year. It would take 1,000 years for Sirius to move 1/6 of a degree and for this mistake to be noticed by a naked eye observer. In addition to this, still, the motion of the Earth's perihelion would become noticeable and have to be accounted for. With all these factors, it is difficult to imagine how they can be resolved into a system that would allow continuous observation to produce a constant of precession accurate to three decimal places in less than 10,000 years.



Similar arguments can be put forth to show that to measure the sidereal period of the Sun to eight decimal places could not be accomplished by naked eye observations alone in any less time.

Even if we cannot comprehend a civilization going back 10,000 years prior to the six-thousand year barrier, we still must face the incredible genius of the cosmological time cycles themselves: a calendar for eternity so accurate that its formulations must be considered as laws of nature, while at the same time a structure so simple, symmetrical, and orderly, that the best scholars and astronomers of modern times have completely failed to see the astronomical basis. In this light we can understand why the Hindus regarded this knowledge as a revelation from the gods.

Show in alphabetical order

181 **Ram Swarup** (1920-1998) a foremost spokesperson of Hindu spirituality and culture in India. He will probably prove to have been the most influential Hindu thinker and Hindu Revivalist in the second half of the 20th century. Arun Shourie has called him a scholar of the first rank. In the 1950s when Indian intellectuals were singing paens to Marxism and Mao, he wrote critiques of communism. **He** was also an author of several books, Hinduism vis-à-vis Christianity and Islam and Christianity, an Imperialist Ideology

"Hindu dharma was a great reconciler. It reconciled various viewpoints, various doctrines. It knew how to look at things from various angles and viewpoints. It knew no conflict between science and religion, between rationalism and spiritualism. It was so because it was not dogmatic in reason or religion.

"Hinduism was organized for peaceful and harmonious co-existence, not for continued confrontation with external enemies in the shape of unbelievers. It is no accident of history that though Hinduism knew internal feuds like any social polity, it never crossed its borders to wage wars against people simply because they worshipped different Gods. Organized on such non-military principles, there is no wonder that Hinduism did not even have a name for itself. "

In Sanatana Dharma, there is no single life, no single judgment, or eternal punishment. There is more than one life and of course, there is no single judgment. In fact, there is no judgment at all as such, for the idea is to help and to judge and condemn. The inner dynamics of incarnation is not reward or punishment but self-improvement, and ultimately self-discovery and self-recovery, moksha.

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p 1-46).

182. **Rene Grousset** (1885-1952) French art historian. He gives a fine interpretation of the **image of Nataraja:**

"Whether he be surrounded or not by the flaming aureole of the Tiruvasi (Pabhamandala) – the circle of the world which he both fills and oversteps – the King of the Dance is all rhythm and exaltation. The tambourine which he sounds with one

of his right hands draws all creatures into this rhythmic motion and they dance in his company. The conventionalized locks of flying hair and the blown scarfs tell of the speed of this universal movement, which crystallizes matter and reduces it to powder in turn. One of his left hands holds the fire which animates and devours the worlds in this cosmic whirl. One of the God's feet is crushing a Titan, for "this dance is danced upon the bodies of the dead", yet one of the right hands is making a gesture of reassurance (abhayamudra), so true it is that, seen from the cosmic point of view…the very cruelty of this universal determinism is kindly, as the generative principle of the future. And, indeed, on more than one of our bronzes the King of the Dance wears a broad smile. He smiles at death and at life, at pain and at joy, alike, or rather,..his smile is death and life, both joy and pain…**From this lofty point of view, in fact, all things fall into their place, finding their explanation and logical compulsion. Here art is the faithful interpreter of a philosophical concept.** The plastic beauty of the rhythm is no more than the expression of an ideal rhythm. The very multiplicity of arms, puzzling as it may seem at first sight, is subject in turn to an inward law, each pair remaining a model of elegance in itself, so that the whole being of the Nataraja thrills with a magnificent harmony in his terrible joy. And as though to stress the point that the dance of the divine actor is indeed a sport, (lila) – the sport of life and death, the sport of creation and destruction, at once infinite and purposeless – the first of the left hands hangs limply from the arm in the careless gesture of the gajahasta (hand as the elephant's trunk). And lastly, as we look at the back view of the statue, are not the steadiness of these shoulders which uphold world, and the majesty of this Jove-like torso, as it were a symbol of the stability and immutability of substance, while the gyration of the legs in its dizzy speed would seem to symbolize the vortex of phenomena."

(source: **The Civilization of the East – India - by Rene Grousset** p. 252 - 53).

He speaks of the Trimurti statue at **Elephanta Caves**:

"Universal art has succeeded in few materialization of the Divine as powerful and also as balanced. He believed that it is "the greatest representation of the pantheistic god created by the hands of man."

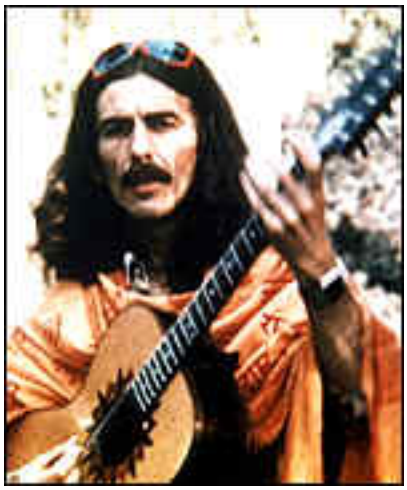
He concludes with poetic enthusiasm: "Never have the overflowing sap of life, the pride of force superior to everything, the secret intoxication of the inner god of things been so serenely expressed."

(source: **The India I Love - By Marie-Simone Renou** p. 88-93).

In the words of Rene Grousset, " The three countenances of the one being are here harmonized without a trace of effort. There are few material representations of the divine principle at once as powerful and as well balanced as this in the art of the whole world.

Nay, more, here we have undoubtedly the grandest representation of the pantheistic God ever made by the hand of man...Indeed, never have the exuberant vigor of life, the tumult of universal joy expressing itself in ordered harmony, the pride of a power superior to any other, and the secret exaltation of the divinity immanent in all things found such serenely expressed."

(source: **The Civilization of the East – India - by Rene Grousset** p.245-6).



In its Olympian majesty, the Mahesamurti of Elephanta is worthy of comparison with the Zeus of Mylasa or the Asklepios of Melos."

(source: **Civilizations of the East - By Rene Grousset** Vol. II, p. 245-246).

He writes about the **Indian influence in South East Asia**: "In the high plateau of eastern Iran, in the oases of Serindia, in the arid wastes of Tibet, Mongolia, and Manchuria, in the ancient civilized lands of China and Japan, in the lands of the primitive Mons and Khmers and other tribes of Indo-China, in the countries of the Malaya-Polynesians, in Indonesia and Malay, **India left the indelible impress of her high culture, not only upon religion, but also upon art, and literature, in a word, all the higher things of spirit."**

"There is an obstinate prejudice thanks to which India is constantly represented as having lived, as it were, hermetically sealed up in its age-old civilization, apart from the rest of Asia. Nothing could be more exaggerated. During the first eight centuries of our era, so far as religion and art are concerned, central Asia was a sort of Indian colony. **It is often forgotten that in the early Middle Ages there existed a "Greater India," a vast Indian empire.** A man coming from the Ganges or the Deccan to Southeast Asia felt as much at home there as in his own native land. In those days the Indian Ocean really deserved its name."

(for more on Greater India refer to chapter on **Suvarnabhumi** source: **Civilizations of the East - By Rene Grousset** Vol. II, Chapter - Farther India and the Malay Archipelago p. 275-343).

183. **George Harrison** (1943-2001) **former Beatle** and rocker, who was the impetus for the group's spiritual quest of the 1960s which brought them to India. In 1965, he discovered the Indian string instrument, the sitar. Harrison was in India, to learn how to play the instrument under the renowned sitar maestro Ravi Shankar. But for some, Harrison brings back memories of a time when the West turned to India for inspiration and enlightenment.

One reason he became interested in India, he was to say in a 1992 interview, was because "**it unlocked this enormous big door in the back of my consciousness". Eventually he became a devotee of Hindu God Krishna,** donating large sums of money to the International Society for Krishna Consciousness and even donating a 23-acre site outside London to the movement. He also incorporated the trademark Hare Krishna chants in his music. Harrison had been close to the International Society of Krishna Consciousness since the 1960s. The ISKCON in a statement said, "During his last days, Krishna devotees were by his side and he left his body to the sounds of the Hare Krishna Mantra."

(source: **rediff.com** 12/01/01).

Harrison became deeply interested in India. The late George Harrison, a longtime devotee of Hinduism, left £700,000 to build a temple in the holy city of Varanasi in India according to Hare Krishna devotees.

(source: **BBC News.com**).

His real interest remained Indian spirituality. In 1976, he told me that the most influential book he had ever read was **Yogananda Paramahansa's Autobiography of a Yogi.** "None of this will last," he repeated. "In the end, there's only God-consciousness."

(source: **He was keener on God than on rock - By Vir Sanghvi** Hindustan Times 12/1/01).

George Harrison "Beatle yogi" who linked Western pop to the strains of the sitar, would have liked himself to be remembered as the man who spread the message of Indian spirituality to the decadent West.

(source: **Hindustan Times** 12/01/01).

George Harrison, the 'Quiet Beatle' was the most Indian of the quartet. It was **his spiritual yearning** that brought the Fab Four to the banks of the Ganges and to the feet of Maharishi Mahesh Yogi and Pandit Ravi Shankar. Harrison introduced a whole generation of western performers and entertainers to Indian music and mysticism following a 1966 visit to Rishikesh where he drank deeply of ragas and religion.

(source: **George Harrison: The India connection - By Chidanand Rajghatta** Times of India 12/1/01).

At a time before Westerners were flocking to yoga classes, Harrison became one of the first proponents of Eastern culture, studying meditation and Indian music. (source: **abcnews.com**).

In 1973, he came up with a neatly arranged album aptly titled, Living in the Material World. The songs reflect the Hindu view of the world and a culmination of his quest for self-realisation. The song, The Art of Dying for instance, deals with the philosophy of Karma and reincarnation. He even inculcated in himself the orthodox-Hindu way of life by waking up at the crack of dawn, bathe in cold water and study **Bhagvad-Gita**.

(source: **Living in a yellow submarine - Dailypioneer.com**).

He passed away to the sonorous tone of Hare Krishna chants. **He was a lifelong follower of Hinduism and was closely associated with the Hare Krishna movement.** Harrison had produced the **Chants of India**, a recording of Indian religious music. A collection of mantras and prayers from the Vedas, Upanishads, and other scriptures powerfully transports the listener to a place of peace where it's possible to be one with the universe.

(source: **Times of India** 12/03/01).

In an Interview, Henley-On-Thames, Oxfordshire, 1982, this is what the rocker said on His Personal Spirituality:

"I always felt at home with Krishna. You see it was already a part of me. I think it's something that's been with me from my previous birth…. I'd rather be one of the devotees of God than one of the straight, so-called sane or normal people who just don't understand that man is a spiritual being, that he has a soul."

(please refer to Lyrics for **My Sweet Lord**, **Hare Krsna Mantra** and **Govinda**).

In his album **Brainwashed**, former Beatle, George Harrison's answer is "God, God, God" and we eventually get a reading from How To Know God (The Yoga Aphorisms of Patanjali) and a chant seemingly called Namah Parvati performed along with his son Dhani.

It is the perfect end to a final album of the man who took the world to the feet of the Maharishi and **became Krishna's most famous devotee. "Namah Parvati"** was appended it as the album's spiritual benediction, a touching reminder that while musicians come and go, music can truly embody their spirit forever.

The album is dedicated to the Yogis of Hinduism.

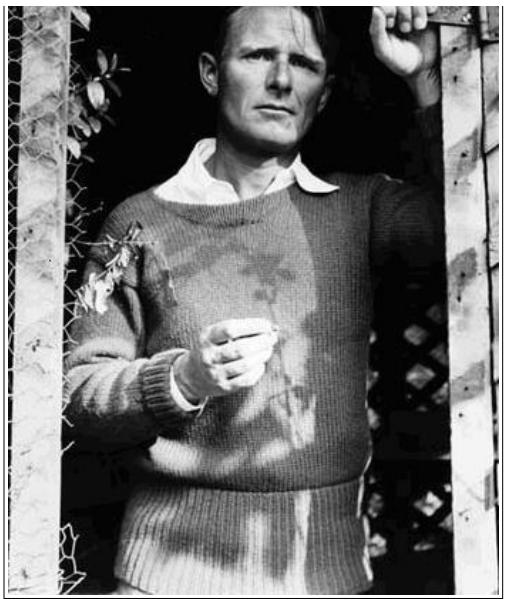
(For more on George Harrison refer to chapter **GlimpsesVI**).

184. **Dr R. Chidambaram** (1936 -) Principal Scientific Advisor to the Government of India has said: "Bhagwat Gita" continues to be the source of inspiration for both Indian and western scientists and "one sees a thread of similarity in the spiritual thinking of great scientists like Srinivasa Ramanujan, C V Raman, Chandrasekhar,"

He said **Bhagwad Gita** has influenced the thinking of even many foreign scientiss like Erwin Schrodinger and Robert Oppenheimer.

"I myself have been influenced by the Saivite religious environment in my family and the great intellectual force of Advaita Vedanta," he said.

(source: **Hindustan Times** 12/22/01).



185. **Houston Stewart Chamberlain** (1855-1927) British born writer, and admirer of music composer Richard Wagner. In his major work, **The Foundations of the Nineteenth Century**, he extolled the profundity of Indian philosophy and praise of Hindu mysticism.

"Indian thought is unsurpassed in depth and comprehensive many-sidedness."

(source: **The Soul of India - By Amaury de Riencourt** p 276-279).

186. **Christopher W. B. Isherwood** (1904-1986) Translator, biographer, novelist, and playwright, he is the author of over twenty books, including Vedanta for the Western World and My Guru and His Disciple **-** a book about Swami

Prabhavananda, who guided Isherwood for some thirty years. During the 1940s his interests turned from Christianity to Hinduism. With his guru Swami Prabhavananda Isherwood translated from the Sanskrit **The Bhagavad-Gita** and **The Yoga Aphorism of Patanjali.** Isherwood broke from the strictly chronological format to create a spiritual autobiography wherein the values of Vedanta Hinduism counter his life as a Hollywood scriptwriter.

"I believe the Gita to be one of the major religious documents of the world. If its teachings did not seem to me to agree with those of the other gospels and scriptures, then my own system of values would be thrown into confusion, and I should feel completely bewildered. The Gita is not simply a sermon, but a philosophical treatise."

(source: **Living Wisdom: Vedanta in the West - Pravrajika Vrajaprana** (Editor) **Essay on Gita and the War** - **By Christopher Isherwood** 93-99).

Turning from Christianity to Hinduism In 1943 he became follower of Swami Prabhavananda, producing several works on Indian Vedãnta in the following decades.

187. **Dr. D. T. Suzuki** (1870-1966) Japanese Buddhist and Zen scholar, who has written several books, including Zen Buddhism and Its Influence on Japanese Culture (1938, rev. ed. 1959), An Introduction to Zen Buddhism. He has said:

"The study of Japanese thought is the study of Indian thought."

(source: **India: Mother of Us All - By Chaman Lal** p. 25).

188. **Rizwan Salim** (?) reviewer, New York Tribune, Capitol Hill reporter, Engineering Times, assistant editor, American Sentinel, published in Hindustan Times has wisely observed:

"Given the reality that **Hindustan is the longest surviving ancient civilization and Hindus have to their credit so many unccountable and such astonishing achievements** of architecture and painting, music and dance, poetry and drama, epics and narratives, intellectual systems and philosophical doctrines, healing systems and mind-body disciplines, Hindus of every caste and class today should have possessed a well-informed and well-developed, intense and, fully conscious cultural pride.

But one of the principal tragedies of contemporary India is that the

majority of even the educated and otherwise affluent Hindus do not possess a deep and extensive knowledge of their culture-and do not give evidence of an intensely felt cultural pride.' Lacking profound cultural knowledge and intense cultural pride, India's intellectuals regard the fashionable ideas and ideologies from Europe and America as unquestionably superior to Bharat's thousands of years old Hindu culture and wisdom."

There are not very many scholars of high ability and international reputation in India today who illuminate Hindu culture and Hindus' past great accomplishments. It is an embarrassing truth that the best Indologists are found in the Netherlands and Sweden, Germany and France, Japan and Italy-not in Delhi and Ujjain, Varanasi and Puri, Madurai and Mysore."

"It is clear that India at the time when Muslim invaders turned towards it (8 to 11th century) was the earth's richest region for its wealth in precious and semi-precious stones, gold and silver; religion and culture; and its fine arts and letters. Tenth century Hindustan was also too far advanced than its contemporaries in the East and the West for its achievements in the realms of speculative philosophy and scientific theorizing, mathematics and knowledge of nature's workings. Hindus of the early medieval period were unquestionably superior in more things than the Chinese, the Persians (including the Sassanians), the Romans and the Byzantines of the immediate preceding centuries. **The followers of Siva and Vishnu on this subcontinent had created for themselves a society more mentally evolved - joyous and prosperous too - than had been realized by the Jews, Christians, and Muslim monotheists of the time.** Medieval India, until the Islamic invaders destroyed it, **was history's most richly imaginative culture and one of the five most advanced civilizations of all times."**

The descendents of those who built the magnificent temples of Bhojpur and Thanjavur, Konark and Kailas, invented mathematics and urban surgery, created mind-body disciplines (yoga) of astonishing power, and built mighty empires would almost certainly have attained technological superiority over Europe."

(source: **Need for Cultural pride - Revival - By Rizwan Salim** The Hindustan Times 9/20/1998).

189. **François-Auguste-René Rodin** (1840-1917) French sculptor, who imbued his work with great psychological force, which was expressed largely through texture and modeling. He is regarded as the foremost sculptor of the 19th and early 20th centuries.

In a magnificently poetic outburst about the **Mahesamurti (Trimurti) of the Elephanta Caves**:

"This full, pouting mouth, rich in sensuous

expressions, these lips like a lake of pleasure, fringed by the noble, palpitating nostrils."

(source: **Civilizations of the East - By Rene Grousset** Vol. II, p. 245-246).

Rodin described the statue of Nataraja or King of Dance - as the perfect embodiment of rhythmic movement.

(source: **Indian Art - By Vidya Dehejia** p. 12).

190. **Gerald James Larson**, An American scholar who points out that there are in a manner of speaking almost as many Gitas as there are readers of it and that:

"What the Gita is, finally is inseparable from its many contextual environments, ancient and modern, Eastern and Western, scholarly and popular, corporate and personal, secular and sacred - contextual environments that have emerged in an on-going historical process and will continue to emerge as that historical process unfolds." and he adds:

" An interesting monograph could be written on the Gita as symptomatic of trends in nineteenth-and twentieth-century European and American scholarly thought."

(source: **The Universal Gita: Western Images of the Bhagavad Gita a Bicentenary Survey - By Eric J. Sharpe** p. 14).

191. **Dorothea Chaplin** mentions in her book, **Matter, Myth and Spirit or Keltic and Hindu Links** (pp. 168-9),

"Long before the year 460 B.C. in which Hippocrates, the father of European medicine was born, the Hindus had built an extensive pharmacopoeia and had elaborate treatises on a variety of medical and surgical subjects...The Hindus' wonderful knowledge of medicine has for some considerable time led them away from surgical methods as working destruction on the nervous system, which their scientific medical system is able to obliviate, producing a cure even without a preliminary crisis."

(source: **Matter, Myth and Spirit or Keltic and Hindu Links - By Dorothea Chaplin** p. 168-9).

192. **Alexandra David-Neel** (1868-1969) French explorer, writer, Orientalist and mystic. She had studied Sanskrit and Buddhism at the Sorbonne University and made her first journey alone to India. Though educated in a convent, she became interested in spiritualism and theosophy and joined a group with similar interests, one of this group was Mirra Richard, the future "Mother" of Pondicherry. She had remarked that **the role Gods play in India is remarkable. She** has said:

"because the images of statues are like a battery which is charged over the ages by the adoration of the devotees, who in turn can draw energy, inspiration, or grace from these statues." She goes on: "As a battery, the energy in the statue will not get discharged, as

long as the faithful continue to worship it by their adoration." And she concludes: " Gods are thus created by the energy given out by the faith in their existence."

(source: **Arise O' India - By Francois Gautier** p. 15).

193 **Rev. William Robertson**

He could not but praise "the ancient and high civilization of the inhabitants of India."

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 17).

194. **Professor Rudolph Otto** (1869-1937 Was associate professor at Göttingen. Eventually he became a professor of systematic theology, first at Breslau in 1915, then at Marburg in 1917. He is emphatic that the idea of a Son of God is certainly not from Israel....The figure of a being who had to do with the world, is of high antiquity among the Aryans....and points back in some way to influences of the Aryan East. "These materials are found in India, in more primitive forms not merely as a late period but in the remotest pre-Christian Kausitaki Upanishad."

(source: **Eastern Religions and Western Thought - By Sir Sarvapelli Radhakrishnan**. p. 161).

195. **Sir John Malcolm** (1829-1896) Was the Governor of Bombay and author of A Memoir of Central India including Malwa and Adjoining Provinces and also worked for the East India Company and he remarked:

"The Hindoo...are distinguished for some of the finest qualities of the mind; they are brave, generous, and humane, and their truth is as remarkable as their courage. "

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 17).

196. **David Frawley** (?) also known as **Pandit Vamadeva Shastri** the American eminent teacher and practitioner of Ayurvedic medicine and Vedic astrology and author of several books, including **Arise Arjuna : Hinduism and the modern world** and **Awaken Bharata: A Call for India's Rebirth** - in which the need for a new intelligentsia, "intellectual kshatriya" or intellectual warrior class trained in Vedic dharma, to handle challenges was emphasized.

He writes:

"The Hindu mind represents humanity's oldest and most continuous stream of conscious intelligence on the planet. Hindu sages, seers, saints, yogis and jnanis have maintained an unbroken current of awareness linking humanity with the Divine since the dawn of history, and as carried over from earlier cycles of civilization in previous humanities unknown to our present spiritually limited culture."

"The Hindu mind has a vision of eternity and infinity. It is aware of the vast cycles of creation and destruction that govern the many universes and innumerable creatures within them."

(source: **Hinduism and the Clash of Civilizations - By David Frawley** p. 12-13).

He considers **Hinduism to be a religion of the Earth**, because, as he describes beautifully:

"…it honors the Earth as the Divine Mother and encourages us to honor her and help her develop her creative potentials. The deities of Hinduism permeate the world of nature…they don't belong to a single country or book only. It is not necessary to live in India to be a Hindu. In fact, one must live in harmony with the land where one is located to be a true Hindu.

"I see Hinduism as a religion eminently suited for all lands and for all people because it requires that we connect with the land and its creatures - that we align our individual self with the soul of all beings around us. Hinduism finds holy places everywhere, wherever there is a river, a mountain, a large rock, or big tree, wherever some unusual natural phenomenon be it a spring, a cave, or a geyser."

"True religion, whether it predominates in the Eastern or Western parts of the world, is not a matter of geography," says Frawley. "All the religions of the world are followed in areas far beyond the geographical locale of their origin. Religion speaks of the ultimate issues of life and death and should orient us to the Eternal and the Universal. In this respect, **Hinduism with its universal view has greater relevance for all human beings than any belief system, which divides humanity into believers and non-believers."**

(source: **About.com**).

The Indian tradition is pluralistic and has always offered freedom of worshipping the divine in the name and form of one's choice and according to one's individual samskaras. It is pluralistic both at the level of religious practices as well as philosophical teachings. For this reason we find more religions inside Hinduism than among all of the world's religions put together.

Pluralism means freedom. It means that we should accept religious differences as a fact of life, like other natural variations. We need freedom to arrive at the truth. The pursuit of dharma, the urge for self-realization and desire for liberation are common to all paths. Rather than as a cause for confusion, I see Indian pluralism as constructively facilitating an individual's spiritual quest.

(source: **Vedacharya from the West** - **Times of India** March 30, 2000).

David Frawley has convincingly argued, the **central value of Hinduism is not "tolerance" (as interested parties try to make Hindus believe) but truth.**

(source: **Bharatiya Janata Party vis-a-vis Hindu Resurgence - By Koenraad Elst** p. 135).

197. **Pierre Loti** (1850-1923) pseudonym of Louis-marie-julien Viaud, a novelist whose exoticism made him popular in his time and whose themes anticipated some of the central preoccupations of French literature between World Wars. Loti's career as a naval officer took him to the Middle and Far East, thus providing him with the exotic settings of his novels and reminiscences. Some of his books include **Voyages 1872-1913** and **L'Inde sans les Anglais**.

He expressed his esteem for India in the following pregnant words:

"And now **I salute thee with awe, with veneration, and wonder,**

ancient India, of whom I am the adept, **the India of the highest splendor of art and philosophy.** May thy awakening astonish the Occident, decadent, mean, daily dwindling, slayer of nations, slayer of Gods, slayer of souls, which yet bows down still, ancient India, before the prodigies of thy primordial conceptions!"

(source: **Sanskrit Civilization - G. R. Josyer** International Academy of Sanskrit Research. p. 1)

198. **William Edward Hartpole Lecky** (1838-1903) Irish historian, essayist, author of **The Substance of History of European Morals** (From Augustus to Charlemagne).

He quotes an old tradition in Greece that **Pythagoras himself had come to India** and learnt philosophy from the gymnosophists. It seems he believed in an "all-pervading soul" which is at least one important attribute to Hindu atman. Pythagoras believed in rebirth or transmigration ; he taught and practiced harmlessness or no-injury, he taught silence; he taught that the end of man is to "become like God". Orphic mysteries taught release (lysis) from all material entanglements, which is close to **moksha of the Hindus.**

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 197).

199. **Paul Hubert**, a French Theosophist, was to write in glowing terms of Charles Wilkins translation the **Bhagavad Gita.** In his book **Histoire de la Bhagavad Gita** he said it was one of the **'striking events in the universal history of philosophy'**

(source: **The Universal Gita: Western Images of the Bhagavad Gita a Bicentenary Survey - By Eric J. Sharpe** p. 4).

200. **Prince Muhammad Dara Shikoh** (1627-1658 AD) the favorite Sufi **son of Moghul emperor, Shah Jehan**. Known the world over for his unorthodox and liberal views. He was a mystic and a free thinker. Dara Shikoh's most important legacy is the translation of fifty Upanishads, known under the title of Sirr-i-Akbar ("The Great Secret"). It was completed in 1657, together with paraphrases and excerpts from commentaries which in various cases, though by no means throughout, can be traced back to Sankara.

He had learned Sanskrit and studied the Hindu scriptures in the original. He studied the Torah, the Gospels and the Psalms, **but it is the "Great Secret" (Sirri-i-Akbar) of the Upanishads which, in his view, represents the most original testimony of the oneness of God or the Absolute.**

His personal fate is well-known: in 1659, two years after the completion of the Sirr-i-Akbar, he was executed by order of his brother, Aurangazeb, and with the consent of the Islamic orthodoxy community (Ulama), who claimed that he was a heretic and a danger to the state, the faith and the public order.

(source: **India and Europe: An Essay in Understanding - By Wilhelm Halbfass** p. 34).

He translated the **Upanishads**, **Bhagavad Gita** and **Yoga - Vashishta** into Persian directly from Sanskrit and called it **Sirr-e-Akbar (The Great Mystery**). Titled **"The Upanishads: God's Most Perfect Revelation"** and then into Latin by Anquetil Duperron (1801 and 1802) under the title **Oupnekhat,** contained about fifty. This translation introduced Western readers to the Upanishads. Schopenhauer's reaction to it is well-known.

The Quran itself, he said, **made veiled references to the Upanishads as the "first heavenly book and the fountainhead of the ocean of monotheism."**

Dara Shikoh, wrote in his Persian translation of the **Upanishads**.

"After gradual research; I have come to the conclusion that long before all heavenly books, God had revealed to the Hindus, through the Rishis of yore, of whom Brahma was the Chief, His four books of knowledge, the Rig Veda, the Yajur Veda, the Sama Veda and the Atharva Veda."

In his **Majma al-Bahrain**, he sought to reconcile the Sufi theory with the **Vedanta.**

He was able to affirm that Sufism and **Advaita Vedantism (Hinduism)** are essentially the same, with a surface difference of terminology."

And in introduction to this work he says that one finds in Upanishads the concept of tawhid (the doctrine of Unity of God, the most fundamental doctrine of Islam) after the Qur'an and perhaps the Qur'an refers to Upanishad when it refers to Kitab al-Maknun (The Hidden Book). His work Majma`ul Bahrayn (Mingling of the Two Oceans i.e. Hinduism and Islam) is very seminal work in the history of composite culture of India.

Two years after the completion of the Sirr-i-Akbar, Dara was executed on the orders of his brother - Aurangazeb.

Updated - December 19, 2003

271. **Paul Brunton** (1898 -1981) was a British philosopher, mystic, traveler and author of **A Hermit in the Himalayas**, **A Message from Arunachala** and **The Orient: Legacy to the West**. **A Search in Secret India** is one of the great classics of spiritual travel writing. With a keen eye for detail, Paul Brunton describes taking a circular journey round India: living amongst yogis, mystics and gurus, seeking the one who would give him the peace and tranquility that come with self-knowledge. His vividly told search ends at Arunachala, with Sri Ramana Maharshi. He has observed:

"We are witnessing in the West the appearance of an at present thin but slowly deepening current of interest in those very thoughts and ideas which the **young men of India are today doing their best to reject as inadequate to their needs and which constitute the faith and religious traditions of their forefathers."**

"For Indian culture is fruitful in the domain of psychology, philosophy, and religion, so fruitful that there are few doctrines which appeared out of original Western sources that have not already been anticipated and developed...in India. "

The **Bhagavad Gita** contains the **mental quintessence and successful synthesis of the various systems of religion and philosophy, it offers a unique epitome of the high culture of prehistoric India.** The following sentences from the Bhagavad Gita unite in making the same declaration of an unseen Reality and Unity which dwells behind nature.

“My self is the bearer of all existence.”
“All this world is pervaded by Me in My unmanifested form.”

This doctrine is the keystone in the entire arch of the earliest Indian philosophy.

This idea appealed to several “wise men” of our Western world - philosophers and scientists, living so many centuries later, including **Tennyson, Thomas Carlyle**, and **Ralph Waldo Emerson.**

Alfred Lord Tennyson, (1809-1892) one time Poet Laureate of England sings:

“The sun, the moon, the stars, the hills and the plains,
Are not these, O Soul, the vision of Him who reigns?
The ear of man cannot hear, and the eye of man cannot see;
But if we could see and hear this vision – were it not He?”

"**Ralph Waldo Emerson** (1803-1882), whose **Transcendentalism earned him the appellation of "the Boston Brahmin."** Reading through his writings and essays we find several passages which insists, as the Hindu texts on the subordinate character of the visible material creation."

The work of physicists like Currie, Rutherford, Fermi, Cockcroft, Chadwick, Anderson and Millikan has brought us to the practical and proven scientific principle that the inner structure of matter is reducible to a single fundamental substance, an essential and immortal energy which is the "life" of the myriad forms that make up the universe. Modern development in the laboratory will vindicate the theory of a single element underlying all the visible and different manifestations of material Nature, we shall have to grant that **the assertions of the Hindu philosophers, made thousands of years ago....are but results of the insight practiced by keenly perceptive and concentrated minds."**

"The ancient Hindus took their philosophic statements in the nature of a revelation from on high, as issuing forth from their seers as a result of a personal self-experience in the spiritual domain. Our Western scientists have no such experience, and if they are approaching similar conclusions, it is because they are working their way from the profoundest depths of this material world up to its farthest frontier where the ions elude them and vanish into mystery……the wisest men of the ancient East and the modern West…are beginning to arrive at precisely the same conclusions."

" This Indian doctrine declares human cognition of the entire manifold universe to be illusionary in character. The vast multitude of tangible objects and tangible creatures which we so plainly witness around us were said to be the product of the constructive imagination of the One Hidden Self. Man and his material environments were but finite dreams passing through the mind of the Infinite Dreamer. **Consequently all that we know of the world is nothing more or less than a series of idea held in our consciousness.** Thus we arrive at a completely idealistic metaphysics which, because of its very nature, must apparently remain for ever purely speculative and beyond the scope of the finest instruments which can be devised to prove or disprove. Nevertheless the strangeness and unfamiliarity of the doctrine fascinated the Indian mind to an amazing extent. **That this early foreshadowing of modern idealistic philosophy was not merely a worthless superstition is evidenced by the fact that some brilliant minds of the West have been equally fascinated and perplexed. "**

One of the greatest 19th century scientists was **Thomas Henry Huxley** (1825-1895), his work, **Collected Essays** vol. VI, serve to show **how much ancient Indian philosophy anticipated modern Western thought.**

(source: **Indian Philosophy and Modern Culture - By Paul Brunton** p. 9 - 92 London Rider & Co. Paternoster House, E. C). For more on Paul Brunton refer to chapter on **Glimpses VI**).

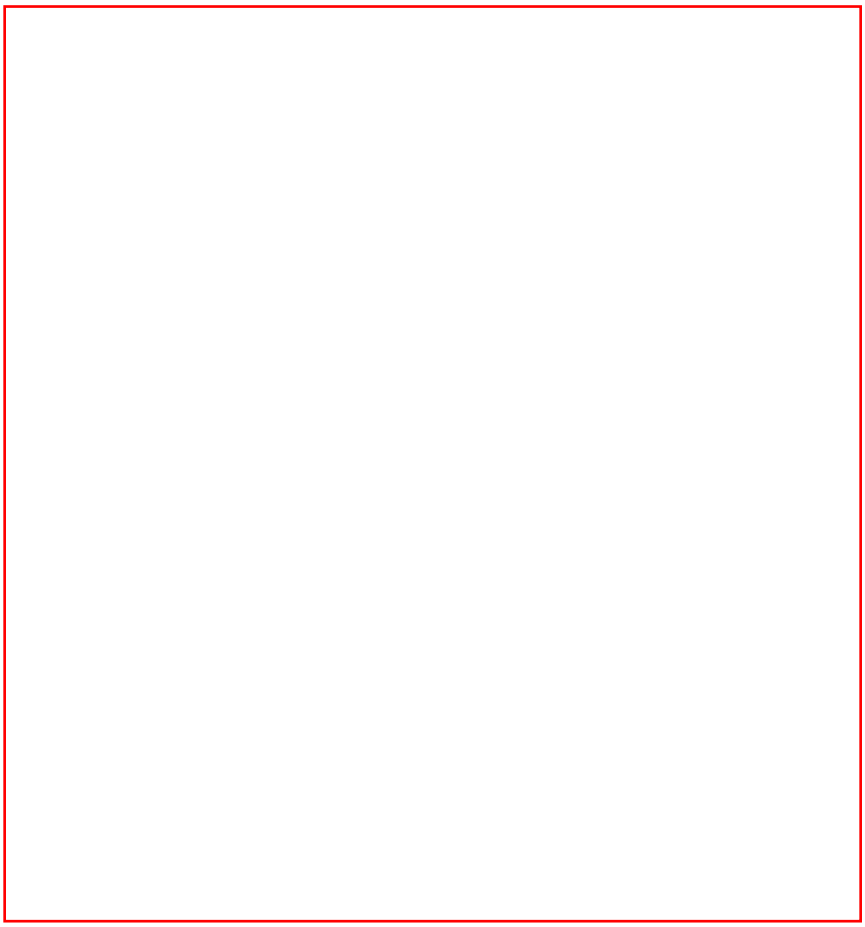
272. **William Cooke Taylor** (1800-1849) author of several books including **A popular history of British India, commercial intercourse with China, and the insular possessions of England in the eastern seas**. He spoke glowingly of Sanskrit literature:

"It was an astounding discovery that Hindustan possessed, in spite of the changes of realms and chances of time, a language of unrivalled richness and variety; a language, the parent of all those dialects that Europe has fondly called classical - the source alike of Greek flexibility and Roman strength. **A philosophy, compared with which, in point of age, the lessons of Pythagoras are but of yesterday, and in point of daring speculation Plato's boldest efforts are tame and commonplace. A poetry more purely intellectual than any of those which we had before any conception; and systems of science whose antiquity baffled all power of astronomical calculation.** This literature, with all its colossal proportions, which can scarcely be described without the semblance of bombast and exaggeration claimed of course a place for itself - it stood alone, and it was able to stand alone."

"To acquire the mastery of this language is almost the labor of life; its literature seems exhaustless. The utmost stretch of imagination can scarcely comprehend its boundless mythology. Its philosophy has touched upon every metaphysical difficulty; its legislation is as varied as the castes for which it was designed."

(source: **Journal of the Royal Asiatic Society Vol. II (1834) - W. C. Taylor's paper on Sanskrit Literature**).

273. **Gertrude Emerson Sen** (- 1982) historian and journalist and Asia specialist. Author of several books including **The Story of Early Indian Civilization**. She married a Bengali - Basiswar Sen and in her **Voiceless India**, she learned to love the deep-rooted Indian view of life, Indian ways of thought and Indian ideals.



She considered **Hinduism a priceless heritage of India**. The vast archaic literature been handed down, and which faithfully preserves the ideas and ideals of those far-off times. It establishes the wonderful continuity and depth of Indian civilization.

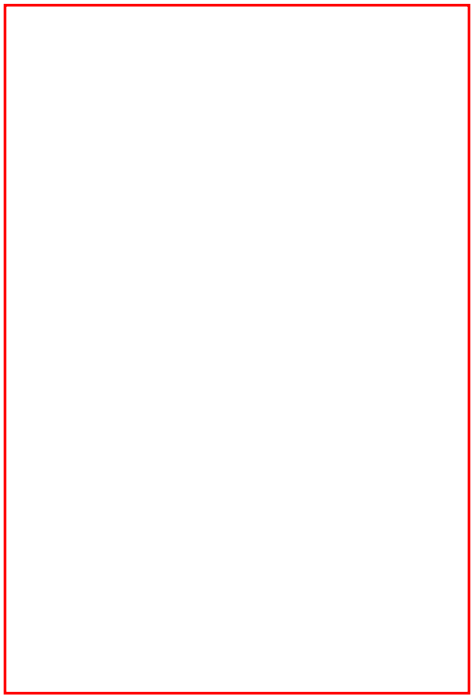
"As the **Indian sages pondered** on the problem of good and evil, they were confronted with the apparent injustices and cruelties of the world around them, and this state of affairs was finally reconciled with their idea of Brahman by the conception of a universal ethical law applying to all life. This law as proclaimed as the **law of karma.** In the words of the **Upanishads**, "As is a man's desire so is his will, and as is his will so is his deed, and whatever deed he does that he will reap."

"India held a strange and irresistible attraction for the whole of Asia in the first millennium. People in the most primitive stage of development as well as the Chinese with a civilization as ancient and illustrious as India's own, acknowledged India as first in the supreme realm of spiritual perception. Yet the civilization of India, transplanted abroad, did not have a deadening effect of suppressing or stifling native genius, as the imposition of a foreign culture often does. On the contrary, it called out the best that others

had to give. As a result of India's fertilizing influence, new and distinctive types of culture everywhere arose, and each new colony was able to create and contribute fresh treasure, to be added to the great Asiatic heritage. **How Indian religions and Indian culture blossomed anew in foreign environments and endured for many centuries is a fascinating and little appreciated chapter of Indian history."**

Shiva and Parvati - Japan *Goddess Saraswati - Japan*
India's religious and cultural ideas lapped at the far shores of Korea and Japan.

"The Indian colonies which began to grow up all along the periphery of the motherland were essentially cultural and religious, rather than political or racial. Yet they were subject to strong Indian influences. These swept outward like tidal waves. They passed south to Sri Lanka and beyond to the remote islands of the Pacific. They inundated Burma, Malaya, Siam and Indo-China. They overwhelmed Nepal and Tibet. From Afghanistan, they passed along to central Asia and China. **They lapped at the far shores of Korea and Japan. Indian religious ideas and literature, Indian conventions of art and architecture, Indian legal codes and social practices...all took root in these outer territories."** "For a long time Indians seem to have held the monopoly of maritime commerce in both the southern and eastern seas of Asia. They possessed large ocean-going vessels, in which they first ventured to Sri Lanka, Burma, Malaya and gradually they extended their journeys to Java and Sumatra and then to southern China.'



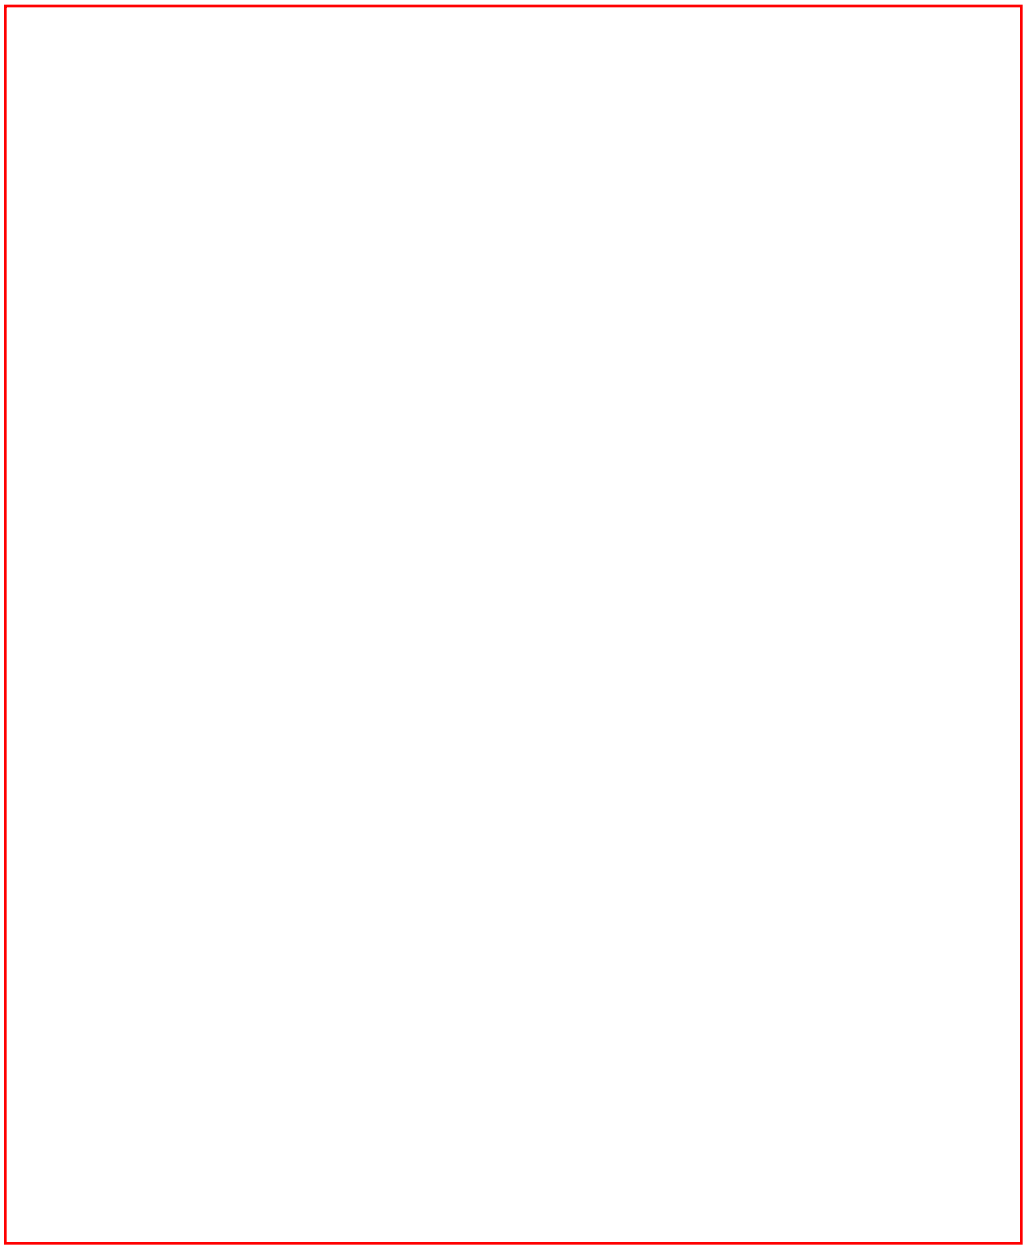
(source: **The Pageant of India's History - By Gertrude Emerson Sen** p. 52 - 322).

274. **J. Seymour Keay** (?) British M. P. Banker in India and Indian Agent writing in 1883:

" It cannot be too well understood that our position in India has never been in any degree that of civilians bringing civilization to savage races. **When we landed in India we found there a hoary civilization, which, during the progress of thousands of years, had fitted itself into the character and adjusted itself to the wants of highly intellectual races.** The civilization was not perfunctory, but universal and all pervading - furnishing the country not only with political systems, but with social and domestic institutions of the most ramified description. **The beneficent nature of these institutions as a whole may be judged from their effects on the character of the Hindu race.** Perhaps there are no other people in the world who show so much in their character the advantageous effect of

their own civilization. They are shrewd in business, acute in reasoning, thrifty, religious, sober, charitable, obedient to parents, reverential to old age, amiable, law-abiding, compassionate towards the helpless and patient under suffering."

(source: **Hindu Swaraj or Indian Home Rule - By M. K. Gandhi** p. 106).



275. **Swami Rama Tirtha** (1873-1906) renounced his career as a Mathematician in order to practice and preach Vedanta.

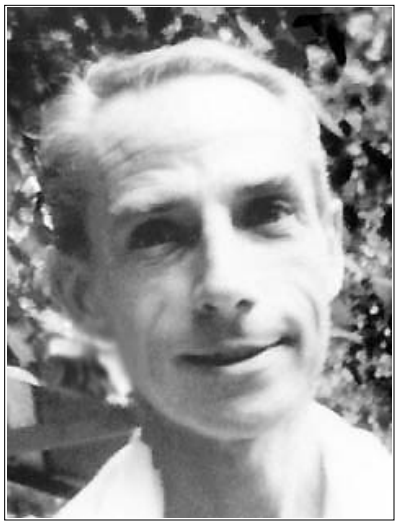
"Sanatana means Eternal. In its purest form, this religion is Sanatana, because it is based on Truth. Truth is immortal and is never annihilated. It remains the same yesterday, today and forever. Therefore our true Sanatana Dharma, in its purest form, cam never be exterminated. It, however, does not follow that we should relax into inaction, in the belief that our religion is the best or that it can never be destroyed. No, no. This idle thinking is the result of our indolent minds. **It is, therefore, absolutely essential for the followers of Sanatana Dharma to keep it safe from the evil and aggressive designs of the non-Hindus, who are generally ever ready to malign us."**

Truth is not only Eternal but also unlimited and infinite. It is all-embracing. It is the religion for all, irrespective of their caste, creed or nationality. In fact, it is great and glaring, and never sectarian. It is liberal. Other religions have all been founded by individuals. **But this Sanatana Dharma is not based on the teachings of any one single person.** Much before Rama, Krishna, Buddha, Christ, Mohammed, Shankarcharya and others, the germs of the fundamental principles of Sanatana Dharma were present.

Sanatana Dharma is very simple and natural because it is based on the Laws of Nature. The man whose life is molded according to these Laws, irrespective of their being physical, mental and spiritual, is in the real sense, a Sanatani. **Santana Dharma is a grand and all-embracing religion.** There should be no narrow mindedness in a Sanatani. **He should feel His presene in the Chandala, in the thief, the lowest beings, the sinners, the foreigners and in all. He should worship God in all, especially in the hungry, the needy and the downtrodden with selfless service and liberality. This is in real sense, the true worship of and devotion to God."**

(source: **Om Sanatana Dharma - By Swami Rama Tirtha** p. 20-29 and p. 73).

carved temple horse court



276. **R S Nathan** (?) author of **Hinduism That is Sanatana Dharma**, observes:

"The result is the **profound Philosophy of Vedanta** to which more and more men and women from all parts of the world are flocking today for light, solace and fulfillment. So in India, **Philosophy is not a hobby or an escape, but an intense search for Truth** after having found from experience that mundane achievements only complicate our lives and takes us farther from our real goal. In fact Rishis of yore did not make a distinction between Science on the one side, and Religion and Philosophy on the other. The Science of the Upa-Vedas and the Vedanagas, and the Philosophies are the Vedas-Vedangas, all culminating in the Vedanata – the end of the Vedas.

"Sanatana Dharma" the most ancient of all the living religions of today, a non-prophetic religion popularly known as "Hinduism" since the last few centuries, based on all-embracing universal love, the eternal values of life and human endeavor, time-tested knowledge and wisdom, and all-comprehensive in its vision, has a permanent message enshrined in it, for the entire humanity irrespective of time, place and circumstances."

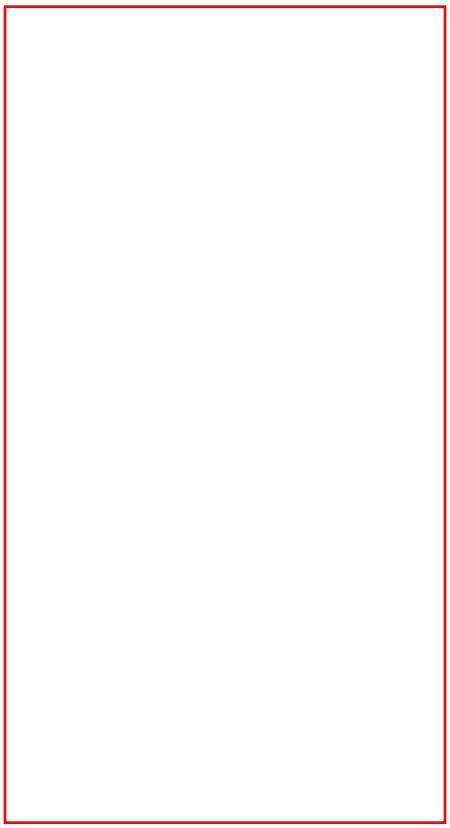
(source: **Hinduism That is Sanatana Dharma - By R S Nathan** preface and 36 - 46

published by Central Chinmaya Mission Trust - Bombay 1989).

277. **Satprem** (1923 -1989) aka Bernard Enginger, a sailor and a Breton born in Paris. A member of the French Resistance. Satprem was arrested by the Gestapo when he was twenty and spent a year and half in concentration camps. Devastated he journey first to Upper Egypt, then to India, where he served in the French colonial government of Pondicherry. There he discovered Sri Aurobindo and Mother. Their Message - "Man is a transitional being" - struck a deep chord.

His first essay was dedicated to **Sri Aurobindo or the Adventure of Consciousness** a book that has led so many to Sri Aurobindo and the Mother. His book, **Evolution II** translated from the French by Michel Danino is dedicated to the **Souls of India**:

"the millions souls of India
unknown to themselves
unknowing of their own Treasure
with my love infinite



In his book, Evolution II, he wondered after Man, who? But the question is: After Man, how?

(source: **Evolution II - by Satprem** - **Translated by Michel Danino**).

Satprem believed in the Hindu **concept of reincarnation** and asks:

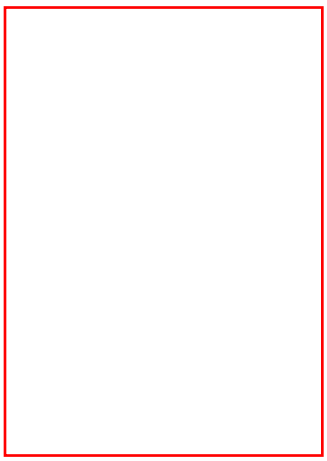
"Which sadist God has decreed that we would have only one life to realize ourselves and through which colossal ignorance Islam and Christianity have decided that we shall go to Heaven or Hell, according to the deeds, bad or good, which we have committed in a single life?"

(source: **Arise O'India - By Francois Gautier** p. 10-11 ISBN 81-241-0518-9 Har-Anand Publications 2000).

278. **Allama Iqbal** (1873-1938) Indian thinker and poet.

The great civilization of the Indian subcontinent, has had its roots deep in antiquity, some seven to eight thousand years ago, and its flowering in the third millennium B.C. still lives on. In contrast, when we look round the world we are surprised by the fact that the Egyptian and Mesopotamia civilizations that flourished alongside this Indic Civilization have all disappeared, leaving hardly any trace behind. Why? The Indian psyche has indeed been pondering over this great cultural phenomenon of 'livingness', and this quest has been very aptly echoed by him in the following words:

Yunan-o-Misra Ruma sab mit gaye jahan se
Ab tak magar hai baqi namo-nishan hamara
Kuchh bat hai ki hasti mitati nahin hamari
Sadiyon raha hai dushman daur-i-zaman hamara



Ancient civilizations of Greece, Egypt and Rome have all disappeared from this world, but the elements of our civilization still continue. Although world-events have been inimical to us for centuries, there is something in our civilization which has withstood these onslaughts.

(source: **The Saraswati Flows on: The Continuity of Indian Culture - By B. B. Lal**. p. Chapter V p. 136). For more on B B Lal refer to chapter **Quotes251-270**).

Iqbal, described **Lord Ram as the Imam of Hindustan.**

(source: **Saeed Naqvi column - indianexpress.com**).

279. **Ekkirala Krishnamacharya** (1926-1984) author of **Cradle of Indian History**, physician, educationist and Kulapati (rector) of the Theosophy-related World Teacher Trust in Visakhapatnam. Fondly called by his disciples as `Master E.K'.

"There was no religion in this land, nor was any religion necessary for the Indians. The ancient Indians had a code of law for man to follow. This was framed in accordance with various truths working in natrue. The law of the existence of nature and its creation was observed in all its detail and the law for man to follow as copied in accordance with it. This was called **Dharma.** The term means that which bears and protects. It is that which bears and protects when we follow (it). Man is honored when he honors it. He receives protection when he protects it. It was made into a constitution called **Bharata Dharma.** It was the path of life commonly accepted throughout the land. Any attempt for religion is naturally limited and narrow when compared with this."

So Dharma, is nothing but living in accordance with the laws of nature. He used to say that the only qualification required to learn the **`Gayatri Mantram'** was the urge to learn it, and today lakhs of people all over the world, irrespective of caste, creed or religion have mastered it. He siad: "Secularism only means `not guided by religion' but not discarding religion altogether. While some countries do not feel ashamed

to call themselves Christian or Islamic nations, it is only India which is giving freedom to all people to practize their own religion,"

In 1974, he toured Europe and America five times between 1972 and 1983 and **propagated the message of Sanatana Dharma, spiritual astrology, Pantanjali's Yoga, Bhagavadgita and spiritual psychology.**

(source: **Who is a Hindu? - Koenraad Elst** and **An embodiment of service - The Hindu** - Sept 09' 02).

280. **Swami Ghanananda Saraswati** (?) the first African swami was initiated by Swami Krishnanand of India in 1975. He heads the Hindu Monastery of Africa in Accra, Ghana, regularly imparting spiritual guidance to devotees. He writes:

"African religions and Hinduism have certain similarities. Traditional African religions recognize the many aspects of Brahman and worship God as Prithivi, Vayu, Varuna, Agni, etc., just as in Hinduism. Only Africans who have been exposed to Hinduism can appreciate these similarities which help them to better understand African beliefs and aspirations."

"I was searching for the truth. **I went through some books on yoga and discovered that Hinduism is a very good religion. It is open minded. It teaches you about God. It also teaches you about science of the soul.** Later I went to Rishikesh and stayed with Sivananda's ashram, the Divine Life Society. There I found that **Hinduism is a straightforward religion that revealed the truth.**

I believe that Hinduism will grow with time among both Indians and Africans. It is now time for India and Hindu masters to turn their attention to Africa, with swamis and brahmins coming to conduct workshops, etc., and thereby give Africa a chance to remove the veil of spiritual darkness that has given Africa the name "the dark continent."

(source: **Hinduism Today** - August 1998 and July/August/September 2003 p. 63).

281. **Herbert George H. G. Wells** (1866 -1946) historian, a bitter critic of the Roman Catholic Church and author of several books including **A Short History of the World** and **Crux Ansata: An Indictment of the Roman Catholic Church** and **The Time Machine.**

In Hinduism, tolerance is not simply a matter of policy but an article of faith. He say that Hindu kings actually welcomed with open arms Christian missionaries and Muslim fakirs and Buddhist monks for a free exchange of ideas. One great Hindu king, Ashoka, in fact changed his religion to Buddhism and propagated Buddhism throughout India.

(source: **Am I a Hindu - by Ed Viswanathan** p. 8).

H. G. Wells has remarked: "The history of India for many centuries had been happier, less fierce, and more dreamlike than any other history. In these favorable conditions, they built a character - **meditative and peaceful and a " nation of philosophers such as could nowhere have existed except in India."**

(source: **The Outline of History - By H. G. Wells** p. 855).

282. **M. J. Akbar** Indian journalist and editor of Asian age and author of **The Shade of Swords: Jihad and the Conflict Between Islam and Christianity** writes:

"Hinduism has a supernatural aspect, which involves faith in an afterlife; and a natural one, which guides the worldly behavior.

If Hinduism has a defining message, then it is humanism. **There is space in its philosophy for everyone, which is one reason why India is a home to every single religion in the world.** Anyone who has been persecuted anywhere else has found an undisturbed haven in India. This remained true even when men distorted the philosophy of Hinduism and introduced the inequities of caste: The attitude of Hinduism to other faiths continued to be liberal. **Hinduism is synonymous with humanism. That is its essence and its great liberating quality."**

(source: **Of human bondage - arabnews.com**).

283. **Andrew Harvey** (1952 -) has devoted hi life to studying the world's mystical traditions. He is the author of several books including **The Direct Path creating a journey to the divine through the world's mystical traditions.**

"The Sanatana Dharma is a gallimaufry of the most extravagantly varied faiths, rituals, customs, beliefs; Hinduism has no single dogmatic authority and, until very recently in its history, no "missionary zeal" to convert others, sine it has never seen itself as the one true religion or the only hope of salvation.

"While there is no one 'exclusive' dogmatic Hindu tradition, then, there is a very definitely, a spirit of inquiry and of revelation that is so consistent with the greatest of modern Hindu mystics, Ramana Maharshi...down the Upanishads more than two thousand years before him. It is this consistency that gives the Hindu mystical tradition its timeless purity, weight, and grandeur. "

"What, then, is the core truth of the Hindu tradition? It is the truth of the mystery of a Spirit that pervades, creates, and transcends all things and of each soul's conscious identity with it beyond space and time. In the Upanishads, this all-pervading, all-creating, all-transcending Spirit is named Brahman. For the Upanishads and all the later teachings rooted in them, every human

being is naturally one with Brahman in his or her Atman, his or her "soul" or "indwelling core of divine consciousness." The aim of human life and the source of liberation from all the chains of life and death is to know, from inmost experience, the Atman's identity with Brahman and to live the calm, fearless, selflessly loving life that radiates from this knowledge."

"It is its sublime ancient tolerance, that was the true proof of the wisdom and mature dignity of the Hindu tradition. While there is no one "exclusive" dogmatic Hindu tradition, then, there is very definitely, a spirit of inquiry and of revelation that is so consistent that we find one of the greatest of modern Hindu mystics, Raman Maharishi, speaking in ways and with images that echo exactly the terminology of the anonymous seers who wrote down the Upanishads more than two thousand years before him. **It is this consistency that gives the Hindu mystical tradition its timeless purity, weight, and grandeur.** It is as if one eternal voice is speaking in and through a myriad different voice tirelessly exploring different registers of its own majestic range, as if all the tradition's poems and meditations and philosophical texts are, in Zaehner words, "different-shaped peaks in one vast, grand, interconnected mountain chain, like the Himalayas."

"The Hindu tradition provides exquisite, firm guidance toward this attunement because it has always recognized that different temperaments take different paths into the Sacred Marriage. It has not only recognized the validity of other religions, but has also acknowledged within itself a variety of paths." No other mystical tradition has had so broad and wise and all-embracing a vision of the different aspects and faces of the path. As Robin Zaehner used to say, "If anyone feels excluded from the Hindu embrace it is by his or her own perverse choice."

"Perhaps the supreme gift of Hinduism to the world is that its Tantric traditions have kept the truth of the splendor, majesty and power of the Bride vibrant and alive in all her unbridled fullness. Worshipping Her as Devi, Ambika, Durga, Lakshmi or Kali, the Hindu Tantric mystics have known how to adore Her both as Queen of Transcendence and Earth Mother, and love Her both in Her terrifying, life-devouring aspects and as infinitely benign and tender."

(source: **Teachings of Hindu Mystics - By Andrew Harvey** p. xv - xxix).

284. **General Joseph Davey Cunningham** (1812-1851) author of **A history of the Sikhs, from the origin of the nation to the battles of the Sutlej** says:

"Mathematical science was so perfect and astronomical observations so complete that the paths of the sun and the moon were accurately measured. The philosophy of the learned few was perhaps for the first time, firmly allied with the theology of the believing many, and Brahmanism laid down as articles of faith the unity of God, the creation of the world, the immortality of the soul, and the responsibility of man. The remote dwellers upon the Ganges distinctly made known that future life about which Moses is silent or obscure, and that unity and Omnipotence of the Creator which were unknown to the polytheism of the Greek and Roman multitude, and to the dualism of Mithraic legislators, while **Vyasa** perhaps surpassed Plato in keeping the people tremblingly alive to the punishment which awaited evil deeds."

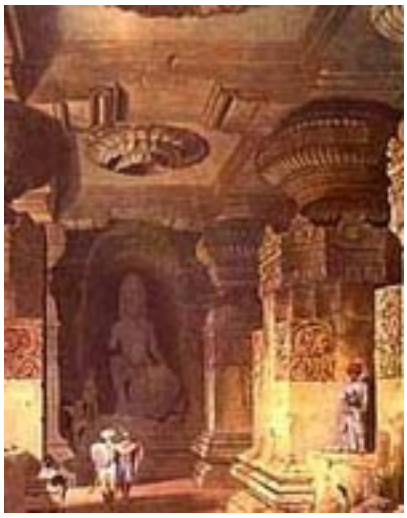
(source: **History of the Sikhs - By Joseph Davey Cunningham**).

285. **H. T. Goldich** (?) writes:

"No river on the surface of the globe, can compare with the Ganges in sanctity. From her source to her outflow in the Bay of Bengal, every yard of the river is sacred. To bathe in the Ganges at stated festivals is to wash away sin; to die and cremated on the river bank is to attain eternal peace. Tracing magnificent curves through the flat lowlands, the four rivers – Ganga, Jumna, Gogra and Gandaki – have for centuries combined to form an over-ruling factor in the development of Indian races."

Below the Rajmahal hills, the flood-discharge amounts to a million and a half cubic feet per second. Nearly every vegetable product which feeds and clothes, a people, or enables them to trade with foreign countries, is to be found in its basin. Upon its banks, in the present day, are such centers of wealth as Calcutta, Patna, Benares, Allahabad, Cawnpore – with Agra and Delhi on its affluent Jumna. "There is not a river in the world which has influenced humanity or contributed to the growth of material civilization or of social ethics, to such an extent as the Ganges. The wealth of India has been concentrated in her valley; and beneath the shade of trees, whose roots have been nourished on her waters, **the profoundest doctrines of moral philosophy have been conceived to be promulgated afar for the guidance of the world."**

(source: **Imperial Gazetteer of India** – The Clarendon Press. Oxford. I 22-26 and **Our Heritage and Its Significance - By Shripad Rama Sharma** p. 16-17).



286. **Dhan Gopal Mukerji** (1890 -1936) was the first South Asian immigrant to the United States to carve out a successful literary career, publishing more than twenty books **Caste and Outcast** was the first book on India written by an Indian that was widely read in America. As an interpreter of Indian thought and spirituality, Mukerji's influence on American literary circles was considerable. Among his long-time literary associates were the eminent critic Van Wyck Brooks and the historians Will and Ariel Durant. Mukerji's opus was an integral part of a far-flung intellectual effort in the early twentieth century that seriously studied **Indian civilization and drew upon it for inspiration and direction.** Those involved included such figures as T. S. Eliot, Theodore Dreiser, Eugene O'Neill, Lewis Mumford, Luther Burbank and A. J. Liebling.

The book won high critical acclaim: Saturday Evening Post reviewed it as "the most important and inspiring book that has appeared in America since the war." **Its theme is the contrast between Hinduism's pervasive spirituality and tolerance and the Western world's materialism and religious dogmas.** Mukerji proposes that the West should learn "repose and meditation" from India, and India should learn the value of "activity and science" from the West. In Caste and Outcast, Mukerji depicts India as a tolerant Hindu civilization.

He illustrates **Hinduism's tolerance** with numerous narratives. An example: As a child, Mukerji brings home a picture of Christ given to him by his Christian teacher in the missionary school with the admonition to get rid of false Hindu gods and instead worship

the only true god, Christ. Mukerji's mother places the picture of Christ next to Vishnu's and says, "God is one. We have given him many names. Why should we quarrel about names?" She burns incense and meditates before the images of Christ and Vishnu."

He talks about the role of **Art in Hinduism**. "According to the **Shilpa Sastras**, in which the symbolic art of India has been thoroughly explained, certain rules have been laid down for the guidance of artists. One of these is that the novice should not be taught the technique for the asking. He must meditate, and find within himself a vision that clamors for expression, and only then may his masters instruct him in technique.

In India, all our art is ritualistic, especially the art of the temples and the caves. When I went to the cave temples, to Elephanta or Ellora, I found mountains hollowed out, and temples built underneath them. The columns supporting the roof resembled elephant legs, and the ceilings and the walls were gorgeously decorated with the sculptured forms of human beings and of gods. About 200 B.C, or earlier, a groups of monks went to meditate under the rocks of Ajanta. In meditation they experienced ecstasy, and having experienced it, they carved it on the wall. The story of all the gods of India is carved on these walls, and the youngest of them all is Buddha. **Seven hundred years of Indian history is written out in these caves covering vastness with terrific forms.**

I shall never forget my first visit to Ellora, reached after two days tramp from the nearest town. **When the sages of southern India wanted to create an image of the universe, they went to Ellora. They worked for one hundred and fifty years and used up generations of artists. They carved a mountain into galleries, and as these rose higher and higher, they gradually attained the summit, and the whole mountain was covered as the Himalayas are covered with strange life."**

The "Outcast" in the title refers primarily to Mukerji's experience in America as a newly arrived, penniless Indian student at the University of California, Berkeley, where he suffered from racial discrimination - the **Indian students were routinely refused service in the campus restaurants.**

(source: **Caste and Outcast - By Dhan Gopal Mukerji** p. 110 -120). For more on Dhan Gopal Mukerji refer to **IndiaStar Review**).

287. **Haven O'More**, a scholar at the University of Chicago and author of several books, including **Butoh : Dance of the Dark Soul and Sacrificial Bone Inscriptions**, has written:

"Greater than any mountain, the Mahabharata sits supreme...."

(source: **Nostradamus and Beyond: Visions of Yuga-Sandhi - By N S Rajaram** p. 41).

288.**Yann Martel** (1963 -) a Canadian who won this year's Booker Prize for **Life of Pi** thinks:

"Hinduism -- is a very open religion. It can lend itself to so much,"

Martel claims he has always loved India. "India is all lives in one place, India is all emotions in one place. It's an extra - ordinary, dazzling place, it's all the wonder and horror of life."

According to him, India stokes the fires of creativity. "There are stories that can be told only in India. There are things that are possible in India that are not possible anywhere else." **"It's a country that dazzles me because it is all of life. I truly think that in some ways, India is the richest place on earth."**

(source: **India is the richest place on earth: Booker winner- sify.com**).

289. **Sir Henry James Summer Maine** (1822-1888) His first work, **Ancient Law** was his most famous. He was (1862-69) legal member of the viceroy's council in India, where he planned the codification of Indian law.

This eminent Jurist has shown that the **old Brehon laws of Ireland are derived from Vedic laws of India.**

(source: **The Vision of India - By Sisirkumar Mitra** p. 208).

Sir Henry Maine, a former Vice Chancellor of Calcutta university and an advisor to the Viceroy echoed the sentiment of many Englishmen when he said: **"A nation has been born out of Sanskrit."**

(source: http://members.tripod.com/~ramkumaram/article3.html).

290. **E. M. Plunkett** (?) writes in his book **Ancient Calendars and Constellations**:

"The opinion of the Greek writers at the beginning of the Christian era may be quoted as showing the high estimation in which Indian astronomy was held. In the Life of Appollonius of Tyana, the Greek philosopher and astrologer, written by Philostratus about 210 CE, the wisdom and learning of Appollonius are set high above his contemporaries because he had studied astronomy and astrology with the sages of India."

(source: **Antiquity of Indian Astrology**).

291. **James Prinsep** (1799-1840) an employee of the East India Company, deciphered the Brahmi script in 1883 and author of **Essays on Indian antiquities, historic, numismatic, and palaeæographic of the late James Prinsep,** is recorded to have observed that:

"Greek was nothing more than Sanskrit turned topsy-turvy."

"The fact, however, that he (Pythagoras) derived his doctrines from an Indian source is very generally admitted. Under the name of Mythraic, the faith of Buddha had also a wide extension."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 280 - 281).

292. **William Enfield** (1741-1797) has written:

"We find that it (India) was visited for the purpose of acquiring knowledge by Pythagoras, Anaxarchus, Pyrrho, and others who afterwards became eminent philosophers in Greece."

(source: **History of Philosophy - By William Enfield** Vol. I p. 65).

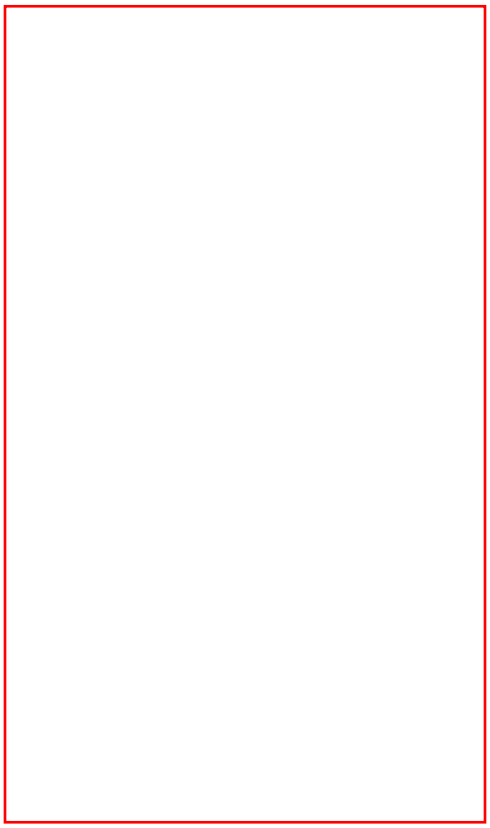
293. **Thomas Carlyle** (1795 - 1881) Scottish-born English historian and essayist who was leading figure in the Victorian era.

He was a historian, novelist and essayist who exerted a huge influence over the Victorian age. His major works are the satirical novel **Sartor Resartus** (1833-4) **The French Revolution** (1837) and the lecture-series **On Heroes, Hero-Worship and the Heroic in History** (1841).

The Vedantic note in Carlyle's writings is too well known to require mention. **And the Gita was the only book he chose to present to Ralph Waldo Emerson when the latter met him for the first time.**

(source: **The Vision of India - By Sisirkumar Mitra** p. 204).

Thomas Carlyle, in Sartor Resartus exclaims:



“Detached, separated! I say that there is no such separation, nothing hitherto was ever stranded, cast aside; ….The withered leaf is not dead and lost, there are Forces in it and around it, though working in inverse order, else how could it rot?…Rightly viewed no meanest object is insignificant: all objects are as windows, through which the philosophies eye look into infinitude itself.”

In the last lines he rises to passionate heights in his assertion of the same theory which fascinated the first Hindu thinkers.

(source: **Indian Philosophy and Modern Culture - By Paul Brunton** p. 33 - 35 London

Rider & Co. Paternoster House, E. C).

294. **Sardar Kavalam Madhava Panikkar** (1896-1963) Indian scholar, journalist, historian from Kerala, administrator, diplomat, Minister in Patiala Bikaner and Ambassador to China, Egypt and France. Author of several books, including **Asia and Western Dominance**, **India Through the ages** and **India and the Indian Ocean**. He has succinctly summed up the basic tenets of Hinduism, which show that the Divine for the Hindu is a family phenomenon and not a distant Truth. He says:

"The Hindu believe in one God, conceived as the universal soul or Paramatma, the absolute and eternal, beyond the categories of thought and expression, and embracing the entire universe. The text - there is only One, the learned speak of it in many ways. Though the Paramatma is impersonal or without qualities in itself in relation to the world expressed in terms of the relative, it is personal and man's mind conceives it as having qualities and form. This leads to the doctrine of Ishta Devata, or God, as conceived according to one's preference, as father, mother, guru, lover or even friend. The One Supreme thus assumes for the devotee the qualities and form in which he likes to worship. Many who worship the Supreme as Krishna think of him as a playful child, others as the great guru. In the same way, God is conceived by others as the Divine Mother. It is this doctrine of Ishta Devata, the freedom given to every one to worship God with the attributes of his own choice, never however forgetting that the Supreme has no qualities, that has led to the misconception that Hinduism is polytheistic. In a sense, it is true that there can be as many forms of Godhead in Hinduism as there are believers, for each one can conceive God only as the limitations of his own mind permit him."

(source: **Hinduism: Its Contribution to Science and Civilization- By Prabhakar Machwe** p. 114-115).

295. **Joseph Needham** (1900-1995) is famous mainly for the formidable magnitude and scholarship of his work on science in China. He impressed by the achievements of India in the field of knowledge and learning.

He comments on the Indian fascination with perpetual motion, 'to seek the ultimate origin or predisposition of the Indian conviction in the profoundly Hindu world view of endless cyclical change, kalpa and mahakalpas succeeding one another in self-sufficient and unwearying round. For Hindus as well as Taoists, the universe itself was a perpetual motion machine."

(source: **The Speaking Tree: A Study of Indian Culture and Society - By Richard Lannoy** p. 292).

In his lecture to the students of Cambridge University in 1963 he gave **full compliments to India's intellectual heritage.** He said, 'it is good to remember, therefore, that our own pious founders were not the only men, and that Christendom was not the only culture, to set on foot great and noble institutions of learning where successive generations of

students assembled to get the benefits of education and research. When the men of Alexander the Great came to Taxila in India in the fourth century BC they found a university the like of which had not then been seen in Greece… and was still existing when the Chinese pilgrim Fa-Hsien went there about AD 400.

(source: **infinityfoundation.com**).

"....Indian culture in all probability excelled in systematic thought about Nature (as for example in the **Samkhya atomic theories** of Kshana, bhutadim paramanu,etc.), including also biological speculations...When the balance comes to be made up, it will be found I believe, that Indian scientific history holds as many brilliant surprises....."

(source: **Homo Faber: Technology and Culture in India, China and the West 1500-1972 - by Claude Alphonso Alvares** p. 69 - 70).

296. **Stephen Knapp (Sri Nandanandana Dasa)** (?) American born author of several books including **The Secret Teachings of the Vedas : The Eastern Answers to the Mysteries of Life** and **Proof of Vedic Culture's Global Existence**.

He has observed the following about the **total freedom** in Hinduism:

"One of the **unique things about Vedic philosophy** is that within the many texts it contains, it deals with all varieties of viewpoints, from impersonalistic atheism, outright materialism, to loving devotion to God. And you have room to discover and realize the knowledge at your own rate, whether it be many months, many years, or even lifetimes. In other words, you may at first be an impersonalist persuasion and believe that the Supreme is only a great unembodied force. Or you might believe that God is a person. Or you may worship Durga, Ganesh, Shiva, Vishnu or Krishna, and still be considered on the Vedic path, though on different parts of the path. **But this is the sort of freedom and opportunity you have in the Vedic philosophy for your growth and development.** However, we find that in other religions, such as Christianity and Islam, if you question or doubt the local scriptures or authorities, or argue different points of view, or look for answers from another religion, your faith will be questioned, you may be called a heretic, and you may even be excommunicated from the Church, which is supposed to equate with eternal damnation. **This is obviously a very closed minded discipline to work in compared to the freedom of Vedic system. After all, what kind of God would make a system in which you have only one life to live and only one chance to discover how to attain Him, and then follow all the scriptural demands and requirements or face eternal damnation?**

"In fact, history shows that the three traditions of Judaism, Christianity, and Islam have, in their monotheistic theology developed patterns and traits of prejudice, intolerance, violence and war against all other religions and cultures. In fact, the history of these three religions show that they have spread primarily because of political intolerance for other

religions, militant zeal, and through fear of persecution, rather than by spiritual purity. **Hinduism, on the other hand, has not spread on the basis of fear, whether that fear be of political persecution or fear of a wrathful God. "**

"The Vedic philosophy contains the oldest spiritual texts of any religion in the world, and its more advanced concepts can be difficult for event the greatest scholars of the West to fathom."

(source: **The Universal Path to Enlightenment - By Stephen Kanpp** preface vi-viii and 4).

"The Vedas are not new to the Western world. There have been seekers, writers, poets, philosophers, and people of all levels who have appreciated the depth, inspiration, and insight of Vedic thought for many years."

(source: **The Secret Teachings of the Vedas - By Stephen Knapp** p. 31 and http://www.stephen-knapp.com/).

297. **Shri Jagmohan** (?) Union Minister of Tourism and Culture of India has recently observed:

"The hallmark of India has been the power of its mind. It was this power of mind which found expression in its pre-eminent philosophy, religion, culture and way of life.

One of the finest pieces of evidence which shows how powerful and insightful was once the Indian mind was its clear and correct understanding of the pattern of human existence on this planet and beyond. It perceived the “non-dual reality” that lies behind the smoke-screen of “surface duality” and realized that the universe was an organic web in which every item of life and nature was inextricably enmeshed with every other item. It also understood that this web was permeated with a cosmic force of which man and nature are the constituents as well as the contributors.

This deep perception, this great realization and **this subtle understanding of the Indian mind so impressed the renowned American poet and philosopher, Emerson, that he wrote a beautiful poem, titled “Brahma”, in which he gave expression to the concept of non-duality. Clearly, what the Indian mind discovered, centuries earlier, by virtue of its perceptive power and its higher level of consciousness, was discovered by the modern science only recently.** The profundity of the concepts of the universe being an organic web, as evolved by the Indian mind, in the heydays of its power, can best be brought

The Indian mind was the earliest to grasp the significance of maintaining the ecological balance. From time immemorial, our sages and saints have been propagating: “The Earth is our Mother and we are its Children.” One of the earliest **Vedic hymns**, composed over 4,000 years ago, gave the message of what is now termed as sustainable development: “Whatever I dig of you, O Earth,\ May you of that have quick replenishment!\ O Purifying One, may my thrust never\ Reach right unto your vital points, your heart!”

(source: **Power of the Indian mind: our heritage & asset - by Jagmohan** - tribuneindia.com - editorial - Sunday February 23 2003).

298. **L S S O'Malley** (?) author of Popular Hinduism writes about Hindu Literature as giving help to a sense of moral value and to maintain a healthy ethical standard. The two great epics, the Mahabharata and Ramayana, are a means of moral education for millions, teaching moral lessons in concrete terms and illustrating in the lives of heroes and heroines such virtues as truth, love, fidelity, courage and calm resignation.

"Besides giving examples of noble lives, the literature of the Hindus is full of lines announcing moral truths and inculcating virtue. In the **Ramayana** Rama, who is himself a pattern of loyal truthfulness, declares: "Truth is lord in the world; virtue always rests on truth.

The **Mahabharata** has been described as an encyclopedia of moral teaching, the nature of which may perhaps be judged from a few extracts. "The sum of true righteousness is to treat others as you yourself would be treated. Do nothing to your neighbor that you would not have your neighbor do to you hereafter." "It is the constant duty of the good to injure no one by thought, word or deed, to give to others and to be kind to all." "High minded men delight in doing good without thought of their own interest. when they confer a benefit on others, they do not count on favors in return." "Fasts, ablutions and austerities are all in vain unless the soul is pure." "Overcome the wicked by goodness."

' The complexity of Hinduism is so great, the forms which it assumes so protean, that it defies precise definition. It is a composite religion made up of many conflicting elements.... **It allows the greatest possible freedom of thought as apart from practice,** as is admitted by Hindu scholars."

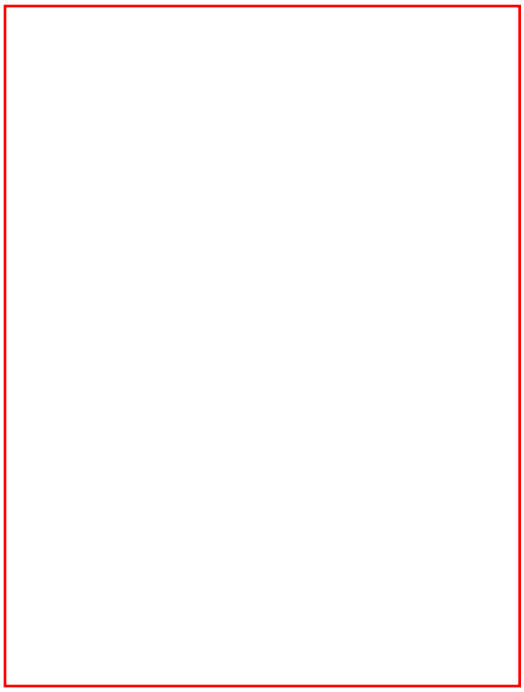
Hinduism has a highly spiritual side and contains many sublime conceptions."

(source: **Popular Hinduism - L S S O'Malley** p. 81- 86).

299. **Sir James Mackintosh** (1765-1832) British writer and Philosopher. He was trained as a physician, but after settling in London he became a writer and lawyer. He served as recorder of Bombay (1804-6) and judge in Bombay vice-admiralty court (1806-12). He called:

"**the theory (propounded by Vedanta) refined, abstruse, ingenious and beautiful.**"

(source: **Hindu Superiority - By Har Bilas Sarda** p. 297).



300. **Gustav Holst** (1874 - 1934) composer of **S¯avitri ; The dream-city**, **Choral hymns from the Rig Veda** and **S¯avitri; an episode from the Mah¯abharata, Op. 25** He was Vaughan Williams' greatest friends. Despite his German name, Holst was born in Cheltenham in 1874. Holst's music as exploring 'mystical regions'

Conventional religion did not interest Holst, and he felt himself drawn towards Hinduism. He believed in the concept of Dharma and the idea of life after death, and this eastern influence also led to his love of astrology. Holst's beliefs are revealed in a letter to a friend : -

'…everything in this world – is just one big miracle. Or rather, the universe itself is one.'

He conceived as well a passion for Wagner, whose style looms large in Hoist's apprentice

works, and an interest in Hindu philosophy and literature. The most notable of many works springing from Holst's preoccupation with Hinduism was the chamber opera **Savitri** dating from 1908, based on an episode from the epic poem **Mahabharata**: its economy and intensity are exemplified in the arresting and dramatic opening, where Death sings, offstage and unaccompanied.

This English composer composed operas about **Sita** and **Savitri** and other works based on Hindu themes. **It was in 1895 that Holst first became interested in Hindu philosophy and Sanskrit literature.** His immediate impulse was to set some hymns from the **Rig Veda,** the most important of the Hindu scriptures, to music. Finding the English translations he discovered were hopelessly stilted, Holst decided to learn Sanskrit so that he could translate the words to his own satisfaction. in doing so, he opened an entirely new world for himself.

Holst began work in an opera, Sita, in 1899. It is based in the Hindu epic **Ramayana.** He worked on it, on and off, until 1906. Although it was never performed in his lifetime, he learned a great deal from it . In 1903 he also wrote a symphonic poem titled Indra, which was a vivid portrait of the god, Indra, and his battle with the drought.

At home in England again, a reinvigorated Holst began working on another Indian opera which he called, Savitri. This was a much smaller work only lasting a little over thirty minutes. The music was written for three soloists, a small hidden chorus, and a chamber orchestra. During this time, Gustav was at the height of his interest in setting Sanskrit texts. From 1908 to 1912, he wrote four sets of hymns from the Rig Veda, the Vedic Hymns for voice and piano, and the large scale choral work called The Cloud Messenger.

(source: http://hem.passagen.se/alkerstj/worldofclassicalmusic/early20th/gustav_holst.html and http://wso.williams.edu/~ktaylor/gholst/). For more refer to chapter on **Hindu Music**).

Updated - December 19, 2003

It is clear that the motives of Western scholarship in pursuing Indology were far from altruistic. Motivated western scholarship in India's religious, cultural and historical spheres has a checkered history. The pioneers in this field have been western Christian missionaries. It was Pope Honorius IV (1286-87 A.D.) who first encouraged the study of oriental languages as an aid to missionary work. Soon after, the Ecumenical Council of Vienna (1311-12 A.D.) decided that "the Holy Church should have an abundant number of Catholics well versed in the languages, especially in those of the infidels, so as to be able to instruct them in the sacred doctrine." In 1870, The First Vatican Council, Hindu beliefs were specifically selected for condemnation in the "five anathemas against pantheism" according to Jesuit John A. Hardon in the Church-authorized book, **The Catholic Catechism.**

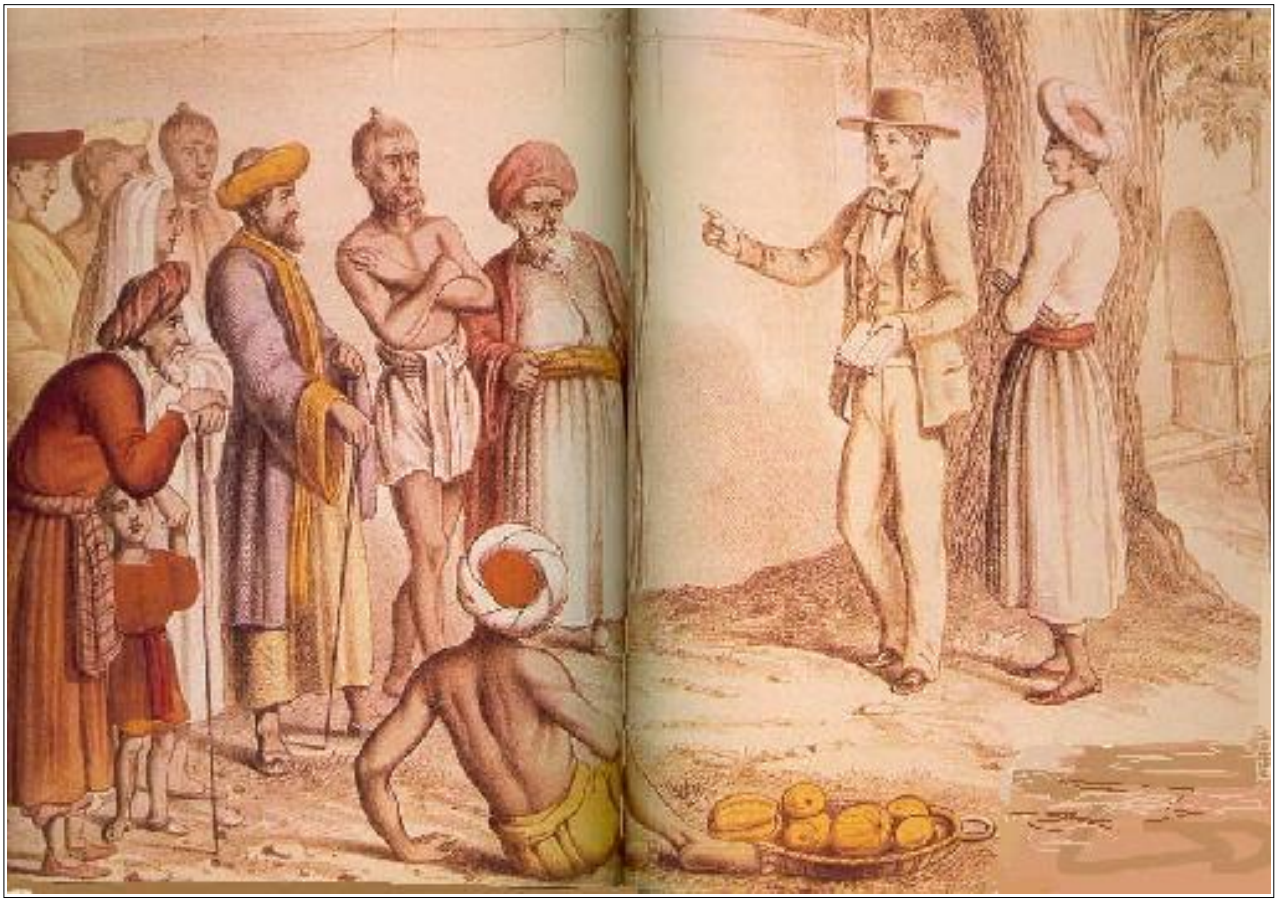
History of Indology:

The first Westerners to investigate the Vedic literatures were the British in the last half of the eighteenth century. It was the British Sanskritists and educators in India, during the 1700 and 1800's, who **first portrayed Vedic literature and culture as something barbaric, inferior, and recent. This cultural prejudice** was the result of deliberate undermining with the disguised intention of asserting the superiority of their own Christian-based values and outlook, as well as the perpetuation of colonial rule. India was the centerpiece of Britain's imperialistic exploits. **And many of the notable professors at the time had the audacity to consider themselves to be better authorities on their questionable translations of the Vedas then the Indian scholars.** Western Indology itself, has its roots in European colonialism and Christian missionary propaganda.

Pope Honorius IV encouraged the study of oriental languages as an aid to missionary work.

It was Indologist **W.W. Hunter** who said: **"Scholarship is warmed with the holy flame of Christian zeal."**



On November 7th, 1919, "The Daily Telegraph (London), wrote: "There is no Civilization known to the world except that of Christianity." All then who are not Christians are uncivilized." **Cardinal Bourne**, speaking about this time at Waterford, said:

" When you come to nations where Christianity had not penetrated, there was no civilization in our sense of the word except fragments which they had picked up from the Christian Civilized Nations."

(source: **Is India Civilized: Essays on Indian Culture - By Sir John Woodroffe** p.28).

Catholic Bishop of Plymouth wrote of the books "dignified" by the Sanskritists under the name "Sacred Books of the East" as being **"gibberish".**

At first the British government was careful not to force any change in religion upon the Indian people. This policy seemed judicious for ruling the several hundred million Indian citizens without precipitating rebellion. It can be easily summed up in the words of a tea-dealer **Mr. Twinning,** "As long as we continue to govern India in the mild, tolerant spirit of Christianity, we may govern it with ease; but if ever the fatal day should arrive, when religious innovation shall set her foot in that country, indignation will spread from one end of the Hindustan to the other, and the arms of fifty millions of people will drive us from that portion of the globe, with as much ease as the sand of the desert is scattered by the wind". Another point of view in support of that policy was by Montgomery. "Christianity had nothing to teach Hinduism, and no missionary ever made a really good Christian convert in India. He was more anxious to save the 30,000 of his country-men in India than to save the souls of all the Hindu by making them Christians at so dreadful a price".

A British Protestant missionary expounds on Christian doctrine to the natives.
(source: What Life Was Like In The Jewel In The Crouwn - Time Life).

Despite facing such resistance in the beginning, missionaries won the battle in 1813 resulting in full right to visit and preach their religion in India. The Christian population in India in 1893 was around 600,000 but today it has grown up to 24 million, an increase of 4000% in 106 years!

However, soon, "the company manifested a laudable zeal for extending, as far as its means went, the knowledge of the Gospel to the pagan tribes among whom its factories were placed." The British showed very little interest in Hindu scriptures in the beginning. Doubtless this was in part a reflection of the usual British attitude to India during most of the period of the Raj: that **India as a whole was a profitable nuisance.**

Lord Cornwallis, a contemporary of William Jones, made his famous and bold announcement in "Every native of Hindostan, I verily believe, is corrupt."

The missionaries in India were always supporters of colonialism; they encouraged it and their whole structure was based on **"the good of Western civilized world being brought to the Pagans."** The Christian missionaries had no sympathy for Hinduism which, in their view, was **"at best, work of human folly and at worst the outcome of a diabolic inspiration."**

(source: **Ancient India - By V. D. Mahajan** p. 1).

Preacher, **William Archer**, wrote in his book, **India and the Future**:

"The plain truth concerning the mass of the [Indian] population — and the poorer classes alone — is that they are not civilized people."

Reverend A. H. Bowman wrote that Hinduism was a:

"…great philosophy which lives on unchanged whilst other systems are dead, which as yet unsuplanted has its stronghold in Vedanta, the last and the most subtle and powerful foe of Christianity."

In the word of **Charles Grant** (1746-1823), **Chairman of the East India Company**:

"We cannot avoid recognizing in the people of Hindustan a race of men lamentably degenerate and base...governed by malevolent and licentious passions...and sunk in misery by their vices.."

Charles Grant, who exercised a tremendous influence in the Evangelical circles, published his Observations as early as 1797 in which he attacked almost every aspect of Indian society and religion, determined the "true place" of Indians "in the moral scale" by describing them as morally depraved, "lacking in truth, honesty and good faith"and "in every way different" from the British, enriched the ideological armoury of the Christian missionaries, and provided a justification as well as an agenda for the British rule.

(source: **Aryans and British India - By Thomas R. Trautmann** p.103).

In 1792, Charles Grant who for his over zeal for the conversion of the Hindus was known as the only Christian chairman of the East India Company wrote his infamous tract, Observations on the State among the Asiatic Subjects of Great Britain, particularly with respect to morals and means of improving them, written chiefly in the year 1792. In its pages, **Grant had advanced the theory that all problems of India and of the English of India could be reasonably traced and satisfactorily solved if the Hindus of India were converted to Christianity.**

Grant had been an active member of the **Clapham Sect** known also in the British Parliament by the name of **Evangelical Party** which had William Wilberforce as its leader.

Grant argued: "We proceed, the, to observe, that it is perfectly in the power of the country (England) by degrees, to impart to the Hindoos our language, afterwards, through that medium, to make them acquainted with our easy literary compositions, upon a variety of subjects; and, let not the idea hastily excite derision, progressively with the simple elements of our art, philosophy and (Christian dogma and tenets) religion. These acquisitions will silently undermine, and at length subvert the fabric of error (Hinduism); and all the objections that may be apprehended against such a change, are it is confidently believed, capable of solid answer."

(source: **The Hindu - By Krishna Vallabh Paliwal and Brahm Datt Bharti** p. 1-2).

"Aryan," a word that today evokes images of racial hatred and atrocity, was first used by Europeans to suggest bonds of kinship, as Thomas Trautmann shows in his far-reaching history of British Orientalism and the ethnology of India. When the historical relationship uniting Sanskrit with the languages of Europe was discovered, it seemed clear that Indians and Britons belonged to the same family. Thus the Indo-European or Aryan idea, based on the principle of linguistic kinship, dominated British ethnological inquiry. In the nineteenth century, however, an emergent biological "race science" attacked the authority of the Orientalists. **The spectacle of a dark- skinned people who were evidently civilized challenged Victorian ideas,** and race science responded to the enigma of India by redefining the Aryan concept in narrowly "white" racial terms. By the end of the nineteenth century, race science and Orientalism reached a deep and lasting consensus in regard to India, which Trautmann calls "the racial theory of Indian civilization," and which he undermines with his powerful analysis of colonial ethnology in India.)

As Thomas Trautmann puts it, " **Evangelical influence drove British policy down a path that tended to minimize and denigrate the accomplishments of Indian civilization and to position itself as the negation of the (earlier) British Indomania" that was nourished by belief in Indian wisdom."**

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 23-24).

The Evangelicals, horrified by the idea that Christians could take the idolatry and improprieties of a pagan culture seriously, seeing in India an unlimited field for missionary activity, and insisting that it was part of a Christian government's duty to promote this.

In 1790, **Dr. Claudius Bucchanan**, a missionary attached to the East India Company, arrived in Bengal. He was convinced that God had given the Company dominion over India for the specific purpose of India's christianization. "No Christian nation," he wrote, "ever possessed such an extensive field for the propagation of the Christian faith, as that afforded to us by our influence over the hundred million natives of Hindoostan. No other nation ever possessed such facilities for the extension the faith as we have in the government of a passive people, who yield submissively to our mild sway, reverence our principles, and acknowledge our dominion to be a blessing. Why should it be thought incredible that Providence hath been pleased, in a course of years to subjugate this Eastern empire to the most civilized nation in the world, for this very purpose."

His conviction was fully shared by **William Wilberfore** who proclaimed in the British Parliament in June 1813, "Our religion is sublime, pure and beneficent. Theirs is mean, licentious, and cruel."

(source: **History of Hindu-Christian Encounters - By Sita Ram Goel** South Asia Books July 1990 ISBN 9990049173 p.33).

Not long after his arrival, Claudius Bucchanan went further:

"Neither truth, nor honesty, honor, gratitude, nor charity, is to be found in the breast of a Hindoo." What a comment to make about a nation that gave the world the Vedas and the Upanishads, at a time when Europeans were still living in their caves!

Bucchanan traveled to Puri in Orissa and witnessed the annual *Ratha-yatra* (or as Bucchanan called it, 'The horrors of Juggernaut'). His description of Jagannatha – 'The Indian Moloch', has been recorded by the historian George Gogerly as- "…a frightful visage painted black, with a distended mouth of bloody horror." Perhaps, by seeing the face of Lord Jagannatha, the British hallucinated and saw a projection of their own international destiny of bloodshed and carnage. In any case, from the time the British observed the 'terrifying' sight of the Lord on **His gigantic chariot, the word 'juggernaut' entered the English language and became synonymous with any great force that crushes everything in its path.**

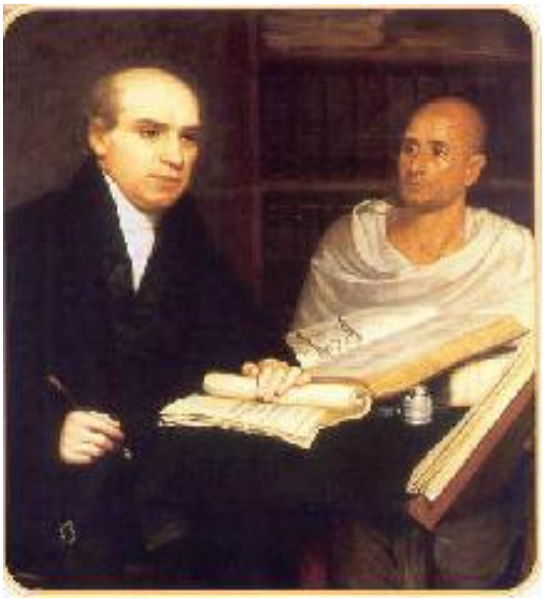
Gogerly went on to write –

"The whole history of this famous god (Krsna) is one of lust, robbery, deceit and murder…the history of the whole hierarchy of Hindooism is one of shameful iniquity, too vile to be described."

To most 18th century Englishmen, religion meant Christianity. Naturally racism played its part also. This attitude of Europeans toward Indians was due to a sense of superiority - a cherished conviction which was shared by every Englishman in India, from the highest to the lowest. Upon his arrival in 1810, the **Gov. General marquis of Hastings** wrote in his diary on October 2, 1813:

"the Hindoo appears a being merely limited to mere animal functions, and even in them indifferent.....with no higher intellect than a dog or an elephant or a monkey, might be supposed capable of attaining.."

(source: **The History and Culture of Indian People - By R. C. Majumdar** volume X, 2nd edition, Bombay, 1981, p. 338).



William Carey (1761-1834)

Without governmental sanction or license, the Christian evangelists came to India and proselytized to undermine the "superstitions of the country". The history of western (missionary) scholarship in Oriental Studies in India can be traced to William Carey, the pioneer of modern missionary enterprise in India. Carey was an English oriental scholar and founder of the Baptist Missionary Society. From 1801 onward, as Professor of Oriental Languages, he composed numerous philosophical works, consisting of 'grammars and dictionaries in the Mahratti, Sanskrit, Punjabi, Telugu, Bengali and Bhatanta dialects. From the Serampor press, there issued in his life time, over 200,000 Bibles and portions in nearly 40 different languages and dialects, Carey himself undertaking most of the literary work.' (Encyclopedia Britannica, 1950, Vol. 4, p. 860). Carey and his colleagues experimented with what came to be known as Church Sanskrit. **He wanted to train a group of 'Christian Pandits' who would probe "these mysterious sacred nothings" and expose them as worthless.** He was distressed that this "golden casket (of Sanskrit) exquisitely wrought" had remained "filled with nothing but pebbles and trash." He was determined to fill it with "riches - beyond all price", that is the doctrine of Christianity

(source: **Richard Fox Young, Resistant Hinduism,** Vienna, 1981, p. 34).

Carey a cobbler by profession, had published a book, **An Enquiry into the Obligations of Christians to use means for the Conversion of the Heathens**, in 1792 while he was still in England.

Baptist William Carey learned to speak and read classical Indian languages with the help of Pandit Mrityunjay.

In the 19th century, Christian theologians were highly critical of Hinduism. **William Archer** wrote in his book, India and the Future, "The plain truth concerning the mass of the [Indian] population — and the poorer classes alone — is that they are not civilized people." However, these uncivilized people proved unenthusiastic about missionary promises that conversion would mean prosperity, wealth and education. **Reverend A.H. Bowman** wrote that Hinduism was a "great philosophy

which lives on unchanged whilst other systems are dead, which as yet un supplanted has its stronghold in Vedanta, the last and the most subtle and powerful foe of Christianity."

Alexander Duff (1806-1878) a prominent missionary, founded the Scots College, in Calcutta, which he envisioned as a "headquarters for a great campaign against Hinduism." Duff sought to convert the natives by enrolling them in English-run schools and colleges, and he placed emphasis on learning Christianity through the English language. He wrote,

" While we rejoice that true literature and science are to be substituted in place of what is demonstrably false, we cannot but lament that no provision has been made for substituting the only true religion-Christianity - in place of the false religion which our literature and science will inevitably demolish… Of all the systems of false religion ever fabricated by the perverse ingenuity of fallen man, Hinduism is surely the most stupendous."

(source: **The History and Culture of Indian People - By R. C. Majumdar** volume X, 2nd edition, Bombay, 1981, p. 155).

Duff received remarkable success in his educational and missionary activities amongst the higher classes in Calcutta. The number of students in the mission schools was four times higher than that in government schools. It is an axiomatic truth that the aim of missionaries like Duff was not so much education than conversion. They were obliged to use the excuse of education in order to meet he needs of the converted population, and more importantly, to train up Indian assistants to help them in their proselytizing. Duff remained unsatisfied with converting Indians belonging to low-castes and orphans – his chosen target was the higher castes, specifically the brahmanas, in order to accelerate the demise of Hinduism.

"India was the chief seat of Satan's earthly dominion"

John Muir (1810-1882) had come to Calcutta in 1828 as a civil servant of the East India Company. He was, for some time, a student of William Carey. He published his first draft of his **Matapariksha** in 1839. It drew three rejoinders from Hindu pandits, Somnatha, whose real name was Subaji Bapu, a Maharastrian scholar, Harachandra Tarkapanchanana and Nilakanth Gore.

In his publication, Muir asserted that miracles mentioned in Hindu scriptures were false and 'merely ornamental in that religion instead of being at its very center as in Christianity. This way of arguing is pompously called Evidential Apologetics in Christian theology. At one point, however, Muir was deliberately dishonest. **He criticized the cosmography of the Puranas as erroneous. Surely he must have known what Galileo and Copernicus had done to the cosmography of the Bible and how they had suffered persecution at the hands of the Church.**

(source: **History of Hindu-Christian Encounters - By Sita Ram Goel** p. 78 . **The Shadow of the Cross - By Sisir Kumar Das** 1974 p. 51-78).

Sir Charles Trevelyan, an officer, with the East India Company asserted in a widely circulated tract:

"The multitudes who flock to our schools ... cannot return under the dominion of the Brahmins. The spell has been for ever broken. Hinduism is not a religion that will bear examination... It gives away at once before the light of European sciences."

"Educated in the same way, interested in the same objects, engaged in the same pursuits with ourselves, they become more English than Hindus...The young men brought up in our

seminaries, turn with contempt from the barbarous despotisms, under which their ancestors groaned....Instead of regarding us with dislike, they court our society...the summit of their ambition is, to resemble us."

(source: **Christianity's Scramble for India and The Failure of the Secularist Elite - By N S Rajaram** p. 70).

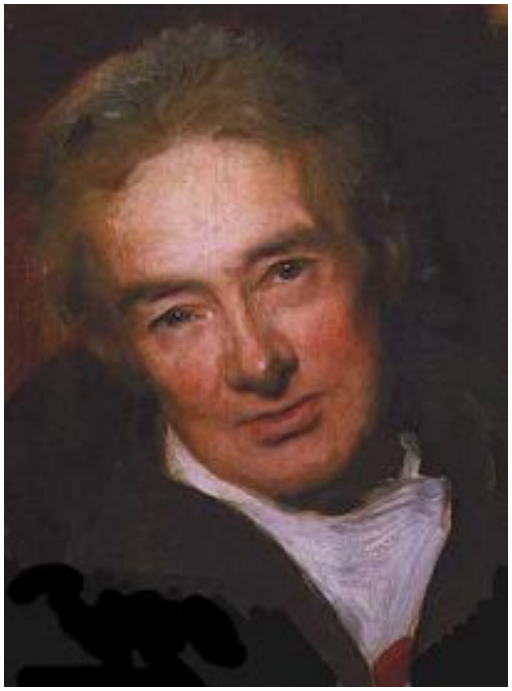
The Crown of Hinduism, by the Scottish missionary, **J N Farquhar**, who worked in India in the cause of his brand of Christianity during the period 1891 to 1923. What this book tries to project is that while there may well be some good points in Hinduism, ultimately the true salvation can only be achieved through Jesus Christ, who is the crown of Hinduism.

Richard Temple, another high officer, said in a 1883 speech to a London missionary society intended to generate donations to missions: " India presents the greatest of all fields of missionary exertion... India is a country which of all others we are bound to enlighten with external truth...But what is most important to you friends of missions, is this - that there is a large population of aborigines, a people who are outside caste....If they are attached, as they rapidly may be, to Christianity, they will form a nucleus round which British power and influence may gather. He addressed a mission in New York in the most explicit terms: "Thus India is like a mighty bastion which is being battered by heavy artillery. We have given blow after blow, and thud after thud, and the effect is not at first very remarkable; but at last with a crash the mighty structure will come toppling down, and it is our hope that someday the heathen religions of India will in like manner succumb."

According to **Kate Teltscher** in her book **India Inscribed: European and British Writing on India 1600-1800.** p. 94, 22

"One **Professor McKenzie**, of Bombay found the ethics of India defective, illogical and anti-social, lacking any philosophical foundation, nullified by abhorrent ideas of asceticism and ritual and altogether inferior to the 'higher spirituality' of Europe. He devoted most of his book '**Hindu Ethics**' to upholding this thesis and came to the conclusion that Vedic philosophical ideas, 'when logically applied leave no room for ethics'; and that they prevent the development of a strenuous moral life."

All efforts were made by the missionaries to portray Hinduism as backwards, illogical, debauched and perverse. As one preacher exclaimed,



'The curse of India is the Hindoo religion. More than two hundred million people believe a monkey mixture of mythology that is strangling the nation.' 'He who yearns for God in India soon loses his head as well as his heart.'

The missionaries opposed the government's efforts to take a neutral stand towards Indian culture and worked with more zeal for the complete conversion of the natives. Thus India became an arena for religious adventure.

"Hinduism was often perceived as the enemy to be conquered by Christian forces. Efforts were made to depict Hinduism as poetry, fiction or mythology. Hinduism was a manifest work of Satan, provides Christianity with devils to destroy; an element lacking in 18th century Europe with the decline in witch-craft prosecution. The devil is defeated through conversion. Proof of God's victory is provided by the accounts of multiple baptisms that regularly appear in the Lettres edifiantes. In one day, Father Bouchet baptizes 500 hundred converts. Such scenes, where a single missionary saves huge numbers of pagan souls from damnation, emphasize the thrilling drama of conversion. They present the reader with an exciting image of heroic enterprise and a flattering representation of Western influence over Indians. **Efforts were made to show Hinduism as strangely illogical and perverted. Thus, India was turned into an**

arena for religious adventure. In the words of Edward Said's Orientalism, produces an unshakeable assumption of European superiority, with the East always functioning as the West's negative foil."

(source: **India Inscribed: European and British Writing on India 1600-1800 - By Kate Teltscher** p. 94, 22).

William Wilberforce (1759-1833) British politician declared: "The people of India are today enslaved by, they today groan under the yoke of "a monstrous and absurd superstitions of their native faith." The evils of that faith, he noted were "inveterate", not jut long-lasting but inherent. He talked of the "dark and degrading superstitions," the inhuman cruelties of Hinduism, of its "mean, licentious, and cruel" nature. On the testimony of many like-minded persons, Wilberforce said **Indians to be mean and petty, to be liars and thieves, widow-burners, and murderers of infants.**

In 1813, Wilbeforce spoke to the **House of Commons on behalf of the missionaries toiling in India**: "On the principle, we might have anticipated the moral condition of the Hindoos, by ascertaining the character of their deities....**Their divinities are absolute monsters of lust, injustice, wickedness, and cruelty. In short, their religious system is one grand abomination."**

He maintained, quoting the Directors of the East India Company, that these traits of character flowed directly from “the nature of their superstitions and the degraded character of their deities, as well as the almost entire want of moral instructions.” Further, “I scarcely need to remark that in its superstitious rites, there has commonly been found to be a natural alliance between obscenity and cruelty, and of the Hindoo superstitions it may be truly affirmed, that they are scarcely less bloody that lascivious” .

Wilberforce went on to say that “we might have anticipated the moral condition of the Hindoos, by ascertaining the character of their deities.” The perpetrator of a crime “found precedent in one of its national gods … in the adventures of the countless rabble of Hindoo deities, you may find every possible variety of every practicable crime. … Every vice has its patron … their divinities are absolute monsters of lust, injustice, wickedness and cruelty. In short, their religious system is one grand abomination.”

Some years later, in 1853, **Reverend J. Tucker** addressed the Select Committee on Indian Territories, citing **the progress made in native conversions through missionary schools,** and through “cordial support and assistance to missionary proceedings” of civil and military government individuals. He was particularly proud to present a letter written by the **Tinnevelly Congregation of Indian Protestant Christians.** It read in part:

"To Her Most Gracious Majesty Victoria,
By the Grace of God,
Queen by the Grace of God,
Queen of Great Britain and Defender of the Faith

We, **native Christians** … have embraced the Christian religion in number of 40,000 persons, presume to approach the feet of your Gracious Majesty, with all humility and reverence, presenting this humble memorial.

We desire to acknowledge in your Majesty's presence that we, your humble subjects, and all our fellow-countrymen, placed by the providence of Almighty God under the just and merciful rule of the English Government, enjoy a happiness unknown to our forefathers in the inestimable blessings of peace. … by the gratitude we feel, we humbly acknowledge it to be our delightful duty, heartily and incessantly, to beseech Almighty God, the King of Kings, to "endure our Gracious Queen plenteously with heavenly gifts, to grant her health and wealth long to live, to strengthen her … and finally, after this life, attain everlasting joy and felicity."

Incalculable are the benefits that have accrued … we who are Christians are bound to be especially grateful for having received … the privilege of ourselves learning the true religion and its sacred doctrines, and of securing it for our sons and daughters … (emphasis added).

… Our countrymen (seeing) the vast number of boys and girls, children of Christian, Heathen, Mohammedan and Roman-catholic parents, learning gratuitously both in Tamul and English, at the expense of English missions, repeat their ancient proverbs, and say, "Instruction is indeed the opening of sightless eyeballs"…

***

Another leading missionary, a Baptist, **William Carey** (1761-1834), smuggled himself into India and propagandized **against the Vedic culture** so zealously that the British government in Bengal curbed him as a political danger. The missionaries actively denounced the Vedic literatures as "absurdities" meant for the "amusement of children". How close was the nexus between the 'neutral' British rulers and Christian missionaries? "It is not only our duty," declared **Lord Palmerston, the Prime Minister**, "but in our own interest to promote the diffusion of Christianity as far as possible throughout the length and breadth of India."

"Every additional Christian," declared **Lord Halifax, the Secretary of the State**, "is an additional bond of union with this country and an additional source of strength to the Empire." "They are doing for India," as **Lord Reay** introducing a deputation of Indian Christians to the Prince of Wales, said "more than all those civilians, soldiers, judges and governors whom your Highness has met;" "They are the most potent force in India," declared **Sir MacWorth Young**.

And so the effort to civilize India, to secure it for the British Empire, to gather it up as the rich harvest for the Church proceeded as a joint endeavor: the civil servants helped by many devices, including among these their "religious neutrality": :the soldiers of the Cross" reinforced each other's efforts; and the scholars helped working to "undermine" and "encircle" and thereby prepare the way for "the **soldiers of the Cross**" to finally storm" the strong fortress of Brahminism".

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p.109-132).

In fact, the façade of neutrality was a convenient strategy. As **Reverend Tucker** told the Select Committee on Indian Territories, in 1853, "I should be sorry to see the Government departing from its present position of strict neutrality. If the Government openly announces Christianity to be a part of the education it imparts, Christianity will immediately lose the high vantage point it now occupies." (*ibid, p. 120*).

Sir William Muir (1819- 1905) a representative of the mighty British Empire, wrote various articles in the **Calcutta Review**, put it bluntly: "From all the varieties of heathen religions Christianity has nothing to fear for they are but passive exhibitions of gross darkness which must vanish before the light of the Gospel."

In 1845 he said, "**the Hindu, sickened by idolatry** (Islam's and Christianity's common name for Hinduism), turns to the other two religions which surround him, and inquires into their respective claims.. we must be ready at hand to meet him with the proofs of our most holy faith...the comparison of the two religions, Christianity and Islam, cannot fail to be of essential service, under God's blessings, to lead to practical results."

(source: **Hindu View of Christianity and Islam - By Ram Swarup** Publisher: Voice of India p. 16-55).

While in India Baptist Christian missionaries used their time in collecting materials derogatory to Hinduism. **Dr. R. C. Majumdar**, author of **The History and Culture of the Indian People**, writes:

" A number of people including William Wilberforce, sought to refute these arguments by painting in black colors the horrible customs of the Hindus such as sati, infanticide, throwing the children into the Ganga, religious suicides, and above all idolatry. Vivid descriptions were given of the massacre of the innocent resulting from the car procession of Lord Jagannath at Puri, and the Baptists put down the number of annual victims at not less than 120,000. When challenged they had to admit that they did not actually count the dead bodies but arrived at the figure by an ingenious calculation."

(source: **The History and Culture of Indian People - By R. C. Majumdar** volume X, 2nd edition, Bombay, 1981, p. 152-153).

Bishop Heber's (1783- 1826) **Hymn**

From Greenland's icy mountains, from India's coral strand;
Where Afric's sunny fountains roll down their golden sand:
From many an ancient river, from many a palmy plain,
They call us to deliver their land from error's chain.

What though the spicy breezes blow soft o'er Ceylon's isle;
Though every prospect pleases, and only man is vile?
In vain with lavish kindness the gifts of God are strown;
The heathen in his blindness bows down to wood and stone.

Shall we, whose souls are lighted with wisdom from on high,
Shall we to those benighted the lamp of life deny?
Salvation! O salvation! The joyful sound proclaim,
Till earth's remotest nation has learned Messiah's Name.

Waft, waft, ye winds, His story, and you, ye waters, roll
Till, like a sea of glory, it spreads from pole to pole:
Till o'er our ransomed nature the Lamb for sinners slain,
Redeemer, King, Creator, in bliss returns to reign.

The hymn was published in the *Evangelical Magazine* in July 1821. It is considered one of the finest missionary hymns in the English language. It is one of the many specimens of

contempt which Christians have shown for Hindus. The hymn was included in the official hymns of the Anglican Church in England and elsewhere.

Gandhi had chided the Christian missionaries for misrepresenting Hinduism.

"You, the missionaries," he said, "come to India thinking that you come to a land of heathens, of idolators, of men who do not know God. One of the greatest Christian divines, **Bishop Reginald Heber, wrote the two lines which have always left a sting with me**: 'Where every prospect pleases, and man alone is vile.' I wish he had not written them. My own experience in my travels through out India has been to the contrary. I have gone from one end of the country to the other, without any prejudice, in a relentless search for truth, and I am not able to say that here in this fair land, watered by the great Ganga, the Brahmaputra, and the Jamuna, man is vile. He is not vile. He is as much a seeker after truth as you and I are, possibly more so...."

He further commented: "I have read several missionary publications and they are able to see only the dark side and paint it darker still. The famous hymn of Bishop Heber's - 'Greenland's icy mountains' - **is a clear libel on Indian humanity.** I was favored with some literature even in the Yervada prison by well-meaning missionaries, which seemed to be written as if merely to belittle Hinduism."

(source: **The Collected Works of Mahatma Gandhi** Volume 27 New Delhi 1968 p.214- 436).

Christian missionaries were attacking the Puranas for containing passages which they considered obscene. **Swami Vivekananda** had studied the Bible and knew that it contained a lot which was far worse. "The Chinese,' he wrote, "are the disciples of Confucius, and the Buddha, and their morality is quite strict and refined. The Christian missionaries translated the Bible into Chinese tongue. Now in the Bible there are some passages so obscene as to put to shame some of the Puranas of the Hindus. Reading those indecorous passages, the Chinamen were so exasperated against Christianity that they made a point of never allowing the Bible to be circulated in their country...They raised a cry, saying: "Oh, horror! This religion has come to us to ruin our young boys, by giving them the Bible to read...."

(source: **The Complete Works of Swami Vivekananda** Calcutta, 1985 Volume V. p. 503).

The First Scholars:

Such are the settings in which the first Indologists first appeared.

Sir William Jones, the first British to master Sanskrit and study the Vedas, drew fire from the eminent British historian **James Mill,** author of **History of India**, for his "hypothesis of a high state of civilization". Typically, Mill believed that the:

"The people of India were never advanced and that they had no right to a claim a glorious past. And that it was a historical fantasy...."

James Mill, father of John Stuart, had published his history of India in 1818. Though Mill spoke no Indian languages, indeed had never been to India, his damning indictment of Indian society and religion had become the standard work -

required reading for all who would serve in India.

At any rate, by translating the Vedas for the Western reader and thus evincing the ancient Vedic genius, the scholars increased India's prestige in the West.

Sir William Jones (1746-1794), **Charles Wilkins** (1749-1836) and **Thomas Colebrooke** (1765-1837) are considered the fathers of Indology. Sir Jones was appointed a judge of the Supreme Court in Calcutta. He translated a number of Sanskrit works into English and his works into the investigations into languages mark him as one of the most brilliant minds of the 18th century. Yet he was not prone to invective against another's religion, particularly the Vedas, which he admired. He described the Bhagavata Purana as “a motley story”. He speculated that the Bhagavad Gita came from the Christian Gospels, which had been brought to India and "repeated to the Hindus, who ingrafted them on the old fable of Kesava, (a name for Krishna). Of course, this theory has been discredited since records of Krishna worship predates Christ by centuries.

According to **Thomas R. Trautmann**, author of **Aryans and British India**, **"neither Jones nor any of the British Orientalists had any doubt as to the present superiority of European civilization to that of India".**

" The Aryan idea was a unifying idea in the initial phase of British expansion it ceased to be so later when the British stranglehold on India tended to be strong and the emphasis on affinities between Britons and Indians would more hinder than facilitate the consolidation of the British power in India. The heart of the matter, therefore, remains that British imperialism spoke in different voices at different times, though its goal was always the same, i.e., to devise new mechanisms of control and administration of the Indian colony in consonance with the policies of the home government. In 1861 John Crawfurd went to the extent of saying : "I am not prepared to admit the claim of a common descent between Hindu, Greek, and Teuton, for that would amount to allowing that there was no difference in the faculties of the people that produced Homer and Shakespeare and those that have produced nothing better than the authors of the Mahabharat and Ramayana; no difference between the home-keeping **Hindus who never made a foreign conquest of any kind, and the nations who discovered, conquered, and peopled a new world"(p.181). His contempt for Indians and their civilisation was accompanied by his belief in "the dangers of intermarriage between races widely apart on the scale of civilization"(p.181). For him, Trautmann points out, "philology is bad for racial hygiene"(p.181)."**

(source: **Aryans and British India - By Thomas R. Trautmann** http://www.indolink.com/Book/aryans.html).

H. H. Wilson (1786-1860), described as the greatest Sanskrit scholar of his time", became the Boden Professor of Sanskrit at Oxford in 1833. Wilson felt that the Christian culture should simply replace the Vedic culture, and he believed that full knowledge of the Indian tradition would help effect that conversion. He felt hopeful that by inspired, diligent effort the "specious" system of Vedic thought would be "shown to be fallacious and false by the Ithuriel spear of Christian truth. He also was ready to award a prize of two hundred pounds.. "for the best refutation of the Hindu religious system."

The famous French Missionary, **Abbé Dubois,** wrote a whole chapter on Hindu temples in his book, "Hindu Manners, Customs and Ceremonies." Coming to Hindu idols he says "Hindu imagination is such that it cannot be excited except by what is monstrous and extravagant" (p.607). Abbé Dubois' book has run through a dozen of reprints in England and remains the best primer for the average western traveler to India to this day.

Abbé Dubois influenced **James Stuart Mill's** malicious **History of British India** which was written in six volumes in 1818. The volumes were compulsory reading for candidates wishing to

appear for the I.C.S. exams. Mill's history has in fact mesmerized the best Hindu minds.

To illustrate, James Mill's tripartite periodization of Indian history into 'Hindu', 'Muslim' and 'British' epitomized in his infamous **The History of British India** **was not an innocent exercise.** It is well known that throughout Indian history the frontiers of the religion(s) of ruler(s) did not overlap with those of the people. If at all the defining criterion of Mill was the ruler's religion, the logic of such a formulation demanded that the third period should have been designated as 'Christian'. It is now recognized that **Mill's periodization stemmed from the imperialist objective of fomenting a religious divide in India** (no wonder Mill's History was one of the prescribed texts at the Haileybury College, where the prospective English officers received their training before coming to India).

(source: **Aesthetic deceptions - By K. M. Shrimali - hindustantimes.com** The writer is Professor of History, Delhi University).

Mill comments on the Hindu's pretensions to a remote antiquity as an example of the boastful and turgid vanity of the oriental nations...

He has nothing positive to comment on the Hindu manners. 'the vices of falsehood, indeed, they carry to a height almost unexampled among the other races of men. "the languid and slothful habits of the Hindus."

The level of Hindu fine arts was lower than " the height of even of the Egyptians, much less of the Greeks and Romans. " This is the first major racist elaboration of the ancient Indian history and culture in Western Indology, and all that we note here is that Mill's contempt for ancient India extends to the other Asian civilizations as well as that much of Mill's framework has survived in the colonial and post-colonial Indology.

(source: **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarti** p. 92-94).

Another renowned pioneer Indologist was **Fredrich Max Muller** (1823-1900). He is best known for his series Sacred Books of the East. Muller speaking at the Christians Missions in **Westminster Abbey in 1873** he **declared that Hinduism was dying or dead** because it belonged to a stratum of thought which was long buried beneath the foot of modern man. He continued: " The worship of Shiva, Vishnu, and other popular deities was of the same and in many cases of a more degraded and savage character than the worship of Jupiter, Apollo or Minerva. 'A religion', he said ' may linger on for a long time, it may be accepted my large masses of the people, because it is there, and there is nothing better. But when a religion has ceased to produce defenders of the faith, prophets, champions, martyrs, it has ceased to live, in the true sense of the word; and in that sense the old orthodox Brahmanism has ceased to live for more than a thousand years."

(source: **Hinduism: a religion to live by** **- Nirad C. Chaudhari** Oxford University Press February 1997 ISBN 0195640136 p. 116 -117).

In 1876, Muller wrote to a friend, **" India is much riper for Christianity than Rome or Greece were at the time of Saint Paul."**

(source: **Vedic Literature: The Tradition Speaks for Itself - By Satsvarupa dasa Goswami** Bhaktivedanta Book Trust ISBN 0912776889 June 1985 p. 178).

" The rotten tree for some time had artificial supports ...but if the English man comes to see that the tree must fall...he will mind no sacrifice either of blood or of land...I would like to lay down my life, or at least lend my hand to bring about this struggle"

(source: **Life and letters of the Rt. Hon. Fredrich Max Muller,** Vol. I, pp. 190-92.).

" I do not claim for the ancient Indian literature any more that I should willingly concede to the fables and traditions and songs of savage nations . I simply say that in the Veda we have a nearer approach to a beginning, and an intelligent beginning, than in the wild invocations of the Hottentotes and Bushmen, "

(source: **The Hindu world, an encyclopedic survey of Hinduism' - By George Benjamin Walker**, New York: Praeger, 1968. 2v.)

Max Muller wrote: **"This edition of mine and the translation of the Veda will hereafter tell to a great extent... the fate of India, and on the growth of millions of souls in that country. It is the root of their religion, and to show them what the root is, I feel sure, the only way of uprooting all that has sprung from it during the last 3000 years."**

(source: **The Life and Letters of the Rt. Hon. Fredrich Max Muller,** edited by his wife. Longmans, London, 1902, Volume I, p. 328) **Vedic Aryans and the Origins of Civilization - By N. S. Rajaram & David Frawley** p. 10).

" The rotten tree for some time had artificial supports...but if the English man comes to see that the tree must fall...he will mind no sacrifice either of blood or of land...I would like to lay down my life, or at least lend my hand to bring about this struggle"

(source: **The Life and Letters of the Rt. Hon. Fredrich Max Muller,** edited by his wife. Longmans, London, 1902, Volume I, pp. 190-92).

In another letter, Mueller wrote to his son:

"Would you say that any one sacred book is superior to all others in the world?...I say the New Testament, after that, I should place the Koran, which in its moral teachings, is hardly more than a later edition of the New Testament. Then would follow according to my opinion the Old Testament, the Southern Buddhist Tripitaka, the Tao-te-king of Lao-tze, the Kings of Confucius, the Veda and the Avesta."

(source: **Life and letters of Max Mueller** Vol. II, Ch. XXXII., page 339).

In an audacious letter to **N. K. Majumdar**, Mueller wrote:

'Tell me some of your chief difficulties that prevent you and your countrymen from openly following Christ, and when I write to you I shall do my best to explain how I and many who agree with me have met them and solved them...From my point of view, India, at least the best part of it, is already converted to Christianity. You want no persuasion to become a follower of Christ. Then make up your mind to work for yourself. Unite your flock - to hold them together and prevent them from straying. The bridge has been built for you by those who came before you. STEP BOLDLY FORWARD, it will break under you, and you will find many friends to welcome you on the other shore and among them none more delighted that you old friend and fellow labourer."

(source: **Western Indologists: A Study in Motives - P B Dutt** http://www.philosophy.ru/library/asiatica/indica/authors/motives.html).

Mueller harshly criticised the view of the German scholar, **Dr. Spiegel**, who claimed that the Biblical theory of the creation of the world is borrowed from the ancient religion of the Persians or Iranians. Stung by this statement Max Mueller writes:

'A writer like Dr. Spiegel should know that he can expect no money; nay, he should himself wish for no mercy, but invite the heaviest artillery against the floating battery which he has launched in the troubled waters of Biblical criticism.'

Dr. Spiegel was not the only target of Mueller's bigotry. In 1926 the French scholar **Louis Jacolliot**, Chief Judge in Chandranagar, wrote a book called **La Bible dans l'Inde**. **Within that book, Jacolliot theorized that all the main philosophies of the western world originated from India, which he glorified thus:**

'Land of ancient India! Cradle of Humanity. hail! Hail revered motherland whom centuries of brutal invasions have not yet buried under the dust of oblivion. Hail, Fatherland of faith, of love, of poetry and of science, may we hail a revival of thy past in our Western future.'

Mueller said while reviewing Louis Jacolliot's book that, 'The author seems to have been taken in by the Brahmins of India.'

Another revealing incident of Mueller's glaring ignorance was when a *brahmana* came from India to meet the famous Sanskrit scholar. When he came face to face with Mueller and spoke to him in chaste Sanskrit, Mueller admitted that he couldn't understand what the gentleman was saying!

No wonder **Arthur Schopenhauer** acerbically said, **"I cannot resist a certain suspicion that our Sanskrit scholars do not understand their texts any better than the higher class of school boys their Greek and Latin."**

Swami Dayananda Saraswati, the founder of the Arya Samaja, was so disgusted with the level of Mueller's knowledge of Sanskrit that he likened him to a "toddler learning to walk". He wrote:

"Prof. Max Mueller has been able to scribble out something by the help of the so called 'tikas' or paraphrases of the Vedas current in India."

(source: **Satyartha Prakash** Third Edition p. 278). Note: Swami Dayanand Saraswati commented very negatively on Max Mueller's knowledge of Sanskrit by saying that his depth of understanding is like a Aak plant among the trees (Indian Sanskrit scholars).

It was Max Mueller who said: "I do not shrink from saying that their religion (Hinduism) is dying or dead. And why? Because it cannot stand the light of day. The worship of Siva, Vishnu and other popular deities is of the same, nay, in many cases of a more degraded and savage character than the worship of Jupiter, Apollo and Minerva. It belongs to a stratum of thought which is long buried beneath our feet…"

(source: **In the matter of conversions…- By M V Kamath indiainfo.com**).

***

All this from the man (Max Muller) who has Bhavans named after him all over India. Muller's purpose was to uproot Hinduism!!

Muller concluded : "But the ancient religion of India is doomed,"

"and if Christianity does not step in, whose fault will it be?"

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p. 139).

Exposing the roots of another culture so as to support everything that has flowed from it for 3,000 years, and this seen as God's work. Not quite the motive and belief we would associate with an objective scholar like Max Muller!

The credit of consolidating of the Aryan concept in the second half of the 19th century goes more to Max Mullller than to anybody else. It was he who sold the idea quite aggressively to the Western audience of his time. It was also something which was eagerly lapped up by his 'native' audience, although he himself was never ready for the rough and tumble of the Indian dust. In Max Muller's parlance " a native writer" exclaimed in **Indian Mirror**, Calcutta, of 20 September, 1874: "we were niggers at one time. We now become brethren."

(source: **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarti** p. 92-94).

Theordore Goldstucker (1821-1872) born in Germany, professor of Sanskrit at London's University College wrote the Dictionary of Indian Biography. He regarded the people of India as being burdened by Vedic religion, which had only brought them worldwide "contempt and ridicule." Thus, he proposed to reeducated them with European values. In his book, **Inspired Writings of Hinduism,** Goldstucker assailed the validity of Vedic literature. His aim was to demonstrate to the new generation of Vedic followers that he had scholastically annihilated their scripture and that they should show their appreciation by adopting European values and improving their character.

Successor to Wilson in **Oxford's Boden Chair** was **Sir Monier-Williams**(1819-1899) **who was a Christian of warm Evangelical convictions.** He said:

"For what purpose then has this enormous territory been committed to England? Not to be the 'corpus vile' of political, social, or military experiments; not for benefit of our commerce, or the increase of our wealth - but that every man, woman and child, from Cape Comorin to the Himalaya mountains, may be elevated, enlightened Christianized."

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p. 152)

In 1869 **Dr. Franz Lorinser** published a new translation and commentary on the Bhagavad Gita, **Die Bhagavad-Gita: Uebersetzt und erlautert**.

Lorinser believed that the Gita, which the world already regarded as **'one of the fairest flowers of heathen world', actually owed its ' purest and most greatly praised teachings' to the New Testament!**

Historian **Arthur D.Innes** writes:

"The educators had hardly concealed their expectations that with Western knowledge the sacred fairy tales of the East would be dissolved and the basis of popularly cherished creeds would be swept away.

Richard Temple said:

"Hinduism is gradually breaking up, like the clouds before the rising sun…. it is being dissipated like the mist, before the science of the 19th century."

W. J Wilkins in his **Daily Life and Work in India** p. 252 was another Christian missionary who worked in India to gather harvest of converts for Christ. He said: "If this faith in the Divine origin of these books (the Vedas) could be destroyed, they could then reasonably hope the people would

listen with unprejudiced minds to their statements respecting Christianity…"

Rev. J Fr. Stacker another Christian zealot in his book, **Arsenal for the Christian Soldier in India** p. 493 had this to say: "The Hindu religion resembles the Christian just as a counterfeit coin resembles a true one."

(source: **The Hindu - By Krishna Vallabh Paliwal and Brahm Datt Bharti** p. 98-99).

Sir W. M. Williams, a Sanskritist with great missionary sympathies, prophesied, "When the walls of the mighty fortress of Brahminism are encircled, undermined and finally stormed by the soldiers of the Cross, the victory of Christianity must be signal and complete."

Sir Charles Edward Trevelyan (1807- 1886) was the brother-in-law of Thomas Macaulay and author of **Christianity and Hinduism Contrasted**. 1882. He addressed the Literary and Philosophical Society of Newcastle-on-Tyne. He states:

"...as the Christian religion is the only one capable of correcting the disorder caused by the passions of mankind, and of gradually leading on the world to a state of perfection, it must be of divine origin, and we are bound to promote its universal diffusion in obedience to its founder, Jesus Christ. It this is true as a general proposition, we are under a special obligation to **our magnificent Indian Empire,** and the facilities for the task are in proportion to the obligation;" their special loathing in this context for Hinduism; their premise, their hope, indeed their expectation that Christianity would soon prevail; their calculation that it was enough for Government to spread western lore and learning for Hinduism to be destroyed - The grammar and spelling books suffice to destroy the Hindu religion."

"Although India has yet to become Christian, a higher standard of morality has been established, and the spirit of Christianity is becoming diffused throughout the society. Christian knowledge is spreading in every direction in advance of openly professed conversions, and it has become a common thing to meet with natives who know more of the Bible than most Christians.

He wrote in 1838: "Familiarly acquainted with us by means of our literature, the Indian youth almost ceases to regard us as foreigners. **They speak of our great men as we do. Educated in the same way, interested in the same objects, engaged in the same pursuits with ourselves, they become more English than Hindus..."**

He delivered this to the Baptist Missionary Society in London in April 1888:

"..That every British is spreading the truth of Christianity that Providence has placed the Empire at the disposal of Britain; that Buddhism and Hinduism are dying and dead; that the tribals ought to be made the special focus of the exertions of the missionaries."

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p 80-92).

****

Lord Thomas Babbington Macaulay (1800-59) is best known for introducing English education in India. Macaulay was the first Law Member of the Governor-General's Legislature.

He wrote in his **notorious 1835 Minute** that Hinduism was based on **" a literature admitted to be of small intrinsic value ...(one) that inculcates the most serious errors on the most important subjects ... hardly reconcilable with reason, with morality...fruitful of monstrous superstitions. " Hindus had therefore been fed for millennia with a "false history, false astronomy, false medicine ...in company of a false religion."**

"A war of Bengalees against English men was like a war of sheep against wolves, of men against demons."

Baron Macaulay (1800-1859): The life-long bachelor was a skilled politician and author

Dismissing with incredible arrogance the profound speculation and beautiful language of the Sanskrit classics, he said, " I doubt whether the Sanskrit literature be as valuable as that of our Saxon and Norman progenitors."

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 194)).

Macaulay advised in 1835 the creation of an Indian elite through Western style education, making them **`Indian in blood and color, but English in taste, in opinion, in morals, in intellect.'**

The policy was frankly one of Westernizing India.

Though not a missionary himself, he sincerely believed that Christianity held the key to the problems of administering India. In a letter to his father in 1836, **Macaulay** exulted, "...It is my belief that if our plans of education are followed up, there will not be a single idolater among the respectable classes in Bengal thirty years hence. And this will be effected without any efforts to proselytize, without the smallest interference with religious liberty, by natural operation of knowledge and reflection. I heartily rejoice in the project."

" I have never found one among them who could deny that a single shelf of a good European library was worth the whole native literature of India and Arabia. The intrinsic superiority of the Western literature is, indeed, fully admitted by those members of the Committee who support the Oriental plan of education." The superiority of the Europeans becomes absolutely immeasurable." The question now before us is simply whether, when it is in our power to teach this language, we shall teach languages in which, by universal confession, there are no books on any subject which deserve to be compared to our own; whether, when we can teach European science, we shall teach systems which, by universal confession, whenever they differ from those of Europe, differ for the worse; and whether, when we can patronize sound Philosophy and true History, we shall countenance, at the public expense, medical doctrines, which would disgrace an English farrier,--Astronomy, which would move laughter in girls at an English boarding school,--History, abounding with kings thirty feet high, and reigns thirty thousand years long,--and Geography, made up of seas of treacle and seas of butter." " I would at once stop the printing of Arabic and Sanscrit books, I would abolish the Madrassa and the Sanscrit college at Calcutta. Benares is the great seat of Brahmanical learning."

(source: **http://www.tc.umn.edu/~raley/research/english/macaulay.html**)
Please read the following article: **Haunted by Macaulay's ghost - By Francois Gautier**)

"To the literature of Britain . . . which has exercised an influence wider than that of our commerce and mightier than that of our arms . . .before the light of which impious and cruel superstitions are fast taking flight on the Banks of the Ganges!"

(source: http://members.tripod.com/~INDIA_RESOURCE/britishedu.htm).

He remarked that Indians were: "lesser breeds without the law" and summed up the opinion of many. In 1885 he wrote of the "monstrous superstitions" of India and summarily condemned ancient Sanskrit texts as "less valuable than what may be found in the most paltry abridgements used at preparatory schools in England."

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p.73)

He wrote to his father in 1836:

"It is my firm belief that if our plans of education are followed up, there will not be a single idolator among the respectable classes in Bengal, thirty years hence."

Macaulay's object was to undermine the social and religious institutions of India. **The Indian Daily News**, for instance, wrote in its leader on March 29, 1909: "Lord Macaulay's triumph over the Oriental School, headed by Dr. Wilson, was really the triumph of a deliberate intention to undermine the religious and social life of India."

Macaulay looked upon India much in the same way as a landlord looks upon his serfs. He wrote: **"We know that India cannot have a free government. But she may have the next best thing - a firm and impartial despotism."**

He had no heart, no sympathy for the longings and ambitions of educated India, nor had he ever tried to understand them. His idea was to bind India with the fetters of legislation, albeit the chain might be gilded. In his famous speech of the 10th July, 1838, Macaulay said: "I believe that no country ever stood so much in need of a code of laws as India; and I believe also there never was a country in which the want might so easily be supplied...It is a work which especially belongs to a Government like that of India, to an enlightened and paternal despotism."

(source: **Rise Of The Christian Power In India - By Major Baman Das Basu** (1867-1930) Calcutta R. Chatterjee 1931 p. 802-807).

The question in Macaulay's mind was not just of perpetuating British imperial control over India: his aim was to rescue Indians from Hinduism, he was certain about the superiority of Christianity and about the boons that would follow as it spread in India. For he declared four years later in his essay, "Gladstone on Church and State," the heathenism of India is "more cruel, more licentious, more fruitful of absurd right, and pernicious laws" than that of any other part of the world. The people of India, he declared in "The Gates of Somnath", are idolators, blindly attached to doctrines and rites which, considered meekly with reference to the temporal interests of mankind, are in the highest degree pernicious."...Hence to condone Brahminical idolatry and to discountenance Christianity is to "commit high treason against humanity and civilization."

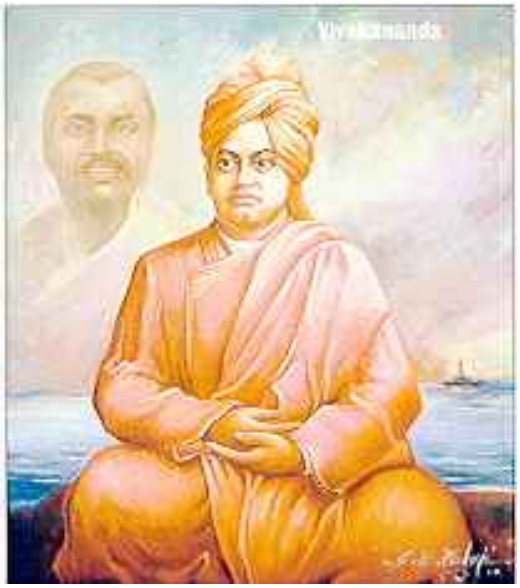
(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p.64).

Bishop James M. Thoburn (1836-1922) wrote in his book, The Christian Conquest of India in 1906, about the Millions Waiting to be converted in the British Empire:

“In her most palmy days Rome ruled over only one hundred and twenty million people, while

in India today nearly three hundred million souls are subject, more or less directly, to the rule of the King-Emperor. China alone among the great kingdoms and empires of the world can compare with India in population at the beginning of this new century, and this splendid realm has opened all her gates and doors to the Christian missionary. Instead of the wretched little vessels in which Paul coasted around the Mediterranean ports, the Indian missionary has floating palaces to convey him at sea, while palatial cars await him when he wished to travel by land. God has opened his pathway to even the most remote tribes, while a sympathetic and enlightened government protects him from hostile persecution, or even the menace of danger. The original commission to evangelize the nations still stands, while God, who rules over all nations, sets an open door before his servants who are willing to enter and evangelize the waiting millions."

"The time is auspicious, and the missionaries of India should not lose a day or an hour in sounding the trumpet for a great forward movement. As Paul, the ideal missionary for all lands and all times, aimed first at Greece and next for Rome, so should the missionaries of our modern day aim for all the great centers of population, commerce, and political rule in the empire. This does not mean that outlying and distant places are to be negated, but only that the great centers of power and influence should be quickly seized and strongly held. A wide and firm grasp is needed. **The word should be passed all along the line that India is to be won for Christ, and that the greatest movement ever attempted in the history of Christianity is now at hand. Nothing in all modern history, nothing since the day of Pentecost, has been equal to the present opportunity.**



The old may rejoice that they have lived to see this day, but the young may rejoice still more in the hope of seeing a day when a million souls will be found inquiring the way to Zion in North India, a million in West India, a million more in Burma, and still a million more in South India. A million? Why not ten million? **Why not the Christian Conquest of India?**

(source: **The Christian Conquest of India - By Bishop James M. Thoburn** Publisher: Jennings And Graham Date of Publication: 1906 p. 244-245).

***

As the British became more sure of their position in India and developed a sense of mission, there grew up a contempt for Indian culture. This was partly due to cultural arrogance on the part of the British, who dismissed Indian literature as pagan rubbish and Indian science as primitive nonsense. Macaulay disposed of 'the whole native literature of India' as 'medical doctrines which would disgrace an English farrier – Astronomy, which would move laughter in girls at an English boarding school – History, abounding with kings thirty feet high, and reigns thirty thousand years long – and Geography, made up of seas of treacle and seas of butter.'

(source: **British India - By Michael Edwardes** p. 305-306).

Swami Vivekananda was to shatter Macaulay's dream and hope. The key point here is Macaulay's belief that 'that knowledge and reflection' on the part of the Hindus would cause them to turn to Christianity. His plan was to turn the strength of the educated Hindus against them, to use their commitment to scholarship to uproot their own tradition. To this end, he wanted someone willing and able to interpret Hindu Scriptures in such a way that the newly educated Hindu elite would see for itself the difference between their scriptures and the New Testament and choose the latter. It is a measure of Macaulay's seriousness that he persisted with his hare-brained scheme until he found just the man for it. The man was Friedrich Maximillian Mueller (1823-1900) who was to be touted as the foremost Indologist, Scholar Extraordinaire (by Nirad Chaudhury) and Vedemaharishi Mokshamula Bhatta (of Oxford).

Swami Vivekananda pointed out more than a century ago: **" The histories of our country written by English [and other Western] writers cannot but be weakening to our minds, for they talk only of our downfall. How can foreigners, who understand very little of our manners and customs, or religion and philosophy, write faithful and unbiased histories of India? Naturally, many false notions and wrong inferences have found their way into them. It is for Indians to write Indian history."**

As Swami Vivekananda pointed out, the goal of the British was to weaken the Indian spirit, particularly the Hindu spirit, because the nationalist movement in India was mainly a Hindu movement. Most of the distortion in Indian history had already been done for them by the British, and then by their successors during the Congress rule.

(Please refer to **Eminent Historians - By Arun Shourie** Harper-Collins, New Delhi ISBN 8190019988).

Swami Vivekanada responded to a concerted attack on Hinduism:

"We who had come from the east have sat here day after day and have been told in a patronizing way that we ought to accept Christianity because Christian nations are the most prosperous. **We look about us and we see England the most prosperous Christian nation in the world, with her foot upon the neck of 250,000,000 Asiatics.** We look back into history and see that the prosperity of Christian Europe begin with Spain. Spain's prosperity began with the invasion of Mexico. Christianity wins its prosperity by cutting the throats of its fellow men. At such a price the Hindoo will not have prosperity."

"When someone suggested to him that Christianity was a saving power, he opened his great dark eyes upon him and said: **"If Christianity is a saving power in itself, why has it not saved the Ethiopians, the Abyssinians?"**

(source: **Hinduism for Our Times - By Arvind Sharma** Oxford Univ Pr June 1996 ISBN 0195637496 p. 72-73).

"On metaphysical lines, he wrote "no nation on earth can hold a candle to the Hindus' and curiously all the fellows that come over here from Christian lands have that one antiquated foolishness of an argument that because the Christians are powerful and rich and Hindus are not, so Christianity must be better than Hinduism. To which the Hindus very aptly retort that, that is the very reason why Hinduism is a religion and Christianity is not..."

(source: **The Complete Works of Swami Vivekananda** Calcutta, 1985 Volume VI. p. 390-391 and **History of Hindu-Christian Encounters - By Sita Ram Goel** South Asia Books July 1990 ISBN 9990049173 p. 90).

***

No Hindu Culture

So far as Europeans were concerned, it was fashionable for a time to deny the mere existence of such a thing as an Indian culture. Here are two representative quotations to illustrate this point:

Says **Sir Henry Norman**, in his book on the Far East: "Asia - always excepting Japan - has never been civilized and never will be unless a great change comes which this age is not likely to see otherwise than at the **mouth of the cannon and the point of the bayonet."**

William Archer, who in his day was considered a dramatic critic of some standing, author of gave expression to the following judgment on India:

"Barbarian, barbarism, barbarious, I am sorry to harp on these words. But they express the essence of the situation...The plain truth concerning the mass of Indian population - and not the poor classes alone - is that they are not civilized people."

Naturally they could have no culture. Of minor poets like Robert Nicholls, or **imperialist propagandists like Katherine Mayo**, or the general run of Christian missionaries who could see nothing good in India. I need not say anything; for their views do not deserve consideration.

(source: **Essential Features of Indian Culture - By K. M. Panikkar** Bharatiya Vidya Bhavan. Mumbai.1964 p. 23-24).

***

Bishop Caldwell on Dravidian Grammar:

' The idea of the Dravidian migrations from the north was first put forth by Bishop (who else). Caldwell, insisted that the Dravidians had 'invaded' India long before the Aryans. As this theory had no basis in tradition, history or even archeology, it has tried to draw linguistic support from 'Dravidian-speaking Brahuis in Baluchistan and in Central and East India'.

"It is not only our duty," declared **Lord Palmerston, the Prime Minister**, " but in our own interest to promote the diffusion of Christianity as far as possible throughout the length and breadth of India"; " Every additional Christian," declared **Lord Halifax, the Secretary of State**," is an additional bond of union with this country and an additional source of strength to the Empire."

Rev William Ward, an English missionary who wrote a four-volume polemic which characterized Hindu faith as "a fabric of superstition" concocted by Brahmins, and as "the most complete system of absolute oppression that perhaps ever existed". (How would Christians feel if the compliment is returned by saying that nothing could excel superstition and oppression as the concepts of *virgin birth, resurrection and slavery in the Bible,* the pillars of faith that are central to Christianity?).

Barthelemy de Saint Hilare, the Education Minister of the French Government of 1883, declared that:

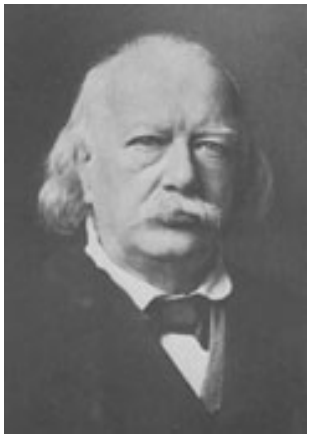
"**the Hindu system of thought is hideous, without any intellectual rigor and coherence and cannot be compared with those of ancient Greece or modern Europe."**

(source: **Arise O' India - By Francois Gautier** Har Anand publisher ISBN: 81-241-0518-9 p. 26).

John P. Jones in 1915 said:

"Schools for Non-Christians are especially established with a view to reaching and affecting the non-Christian community. They represent the leaven of Christianity in India. They are pre-eminently an evangelistic agency. ... I fearlessly maintain that more conversions take place, and more accessions are made, through these schools than through any other agency..."

Moriz Winternitz



Unfortunately, not all scholars appreciated the timeless wisdom of the Vedas and Upanisads. **Some scholars were so convinced of the superiority of Christianity and western philosophy that they had no qualms in shamelessly expressing their feelings publicly.**

In 1925 The Professor of Indian Studies at the German University of Prague, **Moriz Winternitz** (1863-1937), denounced Schopenhauer for his admiration of the **Upanisads** with the following words -

'Yet I believe, it is a wild exaggeration when Schopenhauer says that the teaching of the Upanishads represents 'the fruit of the highest human knowledge and wisdom' and contains 'almost superhuman conceptions the originators of which can hardly be regarded as mere mortals...'

On the subject of the *Vedas*, Winternitz had this to say -**'It is true, the authors of these hymns rise but extremely seldom to the exalted flights and deep fervor of, say, religious poetry of the Hebrews.'**

Weber, Boehtlingk, Kuhn and Goldstucker:

1. The famous German indologist **Albrecht Weber** (1825-1901) was a notorious racist whose German nationalistic tendencies were thinly veiled as works on Indian philosophy and culture.

When **Humbolt** lauded praise upon the **Bhagavad-gita**, Weber became disgusted. His immediate response was to speculate that the *Mahabharata* and *Gita* were influenced by Christian theology -

'The peculiar colouring of the Krishna sect, which pervades the whole book, is noteworthy: Christian legendry matter and other Western influences are unmistakably present...'

Two Sanskrit scholars, Franz Lorinser and E. Washburn Hopkin, were quick to support Weber's postulation. However, their theory lacked any hard evidence and was considered so ludicrous that most scholars in European universities rejected it, despite their Christian leanings. Nevertheless, the propagation of this eroneous hypothesis played its mischief and was mainly responsible for the hesitation of the Western scholars to assign to the *Mahabharata* a date, earlier than that of the Christian era.

In Chapter 4 of his book **Krishnacharita**, the famous Bengali writer, **Bankim Chandra Chattopadhyaya**, spoke about Weber as follows –

'The celebrated Weber was no doubt a scholar but I am inclined to think that it was an unfortunate moment for India when he began the study of Sanskrit. The descendants of the German savages of yesterday could not reconcile themselves to the ancient glory of India. It was therefore, their earnest effort to prove that the civilization of India was comparatively of recent origin. They could not persuade themselves to believe that the Mahabharata was composed centuries before Christ was born'.

2. Weber and his collegue **Otto Boehtlingk** prepared the famous Sanskrit dictionary called the **'Sanskrit Worterbuch'**. Prof. Ernst Kuhn was also one of their assistants. Being mainly based on speculative and incorrect principles of philology, the work was unreliable and misleading. The dictionary was subject to severe criticism by **Theodore Goldstucker** (1821-1872), who was professor of Sanskrit at the University College in London. Weber was so disturbed by Goldstucker's criticism that he resorted to abusing the Professor with the coarsest words possible. He added that the views of Goldstucker on his *Worterbuch* showed 'a perfect derangement of his mental faculties', since he was not willing to dismiss the authority of the Vedic scholars so easily. Replying to their undignified attacks, Goldstucker exposed the 'scholarship' of the likes of Roth, Boehtlingk, Weber and Kuhn and wrote:

'It will, of course, be my duty to show, at the earliest opportunity, that Dr. Boehtlingk is incapable of understanding even easy rules of Panini, much less those of Katyayana and still less is he capable of making use of them in the understanding of Classical texts. The errors in his department of the Dictionary are so numerous... that it will fill every serious Sanskritist with dismay, when he calculates the mischievous influence which they must exercise on the study of Sanskrit philology'.

He further remarked: '....that questions which ought to have been decided with the very utmost circumspection and which could not be decided without very laborious research have been trifled with in the Worterbuch in the most unwarranted manner…When I see that the most distinguished and most learned Hindu scholars and divines - the most valuable and sometimes the only source of all our knowledge of ancient India - are scorned in theory, mutilated in print, and, as a consequence, set aside in the interpretation of Vaidik texts; ...when a clique of Sanskritists of this description vapours about giving us the sense of the Veda as it existed at the commencement of Hindu antiquity; ...when I consider that those whose words apparently derive weight and influence from the professional position they hold...then I hold that it would be a want of courage and a dereliction of duty, if I did not make a stand against these Saturnalia of Sanskrit Philology.'

3. Referring to **Prof. Kuhn, Goldstucker** was positively venomous –'(Professor Kuhn) was 'an individual whose sole connection with Sanskrit studies consisted in handing Sanskrit books to those who could read them, a literary naught, wholly unknown, but assuming the airs of a quantity, because it had figures before it that prompted it on, a personage who, according to his own friends, was perfectly ignorant of Sanskrit'.

However, we should not make the mistake that Herr Goldstucker was championing the cause of the Vedic literatures. **Goldstucker's skirmish with his fellow indologists was purely on an academic basis. Goldstucker was of the opinion that the people of India were burdened by Vedic religion which had simply brought them world-wide 'contempt and ridicule'. He thus proposed to re-educate the Indians with Western values.** He wrote:

'The means for combating that enemy is as simple as it is irresitable: a proper instruction of the growing generation of its ancient literature.'

In his book, **'Inspired Writings of Hinduism'** Goldstucker a**ttacked the validity of the Vedas, stating that his aim was to inspire the new generation of Indians that their religious superstitions were backwards. This could only be achieved by scholastically destroying their sastras. The only recourse for the new generation would be to adopt European values in order to improve their character.**

(source: **Inspired Writings of Hinduism - By Theodore Goldstucker** p.115).

British historians - like Stirling, Hunter, Beams and Toynbee were in the British administrative services. They were eager to give the impression that foreign rule was a blessing for India. They present a dark picture of the Maratha administration. They depict the feudatory rajas as barbarians. There were many dark sides to British administration. There were corrupt and inefficient officers. There were judges who were deeply involved in unjust dealings. These facts have been kept hidden from the public eye.

***

According to author **Paul William Roberts**, "Conversion has largely failed in India because Christianity offers nothing that is not already available somewhere in the many forms of Hinduism. Hinduism never rejected the teachings of Jesus. Those who have converted either agreed with a gun pressed at their skulls as in Goa, or because it provided an escape from caste tyranny, as well as a guaranteed professional advancement. Through its Vedic legacy, Hinduism respects all faiths. It clearly states that God is one, but has many forms. The Christian message must sound preposterous: that God is indeed one, but has only one recognized form, his son. The "savages" of India were sophisticated - so sophisticated that the imperialist mixture of church and state in Europe could not grasp such sophistication.

"The sheer power of Hinduism terrified the Christian soldiers."

The British were more cunning at the game than the Portuguese, careful to show respect for Indian religions. Yet they sneered at the pagans behind their back, educated the Indian elite in British-run schools, or at Eton and Cambridge - which, if it did not guarantee conversion to Christianity, resulted in lapsed Hinduism, agnosticism, or an intellectual humanism.
In India, Anglo indoctrination produced a generation of "brown sahibs" who looked down on the religion of the masses, the opium of the people. Such is the power of colonization that a whole generation must pass before the paralyzing spell wears off."

(source: **Empire of the Soul: Some journeys in India - By Paul William Roberts** p. 323-325).

Many Christian researchers have documented the cause of the antipathy of the missionaries towards the Brahmins. **Elizabeth Susan Alexander** wrote,

"For the missionaries Brahmans (sic) had been in the forefront of the staunch Hindu opposition to missionary endeavours in Madras Presidency. They had also been the vanguard of the Indian nationalist movement that had taken alarmingly extremist turns."

(source: **The Attitudes of British Protestant Missionaries Towards Nationalism in India,** Konark Publishers, Delhi, 1994, p 67.)

As the great **Dr. Ananda Coomaraswamy,** late curator at Boston Museum of Fine Arts, a distinguished student of Indian history and culture, and author of several books, and unmatched in his understanding of Indian culture, language, religion and philosophy. Ananda Coomaraswamy, had this to say regarding the Macaulayite higher education:

"A single generation of English education suffices to break the threads of tradition and create a nondescript and superficial being deprived of all roots — an intellectual pariah who does not belong to the East or the West, to the past or the future. Of all Indian problems the educational is the most difficult and the most tragic."

(source: **The Dance of Shiva - By Dr. Ananda K Coomaraswamy** p. 127).

******

(**Note**: The tragic consequences was that the convert now found himself cut off from his ancient roots, attached to a foreign godhead and a foreign culture, and taught to despise and revile everything that for millennia had been an object of worship for his ancestors - including his own country. **This proves how the so called "just and merciful rule" of the British was indeed barbaric tyranny.** The burning of ancient books on Ayurveda in Kerala, so as to impose the European system of medicine on the natives, the cutting of weavers' thumbs in Bengal with a view of crippling the production of superior Indian cloth and ensuring the sale of British products, the ruthless, often bloody, extortion of revenue from the peasants for decades on end, even in the midst of the worst famines, the whipping, hangings and tortures that awaited those who opposed the Empire - these are only a few among the unending examples of the "providential character" of the British rule. But they took place too far from the "civilized" world to attract any notice. The Britons like the relief of high-sounding speeches in London's salons, adorned with a few pagan objects d'art purloined from India.

(Source: **Readings in Vedic Literature: The Tradition Speaks for Itself - By Satsvarupa dasa Goswami** p. 173-181).

Since Independence, there has been a growing conviction that education should teach Indian values. One of India' leading experts on education, **Dr. Humayun Kabir,** former Minister of Science and Cultural Relations of the centrall government, had warned:

" The divorce of modern education from the Indian context is still a fact which threatens danger to the country's life....danger in ....the weaning away of the literate classes from the culture of the country....**The new literates no longer derive their strength from the age-long traditions of the land. Their outlook is Western or more frequently pseudo-Western. Cut off from their moorings, they are unstable, loud and factional."**

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 191-192).

Prof. **Perceival Spear** of Cambridge University has said: “It was possible for a man to admire the West and to revere the East and to have European authority for both opinions.” **What arrogance!** The “unique” has to be replaced by “Universals” in the plural. We have to be the children of the horizons, or as the Atharvaveda (16.3.6) says, *Samudro Asmi Vidharmana,* “the Unbounded Ocean am I.”

(source: **Theo-Diversity and Humane Values - By Prof. Lokesh Chandra**).

The Indological scholars of the present day have inherited the pioneer's bias and thought; today's bias is not "evangelist" but "empiricist," it slants just the same.

Dilip K. Chakrabarti in his book, **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarty** thus summarized the situation:

"The model of the Indian past...was foisted on Indians by the hegemonic books written by Western Indologists concerned with language, literature and philosophy who were and perhaps have always been paternalistic at their best and racists at their worst.."

Thoughts of Modern Indian Scholars

But truth can never remain hidden for long. Now some modern Indian scholars of have also begun to see to some extent, though not thoroughly, through the thin veneer of European scholarship.

Prof. Rangacharya writes:

" Incalculable mischief has been done by almost all the English and American scholars in assuming arbitrarily the earliest dates for Egypt or Mesopotamia - dates going back to B.C. 5000 at least - and the latest possible dates for Ancient India on the ground that India borrowed from them."

(source: **History of Pre-Musulman India**, Vol. II, Vedic India, Part I. 1937 A.D., p. 145.)

Nilakantha Shastri, the Head of History Department of Madras University, although a supporter of many untenable Western theories, had to write:

'What is this but a critique of Indian society and Indian history in the light of the nineteenth century prepossessions of Europe? This criticism was started by the English administration and European missionaries and has been nearly focused by the vast erudition of Lassen; the unfulfilled aspirations of Germany in the early nineteenth century, doubtless had their share in shaping the line of Lassen's thought."

(source: **All India Oriental Conference**, December 1941, Part II., p. 64, printed in 1946.)

C. R. Krishnamacharlu, Ex-Epigraphist to the Government of India, having realised the ulterior motives of European writers, has expressed his views more strongly. He writes: '

"These authors, coming as they do from nations of recent growth, and writing this history with motives other than cultural, which in some cases are apparently racial and prejudicial to the correct elucidation of the past history of India, cannot acquire testimony for historic veracity of cultural sympathy."

(source: '**The Cradle of Indian History**', p. 3, Adyar Library, Madras, 19).

Prof. R. Subba Rao, M.A., L. T., in his Presidential Address, (Sectional), Sixteenth Session of Indian History Congress, Waltair, (29th December, 1953.) writes:

"Unfortunately, the historicity of Puranas and their testimony has been perverted by certain Western scholars who stated rather dogmatically that the historical age cannot go back beyond 2000 B.C., and that there is no need for fixing the Mahabharata war earlier than 1400 B.C. They accused the Brahmins of having raised their antiquity and questioned the authenticity of the Hindu astronomical works."

(source: **J.A.H.R.S.**, Vol. XX, p. 187). (source: **Vedic Knowledge Online**).

For those who came from the West to convert India into Christianity or to rule over India, the British in particular, saw India with a different eye. They saw nothing good in this country. Why? Because they wanted to justify conversions or British rule over India. Thus, **they did the greatest damage to the image of this country.**

A word on missionaries: they claim they brought "light" to this country. **Rabindranath Tagore** says: **they started fires.**

Women in the Age of Imperialism NEW

"Until the females are raised by education as to hold their proper rank in society and until their hearts are brought under the influence of Christianity, there is little hope that the people of India will rise from idolatry and sin to the dignity and happiness of a Christian people."

– **American Mission Report**, Jaffna (1839-9-10).

Women believed, according to Hunter, that "Christianity was responsible for the elevated status of Western women" and that "in preaching the gospel they were only sharing what they had received in such bounty." This means that American women missionaries were moved to action by both **"the heinousness of heathen womanhood and gratitude for their own Christian womanhood."** Many had noted that such attitude were a kind of **"Imperial feminism"**

In both America and Britain, there, was a whole cult of missionary work, highlighting the "romance of missions." Women who were "doers" could fight oppressive conditions at home and boldly venture abroad to expose the "wrongs of women." Magazines, popular novels and poetry on women's work among "heathen" women abounded; there were journals like "The Heathen Women's Friend," "Helping Hand" and books such as Life and Light for Heathen Women were published by the Women's Board of Missions. Popular novelists also latched on to the theme of missionary adventure, introducing a new genre of daring missionary heroines in exotic settings fraught with dangers of various kinds. Emma Southworth (in Fair Play, 1868) created a character, Britomarte Conyers, whose main desire is to leave America and save other women. "Oh my sisters! My sisters!" she exclaims, "as Christ died to save the whole human race, so I would die for you."

In Britain, Priscilla Chapman wrote a book, Hindoo Female Education (1839), alerting her readers to **"the poor idolatrous females in bondage"** and wrote of "the necessity of an avowed Christian direction to the efforts which may affect the elevation of the Hindoo females from their present degradation to the proper level." And in 1878, Isabel Hart (of the

Baltimore Women's Foreign Missionary Society) described heathen women as "degraded, secluded and helpless" and reminded American women of their "responsibility and duty" to support missionary work.

Helen Montgomery writing of Western Women in Eastern Lands (1910) said: "Christianity was the most tremendous engine of democracy ever forged" and was "destined to break in pieces all castes, privileges, and oppression."

But missionaries had to also face the realities of rising nationalism in India and Sri Lanka. But the **tradition of the white man's and white woman's Christian burden** continued the belief, among many, that "premature independence for India would be….an abdication of the ordained exercise of Christian rule." A conservative member of parliament who opposed political reforms for India, which were being discussed in the early 1930s, wrote:

"…the whole ideal of British laws, justice, and administration….exactly interpret the Ten Commandements…our idea of government is the nearest approach to Christianity, and to exchange it for government which may lean towards…the worship of Shiva or Kali is…a "spiritual abdication."

"The holy church – now alas steering its malignant way through the Indian Ocean." - **W. B. Yeats** (around 1905), letter to Florence Farr.

Technology and Culture in India NEW

The reversal of the European image of Asia seems to have occurred, however, in a gradual period between 1780 and 1830, by which time the foundations of the industrial revolution in England had already been laid. **Voltaire** noticed a bit of it. **Having once considered India as "famous for its laws and sciences",** he felt it necessary to denounce the increasing preoccupations of Europeans in India with the amassing of "immense fortunes", and this led him to remark that "if the Indians had remained unknown to the Tartars and to us, they would have been the happiest people in the world."

By 1830, the British had acquired, in what was to become a completely European century, a flattering notion of the nature of their own civilization, and a thoroughgoing contempt for every other.

In India, itself, this new attitude found expression in the famous Minute of **Lord Macaulay** (1800-59) on the 2nd of February, 1835:

I have never found one amongst them (the Orientalists) who could deny that a single shelf of a good European library was worth the whole native literature of India and Arabia….It is, I believe, no exaggeration to say that all the historical information which has been collected from all the books written in the Sanskrit language is less valuable than what may be found in the most paltry abridgement used at preparatory schools in England. In every branch of physical or moral philosophy the relative position of the two nations is nearly the same.

The next influential person on our list, **Karl Marx** (1818 - 1883), had his own theories about the role of the British industrial civilization in India. “England” he wrote, “has to fulfill a double mission in India: one destructive, the other regenerating – the annihilation of old Asiatic society, and the laying of the material foundations of Western society in Asia. He went on to emphasize how the British were breaking up the village community, uprooting handicraft industry, and establishing private property in land, which he termed “the great desideratum of Indian society”. Industrial life would wreck the caste system: “Modern industry, resulting from the railway system, will dissolve the hereditary divisions of labor, upon which rest the Indian castes, those decisive, impediments to Indian progress and Indian power.”

Here again, the remarkable fact is that a hundred years later, **Peter F Drucker** (1909 -) (the godfather of the global corporation) would still be theorizing along similar lines. In one of his not so well known books, **The Landmarks of Tomorrow**, he urged his readers to face “the new reality of the collapse of the East, that is, of non-Western culture and civilization, to the point where no viable society anywhere can be built except on Western foundations”. He based his pontification on the perception that: Every single one of the new countries in the world today – including those that have not yet shaken off colonial status – sees its goal in its transformation into a Western state, economy and society, and sees the means to achieve this goal in the theories, institutions, sciences, technologies and tools the West has developed.

And certainly no accurate description of non-Western human experience could ever have been possible with minds convinced, for example, that Western philosophy was the nearest approach to metaphysical truth ever attained by mankind, that the Christian religion contained truth incumbent upon all men everywhere to believe.

As **Dr. Joseph Needham** (1900-1995) put it, even European painting and sculpture had become “absolute” painting and sculpture, that “which artists of all cultures must have been trying unsuccessfully to attain”. European music was music, all other music, anthropology. **The study of white men, even, was a separate science called sociology: anthropology was for the rest.**

If Macaulay was one of the first to set out to prescribe how best, in his case Indians, might save their withered souls, he was also the virtual founder of a movement that would carry on his tradition to the present day.

Conclusion

Macaulayism

Indian Marxism is only a passing phase in a much larger trend known as Macaulayism, named after the British administrator designed to create a class of people in Indian in skin color but British in every other respect. **"Macaulayites" are those Indians who have interiorized the colonial ideology of the "White Man's Burden" (as Rudyard Kipling called it in a famous poem): the Europeans had to come and liberate the natives, "half devil and half child", from their native culture, which consisted only of ignorance, superstition and the concomitant social evils;**

and after this liberation from themselves, these Indians became a kind of honorary Whites.

Macaulay's policy was implemented and became a resounding success. The pre-Macaulayan vernacular system of education was destroyed, even though British surveys had found it more effective and more democratic than the then-existing education system in Britain. The rivalling educationist party, the so-called Orientalists, had proposed a Sanskrit-based system of education, in which Indian graduates would not have been estranged from their mother civilization as they became through an English education....."

This is the continuance of, in a series the culmination of the Macaulay-Missionary technique. **The British calculated that to subjugate India and hold it, they must undermine the essence of the people: this was Hinduism, and everything which flowed from it. Hence the doggedness with which they set about to undermine the faith and regard of the people for five entities:**

- the gods and goddesses the Hindus revered;
- the temples and idols in which they were enshrined;
- the texts they held sacred;
- the language in which those texts and everything sacred in that tradition was enshrined and which was even in mid-19th century the lingua franca - that is, Sanskrit;
- and the group way of life - the Brahmins. The other component of the same exercise was to prop up the parts - the non-Hindus, the regional languages, the castes and groups which they calculated would be the most accessible to Missionaries and the Empire.

As **Ashish Nandy**, a Christian critic of old and new forms of colonialism, has observed: **"Schooling is the chosen instrument of alienation. The brightest children are snatched away from familiar surroundings to be introduced in schools based on Western model. When they leave, they speak the language of the colonizer and can no longer communicate with their own people."**

Persons no less than **Mahatma Gandhi, Swami Vivekanada, Rabindranath Tagore** etc have called for a change in the teaching of history.

Mahatma Gandhi said “I find daily proof of the increasing and continuing wrong being done to the millions by our false **deindianising of education**. These graduates who are my valued associates flounder when they have to give expression to their innermost thoughts. They are strangers in their own homes. What is worse, even the swaraj for which we are struggling may become foreign in character when we finally get it.” His words were indeed prophetic

In spite of Islamic Onslaught and British Imperialism, our children should read what the **West Bengal's leftist government** is teaching kids. Refer to an extract from the, textbook for Class V**. “Islam and Christianity are the only religions which treated man with honor and equality..."**

Today the **Marxists** are in the same business of conversion. For their outlandish dreams to be realized it was just as essential that the people lose faith in, and regard for, that they cut themselves off from their roots. While our eminent historians try to belittle the achievements of Indian art and architecture in the ancient period - by insinuating that it was derived from other countries, by seeing in it only reflection of the life of the privileged classes - **Soviet historians** talk of the high standards the Indians attained in these spheres. They talk of high originality..."

The Early American Indologists

source:
http://www.gosai.com/chaitanya/saranagati/html/nmj_articles/east_west/east_west_5.html

The American Oriental Society, founded in 1842 though the study of Sanskrit itself, did not start in American universities until some years later. The first American Sanskrit scholar of any repute was Edward Elbridge Salisbury (1814-1901) who taught at Yale (Elihu Yale was himself ultimately connected with India and had profound respect for Vedic philosophy). Another early Sanskritist, Fitzedward Hall (1825-1901) was in the Harvard class of 1846 but left college to search for a runaway brother in-of all places-India, where he continued his studies of Indian languages and even became tutor and professor of Sanskrit at Banaras. He was the first American scholar to edit a Sanskrit text-the Vishnu Purana.

One of Salisbury's students at Yale, William Dwight Whitney (1827-1901) went on to become a distinguished Sanskritist in his own right having studied in Berlin under such distinguished German scholars as Bopp and Weber. Whitney became a full professor of Sanskrit language and literature at Yale in 1854, wrote his classic Sanskrit Grammar (1879) and was the doyen of Indologists of his period. Whitney was succeeded in the Chair of Sanskrit Studies of Yale by Edward Washburn Hopkins (1857-1932). Hopkins was an excellent scholar but made his name principally as an exponent of India's religions. His book The Religions of India (1895) was for many years one of the principal works on the subject available in America and his Origins and Evolution of Religion published in 1923, sold well.

With Yale leading the way, Harvard caught up and beginning with James Bradstreet Greenough (1833-1900), had a succession of great Sanskrit teachers, the most distinguished among them was Charles Rockwell Lanman who taught for over forty years, publishing such works as Sanskrit Reader and Beginnings of Hindu Pantheism. But his greatest contribution was planning and editing of the Harvard Oriental Series. In his time he was responsible for influencing such students of his who were later to achieve literary renown as T. S. Eliot, Paul Elmer More and Irving Babbitt. The tradition of American Indologists has been nobly kept up by those who followed: to mention only a few names, A. V. William Jackson, Franklin Edgerton, W. Norman Brown, and Joseph Campbell.

1.Western Response to Modern India

Excerpts from **India and World Civilization- By D. P. Singhal** pp- 268.

The growing influence of Indian thought in recent years has indeed frightened some Western religious writers, such as Hendrick Kraemmer (World Cultures and World Religions), who have designated it as the "Eastern invasion of the West". Perhaps excessive anxiety to defend the Western Christian traditions may have led Kraemer to over-rate Indian influence. But there are many European scholars who have denounced Indian thought in unmistakable terms. Whether response or resistance, admiration or denunciation, all are equally indicative of impact and stimulus.

In a limited way the migration of Indian labor to other countries provided yet another link between India and the outside world. Indian settlers began to move to other countries in 1830, mainly to work on British plantations. This made abolition of slavery commercially possible a few years later, when the notorious indenture system was introduced in the British Empire. According to estimate, twenty-eight million Indians migrated to various countries between 1834 and 1932.

An important social survey, carried out in Britain about some years ago, produced some surprising results. A quarter of all those who professed belief in an after-life- an eighth of the population-did not believe that this after-life would be eternal; eleven percent of the believers actually declared their faith in transmigration. This was "perhaps the most surprising single piece of information to be derived from this research". Belief in transmigration is a typically Indian doctrine and is contrary to the creeds of Europe and Western Asia.

Politically and intellectually it was inevitable that there should have been some reaction in Europe against an invasion of Indian learning. Reaction against alien ideas appears to be a common human irrationality. Certainly, the nature of political relationships and nationalistic pride understandably played a significant role. European nations generally were more receptive to Indian ideas during the early period of their relationship which was based on relative equality. But as European political, technological and economic supremacy over Asia came to be recognized, an attitude of superiority crept into the European – and particularly the British- outlook. The influence of political relationships on cultural intercourse is further illustrated by the fact that, once the British became overlords of India, Indian learning drew more sympathetic and imaginative understanding form other European countries than it did from the British.

The discovery of Indian thought by European scholars in the eighteenth and nineteenth centuries led to an outburst of admiration and enthusiasm, mainly because they felt that Indian thought filled a need in their European culture. Neither Christianity nor the classical cultures of Greece and Rome were considered satisfactory any more and the European intelligentsia sought to apply the new knowledge, brought in increasingly by Indologists, to their own spiritual preoccupations.

It is significant that, with notable exceptions, India appears to have been most attractive to those Europeans who did not visit the country personally. In other words, Indian thought made a better impact on the European mind than did contemporary Indians.

Of all the European nations, **Germany**'s response to India was most enthusiastic and open hearted. Perhaps the similarity between the German and the Indian mind, in the sense that both are given to contemplation, abstract speculation, and pantheism, and both have a tendency towards formlessness, inwardness, and transcendentalism, contributed toward German understanding of Indian literature. **Leopold von Schroeder** says: "The Indians are the nation of romanticists of antiquity." The Germans are the romanticists of modern times". Sentimentality and feeling for nature are common to both German and Indian poetry, whereas they are foreign, for instance to Hebrew or Greek poetry. Another similarity is illustrated , by the Indian tendency to work scientific systems, India was the nation of scholars of antiquity, in the same way as the Germans are the nation of scholars of the modern times.

The **French** were not amongst the first Europeans to come into contact with India. But as soon, as French travelers, who are known for their literary taste, visited India and reported on their travels, French literary circles responded enthusiastically.

The British response to Indian learning was most mixed. Whilst India remained a trying political problem, she was a symbol of British power and achievement, as well as a major source of her economic wealth. Individual thinkers studied India closely and whilst some were fascinated, others were repelled. Often the political expedience-for instance the need to justify domination of India to the British public-British administrators were compelled to interpret Indian culture as degenerate and decadent.

Another barrier between Indian and British cultural co-operation was the Englishmen working in India. The early administrators were indifferent to anything except trade and profits; the later ones, after 1830, suffered from a sense of cultural inferiority, which compounded with political superiority, manifested itself in self-righteousness, prejudices, and arrogance. They often came to India for only a few years, invariably lived an exclusive life, and returned home to condemn Indian culture and traditions with gusto.

Their callous indifference to Indian art is well reflected by the fact that the liberal William Bentinck, who initiated social reforms in India, seriously considered the possibility of dismantling the Taj Mahal and selling the marble to meet the shortage of money in the Company's treasury. He was prevented because "the test auction of materials from the Agra palace proved unsatisfactory."

Fed on Macaulay, Mutiny, and Kipling, the English, no wonder, did not appreciate India.

2. Indian Response to Modern Europe

Excerpts from **"India and World Civilization" - By D. P.Singhal** - Chapter VII pp- 273.

Whilst Europe sought ancient Indian learning, India focused her attention on modern European knowledge. In this cultural encounter, initiative remained for the most part with Europe, for she was a young developing society with an inquisitive mind and the material resources to obtain easy access to what she fancied. In contrast, Indians even if they knew what they needed, could not get at it at will.

Western tradition is a highly generalized, extremely vague, and ill-defined concept that is often stretched to include or exclude anything at will to suit the purpose in hand. It is not a unitary system of thought, nor has it an unbroken historical continuity. There are deep controversies as to its exact nature and value, and it is a complex of diverse, even contradictory, ideologies and traditions. For instance, it is equally proud of the imprints of early Greek and Christian traditions which were relentlessly opposed to each other.

Even a casual investigation reveals the inherent contradictions of Western traditions. Western tradition is often characterized as one of material progress and scientific advancement, yet Christian mystical thought is superbly well developed, and until recently science was positively denounced in the Christian West. In most

respects scientific inquiry was much more highly developed in the Hellenistic period than it was in mediaeval Europe. In fact, exactly why Hellenistic science declined needs an explanation. Again, it is repeatedly pointed out that Western tradition stems from the enlargement of individual liberties, and that individual liberty is the essence of Western civilization. Some Western scholars go even much farther and assert that the West has regarded " a denial of freedom as a denial of the value of the individual and therefore as a sin against the soul of man."

Yet it is not possible to completely ignore the Western institutions of slavery, feudalism, colonialism, and imperialism and racism. Western liberalism, of which the West can be justly proud , was born in the seventeenth century as a reaction against the violence and hatred that had prevailed during the almost unbelievably atrocious religious wars. But even since then, liberalism has not remained unchallenged in the West. Indeed, totalitarianism and suppression of freedom of thought and person appear to be the unbroken trend of a Western tradition that can claim most of the famous despots of world history, including Alexander, Julius Ceasar, Nero, Napoleon, Hitler, and Mussolini. This fact is even more startling when these dictators and conquerors are contrasted with the prophets of non-violence and peace, such as Gautama Buddha, Asoka, and Mahatma Gandhi, who were all born in Asia. Even the divine rights of kings, found far more serious advocates amongst Western monarchs- the Greek Alexander, the Roman Ceasars, Russians Czars, French Bourbons, and British Stuarts. It is true that the Western world has continuously fought for liberty, but this only serves to illustrate the existence of anti-freedom forces and a totalitarian current in Western tradition.

Again, it cannot be claimed, as it is often done, that the rise of Christianity did much to improve the position of the individual, for religious persecution has been a common feature of Western Christianity. The once persecuted Christians, having gained power, themselves became persecutors. The terrible struggles between Church and State were not fought for individual, or even religious freedom; the Church sought to compel the secular powers to serve its own purposes. Any individual who did not subscribe to the Church's belief was at once denounced as a heretic. Crusades and religious wars of extermination were often as bloody as Hitler's slaughter of the Jews and Gypsies.

The Church even persecuted the mediaeval minstrels and Gypsies because they loved freedom.

Christianity, which is in practice a unique combination of beliefs and clergy, whilst owing its religion to Jesus and his early Asian disciples, is, in strict ecclesiastical hierarchy, an essential Western movement. Whatever may have been the value of the Church in religious practice, it has inhibited freedom of thought and individual liberty by relentlessly enforcing its presuppositions as eternal truths. It is the Church which sets moral standards for the individual and prescribes his belief. The organization of the Church is unparalleled in history. No federation of states has been as comprehensive and universal in taking hold of the minds of people, and no monarch or dictator has been given the complete and willing obedience of such a wide and vast body of peoples, as has the Church.
The Islamic Caliphate and the Buddhist monasticism were, in this respect, no way comparable to the Christian Church.

Communism, with all its scientific reason, humanism, and economic equality, is essentially a totalitarian doctrine, negating individual liberty, and is a typical, almost, exclusive Western concept. Communism stresses the primary of reason, but like a missionary religion, it has a sense of its own infallibility and an obligation to world-wide expansion. Its greatest exponents have mainly been Western or Western-trained.

Even the British thought, which was more directly and closely linked with India than that of other European countries, had its own inner conflicts and contradictions in respect to India, ranging from

Edmund Burke's liberalism and John Stuart Mill's utilitarianism to John Bright's radicalism.

Burke desired India to stay Indian; in fact, he was rather anxious to reform the disreputable English trustees in India. He strongly condemned the facile and much used aspersion of "Oriental Despotism" and warned his countrymen against passing judgment upon a people, for ages civilized and cultivated, who formed their own laws and institutions prior to "our insect origins of yesterday." The Utilitarians and Evangelicals, on the contrary, saw little good in Indian society and desired to Westernize it completely by denying individual liberty to the Indian. The Utilitarians, whilst not denying the abstract right to liberty, could see no alternative to a benevolent British despotism in India, conducted from London. India exposed Utilitarianism's paradox between its principle of liberty and that of authority. The Evangelicals' viewpoint was religious; they believed that only through Christianity could temporal welfare and spiritual salvation be achieved. Hence, they looked upon the British conquest of India as a divine act to redeem themselves from their depraved system of superstition. Thus they sought the rapid conversion of the peoples of India to Christian ways, as interpreted by Western clergy. If Utilitarianism provided a justification and a practical basis for British imperial rule in India, Evangelicalism gave it a sense of urgency and intense zeal.

Whilst the 17th century marked the zenith of India's mediaeval glory, the 18th century was a spectacle of corruption, misery, and chaos. The glory of the Mughals had vanished, life had become insecure, the nobility was deceitful and oppressive, and intellectual curiosity had given way to superstitious beliefs. The country was in a state of military and political helplessness. In this atmosphere, literature, art and culture could barely survive. The malaise of India was aggravated in full measure by the East India Company with its indiscriminate exploitation, corruption and bribery.

In contrast, Europe was robust and vigorous. This was the Age of Enlightenment, and Europeans were going through a process of rebirth during which religion was detached from state, alchemy from science, theology from philosophy, and divinity from art. The impact of Western culture on India was that of a dynamic society on a static one. It is a cruel irony of history, that whilst two major revolutions – the French and the American-upholding the human rights to liberty and equality were taking place in the West, India was in the throes of losing her own freedom to Western mercantile imperialism.

" The British domination of India has been described as a "political and economic misfortune."

In 1937, a distinguished British civil servant, **G. T. Garratt, declared that the period of Indo-British civilization of the 150 years had been most disappointing, and "in some ways the most sterile in Indian history."**

Haunted by Macaulay's ghost
By Francois Gautier -Publication: Organiser
Date: November 29, 1998
http://www.hvk.org/hvk/articles/articles/1298/0023.html

As a foreign journalist, one cannot understand all the excessive noise made about the Education Agenda of Murli Manohar Joshi: What is wrong in trying to "Indianise, nationalise and spiritualise" education in India? Joshi's critics-and there have been many-have called it "a hidden Hindu agenda". So what?

With 800 million souls, Hindus constitute the majority of this country. Why should Hindus then be ashamed of a "Hindu education"? Traditionally and historically, Hinduism has always been the most tolerant of all religions, allowing persecuted minorities from all over the world, whether the Jerusalem Jews, the Parsis from Persia, Christians from Syria, or even Arab merchants, to settle in India over the centuries and practice their religion in peace. Unfortunately, the same cannot be said of India's invader, be they Muslims, who ruthlessly tried for 10 centuries to stamp out this most peaceful of all religions; or the Christians missionaries, who used every means at their disposal to convert Hindus to the “true” religion (and are still trying today).

But Hinduism, never tried to convert anybody, never sent its armies or missionaries to neighbouring countries, to impose its religion and ways of life-not even by non-violence means, as the Buddhists did all over Asia. It should also be said that Hinduism is much more than a religion, it's a way of life, a universal spiritual outlook, which has allowed numerous sects, branches, philosophies, to develop within its fold, as long as they were faithful to the central truth of Hinduism: Dharma. It even recognises the truth and validity of other creeds-and it's perfectly normal for a Hindu to have pictures of Guru Govind, Christ, Buddha and Krishna in their homes. For are they not avatars? And is that not true secularism (and not the .opportunistic secularism of India’s politicians, which has divided India along caste and religious lines)?

Then why should Hindus not be proud of Hinduism? It has not only shaped the psyches of Hindus, but also of Indian Christians, Jains, Parsis, even Muslims, who are like no other Muslims in the world. And why should Indians be ashamed of their own civilisation whose greatness was foremost Hindu? Why should they refuse to have their children read the Vedas, which constitute one of the great Mountains of spiritual wisdom, or the Bhagavad Gita, which contains all the secrets of eternal life? Or the Ramayana and the Mahabharata, which teach the great values of human nature: courage, selflessness, spiritual endeavour, love of one’s wife and neighbours. ...

Are the French ashamed of their Greeco-Roman inheritance? Not at all! On the contrary they even think that civilization started with the Greeks. Would you call the Germans or the Italians “nationalists" because they have Christian Democrats Parties? Christianity is the founding stone of Western civilisation and nobody dares deny it. Clinton goes to the mass and swears on the Bible and none finds anything to say. We French are brought-up
listening to the values of Homer's Iliad, or Corneille's Le Cid. It is true that in France there has been a separation of the State and the Church; but that is because at one time the Church misused its enormous political power and grabbed enormous amounts of lands and gold. But no such thing ever happened in India. The Brahmins never interfered in politics and today they are often a neglected lot.

When they took over India, the British set about establishing an intermediary race of Indians, whom they could entrust with their work at the middle level echelons and who could one day be convenient instruments to rule by proxy or semi-proxy. The tool to shape these "British clones" was Education. In the words of Macaulay, the 'Pope' of British schooling in India: "We must at present do our best to form a class, who may be interpreters between us and the millions we govern; a class of persons, Indians in blood and colour, but English in taste, in opinions in morals and in intellects". Macaulay had very little regard for Hindu culture

and education: "All the historical information which can be collected from all the books which have been written in the Sanskrit language, is less valuable than what may be found in the most paltry abridgement used at preparatory schools in England".

It seems today that India's Marxist and Muslim intelligentsia could not agree more with Macaulay or with Charles Grant. For the dream of Macaulay has come true: Nowadays, the greatest adversaries of the "Indianised and spiritualised education" of Joshi, are the descendants of these "**Brown Sahibs'** the "secular" politicians, the journalists, the top bureaucrats, in fact the whole Westernised cream of India. And what is even more paradoxical, is that most of them are Hindus. It is they who upon getting independence, have denied India its true identity and borrowed blindly from the British education system, without trying to adapt it to the unique Indian mentality and psychology; and it is they who are refusing to accept "an Indianisation, nationalisation and spiritualisation" of India's education system, which is totally western-oriented. And what India is getting from this education is a youth which apes the West.

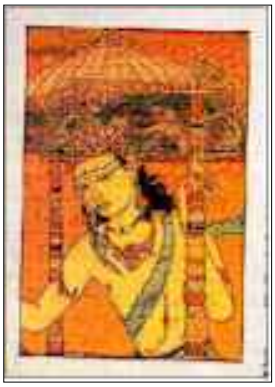
But then, what does makes Indian unique? Take the proposal of Joshi to make Sanskrit compulsory in school. Great idea! Sanskrit is the mother of all languages, and it could become the unifying language of India, apart from. English, which is spoken only, by a tiny minority. "Sanskrit. ought still to have a future as the language of the learned and it will not be a good day for India when the ancient tongues cease entirely to be written or spoken", admonished 50 years ago Sri Aurobindo, India's great Sage and Seer.

A dead language, you say! Impossible to revive? But that's what they argued about Hebrew. And did not the Jewish people, when they got back their land in 1948, revive their "dead" language, so that it is spoken today by all Jewish people and has become alive again? The same thing ought to be done with Sanskrit. Let the scholars begin now to revive and modernize the Sanskrit language, it would be a sure sign of the dawning of the Renaissance of India. In a few years it should be taught as the second language in schools throughout the country, with the regional language as the first and English as the third. Then will India again have its own unifying language.

The Ministers walked out when the Saraswati Vandanam was played. But why should anyone object to Saraswati, the Goddess of Learning who bestowed so much grace on India. In 1939, a disciple told Sri Aurobindo that: "there are some people who object to singing of Vande Mataram as a national song; Sri Aurobindo had replied; "in that case Hindus should give up their culture". But the disciple had continued: "the argument is that the song speaks of Hindu- gods, like Durga and that it is offensive to Muslims". Said Sri Aurobindo: "but it is not a religious song, it is a national song and the Durga spoken of is India as the Mother. Why should not the Muslims accept it? In the Indian concept of nationality, the Hindu view should be naturally there. If it cannot find a place, the Hindus may as well be asked to give-up their culture. The Hindus don't object to "Allah-Ho-Akbar".

It is then obvious that Education in India has to be. totally revamped. The kind of Westernised education which is standard in India, does have its place, because India wants to be on par with the rest of the world, and Indian youth should be able to deal confidently with the West: do business, talk, and relate to a universal world culture. But nevertheless, the first thing that Indian children should be taught is the greatness of their own culture. They should learn to revere the Vedas, they should be taught the genius of the Mahabharata and the Ramayana, they should be told that in this country everything has been done, that it was an unsurpassed civilisation, when the West was still mumbling its first words, that Indian civilisation reached heights, which have been since unsurpassed. But they should be taught early that India's greatness is her spirituality her world-wide wisdom. India’s new education has to be spiritualised, it has to be an inner education, which teaches to look at things from the inner prism, not through the western artificial looking glass.

India's Dharma, her eternal quest for truth, should be drilled in the child from an early age. And from this firm base, everything then can be taught - from the most modem forms of mathematics, to



the latest scientific technologies.

Did You Know?

Much of Modern Medicine can be traced to the Hindu surgeon, Sushruta, circa 600 BCE.

Best known for plastic surgery, his other notable achievements include cosmetic surgery, treatises on medical ethics, definitions, for 121 surgical implements, control of infection through antiseptics, use of drugs, to control bleeding, toxicology, psychiatry, midwifery, cataract operations and classifications of burns. And if all this weren't enough, Sushruta was among the first to prescribe surgical anesthesia - which in his day was a healthy dose of strong wine!

For more on medicine, please refer to chapter on **Hindu Culture**).

221. **Rev. Jabez T. Sunderland** (1842-1936) American born, former President of the India Information Bureau of America and Editor of Young India (New York). Author of **India, America and World Brotherhood**, and **Causes of Famine in India**. He has written glowingly about India's culture:

"India is a highly civilized nation - a nation which **developed a rich culture much earlier than any nation of Europe, and has never lost it."**

India was the first and only nation that proved too powerful for Alexander the Great. It was India that stopped his advance and compelled him to turn back in his career of world conquest. India was the richest nation in the world until conquered and robbed of her wealth by Great Britain.

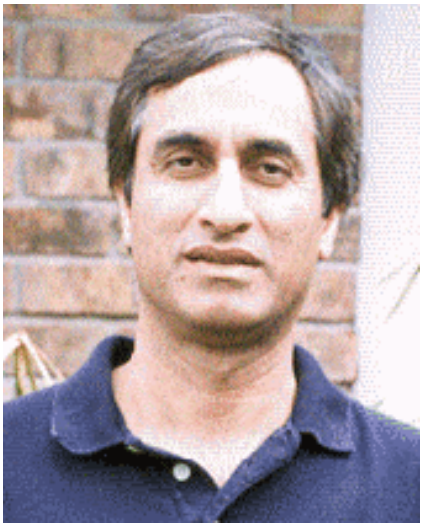
Rev. J. T. Sunderland

India gave to the world two out of six of its greatest Historic religions. Of the six greatest Epic Poems of the world India produced two. India gave to mankind - **Kalidasa**. India contributed enormously to the origin and advancement of Civilization by giving to the world its immensely important decimal system, or so-called "Arabic Notation" which is the foundation of modern mathematics and much modern science.

India early created the beginning of nearly all of the sciences, some of which she carried forward to remarkable degrees of development, thus leading the world. India has produced great literature, great arts, great philosophical systems, great religions, and great men in every department of life - rulers, statesmen, financiers, scholars, poets, generals, colonizers, ship-builders, skilled artisans and craftsmen of every kind, agriculturists, industrial organizers and leaders in far-reaching trade and commerce by land and sea.

For 2,500 years India was pre-eminently the intellectual and spiritual teacher of Asia, which means of half the human race.

"When the British first appeared on the scene, India was one of the richest countries of the world; indeed, it was her great riches that attracted the British to her shores. For 2,500 years before the British came on the scene and robbed her of her freedom, India was self-ruling and one of the most influential and illustrious nations of the world."



"This wealth, was created by the Hindus' vast and varied industries. Nearly every kind of manufacture or product known to the civilized world – nearly every kind of creation of Man's brain and hand, existing anywhere, and prized either for its utility or beauty – had long, long been produced in India. India was a far greater industrial and manufacturing nation than any in Europe or than any other in Asia. Her textile goods – the fine products of her loom, in cotton, wool, linen, and silk – were famous over the civilized world; so were her exquisite jewelry and her precious stones, cut in every lovely form; so were her pottery, porcelains, ceramics of every kind, quality, color and beautiful shape; so were her fine works in metal – iron, steel, silver and gold. She had great architecture – equal in beauty to any in the world. She had great engineering works. She had great merchants, great business men, great bankers and financiers. **Not only was she the greatest**

ship-building nation, but she had great commerce and trade by land and sea which extended to all known civilized countries. Such was the India which the British found when they came."

"The fact is, not Europe but Asia seems to have been the cradle of political liberty, the cradle of democratic and republican government, in the world...research makes it clear that the democratic and republican institutions of Europe and America actually send their roots back to Asia, and especially to India. Republics actually existed in India at least as early as the days of the Buddha (6th century before Christ). The republican form of government in ancient India had a duration of at least a thousand years. We have records of no other country, ancient or modern, where republics have existed and continued for so long a period. Even more important than her republics has been the spirit of freedom and democracy which has manifested itself in many forms among the Indian people from the earliest ages. The **Vedas** show that the principle of representative government were held by the ancient Aryans 12-13 centuries before the Christian era."

(source: **India in Bondage: Her Right to Freedom - By Rev. Jabez T. Sunderland** p.1- 61 and 196 -197).

222. **Dr. Subhash Kak** (1949 -) is a widely known scientist and a Indic scholar. Currently a Professor at Louisiana State University, he has authored ten books and more than 200 research papers in the fields of information theory, quantum mechanics, and Indic studies. He is a Sanskrit scholar and is author of **Astronomical Code of the Rig Veda**, and **India at Century's End: Essays on History and Politics**. He has observed:

"India has had cultural continuity for at least 10,000 years. Before that we had a rock-art tradition which, according to some estimates, goes back to 40,000 BCE. Not only are we one of the most ancient civilizations, we have found in India the record of the earliest astronomy, geometry, mathematics, and medicine. Artistic, philosophical and religious impulses, central to the history of mankind, arose first in India.

Vedic Indians were scientific. They believed in laws of nature. They represented their astronomy in terms of the altar constructions. One problem they considered was that of the synchronization of the lunar and the solar years: the lunar year is about 11 days shorter than the solar year and if we add a round number of days every few years to make up for the discrepancy, we find we cannot do it elegantly unless we have a correction cycle of 95 years or its multiples. This 95-year cycle is described in the earliest Vedic prose books.

The altars were to be built to slightly larger dimensions each year of the cycle to represent the corrections. There were other symbolic constructions. Like building a square altar (representing the sky) with the same area as a circular altar (representing the earth), which is the problem of squaring the circle. This led to the discovery of the earliest geometry. They were aware that the sun and the moon were at 108 times their own diameters from the earth."

" Our school books talk about Socrates, Plato and Aristotle -- and rightly so -- but they don't mention **Yajnavalkya, Panini and Patanjali, which is a grave omission.** Our grand boulevards in Delhi and other cities are named after Copernicus, Kepler and Newton, but there are no memorials to **Aryabhata, Bhaskara, Madhava and Nilakantha!"**

"For at least 50 years, **Indian intellectual life was stifled by a Stalinist attitude.** And before that, for two centuries, colonialist historians appropriated Indian past for their own purposes. **What they left for us was a mutilated version of our past.** We are barely emerging from that hell."

(source: **rediff.com interview** - For more on Astronomical Code refer to chapter on **India and Egypt**).

223. **Lord Curzon** (1859-1925) the late Viceroy of India, in an address delivered at the great Delhi Durbar in 1901:

"Powerful Empires existed and flourished here [in India] while Englishmen were still wandering painted in the woods, and while the British Colonies were a wilderness and a jungle.

India has left a deeper mark upon the history, the philosophy, and the religion of mankind, than any other terrestrial unit in the universe."

It is such a land that England has conquered and is holding as a dependency. It is such a people that she is ruling without giving them any voice whatever in the shaping of their own destiny.

(source: **India in Bondage: Her Right to Freedom - By Jabez T. Sunderland** p. 7 and source: **theatlantic.com**).

224. **Yaqubi** the 9th century Muslim historian has written:

"The Hindus are superior to all other nations in intelligence and thoughtfulness. They are more exact in astronomy and astrology than any other people.

The Siddhanta is a good proof of their intellectual powers; by this book the Greeks and Persians have also profited. In medicine their opinion ranks first."

(source: **The Vision of India - By Sisirkumar Mitra** p. 226).

225. **Harvey Cox** (1929 -) of the Harvard Divinity School remarks,

”I agree that the quest for Truth is the quest for God. This is the core teaching of all religions. The Scientist’s motivation is to seek the very kind of truth that **Krishna speaks about in the Bhagavad Gita. I also agree that the word Religion is an invention of modern western thought.”**

(source: **The Lost City of Dvaraka - S. R. Rao** p. 2).

226. **L. Adams Beck** (? - 1931) author of **The splendour of Asia : the story and teaching of the Buddha** and **The Story of Oriental Philosophy** writes:

India has had a spiritual freedom never known until lately to the West. Christianity when it came offering its spiritual philosophy of life imposed an iron dogma upon the European peoples. Those who could not accept this dogma, whatever it happened to be at the moment, paid so heavy a penalty that the legend of the Car of Juggernaut (Jagarnath) is far truer of Europe than Asia.

Whereas in India the soul was free from the beginning to choose what it would, ranging from the dry bread of atheism to the banquets offered by many-colored passionate gods and goddesses, each shadowing forth some different aspect of the One whom in the inmost chambers of her heart India has always adored. Therefore the spiritual outlook was universal. Each took un rebuked what he needed. The children were at home in the house of their father, while Europe crouched under the lash of a capricious Deity whose ways were beyond all understanding.

But while India fixed her eyes on the Ultimate she did not forget that objective science in the beginning of wisdom. In India, in relation to this consciousness, all roads lead home. A prayer daily repeated by millions says: "As different streams, having different sources and with wanderings crooked or straight, all reach the sea, so Lord, the different paths which men take, guided by their different tendencies, all lead to Thee."

There the foundation of mathematical and mechanical knowledge were well and truly laid by the Noble Race. **Here, written two thousand years before the birth of Copernicus, is an interesting passage from the Aitareya Brhamana**:

“The sun never sets or rises. When people think the sun is setting he only changes about after reaching the end of the day and makes night below and day to what is on the other side. Then, when people think he rises in the morning, he only shifts himself about after reaching the end of the night, and makes day below and night to what is on the other side. In truth, he does not set at all.”

It is interesting to wonder along what lines the philosophies of this great race might have developed later if its ancestral heritage had been less diffused and intermingled with other such different stocks as it found in India on arrival, or were forced by many invasions and conquests to accept later.

Regarding the **Mahabharata** and **Bhagavad Gita**, he writes:

"I read almost daily in both, marveling at the vast fertility, the tropic splendor of romance unfolded in either, but still more at the nobility of ideals set forth, the great passion for the Unseen, the Beautiful, and Entirely Desirable, both in man and woman, which has always been the soul of India."

"The **Bhagavad Gita** is known as the Lord's Song - or the Song Celestial - and **it represents one of the highest flights of the conditioned spirit to its unconditioned Source ever achieved."**

(source: **The Story of Oriental Philosophy - By L. Adams Beck** p. 10 - 120).

227. **Father Heras** (1885-1955) was a Spanish Jesuit priest who worked in India and was a celebrated Professor of History in Bombay. He wrote in **Studies in Proto-Indo-Mediterranean Culture**:

"India has not changed much in the course of ages. Invasions have taken place, wars have been waged in her vast plains, new nations and races have conquered the land and ruled over it, foreign civilizations have brought new notions and new ideals; but everybody and everything has been remodeled and reshaped and recast by the influence of the Indian nation and its ancient civilization. The ancient civilization of Egypt, Babylonia, and Assyria have been blotted out from the map of the world. **But that of India, the first lights of which have been discovered in modern times along the banks of the Indus, is still alive...."**

(source: **East and West - By S. Radhakrishnan** p. 19).

228. **Friedrich Creuzer** (1771-1858) German philologist and archaeologist, was born at Marburg, the son of a bookbinder. In 1802 he was appointed professor at Marburg, and two years later professor of philology and ancient history at Heidelberg. Creuzer's first and most famous work was his **Symbolik und Mythologie der allen VOlker**. He says:

"If there is a country on earth which can justly claim the honor of having been the cradle of the human race or at least the scene of primitive claim the honor of having been the cradle of the human race or at least the scene of primitive civilization, the successive developments of which carried into all parts of the ancient world and even beyond, the blessings of knowledge which is the second life of man, **that country assuredly is India."**

(source: **India: Mother Of Us All - By Chaman Lal** p. 24).

229. **Arnold Hermann Ludwig Heeren** (1760-1842) an Egyptologist has observed:

"India is the source from which not only the rest of Asia but the whole Western World derived their knowledge and their religion."

"The literature of the Sanskrit literature incontestably belongs to a highly cultivated people, whom we may with great reason consider to have been the most informed of all the East. It is, at the same time, a scientific and poetic literature.

(source: **Historical researches into the politics, intercourse, and trade of the Carthaginians, Ethiopians, and Egyptians - By A. H. Heeren** Vol. II p. 201).

"India is the source from which not only the rest of Asia but the whole western world derived their knowledge and religion."

(source: **Yoga: A Vision of its Future - By Gopi Krishna** p. 119).

"The literature of the Hindus is rich in epic poetry." "It will scarcely be possible to deny the Mahabharata to be one of the richest compositions in Epic poetry that was ever produced." "The Hindu lyric surpassed that of the Greeks in admitting both the rhyme and blank verse."

(source: **Historical researches into the politics, intercourse, and trade of the Carthaginians, Ethiopians, and Egyptians - By A. H. Heeren** p. 45).

"If we compare the mythology of the Hindus with that of the Greeks, it will have nothing to apprehend on the score of intrinsic copiousness. In point of aesthetic value, it is sometimes superior, at others, inferior to Greek: while in luxuriance and splendor it has the decided advantage. Olympus, with all its family of gods and goddesses, must yield in pomp and majesty to the palaces of Vishnu and Indra." The Hindu Mythology like the sublime compositions of Milton and Klopstock, extends its poetic flight far into the regions of unlimited space."

(source: **Hindu Superiority - Har Bilas Sarda** p. 244).

230. **Richard Wagner** (1813 -1883) German composer, known for his 13 operas

Wagner absorbed Indian ideas and transformed them to suit his aesthetic purpose. They appear in the libretti of such operas as **Parsifal** (1882), in which he used an episode from the great epic of the **Ramayana** (c.400 BC). In a sense, he succeeded in producing a synthesis of East and West, and from it derived the materials of a universal drama. In this, he was in a direct line from the early German romantics.

(source: **British India: 1772-1947 - By Michael Edwardes** p. 306).

231. **Carl Suneson** author of **Richard Wagner och den indiska tankevärlden** has said: "Parsifal" is in my opinion, of Wagner's completed music-dramas, that in which the Indian influence is most demonstrable.

(source: **Richard Wagner Und Die Indische Geisteswelt - By Carl Suneson**).

232. **Flavius Arrian** (2nd century) Greek historian of the campaigns of Alexander, wrote of the **Hindus**:

"They are remarkably brave, and superior in war to all Asiatics; they are remarkable for integrity; they are so reasonable as seldom to have recourse to law suits, and so honest as to require neither locks to their doors nor writings to bind their agreements. They are in the highest degree truthful."

(source: **India in Bondage: Her Right to Freedom - By Rev. Jabez T. Sunderland** p. 178).

233 **Swami Abhedananda** (1866-1939) in his book, **India and her people** Kessinger Publishing Company February 1998 ISBN 076610186X writes:

"Hinduism stands like a huge banian tree spreading its far reaching branches over hundreds of sects, creed and denomination and covering with innumerable leaves, all forms of worship, the dualistic, the qualified non-dualistic and monistic worship of the one Supreme God, the worship, of the Incarnation of God and also hero worship, saint worship, ancestor worship and the worship of the departed spirit. It is based on the grand idea of universal receptivity. It receives everything."

(source: **Ancient Indian Culture At A Glance - By Swami Tattwananda** p. 50).

234. **John Davies** (? -1890) author of **Hindu philosophy** has written:

"The latest German philosophy, the system of Schopenhauer and Von Hartmann, is mainly a reproduction of the philosophic system of Kapila in its materialistic part, presented in a more elaborate form but on the same fundamental lines. In this respect the human intellect has gone over the same ground, that it occupied more than two thousand years ago; but on a more important question it has taken a step in retreat. Kaipila recognized fully the existence of a soul in man, forring indeed his proper nature - the absolute ego of Fichte - distinct from matter and immortal; our latest philosophy, both here and in Germany, can see in man only a highly developed physical organization. 'All external things' says Kapila 'were formed that the soul might know itself and be free.' "The study of psychology is vain says, Schopenhauer, "for there is no Psyche."

(source: **Hindu Philosophy: The Sânkhya Kârikâ of Îúwara Krishna. An Exposition of the System of Kapila - By John Davies** Elibron Classics reprint. Paperback. New. Based on 1881 edition by TrLbner & Co., London - in preface).

"Scythianus was a contemporary of the Apostles, and was engaged as a merchant in the Indian trade. In the course of his traffic he often visited India and made himself **acquainted with Hindu philosophy.** According to Epiphanius and Cyril, he wrote a book in four parts, which they affirm to be the source from which the Manichaean doctrines were derived."

(source: **Bhagwad Gita - by John Davies** p. 196 and **Hindu Superiority - By Har Bilas Sarda** p. 282).

235. **Guillaume Apollinaire** (1880-1918) French poet, novelist, dramatist, and art and literary critic. He became a leader of the avant-garde in Paris in the early 20th century and is believed to have coined the term surrealist. He was christened Wilhelm Apollinaris de Kostrowitzky.

He used the **Shakuntala** theme in his poem in **La Chanson du Mal-Aime**:

" L'époux royal de Sacontale
Las de vaincre se réjouit
Quand il la retrouva plus pâle
D'attente et d'amour yeux pâlis
Caressant sa gazelle mâle."

"The royal spouse of Sacontale
(Shakuntala)
Weary of victories, rejoices
When he finds her paler
From waiting and eyes pale from love,
Petting her male gazelle."

(source: **The India I Love - By Marie-Simone Renou** p. 45-46).

236. **Dr. Aidan Rankin** author of **Lifting the shadow : why Conservatives must reclaim human rights** and was a Research Fellow in Government at the London School of Economics and editor of the Britain's leading environmental magazine, the Ecologist has written:

"Hinduism, whose **rishis** or seers the Greeks admired from afar, provides the strongest, most consistent critique of materialism. It is the philosophical tradition best adapted to our post-modern age.

"...Hinduism, offers true universalism, that is to say unity-in-diversity. In the Hindu dharma, the individual can approach the divine in his or her own way. The eternal truth is the same truth, but can be pursued by different means, according to personal or cultural preference. Hindu economics is based on local production for local need, a principle to which the green movement now looks. Rooted in Hindu philosophy it offers a humane alternative to the failed socialist planning of Nehru - and the ascendant Coco Cola capitalism, the iniquities of which become more apparent every day. Similarly, the ethical teachings of the **Vedas** provide for a healthy balance between masculine and feminine principles, to the advantage of both and the detriment of neither. Above superficial ' rights' for individuals or groups, Vedic teaching exalts our responsibilities - for each other, as human beings, and to our fellow creatures who have souls as we do. **Hinduism gives spiritual underpinnings to the new wisdom of Deep Ecology and the revelations of modern science."**

"Hinduism has survived its historical tribulations and is finding a new voice in world affairs."

(source: **Hinduism and the Clash of Civilizations - By David Frawley** p. foreword vi -x).

237. **Percy B Shelley** (1792-1822) English Romantic poet who rebelled against English politics and conservative

values. His pantheism is full of unconscious reminiscences of Hindu thought, which reached them through the medium of Neoplatonism. Sir William Jones was also a strong influence on Shelley, as was Southey's "The Curse of Kehama." Indeed, Jones served as a "catalyst" for Shelley's thought. Shelley used Indian imagery throughout **Prometheus Unbound**, and John M L Drew, author of **India and the Romantic Imagination**, thinks that particularly in the final act one can discern Shelley's acceptance of Jones's optimism that India was the primeval fount of wisdom and understanding.

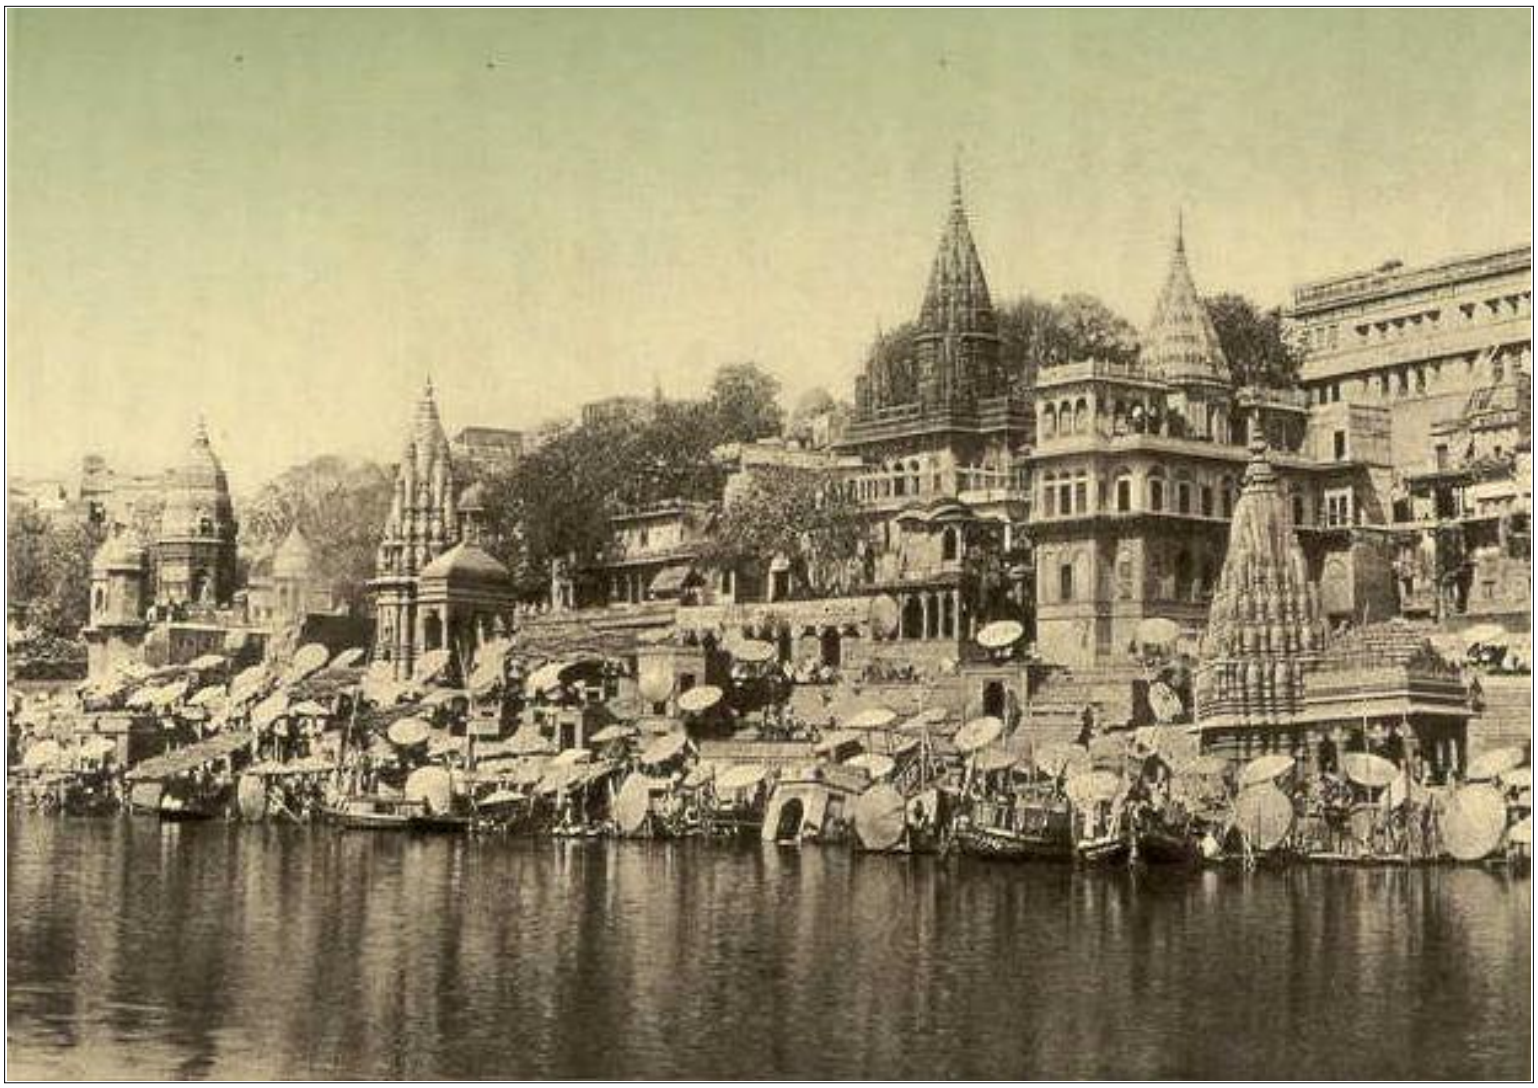
Similar to the Yugas and the cosmic cycles in Hinduism, he wrote in his poem - Worlds on worlds are rolling ever

"Worlds on worlds are rolling ever
From creation to decay,
Like the bubbles on a river
Sparkling, bursting, borne away."

(source: **Philosophy of Hinduism - An Introduction By T. C. Galav** Universal Science-Religion. ISBN: 0964237709 p 91).

Nowhere is the **Vedantic doctrine of Maya** more magnificently propounded than in **Adonais**:

"The One remains, the many change and pass,
Heaven's light for ever shines, Earth's shadows fly,
Life, like a dome of many-colored glass,
Stain the white radiance of Eternity,
Until Death tramples it to fragments."



Even more striking is Shelley's passionate conviction that Adonais has found that final absorption which in **Hindu philosophy is the end of the Quest.** He is not dead: he has 'awakened from the dream of Life.' He is 'made one with Nature':

(source: **The Legacy of India - Edited by G. T. Garrett.** p. 33-34).

238. **Kenneth Saunders** (1883-1937) author of **The Heritage of Asia** has written:

"India is not only a mother of civilization, she is pre-eminently a spiritual mother of Asia. Her arts - noble architecture, fresco painting, sculpture, chamber-music and poetry - these have in India been handmaiden of religion. And this is no less true of her poetry from the rich anthology of the Rig Veda and the Great Epics to the lyrics of Rabindranath Tagore, the best of which are hymns. The tradition, too, of her education, from the university of Nalanda, where ten thousand students sat at the feet of religious teachers, to the guru seated under a tree with his handful of disciples, has been pre-eminently religious. India, in a word, is a God-intoxicated country; and her philosophy, which has in many ways and by many centuries anticipated the systems of European thought, is for the most part a religious philosophy; it deals with the One behind the many, the Real behind the illusory, and is perhaps **man's most courageous attempt to reach an ultimate unity.**

The essential **unity of ancient India** may be sufficiently demonstrated for our purpose by two facts. Firstly, her sacred places are known and visited by all; they are a common heritage, and a network of pilgrim-roads links them one with another. "The institution of pilgrimage," says a Hindu writer, "is entirely an expression of love for the motherland, one of the modes of worship of the country which strengthens the religious sentiment and expands the geographical consciousness." Whether amidst the snowy peaks of the Himalayas or the palm-fringed shores of Bengal or Madras, these shrines are all set in scenes of great natural beauty. Indian religion and Indian patriotism are, the, inseparably intertwined; **the motherland is a holy land, one for every Indian** from the Himalayas to Cape Comorin."

Mark Twain called Benares older than history, older than tradition, older even than legend, and looks twice as old as all of them put together.

India's noblest gift to humanity - a belief that the unseen and intangible values are stronger and more real than the things of sense, and to this, her philosophy, with its unshaken conviction that there is One behind the many. One alone supremely real, bears witness.

Her most ancient prayer is a summary of her immemorial quest:

From the unreal to Reality
From death to Immortality.

(source: **The Heritage of Asia - By Kenneth Saunders** p. 35 - 41 - Student Christian Movement Press).

We may say schematically that India has been more concerned with the mystical than the ethical, with the beauty of the unseen mind at play in the universe….."

In the golden age of Korea, too, something of Indian mysticism and of Chinese humanism was blend in a fine synthesis which inspired the Japanese…."

(source: **The Heritage of Asia - By Kenneth Saunders** p. 24 - Student Christian Movement Press).

239. **Francois Gautier** (1950 -) Paris-born, he has lived in India for 30 years, is a political analyst for Le Figaro, one of France's largest circulation newspaper. He defends Indian nationalism. He caused a storm of controversy in India by advocating reunification with Pakistan. Author of several books, including **A Western journalist on India : The Ferengi's Columns** and **Rewriting Indian History**

He has called India, Spiritual leader of the world.

"Ancient Hindus were intensely secular in spirit, as their spirituality was absolutely non-sectarian - and still is today in a lesser measure. Seven thousand years ago, **Vedic sages**, to define the Universal Law which they had experienced within themselves on an occult and supra-spiritual plane, had invented the word **dharma.** In a nutshell, dharma is all that which helps you to become more and more aware of jiva inside yourself.

"India also survived the immense threat of European colonialization, which has annihilated the souls of so many countries, some more powerful than India. **The British came, conquered...understood nothing...left nothing...and India's spirituality remained.** It survived the cruel partition of its ancient land, tearing its limbs into Pakistan and Bangladesh, any other nation might never have recovered from such a maiming. It survives today the Hindu-bashing of its westernized elite..."

Thus, for India, the Muslims invasions and later the European ones, must be the result of bad karma....India's soul is so strong, so old, so vibrant, that she has managed so far to survive the terrible Muslim onslaughts and later the more devious British soul-stifling occupation."

"Yet because of this extraordinary spirituality, because of the **Dharma stored by its great Rishis**, India always had the extra impetus to renew itself, to spring forward again, when it seemed she was on the brink of collapsing."

(source: **Arise O' India - By Francois Gautier** Har Anand publisher ISBN: 81-241-0518-9 p. 11 and 155-156).

Speaking about the legendary tolerance of Hinduism, he recently wrote:

" But, once again my "fringe" Hindu brothers and sisters, as well as the Christian and Muslim communities of India, should remind themselves than in the entire Indian history, **Hinduism has always shown that it is not fundamentalist, that it accepts the others with their religions and customs as long as they do not try to impose these beliefs on the majority community.**

Indeed, in a recent report, **UNESCO pointed out that out of 128 countries where Jews lived before Israel was created, only one, India, did not persecute them and allowed them to prosper and practice Judaism in peace.**

Hinduism is probably the only religion in the world which has never tried to convert others, or conquer other countries to propagate itself as a new religion. The same is not true of Islam and Christianity. "

(source: **Redefining India - By Francois Gautier** - dailypioneer.com December 11 '02) For more visit **Francois Gautier**).

240. **Sita Ram Goel** (1921- 2003) scholar, writer, publisher, the founder of Voice of India, an 'intellectual' Kshatriya' par excellence, and a Hindu revivalist. Author of several books, including **The Story of Islamic Imperialism**, **Defence of Hindu Society** and **History of Hindu-Christian Encounters**. He writes:

"It is an intuition ingrained in the Hindu psyche to inhabit our entire environment - celestial, physical, vegetable, animal, and human - with innumerable Gods and Goddesses. Some of these divinities are installed in temples as icons, and worshipped with well-defined rituals. Some others are worshipped as and where they are invoked. Hindu shastras, saints and sages have paid homage to many Gods and Goddesses in many sublime hymns."

" I am a Hindu, which to me means the inheritor of the oldest and the highest spiritual culture known to human history."

Hindu seers and sages as also Hindu shastras, no matter to what Hindu sect they belong, designate this spiritual center of Hindu society as Sanãtana Dharma. Sanãtana Dharma says that the aspiration for Truth (satyam), Goodness (šivam), Beauty (sundaram), and Power (aišvarya) is inherent in every soul, everywhere, and at all times, like the physical hunger of the body for food and drink.

The Upanishadic prescription, ãtmãnam viddhi (know thyself) is a variation on the same theme. It leads to the same attainment - aham brahmo'smi (I am Brahma), tat tvam asi (thou art That), and sah tadasti (he is That). It is a steep spiritual ascent at the end of which the Ãtman (Self) becomes Paramãtman (Supreme Self), and the PuruSa (Person) becomes PuruSottama (Superperson). In the language of Theism, man becomes God."

(source: **Defence of Hindu Society - By Sita Ram Goel - voi.org**).

241 **Sir Chetpat Pattabhirama Ramaswami Aiyar** (1879-1966) former Dewan of Travancore, and eminent scholar-statesman and former Vice-Chancellor, who was the first to ban hunting in India

"Indian Culture in the past is analogous to a subterranean river that has been fertilizing many countries which have not only on the landscape but also on all the countries of the mind."

He has shown how we see manifestations of the **pervasive influence of Hindu Culture** in Greece and Egypt and in Peru and Mexico as also in Sumatra and Java and Bali and in Burma and Siam and Cambodia and Indo-China and even in China and Japan. He has shown how Vedanta has inspired the Sufi doctrine.

Sir C. P. Ramaswami Aiyar, who had reached New York en route to San Francisco, met on the 30th September a group of American intellectuals and journalists. British historian had observed that India was conquered in a spirit of British absent-mindedness. Free India wanted to make sure that there was not going to be such absent-mindedness on anybody' part again. Asked if India would accept Communist doctrine, he replied it could not, because the **Indian was a rugged individualist.**

(source: **Sir C. P. on India and the U. S**).

242. **Count Magnus Fredrik Ferdinand Bjornstjerna** (1779-1847) author of **The Theogony of the Hindoos with their systems of Philosophy and Cosmogony** after quoting from the Vedas says:

"These truly sublime ideas cannot fail to convince us that the Vedas recognize only one God, who is Almighty, Infinite, Eternal, Self-existent, the Light and the Lord of the Universe."

He says: “No nation on earth can vie with the Hindus in respect of the antiquity of their civilization and the antiquity of their religion.”

"In a metaphysical point of view we find among the Hindus all the fundamental ideas of those vast systems which, regarded merely as the offspring of fantasy, nevertheless inspire admiration on account of the boldness of flight and of the faculty of human mind to elevate itself to such remote ethereal regions. We find among them all the principles of Pantheism, Spinozism and Hegelianism, of God as being one with the universe; spiritual life of mankind; and of the return of the emanative sparks after death to their divine origin; of the uninterrupted alternation between life and death, which is nothing else but a transition between different modes of existence. All this we find among the philosophies of the Hindus exhibited as clearly as by our modern philosophers more than three thousand years since."

Referring to the practical character of Hindu philosophy, he said, In this respect the Hindus were far in advance of the philosophers of Greece and Rome, who considered the immortality of the soul as problematical."

"The literature of India makes us acquainted with a great nation of past ages, which grasped every branch of knowledge, and which will always occupy a distinguished place in the history of the civilization of mankind."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 203-278).

243. **Rick Briggs** NASA researcher, has written about India's ancient language - Sanskrit:

" In ancient India the intention to discover truth was so consuming, that in the process, they discovered perhaps the most perfect tool for fulfilling such a search that the world has ever known -- the Sanskrit language.

It is mind-boggling to consider that we have available to us a language which has been spoken for 4-7000 years that appears to be in every respect a perfect language designed for enlightened communication. But the most stunning aspect of the discovery is this: NASA the most advanced research center in the world for cutting edge technology has discovered that Sanskrit, the world's oldest spiritual language is the only unambiguous spoken language on the planet. Considering Sanskrit's status as a spiritual language, a further implication of this discovery is that the age old dichotomy between religion and science is an entirely unjustified one.

Why has Sanskrit endured? Fundamentally it generates clarity and inspiration. And that clarity and inspiration is directly responsible for a brilliance of creative expression such as the world has rarely seen.

Another hope for the return of Sanskrit lies in computers. Sanskrit and computers are a perfect fit.

(source: **Knowledge Representation in Sanskrit and Artificial Intelligence - By Rick Briggs - Artificial Intelligence Magazine** 6(1) 32-39 1985).

244. **Dr. Alexander Duff** (1806-1878) British Christian missionary, is reported to have said, in a speech delivered in Scotland, that:

"Hindu philosophy was so comprehensive that counterparts of all systems of European philosophy were to be found in it."

(source: **Hindu Superiority - BY Har Bilas Sarda** p. 277).

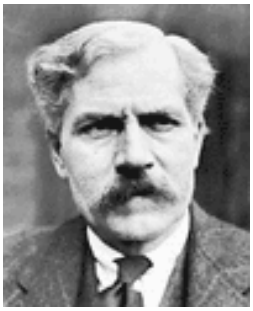
245. **Al-Jahiz** 9th century Muslim historian writes:

"The Hindus excel in astrology, mathematics, medicine and in various other sciences. They have developed to a perfection arts like sculpture, painting, and architecture. They have collections of poetry, philosophy, literature and science of morals. From India we received the book called Kalilah wa Dimnah. These people have judgment and are brave. They posses the virtues of cleanliness and purity. Contemplation has originated with them."

(source: **The Vision of India - By Sisirkumar Mitra** p. 226).

246. **Abdullah Wassaf**, writing in the 14th century A.D. says of India in his history book, **Tazjiyatul Amsar**:

" India, according to the concurrent opinion of all writers, is the most agreeable abode on earth and the most pleasant quarter of the world. Its dust is purer than air and its air is purer than purity itself: Its delightful plains resemble the garden of paradise.



248. **Alexander Dow** author of **History of Hindustan** and had published an essay on Hinduism, entitled **A Dissertation Concerning the Customs, Manners, Language, Religion, and Philosophy of the Hindus** (1768). The first European scholar to produce a real dissertation on Sanskrit learning, he pointed out the vast quantities of Sanskrit literature in existence, plus the fact that **the history of the Hindus was older than that of any other people.**

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 242).

248. **Theordore Goldstucker** (1821-1872) born in Germany, professor of Sanskrit at London's University College wrote the Dictionary of Indian Biography. He finds in the Upanishads: "the germs of all the philosophies."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 277).

249. **James Ramsey MacDonald** (1866-1937) first Labor Party prime minister of Great Britain could grasp the truth when he said in his Introduction to the "The Fundamental Unity of India:

"The Hindu from his traditions and religion regards India not only as a political unit naturally the subject of one sovereignty, but as the outward embodiment, as the temple - nay even as the Goddess Mother of his spiritual culture. **"India and Hinduism are organically related as body and soul."**

(source: **The Soul of India - By Satyavrata R Patel** p.208).

250. **Michael Pym** (1889 -) author of **The Power of India** writes:

"Hindu philosophy has had more effect upon the world than is perhaps generally realized, though it has often come through at second and third hand. Hinduism as a practical working institution is intended for and has grown out of Indian condition."

***

"India challenged, one realized, the whole of the West. Not Western inventions, Western science, Western conveniences, which India was perfectly ready to adopt insofar as they suited India's convenience. ...Not that. **The challenge was a much deeper thing. A challenge of values, of ethics, of attitude to life.**

India, like the rest of the East, had bowed to the illusion of Western superiority, taken it all quite literally - Christianity as the religion of peace and love, of the brotherhood of man. Western education and Western progress as the panacea for the evils of existence.

The West spoke fairly enough, talking of honor, the sanctity of the given word, and of promises; of freedom and enlightenment. **It vaunted its poets, its philosophers, its scientists, its classical inheritance from that beautiful, far off Greece, whose greatest philosophers, it forgot to mention, had been inspired through Egypt and Persia, by India.**

For years India and all the East really believed all this. Complete subscribers to Nordicism and the theory of the Great Race. Indians did their best to Westernize themselves. **It was a dis-illusionizing period.** This great Western civilization, what was it? The West brought certain material benefits, certain aspects of learning which nobody could deny….**But also it seemed to bring a deadly poison. Beneath its hand, the East withered – its morality destroyed, its physical body destroyed, its ancient learning destroyed.** Only its vices added to by the new vices of the West, remained and flourished.

So this wonderful Western civilization made its own people no more happy, no better off ultimately, than the ancient systems of the East. India understood greed; she understood treachery and lies, violence and vice. All that exists wherever humanity exists, is a part of life. **But it could not understand a claim to superiority** which, as far as it could see, was based upon just these things. It saw that in the West vice hardly troubled any longer even to pay tribute to virtue. The West, India observed, did not revere its holy men. It seemed always to prefer killing them. **It saw the West take possession of other lands, because the people to whom they first belonged were, said the West, ignorant and miserable and it was the sacred duty of the Christian West – "the White Man's Burden" – to bring them enlightenment, education, freedom.**

It saw these people, in their turn, strive towards Western education, imitating the White Man, and saw the White man, when this or that individual had successfully obtained the prize, gone through Western universities, Western schools, scornfully deny them equality, and openly declare that Western education spoilt a good Orient. Finally, India, the East, saw the West in its frenzy of destruction turn upon itself, and, in **the most horrible of all wars** – a conflict disgraced by its barbarism, its inhumanity, its slimy filth of propaganda, tear itself to pieces. The forces of Western civilization revealed themselves to the East as forces of sheer, mad, destruction.

Then India shuddered. It did not condemn the peoples of the West. But it realized that somewhere in the Western scheme existed a dreadful flaw. India does not believe in the validity of Western civilization. It does not believe in Western ethics or in Western standards – taken as a whole. It challenges dynamic action with dynamic thought. It challenges the intolerance which conceives of a personal Deity creating, at his pleasure, a Chosen Race to inherit and rifle the earth, with the tolerance which sees all the world as changing forms expressing the same essential divinity. **It challenges the intellectual conceit which sees no divinity anywhere,** man as the supreme formation of matter, with the spiritual wisdom which realizes the limitations of the senses and of the intellect. It lifts above the five pointed star, the seven pointed!

That is India's challenge to the West – a question of values, of attitude to existence. India as Vishnu, preserving the sacred flame; as Shiva dancing the dance of creation over the Darkness he has destroyed; even as Kali, garlanded with skulls, smeared with blood, destroying destruction. **India will win. Matter is always molded by spirit.** But what is this spiritual power of India? As a sensitive Russian woman asked me: **"Why does God seem so much nearer in India?"**

India is God-intoxicated. Not, as the limited view has it, religion mad, but **infected by what Plato called the divine madness of the philosopher, the seeker after wisdom.** Nothing of that explains India's spiritual power.

It may be that India has realized God. Is that the secret of her power?

India regards the attempt to understand the **ultimate reality** as the highest and finest aim of existence... **This freedom is more priceless than any political institution. Because of this, India has been able to arrive at spiritual knowledge and strength unequalled anywhere in the world.**

Were India ever to be influenced by superficial Western ideas as to institute foolish vagrancy laws and organized charity distribution societies, **it would lose living torches of spiritual wisdom and knowledge, and perhaps even sink to levels of materialistic barbarism.** The spiritual adventurers of India are the yogis, sadhus, holy men and women of all creeds and descriptions…They have existed in India since the earliest days of history, and through all its magnificent and wealthy civilization they have kept alive in India the thought of another beauty, a more wonderful existence, of which is all this is but a lovely veil.

To reach the reality which is concealed by the unrealities of the visible world. That is yoga – literally union with God. With ruthless logic, India dismisses the unthinking Western deification of science as a means of discovering ultimate truth. Science, especially as the popular mind understands it, with its test tubes, its microscopes, its laboratories, all its most delicate instruments, while it is helpful, has an inherent limitation. It is still confined to the bounds of this form world. India, through centuries upon centuries, has taught another method of attaining reality. This is the system of yoga. It is based upon two things: intuitive knowledge; and the development of other faculties, other states of consciousness.

Show in alphabetical order

61. **Mihai Eminescu** (1850-1889), the greatest poet of Rumania, learnt of Indian philosophy through Schopenhauer. The Hindu approach to reality and beauty is found in his verses. The title of his poem "**Tattwamasi**," indicates his familiarity with Upanishadic thought, but the content deals with the identity of Atman and Brahman. Hindu Monoism is reflected in his poem:

" So it is that bird and man,
Sun and moon
Are born and die in **Brahma**
the Sacred -
Where all things become one."

Eminescu's poetry also contains many erotic themes, such as Kamadeva, after the Hindu god of love, the spark of creation. That Eminescu chose an Indian symbol to express one of his intimate sentiments is held as " yet another proof of the deep and wide contact he had with the ancient literature of India."

(source: **India and World Civilization** - **By D. P. Singhal** p. 252).

62. **Leo Tolstoy** (1828-1910) was a champion of nonviolent protest; he was "an influential factor in the social restlessness that swept Russia before the revolution." **He was a mystic who started Russia's first vegetarian society.** After the Bolshevik revolution in 1971, his followers were persecuted and all vegetarian communities were closed.

Tolstoy, a late-comer, was also deeply influenced by Indian religious thought. Like Wagner, his introduction to it was through Burnoff and Schopenhauer. Beginning with his *Confessions*, there is no work of his "which is not inspired, in part by Hindu thought", to put it in the words of Markovitch quoted by Raymond Schwab in *The Oriental Renaissance*. He further adds that Tolstoy also **"remains the most striking example, among a great many , of these who sought a cure for the western spirit in India."**

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 105).

Tolstoy the famous Russian author of 'War and Peace', responded to India with sensitivity. Ancient Indian literature and the writings of Swami Vivekanada made a deep impression on him. In a letter to Gandhi in 1909, he quoted from the Upanishads, the Bhagavad Gita, the Tamil Kural, and Vivekananda. His philosophy contradicted official church doctrine and was deemed heretical. Tolstoy is only one of the many Western writers and thinkers to find much of illumination within Hinduism's pages.

He urged Indians to adopt what he called :

"The Law of Love," and not to give up their ancient religious culture for the materialism of the West."

(source: **India and World Civilization - By D. P. Singhal** p. 252).

Mr. Alexander Shifman Research scholar of **Tolstoy Museum in Moscow** wrote in his article entitled **A Leo Tolstoy and the Indian Epics'** published in several papers during Tolstoy centenary celebrations in 1963.

"Leo Tolstoy was deeply interested in ancient Indian literature and its great epics. The themes of the Vedas were the first to attract his attention. Appreciating the profundity of the Vedas, Tolstoy gave a particular attention to those cantos which deal with the problem of ethics, a subject in which interested him deeply."

Tolstoy not only read the Vedas, but also spread their teachings in Russia. He included many of the sayings of the Vedas and Upanishads (Vedic expositions) in his collections **"Range of Reading", "Thoughts of wise men"** and others. It would have been an ideal time to introduce this great learning with the birth of Marxism where all dogmas were outlawed. The intellects were freer of perversion and could have been easily found acceptance by a great many young Russians.

(source: http://www.geocities.com/Athens/Ithaca/3440/revelation.html).

63. **Anquetil-Duperron** (1731-1805) a French Orientalist. He gave up studying for the priesthood to pursue his deep interest in Eastern languages. In India he learned Persian, Sanskrit, Zend, Avestan, and Pahlavi. He also translated the Upanishads into Latin (1804) and wrote several works on India. He spent seven year in India, had recorded in his moving testimony in 1778:

"**Peaceful Indians**,... did the rumor of your riches have to penetrate a clime in which artificial needs know no bounds? Soon, new foreigners reached your shores; inconvenient guests, everything they touched belonged to them....

If the British ...neglect any longer to enrich Europe's scholars with the Sanskrit scriptures...they will bear the shame of having sacrificed honor, probity, and humanity to the vile love for gold and money, without human knowledge having derived the least lustre, the least growth from their conquests."

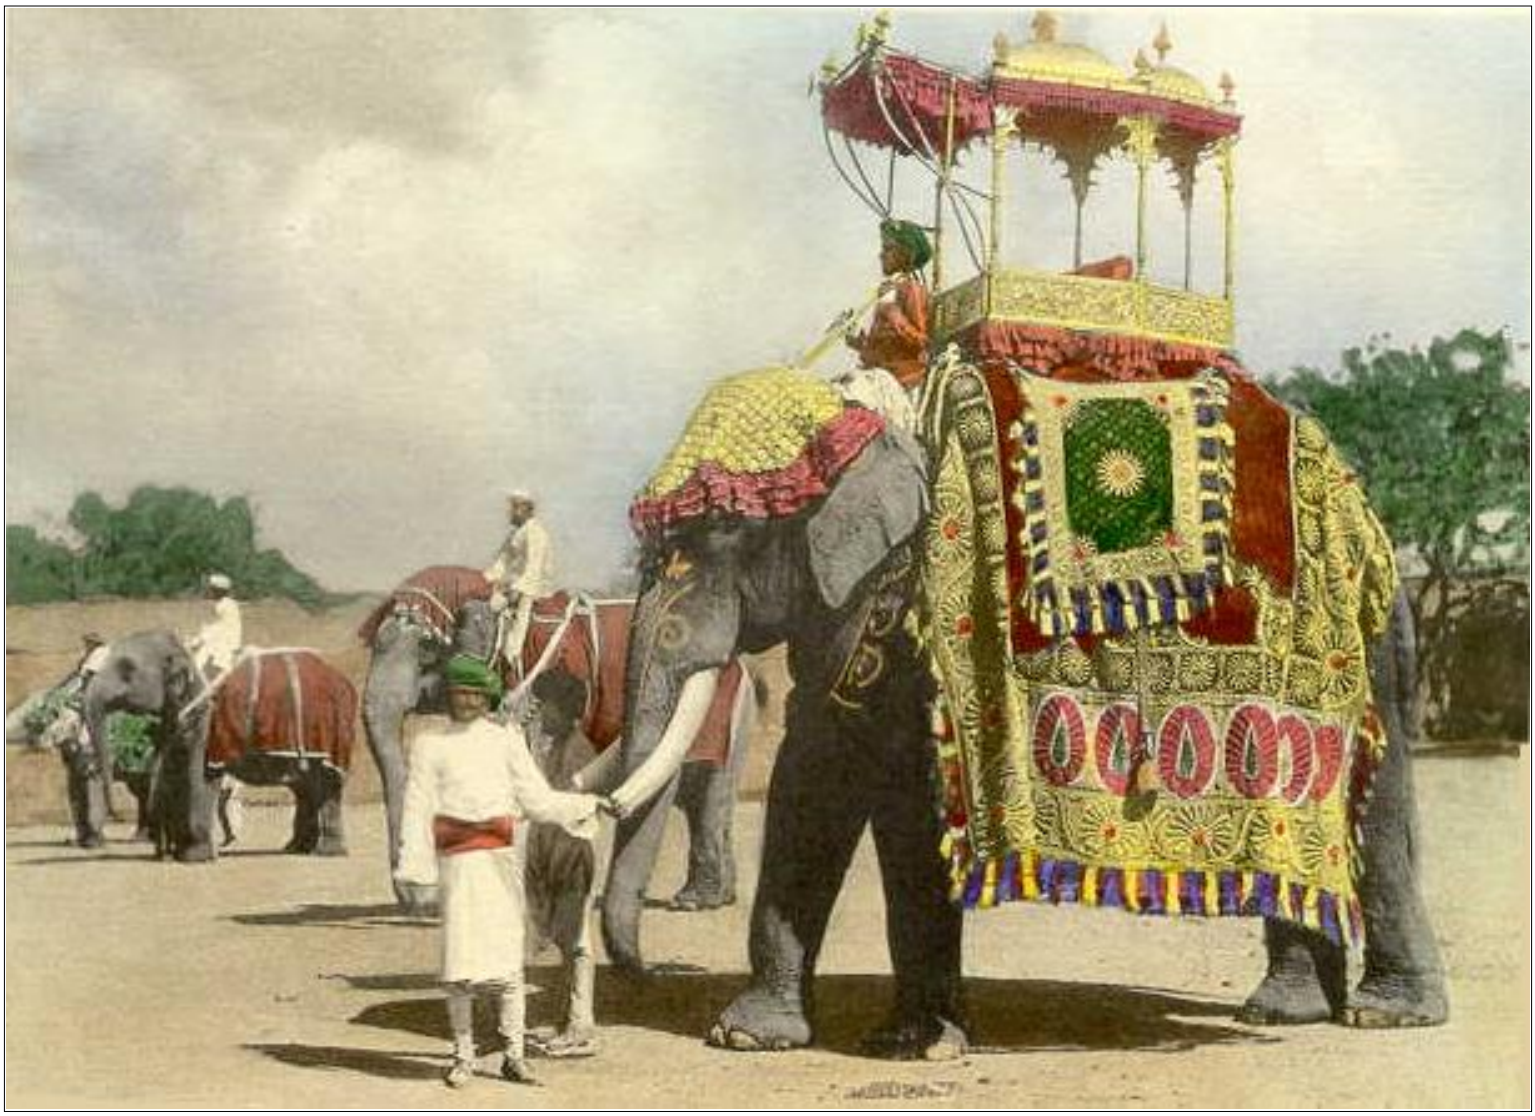
(source: **The Invasion That Never Was** - **By Michel Danino and Sujata Nahar** p. 14-15).

64. **Louis Francois Jacolliot** (1837-1890), who worked in French India as a government official and was at one time President of the Court in Chandranagar, translated numerous Vedic hymns, the **Manusmriti**, and the Tamil work, **Kural.** His masterpiece, **La Bible dans l'Inde**, stirred a storm of controversy. He praised the Vedas in his Sons of God, and said,:

"The Hindu revelation, which proclaims the slow and gradual formation of worlds, is of all revelations the only one whose ideas are in complete harmony with modern science. "

Jacolliot feels India has given to the West much more than she is credited with when he says:

" Besides the discoverers of geometry and algebra, the constructors of human speech, the parents of philosophy, the primal expounders of religion, the adepts in psychological and physical science, how even the greatest of our



biological and theologians seem dwarfed! Name of us any modern discovery, and we venture to say that Indian history need not long be searched before the prototype will be found on record. Here we are with the transit of science half accomplished, and all our Vedic ideas in process of readjustment to the theories of force correlation, natural selection, atomic polarity and evolution. And here, to mock our conceit, our apprehension, and our despair, we may read what Manu said, perhaps 10,000 years before the birth of Christ:

The first germ of life was developed by water and heat.' (Book I, sloka 8,9)
' Water ascends towards the sky in vapors; from the sun it descends in rain, from the rains are born the plants, and from the plants, animals.' (Book III, sloka 76)

(source: **Krishna and Christ - By Louis Jacolliot** p. 15).

"Aware of the resentment I am provoking, I yet shrink not from the encounter. We are no longer burnt at the stake, as in the times of Michael Servetus, Savanarola, and of Philip II, of Spain, and free thought may be freely proclaimed in an atmosphere of freedom.

Soil of Ancient India, cradle of humanity, hail! Hail, venerable and efficient nurse whom centuries of brutal invasions have not yet burned under the dust of oblivion! Hail, farther land of faith, of love, of poetry and of science! May we hail a revival of thy past in our West in future!

State elephants - History of India - By Romesh Chunder Dutt - edited by A V William Jackson. vol. I

"I have dwelt midst the depths of your mysterious forests, seeking to comprehend the language of your lofty nature, and the evening airs that murmured midst the foliage of banyans and tamarinds whispered to my spirit these three

magic words: Zeus, Jehova, Brahma."

" How glorious the epoch that then presented itself to my study and comprehension! I made tradition speak from the temple's recess. I enquired of monuments and ruins, **I questioned the Vedas whose pages count their existence by thousands of years and whence enquiring youth imbibed the science of life long before Thebes of the hundred gates or Babylon the great had traced our their foundations."**

"And then **India appears to me in all the living power of her originality** – I traced her progress in the expansion of her enlightenment over the world – I saw her giving her laws, her customs, her morale, her religion to Egypt, to Persia, to Greece and Rome – I saw Jaiminy and Veda Vyasa precede Socrates and Plato, and Krishna, the son of the Virgin Devajani (in Sanskrit, created by God) precede the son of the Virgin of Bethelehem.

" Very few travelers have sought to understand India, very few have submitted to the labor necessary to a knowledge of her past splendor, looking only at the surface they have ever denied them and with an unreasoning confidence of criticism that made them the easy victims of ignorance."

(source: **La Bible dans l'Inde - By Louis Jacolliot** p 1 - 16).

He has said in his book, **Bible in India: Hindoo origin of Hebrew and Christian revelation**

"India of the **Vedas** entertained a respect for women amounting to worship; a fact which we seem little to suspect in Europe when we accuse the extreme East of having denied the dignity of woman, and of having only made her an instrument of pleasure and of passive obedience." He also said: "What! here is a civilization, which you cannot deny to be older than your own, which places the woman on a level with the man and gives her an equal place in the family and in society."

(source: **India And Her People - By Swami Abhedananda** - p. 253).

Regarding the branching out of the primeval human family, he confirmed his views in his book Bible in India:

"In returning to the fountainhead do we find in India all the poetic and religious traditions of ancient and modern peoples. **India is the world's cradle.** Thence it is that the Common Mother in sending forth her children even to the remotest West has in an unfading testimony of our original, bequeathed us the legacy of her language, her laws, her morals, her literature, her religion."

(source: **Hinduism in The Space Age - By E. Vedavyas** p. 87).

"In point of authenticity, the Vedas have incontestable precedence over the most ancient records. These holy books which, according to the Brahmins, contains the revealed word of God were honored in India long before Persia, Asia Minor, Egypt, and Europe, were colonized or inhabited."

"Of the Sastras and the Mahabharata, which profess the same doctrines, the dates are lost in the night of time. If we accept the chronology of the Brahmins, as calculated by the learned Orientalist, Halhed, they must possess, the first an antiquity of Seven and the second of four million years – a chronology which strikes point blank at all our European ideas or matter. Such things easily excite laughter, especially in France, the country of superficial spirits and of inconsiderate affirmation. We have made a little world for ourselves, dating from scarce 6,000 years, and created in 6 days, that satisfies all, and needs no thought."

(source: **Bible in India: Hindoo origin of Hebrew and Christian revelation - By Louis Jacolliot** p 53 – 57). For more on Louis Jacolliot refer to chapter - **Women in Hinduism**).

65. **Novalis** (1772-1801),was the pseudonym of the young Baron Friedrich von Hardenberg. He was a pioneer of the early German Romantics, one of Germany's greatest Romantic poets.

Novalis wrote in his essay, "Christendom in Europe," in 1799, that poetry, pure and colorful like a beautiful India, stood opposed to the cold and deadening mountains of philistine reason.
For him **Sanskrit** was the most mysterious linguistic symbol of any human expression: Sanskrit took him back to the "original people" who had been forgotten.

66. **Ludwig van Beethoven** (1770-1827) was also attracted by Indian thought, as it is clearly attested by numerous passages and notes referring to Indian ideas and texts found in the Beethoven papers. He was first introduced to Indian literature by the Austrian Orientalist, Hammer-Purgstal, who founded a periodical for the dissemination of Eastern knowledge in Europe as early as January 1809.
Beethoven had a deep interest in Indian knowledge long before Indological studies began in Germany. The fragments of Indian religious texts that have been discovered in the Beethoven manuscripts are partly translations and partly adaptations of the Upanishads and the Bhagavad Gita.

67. **Friedrich Ruckert** (1788-1866), Professor of Oriental Languages at the University of Erlangen from 1827 to 1841, produced, under the inspiration of August Wilhelm von Schlegel, numerous skilful translations from Sanskrit. His published translations from Indian classical poetry made Indian lyrics and poems widely popular in Germany.
Amongst **Ruckert's** translations are **Nalopakhyana,** the **Amarusataka,** the **Raghuvamsa,** and the **Gita Govinda,** which lost nothing of its beauty, color and atmosphere in Ruckert's German version. The Indian poem is such a complex work from the viewpoint of rhyme, alliteration, and allusion that Ruckert's version represents a brilliant accomplishment. Of all the German poets, it was he who best understood the character of Indian poetry.

Ruckert's translation of the Gitagovinda, Bonn 1836, is a work of art. Written in beautiful language, it comes very close to the original in spirit and form. In his **Brahmanische Erzaehlungen ('Brahmin stories'),** Leipzig 1836, he brought out free renderings of Hindu legends from the epics. His translation of the Savitri episode is particularly noteworthy.

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - By Valentine Stache-Rosen. p.11-12).

68. **Henrich Heine** (1797-1856), a late Romantic lyric poet, whose influence was enormous not only in Germany but in most countries of the Western world, describes the India of his imagination: " ...in the glass I saw the dear motherland, the blue and sacred Ganges, the eternally shining Himalayas, the gigantic forests of Banyan trees on whose wide shadowy paths quietly walk wise elephants and while pilgrims ...

Heine's poem, "Auf Flugeln des Gesanges,"
" Am **Ganges** duftet's und leuchtet's
Und Riesenbaume bluhn,
Und schone, stille Menschen
Vor Lotosblumen knien. "

created a picture of India widely familiar in Germany.

69. **Paul Verlaine** (1844-1896), The French lyric poet known for the musical quality of his verse, wrote the French poem, **"Savitri."**

Verlaine became keenly interested in **Hindu mythology** during his high school days. His enthusiasm was such that he said:

"Par Indra! que c'est beau, et comme ca vous degotte la Bible, l'Evangile et toute la degueulade des Peres de l'Eglise."

"By Indra! how beautiful this is and how much better than the Bible, the Gospel and all the words of the Fathers of the Church."

70. **Johann Wolfgang von Goethe** (1749-1832), German Poet, Dramatist, Novelist, Natural Scientist. His own enthusiasm for Shakuntala was no less exuberant than Herder's.

He wrote in 1792:

"Wouldst thou the young year's blossoms and the fruits
of its decline
And all by which the soul is charmed, enraptured.
feasted, fed,
Wouldst thou the earth and heaven itself in one sole name
combine?
I name thee, **O Sakuntala!** and all at once is said. "

Goethe expressed this admiration for Kalidasa's **Shakuntala** more than once. nearly 40 years later, in 1830 when **de Chenzy** sent him his edition of the original with his French translation, he wrote to the Frenchman expressing his gratitude:

"The first time I came across this inexhaustible work it aroused such enthusiasm in me and so held me that I could not stop studying it. I even felt impelled to make the impossible attempt to bring it in some form to the German stage. These efforts were fruitless but they made me so thoroughly acquainted with this most valuable work, it represented such an epoch in my life, I so absorbed it, that for thirty years I did not look at either the English or the German version....It is only now that I understand the enormous impression that work made on me at an earlier age."

(source: **Letters from Goethe - By Marianne Von Herzfeld** and **c. Melvil Sym**. (trans). p. 514).

No wonder he modeled the prologue of his **Faust** (1797) on the prologue to Sakuntala. The jester in the prologue of Faust is reminiscent of one of the vidusaka in the Indian drama, a parallel first noticed by Heinrich Heine. Goethe friend Schiller, was moved to enthusiastic praise of Sakuntala, he wrote, "in the whole world of Greek antiquity there is no poetical representation of beautiful love which approaches even afar."

He also admired other Indian poems such as **Jayadeva's Gita Govinda** and **Kalidasa's Meghduta** (Cloud Messenger) which he read in Wilson's English translation in 1817 and welcomed as "a great treasure."

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 230).

Shakuntala painting

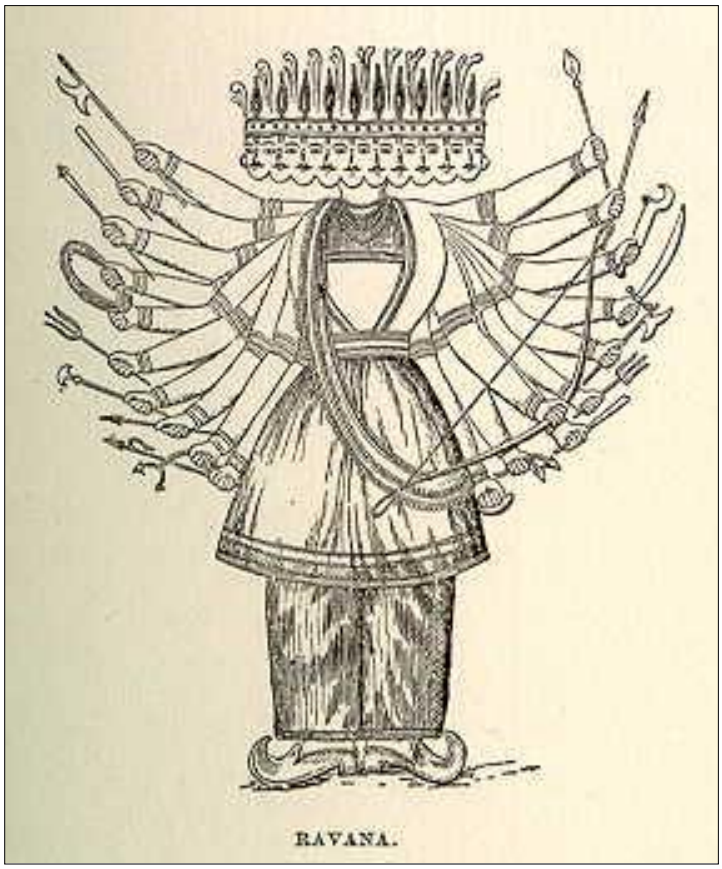
The Sakuntala furor has lasted till almost today. One of the noblest "overtures" in European music is the **Sakuntala overture** of the Hungarian composer **Carl Goldmark** (1830-1915).

(source: **Creative India - By Benoy Kumar Sarkar** published Motilal Banarsi Dass, Lahore 1937. p. 110).

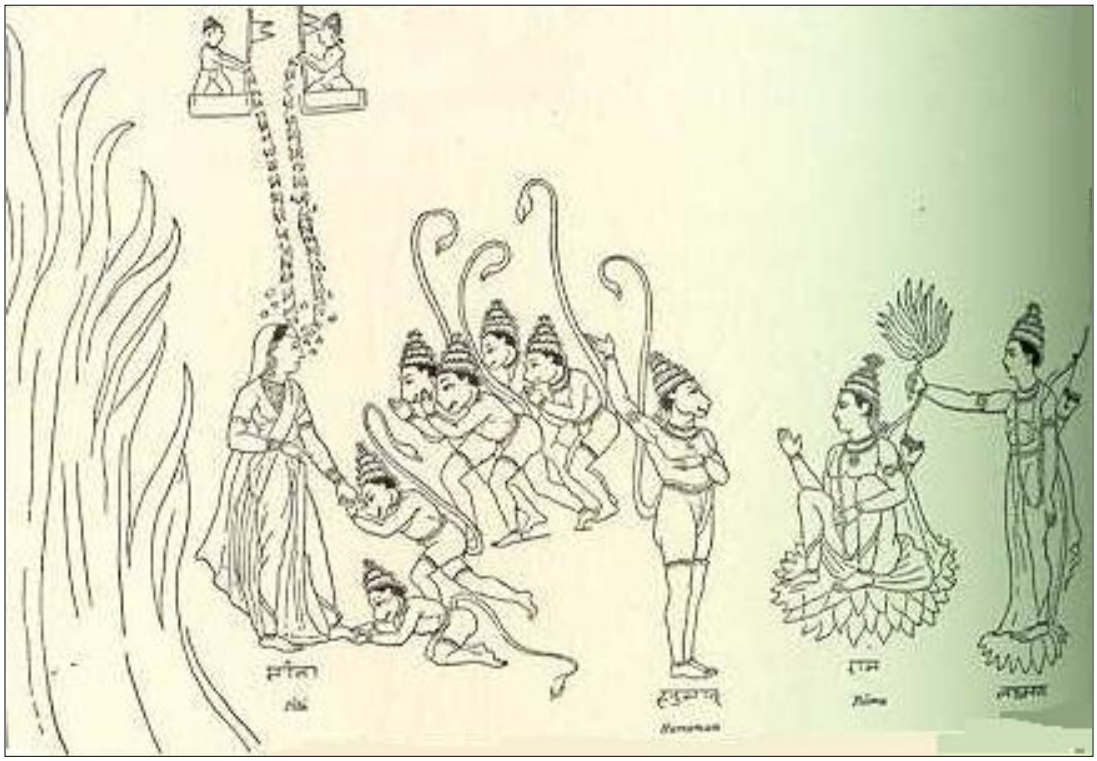
71. **Louis Revel** - French author of **The Fragrance of India : landmarks for the world of tomorrow** and **Les Routes Ardentes de L'Inde**. He went a long step further when he remarked that if Greek culture had influenced Western civilization, the ancient Greeks themselves were the **"sons of Hindu thought."**

"If Greek culture has influenced Western civilization, we must not forget that, in spite of the inestimable benefits of Greece to India, the ancient Greeks themselves were also sons of Hindu thought. As has already been mentioned, Pythagoras went to India in order to draw from the very source the principles which constituted the foundation of his doctrine and which in its turn influenced Plato, Socrates and even Aristotle to a certain degree. Apollonius of Tyanae, Plotin, did they not follow in the footprints of their predecessors, in directing themselves towards far-off India? China, Persia, Islam – the three-fourths of Asia – these civilizations which had already been influenced by the missions of Asoka, were they not attracted by India's wisdom? **That is the reason why ancient India is our Mother. In the measure that we Westerners make our intellectual and spiritual genealogy reach back to India shall we learn to love her and to consider in its true light her wisdom, the patrimony of every man."**

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 241 and **The Fragrance of India : landmarks for the world of tomorrow - By Louis Revel** p 232- 238 Kitabistan Allahabad 1946).



He has dedicated his book **The Fragrance of India : landmarks for the world of tomorrow** to the Great rishis of India:



“These pages are a humble offering,
To the Great rishis of India,
Those wise men who loved the people,
lived for the people,
and who taught the brotherhood of peoples.

The soul of the world is in danger. It is a banal truth to write but, nevertheless, it ought to be ceaselessly repeated. When we seek in the buried centuries for vestiges of these columns of glory, a name, among others, emerges: INDIA.

It is a fact, whether we wish to accept it or not, that India is the Mother of all of us. **She has given us everything: religion, philosophy, science, art.** All that has been truly great, noble, and generous, throughout the ages has come from India. At this moment when a hurricane of violence and hate is raging across the world, and will rage still more through the world of the future, making the very frame-work of our civilization crack, at this moment when intellectual and moral values are being trampled upon by the hordes of egotism, brutality, and lying, let us go together, towards India from whom we can learn so much.

Ramayana is one of the greatest epic poems of the world and that, correctly understood, it leads us, scholars tell us to an understanding of the evolution of humanity:

Hanuman and the Vanara rejoicing at the restoration of Sita

The **Ramayana** shows us also, in the story of Rama and Sita, the ideal of human love, love which is inspired by the noblest of ideas. The Illiad and Odyssey have touched many Western hearts; nevertheless, those epic poems which contain so much truths, when translated into our modern languages, fail unfortunately, to influence intimately the lives of people. In India, on the other hand, there is scarcely a Hindu family or dwelling where the divinity of Rama and of Krishna are not adored; where the chastity of Sita or of Draupadi is not extolled; or where the courage of Hanuman – the monkey god who aided Rama to vanquish his enemies – is not a subject of conversation. These heroes for Hindus, are living personages, as are those of the Gospel for Christians, modeling, kneading India's thought, even in our modern times of upheavals and violence, and it is they, these heroes, who preserve perhaps, or who help to preserve the glory of ancient Aryavarta in the India of today.

Every civilization which is not based on the culture of the spirit is doomed to perish in brutality and blood. Oh! Rama and Sita, noble human heroes, you who give the example of a sublime spiritual ideal, in your atmosphere of peace and infinite tenderness there reigns a hope, the hope of the regeneration of humanity through the understanding of these ancient symbols and by their realization in the inner lives of men.

(source: **The Fragrance of India : landmarks for the world of tomorrow - By Louis Revel** p 83-86 Kitabistan Allahabad 1946).

"The **Bhagavad Gita** is **par excellence the Book of Democracy**; that is what gives it its peculiar radiance. It is not necessary to be a great scholar on the subject to perceive this. It unites all men in the same Principle which "resides in all hearts." If Krishna makes no distinction between races, castes, sects, he also shows us how men, nations, can sink in the typhoon of unchained passions. The message of the Gita is a universal call to Democracy, liberty for the peoples, liberty for each individual. The great affirmation of the Bhagavad Gita is that every individual, whatever he may be, rich or poor, can and must raise himself on life's path and that he has a right to his emancipation, social, intellectual, and spiritual."

"Even if thou were the greatest of all sinners, thou shalt be able to cross over all sins in the bark of spiritual knowledge." (BG iv).

….in the temple of Somanthpur, the stone figure looms out from the shadows. A ray of light rests on the face of Krishna. Above the wind of the plains swirling under the vaults, it seems to me that the flute of Shri Krishna sings melodies on this day of fete, the glory of life, the dawn of a new world, in the eternal verses:

"Know, son of Pritha, that I am the pure fragrance of the earth, sound in the air; in the fire, its splendor; life in all beings; continence in ascetics.

Oh! Govinda. The Friend! May we find, we also, the resting-place, the refuge, the friend who guides and inspires our life!

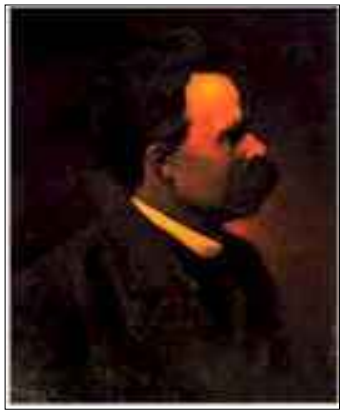
(source: **The Fragrance of India : landmarks for the world of tomorrow - By Louis Revel** p.158 -167 Kitabistan Allahabad 1946).

72. **Herman Hesse** (1877-1962), German poet and novelist, awarded the Nobel Prize for literature in 1946, found in Indian thought an answer to his yearning for deliverance from "ego" and from the tyrannical dictates of temporality. Indian thought offered the most radical possibility of undoing the curse of individuation, of annihilating the "idiotic one-after-the-other" by the postulation of the eternal simultaneity of nirvana.

The positive attitude of the **Bhagavad Gita** also appealed to Hesse.

"The marvel of the Bhagavad-Gita is its truly beautiful revelation of life's wisdom which enables philosophy to blossom into religion."

Hesse claimed that **Yoga** had an invaluable effect upon him as a means of improving his powers of concentration. Yoga and Maya are the background to the events portrayed in **The Glass Beads Game.**



He visited India in 1911 and the study of ancient Hindu texts affected Hesse deeply and had great influence on his works. The threefold sequence of sensual love, wisdom, and self-denial experienced by the poet **Bhartrihari** is interpreted by Hesse as the result of humble and wise humanity. In the **Journey to the Orient,** Hesse says about India:

"It is not only a country and something geographical, but the home and the youth of the soul, the everywhere and nowhere, the oneness of all times."

It is significant that Hesse, although a Christian, repeatedly substituted the **upanishadic tat tvamasi,** literally "love your neighbor for he is yourself. In **Siddhartha** which is subtitled "Indic Poetic Work (1922) he tried to reconcile Christian and Indian piety. There are many parallels in Siddhartha and Bhagavad Gita.

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 240).

73. **Friedrich Nietzsche** (1844-1900) the great German Philosopher, poet, classical philologist, who became one of the most provocative and influential thinkers of the 19th century. He was deeply influenced by Schopenhauer in his youth. One of the great European philosophers, Friedrich Nietzsche's beliefs were best expressed in his **Thus Spake Zarathustra,** in which his teachings are put into the mouth of the wandering prophet Zarathustra.

He was very appreciative of the Upanishads and, indeed, contemptuous of those Europeans who, devoid of intellectual discernment, wanted to convert and "civilize" the Brahmans.

When **Paul Deussen** told him his plan of translating ancient Hindu texts and expounding their wisdom, he expressed great enthusiasm saying that Indian philosophy was the one parallel to their own European philosophy.

He found in the **Manusmriti** one of the source of his own philosophy of superman. The Laws of Manu have been hailed by Friedrich Nietzsche, as ' a work which is spirited and superior by comparision."

(source: **Advanced History of India - By Nilakanta Sastri and G. Srinivasachari** p. 10).

Nietzsche so highly esteemed the **Hindu text** that he declared all other ethical codes to be imitations and even caricatures of this.

(source: **India and World Civilization** - **By D. P. Singhal** p. 237-238).

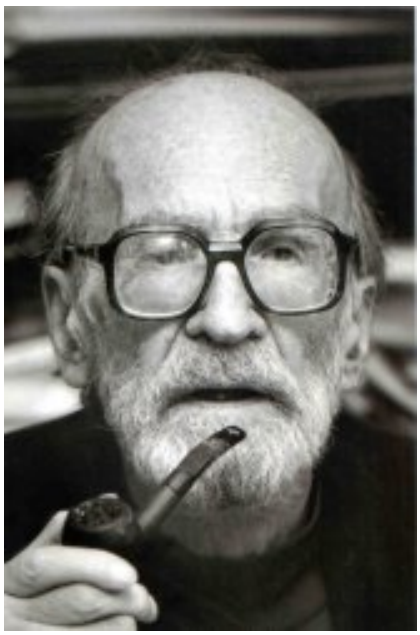
"One draws a breath of relief when coming out of the Christian sick-house and dungeon atmosphere into this healthier, higher wider world. How paltry the 'New Testament' is compared with Manu, how ill it smells! One sees immediately that it has a real philosophy behind it, in it, not merely an ill-smelling Jewish acidity compounded of rabbinisim and superstition.....All the things upon which Christianity vents its abysmal vulgarity, procreation, for example, woman, marriage, are here treated seriously, with reverence, with love and trust."

"Christianity has been up till now mankind's greatest misfortune." Nietzsche angrily denounced Christianity as a "slave morality," created by the weak as a means of checking the strong."

(source: **The Twilight of the Idols - By Friedrich Nietzsche** (1889) p. 57. **The Antichrist - By Friedrich Nietzsche** p. 176).

"One breathes more freely, after stepping out of the Christian atmosphere of hospitals and poisons into this more salubrious, loftier and more spacious world. "

In Nietzsche's estimation Manu is also better because more frank teacher of political science than the philosophers, insincere as they are, of the Western world.



(source: **Creative India - By Benoy Kumar Sarkar** p. 112-115).

Nietzsche himself had read the Vedas, which he admired profoundly, could quote from the Laws of Manu and thought that **"Buddhism and Brahmanism are a hundred times deeper and more objective than Christianity."**

(source: **Arise O' India! - By Francois Gautier** ISBN 81-241-0518-9 Har-Anand Publication p. 25).

74. **Mircea Eliade** (1907-1986) born in Bucharest, Romania and was educated as a philosopher lectured in the Ecole des Hautes-Etudes of the Sorbonne. He is author of **Yoga: Immortality and Freedom**

"**Yoga**, as a 'science' of achieving this transformation of finite man into the infinite One, has to be recognized as something intrinsically Indian or, as 'a specific dimension of the Indian mind."

"Yoga constitutes a characteristic dimension of the Indian mind, to such a point that whatever Indian religion and culture have made their way, we also find a more or less pure form of Yoga. In India, Yoga was adopted and valorized by all religious movements, whether Hinduist or 'heretical.' The various Christian or syncretistic Yogas of modern India constitutes another proof that Indian religious experience finds the yogic methods of "meditation" and "concentration" a necessity.

"Yoga had to meet all the deepest needs of the Indian soul. In the universal history of mysticism, Yoga occupies a place of its own, and one that is difficult to define. It represents a living fossil, a modality of archaic spirituality that has survived nowhere else. Yoga takes over and continues the immemorial symbolism of initiation; in other words, it finds its place in a universal tradition of the religious history of mankind." "From the Upanishads onward, India has been seriously preoccupied with but one great problem - the structure of the human condition. **With a rigor unknown elsewhere, India has applied itself to analyzing the various conditionings of the human being."**

"The conquest of this absolute freedom, or perfect spontaneity, is the goal of all Indian philosophies and mystical techniques; but it is above all through Yoga, through one of the many forms of Yoga, that India has held that it can be assured."

"Yoga is present everywhere - no less in the oral tradition of India than in the Sanskrit and vernacular literature....To such a degree is this true that Yoga has ended by becoming a characteristic dimension of Indian spirituality."

(source: **Yoga: Immortality and Freedom - by Mircea Eliade** p. xvi - xx and 101 and 359-364).

Commenting on history which has no metaphysical significance for either Hinduism or Buddhism, he states that:

"Profane time must be abolished, at least symbolically, so that man forgets his "historical situation". The highest human ideal is the **jivamukta** - one who is liberated from Time. Man, according to the Indian view, 'must, at all costs, find in his world a road that issues upon a tran-historical and atemporal plane.'

(source: **The Speaking Tree: A Study of Indian Culture and Society - By Richard Lannoy** p. 292). For more on Mircea Eliade refer to chapter on **Yoga and Hindu Philosophy**).

75. **Sri Ramakrishna Paramahamsa** (1836-1886) the surreal Hindu Bengali Saint spent a lifetime seeking spiritual enlightenment, beginning in his childhood with a mystical encounter he experienced at the age of six. A temple priest at Dakshinesvar and a mystical **devotee of Kali,** became a source of religious renewal for a large number of Bengalis who met him during his lifetime.

Mahatma Gandhi said: "The story of Ramakrishna Paramahamsa's life is a story of religion in practice. His life enables us to see God face to face." Romain Rolland wrote "Ramakrishna was a rare combination of individuality and universality, personality and impersonality. His word and example have been echoed in the hearts of Western men and women. His soul animates modern India." His influence was felt throughout the social life of Bengal, where he passed his life in continuation of the bhakti tradition so deeply rooted in that region. ...Among the crowds that went to see Sri Ramakrishna were **Keshub Chunder Sen.**

He experimented with the truths of Vedanta. He attained God-realization through four different religions (Tantrism, Hinduism, Islam and Christianity), each time meeting the same Absolute God--which prompted him to declare that all religions lead to the same God.

Ramakrishna said,

" In Hinduism, there can be as many spiritual paths as there are spiritual aspirants & similarly there can really be as many Gods as there are devotees to suit the moods, feelings, emotions & social background of the devotees."

" The Eternal Religion, the religion of the rishis, has been in existence from time immemorial and will exist eternally. **There exists in this Sanatana Dharma (Hinduism) all forms of worship -- worship of God with form and worship of the impersonal Deity as well. It contains all paths--the path of knowledge, the path of devotion and so on. Other forms of religion, the modern cults, will remain for a few days and then disappear."**

(source: - unknown).

He was addressed as Master by his disciples. Once one of his disciples asked him: "Do you believe in God, sir?" "Yes," the Master replied. "Can you prove it, sir?" "Yes," "How?" "Because I see Him just as I see you here, and rather more intensely." The Master said: "So long as God seems to be outside and far away, so long there is ignorance. But where God is realized within, that is true knowledge."

"In the kingdom of God, reason, intellect and learning are of no avail. There the dumb speaks, the blind sees, and deaf hears."

Years of aspiration, meditation and adoration in silence ripened into Ramakrishna's realization of the **Divine Mother**. The great disciple of Ramakrishna was **Swami Vivekananda** whose message has inspired, influenced and transformed thousands of lives around the world. Sri Ramakrishna Paramahamsa and Vivekananda started the **renaissance of Hinduism** at this time.

(source: **Great Indian Saints - By Pranab Bandyopadhyaya** p. 277 - 285).

76. **Abraham Seidenberg** an American historian of mathematics, has said:

" Ancient Egyptian, Babylonian and Greek geometries derive from the mathematics recorded in the **Sulbasutras.**

(source: **The Invasion That Never Was** - **By Michel Danino and Sujata Nahar** p. 79).

77. **Severus Sebokbt**, Bishop of Kenneserin, a Syrain astronomer wrote the following in A.D. 662:

"I shall now speak of the knowledge of the Hindus...of their subtle discoveries even more ingenious than those of the Greeks and Babylonians - of their rational system of mathematics or of their method of calculation which no word can praise strongly enough - I mean the system using the nine symbols. If these things were known by the people who think that they alone have mastered the sciences because they speak Greek, they would perhaps be convinced that every folk, not only Greeks, but men of a different tongues, know something as well as they."

(source: **The Wonder That Was India - By A. L. Basham** p. vi).

78. **Barend Van Nooten** author of **Rig Veda, a metrically restored text** with an introduction and notes, and **The Mahabharata; Attributed to Krsna Dvaipayana Vyasa,** writes:

"Borrowings by western scholars in the sphere of literature and philosophy are obvious and well-known. There are near virtual; copies of plots, characters, episodes, situations and time duration from the Mahabharata in Homer and Virgil."

(source: **Philosophy of Hinduism - An Introduction - By T. C. Galav** p. 18).

79. **Carl Gustav Jung** (1875-1961), student of Sigmund Freud, psychiatrist, interpreted Hinduism in terms of his psychological system, and pointed out the great significance of Indian thought for the modern West:

"We do not yet realize that while we are turning upside down the material world of the East with our technical proficiency, the East with its psychic proficiency, is throwing our spiritual world into confusion. We have never yet hit upon the thought that while we are overpowering the Orient from without, it may be fastening its hold upon us from within."

Jung found out in 1909 that myth and dream were linked, but it had been well known in India forever. It is implicit in the syllable OM, or A-U-M according to Mandukya Upanishad.

(source: **A Joseph Campbell Companion** - Selected and edited by **Diane K. Osborn** p. 122)

No system of thought or body control is more widely known today than **Yoga.** "When a religious method recommends itself as 'scientific', it can be certain of its public in the West. Yoga fulfills this expectation. "Quite apart from the charm of the new and the fascination of the half-understood, there is good cause for Yoga to have many adherents. It offers the possibility of controllable experience and thus satisfies the scientific need for 'facts'; and, besides this, by reason of its breadth and depth, its venerable age, its doctrine and method which include every phase of life, **it promises undreamed of possibilities."**

(source: **Let's regain our lost soul - By Nani A Palkhivala** - Tapovan Prasad - Chinmaya Mission vol. 39 #2 February 2001p 29-30).

Jung says: **"The Christian West considers man to be wholly dependent upon the grace of God, or at least upon the Church as the exclusive and divinely sanctioned earthly instrument of man's redemption. The East (India), however, insists that man is the sole cause of his higher development, for it believes in "self-liberation."**

"While we are overpowering the Orient from without, it may be fastening its hold upon us from within."

(source: **In Search Of The Cradle of Civilization: New Light on Ancient India - By Georg Feurerstein, Subhash Kak & David Frawley** p. 267).

"The idea that man is like unto an inverted tree seems to have been current in by gone ages. The link with Vedic conceptions is provided by Plato in his Timaeus in which it states..." behold we are not an earthly but a heavenly plant."

What is of special interest to us is the surprising affinity between Jung's conclusions and Hindu thought. He himself was aware of it. He thought that it was no mere accident that soon after the French Revolution the **Frenchman Anquetil du Perron brought to Europe a translation of the Upanishads** "which gave the Western world its first deep insight into the baffling mind of the East."

He says, "To the historian this is mere chance without any factors of cause and effect. But in view of my medical experience I cannot take it as an accident…In the crowds that poured into the Notre Dame, bent on destruction, dark and nameless forces were at work that swept the individual off his feet; these forces worked also upon Anquetil du Perron and provoked an answer which has come down in history. For he brought the Eastern mind to the West, and its influence upon us we cannot measure. Let us beware of under-estimating it!" He had a great respect for the Eastern civilizations which had discovered and learnt to use the resources of the subliminal mind. In his own words, "Great and **enduring civilizations like those of the Hindus** and the Chinese were built upon this foundation and developed from it a discipline of self-knowledge which they brought to a high pitch of refinement both in philosophy and practice."

As the **Upanishad** describes it, the Self is that which being known all else becomes known.

(source: **Hindu Culture - By K. Guru Dutt** - With a foreword by Sir C.Ramaswami Aiyar p. 227-228).

He admired Hinduism. He said if Rama can cry in the forest when he lost Sita and if still Rama could be an altar of worship, that is why Hindu society is a sane society. He said the Hindu society legitimised sorrow, while other religions do not do that.

(source: **'There is reverse discrimination against Hindus' - T R Jawahar** - newstodaynet.com).

Jung says: "We have not yet clearly grasped the fact that Western Theosophy is an amateurish imitation of the East." Our studies of sexual life, originating in Vienna and England, are matched or surpassed by Hindu teachings on the subject, Oriental texts ten centuries introduce us to philosophical relativism."

(source: **The Wisdom of China and India - By Lin Yutang** p. 118).

Jung in **Psychological Types** examines Indian Philosophy from a psychological perspective in glowing terms. His theories have some intuitively and aesthetically resonant qualities. Simple but precise and partially derived from Indian Thought:

"If the attainment of the middle path consisted in a mere surrender to instinct, as the bewailers of "naturalism" suppose, the profoundest philosophical speculation that the human mind has ever known would have no *raison d'être*. **But, as we study the philosophy of the Upanishads, the impression grows on us that the attainment of this path is not exactly the simplest of tasks. Our Western superciliousness in the face of these Indian insights is a mark of our barbarian nature, which has not the remotest inkling of their extraordinary depth and astonishing psychological accuracy. We are still so uneducated that we actually need laws from without, and a task-master or Father above, to show us what is good and the right thing to do. And because we are still such barbarians, any trust in human nature seems to us a dangerous and unethical naturalism. Why is this? Because under the barbarian's thin veneer of culture the wild beast lurks in readiness, amply justifying his fear.** But the beast is not tamed by locking it up in cage. *There is no morality without freedom.* When the barbarian lets loose the beast within him, that is not freedom but bondage. Barbarism must first be vanquished before freedom can be won. This happens, in principle, when the basic root and driving force of morality are felt by the individual as constituents of his own nature and not as external restrictions. How else is man to attain this

realization but through the conflicts of opposites?"

(source: **Psychological Types – By C G Jung** p 213 – Routledge 1971 Reprinted 1999. This quote has been contributed to this site by a visitor).

80. **Walt Whitman** (1813-1892), who championed American intellectual independence, was amongst those who came under the influence of the American Transcendentalists. He wrote his famous poem **Leaves Of Grass** in 1855. The continuing success of of his Leaves of Grass led to the publication of its fifth edition which included his poem entitled **Passage to India**. According to some Whitman is claimed to have read ancient **Hindu poems** before writing his Leaves of Grass. There is a reference to Brahma and the following verse in his Salut Au Monde:

"I hear the Hindoo teaching his favorite pupil he loves, wars, adages, transmitted safely to this day from poets who wrote three thousand years ago."

(source: **India in the American Mind - By B. G. Gokhale** p.29).

Whitman turned to the East in his anxiety to escape from the complexities of civilization and the bewilderments of a baffled intellectualism.

In **"Passage to India"** he wrote:

O Thou transcedent,
Nameless, the fibre and the breath,
Light of the light, shedding forth universe, thou centre of them...
Athwart the shapeless vastness of space,
How should I think, how breathe a single breath, how speak, if out of myself,
I could not launch, to those, superior universes?

(source: **Hinduism - By Linda Johnsen** p. 367).

Whitman had poetically expressed a philosophy which some had said was similar to Krishana's teachings in the Bhagavad Gita. The relationship of Walt Whitman to Vedic thought is considerably complex.

Ralph Waldo Emerson once described Whitman's *Leaves of Grass* as a **blending of *Gita*** and the New York Tribune Herald. In his reminiscing essay, "A Backward Glance O'er Travel'd Roads" (1889) Whitman claims to have read "the ancient Hindu poems" and there is enough evidence to show that in 1875 he had received a copy of the **Gita** as a Christmas present from and English friend, Thomas Dixon. **Edward Carpenter** (1844-1929) English poet, indicated parallels between Whitman's Leaves of Grass and the Upanishads.

(source: **The Soul of India - By Satyavrata R Patel** p. 74).

Leaves of Grass

The nest of languages, the bequeather of poems
The race of old
Florid with blood, pensive, rapt with musings, hot with passion,
Sultry with perfume,
with ample and flowering garments,
With sunburnt visage,
with intense soul and glittering eyes
The Race of Brahma Comes!

41. **Alan Watts** (1915-1973) a professor, graduate school dean and research fellow of Harvard University, drew heavily on the insights of Vedanta. **Watts** became well known in the 1960s as a pioneer in bringing Eastern philosophy to the West.

"There is an unrecognized but mighty taboo--our tacit conspiracy to ignore who, or what, we really are. Briefly, the thesis is that the prevalent sensation of oneself as a separate ego enclosed in a bag of skin is a hallucination which accords neither with Western science nor with the experimental philosophy religions of the East--in particular the central and germinal Vedanta philosophy of Hinduism. This hallucination underlies the misuse of technology for the violent subjugation of man's natural environment and, consequently, its eventual destruction. It is rather a cross-fertilization of Western science with an Eastern intuition".

"To the philosophers of India, however, Relativity is no new discovery, just as the concept of light years is no matter for astonishment to people used to thinking of time in millions of kalpas, (A kalpa is about 4,320,000 years). The fact that the wise men of India have not been concerned with technological applications of this knowledge arises from the circumstance that technology is but one of innumerable ways of applying it."

It is, indeed, a remarkable circumstance that when Western civilization discovers Relativity it applies it to the manufacture of atom-bombs, whereas Oriental civilization applies it to the development of new states of consciousness."

(source: **Spiritual Practices of India - By Frederic Spiegelberg** Introduction by **Alan Watts** p. 8-9).

"It was once customary to refer to these people of India and China as heathens....apart from Sufism, the Near East produced nothing to approach the high level of mystical and psychological philosophy attained in India and China."

"Hinduism, therefore, is perhaps the most catholic of all religions, for it has not become so in the course of its evolution but was based on the principle of catholicity from the beginnings. Those who laid down the code of Manu made provision both for different mentalities and different vocations in the most through going manner; they showed an understanding of the social organism which in subsequent times has seldom been equaled..."

"It is almost certain, however, that Taoist Yoga was derived in great measure from India, and it is here that we must look for the greater wealth of information."

(source: **The Legacy of Asia and Western Man - By Allan Watts** p.1-2 and 28-29 and 85).

42. **Friedrich Majer** (1771-1818) a disciple of Johann Gottfried Herder, an Orientalist found that:

" It will no longer remain to be doubted that the priests of Egypt and the sages of Greece have drawn directly from the original well of India," that it is to 'the banks of the Ganges and the Indus that our hearts feel drawn as by some hidden urge."

And again:

"Towards the Orient, to the banks of the Ganges and the Indus, it is there our hearts feel drawn by some hidden urge - it is there that all the dark presentiments point which lie in the depths of our heart...In the Orient, the heavens poured forth into the earth."

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 102).

43. **Johann Gottfried Herder** (1744-1803) German philosopher, poet and critic, clergyman, born in East Prussia. Herder was an enormously influential literary critic and a leader in the Sturn und Drang movement. He saw in India the:

"lost paradise of all religions and philosophies," 'the cradle of humanity,' and also its 'eternal home,' the great Orient 'waiting to be discovered within ourselves.'

According to him, "mankind's origins can be traced to India, where the human mind got the first shapes of wisdom and virtue with a simplicity, strength and sublimity which has - frankly spoken - nothing, nothing at all equivalent in our philosophical, cold European world."

Herder regarded the Hindus, because of their ethical teachings, as the most gentle and peaceful people on earth. Herder's **"Thoughts of Some Brahmins "**(1792) which contains a selection of gnomic stanzas in free translations, gathered from Bhartrihari, the Hitopdesa and the Bhagavad Gita, expressed these ideals.

Herder pointed out to the spiritual treasures of India in search of which later German Sansritists and Indologists had devoted their lives.

(source: **Johann Gottfried Herder's Image of India** (1900) - By **Pranebendranath Ghosh** p-334).

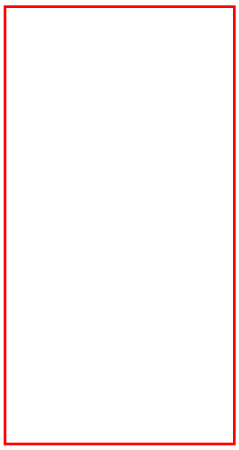
Herder admired India, as did Novalis and Heine, for its simplicity, and denounced the Europeans for their greed, corruption, and economic exploitation of India.

(source: **India and World Civilization - By D. P. Singhal** p. 231).

"O holy land (India), I salute thee, thou source of all music, thou voice of the heart' and "Behold the East - cradle of the human race, of human emotion, of all religion."

Like Sir William Jones, Herder, a Lutheran pastor, was also attracted by the Hindu ideas of pantheism and of world-soul (atman), both of which came to be viewed by the German Romantics as providing support for their own views about the transcendent wholeness and the fundamentally spiritual essence of the natural world.

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p. 61-63).



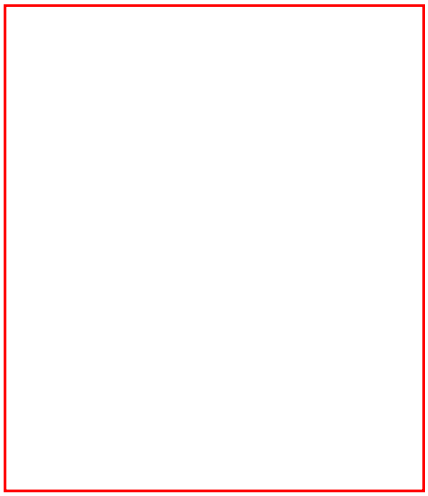
44. **Troy Wilson Organ** a professor at Ohio University and author of **The Hindu quest for the perfection of man** and **Hinduism; its historical development**, wrote:

"Hindu thought is not a philosophy. It is a philosophical religion... "Hinduism is a sadhana which seeks to guide man to integration, to spiritualization, and to liberation.....The concept of reincarnation is the Hindu way of asserting that there are no temporal nor developmental limits to the perfecting. "Hindu thought is natural, reasonable, and scientific. It is a process, not a result - a process of perfecting man". In the Hindu Monism (Advaita) God is not anthropomorphic being. He is All; He is not a despot or autocratic God.

(source: **Philosophy of Hinduism - An Introduction By T. C. Galav** Universal Science-Religion. Pg 123)

"In the Hindu world, the folklore and popular mythology carry the truths and teachings of the philosophers to the masses. In India, the mythology never ceased to support and facilitate the expression of philosophic thought. The rich pictorial script of the epic tradition, the features of the divinities whose incarnations and exploits constituted the myth, became the vehicles of communication for the priests. In this way a wonderful friendship of mythology and philosophy was effected; and this has been sustained with such result that the whole edifice of Indian civilization is imbued with spiritual meaning. The close interdependence of the two has served to counteract the natural tendency of the philosophy to become esoteric, removed from solving life's problems. In this symbolic form, the ideas have not been watered down to become popular. The vivid, perfectly appropriate pictorial script preserves the doctrines without the slightest damage to their senses."

45. **Andre Malraux** (1901-1976) author of **Anti-memoir**, profound thinker and French prolific writer, an essayist, novelist, art-historian, and political speech writer, **Malraux** did give his readers a philosophy.



"The problem of this century is the religious problem and the discovery of Hindu thought will have a great deal to do with the solving of that particular problem".

“Europe is destructive, suicidal,” said André Malraux to Nehru in 1936, whom he would meet several times until the 1960s, trying in vain to persuade him of the relevance of India’s spirituality in today’s world. Malraux also reflected :

"...The West regards as truth what the Hindu regards as appearance (for if human life, in the age of Christendom, was doubtless an ordeal it was certainly truth and not illusion), and the Westerner can regard knowledge of the the universe as the supreme value, while for the Hindu the supreme value is accession to the divine Absolute. But the most profound difference is based on the fact that the fundamental reality for the West, Christian or athiest, is death, in whatever sense it may be interpreted --- while the fundamental reality for **India is the endlessness of life in the endlessness of time: Who can kill immortality?**

(source: **Malraux & India** - (New Delhi : Embassy of France in India, 1996), p. 46.and **Antimemires - By André Malraux** (Paris : Gallimard, 1967), p. 287-288).
http://www.france.diplomatie.fr/culture/france/biblio/folio/malraux/

46. **Dr. Karan Singh** (1931 -) heir apparent to the Maharaja of Jammu & Kashmir, Indian Ambassador to the U.S. and an outstanding thinker and leader. A philosopher, environmentalist, statesman, orator, author and politician, life is a continuous effort to realize the eternal Brahman and work for the greatest common good.

"The Entire Cosmos is all pervaded by the same divine power. there is no ultimate duality in human existence or in consciousness. This is a truth which in the West is only recently being under stood after Einstein and Heisenberg and quantum mechanics. The Newtonian-Cartesian-Marxist paradigm of a materialistic universe has now been finally abolished, it has collapsed in the face of the new physics. Our ancient seers had a deeper insights into the nature of reality than people had even until very recently".

(source: **Essays on Hinduism - By Karan Singh** p. 69-71).

"The master principles upon which Hinduism is based are to be found essentially in the Upanishads, which represent the high watermark not only of Indian but of world philosophy. It is in these luminous dialogues that the great issues confronting humanity have been addressed in a manner that seems to grow in relevance as we move into the global society. "

"The first and most basic concept is that of the all-pervasive Brahman — “Isavasyam idam sarvam yat kincha jagatyam jagat” (Whatever exists and wherever it exists is permeated by the same divine power.) While many philosophies have postulated unbridgeable

dichotomies between god and the world, matter and spirit, the Upanishadic view is that all that exists is a manifestation without the light of consciousness behind it, and this, in a way, is the realization of the new science.

The second concept is that this Brahman resides within each individual consciousness, in the Atman. The Atman is the reflection of this all-pervasive Brahman in individual consciousness; but it is not ultimately separate from the Brahman. The concept of “Isvarah sarvabhutanam hriddese tishthati” (The lord resides within the heart of each individual) is the second great insight of the Upanishads, and the relationship between the Atman and the Brahman is the pivot upon which the whole Vedantic teaching revolves.

Another important Vedantic concept is that all human beings, because of their shared spirituality, are members of a single family. The Upanishads have an extraordinary phrase for the human race, ‘Amritasya putrah’ (Children of immortality), because we carry within our consciousness the light and the power of the Brahman regardless of race, colour, creed, sex, caste or nationality. That is the basis of the concept of human beings as an extended family — ‘Vasudhaiva kutumbakam’ — which is engraved on the first gate into our Parliament House.

"It is certainly true that Hinduism has provided the broad cultural and religious framework that has held India together despite its astonishing linguistic, ethnic and political diversity and divisions. **Hinduism is as essential for an understanding of Indian culture and civilization"**

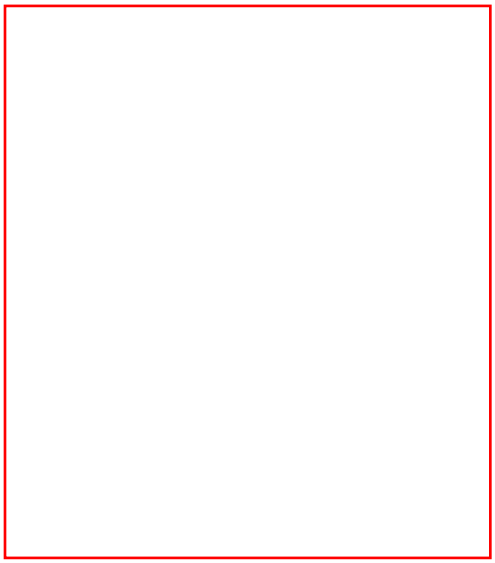
(source: **Keep the light shining - By Karan Singh** - Hindustantimes.com).

47. **August Wilhelm von Schlegel** (1767-1845).German Scholar and Poet who also learnt Sanskrit. The impulse to Indological studies was first given in Germany, through his book, ' **The Language and Wisdom of the Indians'** which appeared in 1818. He wrote The Bhagavat-geeta, or, Dialogues of Krishna and Arjoon : in eighteen lectures.

"The divine origin of man, as taught in Vedanta, is continually inculcated, to stimulate his efforts to return, to animate him in the struggle, and incite him to consider a reunion and re-incorporation with Divinity as the one primary object of every action and reaction. Even the loftiest philosophy of the Europeans, the idealism of reason as it is set forth by the Greek philosophers, appears in comparison with the abundant light and vigor of Oriental idealism like a feeble Promethean spark in the full fold of heavenly glory of the noonday sun, faltering and feeble and ever ready to be extinguished."

Schlegel edited to original text of the **Bhagavad Gita**, together with a Latin translation, and paid tribute to its authors:

"I shall always adore the imprints of their feet"



He noted in his book, **Wisdom of the Ancient Indians**, " It cannot be denied that the early Indians possessed a knowledge of the God. All their writings are replete with sentiments

and expressions, noble, clear, severely grand, as deeply conceived in any human language in which men have spoken of their God..."

(source: **Proof of Vedic Culture's Global Existence - By Stephen Knapp** p. vii).

Hindu philosophy in comparison with which, in the words of Schlegel, **"even the loftiest philosophy of the Europeans" appears "like a feeble Promethean spark in the full flood of heavenly glory of the noonday sun faltering and feeble and ever ready to be extinguished."**

(source: **A History of Hindu Civilization During British Rule - By Pramatha Nath Bose** volume I p. x).

48. **Jawaharlal Nehru** (1889-1964) first prime minister of free India, was more than a deeply moral human being. He yearned for spiritual light. He was particularly drawn to Swami Vivekananda and the Sri Ramakrishna Ashram. The Upanishads fascinated him. **Nehru** called the Vedas as:

"The unfolding of the human mind in the earliest stages of thought. And what a wonderful mind it was!." It is the first outpourings of the human mind, the glow of poetry, the rapture at nature's loveliness and mystery." A brooding spirit crept in gradually till the author of the Vedas cried out: 'O Faith, endow us with belief'. It raised deeper question in a hymn called the ' The Song of Creation'.

"The **Bhagavad-Gita** deals essentially with the spiritual foundation of human existence. It is a call of action to meet the obligations and duties of life; yet keeping in view the spiritual nature and grander purpose of the universe."

"I am proud of this noble heritage which was and still is ours, and I am aware that I too, like all of us, am a link in that uninterrupted chain which finds its origin in the dawn of history, in India's immemorial past. It is in testimony of this and as a last homage to the cultural heritage of India that I request that a handful of my ashes be thrown in the **Ganges** at Allahabad (formerly known as Prayag) so that they may be borne to the vast ocean that bears on the shores of India."

(source: **The India I Love - By Marie-Simone Renou** p.128).

Jawaharlal Nehru in his book **- A Discovery of India** wrote:

" **The statue of Nataraja (dance pose of Lord Shiva) is a well known example for the artistic, scientific and philosophical significance of Hinduism."**

(source: **A Discovery of India - By Jawaharlal Nehru** p. 214).

49. **A. E. George Russell** (1867 - 1935) the Irish poet, essayist, painter, Nationalist leader, mystic, and economist; a leader in movement for cooperation among Irish farmers; editor The Irish Statesman 1923-30.

Russel paid an eloquent tribute to the **Upanishads** and the **Bhagavad Gita**.

'Goethe, Wordsworth, Emerson, and Thoreau among moderns have something of this vitality and wisdom but we can find all they have said and much more in the grand sacred books of India."

"The Bhagavad Gita and the Upanishads contain such godlike fullness of wisdom on all things that I feel the authors must have looked with calm remembrance back through a thousand passionate lives, full of feverish strife for and with shadows, ere they could have written with such certainty of things which the soul feels to be sure."

(source: **A Discovery of India - By Jawaharlal Nehru** p. 93).

50. **Paul Deussen** (1845-1919) a direct disciple of Arthur Schopenhauer, preferred to be called in Sanskrit, **Deva-Sena** was a scholar of the Asiatic Society of Bengal, has observed:

"Whatever may be the discoveries of the scientific mind, none can dispute the eternal truths propounded by the Upanishads. Though they may appear as riddles, the key to solving them lies in our heart and if one were to approach them with an open mind one could secure the treasure as did the Rishis of ancient times"

About **Vedanta**, he said : It is now, as in the ancient times, living in the mind and heart of every thoughtful Hindu."

(source: **Indian Antiquary** (1902) - By **Paul Deussen** and reprinted in **Outline of Indian Philosophy** - 1907).

He writes in his **Philosophy of the Upanishads**,

"God, the sole author of all good in us, is not, as in the Old Testament, a Being contrasted with and distinct form us, but rather.....our divine self. This and much more we may learn the lesson if we are willing to put the finishing touch to the Christian consciousness, and make it on all sides consistent and complete."

(source: **India And Her People - By Swami Abhedananda** p.234).

The Vedanta gives profoundly based reasons for all charity and brotherliness.

Dr. Deussen says, "the fact is nevertheless that the highest and purest morality is the immediate consequence of the Vedanta. The Gospels fix quite correctly as the highest law of morality 'love your neighbor as yourself'. But why should I do so, since by the order of nature I feel pain and pleasure only in myself and not in my neighbor?' **" The answer is**

not," he says, "in the Bible but it is in the Veda in the great formula:

'That thou art' (Tat tvam asi) which gives in three words, metaphysics and morals together.

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** p. 264).

In his **Philosophy of the Upanishads**, recently translated by Rev. A. S. Geden, Prof. Deussen claims, for its fundamental thought **"an inestimable value for the whole race of mankind."** It is in "marvelous agreement with the philosophy founded by Kant, and adopted and perfected by his great successor Schopenhauer." differing from it, where it does differ, only to excel.

"It was here that for the first time the original thinkers of the Upanishads , to their immortal honour, found it when they recognized our Atman, our innermost individual being as the Brahman, the inmost being of universal nature and of all her phenomenon." (p. 39-40)

(source: **Hindu Superiority - By Har Bilas Sarda** p. 298-299).

" the Upanishads have tackled every fundamental problem of life. They have given us an intimate account of reality."

"On the tree of wisdom there is no fairer flower than the *Upanishads*, and no finer fruit than the Vedanta philosophy,' and he added,

'The system of Vedanta, as founded on the **Upanishads** and **Vedanta Sutras** and accompanied by Shankara's commentary on them---equal in rank to Plato and Kant---is one of the most valuable products of the genius of mankind in his researches of the eternal truth.'

(source: **Paul Deussen's address before the Bombay Branch of the Royal Asiatic Society** on February 25, 1893).

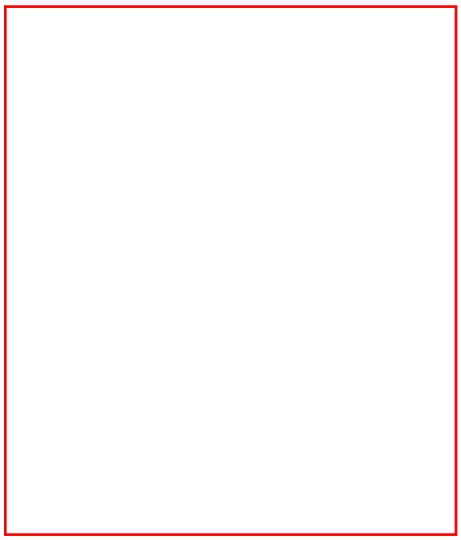
51. **F. C. Frederick Crossfield Happold** (1893 -) author of several books including **Mysticism: a study and an anthology** and **Religious faith and twentieth-century man**, said about the **Upanishads**:

"The most profound and revolutionary statement on the nature of reality, which mankind has as yet made"

(source: **The Upanishads Translated for the Modern Reader By Eknath Easwaran**. Nilgiri Press. 1987 quoted on book cover).

52. **Dr. Heinrich Zimmer** (1890 -1943) was a scholar with a great deal of first-hand knowledge of Indian philosophy and art history. **Zimmer** declared in his book **Philosophies of India**:

"We of the Occident are about to arrive at crossroads that was reached by the thinkers of India hundreds of years before Christ"



Regarding the **Cosmic Dance of Shiva**, he has said:

"His gesture wild and full of grace, precipitate the cosmic illusion; his flying arms, and legs and the swaying of his torso produce – indeed, they are – the continuous creation-destruction of the universe, death exactly balancing birth, annihilation the end of every coming-forth."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p.243).

53. **Ashby Philips** of Princeton University echoes:

"The Hindu argument that all religions are equally valid may well sweep the world in the next 25 years. **It may well be that within the foreseeable future, it will be Hinduism which will be challenging Christianity not only in India but in the west as well.** Hinduism indeed has a new vitality not only suitable for defense but also adaptable for offense against Western religions."

54. **Nani Ardeshir Palkhiwala** (1920-2002) a brilliant legal brain and a philanthropist. Former prime minister Morarji Desai had described him as 'India's finest intellectual'. A vocal proponent of press freedom, Palkhivala was one of the directors of Press Trust of India (PTI) representing public interest since 1985. None other than C Rajagopalachari had once observed, "Nani is God's gift to India". India's best known constitutional lawyer, author, former Indian ambassador to the US, has said:

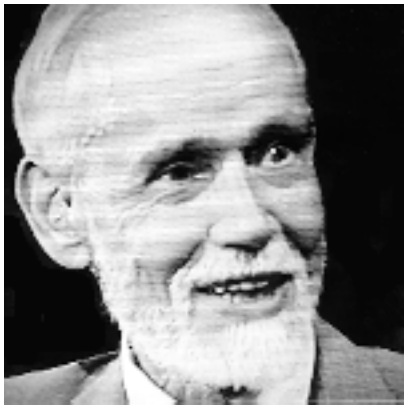
"India is eternal. Though the beginnings of her numerous civilizations go so far back in time that they are lost in the twilight of history, she has the gift of perpetual youth. Her culture is ageless and is as relevant to this present 20th century as it was to the 20th century before Christ."

"Our culture is primarily concerned with spiritual development is of special significance in our age which is marked by the obsolescence of the materialistic civilization."

Ahimsa, peace and non-aggression were the hallmarks of Indian culture. In her crowded history of over 5,000 years during which she had thrown up vast and puissant empires, India never practiced military aggression on countries outside her borders. Thanks to our ethos, even today the Indian people patiently suffer miseries and endure injustices which would result in devastating explosions in any other country. In these days of spiritual illiteracy and poverty of the spirit, when people find that wealth can only multiply itself and attain nothing, when people have to deceive their souls with counterfeit after having killed the poetry of life, it is necessary to remind ourselves that civilization is an act of the spirit.

Material progress is not to be mistaken for inner progress. When technology outstrips moral development, the prospect is not that of a millennium but of extinction. Our ancient heritage is a potent antidote to the current tendency to standardize souls and seek salvation in herds.

"It has been my long-standing conviction that India is like a donkey carrying a sack of gold - the donkey does not know what it is carrying but is content to go along with the load on



its back. The load of gold is the fantastic treasure - in arts, literature, culture, and some sciences like Ayurvedic medicine - which we have inherited from the days of the splendor that was India."

" Indian culture encouraged the cultivation of the intellect, not as a commodity for sale in the market-place, but for the inner joy experienced by the questing mind."

(source: **India's Priceless Heritage - By Nani A. Palkhivala** 1980 p.1 - 39).

"Modern India will find her identity and the modern Indian will regain his soul when our people begin to have some understanding of our priceless heritage. A nation which has had a great past can look forward with confidence to a great future. It would be restorative to national self-confidence to know that many discoveries of today are really re-discoveries and represent knowledge which ancient India had at her command. World thinkers have stood in marvel at the sublimity of our scriptures."

(source: **Let's regain our lost soul - By Nani A Palkhivala** - Tapovan Prasad - Chinmaya Mission vol. 39 #2 February 2001p 29).

55. **Huston Smith** born in China to Methodist missionaries, a philosopher, most eloquent writer, world-famous religion scholar who practices Hatha Yoga. Has taught at MIT and is currently visiting professor at Univ. of California at Berkley. Smith has also produced PBS series. He has written various books, **The World's Religions**, "Science and Human Responsibility", and "The Religions of Man".

He found in **Vedantic Hinduism** what he described as: **"a profundity of worldview that made my Christianity look like third grade."**

(source: **Philadelphia Inquirer Section: Faith - By David O'Reilly** Sunday June 18, 2000).

He was "perfectly content" with Christianity until the Vedanta came into his life some five decades ago. **"When I read the Upanishads, I found a profundity of world view that made my Christianity seem like third grade."**

(source: **Rediff.com - 'Religions are like human beings**).

"Men and women that are lining the Bathing Ghats are all Hindus, but how different they are. But India looked past their bodies into their minds where she found the **prolific ness of the infinite** exploding like a Roman cantle.

No other civilization saw, appreciated, and classified so precisely the full spectrum of human personality types…an achievement that has earned for India – the title of the world's introspective psychologist. The key to this psychological perceptiveness is her recognition to the extent to which people will differ and the degree to which these differences are to be respected.

The stages of life - The kind of person and way we approach God – affective – loving him, reflective person – by knowing him, active person – by serving him, contemplative – by meditating. All four of these way to yoga – union reach the same summit – which you follow depends on your spiritual temperament. Side of the mountain – which you start climbing. **Hinduism's cosmology was prodigious in scope and depth, but India did not stop there. She went on to advance what was probably the most daring**

hypothesis man has ever conceived. We are ourselves are the infinite, the very infinite from which the Universe proceeds. Everything in Hinduism works to drive the point home.

(source: **The Mystic's Journey - India and the Infinite: The Soul of a People – By Huston Smith**).

Here are Smith's views on **Symbols and Idols of Hinduism:**

"Enter Hinduism's myths, her magnificent symbols, her several hundred images of God, her rituals that keep turning night and day like never-ending prayer wheels. It is obtuse to confuse Hinduism's images with idolatry, and their multiplicity with polytheism. They are 'runways' from which the sense-laden human spirit can rise for its "flight of the alone to the Alone". Even village priest will frequently open their temple ceremonies with the following beloved invocation:

O Lord, forgive three sins that are due to my human limitations:
Thou art everywhere, but I worship you here;
Thou art without form, but I worship you in these forms;
Thou needest no praise, yet I offer you these prayers and salutations,
Lord, forgive three sins that are due to my human limitations.

(source: **The World's Religions** - **By Huston Smith** p. 34).

"The invisible excludes nothing, the invisible that excludes nothing is the infinite – the soul of India is the infinite."

"Philosophers tell us that the Indians were the first ones to conceive of a true infinite from which nothing is excluded. The West shied away from this notion. The West likes form, boundaries that distinguish and demarcate. The trouble is that boundaries also imprison – they restrict and confine."

"India saw this clearly and turned her face to that which has no boundary or whatever." "India anchored her soul in the infinite seeing the things of the world as masks of the infinite assumes – there can be no end to these masks, of course. If they express a true infinity." And It is here that India's mind boggling variety links up to her infinite soul."

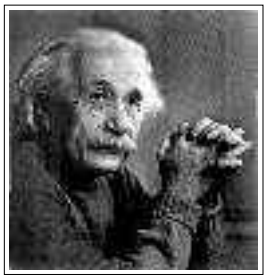
"India includes so much because her soul being infinite excludes nothing." It goes without saying that the universe that India saw emerging from the infinite was **stupendous**."

While the West was still thinking, perhaps, of 6,000 years old universe – India was already envisioning ages and eons and galaxies as numerous as the sands of the Ganges. The Universe so vast that modern astronomy slips into its folds

without a ripple."

(source: **The Mystic's Journey - India and the Infinite: The Soul of a People – By Huston Smith**).

56. **Rudyard Kipling** (1865-1936) imperial poet of British India, as well as a writer, who spent his earliest years blissfully happy in an India full of exotic sights and sounds. **Kipling** was a Nobel Laureate in Literature, and was famous for his poem, **The White Man's Burden**. He said this to Fundamental Christian Missionaries :



"Now it is not good for the Christian's health to hustle the Hindu brown for the Christian riles and the Hindu smiles and weareth the Christian down ; and the end of the fight is a tombstone while with the name of the late deceased and the epitaph drear , " A fool lies here who tried to hustle the east".

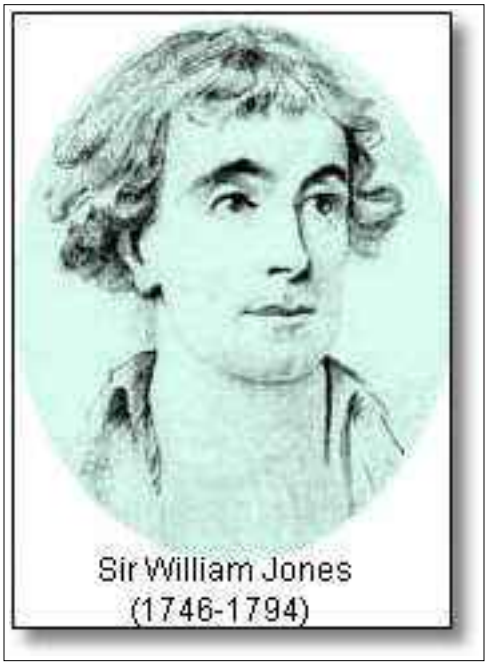
57. **William Macintosh** wrote: "All history points to India as the mother of science and art,"

"This country was anciently so renowned for knowledge and wisdom that the philosophers of Greece did not disdain to travel thither for their improvement."

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 18).

58. **Albert Einstein**, (1879-1955) physicist. In 1905 He published his theory of Relativity. **Einstein** said:

" When I read the Bhagavad-Gita and reflect about how God created this universe everything else seems so superfluous."



"We owe a lot to Indians who taught us how to count, without which no worthwhile scientific discovery could have been made."

(source: http://www.agbioworld.org/biotech_info/articles/prakash/prakashart/plant_biotech.html).

59. **Pierre Sonnerat** (1748 - 1814) a French naturalist, and author of **Voyage aux Indes Orientales et a la Chine**, concurred:

"We find among the Indians the vestiges of the most remote antiquity....We know that all peoples came there to draw the elements of their knowledge ... India, in her splendor, gave religions and laws to all the other peoples; Egypt and Greece owed to her both their fables and their wisdom."

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 18).

60. **Sir William Jones** (1746-1794),came to India as a judge of the Supreme Court at Calcutta. He pioneered Sanskrit studies. His admiration for Indian thought and culture was almost limitless. Even at a time when Hinduism was at a low ebb and it was quite fashionable to run it down, he held it in great esteem. While he believed in Christianity, he was attracted to the Hindu concepts of the non-duality of God, as interpreted by Sankara, and the transmigration of the human soul. The later theory he found more rational than the Christian doctrine of punishment and eternity of pain. Writing to his close friend, Earl Spencer, in 1787, he said:

" I am no Hindu, but I hold the doctrine of the Hindus concerning a future state to be incomparably more rational, more pious, and more likely to deter men from vice, than the horrid opinions, inculcated on punishments without end"

He writes of the Hindus that they are **"a people with a fertile and inventive genius" who in some early age...were splendid in arts and arms, happy in government; wise in legislation, and eminent in various knowledge..."**

" I am in love with the **gopis,** he wrote to Wilkins in 1784, 'charmed with Krishna, an enthusiastic admirer of Rama and a devout adorer of Brahma. Yudhisthir, Arjuna, Bhima and other warriors of the Mahabharata appear greater in my eyes than Agamemnon, Ajax, and Achilles appeared when I first read the Iliad.'

(source: **India Discovered By John Keay** p-28).

In 1794, he published a translation of the Ordinances of Manu. He said about Manu:

"A spirit of sublime devotion, of benevolence to mankind, and of amiable tenderness to all sentient creatures pervades the whole work: the style of it has a certain austere majesty, that sounds like the language of legislation and extorts a respectful awe; the sentiments of independence on all beings but God, and the harsh admonition even to kings are truly noble: and the many panagyrics on the Gayatri, the mother, as it is called, of the Veda, prove the author to have adored not the visible material sun, but the divine and incomparably greater light, to use the words of the most venerable text in the Indian Scripture, which illumines all, delights all, from which all proceed, to which all must return, and which alone can irradiate not our visual organs merely but our souls and our intellects."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p.6).

"To read the Vedanta, or the many fine compositions in illustration of it, without believing that Pythagoras and Plato derived their sublime theories from the same fountain with the sages of India." He also gave arguments to show that a group of Egyptian priests had settled down in India and borrowed much from it."

(source: **The Hindu Phenomenon - By Girilal Jain** p- 35-36).

Equally interesting are his poems. A Hymn to Narayana, in which he describes the Hindu theory of creation. A Hymn to Lakshmi and A Hymn to Ganga are equally fine.

A Hymn to Ganga

"How sweetly Ganga smiles, and glides,
Luxuriant o'er her broad autumnal bed!
Her waves perpetual verdure spread;
Whilst health and plenty deck her golden sides."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p.13-18).

"The analogies between Greek and Pythagorean philosophy and the Sankhya school are very obvious."

Jones firm belief in the Vedas is challenging and at the same time illuminating:

" I can venture to affirm, without meaning to pluck a leaf from the never-fading laurels of our immortal Newton, that the whole of his theology, and part of his philosophy, may be found in the Vedas".

"The six philosophical schools, whose principles are explained in the Darsana Sastra, comprise all the metaphysics of the old Academy, the Stoa, the Lyceum; nor is it possible to read the Vedanta, or the many fine compositions in illustration of it, without believing that Pythagoras and Plato derived their sublime theories from the same fountain with the Sages of India."

"We are told by the Greek writers that the Indians were the wisest of nations, and in moral wisdom, they were certainly eminent."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p.11).

Of **Sankara's** commentary upon the Vedanta, Sir Jones says that "it is not possible to speak with too much applause of so excellent a work."

Sir Jones says of **Vedanta**:

"The fundamental tenet of the Vedantic school consisted not in denying the existence of matter, that is, of solidity, impenetrability and extended figure (to deny would be lunacy), but in correcting the popular notion of it, and in contending that it has no essence independent of mental perception, that existence and perceptibility are convertible terms, that external appearances and sensations are illusory and would vanish into nothing if the divine energy, which alone sustains them were suspended but for a moment: an opinion which Epicharmus and Plato seem to have adopted, and which has been maintained in the present century with great elegance, but with little applause, partly because it has been misunderstood, and partly because it has been misapplied by the false reasoning of some popular writers, who are said to have disbelieved in the moral attributes of God, whose omnipresence, wisdom, and goodness are the basis of the Indian philosophy."

He adds: "The system is built on the purest devotion."

"Human life would not be sufficient to make oneself acquainted with any considerable part of Hindu literature."

(source: **Hindu Superiority - by Har Bilas Sarda** p. 203 and 296 -297).

Guest Book

Updated - December 19, 2003

201.**Professor Kakuzo Okakura** (1862-1913) a Japanese philosopher, art expert, curator and author of **The Book of Tea** and **The Ideals of the East, with Special Reference to the Art of Japan** says:

"We catch a glimpse of the great river of science which never ceases to flow in India. For India has carried and scattered the data of intellectual progress for the whole world, ever since the pre-Buddhist period when she produced the Sankhya philosophy and the atomic theory; the fifth century, when her mathematics and astronomy find their blossom in Arya Bhatta; the seventh when Brahmagupta uses his highly-developed Algebra and makes astronomical observations; the twelfth, brilliant with the glory of Bhaskaracharya, and his famous daughter, down to the nineteenth and twentieth centuries themselves with Ram Chandra the mathematician and Jagdish Chandra Bose the physicist.

Okakura adds that in this scientific age: India had faith.

"Such a faith in its early energy and enthusiasm was the natural incentive to that great scientific age which was to produce astronomers like Aryabhatta, discovering the revolution of the earth on its own axis, and his not less illustrious successor Varamihira; who brought Hindu medicine to its height, perhaps under Susruta; and which finally gave to Arabia the knowledge with which she was later to fructify Europe.

The religion and culture of China are undoubtedly of Hindu origin. At one time in the single province of loyang there were more than three thousand Indian monks and ten thousand Indian families to impress their national religion and art on Chinese soil.

(source: **The Ideals of the East, with Special Reference to the Art of Japan - By Kakuzo Okakura** ISBN 4925080261).

Asia is one," says Okakura "The Himalayas divide only to unite."

(source: **The Heritage of Asia - By Kenneth Saunders** p.24 1932 Student Christian Movement Press).

202. **Sir Michael Sadler** (1861-1943) authority on education, wrote in 1919:

"One cannot walk through the streets of any center of population in India without meeting face after face which is eloquent of thought, of fine feeling, and of insight into the profound things of life. In a very true sense the people of India are nearer to the spiritual hearts of things than we in England are. As for brain power, there is that in India which is comparable with the best in our country."

(source: **India and British Imperialism - By Gorham D. Sanderson** p. 49).

203. **Dr. Arthur Versluis** (1959 -) Associate Professor of American Thought and Language at Michigan State University, a scholar and researcher of several currents of the hermetic, gnostic, theosophic and mystic traditions and author of The Egyptian Mystery, has said:

"It is necessary that we turn to the Vedanta....because the Upanishads provide the purest metaphysics available to us from the primordial past."

(source: **The Egyptian Mystery - By Arthur Versluis** SBN 014019018X).

204. **Count Maurice Maeterlinck** (1862-1949) was a Belgian writer of poetry and a wide variety of essays. He won the 1911 Nobel Prize for literature. In his book **Mountain Paths**, in the **doctrine of Karma**, he finds **"the only satisfactory solution of life's injustices."**

"he falls back upon the earliest and greatest of Revelations, those of the Sacred Books of India with a Cosmogony which no European conception has ever surpassed."

(source: **Mountain Paths - By Maurice Maeterlinck** ISBN 1589632532).

Maeterlinck writes in his book **The Great Secret** pages 26-98:

"We cannot tell how the religion of the Hindus came into being. When we become aware of it, we find it already complete in its broad outlines, its main principles. Not only is it complete, but the **farther back we go, the more perfect it is, the more unadulterated, the more closely related to the loftiest speculations of our modern agnosticism."**

"When the world had emerged from the darkness," says the **Bhagavata Puranam**, "the subtle elementary principle produced the vegetable seed which first of all gave life to the plants. From the plants, life passed into the fantastic creatures which were born of the slime in the waters; then, through a series of different shapes and animals, it came to Man." They passed in succession by way of the plants, the worms, the insects, the serpents, the tortoises, cattle, and the wild animals - such is the lower stage," says Manu again, who adds, "Creatures acquired the qualities of those that preceded them, so that the farther down its position in the series, the greater its qualities.

"Have we not here the whole of Darwinian evolution confirmed by geology and foreseen at least 6,000 years ago? On the other hand, is this not the theory of Akasa which we more clumsily call the ether, the sole source of all substances, to which our science is returning? Is it true that the recent theories of Einstein deny ether, supposing that radiant energy - visible light, for example - is propagated independently through a space that is an absolute void. But the scientific ether is not precisely the Hindu Akasa which is much more subtle and immaterial being a sort of spiritual element or divine energy, space uncreated, imperishable, and infinite."

Commenting on the **Vedic hymns** Maseterlinck says:

"Is it possible to find, in our human annals, words more majestic, more full of solemn anguish, more august in tone, more devout, more terrible? Where, from the depths of an agnosticism, which thousands of years have augmented, can we point to a wider horizon? At the very outset, it surpasses all that has been said, and goes farther than we shall even dare to go. No spectacle could be more absorbing than this struggle of our forefathers of five to ten thousand years ago with the Unknowable, the unknowable nature of the causeless Cause of all Causes. But of this cause, or this God, we should never have known anything, had He remained self-absorbed, had He never manifested Himself." Thus it is, say the Laws of Manu, "that, by an alternation of awakening and repose, the immutable Being causes all this assemblage of creatures, mobile and immobile, eternally to return to life and to die." He exhales Himself, or expels His breath, throughout the Universe, innumerable worlds are born, multiply and evolve. He Himself inhales, drawing His breath, and Matter enters into Spirit, which is but an invisible form of Matter: and the worlds disappear, without perishing, to reintegrate the Eternal cause, and emerge once more upon the awakening of Brahma - that is, thousands of millions of years later; to enter into Him so it has been and ever shall be, through all eternity, without beginning, without cessation, without end."

(source: **Ancient Indian Education - By Radha Kumud Mookerji** p.17 and 49 ISBN 8120804236).

Maeterlinck in his book **The Great Secret**, calls The **Bhagavad Gita** or "Song of the Blessed" **a magnificent flower of Hindu mysticism**.

(source: **The Great Secret** - **By Maurice Maeterlinck** ASIN 0806511559 p. 14).

205. **John Adam Cramb** (1862-1913) author of **The Origins and Destiny of Imperial Britain** says:

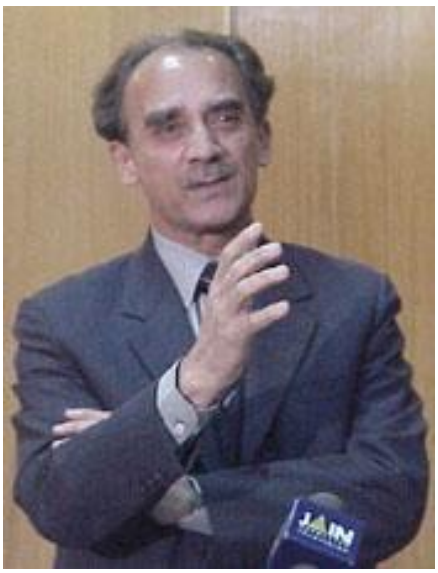
"India is not only the Italy of Asia, it is not only the land of romance of art and beauty, it is in religion, earth's central shrine. India is religion."

(source: **Ancient Indian Culture At A Glance - By Swami Tattwananda** p.76).

206. **James Bissett Pratt** (1875-1944) American author of **Why Religions Die** and **India and its Faiths**, makes these observations about Hinduism, which according to him, is the only religion which tends to survive the present crisis in the life of all religions.

Hinduism, which he calls the "Vedic Way" is a **"self perpetuating" religion. The Vedic way...the way of constant spiritual re-interpretation.. leads to life - life which is self perpetuating, self-renewing and which for the individual and for the world may be eternal. "**

Unlike other religions "not death, but development" has been the fate of Hinduism. "that which in it was vital and true cast off the old shell and clothed itself in more suitable expression, with no break in the continuity of life and no loss in the sanctity and weight of its authority." Generalizing on the secret of **longevity of the Vedic religion,** Professor Pratt says: "If a religion is to live it must adapt itself to new and changing conditions; if it is to feed the spiritual life of its children, it must have the sensitivity and inventiveness that shall enable it to modify their as their needs demand."



Another secret of the **vitality of Hindu religion, is its catholicity**. He says: "Mutually contradictory creeds can and do keep house together without quarrel within the wide and hospitable Hindu family." **"Hindu thought....because of its ingrained conclusiveness, its tolerance, and its indifference to doctrinal divergences, stressed the essential unity of all Indian Dharmas,** whether Hindu or Buddhist, and minimized differences."

(source: **Why Religions Die - By James Bissett Pratt** Berkeley. University of California Press. 1940 p. 122).

207. **William Harten Gilbert** (1904 -) author of **Peoples of India** has said:

"In the history of human culture the contribution of the Indian peoples in all fields has been of the greatest importance. From India we are said to have derived domestic poultry, shellac, lemons, cotton, jute, rice, sugar, indigo, the buffalo, cinnamon, ginger, pepper, sugar-cane, the games of chess, Pachisi, Polo, the Zero concept, the decimal system, the basis of certain philological concepts, a wealth of fables with moral import, an astonishing variety of artistic products, and innumerable ideas in philosophy and religion such as asceticism and monasticism."

(source: **Peoples of India - By William Harten Gilbert**).

208. **Arun Shourie** (1941-) is a Rajya Sabha member and among India's best known commentators on current and political affairs. His writings are backed by rigorous analysis and meticulous research. **Shourie** has been an economist with the World Bank, a consultant in the planning commission and the editor of Indian Express. Among the many honors and awards, he has received the Magsaysay Award, the International Editor of the Year, the Dadabhai Naoroji and the Astor Award. Author of several books, including **Secular Agenda**, **Eminent Historians**, **Harvesting Our Souls**, **Religions in Politics**.

Shourie writes:

"The traditions of India were rich as can be. They had attained insights of the first water...And they were inclusive. A person devoted to a tree was not traduced as an 'animist', a person devoted to a bull or an elephant, or a lion or a snake or even the lowly mouse was not laughed away. The

objects of his devotion were received with reverence - they became part of a pantheon.. Nor was this artifice. The inclusiveness flowed from deep conviction, from what had been experienced at the deepest.. But no one could impede reform by an appeal to 'fundamentals', for these fundamentals made the individual's own experience the ultimate referrent. That everything should reform and transform, the tradition regarded as natural. Differences were harmonized through discourse..."

(source: **Missionaries in India - By Arun Shourie** 1994 - ISBN 8172232705 p. 41-43). For more on Arun Shourie refer to chapter **GlimpsesVII** and **Conversion**).

Bronze four armed Nataraja

209. **Prof. Brian David Josephson** (1940 -) Welsh physicist, the youngest Nobel Laureate has said:

"The Vedanta and the Sankhya hold the key to the laws of mind and thought process which are co-related to the Quantum Field, i.e. the operation and distribution of particles at atomic and molecular levels."

"He has turned to meditation and Indian Philosophy especially the Vedanta and Smakhya philosophy to find" scientific explanations" for the laws of mind and thought processes and their correlation to the quantum field in physics, which deals with creation and destruction of particles at atomic and molecular levels. 'Indian philosophy shows the relationship between mind and matter. Mind as seen in Indian philosophy enables one to describe subjective reality or the process of decision making as a wave function in terms of quantum physics".

Samkhya and Vedanta propound the evolution of universe in it inanimate and animate aspects, more comprehensively than modern science does. Vedananta derives it from primal Divine Energy or Sakti and Samkhya from proto-Nature or Prakriti.

(source: **Science and Vedanta - By H. M. Ganesh Rao** and **Mera Bharat Mahan**).

210. **Michael Wood** (1948 -) British historian/host/writer of **The Barbarian West** public TV documentary. At the heart of the Western Civilization, says Wood, lies a deep streak of violence which drives them to exploit nature and mankind.

"Usually it is said that the East is hopelessly backward and needs to catch up with the West. But, a consideration of the legacy of these great civilizations suggests, says wood, that the West has some catching up to do. It needs to learn from the East a way of cultivating its inner space, of accepting limits and desires in an increasingly finite world.

"In the past 200 years one form of civilization, that of the West, has changed the balance of nature for ever. And now it is civilization itself which has become a central problem of our world."

Taking the Eastern perspective of life, Wood leads us through Western history from its Greco/Roman beginnings to Sir Francis Bacon's and momentous treatise declaring science's supremacy over God. Wood says this is where the West really got off-track, into matter, away from spirit. Final frames of this uncomplimentary portrait of Western societies-and their claims of superiority over Eastern cultures-are cuts from NASA spaceships to a worship scene in Meenaskhi temple, South India, where Wood suggests real civilization has been flourishing for millennia.

He forcefully appreciates India's spirituality and culture and narrates:

"History is full of empires of the sword, but India alone created an empire of the spirit."

"India was one of the earliest of the great civilizations and it defined the goals of civilized life very differently from the West. The West raised individualism, materialism, rationality, [and] masculinity as it ideals. India's great tradition insisted on non violence, renunciation, the inner life, [and] the female as pillars of civilization. And through all the triumphs and disasters of her history she hung on to that ideal, an eternal quest to identify humanity with the whole of creation, a unity in diversity ... History is full of empires of the sword but India alone created an empire of the spirit."

"Ancient India is with us today in the living tradition of the Hindu religion, the basis of Indian culture. The traditions that are honored by millions of Hindus in the present were born in the Indus Valley 5,000 years ago."

(source: **India: Empire of the Spirit - Michael Wood**, quoted from program 2 of the television documentary "Legacy").

211. **Gary Zukav** author of **The Dancing Wu Li Masters: an overview of the new physics** says,

"Hindu mythology is virtually a large scale projection into the psychological realm of microscopic scientific discoveries." "The Wu Li Masters know that physicists are doing more than 'discovering the endless diversity of nature.' They are dancing with Kali, the Divine Mother of Hindu mythology."

(source: **The Dancing Wu Li Masters: An overview of the new physics** ASIN 0553249142).

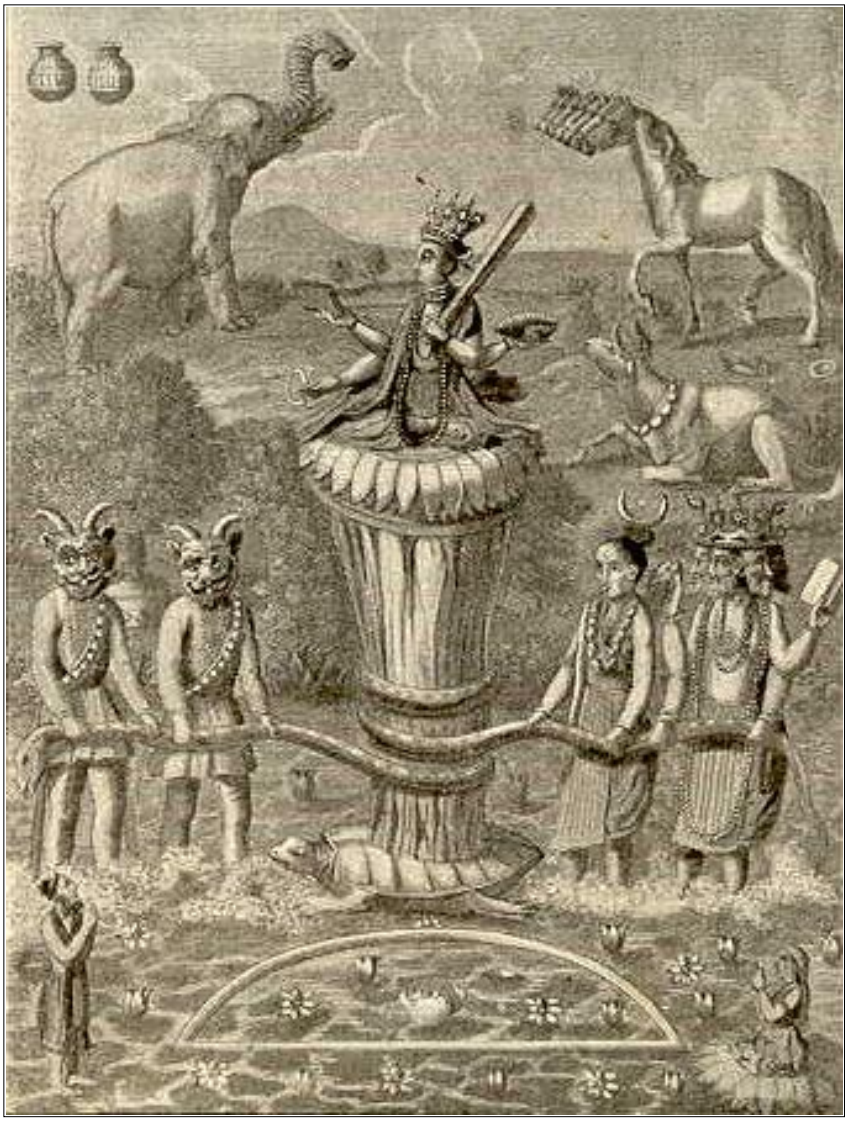
212. **Dr. Koenraad Elst** (1959 -) Dutch historian, born in Leuven, Belgium, on 7 August 1959, into a Flemish (i.e. Dutch-speaking Belgian) Catholic family. He graduated in Philosophy, Chinese Studies and Indo-Iranian Studies at the Catholic University of Leuven. During a stay at the Benares Hindu University, he discovered India's communal problem and wrote his first book about the budding Ayodhya conflict.

An strong advocate for **Hindu revivalism in the West.** He writes:

"The struggle of Hindu society is not primarily with the Muslim community. The most important opponents of Hindu society today are not the Islamic communal leaders, but the **interiorized colonial rulers of India, the alienated English-educated and mostly Left-leaning elite that noisily advertises its "secularism."** It is these people who impose anti-Hindu policies on Hindu society, and who **keep Hinduism down and prevent it from proudly raising its head after a thousand years of oppression."**

"The Hindu fight is not at all with Muslims; the fight is between Hindus anxious to renew themselves in the spirit of their civilization, and the state, Indian in name and not in spirit and the political and intellectual class trapped in the debris the British managed to bury us under before they left."

"The worst torment for Hindu society today is this **mental slavery, this sense of inferiority which Leftist intellectuals,** through their power positions in education and the media, and their direct influence on the public and political arena, keep on inflicting on the Hindu mind."



"Pride in being Indian means, for 99%, pride in Hinduism. So, this legitimate pride has to be nourished with broad and in-depth knowledge of Hindu culture. The two enemies of this effort are the pseudo-secularist morbidity that glorifies the destroyers of Hindu culture, and discourages its study altogether..."

(source: **Ayodhya and After: Issues Before Hindu Society - By Koenraad Elst** p. vi - vii and p. 356. Voice of India publication).

Elst notes that Eastern philosophy has appeal in the West these days because ‘‘of their aura of rationality and the absence of a conflict between science and religion as there is in Islam or Christianity.’’

(source: **Elst probes, discovers India for himself** - newindpress.com).

"Hinduism applauds diversity and consequently accepts that people of different temperaments, circumstances and levels of understanding develop different viewpoints and different forms to express even the same view point. In that sense, it has always paid equal respect to shramanas and brahmanas, to jnana and bhakti etc. It showed samabhava to all traditions which counted as dharma. This respect was never extended to **adharma** practices and doctrines such as Christianity and Islam, the religions for whose benefit the slogan is used mostly."

The Churning of the Milky Ocean or Samudra-Manthana. For more refer to chapter on Hindu

Cosmology.

The **fundamental mistake of Indian secularism** is that Hinduism is put in the same category as Islam and Christianity. Islam and Christianity's intrinsic irrationality and hostility to independent critical thought warranted secularism as a kind of containment policy. **By contrast, Hinduism recognizes freedom of thought and does not need to be contained by secularism. "**

"Historically, Hindus have quickly recognized Islam and missionary Christianity as mlecchа, barbaric predatory religions, not as instances of **dharma** to which any respect is due. **Until Swami Dayananda Saraswati, they didn't even consider these religions as worthy of a detailed critique."**

"Christianity and Islam are wrong in their central truth claims and can immediately be discarded. Humanity has lived without these **pretentious doctrines** for long, and that it is a matter of mathematical certainty that it will resume doing so. The question is only how much damage they will be allowed to add to their record before expiring." "A very optimistic objection could be that Hindu society need not bother about Christianity and Islam, because the thrust of their **historical aggression against Hinduism** is weakening and will weaken further in the future. It has happened before; while **Communists were plotting the death of Hinduism** and the dismemberment of India, the Hindutva movement did very little to counter Communism, yet Communism collapsed under its own failure in its very stronghold."

(source: **Bharatiya Janata Party vis-a-vis Hindu Resurgence - By Koenraad Elst** p. 9-142).

"The Hindu revivalist movement perceives itself as the cultural chapter of India's **decolonization**. This means that it tries to free the Indians from the colonial condition at the mental and cultural level, to complete the process of political and economic decolonization. The need for "reviving" Hinduism springs from the fact that the said hostile ideologies (mostly Islam) have managed to eliminate Hinduism physically in certain geographic parts and social segments of India, and also (mostly the Western ideology) to neutralize the Hindu spirit among many nominal Hindus."

(source: **Decolonising The Hindu Mind - Ideological Development of Hindu Revivalism - By Koenraad** Elst Rupa & Co. January 2001 ISBN 8171675190 p. 10).

He advocates the **intellectual mobilization of Hindu society.** He has observed: "Consider the situation in Africa: in 1900, 50% of all Africans practiced Pagan religions; today, Christian and Islamic missionaries have reduced this number to less than 10%. This is the **kind of threat Hinduism is up against.** So far, the biggest success of these aggressors is at the level of thought: many Hindus have interiorized the depreciation of Hindu culture and society which their enemies have been feeding them from the relative power positions...."

(source: **Negationism in India: Concealilng the Record of Islam - By Koenraad Elst** Voice of India p. 79).

"Hindu tradition is based on the experience of sages, sane men and women who observed the world and explored consciousness. Its approach is scientific: the Vedic truths are verifiable, universal and repeatable, not dependent on the views of privileged individuals ("prophets") but apaurusheya, "impersonal"."

(source: **Bharatiya Janata Party vis-a-vis Hindu Resurgence - By Koenraad Elst** p. 145 -146).

213. **Edmund Burke** (1729-1797) British statesman, parliamentary orator and political thinker, played a prominent part in all major political issues for about 30 years after 1765, and remained an important figure in the history of political theory.

In all his speeches in Parliament on India - those made in connection with his Impeachment of Warren Hastings and others - **Edmund Burke invariably represented the civilization of India as high.** In his speech on the East India Bill, he said:

"This multitude of men (the Indian nation) does not consist of an abject and barbarous populace, much less of gangs of savages; **but of a people for ages civilized and cultivated; cultured by all the arts of polished life while we (Englishmen) were yet dwelling in the woods.** There have been in (India) princes of great dignity, authority and opulence. There (in India) is to be found an ancient and venerable priesthood, the depositary of laws, learning and history, the guides of the people while living and their consolation in death. There is a nobility of great antiquity and renown; a multitude of cities not exceeded in population and trade by those of the first class in Europe; merchants and bankers who vie in capital with the banks of England; millions of ingenious manufacturers and mechanics; and millions of the most diligent tillers of the earth."

(source: **India in Bondage: Her Right to Freedom - By Rev. Jabez T. Sunderland** p. 325).

214. **Fredrick von Schiller** (1759-1805) was Johann Wolfgang von Goethe's friend, who otherwise took little interest in Indian literature, was also moved to enthusiastic praise of Shakuntala, which he found in some respects un paralled in the classical literature of Greece and Rome. He published part of the **Shakuntala in Thalia**, and in a letter to **Wilhelm von Humboldt** he wrote that:

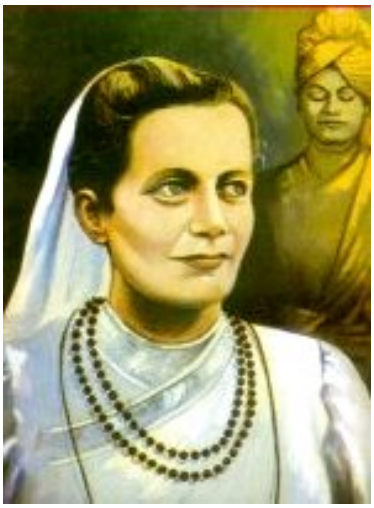
"in the whole of Greek antiquity there is no poetical representation of beautiful love which approaches Sakuntala even afar."

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993 ASIN 0870131435 p. 230-231).

215. **H. M. Hyndman** (1842-1921) the eminent British publicist thus describes the important place of India in the world's history and civilization:

"Many hundreds of years before the coming of the English, the nations of India had been a collection of wealthy and highly civilized people, possessed of a great language with an elaborate code of laws and social regulations, with exquisite artistic taste in architecture and decoration, producing beautiful manufactures of all kinds, and endowed with religious ideas and philosophic and scientific conceptions which have greatly influenced the development of the most progressive races of the West. One of the noblest individual moralists who ever lived, Sankya Muni was a Hindu; the Code of Manu, dating from before the Christian era, is still an essential a study for the jurist....and there are in India, in this later age, worthy descendants of the great authors of the Vedas, of the Mahabharata and the Ramayana."

"and yet, nine-tenths of what has been written by the British about India is so expressed that we are made to believe the shameful falsehood that stability and civilized government in Hindustan began only with the rule of the British."



(source: **India in Bondage: Her Right to Freedom - By Rev. Jabez T. Sunderland** p. 350).

216. **Ernest E. Kellett** (1864-1950) author of **A Short History of Religions**:

"On the other hand there seems to be an increasing number of persons who have been led by natural and acquired sympathy to adopt in some form one of the Eastern religions." The new German faith is said to have for its main source of interpretation Eckhart and the **Bhagavad-Gita.**

(source: **Eastern Religions & Western Thought - By S. Radhakrishnan** p. 251 South Asia Books 1990ISBN 0195624564).

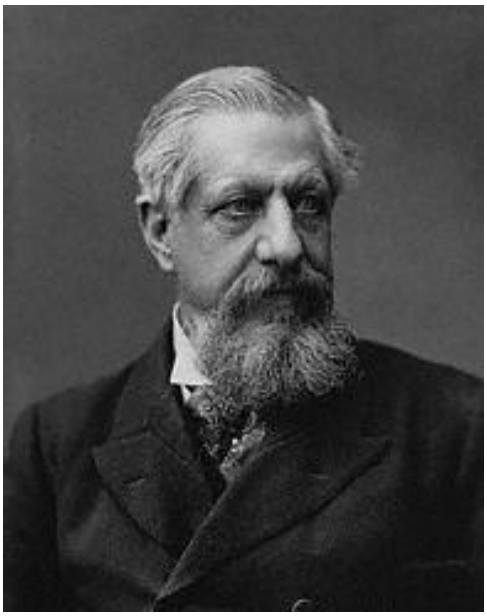
217. **Sister Nivedita** - **Margaret Noble** (1867-1911). Her first literary achievement was **Kali the Mother**, in which she expounds the conception of Kali. There are many 'educated Indians - of Christian missionaries we need not speak - who think that Kali is some blood-thirsty deity worshipped by barbarous people. to such people this book ought to be a revelation. **The Web of Indian Life**, may be at once said that it is the greatest in the English language upon India. It is not a travel book, but a revelation of the soul of a people.

Sister Nivedita probed into the heart of Indian womanhood and reflected in her rhythmic and eloquent prose the natural simplicity and spiritual fervor of the women of India. Women, she contended, are the embodiment and repository of the ancient wisdom of the East. They are the inheritors of a radiant orthodoxy, unspoilt by age and undimmed by the passing fashions of the day to which men so easily succumb.

In the chapter on the **Bhagavad Gita**, she writes: "The book is nowhere a call to leave the world, but everywhere an interpretation of common life as the path to that which lies beyond. "Better for a man is his own duty, however, badly done than the duty of another, though that be easy. "Holding gain and loss as one, *prepare for battle*." That the man who throws away his weapons, and permits himself to be slain, unresisting in the battle, is not the hero of religion, but a sluggard and a coward; that the true seer is he who carries his vision into action, regardless of the consequences to himself; this is the doctrine of the "Gita" repeated again and again....Not the withdrawn, but the transfigured life, radiant, with power and energy, triumphant in its selflessness, is religion. "Arise!" thunders the voice of Sri Krishna, "and be thou an apparent cause!"

Sister Nivedita talked about the task before India. "We must create a history of India in living terms. Up to the present that history, as written by the English, practically begins with Warren Hastings, and crams in certain unavoidable preliminaries, which cover a few thousands of years...The history of India has yet to be written for the first time. It has to be humanized, emotionalized, made the trumpet-voice and evangel of the race that inhabit India."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. ISBN 8120606973 p. 257-276).



"Beauty of place," writes Sister Nivedita, "translates itself to the Indian consciousness as God's cry to the soul. Had Niagara been situated on the Ganges, it is odd to think how different would have been its valuation by humanity. Instead of fashionable picnics and railway pleasure-trips, the yearly or monthly incursion of worshipping crowds; instead of hotels, temples; instead of ostentatious excess, austerity; instead of the desire to harness its mighty forces to the chariot of human utility, the unrestrained longing to throw away the body, and realize at once the ecstatic madness of Supreme Union. Could contrast be greater?"

(source: **The Web of Indian Life - By Sister Nivedita** Ramakrishna-Vivekananda. London, 1904. p. 262).

Sister Nivedita realised that India's unrivalled, integrating culture that had spread from the Himalayas in the North to Kanyakumari in the South was due to this **closeness with the ancient epics, the Ramayana and the Mahabharata, a closeness that had been attacked and almost severed by Colonial style of education: "These two great works form together the outstanding educational agencies of Indian life.** All over the country, in every province, especially during the winter session, audiences of Hindus and Mohammedans gather round the Brahmin storyteller at nightfall, and listen to his rendering of the ancient tales. The Mohammedans of Bengal have their own version of the Mahabharata."

This is why she would never call Indian women as ever having been illiterate. They had imbibed the best in the Indian tradition and strove to bring up their children as a Rama or Krishna, Arjuna or Karna, Sita or Savitri.

(source: **In her Bharati saw the Modern Woman of India - By Prem Nandakumar** - hindu.com).

218. **Sir Edwin Arnold** (1832-1904) poet and scholar. Author of **The Song Celestial**, which is a translation of the **Bhagavad Gita**. It has great elevation of tone and majesty and dignity of style. There are many translations of the Gita but Arnold's translation has a place apart among them by its accuracy and the grave harmony of the verse. The translation is dedicated by the poet to India.

The dedicatory verses are in Arnold's own translation:

"So have I read this wonderful and spirit-thrilling speech,
By **Krishna and Prince Arjuna** held, discoursing each with each;
So have I writ its wisdom here, its hidden mystery,
For England; O our India! as dear to me as she!

He wrote in his preface:

"This famous and marvelous Sanskrit poem occurs as an episode of the Mahabharata, in the sixth - or "Bhishma" - Parva of the great Hindu epic. It enjoys immense popularity and authority in India, where it is reckoned as one of the "Five Jewels" - pancharatnani - of Devanagari literature. **In plain but noble language it unfolds a philosophical system which remains to this day the prevailing Brahmanic belief blending as it does the doctrine of Kapila, Patanjali, and the Vedas."**

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. ISBN 8120606973 p. 234-235).

Arnold already well known for the Light of Asia, wrote in **India Revisited** of the rite of bathing in the Ganges, and he described with emotion the people he observed at their prayers:

"Some are old and feeble, weary with long journeys of life, emaciated by maladies, saddened from loses and troubles; and the morning air blows sharp, the river wave runs chilly. Yet there they stand, breast-deep in the cold river, with dripping cotton garments clinging to their thin or aged limbs, visibly shuddering under the shock of the water, and their lips blue and quivering, while they eagerly mutter their invocations. None of them hesitates; into the Gunga they plunge on arrival, ill or well, robust or sickly; and ladle the holy liquid up with small, dark, trembling hands, repeating the sacred names, and softly mentioning the sins they would expiate and the beloved souls they would plead for."

(source: **Banaras: City of Light - By Diana L Eck** p. 15 -17).

219. **Acharya Jiwatram Bhagwandas Kriplani** (1888 -) Noted Gandhian, and Eminent National Leader. When speaking as the President of the Congress in India, he said:

" I am a Hindu and am proud of the fact. But this is because Hinduism for me has stood for tolerance, for truth and for non-violence....

(source: **Indian Controversies - By Arun Shourie** South Asia Books ASIN 8190019929 p. 173).

220. **Guy Sorman** (1944 -) French intellectual, writer, economist and a professor of political science at Paris University, visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France. He has observed India with a keen eye, a great deal of intelligence and genuine affection. He has written:

" Temporal notions in Europe were overturned by an India rooted in eternity. The Bible had been the yardstick for measuring time, but the infinitely vast time cycles of India suggested that the world was much older than anything the Bible spoke of. **It seem as if the Indian mind was better prepared for the chronological mutations of Darwinian evolution and astrophysics."**

He has commented on the wise division of life in India: "Here is a philosophy far removed from the grotesque refusal to grow old in the West, where wisdom has been replaced by cosmetic surgery and psychiatric help."

"The Indian tradition, on the other hand, is that men submit to nature and form part of it, there nature preserves its sacredness, lost in the West since the Industrial Revolution." He further states that the idea of feminism and **ecology came from the 1968 movement, from the meeting between India and the West.** He says: **"There is hardly anything in European thought to predispose the West to reject virility, the respect for authority, the mastery over nature.** India too has a warrior (khastriya) tradition of virility as exemplified in the **Mahabharata**, only it is secondary. First, comes the veneration of thousands of goddesses - for the Indians, India is above all **Mother India.** India's femininity and sexual ambiguity, is the very antithesis of Western virility. For example, when the British scaled earth's highest peak, the exploit was widely hailed as the **"conquest of the Everest."** It was not realized and is often not realized still, that the word "conquest" was totally out of place in the context of the peak which is considered an object of reverence by many.

"The Brahmins attached to knowledge and learning is what has helped the Indian civilization endure and allowed the arts to flourish. If comparisons have to be made, it may be said that the endurance of the Brahmins in India has kept her elite intact, whereas in neighboring China the anti-intellectualism of communist peasants has completely wiped out the intelligentsia of that country. The Brahmins kept knowledge and art alive in India, preserving not only their savant but also their popular forms. The Brahmin elite is perhaps egoistical and domineering, nonetheless it has preserved a sense of dignity and beauty that has disappeared from China where all that remains is vulgarity and crass ignorance."

Lord Shiva's dance is the dance of subatomic matter.

"The more decentralized, diversified and ritualized a religion is the better it can withstand the onslaught of rationalist thought. Hinduism, derives its strength from the fact that it is not a single unified religion but the sum total of thousands of local faiths. Every village has its own cult, rooted in the local culture without any universalist pretensions."

"India is a marvelous example of the art of living together at a time when Westerners are apprehensive about the future of their society."

"You cannot be a Hindu fundamentalist. It does not mean anything...The concept of fundamentalism does not exist in Hinduism." No one man embodies the spirit of universalism, it runs through the whole of India and there is a place for all religious groups and communities. The spiritual message of India is her capacity to let so many divergent practices coexist. The Enlightenment philosophers seemed to have grasped this profound originality...This the real message of India."

He says, **"India has a strong cultural image in the west; unfortunately, it is not being commercially exploited." This should sink into the heads of those of us who are happy to be third-rate imitators of the US.**

Sorman asserts that India is not a rogue state when he talks of the nuclear option. But there seem to be some Indians who are not so sure of their own country. He points out that "Nobody knows what is right. Each civilization...has its sense of the right. No one can impose his perception of right over others."

"Each Indian looks for God in his own way and worships one or several of the millions of deities who are the supposed reincarnation or expression of God, a Spirit or a Force. This has never led to a religious war. There have been communal clashes, but **India has never had to face religious wars or crusades save those that were thrust on it from outside. The multiple revelation of the East has proved to be in many ways more advantageous than the single revelation of the West."**

(source: **The Genius of India - By Guy Sorman** (**Le Genie de l'Inde**) Macmillan India Ltd. 2001. ISBN 0333 93600 0 p.195 , 122).

161. **Eduard Roeer** (1805-1866) German Indologist, born in Braunschweig Germany, made a name for himself on account of his research in Hindu philosophy. His knowledge of philosophy and philology enabled him to publish a number of valuable editions of philosophical texts. On Roeer's suggestion the **Asiatic Society of Bengal** decided to publish the Upanishads together with Shankara's commentary.

In a letter to Albrecht Weber, he wrote, " Although the philological frame is very important, it is the philosophy of the Hindus which interests me most in Sanskrit literature and it has been my chief aim to bring about a better understanding of the same."

Roeer called the **Upanishads**, **"sublime emanations of the Human mind"** and Shankara's commentary "**a shining example of comprehensive erudition, patient research and philosophical acumen of the ancient Hindus".**

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen**. p.5-6).

162 **Arthur Koestler**, (1905-1983) Hungarian-born British novelist, journalist, and critic. He is best known for his novel Darkness at Noon and **The Lotus and the Robot,** in which he examines Eastern mysticism and wrote:

"Rome was saved in A.D. 408 by the ransom the Senate paid to Alaric the Goth; ever since, when Europe found itself in an impasse or in a questing mood, it has turned yearningly to the land of culinary and spiritual spices. The greatest influence during the dark ages was Augustine, who was influenced by Plotinus, who was influenced by **Indian mysticism.** Long before Aldous Huxley found Yoga a remedy for our Brave New World, Schopenhauer called the Upanishads the consolation of his life."

(source: **Richer by Asia - By Edmond Taylor**, p. 7).

163. **Jean Herbert** (1897-) famous Indianist, author of several books including **Ganesha, précédé d'une étude sur Dieu chez les Hindous, Spiritualité hindoue**, **An Introduction To Asia** and **Vedantisme et vie pratique et autre études**, reminds us that:

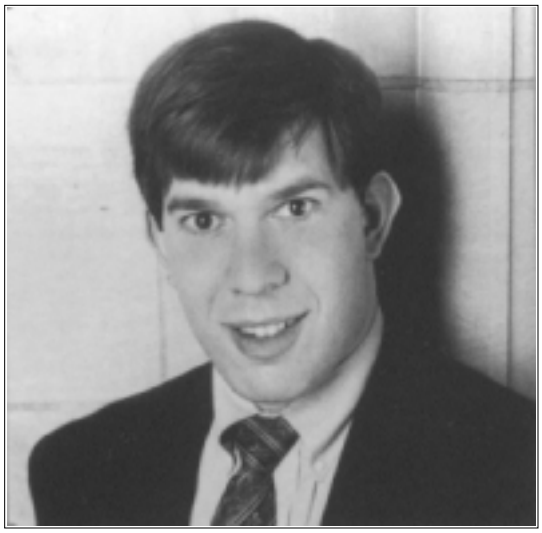
"Many many centuries before us, India had devised most of the philosophical systems which Europe experienced with later. They contained, at least in its essence, the philosophy of the Greeks, the Alexandrine mystique, the religious speculation of the Middle Ages, the rationalism, of the XIXth century and even the most recent incarnations of modern pantheism."

(source: **Arise O' India - By Francois Gautier** Har-Anand publications. p. 25)

164. **The Fourth Caliph, Ali bin Abi Talib**(656-661 A.D.) had remarked:

" The land where books were first written and from where wisdom and knowledge sprang is India."

(Note: Many Islamic traditions support the high standing of Indian culture with the Arabs. This shows the affection and respect of early Muslims had for India. In any case, Caliph Umar, was opposed to attacking India, even when he was told that "Indian rivers are pearls, her mountains rubies, her trees perfumes," for he regarded India as a country of complete freedom of thought and belief where Muslims and others were free to practice their faith.



(source: **Hindu Muslim Cultural Accord - By Syed Mohamud** Bombay 1949 p. 18and 21).

165. **Edmond Taylor**, author of **Richer By Asia** has said:

"The sophisticated philosophies of the East (India) are even more abstract, subtle, and given to the splitting of unsubstantial hairs than those of the West, but the emotional basis of the oldest and richest Oriental religion - Hinduism - is perfectly accessible, it sometimes seemed to me, than certain Christian moods."

"The underlying mood of Hinduism is one of **joyous acceptance of the universe**." It is more richly endowed with gods and goddesses and all the trappings of mythology than even the religion of ancient Greece, and this **imaginative exuberance** is certainly connected with the pantheist emotional mood."

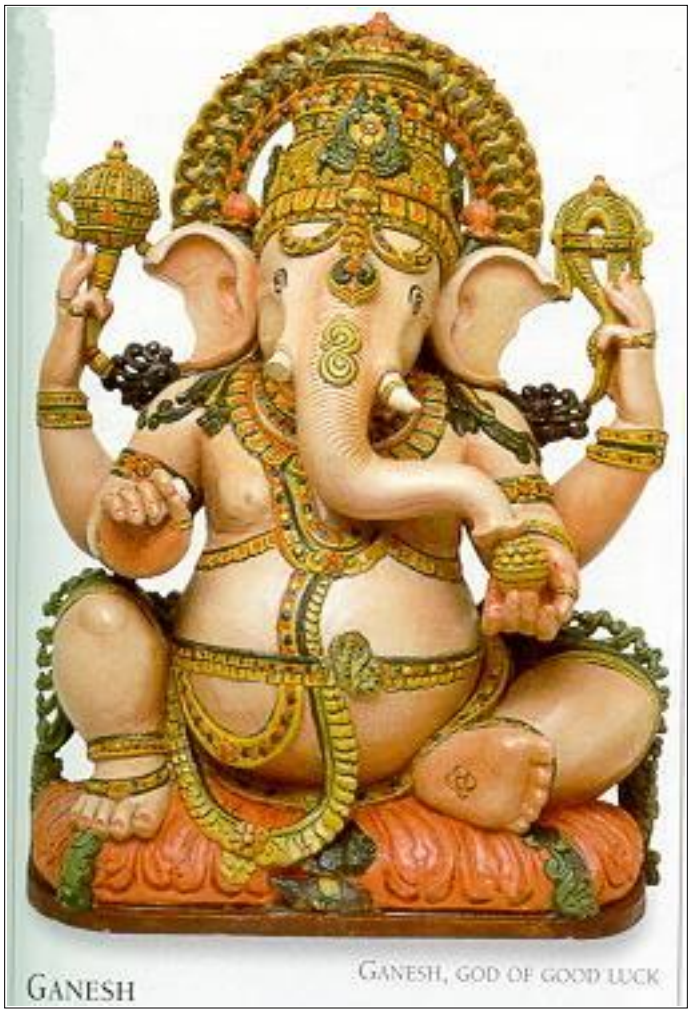
(source: **Richer by Asia - By Edmond Taylor**, p. 297-299).

166. **Charles Seife,** a journalist with *Science* magazine, has also written for *New Scientist*, *Scientific American*, *The Economist*, *Science*, *Wired UK*, *The Sciences*, and numerous other publications. He holds an M.S. in mathematics from Yale University and his areas of research include probability theory and artificial intelligence. He is a mathematician and science writer, author of **Zero: The Biography of a Dangerous Idea**, says:

"Perhaps no one has embraced nothing as strongly as the Indians who, Seife notes,

"never had a fear of the infinite or of the void." Hinduism has embedded within it, a complex philosophy of nothingness, seeing everything in the world as arising from the pregnant void, known as Sunya."

The ultimate goal of the Hindu was to free himself from the endless cycle of pain found in continual reincarnation and reconnect with the Nothingness that is the source and fundament of the All. For Indians, the void of Sunya was the very font of all potential; nothingness was liberation. No surprise then that it is from this sophisticated culture that we inherit the mathematical analog of nothing, zero. Like Sunya, zero is a kind of place holder, a symbol signifying a pregnant space where any other number might potentially reside."



(source: **Zero: The Biography of a Dangerous Idea: It's weird, it's counterintuitive and the Greeks hated it. Why did the Church reject the use of zero?** http://www.calendarlive.com/top/1,1419,L-LATimes-Books-X!ArticleDetail-26133,00.html http://www.salon.com/books/review/2000/03/03/seife/index.html).

167. **Bhagwan S. Gidwani** author of **The Return of the Aryans**, has correctly shows that **Hinduism is based on supremacy of conduct, and not creed.** His view also is simple and forthright --that Hinduism is the one religion that honors and respects human rights. Most other religions consign non-believers to hell, everlasting. Hinduism has room for non-believers, agnostics and atheists. What Hinduism seeks is purity of conduct, and not creed.

In 'The Return of the Aryans' he clarifies that **Bharat** who composed the **Song of the Hindu**, was the 19th Karkarta (Elected Supreme Chief) of the Hindu clan from 5,106 BC. He retired as a hermit at the age of sixty. Long after he retired, the name **Bharat Varsha was given to the country to honor his memory.**

The book unfolds the **drama of the birth and beginnings of Hinduism prior to 8,000 BC, and its early roots of Sanatana Dharma** and Sanatanah. It also tells the story of how in 5,000 BC, the **Aryans originated from India**, and why they moved out of their homeland; their trials and triumphs, battles and bloodshed, adventures and exploits in Europe and elsewhere, including Russian Lands, Finland, Lithuania, Scandinavia, Italy, Greece and Germany; and finally their return to the home-town and heritage of Bharat Varsha.

The Song of the Hindu

"Our desires have grown immeasurable. But they should be desires to give, not merely to receive, to accept and not to reject; to honour and respect, not to deny or belittle...

"God's gracious purpose includes all human beings and all creation_ "For God is the Creator; and God is the Creation... "Each man has his own stepping stones to reach the One-Supreme..."God's grace is withdrawn from no one; not even from those who have chosen to withdraw from God's grace..."How does it matter what idols they worship, or what images they bow to, so long as the conduct remains pure…"It is conduct then - theirs and ours - that needs to be purified..

"There can be no compulsion; each man must be free to worship his gods as he chooses...

"Does every Hindu worship all the gods of all the Hindus? No, he has a free will; a free choice_" A Hindu may worship Agni (fire), and ignore other deities. Do we deny that he is a Hindu? ..."Another may worship God, through an idol of his choosing. Do we deny that he is a Hindu?..."Yet another will find God everywhere and not in any image or idol. Is he not a Hindu?..."He who was Karkarta before me was a Sun-worshiper. Did the worshipers of Siva ever say that he was not a good Hindu? ..."Do the worshipers of Vishnu feel that he who worships before the image of Brahma is not a Hindu?...

"How can a scheme of salvation be limited to a single view of God's nature and worship?_ "Is then God, not an all-loving Universal God?..."Clearly then, he who seeks to deny protection to another on the basis of his faith, offends against the Hindu way of life, and denies an all-loving God... "Those who love their own sects, idols and images more than Truth, will end up by loving themselves more than their gods.." He who seeks to convert another to his own faith, offends against his own soul and the will of God and the law of humanity..."In the Kingdom of God, there is no higher nor lower. The passion for perfection burns equally in all, for there is only one class even as there is only one God..."The Hindu way of life?... Always it has been and always it shall be...that God wills a rich harmony - not a colorless uniformity..."A Hindu must enlarge the heritage of mankind_ "For a Hindu is not a mere preserver of custom. "For a Hindu is not a mere protector of present knowledge...

"Hinduism is a movement, not a position; a growing tradition and not a fixed revelation..."A Hindu must grow and evolve, with all that was good in the past, with all that is good in the present, and with all goodness that future ages shall bring ..."Yet he remains a Hindu_ **"Hinduism is the law of life, not a dogma; its aim is not to create a creed but character, and its goal is to achieve perfection through most varied spiritual knowledge which rejects nothing, and yet refines everything, through**

continuous testing and experiencing..."Yet he must remain strong and united, for a Hindu must know that not an external, outside force can ever crush him, except when he is divided and betrays his own..."What then is the final goal of the Hindu? Through strength, unity, discipline, selfless work, to reach the ultimate in being, ultimate in awareness and ultimate in bliss, not for himself alone, but for all..."This was the silent pledge that our ancient ancestors had taken, when they called themselves the Hindu…"If I cannot abide by that pledge, how can I retain the right to call myself a Hindu?"

Gidwani meets another issue headlong, and demonstrates clearly that caste system was never a tenet of the Hindu faith. Tracing the development of caste system, he shows that it is in fact antagonistic to the Hindu religion, and its ideals.

(source: **The Return of the Aryans - By B S Gidwani** p. 65 & 82-83. For more quotes by Gidwani, please refer to the chapter **Introduction to Hinduism**. For information on the caste system, refer to chapter on **Caste System**).

168. **Roger-Pol Droit,** French philosopher and journalist has remarked that the philosophy of the Vedas and spirituality, seems to disappeared from the consciousness of Europeans and the references to the Indian culture after the collapse of Nietzsche. Since then, Europe has practiced what he calls "helleno-centrism" (Greece-centered) education, which means that the West believes that all philosophical systems started with Greece and that there was nothing worth the name before them.

In his remarkable book, **L'oubli de l''Inde : une amnâesie philosophique** (The forgetting of India) **Droit explains the reasons of this "intellectual amnesia"**. One reason was due to the German philosopher Hegel, who did not discover the Greeks, but created them and made up for them a destiny and thoughts which they did not always have."

In India, things add up, they don't complete to replace each other. It is this gift for coexistence that we have to learn from this **exuberant yet impassive civilization.**

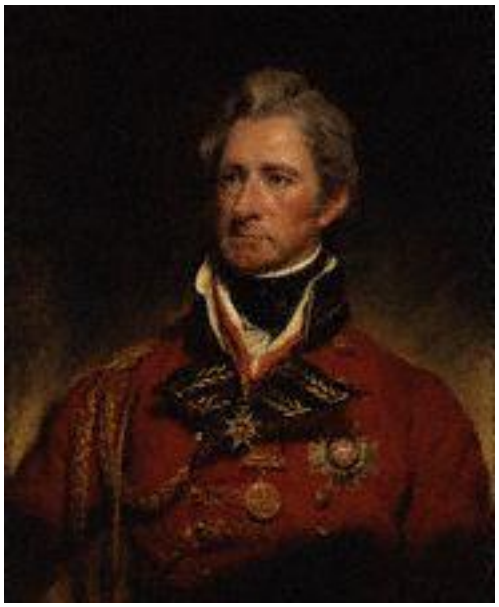
(source: **Arise O' India - By Francois Gautier** p. 26 and **The Genius of India - By Guy Sorman -** Macmillan India Ltd. 2001. ISBN 0333 93600 0 back cover).

169. **Alexander Hamilton** (1757-1804) aide-de-camp to George Washington and first secretary of the Treasury, epitomized this attitude in these words: "When we read in the valuable production of those great Oriental scholars...those of a Jones, a Wilkings, a Colebrooke, or a Halhed, - **we uniformly discover in the Hindus a nation, whose polished manners are the result of a mild disposition and an extensive benevolence."**

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 17).

170. **Professor Arthur Holmes** (1895-1965) geologist, professor at the University of Durham. He writes regarding the age of the earth in his great book, **The Age of Earth** (1913) as follows:

"Long before it became a scientific aspiration to estimate the age of the earth, many elaborate systems of the world chronology had been devised by the sages of antiquity. **The most remarkable of these occult time-scales is that of**



the ancient Hindus, whose astonishing concept of the Earth's duration has been traced back to Manusmriti, a sacred book."

(source: **Hinduism and Scientific Quest - By T. R. R. Iyengar** p. 20).

171. **J. Ovington**, Chaplain to the British King, the seventeenth-century English traveler, wrote in his **A Voyage to Surat in the Year 1689**, that:

" Of all the regions of the Earth (India is) the only Public theatre of Justice and Tenderness to Brutes and all living creatures." He also found that, because of their diet, the Hindus kept a comely and proportionate body and lived a long life. The simple and meatless food made their thoughts 'quick and nimble,' their 'comprehension of things' easier and developed in them a spirit of fearlessness."

(source: **Indian Vegetarian Cookery - By Jack Santa Maria** p. 17).

172. **Sir Thomas Munro** (1761-1827) held various posts in the colonial administration of India, served as brigadier-general during the third Maratha War (1817–18) and was appointed Governor of Madras in 1819. A distinguished Governor of Madras, in a statement made by him before a Committee of the House of Commons, in 1813, ("Hansard's Debates, April 12), he noted:

"If a good system of agriculture, unrivalled manufacturing skill, a capacity to produce whatever can contribute to convenience or luxury, schools established in every village for teaching, reading, writing and arithmetic; the general practice of hospitality and charity among each other; and above all, a treatment of the female sex full of confidence, respect, and delicacy, (if all these) are among the signs which denote a civilized people, then the Hindus, are not inferior to the nations of Europe; and if civilization is to become an article of trade between England and India, I am convinced that England will gain by the import cargo."

(source: **India in Bondage: Her Right to Freedom - By Rev. Jabez T. Sunderland** p.324-325) and **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 17).

173. **Austin Coates,** son of composer Eric Coates, Assistant Colonial Secretary and a magistrate in Hong Kong during the World War II, and First Secretary to the British High Commission in Kaula Lumpur and Penang in 1959-62).

" What we generally fail to realize is that in talking today to the Indians we are face to face with the direct descendants, as often as not, of people who were contemporaries of Ancient Egypt, and whose present culture, in most of its main essentials, is nearly the same as it was then, and is in any event directly descended from that age, and even possibly before it."

(source: **China, India and the Ruins of Washington - By Austin Coates** p- 20)

174. **Robert Ernest Hume**, whose renderings of thirteen principal Upanishads published

in 1921 are still widely read. His translation of the thirteen principal Upanishads was published more than a hundred years ago, and revised more than sixty years ago. It has long been recognized as a classic translation which provides a faithful rendering of the original Sanskrit into twentieth-century English. He wrote:

" In the long history of man's endeavor to grasp the fundamental truths of being, the metaphysical treatises known as the **Upanishads** hold an honored place...they are replete with sublime conceptions and with intuitions of universal truth."

source: **The Thirteen Principal Upanishads - By R. E. Hume** London: Oxford Univ. Press. 1921, p. vii).

175. **Sa`Id Al-Andalusi** (1029-1070) who was a prolific author and in the powerful position of a judge for the king in Muslim Spain. He focused on India as a major center for science, mathematics and culture. He wrote **Kitab Tabaqat al-Uman** or "**Book of the Categories of Nations**," which recorded the contributions to science of all known nations. He has said:

"The Indians among all nations, through many centuries and since antiquity, have been the source of wisdom, fairness and moderation. They are creators of sublime thoughts, universal apologues, rare inventions and remarkable concepts."

"... **They referred to the king of India as the "king of wisdom" because of the Indians' careful treatment of 'ulum [sciences] and all the branches of knowledge.**

"The Indians, known to all nations for many centuries, are the metal [essence] of wisdom, the source of fairness and objectivity. They are people of sublime pensiveness, universal apologues, and useful and rare inventions."

“That which has reached us from the discoveries of their clear thinking and the marvels of their inventions is the (game) of chess. The Indians have, in the construction of its cells, its double numbers, its symbols and secrets, reached the forefront of knowledge. They have extracted its mysteries from supernatural forces. While the game is being played and its pieces are being maneuvered, there appear the beauty of structure and the greatness of harmony. It demonstrates the manifestation of high intentions and noble deeds, as it provides various forms of warnings from enemies and points out ruses as well as ways to avoid dangers. And in this, there is considerable gain and useful profit.”

(source: **The Categories of Nations - By Said al-Andalusi**. A translation was published by University of Texas Press: “Science in the Medieval World”. This is the first English translation of this eleventh-century manuscript. Quotes are from Chapter V: “Science in India”). **A Concise History of Science in India eds. D. M. Bose, S. N. Sen & B. V. Subbarayappa**. New Delhi. Indian National Science Academy, 1989), p. i and **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 16).

176. **Gustav Oppert** (1836-1908) born in Hamburg, Germany, he taught Sanskrit and comparative linguistics at the Presidency College, Madras for 21 years. He was the Telugu translator to the Government and Curator, Government Oriental Manuscript Library. He writes of his high esteem for the Bharatas, the original inhabitants of India:

" I venture to suggest that the inhabitants of this country would do well if they were to assume the ancient, honorable, and national name of Bharata, remembering that India has become famous as Bharatvarsa, the land of the Bharats."

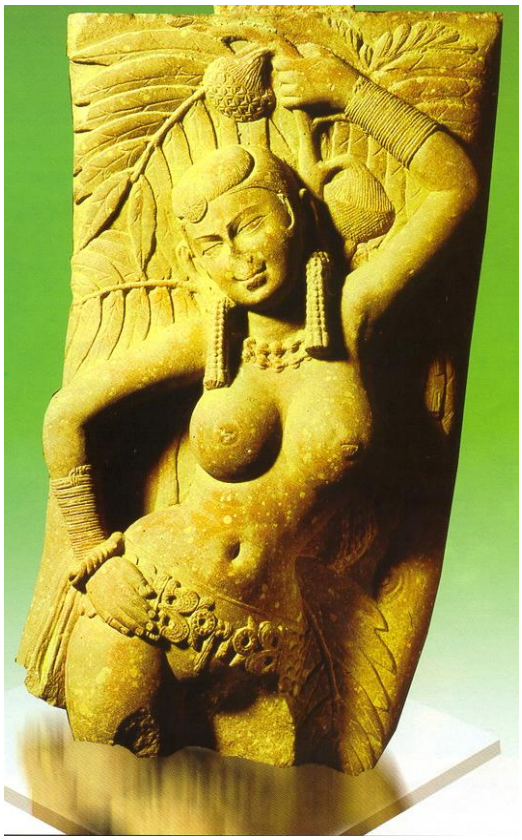
(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen** p.81-82).

177. **Shri V. Shankar,** ICS (Retd.) former Defense Secretary and earlier Private Secretary to the late Sardar Patel.

" It is nothing short of a miracle that the Hindu society and Hindu Dharma have survived so long in spite of repeated aggressions. The secret of our continued existence lies in the fact that our culture has the requisite vitality to influence and absorb outside elements." “India will be saved by Dharma, not by Political maneuvers.” Regarding marriage within caste, he says: "It is human nature to marry some one who is from a similar background. Everyone does it. A Sunni Muslim wants to marry only a Sunni Muslim. How about Jews, Catholics, Whites, Chinese? They all advertise and seek only their own kind. It is universal. A honest narrow minded person creates less harm to the society than a pseudo broad minded person. Are you saying an fifty year old white American who marries a twenty year old mail order bride from Phillipines is better than the typical Indian who marries within his sub caste?"

178. **Vincent A Smith,** British historian, and author of **The Oxford History of India,** says:

" India ...beyond all doubt possesses a deep underlying fundamental unity, far more profound that that produced either by geographical isolation or by political suzerainty. That unity transcends the innumerable diversities of blood, color, language, dress, manners and sect."



"Hinduism has never produced an exclusive, dominant, orthodox sect, with a formula of faith to be professed or rejected under pain of damnation."

(source: **Essays on National Idealism - By Ananda K. Coomaraswamy** p. 131).

Regarding astronomy, he wrote:

"The most systematic record of Indian Historical tradition is that preserved in the dynastic lists of the Puranas, five out of the eighteen works of this class, namely the Vayu, Matsya, Vishnu, Bramhanda and Bhagvata contain such lists. The Brahmanda and the Vayu as well as the Matsya, which has large later additions, appear to be the earliest and most authoratative."

(source: **Hinduism in the Space Age - by E. Vedavyas** p. 108).

179. **Richard Bernstein,** a former New York Times correspondent in China, book critic, author of The book, **Ultimate Journey**

On a visit to India, was struck by how Hinduism is so detached from materialistic values. A meeting with the Shankaracharya of Kanchipuram, a leading figure of Hinduism, was particularly enlightening. "With his entourage, the kind of conspicuous anti-materialism of it, really kind of brought home to me that Hinduism really is an ascetic religion," he said.

"It is a religion which encourages people to look into themselves for truth as the goal of life rather than to get rich or to acquire power." As evidence of this, Bernstein compared the Shankaracharya of Kanchipuram to the Pope, who, he said, holds a comparable spiritual position in Roman Catholicism. **Yet, "their appearance to the world is utterly, utterly different", he said. "One is surrounded by the trappings of splendor -- vast cathedrals and palaces and fabulous museums full of zillion-dollar paintings and sculptures... and all the trappings of power.** I couldn't show up in Rome and say 'Gee, could I come and see the Pope?' and be welcomed, but there I was in India, asking if I could meet the Shankaracharya of Kanchipuram and I was welcomed."

"One of the elements of India that is most difficult for the Western mind to grapple with is the depth and power of Hindu spirituality," Bernstein said. "It's both troubling and inspiring that so many people who are so poor have time and energy for very, very thorough-going, intense and profound spiritual searches."

(source: **Rediff.com - Down The Road With Huien Tsang** http://www.rediff.com/news/2001/may/23usspec.htm).

180. **Dr. Ernest Binfield Havell** (1861-1934) principal to the Madras College of Art in the 1890s and left as principal of the Calcutta College of Art some 20 years later. He wrote several books, including his book, **Indian Architecture - Its Psychology, Structure and History from the First Mohammedan Invasion to the Present Day**. He has said:

"India, whether regarded from a physical or intellectual stand-point, is herself the great exemplar of the doctrine of the one in the many, which her philosophers proclaimed to the world."

(source: **The History of Aryan Rule in India - E. B. Havell**).

"In India, religion is hardly a dogma, but a working hypothesis of human conduct, adapted to different stages of spiritual development and different conditions of life. A dogma might continue to be believed in, isolated from life, but a working hypothesis of human conduct must work and conform to life, or it obstructs life. The very raison d'etre of such a hypothesis is its workableness, its conformity to life, and its capacity to adapt itself to changing conditions. So long as it can do so it serves its purpose and performs its allotted function. when it goes off at a tangent from the curve of life, loses contact with social needs, and the distance between it and life grows, it loses all its vitality and significance."

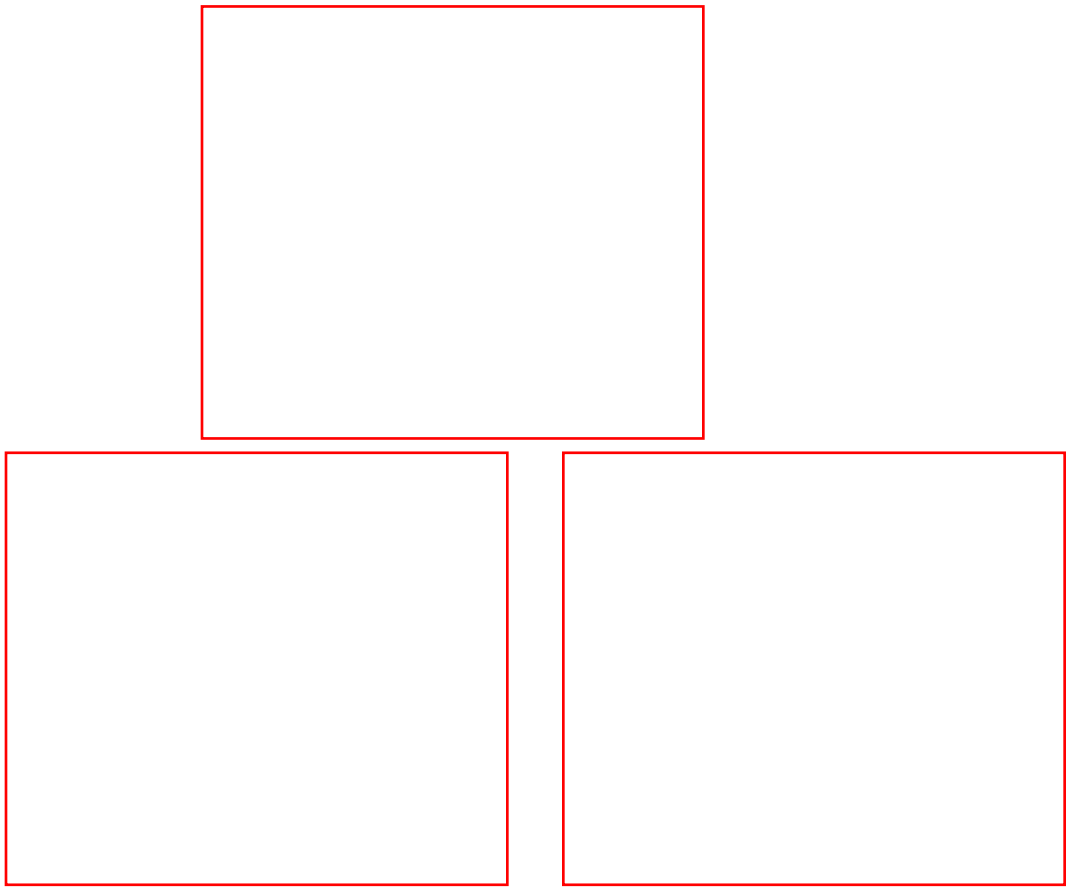
(source: **The Discovery of India - By Jawaharlal Nehru** Oxford University Press. 1995. p. 182).

"It was India, not Greece, that taught Islam in the impressionable years of its youth, formed its philosophy and esoteric religious ideals and inspired its most characteristic expression in literature, art and architecture."

(source: **The History of Aryan Rule in India - E. B. Havell**).

Comparing the European and Hindu art, **E. B. Havell** says:

"European art has, as it were its wings clipped: it knows only the beauty of earthly things. Indian art, soaring into the highest empyrean, is ever trying to bring down to earth something of the beauty of the things above."



Just as angels are given wings, or saints halos, or just as the Holy Spirit was portrayed as a dove, so Shiva or Vishnu were given extra arms to hold the symbols of their various attributes, or extra heads for their different roles. Havell showed how consummately the Indian artist could handle movement. Taking the example of the famous Nataraja (dancing Shiva) bronzes of south India, he first explored its symbolism. No work of Indian art is without a wealth of allegory and symbol, ignorance of which was, and still is, a major stumbling block for most non-Indians. The Nataraja deals with the divine ecstasy of creation expressed in dance.

"Taking the example of the famous Nataraja (dancing Shiva) bronzes of south India, he first explored its symbolism. No work of Indian art is without a wealth of allegory and symbol, ignorance of which was, and still is, a major stumbling block for most non-Indians. **The Nataraja deals with the divine ecstasy of creation expressed in dance. '**

Says **Havell**:

“The design of the Kailasa remained, for all time, the perfect model of a Shivalinga, - the temple craftsman’s vision of Shiva’s wondrous palace in his Himalayan glacier, where in his Yogi’s cell the Lord of the Universe, the great magician, controls the cosmic forces by the power of thought; the holy rivers, creating the life in the world below, enshrined in His matted locks; Parvati, His other Self, the Universal Mother, watching by His side.”

(source: **Indian Sculpture and Painting - By Ernest Binfield Havell** Elibron Classics reprint. Paperback. New. Based on 1908 edition by John Murray, London. p.24 - 69). (source: **The Splendour That Was 'Ind' - By K T Shah** p. 153-154). For more Mr. Havell refer to chapter on **Hindu Art**).

Guest Book

Updated - December 19, 2003

101. **Satguru Sivaya Subramuniyaswami** (1927-2001) American born, was one of Hinduism's foremost spiritual teachers, a prolific author and publisher of **Hinduism Today** magazine.

He has called **Hinduism, the Greatest Religion in the World.**

"Hinduism is so broad. Within it there is a place for the insane and a place for the saint...There is a place for the intelligent person and plenty of room for the fool. The beauty of Hinduism is that it does not demand of every soul perfection in this life, a necessary conclusion for those who believe in a single lifetime during which human perfection or grace must be achieved. Belief in reincarnation gives the Hindu an acceptance of every level of humanity. Some souls are simply older souls than others, but all are inherently the same, inherently immortal and of the nature of the Divine."

"Hinduism, the Eternal Way or Sanatana Dharma, has no beginning, therefore will certainly have no end. It was never created, and therefore it cannot be destroyed. It is a God-centric religion. The center of it is God. All of the other religions are prophet-centric. It is the only religion that has such breadth and depth. Hinduism contains the deities and the sanctified temples, the esoteric knowledge of inner states of consciousness, yoga and the disciplines of meditation. It possesses a gentle compassion and a genuine tolerance and appreciation for other religions. **It remains undogmatic and open to inquiry. It believes in a just world in which every soul is guided by karma to the ultimate goal of Self Realization, or moksha, freedom from rebirth. It rest content in the knowledge of the divine origin of the soul. It cherishes the largest storehouse of scripture and philosophy on the Earth, and the oldest. It is endowed with a tradition of saints and sages, of realized men and women, unrivaled on the Earth.**

It is the sum of these, and more, which makes me boldly declare that Hinduism is the greatest religion in the world.

(source: **Hinduism Today - March/April 2000** p. 10-11).

102. **Dr. Heinrich Zimmer** (1890-1943), the great German Indologist, a man of penetrating intellect, the keenest esthetic sensibility. **Zimmer** came to the United States in 1940, at the height of his career, and was lecturing at Columbia University when he died in 1943. His other works in the Bollingen series include **Myths and Symbols in Indian Art and Civilization and Philosophies of India.**

"We of the Occident are about to arrive at a crossroads that was reached by the thinkers of India some seven hundred years before Christ. This is the real reason, why we become both vexed and stimulated, uneasy and yet interested, when confronted with the concepts and images of Oriental wisdom."

(source: **Readings in Eastern Religious Thought - Hinduism - Edited by Allie M. Frazier** vol 1. p 17).

"It is well known that our Christian Western tradition has long refused to accept the wisdom of the pagans on an equal footing with the body of revelation that it cherishes and worships as its own." The fact that there are virtue, wisdom, and inspiration to be found even among the historical enemies of Christianity."

(source: **Myths and Symbols in Indian Art and Civilization - by Heinrich Zimmer and Joseph Campbell** p. 217-218).

''The whole edifice of Indian civilization is imbued with spiritual meaning. The close interdependence and perfect harmonization of the two serve to counteract the natural tendency of Indian philosophy to become recondite and esoteric, removed from life and the task of the education of society. In the Hindu world, the folklore and popular mythology carry the truths and teachings of the philosophers to the masses. In this symbolic form the ideas do not have to be watered down to be popularized. The vivid, perfectly appropriate pictorial script preserves the doctrines without the slightest damage to their sense."

(source: **Philosophies of India - By Heinrich Zimmer** p. 26).

Regarding the **Cosmic Dance of Shiva**, he has said:

"His gesture wild and full of grace, precipitate the cosmic illusion; his flying arms, and legs and the swaying of his torso produce – indeed, they are – the continuous creation-destruction of the universe, death exactly balancing birth, annihilation the end of every coming-forth."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p.243).

103. **Irwin Babbitt** (1865-1933) the Harvard literary scholar and cultural thinker, will

always stand as a monument to American intellectual culture at its finest. **Babbitt** had a fascination with Asian religion and philosophy. He was one of the principal critics of the twentieth century and an influential teacher of **T. S. Eliot.**

"East bowed low before the blast in humble deep disdain,
It let the legions thunder past, and plunged in thought again."

104. **Dr. Ananda Kentish Cooraswamy** (1877-1947) the late curator of Indian art at the Boston Museum of Fine Arts, was unexcelled in his knowledge of the art of the Orient, and unmatched in his understanding of Indian culture, language, religion and philosophy. He is the author of ' **The Dance of Shiva: Essays on Indian Art and Culture'**

Praising this grand achievement of art, he writes about the **image of the Nataraja**:

"This conception itself is a synthesis of science, religion and art. In the night of Brahma, Nature is inert, and cannot dance till Shiva wills it. He rises from His rapture, and dancing sends through inert matter pushing waves of awakening sound, and lo! matter also dances appearing as a glory round about Him. This is poetry; but nonetheless, science.

Whatever the origins of Siva's dance, it became in time the clearest image of the activity of God which any art or religion can boast of.

“How amazing the range of thought and sympathy of those rishi-artists who conceived such a type as this, affording an image of reality, a key to the complex tissue of life, a theory of nature, note merely satisfactory to a single clique or race, not acceptable to the thinkers of a country only, but Universal in its appeal to the philosopher, the lover and the artist of all ages and all countries…”

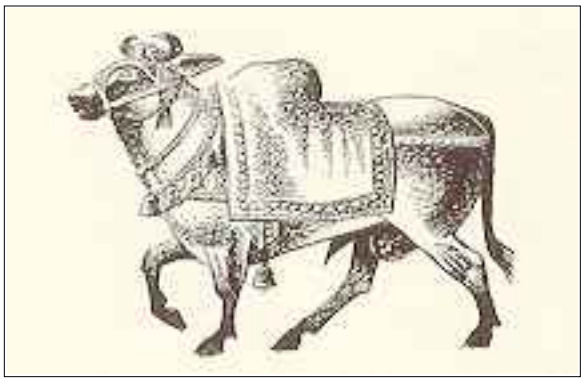
“Every part of such an image as this is directly expressive not of any superstition or dogma, but of evident facts. **No artist of today, however great, could more exactly or more wisely create an image of that Energy which science must postulate behind all phenomena.** “It is not strange that the figure of Nataraja has commanded the adoration of so many generations past; familiar with all skepticisms, expert in tracing all beliefs to primitive superstitions, explorers of the infinitely great and infinitely small, we are worshippers of Nataraja still.”

(source: **The Dance of Shiva - By Dr. Ananda K Coomaraswamy** p. 57-66).

" Hindus have grasped more firmly than others the fundamental meaning and purpose of life, and more deliberately than others organized society with a view to the attainment of the fruit of life; and this organization was designed, not for the advantage of a single class, but, to use a modern formula, to take from each according to his capacity, and to give to each according to his needs." " If it be asked what inner riches India brings to aid in the realization of a civilization of the world, then, from the Indian standpoint, the answer must be found in her religions and her philosophy, and her constant application of abstract theory to practical life."

The essence of the Indian experience, rooted in " a constant intuition" of the unity and harmony of all life. Everything has its place, every being its function and all play a part in the divine concert led by Nataraja (Siva), Lord of Dancers.

He has described the Bhagavad Gita as "a compendium of the whole Vedic doctrine to be found in the earlier *Vedas, Brahmanas and Upanishads*, and being therefore the basis of all later developments, it can be regarded as the focus of all Indian religion."



(source: **Readings in Vedic Literature - By Satsvarupa dasa Goswami** p. 38).

"There are many gods in Hindu pantheon, but they are no more than **the imaginative shadowing forth of all-compassing, all penetrating spirit."**

"Hinduism emerges, not as a post-Vedic development, atheistic declension from the lofty visions of the Upanishads, but as something handed on from a prehistoric past, ever-changing and yet ever essentially itself, raised at various times by devotional ecstasy and **philosophic speculation to heights beyond the grasp of thought,** and yet preserving in its popular aspects the most archaic rites and animistic imagery."

(source: **The Wisdom of Ananda Coomaraswamy - presented by S. Durai Raja Singam** 1979 p. 97).

He detected in **India "a strong national genius... since the beginning of her history." He found Indian art and culture "a joint creation of the Dravidian and Aryan genius."** Of Buddhism, he wrote:' "the more profound our study, the more difficult it becomes to distinguish Buddhism from Brahmanism, or to say in what respects, if any, Buddhism is really unorthodox. The outstanding distinction lies in the fact that Buddhist doctrine is propounded by an apparently historical founder. Beyond this there are only broad distinctions of emphasis." No right-wing historian could dare put it so boldly in Indian today.

(source: **Non-saffron history unnerves reads - By Meenakshi Jain**).

"Almost all that belongs to the common spiritual consciousness of Asia, the ambient in which its diversities are reconcilable, is of Indian origin in the Gupta period."

(source: **The Heritage of Asia - By Kenneth Saunders** p. 45 -46).

"Hinduism is not only the oldest of the mystery religions, or rather metaphysical disciplines, of which we have a full and precise knowledge from literary sources .....but also perhaps the only one of these that has **survived with an unbroken tradition** and that is lived and understood at the present by millions of men..."

The Indian tradition is one of the forms of the Philosophia Perennis, and as such, embodies those universal truths, to which no one people or age can make exclusive claim.

"....We must, however, specially mention the **Bhagavad Gita** as probably the most important single work ever produced in India; this book of eighteen chapters is not, as it has been sometimes called, a "sectarian " work, but one universally studied and often repeated daily from memory by millions of Indians of all persuasions; it may be described as a compendium of the whole Vedic doctrine to be found in the earlier Vedas, Brahmanas, and Upanishads, and being therefore the basis of all the later developments, it can be regarded at the focus of all Indian religion.

(source: **Hinduism and Buddhism - By Ananda Coomaraswamy** p. 3-5). For more on Ananda Coomaraswamy refer to chapter on **Hindu Art** and **Hindu Music**).

105. **Robert Arnett,** professor, has lectured widely throughout America including the Smithsonian Institute and Harvard and Yale Universities. He has been interviewed on National Public Radio, Voice of America and various television programs. **Arnett** in his new book ' **India Unveiled** ' says:

"Hinduism is greatly misunderstood in the West. Most occidentals do not realize that Hinduism is a monotheistic belief in only one God, who as Creator is beyond time, space and physical form. The entire pantheon of Hindu gods and goddesses are merely representations of different attributes of the One, Unmanifested Spirit. Hinduism created a different deity for each of God's numerous

qualities to make God seem more real and approachable."

" Hinduism is a very tolerant religion. It does not have claim exclusivity of the true God for only itself.'

The Rig Veda, clearly states: "Though men call it by many names, it is really One."

106. **Pierre Simon de Laplace, Pierre Simon de Laplace,** (1749-1827) French mathematician, philosopher, and astronomer, a contemporary of Napoleon. **Laplace** is best known for his nebular hypothesis of the origin of the solar system.

" It is India that gave us the ingenious method of expressing all numbers by ten symbols, each receiving a value of position as well as an absolute value, a profound and important idea which appears so simple to us now that we ignore its true merit. But its very simplicity, the great ease which it has lent to all computations, puts our arithmetic in the first rank of useful inventions, and we shall appreciate the grandeur of this achievement the more when we remember that it escaped the genius of Archimedes and Appollnius, two of the greatest men produced by antiquity."

(source: **The Discovery of India - By Jawaharlal Nehru** Oxford University Press.1995 p. 217)

107. **Ninian Smart,** Professor of Sociology. Born in Scotland, he taught at the Universities of London, Birmingham, and Wales for many years before moving to the University of California, Santa Barbara,

" The genius of Hinduism is to combine divergent practices and beliefs into one overall system. "

108. **Von Rene Guenon** (1887-1951) French metaphysician has described our own era as "the reign of quantity". In his many books, Guenon exposed its shortcomings and called for a return to sacred tradition.

" Among the Neo-Platonists, Eastern (Hindu) influences were ... to make their appearances, and it is there ... that ... the Infinite (is) met with for the first time among the Greeks."

109. **Francesco Clemente,** Italian born Indophile, New York artist Clemente was born in 1952. His art was displayed at the Solomon R. Guggenheim Museum recently. He is the youngest artist ever to receive a full-museum retrospective at the Guggenheim. Clemente arrived in India in 1973 and 1978 made more than ten trips there, immersing himself deep in India's philosophy, religion, art and crafts.

"The Gods who left thousands of years ago in Milan (Europe) are still in India."

"In Indian diversity there is still the memory of very refined expressions which we have lost."

110. **Geoffrey Moorhouse** (1931 -) author of **Om: an Indian Pilgrimage**

" No other country has lived with so complicated a past so equably, assimilating everything that has happened to it, obliterating naught, so that not even the intricate histories of European states have produced such a rich pattern as that bequeathed by the Mauryas, the Ashokas, the Pahlavas, the Guptas, the Chalykyas, the Hoysalas, the Pandyas, the Cholas, the Mughals, and the British - to identify a few of the people that have shaped India's inheritance. "

" Religion, flourishes here as it does nowhere else. Other lands may surrender themselves totally to a particular faith, but in India most creeds are deeply rooted and acknowledged fervently. Virtually the whole population practices some form of devotion: the Indian without the slightest feeling for the divine, without a spiritual dimension to his life, is exceedingly rare."

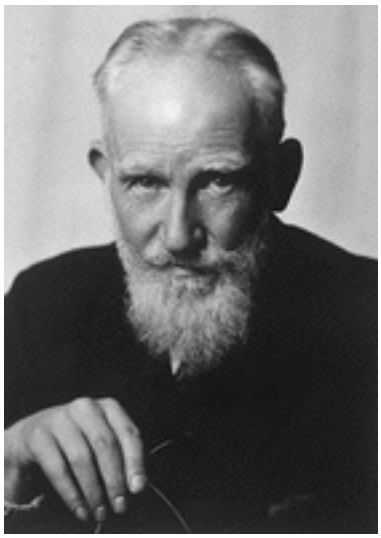
Incomparable and inimitable she is, India is also our great paradigm."

(source: **Om: an Indian Pilgrimage - By Geoffrey Moorhouse** p. 15-16).

111. **Goldsworthy Lowes Dickinson** (1862-1932), A friend of E. M. Forster, wrote in his "**Essay on the Civilizations**" thesis.

" The real antithesis is not between East and West, but between India and the rest of the world." Only India is different; only India un spools some other possibility fantastically. India is the odd man out of the global citizenry." Dickinson held, because religion, religion, religion everywhere had transported the land to somewhere nearly extraterrestrial. All other countries were located on planet Earth, in present time, in specific material conditions- which were so much "maya" or secondary reality in India, where what was important had migrated over the mountaintops into the clouds.

"Indian religion has never been a system of dogma, and is not entangled in questionable history. Indian philosophy and religion have always affirmed that there is; that by meditation and discipline an internal perception is opened which is perception of truth."



"In the first place, India has never put Man in the center of the universe. In India, and wherever Indian influence has penetrated, it is, on the one hand, the tremendous forces of nature, and what lies behind them that is the object of worship and of speculation; and, on the other hand, Mind and Spirit; not the mind or spirit of the individual person, but the universal Mind or Spirit, which is in him, but which he can only have access by philosophic mediation and discipline....It is very much in harmony with the spirit of western science than with that of western religion. And this fact is exemplified not only by the religious and philosophic literature of India, but by its art."

(source: **An Essay on the Civilizations of India, China and Japan - By G. Lowes Dickinson** p.11-31).

Thus India stands for something which distinguishes it from all other peoples, and so she calls Herself a Karmabhumi as opposed to the Bhoga-bhumi of all other peoples. For this

she has been wonderfully preserved until today. Even now we can see the life of thousand of years ago. Standing on the Ghats at Benares or by any village well we are transported into the beautiful antique world.

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** p. 136-137).

112. **George Bernard Shaw**, (1856-1950) a vegetarian and Nobel Laureate in Literature. He was an active socialist on the executive committee of the Fabian Society along with **Annie Besant**. Famous British Author and Playwright, of books such as Pygmalion.

Shaw remarked:

"The Indian way of life provides the vision of the natural, real way of life. We veil ourselves with unnatural masks. On the face of India are the tender expressions which carry the mark of the Creators hand. "

In the face of an Indian, you can see the natural glory of life, while we have covered ourselves with an artificial clock.

"The apparent multiplication of gods is bewildering at the first glance, but you soon discover that they are the same GOD. There is always one uttermost God who defies personification. **This makes Hinduism the most tolerant religion in the world, because its one transcendent God includes all possible gods. In fact Hinduism is so elastic and so subtle that the most profound Methodist, and crudest idolater, are equally at home with it."**

(source: http://www.geocities.com/hindusoc/special/hindintr.htm).

113. **W. Crooke** in his book " **The Popular Religion and Folklore of Northern India**" (Oxford University Press, 1896.

" Among all the great religions of the world there is none more catholic, more assimilative, than the mass of beliefs which go to make up what is popularly known as Hinduism."

114. **Sir Charles Eliot** (1862-1931), British diplomat and colonial administrator, a famous scholar and linguist of Oxford, observed on his book **Hinduism and Buddhism - An Historical Sketch**:

" Let me confess that I cannot share the confidence in the superiority of Europeans and their ways which is prevalent in the West." " European civilization is not satisfying and Asia can still offer something more attractive to many who are far from Asiatic in spirit."

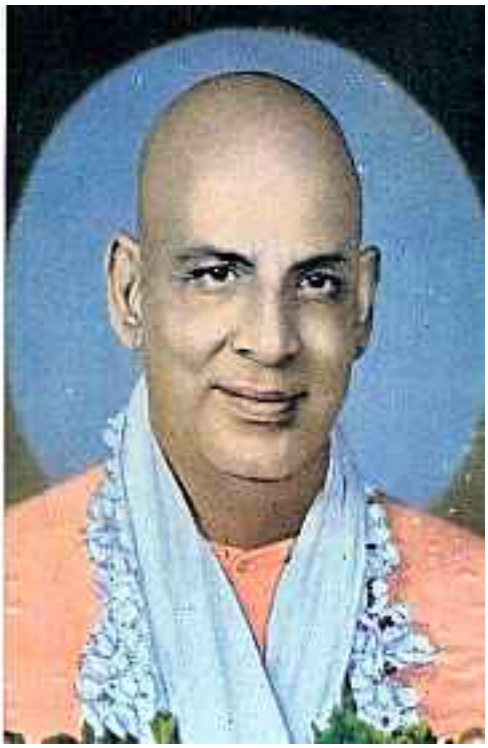
"Indian religions have more spirituality and a greater sense of the Infinite than our western creeds and more liberality. They are not merely tolerant but often hold that different classes of mankind have their own rules of life and suitable beliefs and that he who follows such partial truths does no wrong to the greater and all-inclusive truths on which his circumstances do not permit him to fix his attention....and are more penetrated with the idea that civilization means a gentle and enlightened temper - an idea sadly forgotten in these days of war. "

"I do not think that Christianity will ever make much progress in Asia, for what is commonly known by that name is not the teaching of Christ but a rearrangement of it made in Europe and like most European institutions practical rather than thoughtful. And as for the teaching of Christ himself, the Indian finds it excellent but not ample or satisfying. **There is little in it which cannot be found in some of the many scriptures of Hinduism..."**

"The claim of India to the attention of the world is that she, more than any other nation since history began, has devoted herself to contemplating the ultimate mysteries of existence and, in my eyes, the fact that Indian thought diverges widely from our own popular thought is a positive merit."

(source: **Hinduism and Buddhism - An Historical Sketch -** 3 volume set p. xcviii - xcix).

"Hinduism has not been made, but has grown. It is a jungle, not a building. It is a living example of a great national paganism such as might have existed in Europe if Christianity had not become the state religion of the Roman Empire, if there had remained an incongruous jumble of old local superstitions, Greek philosophy, and oriental cults such as the worship of Sarapis or Mitras."



(source: **Hinduism - By A. C. Bouquet** p. 13).

Compared to Islam and Christianity, Hinduism's doctrines are extraordinarily fluid, and multiform. India deals in images and metaphors. **Restless, subtle and argumentative as Hindu thought is, it is less prone than European theology to the vice of distorting transcendental ideas by too stringent definition. It adumbrates the indescribable by metaphors and figures. It is not afraid of inconsistencies which may illustrate different aspects of the infinite, but it rarely tries to cramp the divine within the limits of a logical phrase.**

The Hindu has an extraordinary power of combining dogma and free thought, uniformity, and variety. Utmost latitude of interpretation is allowed. In all ages Hindus have been passionately devoted to speculation. It is also to point out that from the Upanishads down to the writings of Tagore in the present day literature from time to time enunciates the idea that the whole universe is the manifestation of some **exuberant force giving expression to itself in joyous movement.** Thus the **Taittiriya Upanishad** (III. 6) says:

"Bliss is Brahman, for from bliss all these being are born, by bliss when born they live, into bliss they enter at their death."

(source: **Hinduism and Buddhism: An Historical Sketch** Volume I p. 38-78).

115. **Sri Swami Sivananda Saraswati Maharaj** (1887-1963) the founder of The Divine Life Society, with headquarters in Rishikesh, Himalayas, began as a physician before he turned sannyasi. **Swami** Sivananda said:

" Hinduism stands unrivaled in the depth and grandeur of its philosophy. Its ethical teachings are lofty, unique and sublime. It is highly flexible and adapted to every human need. It is a perfect religion by itself. It is not in need of anything from any other religion. No other religion has produced so many great saints, great patriots, great warriors, great Pativratas (chaste women devoted to their husbands). The more you know of the Hindu religion, the more you will honor and love it. The more you study it, the more it will enlighten you and satisfy your heart. "

116. **Juan Mascaro**, author of **The Bhagvad Gita - translated By Juan Mascaro**. Penguin Classics, 1962), pays tribute to the glory of the Sanskrit literature.

" Sanskrit literature is a great literature. We have the great songs of the Vedas, the splendor of the Upanishads, the glory of the Upanishads, the glory of the Bhagavad-Gita, the vastness (100,000 verses) of the Mahabharata, the tenderness and the heroism found in the Ramayana, the wisdom of the fables and stories of India, the scientific philosophy of Sankhya, the psychological philosophy of yoga, the poetical philosophy of Vedanta, the Laws of Manu, the grammar of Panini and other scientific writings, the lyrical poetry, and dramas of Kalidasa. Sanskrit literature, on the whole, is a romantic literature interwoven with idealism and practical wisdom, and with a passionate longing for spiritual vision."

"Amongst the sacred books of the past, the Upanishads can be called the truth the Himalayas of the soul. Their passionate wanderings of discovery to find that sun of the spirit in us, from whom we have the light of our consciousness and the fire of our life; the greatness of their questions, and the sublime simplicity of their answers; their radiance of joy..."

(source: **The Upanishads - By Juan Mascaro**).

"In the Bhagavad Gita Arjuna becomes the soul of man and Krishna the charioteer of the soul."

"The greatness of the Bhagavad Gita is the greatness of the universe, but even as the wonder of the stars in heaven only reveals itself in the silence of the night, the wonder of this poem only reveals itself in the silence of the soul."

(source: **The Bhagvad Gita - translated By Juan Mascaro**).

117. **Madame Alice Louis-Barthou** writes:

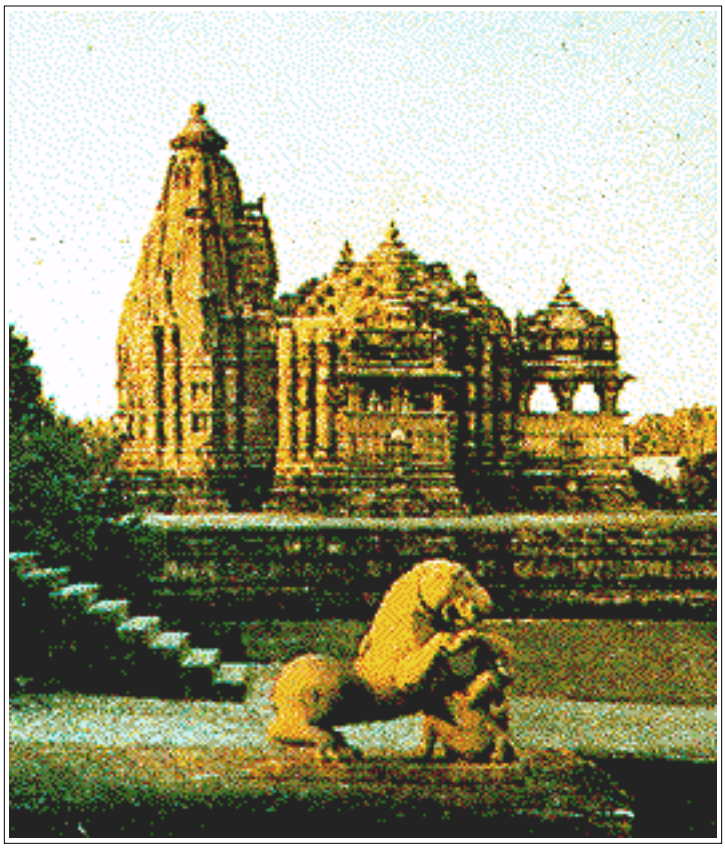
" I look upon the Occident (Europe) with abomination. It represents for me fog, grayness, chill, machinery, murderous science, factories with all the vices, the triumph of noise, of hustling, of ugliness...The Orient is calm, peace, beauty, color, mystery, charm, sunlight, joy, ease of life, and reverly: I find the exact opposite of our hateful and grotesque civilization..... If I had my way, I should have a wall built between the Orient and the

Occident to keep the latter from poisoning the former; I should go and live where you can see clearly and where there are no Europeans."

118. **Professor H. G. (Hugh George) Rawlinson** (1880 -) author of several books including **India, a short cultural history**, remarks that,

"almost all the theories, religious, philosophical, and mathematical, taught by the Pythagoreans were known in India in the sixth century B.C."

119. **W. J. Grant** in his book **The Spirit of India** says:



"India indeed has a preciousness which a materialistic age is in danger of missing. Some day the fragrance of her thought will win the hearts of men. This grim chase after our own tails which marks the present age cannot continue for ever. The future contains a new human urge towards the real beauty and holiness of life. When it comes India will be searched by loving eyes and defended by knightly hands."

"**The religion of the Hindus is rich in legend and stupendous allegory. It is a religion of great dignity and beauty. Its wrestlings with reality are as courageous as any in the whole history of mankind..' Indian thought has generally been contemplative, it has seldom been enamored of the material side of life**."

"In the realm of religious philosophy she has given to us the most searching examination of the ethical law the world is ever likely to have. No Greek was more splendid in his scientific fidelity than the quiet company of Indian thinkers who made the Upanishads and traced the whole beauteous outline of the Eastern spirit."

"There are cities in India whose grace and charm are matched only by the sweetness of an immemorial religion. Nowhere else in the world have I been so exquisitely invaded by the mystic quality of life."

"She is grave and old and stupendous. Her accents are for the calm and gracious. Her temples are laden with symbolism....and internal beauties. It is true, that India is royal...India has been royal at heart from her very foundations of her memory."

"Our sublimest delusion is that India is backward. This predicates, of course, that we are progressive. If backwardness and progress depend on the rate at which one can gobble up vanities perhaps India does not need our aid.....India's devotion to being good rather than being clever comes nearer the heart of a true civilization. Cleverness dies on the tongue like a social pleasantry, goodness echoes round the universe in an un extinguishable reality. We in the West are too busy to see that science without soul is like words without meaning."

"India's greatness is in her humility; her weakness is her strength. She is both wiser and more effective than the West, for she does not declare that reform is not a new shirt on Sunday morning but a clean heart at the Throne of Grace. Justice without spirit of justice is as much of an achievement as a river without its water."

(source: **The Spirit of India - By W. J. Grant** London published by B. T. Batsford Ltd. 1933 preface and p. vi - 58).

120. **Dr. A. L. Basham**, one of the leading authority of ancient Indian culture and author of **The Wonder That Was India**

"Our over-all impression is that no other part of the ancient world were the relations of man and man, and of man and the state, so fair and humane. In no other early civilization were slaves so few in number, and in no other ancient law book are their rights so well protected as in the **Arthashastra**....In all her history of warfare, Hindu India has few tales to tell of cities put to the sword or of the massacre of noncombatants...To us the most striking feature of ancient Indian civilization is its humanity....Our second general impression of ancient India is that her people enjoyed life, passionately delighting both in the things of the senses and the things of the spirit...India was a cheerful land, whose people, each finding a niche in a complex and slowly evolving social system, reached a higher level of kindliness and gentleness in their mutual relations than any other nation of antiquity. For this, as well as for her great achievements in religion, literature, art, science and mathematics, one European student at least would record his admiration of her ancient culture."

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 33).

"India was cheerful land, whose people, each finding a niche in a complex and slowly evolving social system, reached a higher level of kindliness and gentleness in their mutual relationships than any other nation of antiquity."

(source: **The Wonder That Was India - By A L Basham** p. 8 - 9).

Show in alphabetical order

121. **W. Somerset Maugham** (1874-1965) was born in the British Embassy in Paris and was educated in England and Germany. After medical school, a successful attempt at writing led him to widespread fame for his plays and novels. Author of several books including "Of Human Bondage" and " The Moon and Sixpence."

When **Maugham** arrived in India in 1938, he was hoping to find some inspiration for a novel he planned to write incorporating Hindu philosophy. Arriving in Chennai, he met Ramana Maharshi. This meeting inspired him to write his classic " The Razor's Edge". He derived this title from a passage in the **Katha-Upanishad** - **(Kshurasya Dhara):**

" Like the sharp edge of a razor, the sages say, is the path, Narrow it is, and difficult to tread."

His book **Razor's Edge** reveals his clear grasp of Hindu philosophy. The main character of the book seeks in the end relief in India from the horrors of war and gains a sense of being at one with the Absolute, through the Indian philosophical system known as Vedanta.

(Two movies and more than six editions of the book have appeared since 1944, with sales in the millions of copies.)

(source: **1940 Vedantic Novel Still a Hit - Hinduism Today - July/August 2000** p 54-57).

The greatest English novelist **Maugham**, advises **prospective writers to come to India for knowledge of the higher values of life.**

(source: **The Vision of India - By Sisirkumar Mitra** p. 209).

122. **Marcus Leatherdale** Montreal born photojournalist has had a long love affair with India. To him Hinduism and India are almost synonymous. What he likes about Hinduism is that its very emotional, colorful and joyful. **Leatherdale** notes:

The photojournalist Marcus Leatherdale has also had a long love affair with India. For many years he rented a house in Benares, spending half the year there on the bustling

ghats, making friends with Brahmins and boatmen alike. He speaks some Hindi and calls himself an 'adha' Hindustani. He has shot images of maharanis and circus performers and ordinary Indians. His current focus is on the tribal folks who are an almost endangered species in India.

"You'd have to be brain dead to live in India and not be affected by Hinduism. It's not like Christianity in America, where you feel it only on Sunday mornings … if you go to church at all. Hinduism is an on-going daily procedure. You live it, you breathe it."

(source: **Westerners who have succumbed to India' legendary charm - By Lavina Melwani - littleindia.com**).

Dancing Ganesha

"Hinduism has a playful aspect which I've not experienced in any other religion. Its not so righteous or sober as is Christianity, nor is it puritanical. That's one of the reasons I enjoy India. I wake up in the morning, and I'm very content."

(source: **The timeless portraits of Marcus Leatherdale - By Lavina Melwani - Hinduism Today March 1977**).

123. **Jean-Paul Droit** French philosopher, and Le Monde journalist, recently wrote in his book "**The Forgetfulness of India,** that:

"The Greeks loved so much Indian philosophy that Demetrios Galianos had even translated the Bhagavad-Gita". There is absolutely not a shadow of a doubt that the Greeks knew all about Indian philosophy."

(source: **Arise O'India - By Francois Gautier** ISBN 81-241-0518-9 Har-Anand Publications 2000 p. 22).

124. **Herman Melville** (1819-1891) was the great American novelist, and author of **Moby Dick.or The Whale.** Melville's references to Hindu myth and thought, however, peripheral to his works some have thought them to be, are so numerous that there can be no doubt about his extensive knowledge of Hinduism.

That Melville should give a fairly detailed description of the story of **Vishnu** in two places is itself an indication that he did not intend it to be read and forgotten. While trying to present the "true form of this whale," he adverts to those "curious imaginary portraits of him" and describes the Hindu whale as the most ancient portrait available in the world:

"Now, by all odds, the most ancient extant portrait anyways purporting to the whale's is to be found in the famous cavern pagoda of Elephanta, in India. …The Hindoo whale referred to, occurs in a separate department of the wall, depicting the incarnation of Vishnu in the form of leviathan, learnedly known as the **Matse-Avatar**."

In addition to this reference to the portrait of the **Hindu leviathan at Elephanta,** Melville mentions the context in which Vishnu incarnates himself as a fish and relates him to the whaleman's fraternity:

“That wondrous oriental story is now to be rehearsed from the Sashras which gives us the dread Vishnoo, one of the three persons in the godhead of the Hindoos; gives us this divine Vishnoo himself for our Lord: - Vishnoo, who, by the first of his ten earthly incarnations, has forever set apart and sanctified the whale. When Brahma, or the God of Gods, saith the Shaster, resolved to recreate the world after one of its periodical dissolutions, he gave birth to Vishnoo, to preside over the work; but the Vedas, or mystical books, whose perusal would seem to have been indispensable to Vishnoo before beginning the creation, and which therefore must have contained something in the shape of practical hints to young architects, these Vedas were lying at the bottom of the waters; so Vishnu became incarnate in a whale, and sounding down in him to the utter-most depths, rescued the sacred volumes. Was not this Vishnoo a whaleman, then? Even as a man who rides a horse called a horseman?”

(source: **Moby Dick: A Hindu Avatar, a Study of Hindu Myth and Thought in Moby-Dick - By H. B. Kulkarni** p. 1-6).

125. **Jean-Sylvain Bailly** (1736–93) 18th century French astronomer and politician. His works on astronomy and on the history of science (notably the **Essai sur la théorie des satellites de Jupiter**) were distinguished both for scientific interest and literary elegance and earned him membership in the French Academy, the Academy of Sciences, and the Academy of Inscriptions.

Jean-Sylvain Bailly said:

"The motion of the stars calculated by the Hindus before some 4500 years vary not even a single minute from the tables of Cassine and Meyer (used in the 19-th century). The Indian tables give the same annual variation of the moon as the discovered by Tycho Brahe - a variation unknown to the school of Alexandria and also to the Arabs who followed the calculations of the school... "The Hindu systems of astronomy are by far the oldest and that from which the Egyptians, Greek, Romans and - even the Jews derived from the Hindus their knowledge."

(source: **The Politics of History - By N. S. Rajaram** Voice of India ISBN 81-85990-28-X. 1995 p. 47).

126. **R. Gordon Milburn** claims that:

"Christianity in India needs the Vedanta...as constituting what might be called an Ethnic Old Testament " in **Christian Vedantism - Indian Interpreter** 1913.

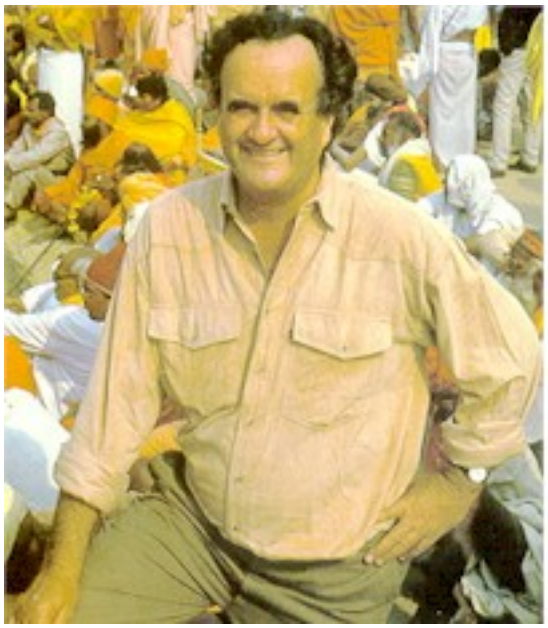
127. **Rene Guenon** (1886-1951) better known in Egypt as **Sheikh 'Abd Al Wahid Yahya**. But at the age of 21 he was already in Paris, when he came in contact with the Advaita Vedanta school. By the time he was nearly 30, his phenomenal intelligence had enabled him to see exactly what was wrong with the modern West.

He was one of the best-known European traditionalist authors on various civilizations, writes in his book **Introduction to the Study of the Hindu Doctrines** says:

" In India, we are in the presence of a tradition which is **purely**

metaphysical in its essence....A fact which stands out much more clearly here than in the Semitic tradition, chiefly owing to the absence of the religious point of view,....is the complete subordination of the various particular orders relatively to metaphysics, that is to say relatively to the realm of universal principles."

(source: **Introduction to the Study of the Hindu Doctrines - by Rene Guenon** p. 90-91).



128. **Hans Torwesten** (1944 -) a native of Germany, studied art in Vienna and Indian philosophy, meditation, and yoga in England. A writer, lecturer, yoga teacher, and painter, he now lives in Austria. In his book **Vedanta - Heart of Hinduism** he writes:

"A fair number of leading physicists and biologists have found parallels between modern science and Hindu ideas. In America, many writers such as J. D. Salinger (An Adventure in Vedanta: J.D. Salinger's the Glass Family), Henry Miller, Aldous Huxley, Gerald Heard, and Christopher Isherwood, were in contact with the Vedanta. Most of them came from elevated intellectual circles which rejected the dogmatism of the Christian Churches yet longed for spirituality and satisfactory answers to the fundamental questions of existence. In Vedanta, they found a wide-open, universal, and philosophically oriented religion where even the penetrating scientific mind could find something to its taste".

"To the Hindu, shruti is what cannot be thought up by the limited human intellect, but is of God. It is what is forever valid, never changes, is not dependent on the limited capacity for understanding of any one historical person. The Hindu for this reason is proud not to need a historical founder. The founder and foundation of the Vedas and the Upanishads is the Brahman itself, is what is indestructible and timeless."

" The Upanishads are indeed thoroughly suffused with the spirit of transcendence."

(source: **Vedanta - Heart of Hinduism - by Hans Torwesten** p. 23 29 and 214).

129. **Mark Tully** former BBC correspondent in India, author of several books, including **No Full Stops in India** and **The Heart of India**, said:

"The genius of Hinduism, and the very reason of its survival for so long, was that it does not stand up and fight."

It changes and adapts and modernizes and its absorbs and that is the scientific and proper way of going about it as well."

" Why is Christianity in so much trouble at the moment? Because it is so difficult for it to adapt," says the celebrated television journalist. Saying that Hinduism would prove to be the religion of the next Millennium."

"The Kumbh Mela could only take place in India. In no other country would millions and millions of pilgrims, driven just by faith that the sins of this life and previous lives would be washed away by bathing in the confluence

of two rivers at an auspicious time, brave severe hardships, some walking barefooted, to get to bathe. Where else would you find hundreds of holy men willing to march naked in processions through the crowds of pilgrims, or one thousand Brahmins sitting around a hundred sacred fires offering a sacrifice for world peace?" At what gathering of one religion would you find such a variety of teaching, such an acceptance that there are many ways to God?"

(source: **cnn.com**).

Addressing the National Hindu Students Forum in Britain in August, 1997, he expressed the view that **Indian civilization has a Hindu base to it and that Hindus should proclaim their identity with pride.**

(source: **Knighthood at last for the 'Voice of India' - Tribune India** 1/6/02).

"It was the promotion of the **ancient Indian tradition of religious tolerance**, a tolerance which owes so much to Hinduism's own pluralism...This tradition provides a basis for Hindus and for Indians who believe in many of the many other religions of this country to live with self-respect, in peace, and proud of their national identity. This is very much an Indian tradition, a tradition which is very different too from the tradition of countries where Semitic religions like Christianity and Islam have dominated. It is the tradition which could meet the needs of so many other countries in the world"

(source: **Opposites distract - By Mark Tully** - hindustantimes.com).

130. **Betty Heimann** late professor of Sanskrit and Indian philosophy at Ceylon University,

"It is an undeniable fact that no philosophy outside India makes such a varied and manifold use of [spiritual] instruction in order to visualize the supreme Truth. It is the very metaphysical bent of Hindu thought which makes room for practical educational training."

131. **Dale M Riepe** (1918 -) says in his book **The Philosophy of India and its impact on American Thought**

"If the American empire meets with the fate of the British, if Americans cannot resolve their life-and-death struggle with the intelligent use of technology, if the alienation in American society cannot be alleviated, then a new attitude may gradually replace the 300 years reign of optimism. Such eventualities may lead to more philosophers turning to contemplation, meditation and increased poring over the **Hindu and Buddhist scriptures."**

" Western thinkers, through their study of Indian philosophies and religions have **"discovered a new technical philosophy of undreamed-of complexity and ingenuity"** and this contact has expanded the imagination, increased the number of categories, made possible new studies in the history of logic, revealed new sensations and has driven the mind back to its origin and out of its possibilities."

(source: **The Philosophy of India and its impact on American Thought - By Dale M Riepe** p. 275).

132. **Clarence Edward Dutton** (1841-1912), a captain of ordinance in the U.S. army, geologist-poet and a Yale man, Dutton was deeply influenced by the philosophies of India. It was Dutton who likened the snow-covered peaks of the canyon walls to the Hindu gods, Brahma, Vishnu and Shiva. There is even a

Hindu amphitheatre which Dutton likened to the "profusion and richness which suggests an Oriental character. On the 7,650-foot Shiva Temple he wrote:

"Dutton found the Shiva Temple the grandest of all, and most majestic in aspect.... All round it are side gorges sunk to a depth nearly as profound as that of the main channel...In such a stupendous scene of wreck, it seemed as if the fabled 'destroyer' might find an abode not wholly uncongenial." he observed.

He was particularly in awe of a 7,529-foot butte. 'It is a gigantic butte,' he wrote in 1860. 'So admirably designed and so exquisitely decorated that the sight of it must call forth an expression of wonder and delight from the most apathetic beholder. Such a magnificent nature-made spire needed a timeless name. He called it the **Vishnu Temple.**

Dutton went on to name other buttes with such names as Brahma Temple, (7,553 feet), Deva Temple (7,339).

According to Professor Stephen J. Payne, professor of history at the Arizona State University and author of the book - **How the Canyon Became Grand** - there is " no explicit explanation for naming the peaks after Hindu gods, only implicit." He likens the naming the peaks to the historical fact of the time. "When there was a growing awareness and respect in the West, particularly Europe, towards Indian philosophies, not economies of the past."

133. **George Hendrick** wrote in the Introduction to reprint edition of Charles Wilkins Bhagavad Gita. He noted about the Bhagwad Gita and its :

"antiquarian charm and historical importance."

(source: **The Universal Gita: Western Images of the Bhagavad Gita a Bicentenary Survey** - **By Eric J. Sharpe** p. 4-5).

134. **Klaus K. Klostermaier** Professor of Religion at the University of Manitoba. Author of several books including **A Survey of Hinduism** states:

"Hinduism has proven much more open than any other religion to new ideas, scientific thought, and social experimentation. Many concepts like *reincarnation, meditation, yoga* and others have found worldwide acceptance. It would not be surprising to find Hinduism the dominant religion of the twenty-first century. It would be a religion that doctrinally is less clear-cut than mainstream Christianity, politically less determined than Islam, ethically less heroic than Buddhism, but it would offer something to everybody. It will appear idealistic to those who look for

idealism, pragmatic to the pragmatists, spiritual to the seekers, sensual to the here-and-now generation. Hinduism, by virtue of its lack of an ideology and its reliance on intuition, will appear to be more plausible than those religions whose doctrinal positions petrified a thousand years ago."

135. **Professor Louis Renou** (1896-1966) French Indologists, author of several books including **Hinduism**, **Civilization in Ancient India**, **L'Inde fondamentale**. He wrote in 1962:

"Truth is for Hinduism an indivisible treasure; spiritual immediacy is widely distributed, the mystic path is open to everyone. **In its purest forms, this religion becomes a type of wisdom, that wisdom which impressed the ancient Greeks when they visited India and which could be of some fruitfulness again for our blase cultures.** It is as wisdom that we should like to define Hinduism rather than by the equivocal term spirituality."

(source: **Hinduism - By Louis Renou** p. 56 - 57).

"The fact remains that Hinduism provides an incomparable field of study for the historian of religion: its aberrations are many, but there is in it a great stream of mystical power: it manifests all the conceptions of religion, and its speculation is continually revealing them in a new light. It combines powers of constant renewal with a firm conservancy of fundamental tradition. In Bhakti and still more in Yoga, it has perfected unrivalled technique of mystical initiation, that contrast strongly with the frequently haphazard methods of spiritual training in the West. Above all, in the interpenetration of religion and dharma in general and the reciprocal stimulus of abstract thought and religious experiment, there is an underlying principle, that, given favorable conditions, may well lead to a new integration of the human personality."

(source: **Religions of Ancient India** - **By Louis Renou** p. 110).

He writes: "For almost everyone the **Bhagavad-Gita** is the book par excellence."

(source: **Readings in Vedic Literature - By Satsvarupa dasa Goswami** p. 38).

The well known Indologist and Sanskrit scholar at the University of Paris, in the course of a talk at Santiniketan in January 1949, said that the best writers and thinkers of France had been influenced by Indian thought and culture, and the intuitive sense of affinity between France and Indian culture had developed into devotion. In another talk he said:

"India has the good fortune of being the repository of the noblest spiritual tradition, the only one in the whole world which has been alive throughout the centuries. And Sanskrit

has been the privileged instrument of this tradition."

(source: **The Vision of India - By Sisirkumar Mitra** p. 210-211).

"The importance of the Veda to India is well known. Its imprint on Hinduism is permanent and unmistakable; and on Buddhism and Jainism, too, it has left a deep impression, if only in the reaction it produced in them. It seems likely that many Indian literary disciplines would have developed quite differently if there had not originally been that striking sequence of hymns, commentaries, descriptive aphorisms and philosophoumena, which were drawn upon and imitated over a long a period. Vedism is a religion, but it is even more a technique; a technique of learned poets and erudite theologians, which has given rise to the most atheistic of the philosophical systems of India. Vedism even developed the secular disciplines, phonetics and grammar, astronomy, the rudiments of law, even geometry, because its teaching made use of them.

"To the Indian mind, God is 'l'hypostase deficiente de l'Absolut', as **M. Olivier Lacombe** (**L'Absolu selon le Vedanta** - The Absolute according to Vedanta) has said. The world is usually envisaged as an attribute of the divine. In short, the divine is both transcendent and immanent...from early times it was said that the Supreme Being is silence."

"India in her exhaustion has often taken refuge in ahimsa and the Vedantic scale of values; but a new and more self-assertive generation may be at hand, a generation imbued with the spirit of Yajnavalkaya." The Veda may once again become a great source of inspiration, as it was to the fiery Dayananda Saraswati in the nineteenth century, who set out to establish a mystique of national and social import based on the Vedas."

(source: **Religions of Ancient India** - **By Louis Renou** p. 42 - 69).

136. **Georg Feuerstein** is a specialist in the Sanskrit literature of yoga and has written considerable number of articles on various aspects of Indian thought. He has written various books including the **Yoga Tradition: Its History, Literature, Philosophy, and Practice** and ' **The Introduction to the Bhagavad Gita: Its philosophy and Cultural Setting**. He observes:

" From earliest times Indian man has shown a distinct predilection for philosophical speculation about the nature of man and the universe. Long before the rise of Greek thought, he grappled with the profoundest problems of philosophy. By the time the Gita was complied, philosophical enquiry had already reached a noteworthy degree of maturity, complexity and coherence. The musings of the early Vedic seers had developed in depth and breadth as well as in clarity and precision."

"The dry, academically stilted approach of contemporary Indology, with little interest in the inner meaning of its subject matter, becomes singularly apparent in the Gita, which is brimming with significance."

(source: **The Introduction to the Bhagavad Gita: Its philosophy and Cultural Setting** p. 61 and 84- 85).

"India's spirituality is undoubtedly the most versatile in the world. In fact, it is hard

to think of any metaphysical problem or solution that has not already been thought of by the sages and pundits of ancient or medieval India."

"Our world, the sages of ancient India tell us, is but a wonderfully bewitching collage of name (nama) and form (rupa). In this they anticipated contemporary philosophy."

"God, is not the Creator-God of deistic religions like Judaism, Islam, and Christianity. Rather, God is the transcendental totality of existence, which in the non-dualist schools of Hinduism is styled the Brahman, "Absolute".

"In a sense, Monoism justifies the emotional discord apparent in most of its Occidental followers and rationalizes their self-centeredness. In the case of India, this is the whole pan-en-theistic current of thought so beautifully exemplified in the Gita, some Upanishads, the schools of Vaisnavism, the Saktivada of the Hindu Tantras and in the remarkable South Indian system of Saiva-Siddhanta. This proliferative movement was of cardinal importance in the making of India. By acting as a counter-balance to the other-worldliness of the monistic trends, it literally prevented the Indian culture from total self-extermination."

(source: **Yoga: The Technology of Ecstasy - By Georg Feuerstein** p. 2 - 15 ASIN 0874775205). For more refer to chapter on **Yoga and Hindu Philosophy**).

137. **Philostratus,** (AD 220) ancient Greek writer, son-in-law of Flavius Philostratus. **Philostratus** puts in the mouth of Apollonius of Tyana these words:

"All wish to live in the nearness of God, but only the Hindus bring it to pass."

(source: **Hinduism and Buddhism - By Sir Charles Eliot** volume 1 p. lxii).

138. **Prema Chaitanya,** praises Hinduism's classic contention "Truth is one; sages call it by different names." or "Ekam sath, Vipraah bahudhaa vadanti"

" How artistic, that there should be room for such variety - how rich the texture is, and how much more interesting than if the Almighty had decreed one antiseptically safe, exclusive, orthodox way. Although he is Unity, God finds, it seems, his recreation in variety!" But beyond these differences, the same goal beckons.

(source: **The World's Religions - By Huston Smith** p 73 & 81).

139. **Ella Wheeler Wilcox,** (1850-1919), **Ella Wheeler Wilcox,** (1850-1919), famous American poet and journalist who is perhaps best remembered for verse tinged with an eroticism that was still unconventional for her time. **Wilcox** poems have been collected in volumes such as **Poems of Pleasure** (1897) and **Maurine and Other Poems** (1888), states that:

" India - the land of Vedas, the remarkable works contains not only religious ideas for a perfect life, but also facts which science has proved true. Electricity, radium, electronics, airship, all are known to the seers who founded the Vedas."

140. **Paul William Roberts** taught at Oxford for a year before setting off around the world, stopping in India before settling in Canada, where he has been an award-winning television writer and producer, university lecturer, journalist, film and book critic and novelist. He journeyed through India for twenty years, and in his book ' **Empire of the Soul: Some Journeys in India.'** creates a dazzling mosaic, by turns tragic and comic, of the subcontinent and its people says:

"India is the only country that feels like home to me, the only country whose airport tarmac I have ever kissed upon landing."

"The Vedas still represent eternal truth in the purest form ever written. And they are what drew me to India in the first place, what kept me there, and what draws me back still." " There is no stable principle of evil in Vedic philosophy. There is no infernal realm for sinners. Its non dualism is really beyond monotheism - which creates a fundamental duality of God and man. Evil is not envisaged as a quality opposed to good. It is the absence of good, just as darkness is the absence of light, not its opposite quality."

(source: **Empire of the Soul: Some Journeys in India.'** p. 299 -325).

81. **Ramanuja** (1017-1137) was, like Sankara, a great exponent of **Visistadvaita Vedanta,** was concerned with the same problems, and adopted the same assumptions and texts. But they came to entirely different conclusions because while Sankara was intellectual, Ramanujan was devotional. Sankara's cold and relentless logic made him identify the soul with Nirguna Brahman while Ramanuja's devotional spirit led him along the Bhakti Marga.

Ramanjua's teachings were based on the Vaishnava mystical Tamil poems, the Upanishads, theBrahma Sutras and the Puranas. He regarded the Brahman as the Supreme Reality, free from imperfections and possessing innumerable auspicious qualities of unparalleled excellence. He is the Lord or Ishvara and the highest person or Purushottama.

" The Bhagavad-Gita was spoken by Lord Krishna to reveal the science of devotion to God which is the essence of all spiritual knowledge."

The Supreme Lord Krishna's primary purpose for descending and incarnating is relieve the world of any demoniac and negative, undesirable influences that are opposed to spiritual development, yet simultaneously it is His incomparable intention to be perpetually within reach of all humanity. "

(source: **Main Currents in India Culture - By S. Natarajan** p. 37-39 Indo-Middle East Cultural Studies Hyderabad 1960).

82. **Serge Elisseev** - Asian scholar, author of several books, **Etudes D'Orientalisme, Publiees Par Le Musee Guimet a La Memoire De Raymonde Linossier: Notes Sur Le Portrait En Extreme-Orient** and **Peinture Contemporaine au Japon** says:

" The East is impenetrable to the West only for the man who deliberately refuses to get rid of certain ideas which, like armor, prevent him from bending . . . **The teaching of the great Indian thinkers could spiritually enrich the European soul**. In the course of its

history, the European civilization has lost most of its spiritual values. It can no longer recover them though it still realizes their necessity. For the best of men cannot exist simply on the ideal of "efficiency of work" in the American way. In the condition in which the West finds itself, it is easier for us to go and search for truths in the India, than to come back to the few values we have left in the course of the development of our civilization."

83. **Dr. Albert Schweizer** (1875-1965) humanitarian, theologian, missionary, organist, and medical doctor.

"The Bhagavad-Gita has a profound influence on the spirit of mankind by its devotion to God which is manifested by actions."

84. **Richard Waterstone** (?) studied Sanskrit at the University of Edinburgh, journalist, creator of BBC documentary, author, comments in his book on **India: Living Wisdom**

"Shiva's dance is a symbol of the unity and rhythm of existence. The unending dynamic process of creation and destruction is expressed in the energetic posture of the god. Shiva dances in a ring of fire that refers to the life-death process of the universe."

"There is a striking resemblance between the equivalence of mass and energy symbolized by Shiva's cosmic dance and the Western theory, first expounded by Einstein, which calculates the amount of energy contained in a subatomic particle by multiplying its mass by the square of the speed of light : E=mc2. "

"Well before 700 BC. Hindu sages were chanting neti neti (not that, not that), denying the ultimate reality of an external world in which they saw little more than illusion, and searching instead for the eternal spark of Brahman in the soul within all beings.

(source: **India: Living Wisdom - By Richard Waterstone** p. 134-135 and 22).

85. **Roger Housden** (?) author of **Travels Through Sacred India** and a student of the spiritual traditions of India for over 20 years, concurs in his book:

"Time, for example, is intimately connected with the **goddess Kali,** which partly accounts for her destructive nature. Energy - in Einstein's equation, E=MC2 - is personified in India as **Shakti** in her various guises."

"...The magnificent portrayal of Lord Krishna in the Bhagavad Gita, when he appears to Arjuna and gives him the most profound of spiritual teaching."

"India is a vast network of sacred places. The entire country is a sacred land. The sacrality of the land of India, is what, still today, gives a sense of unity to this country of so many religions, cultures, races and factions."

"The Ganges is a living presence, a protector, a healer of ills. The Ganges is as alive as it ever was with the hopes and dreams of an entire culture. Countless flowers are strewn across her body daily; millions of lights set sail every evening upon her waters. While stories of gods and goddesses come and go with the ages, while one myth replaces or rivals another, the organic presence of Ganga continues as ever, absorbing her devotees' offerings and ashes in the same way she has done since time immemorial."

(source: **Travels Through Sacred India - By Roger Housden** p. 56-57, 73 and 2 -23)..

86. **Vinoba Bhave**, (1894-1982), the great spiritual leaders and social reformers of modern India, was a disciple of Mahatma Gandhi. Founder of the Bhoodan, or land-gift, movement, seeking donations of land for redistribution to the landless, said :

"The Supreme Lord of the Gita confirms the faith of each and grants the rewards each seeks....No matter what we revere, so long as our reverence is serious, it helps progress."

"Hinduism gives its followers complete freedom. It does not insist on any particular discipline or prayer. Religion has to release us from bondage. The only imperative commandment it can have is to ask us to purify ourselves. Hinduism has emphasized the need for inner purity. Indian civilization and culture has shown a tremendous capacity for assimilation and absorption. If Hinduism becomes narrow, we shall be destroying our precious heritage. "

87. **J. W. Hauer** (1881-1961) a missionary in India and an official exponent of "the German faith", and a Sanskrit scholar, who gave to the **Bhagavad Gita,** a central place in the German faith. He declares that the Bhagavad-Gita::

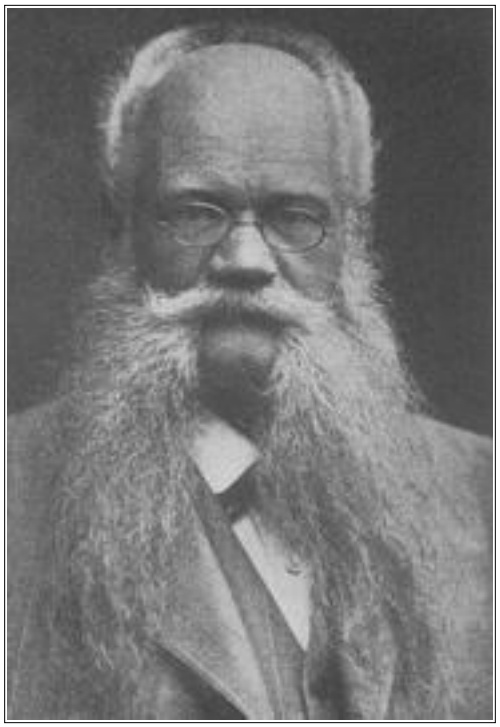
"gives us not only profound insights that are valid for all time and all religious life, but it contains as well the classical presentation of one of the most significant phases of Indo-Germanic religious history....Here spirit is at work that belongs to our spirit." "We are not called to solve the meaning of life but to find out the Deed demanded of us and to work and so, by action, to master the riddle of life."

88. **W. Norman Brown** professor of Sanskrit at University of Pennsylvania, author of several books, including **Mahimnastava or Praise of Shiva's Greatness**, **Mythology of India** has stated:

" As a religion, Hinduism has set side by side in peaceful coexistence every shade of belief ranging from the most primitive sort of animism to a highly sophisticated philosophical monism, and with this has gone a corresponding range of worship of practice extending from the simplest disease spirits to the most concentrated meditation designed to produce knowledge of abstract impersonal reality."

89. **Bal Gangadhar Tilak** (1856-1920) freedom fighter, great Sanskrit scholar and astronomer. He was an ardent patriot and a born fighter. **He has been called the Father of Indian Nationalism.** He is the author of **The Orion** and **The Artic Home in the Vedas** in English and of **Gita Rahasya** in Marathi. He was the fearless editor of the two leading newspapers of the Deccan - the Kesari and the Mahratta. He suffered imprisonment thrice - one of them a rigorous one for twelve months in 1897 and deportation to Manadalay .

His contribution to modern India stands on par with that of Mahatma Gandhi's. Proclaimed to the nation, "Swaraj is my birthright and I shall have it!" Wrote his famous commentary on Bhagavad-Gita, the sacred book of Hindus.



He stressed that Gita taught Karma (action), nothing but action. Religion or spiritual message were secondary and the need of the hour was to arise and fight. This was Lord Krishna's message to Arjuna.

He explained: "The most practical teaching of the Gita, and one for which it is of abiding interest and value to the men of the world with whom life is a series of struggles, is not to give way to any morbid sentimentality when duty demands sternness and the boldness to face terrible things."

(source: **The Soul of India- By Amaury de Riencourt** p. 301).

"The Shrimad Bhagavad Gita is one of the most brilliant and pure gems of our ancient sacred books. It would be difficult to find a simpler work in Sanskrit literature ore even in all the literature of the world than the Gita, which explains to us in an unambiguous and succinct manner the deep, and sacred principles of the sacred science of the SELF (Atman), after imparting to us the knowledge of the human body and the cosmos, and on the authority of those principles acquaints every human being with the most perfect and complete condition of the Self...."

(source: **Gita Rahasya - By B. G. Tilak** p. 1).

90. **Leopold von Schroeder** (1851-1920) German Indologist. In 1884, Schroeder published **Pythagoras und die Inder, Eine Untersuchung ueber Herkunft und Anstammung Pythagoreischer Ideen -** Pythagoras and the Indians. An examination of the origin and derivation of the ideas of Pythagoras.

He says:

"The Indians are the nation of romanticists of antiquity. The Germans are the romantics of modern times. Sentimentality and feelings for Nature are common to both German and Indian poetry. He concludes that all the romantic minds of the West turn towards India because of the deep-rooted similarity between romanticism in Europe."

(Off all the European nations Germany's response to India was most enthusiastic and open hearted).

91. **Jagdish Chandra Bose** (1858-1937), a pioneer of modern Indian science, combined ancient Indian introspective methods with modern experimental methods to demonstrate "the universal livingness of matter" or the "omnipresence of Life in Matter."

Modern science thus endorsed the **ancient Upanishadic** truth that the entire universe is born of a life-force and is quivering with a touch of animation. His work represents the triumph of spirituality over extreme materialism.

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. p. 266).

92. **Kenneth Walker** (?) a famous British surgeon, has devoted a good deal of time and writing to the study of Indian thought and literature in search of an answer:

The eminent English thinker, presiding over the Sri Ramakrishna birthday anniversary meeting in London in March, 1949, said:

"If the two great nations, India and England, cannot be united by political chords, the ties of spiritual and intellectual co-operation will certainly prove a stronger bond of union. **India, the greatest spiritual force of the world,** even maintains today those fountain sources of eternal life, which are the only hope of the spiritual resurrection of humanity."

(source: **The Vision of India - By Sisirkumar Mitra** p.209-210).

"From the point of view of science, we see man as an elaborate piece of mechanism, his actions determined by his central nervous system and his environment. From philosophy we learn that his capacity for knowledge is strictly limited, so that by means of his sense organs alone he can never know reality. This is confirmed by Hindu philosophy, but a new idea is added.

Man, as he is can see no more and do no more, but by right effort and right method, he can gain powers, understand more and achieve more."

93. **Rudolph Steiner** (1861-1925), Austrian architect, highly interested in the alignment between science and nature, matter and spirit, he developed an anthropomorphic architecture for his own Anthroposophical Society. A scholar who had edited the works of German dramatist/poet Johann Wolfgang Goethe.

" In order to approach a creation as sublime as the Bhagavad-Gita with full understanding it is necessary to attune our soul to it."

"What we read in the Vedas, those archives of Hindu wisdom, gives us only a faint idea of the sublime doctrines of the ancient teachers, and even so these are not in their original form. Only the gaze of the clairvoyant, directed upon the mysteries of the past, many reveal the unuttered wisdom which lies hidden behind these writings."

(source: **Ancient Indian Education - By Radha Kumud Mookerji** p. 17).

94. **William Butler Yeats** (1856-1939) a 1923 Nobel Laureate in Literature, described his first meeting with a Hindu philosopher at Dublin.

"It was my first meeting with a philosophy that confirmed my vague speculations and seemed at once logical and boundless. "

In his **"Meru"** written in 1935 - Meru is the central mountain of the world in Hindu Mythology - Yeats contrasts the peaceful life of the mystic, despite the hardships of nature, with the transitory cycles of creation and destruction exemplified in the world of man.

Yeats was keenly interested in Yoga system and the Tantra.

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. p. 262-263).

95. **Stephen P. Huyler** (?) art historian, cultural anthropologist, curator at the Smithsonian's Arthur M. Sackler gallery, in his book **Meeting God: Elements of Hindu Devotion** defines Hinduism:

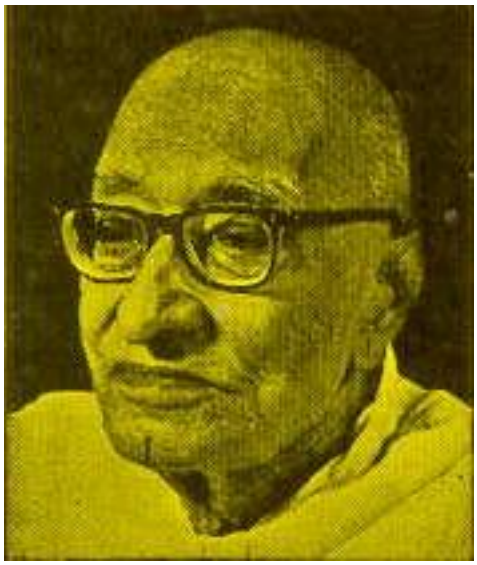
" Hinduism is a religion of individuality'. Both good and evil are believed to be of God, and the purpose of most rituals is to maintain a balance between such opposites: creation and destruction, light and dark, masculine and feminine. All Hindus believe that the Absolute is the pure blend of opposites, neither masculine nor feminine. For the Hindu, as every aspect of existence has a purpose, human meaning involves a fundamental sense of duty and of conscientious accountability. All individuals are considered part of the greater whole, which functions well only when each person fulfills his or her obligations. The focus and means of worship are many, but the process has a common thread. It acknowledges

one of the fundamental principles of Hinduism. God is a universal force, indivisible and yet infinitely divisible, the one and the many, the perfect mixture of all facets of existence."

" Hinduism is a religion of strength, vitality, innovation, and balance."

"For the average Hindu, the Divine is personal and approachable. God is universal force, indivisible, and yet infinitely divisible, the one and the many, the perfect mixture of all facets of existence."

"Many Hindu texts state that the Absolute, Brahman, is pure sound."



"Hinduism is often said to be a religion of millions of Gods, and it is indeed a religion of diversity. But it is essential to understand that underlying all is the belief in the unity in one great God: the Absolute, often known as Brahman. Some Hindus believe that this Absolute is formless, a supreme cosmic force that cannot be completely known by humankind. Hindu philosophers state that existence as we know it is an illusion. The universe is relative, ever changing, whereas its source, the Absolute, is the only permanent thing, never changing. To truly reach the Divine we must divest ourselves of all physical attachments and open our minds and spirit to the great void."

(source: **Meeting God: Elements of Hindu Devotion - By Stephen P Huyler** p. 28 -56).

96. **Roger Garaudy** (?) a Muslim philosopher says:

"The **Bhagavad-Gita** is a rich message, directed toward the human being, showing him the path for his actions, in order to establish a divine society on earth."

(source: unknown).

97. **C. Rajagopalachari** (1878-1972) popularly known as "Rajaji" was a great patriot. He was a scholar, a statesman, and a linguist. A contemporary of Mohandas Gandhi, he was also free India's first Governor General. Perhaps his most signal accomplishment was his thoughtful rendition of the Mahabharata and Ramayana in English, making the stories and wisdom contained in those classics available to a new generation of English educated Indians. In his book **Ramayana**, Rajaji captures for us the pathos and beauty of Valmiki's magic in an inimitable manner.

He spoke eloquently of the **Upanishads.**

"The spacious imagination, the majestic sweep of thought, and the almost reckless spirit of exploration with which, urged by the compelling thirst for truth, the Upanishad teachers and pupils dig into the "open secret" of the universe, make this most ancient of the world's holy books still the most modern and most satisfying."

(source: **The Discovery of India - By Jawaharlal Nehru** Oxford University Press. 1995. pg 90).

Rajagopalachari has observed on indestructible culture of India:

"If there is any honesty in India today, any hospitality, any chastity, any philanthropy, any tenderness to the dumb creatures, any aversion to evil, any love to do good, it is due to whatever remains of the old faith and the old culture."

(source: **India's Priceless Heritage - By Nani A. Palkhivala** 1980 p. 39).

"The Hindu doctrine of all ways trading to God with the resulting attitude of the Hindu creed towards all other religions is unique. No other creed has arrived at this all embracing fraternity of faiths, which Hinduism stand for.

Akasat Sarvadeva Namaskarah Kesavam Prati Gachati. The quotation is from Mahabharata."

(source: **TribuneIndia.com**).

"The Mahabharata has molded the character and civilization of one of the most numerous of the world's people. How? By its gospel of dharma, which like a golden thread runs through all the complex movements in the epic; by its lesson that hatred breed hatred, that covetousness and violence leads inevitably to ruin, that the only real conquest is in the battle against one's lower nature."

(source: **Hinduism - By Linda Johnsen** p. 65).

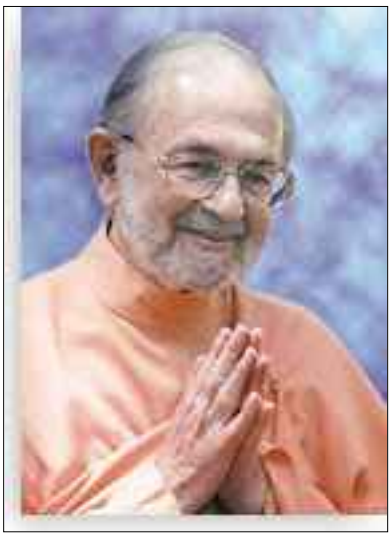
98. **Octovio Paz** (1914-1998) was awarded the Nobel Prize for Literature in 1990. He served as Mexico's ambassador to India from 1962 until 1968. This is what he says about Hindu art in his book **In Light of India**:

"The Hindu genius is a love for abstraction and, at the same time, a passion for the concrete image. At times it is rich, at others prolix. It has created the most lucid and the most instinctive art. It is abstract and realistic, sexual and intellectual, pedantic and sublime. It lives between extremes, it embraces the extremes, rooted in the earth and drawn to an invisible beyond."

(source: **In Light of India - By Octavio Paz** p. 185).

99. **Thomas Merton** (1915-1968) was a Trappist monk, poet, social critic and author of many books, including *Seeds of Contemplation*, *Life and Holiness*, *Mystics and Zen Masters*. **Merton** , in his book **Thoughts on the East** talks about the living importance of the *Bhagavad-Gita:*

" It brings to the West a salutary reminder that our highly activistic and one-sided culture is faced with a crisis that may end in self-destruction because it lacks the inner depth of an authentic metaphysical consciousness. Without such depth, our moral and political protestations are just so verbiage. If, in the West, God can no longer be experienced as other than "dead", it is because of an inner split and self-alienation which have characterized the Western mind in its single-minded dedication to only the half of life: that



which is exterior, objective and quantitative."

100. **J. Donald Walters** (Swami Kriyananda) (?) World renowned as a singer, composer, and lecturer, founder of the Ananda Village is perhaps the most successful intentional community in the world. In his book " **The Hindu Way of Awakening: Its Revelation, Its Symbols**" says:

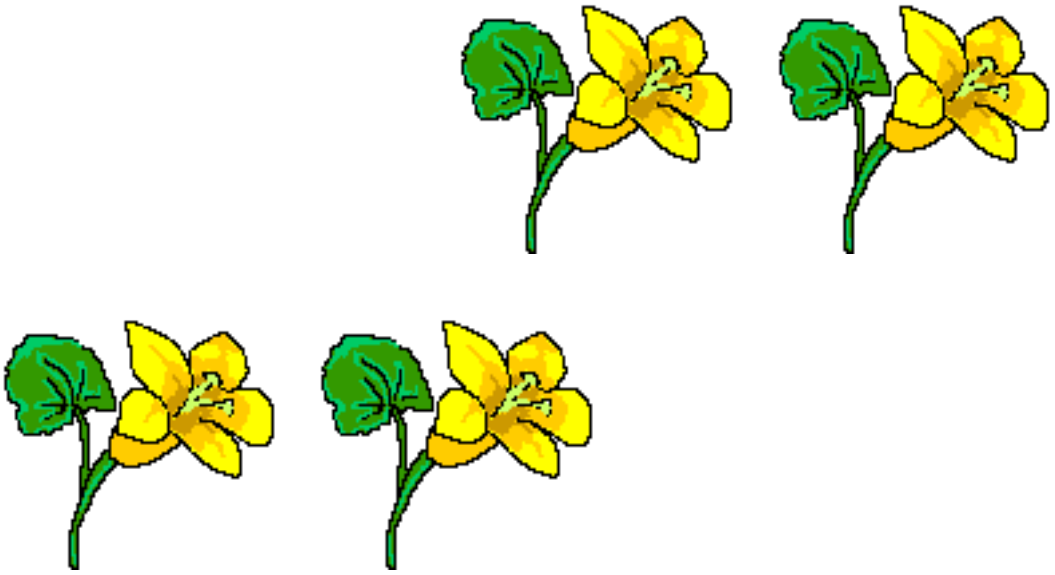
"Hinduism, in its plethora of symbols and images, is endlessly complex and therefore endlessly misunderstood, but its true mission is both simple and universal: **soul enlightenment. The way to understand this mission is to realize that it is goal-oriented, not way-oriented. In other words, its focus is the ultimate attainment, Self-realization."**

For even today, thousands of years since they were were first expounded by the ancient rishis (spiritual sages), the religious teachings of India nourish what continues to be the **most spiritually grounded civilization in the world."**

"Ancient rishis made claims so cosmic that even modern physics seems only to be catching up with them and realizing after every scientific breakthrough, that the ancients were there long before them! Even as recently as a century ago, the West was still reeling under the impact of the discovery of geologists that the earth was formed eons ago, and not in 4004 BC. as theologians had determined.

" India, has accomplished in the field of spirituality what, in the world of finance, the free market (as opposed to a controlled economy) has succeeded in doing: The individual seeker has been left free to explore and develop his own spiritual potentials. Other scriptures have hinted at the deeper truths of inward religion. But the priests in every religion seldom quote those passages, which they rightly see as threatening to their institutional preeminence."

"Hinduism is the most ancient expression of Sanatan Dharma, the eternal and universal religion."



" The insights of which the Hindu teachings are based were revelation in the highest sense of the word."

"A special charm of studying Indian philosophy today is that it is more truly Western, in the modern, scientific sense, than any system of philosophy that the West has produced. Whereas Western rationalism has broken down under the impact of scientific discoveries, **Indian thought cheerfully rides the crest of the wave, and is only pushed higher by every new scientific finding."**

(source: **The Hindu Way of Awakening: Its Revelation, Its Symbols** - By Swami Kriyananda p. 12 - 86 and 150 and **Crises in Modern Thought: Vol. I: The Crises of Reason - By Swami Kriyananda** (**J. Donald Walters**) p. x).

Guest Book

Updated - December 19, 2003

141. **Niels Henrik David Bohr,** (1885-1962) Danish nuclear physicist who developed the Bohr model of the atom. His received the Nobel Prize in physics in 1922, for his theory of atomic structure (**Quantum Theory**).

He is on record as saying that he goes into the Upanishads to ask questions.

(source: From article - **Indian Conquests of the Mind - By Saibal Gupta. The Statesman.org**)

142. **John Archibald Wheeler**, (1911-) physicist, the first American involved in the theoretical development of the atomic bomb. He also originated a novel approach to the unified field theory. Professor Emeritus at Princeton and Texas universities, studied with Niels Bohr, was named winner of the 1997 Wolf Prize in Physics, for developing the modern "black hole" theory. Has taught students include scientists like Richard Feynman, now occupies the chair that was held by Einstein.

Wheeler wrote: **"I like to think that someone will trace how the deepest thinking of India made its way to Greece and from there to the philosophy of our times."**

It is curious that people like Schroedinger, Niels Bohr, Oppenheimer and John Wheeler are Upanishad scholars.

(source: From article - **Indian Conquests of the Mind - By Saibal Gupta. The Statesman.org**).

143. **Lin Yutang** (1895-1976) Chinese scholar and author of the book, **The Wisdom of China and India**, writes:

"Hindus are natural mystics, mysticism meaning a form of religion aiming at achieving direct union with God. To achieve the union of the individual soul (atman) with the world soul (brahman) behind all things may be said to be the whole effort of the Vedic philosophy."

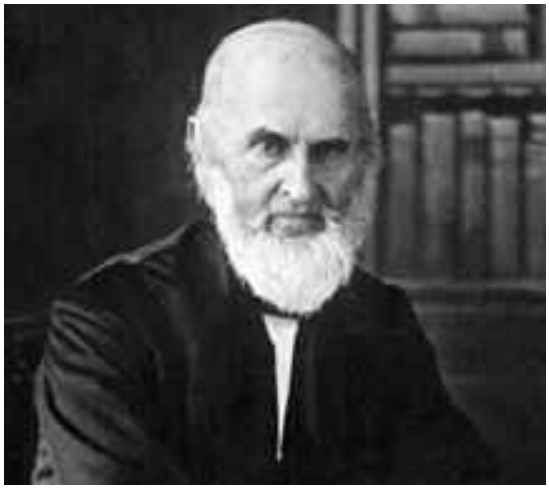
He further writes:

"My love and true respect for India was born when I first read the Indian epics, the **Ramayana** and the **Mahabharata** in the present translation in my college days. In these two masterpieces we are brought closer to the atmosphere, ideals and customs of ancient Hindu life than by a hundred volumes of commentary on the Upanishads, and through them Hindu ideals, as well as Hindu men and women, become real to us. And the fact that Hindu imagination produced such masterpieces of literature, closely rivaling Homer in antiquity and in beauty and power of portraying human passions, is definite pledge of the worth and richness of the Hindu civilization."

"The creative imagination of the Hindus has conceived no loftier and holier character than Sita; the literature of the world has not produced a higher ideal of womanly love, womanly truth, and womanly devotion."

"The contact with poets, forest saints and the best wits of the land, the glimpse into the first awakening of Ancient India's mind as it searched, at times childishly and naively, at times with a deep intuition, but at all times earnestly and passionately, for the spiritual truths and the meaning of existence - this experience must be highly stimulating to anyone, particularly because the Hindu culture is so different and therefore so much to offer." "Not until we see the richness of the Hindu mind and its essential spirituality can we understand India...."

"India was China's teacher in religion and imaginative literature, and the world's teacher in trignometry, quandratic equations, grammar, phonetics, Arabian Nights, animal fables, chess, as well as in philosophy, and that she inspired Boccaccio, Goethe, Herder, Schopenhauer, Emerson, and probably also old Aesop."



"India produced too much religion and China too little." **A trickle of Indian religious spirit overflowed to China and inundated the whole of Eastern Asia.** It would seem logical and appropriate that any one suffering from a deficiency of the religious spirit should turn to India rather than to any other country in the world."

It is apparent that only in India is religion still a living emotion.

India is the home of fables...one must say that the Hindu mind is fabulous. The genius for creating fables seems inexhaustible in Indian literature....**Ernest Rhys**, in his Introduction to Fable, Aesop and Others justly remarks, "We have to admit that the beast-fable did not begin with him (Aesop), or in Greece at all. We have, in fact, to go East and to look to India and burrow in the 'tale of tales' of **Hitopadesa** to get an idea how old the antiquity of the fable actually is. When one remembers also that many of the stories in the Arabian Nights, including that of the famous Sindbad the Sailor, are of **Hindu origin**, it is not easy to accept the view that such tales are not of native Indian growth."

The Indian culture is **highly creative** and in fact has enriched the world literature with the droll humor that we associate with the Arabian Nights.

(source: **The Wisdom of China and India - By Lin Yutang** p. 3-4 and 135 -141 and 265-7).

144. **John Greenleaf Whittier** (1807-1892) was a talented poet who was influenced by Emerson and from whom he borrowed a copy of the Bhagavad Gita. To **Emerson** he wrote: "I will e'en keep it until I restore it to thee personally in exchange for George Fox (founder of the Society of Friends, the Quakers). "It is a wonderful book-and has greatly excited my curiosity to know more of the religious literature of the East."
(source: **The Oriental Religions and American Thought** (Nineteenth-Century Explorations), Carl T. Jackson - Greenwood Press, London, England, 1981, p. 80.)

The results of Whittier's reading are evident in a good number of his poems like "The Oval Heart," "The Cypress Tree of Ceylon," "The Dead Feast of the Kol-Folk," and "The Khan's Devil." A particularly striking example of his use of Indian material is his well-known poem "The Brewing of Soma," which describes the preparation and use of the Vedic sacrificial drink (source: www.gosai.com)

145. **Maurice Winternitz** (1863-1937) famed Indologist, author of **History of Indian Literature**, states:

" From the mystical doctrines of the Upanishads, one current of thought may be traced to the mysticism of Persian Sufism, to the mystic, theosophic logos doctrine of the Neo-Platonics and the Alexandrian Christian Mystics, Eckhart and Tauler, and finally to the philosophy of the great German mystic of the nineteenth century, Schopenhauer."

(source: **History of Indian Literature - By Maurice Winternitz** volume 1. p. 266.)

146. **M. A. Sherring,** noted missionary of the 19th century, eloquently described **the antiquity of Varanasi,** in the following words:

“When Babylon was struggling with Nineveh for supremacy, when Tyre was planting her colonies, when Athens was growing in strength, before Rome had become known, or Greece had contended with Persia, or Cyprus had added lustre to the Persian monarchy, or Nebuchadnezzar had captured Jerusalem, and the inhabitants of Judaea had been carried into captivity, she (Varanasi) had already risen to greatness, if not to glory.”

(source: **Banaras - City of Light - By Diana L. Eck** p. 4-5).

147. **H. Stutfield** author of **Mysticism and Catholicism** states:

"Especially does there seem to be a growing probability that, from the historical standpoint at any rate, **India was the birthplace of our fundamental imaginings, the cradle of contemplative religion and the nobler philosophy."**

(source: **Mysticism and Catholicism - By H Stutfield** 1925 p. 31).

148. **F. W. J. Schelling** (1773-1854) a crucial figure in the development of German idealist and nature philosophy, Eastern ideas pervade and color much of his thinking. In his book **Philosophy of Mythology**, he devoted to India more than one hundred pages. He regarded **Vedanta as an**

'exalted idealism' and this enthusiasm for Indian thought was taken up by Arthur Schopenhauer.

(source: **An Introduction to Hinduism - By Gavin Flood** p. 269).

Through out his life Schelling expressed great interest in and support for Indian studies, and in his 1802 lecture he lavished praise on the 'sacred texts of the Indians, claiming that they were superior to the Bible.

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p. 61-63).

149. **Robert Southey** (1774-1843), English poet, generally considered a member of the romantic movement. He was born in Bristol and educated at the University of Oxford. **Southey** was a good friend of poet Samuel Taylor Cole ridge.

He had read the Bhagavad Gita in the preparation of his lurid narrative poem The Curse of Kehama written in 1810.

(source: **British Attitudes to India, 1784-1858** - **By Bearce** (Oxford 1961) p. 103)

150. **Ludwig von Schröder** German philosopher, author of the book **Pythagoras und die Inder (Pythagoras and the Indians),** published in 1884, he argued that Pythagoras had been influenced by the Samkhya school of thought, the most prominent branch of the Indic philosophy next to Vedanta.

"Nearly all the philosophical and mathematical doctrines attributed to Pythagoras are derived from India."

151. **F. W. Thomas**, wrote in his book **The Mutual Influence of Mohammedans and Hindus**,

"Hinduism is one of the greatest assimilants that the world has known." "It is infinitely absorbent like the ocean."

(source: **The Mutual Influence of Mohammedans and Hindus - by F W Thomas**).

152. **Deepak Chopra** Vedantic sage and wise-man from the East, author of several books including **Ageless Body, Timeless Mind** says of Hinduism:

"I find that Vedanta, of all great traditions, does have a framework that I can come to terms with as a person who thinks that science is the most legitimate way of understanding the secrets of nature." " I regard Vedanta as a source which inspired Hinduism." He emphasizes the Bhagavad Gita, as one of the gemstones of the Vedantic traditions.

(source: **Deepak Chopra: Vedantic Evangelist - Hinduism Today July/August 2000**).

153. **Sir Jacob Epstein** (1880-1959), leading English Sculptor. After studying with Rodin in Paris, he revolted against the ornate and pretty in art, producing bold, often harsh and massive forms in stone and bronze. His best-known pieces include the Oscar Wilde Memorial (1911; Père-Lachaise, Paris), a marble Venus (1917; Yale Univ., New Haven, Conn.), and a Madonna and Child (Convent of the Holy Child Jesus, London).

Epstein has written about **Shiva Nataraja**:

"Shiva dances, creating the world and destroying it, his large rhythms conjure up vast aeons of time, and his movements have a relentless magical power of incantation. Our European allegories are banal and pointless by comparison with these profound works, devoid of the trappings of symbolism, concentrating on the essential, the essentially plastic."

(source: **Let There Be Sculpture - By Sir Jacob Epstein** 1942 p. 193).

154. **Apollonius Tyanaeus,** Greek Thinker and Traveler. 1st Century AD, said:

"In India I found a race of mortals living upon the Earth. but not adhering to it. Inhabiting cities, but not being fixed to them, possessing everything but possessed by nothing."

155. **Mr. Thorton,** in his book **History of British India**, observed:

"the Hindus are indisputably entitled to rank among the most ancient of existing nations, as well as among those most early and most rapidly civilized ...ere yet the Pyramids looked down upon the Valley of the Nile.. when Greece and Italy, those cradles of modern civilization, housed only the tenants of the wilderness, India was the seat of wealth and grandeur.."

156 **Professor Eugene Burnouf** (1801-1852) in his **Discourse on Sanskrit and Its Literature**, given at the College of France, states:

" We will study India with its philosophy and its myths, its literature, its laws and its language. Nay it is more than India, it is a page of the origin of the world that we will attempt to decipher."

(source: **Discourse on Sanskrit and Its Literature - By Eugene Burnouf**).

157. **Sri Sri Ravi Shankar** (?) founder of the Bangalore based **Art of Living** an International Foundation. He recently addressed the UN Peace Summit on Aug 28. He is the only non-westerner to serve on the advisory board of Yale University's School of Divinity and is author of the book - **Hinduism and Christianity .**

"Hinduism is not a religion; it is just a way of life that thousands of Rishis have written about. **It is such a democratic religion where everybody has the freedom to think, write or say whatever they want. We have no opposition for any other philosophy coming into us.** We have no opposition for the Bible to be part of our own study. Nobody here will say, 'If you read the Bible, you will go to hell'. It is an inclusive way of looking at life, and that is what we need in the world today. We have no objection taking food from every part of the world, listening to music from every part of the world. So we need to globalize wisdom too."

(source: **Re-establish The Human Values, Globalize The Knowledge**).

He explains that Hindu astrology has a very ancient lineage. Ten thousand years ago the Rig-Veda saw the earth as round and the sun was at the center and all the planets revolved around it. The West is thus committing an injustice by not giving Indian astronomy and astrology due credit.

"Indian astronomers had calculated that life started 1 billion, 955 million, 818 thousand and 501 years ago and that 28 cycles of yugas have already happened."

"The ancient sages knew these facts. This is why they devised the mala (necklace) with 108 beads, which stand for the 12 constellations and the nine planets and the 108 different permutations which affect one's life." Everything is this universe is interconnected."

158. **Hu Shih** (1891-1962), Chinese philosopher in Republican China. He promoted vernacular literature to replace writing in the classical style. He was ambassador to the U.S. (1938-42) and chancellor of Peking University (1946-48). **Hu Shih** has commented on the peace-loving nature of Indians:

"India conquered and dominated China culturally for 20 centuries without ever having to send a single soldier across her border."

"Never before had China seen a religion so rich in imagery, so beautiful and captivating in ritualism and so bold in cosmological and metaphysical speculations. Like a poor beggar suddenly halting before a magnificent storehouse of precious stones of dazzling brilliancy and splendor, China was overwhelmed, baffled and overjoyed. She begged and borrowed freely from this munificent giver. The first borrowings were chiefly from the religious life of India,

in which China's indebtedness to India can never be fully told."

(source: **India and World Civilization - By D. P. Singhal** p. 338).

159. **Professor Gordon Childe** writes:

"It would be absurd to suggest that any two tribes living, say, in Greece and India, and speaking quite unconnected dialects, on reaching the same level of development should have hit upon such similar words for "father," "fall," and "five" and inflected them in such similar ways as the Vedic Indians and the Homeric Greeks did in fact do. The primitive culture must be the stage of development reached by several peoples while living sufficiently close together to communicate." -- **The European Inheritance** 1: 84

160. **Frederich von Schlegel** (1772-1829), German philosopher, critic, and writer, the most prominent founder of German Romanticism. Educated in law, he turned to writing. His brother, August Wilhelm von Schlegel, was a scholar and poet. With his brother, August Wilhelm, he published the Athenaeum, the principal organ of the romantic school. He was so impressed with Indic spirituality that he declared:

" When one considers the sublime disposition underlying the truly universal education (of traditional India)...**then what is or has been called religion in Europe seems to us to be scarcely deserving of that name.** And one feels compelled to advise those who wish to witness religion to travel to India for that purpose...."

(source: **In Search of The Cradle of Civilization: : New Light on Ancient India - By Georg Feuerstein, Subhash Kak & David Frawley** p. 276).

Schlegel study of Sanskrit and of Indian civilization, **On the Language and Wisdom of India** (1808), was outstanding.

He said that, **" There is no language in the world, even Greek, which has the clarity and the philosophical precision of Sanskrit,"** adding that:

" India is not only at the origin of everything she is superior in everything, intellectually, religiously or politically and even the Greek heritage seems pale in comparison."

(source: **Arise, O India - By Francois Gautier** ISBN 81-241-0518-9 Har-Anand Publications 2000. p. 25).

He wrote to his friend and comrade, the poet **Ludwig Tieck** (1773-1853): "Here is the actual source of all languages, all the thoughts and poems of the human spirit; everything, everything without exception comes from India."

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 105 and **The Aryan Hoax: That Dupes The Indians - By Paramesh Choudhary** p. 109).

Schelegel speaks of the noble, clear and severely grand accents of Indian thought. He wrote in his book, **Indian Languages, Literature and Philosophy**, p. 471:

"The divine origin of man, as taught by Vedanta, is continually inculcated, to stimulate his efforts to return, to animate him in the struggle, and incite him to consider a reunion and reincorporation with Divinity as the one primary object of every action and reaction. Even the loftiest philosophy of the European, the idealism of reason as it is set forth by the Greek philosophers, appears in

comparison with the abundant light and vigor of Oriental idealism like a feeble Promethean spark in the full flood of heavenly glory of the noonday sun, faltering and feeble and ever ready to be extinguished."

(source: **India And Her People - By Swami Abhedananda** - p.23-24).

Schegel spoke for his generation when he wrote that:

"In India lay the real source of all tongues, of all thoughts and utterances of the human mind. Everything - yes, everything without exception - has it origin in India." and "The primary source of all intellectual development - in a word the whole human culture - is unquestionably to be found in the traditions of the East."

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p.65).

"India is pre-eminently distinguished for the many traits of original grandeur of thought and of the wonderful remains of immediate knowledge."

"The doctrine of the transmigration of souls was indigenous to India and was brought into Greece by Pythagoras."

"Even the loftiest philosophy of the Europeans, the idealism of reason, as is set forth by Greek philosophers, appears in comparison with the abundant light and vigor of Oriental idealism **like a feeble promethean spark** in the full flood of heavenly glory of the noonday sun - faltering and feeble and ever ready to be extinguished."

(source: **Lectures on the history of literature: ancient and modern** p. 126 and **Hindu Superiority - By Har Bilas Sarda** p. 276 - 280).
