A TRIBUTE TO HINDUISM

home welcome contents

This site is dedicated to Lord Ganesha - Lord of Beginnings, Bharat Mata (Mother India) and to the intuition of countless rishis (sages) of the past, who committed their lives in pursuit of Sanatan Dharma, the Eternal way of life.

The purpose of this site is to provide useful information about the world's oldest religion. Hinduism's traditions have been preserved continuously since ancient times to the present day despite the tyranny of her invaders. This site catalogs thoughts of world-renowned intellectuals regarding Hinduism, recommends books for further reading, and provides useful links for further research.

This site was established to inspire Hindus worldwide, to create a sense of pride, and to give pleasure regarding Hindu heritage. Hindus can take pride in the fact that India has never invaded any country in the last thousand years of history. This site is also meant to educate, enlighten, and create awareness of the rich canvass of religious traditions of Hinduism. It is hoped that it will help to remove some of the common misconceptions and misinterpretations surrounding rituals and worship found in popular media.

Om Asato maa sad-gamaya;
tamaso maa jyotir-ga-maya;
mrtyor-maa amrutam gamaya.
Om Shaantih Shaantih Shaantih.

O Lord Lead me from the unreal to the real.
Lead me from the darkness to light.
Lead me from death to immortality.
May there be peace, peace, and perfect peace.

- a Sanskrit invocation from the Brihadaranyaka Upanishads 1.3.28).

About the Author

My name is Sushama Londhe, and this site is my personal endeavor to provide appropriate information about Hinduism, as well as to attain correct appraisal of India's rich cultural heritage. Furthermore, it is to create awareness among Hindus and non-Hindus about the world's most ancient living tradition. I began this initiative in the fall of 1997 as a small personal non-commercial web page/hobby, and it has grown over the years as I have become aware of more relevant information. I am an Indian American who came to the U.S. as a graduate student more than 25 years ago, and have settled here for good. Although I welcome feedback from everybody, this site is NOT associated with any religious or political organization.

Some readers have expressed desire to help this effort by contributing information and content. Please feel free to e-mail me or to write in the guest book your suggestions. I promise to take them into consideration and give credit for any content used. Please note that all chapters get updated regularly.

Quotes on Hinduism (chronologically) **Quotes on Hinduism** (alphabetically)	Catalogs thoughts on Hinduism from world-renowned intellectuals. Quotes have been organized both by chronologically and alphabetically.
Thoughts on Hinduism	There seems a constant effort at defamation of Hinduism in the media in the west.
Introduction to Hinduism	Hinduism is among the oldest of the world's faiths. Its traditions extend back before recorded history.
Symbolism in Hinduism	Hinduism is often labeled as a religion of 330 million gods. This misunderstanding arises when people fail to grasp the symbolism of the Hindu pantheon.
Hindu Scriptures	No other living tradition can claim scriptures as numerous or as ancient as Hinduism; none of them can boast of an unbroken tradition as faithfully preserved as the Hindu tradition.
Nature Worship	Hinduism has always been environmentally sensitive philosophy. The rishis of the past have always had a great respect for nature.
Yoga and Hindu Philosophy	"Without the practice of yoga, How could knowledge Set the atman (soul) free? asks the Yogatatva Upanishad. Yoga: is union with the ultimate.
Hindu Cosmology	In India, science and religion are not opposed fundamentally, as they often seem to be in the West,
Advanced Concepts in Hinduism	The Vedas have guided Indian civilization for thousands of years. There is no major religion on the planet, which has not been influenced by the Vedas.
Hindu Art	"The man who knows nothing of music, literature, or art is no better than a beast," ancient Hindu wisdom warned. Art pervades every facet of Indian life, is found on every byway of Indian Civilization.

Hindu Music	Since the most ancient times, music in India has been practiced as a spiritual science and art, a means to enlightenment. Sangita, which originally meant drama, music and dance, was closely associated with religion and philosophy.
Vimanas	Vedic literature of India contains many descriptions of flying machines that are generally called vimanas.
War in Ancient India	The value and importance of the army were realized very early in the history of India, and this led to the maintenance of a permanent militia to put down dissent within and arrest aggression from without. This gave rise to the Ksatriya warrior caste, and the ksatram dharmam came to mean the primary duty of war.
Hindu Culture Part I	India is the world's most ancient civilization. Indians have demonstrated greater cultural stamina than any other people on earth.
Hindu Culture Part II	India is the world's most ancient civilization. Indians have demonstrated greater cultural stamina than any other people on earth.
Education in Ancient India	From the Vedic age downwards the central conception of education of the Indians has been that it is a source of illumination giving us a correct lead in the various spheres of life.
Hinduism's influence on world religions	From the beginning of her history, India has adored and idealized, men who have stamped infinity on the thought and life of the country.
Sanskrit	Sanskrit (meaning "cultured or refined"), the classical language of Hinduism, is the oldest and the most systematic language in the world.
Yantras	The word “yantra” is derived from the root yam, to control, and has been freely used in ancient India for any contrivance. Mechanical skills had produced in ancient India many accessories for scientific activities.
History of Hinduism: Islamic Onslaught	India gave shelter, acceptance, and freedom to all. But, in holy frenzy, millions of Hindus were slaughtered or proselytized. Their cities were pillaged and burnt, temples were destroyed and accumulated treasures of centuries carried off.
History of Hinduism: European Imperialism	There is nothing either in the time-honored doctrines or the hoary history of Hinduism, which resembles even remotely the ideology, or history of Nazism, or for that matter, Christianity or Islam or Communism.

Dwaraka	Dwaraka was submerged by the sea after the death of Lord Krishna yet it has not attracted attention as ancient Troy.
Bhaarat and China	The Mahabharata refers to China several times. According to Rene Grousset, the name China comes from "an ancient" Sanskrit name for the regions to the east. According to Terence Duke, martial arts went from India to China. Fighting without weapons was a specialty of the ancient Ksatreya warriors of India.
Suvarnabhumi - Greater India	Southeast Asia region was broadly referred to by ancient Indians as Suvarnabhumi (the Land of Gold). Earliest references are found in the Ramayana.
Bhaarat and Egypt	Neither historical events nor cross-cultural currents can explain the unique parallels in the myths and imagery of ancient Egypt and India.
Bhaarat and Greece	Indian civilization is distinctive for its antiquity and continuity. Indian civilization has continued to grow despite revolutionary changes.
India on Pacific Waves?	What if Hindus and Hopis, Advantins and Aztecs, Tibetan Monks and Mayans were part of one world culture - a spiritual one?
Seafaring in Ancient India	Western scholars have underestimated India's achievement with regard to commerce, ship-building and navigation, and sea travel. The colonist bias against Indian culture is fully matched by the Indian 'Marxist historian' bias against culture.
First Indologists	It was the British who first portrayed Vedic literature and culture as something barbaric, inferior, and recent.
Aryan Invasion Theory	Since the nineteenth century, India's ancient history from Vedic times have been distorted including the groundless Aryan Invasion theory
Politics of Conversion	Hinduism and India have been under attack for thousands of years. First it was Islam, then came Christianity that have created havoc to the fabric of Hindu society.
Caste System	The Caste System or varna-ashrama has been one of the most misrepresented, misinformed, misunderstood, misused and the most maligned aspects of Hinduism.
Women in Hinduism	In ancient India, women occupied a very important position, in fact a superior position to, men.
Unknown Hindu Revivalists	Vishnu Bhikaji Gokhale, Arumuga Navalar, Dayanand Saraswati, were some of the earlier revivalists.
Glimpses	Interesting information on varied aspects of Hinduism and India.

Glimpses II	more information on varied aspects of Hinduism and India.
Glimpses III	more information on varied aspects of Hinduism and India.
Glimpses IV	more information on varied aspects of Hinduism and India.
Glimpses V	more information on varied aspects of Hinduism and India.
Glimpses VI	more information on varied aspects of Hinduism and India.
Glimpses VII	more information on varied aspects of Hinduism and India.
Glimpses VIII	more information on varied aspects of Hinduism and India. NEW
Glimpses IX	more information on varied aspects of Hinduism and India. NEW
Glimpses X	more information on varied aspects of Hinduism and India. NEW
Articles	A wide selection of articles relating to various aspects of Hinduism. Vedas, Dharma, Mother Goddess, Ayurveda and others.
Recommended Books	A vast collection of books that have been used for information on this site.
Images and Scriptural quotes	Colorful and lovely Images, a poem named 'Brahma' by Ralph Waldo Emerson.
Did You Know?	Did You Know? feature at the end of all chapters. Little bits of information on amazing facts related to Hinduism and India.
Links	A list of interesting sites about Hinduism. Some of the sites have been suggested by readers.

Show in alphabetical order

Some of the famous intellectuals in the West and the East had the following things to say about Hinduism:

1. **Henry David Thoreau** (1817-1862) American Philosopher, Unitarian, social critic, transcendentalist and writer. It was Ralph Waldo Emerson who aroused in him a true enthusiasm for India. He wrote:

"In the morning I bathe my intellect in the stupendous and cosmogonal philosophy of the Bhagavad Gita in comparison with which our modern world and its literature seems puny."

(source: **The Writings of Henry D. Thoreau - Walden** 1989. Princeton Univ. Press. page 298).

In the 1840s Thoreau's discovered India, his enthusiasm for Indian philosophy was thus sustained. from 1849-1854, he borrowed a large number of Indian scriptures from the Harvard University Library, and the year 1855 when his English friend Thomas Chilmondeley sent him a gift of 44 Oriental books which contained such titles as the Rig Veda Samhita, and Mandukya Upanishads, the Vishnu Puranas, the Institutes of Manu, the Bhagavad Gita and the Bhagvata Purana etc.

In Indian contemplation he found a "wonderful power of abstraction" and mental powers which were able to withdraw from the concerns of the empirical world to steady the mind and free it from distractions.

"What extracts from the Vedas I have read fall on me like the light of a higher and purer luminary, which describes a loftier course through purer stratum. It rises on me like the full moon after the stars have come out, wading through some far stratum in the sky."

(source: **Commentaries on the Vedas, The Upanishads & the Bhagavad Gita By Sri Chinmoy** Aum Publications. 1996. Pp 26.)

"Whenever I have read any part of the Vedas, I have felt that some unearthly and unknown light illuminated me. In the great teaching of the Vedas, there is no touch of sectarianism. It is of all ages, climes and nationalities and is the royal road for the attainment of the Great Knowledge. When I am at it, I feel that I am under the spangled heavens of a summer night."

(source: **The Hindu Mind:** Fundamentals of Hindu Religion and Philosophy for All Ages - **By Bansi Pandit** B & V Enterprises 1996. page 307.

"I would say to the readers of the Scriptures, if they wish for a good book, read the Bhagvat-Geeta .... translated by Charles Wilkins. It deserves to be read with reverence even by Yankees...."Besides the Bhagvat-Geeta, our Shakespeare seems sometimes youthfully green... Ex oriente lux may still be the motto of scholars, for the Western world has not yet derived from the East all the light it is destined to derive thence."

In his book **Walden**, **Thoreau** contain explicit references to Indian Scriptures such as:

"How much more admirable the Bhagavad Geeta than all the ruins of the East.'

(source: **The Writings of Henry D. Thoreau - Walden** 1989. Princeton Univ. Press. page 57).

Thoreau described Christianity as "radical" because of its "pure morality" in contrast to **Hinduism's "pure intellectuality"**

(source: **A Week on the Concord and Merrimack Rivers - By Henry David Thoreau** p. 109 - 111).

"The Vedas contain a sensible account of God." "The veneration in which the Vedas are held is itself a remarkable feat. Their code embraced the whole moral life of the Hindus and in such a case there is no other truth than sincerity. Truth is such by reference to the heart of man within, not to any standard without."

Thoreau, like other Transcendentalist had a breath and catholicity of mind which brought him to the study of religions of India. From the beginning he was disillusioned with organized Christianity (he never went to Church) and like Emerson showed great interest in Hinduism and its philosophy. In comparison to Hebraism, Thoreau found Hinduism superior in many ways. The following passage demonstrates Thoreau's disenchantment with Hebraism and his love for Hinduism: In 1853 he wrote:

"The Hindoos are most serenely and thoughtfully religious than the Hebrews. They have perhaps a purer, more independent and impersonal knowledge of God. Their religious books describes the first inquisitive and contemplative access to God; the Hebrew bible a conscientious return, a grosser and more personal repentance. Repentance is not a free and fair highway to God. A wise man will dispense with repentance. It is shocking and passionate. God prefers that you approach him thoughtful, not penitent, though you are chief of sinners. It is only by forgetting yourself that you draw near to him. **The calmness and gentleness with which the Hindoo philosophers approach and discourse on forbidden themes is admirable."**

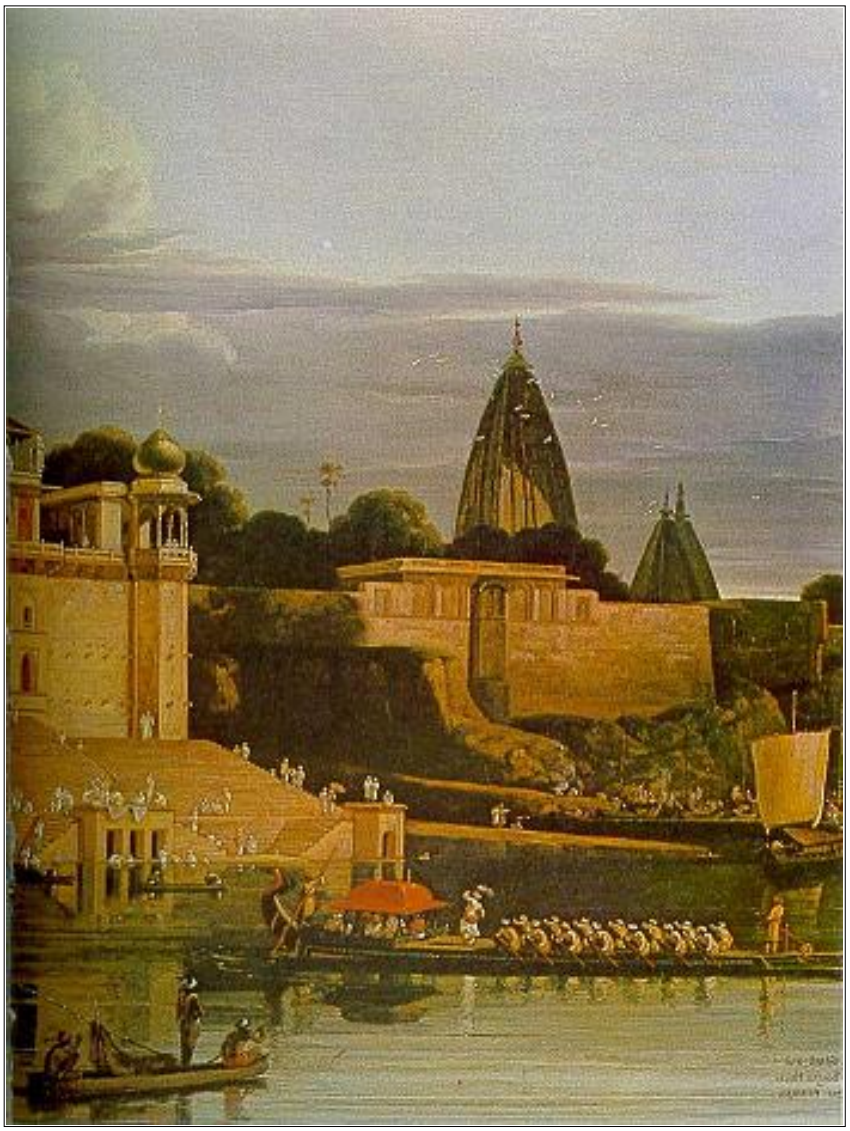
The Christian and Hindu concept of man, Thoreau thinks, are diametrically opposed to each other, the former sees man as a born sinner whereas the latter takes him to be potentially divine. The lofty concept of man embodied in Hinduism appealed to Thoreau. Praising such concept he writes: "In the Hindoo scripture the idea of man is quite illimitable and sublime. There is nowhere a loftier conception of his destiny. He is at length lost in Brahma himself 'the divine male.'

Thoreau – his grand philosophic aloofness, his hatred of materialism, his society, his yogic renunciation and austerity, his lack of ambition, his love of solitude, his excessive love of nature, resulting his refusal to cooperate with a government whose policies he did not approve of, were certain extreme traits like to be misunderstood. Besides, he was a vegetarian, a non-smoker, and a teetotaler. He remained a bachelor, throughout his life, walked hundreds of miles, avoided inns, preferred to sleep by the railroad, never voted and never went to a church, **derived spiritual inspiration from the Hindu scriptures like the Bhagavad Gita,** and the laws of Manu living an extremely frugal and Spartan life.

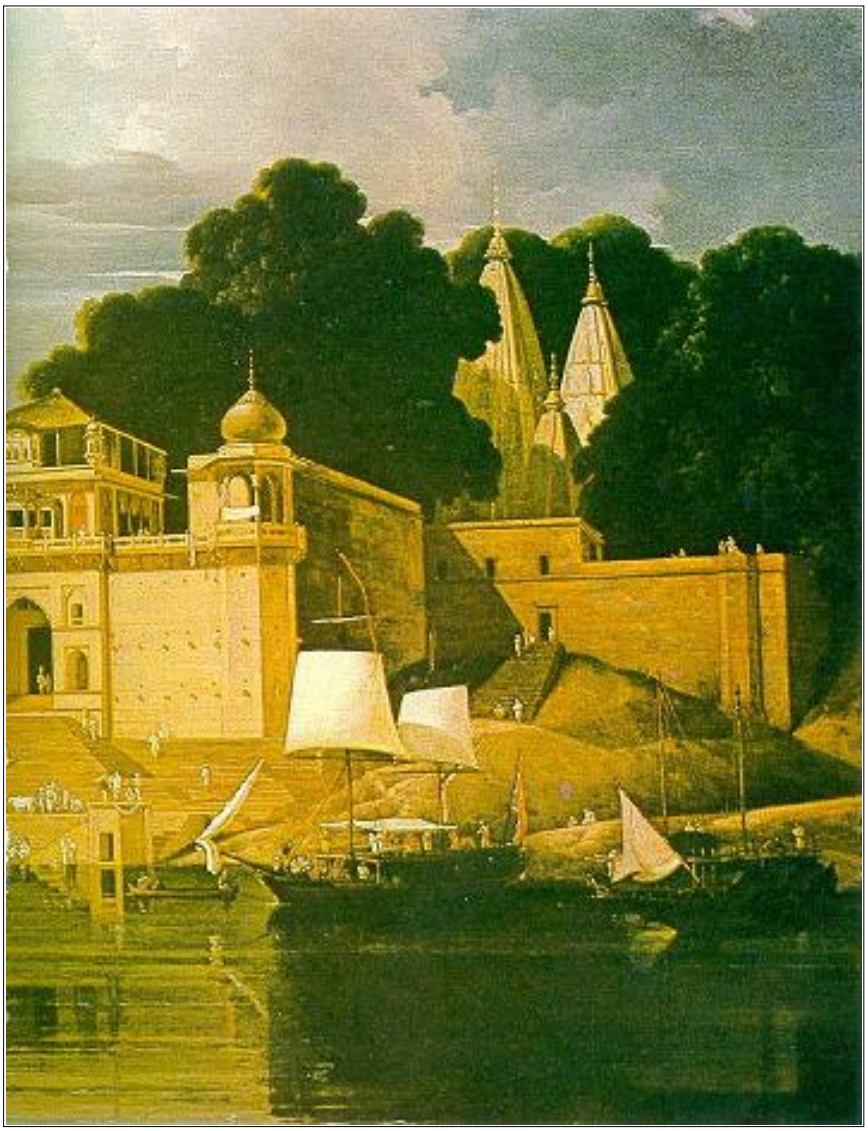
The influence of Hinduism made Thoreau a Yogi.

(source: **Hindu Scriptures and American Transcendentalists - By Umesh Patri** p 98 -240 and **India And Her People - By Swami Abhedananda** p.235-236).

"In the Hindoo scriptures the idea of man is quite illimitable and sublime. There is nowhere a loftier conception of his destiny. He is at length lost in Brahma himself....**there is no grandeur conception of creation anywhere**....The very indistinctness of its theogeny implies a sublime truth."



Thoreau's use of Indic scriptures in Walden far outweighs his use of the Bible. He refers to the Bhagawad-Gita, the Harivamsa, the Vedas, the Vishnu Purana, Pilpay (whose fables form the Hitopadesa) and Calidasa. Thoreau annexes India for his own purpose. It is, for example, in the spirit of



the Indic myth that Thoreau writes the fantastic passage connecting Walden with the Ganges and Concord with India, and it is in the spirit of India that Thoreau wrote or included the story of the artist of Kuru.

On 6 August 1841 he wrote in his journal that:

"I cannot read a sentence in the book of the Hindoos without being elevated as upon the table-land of the Ghauts. It has such a rhythm as the winds of the desert, such a tide as the **Ganges**, and seems as superior to criticism as the Himmaleh Mounts. Even at this late hour, unworn by time with a native and inherent dignity it wears the English dress as indifferently as the Sancrit."

(source: **India in the American Mind - By B. G. Gokhale** p.22-27).

The Ghats on the Ganges
(source: Picturesque India: sketches of travels of Thomas and William Daniell – By J. Mahajan).

He even followed a traditional Hindu way of life.

"It was fit that I should live on rice mainly, who loved so well the philosophy of India."

(source: **Philosophy of Hinduism - An Introduction By T. C. Galav** Universal Science-Religion. ISBN: 0964237709 p 18).

In his Transcendental thoughts, the world at large conglomerate into one big divine family. He finds beside his Walden pond "the servant of the Brahmin, priest of Brahma and Vishnu and Indra, who still sits in his temple on the Ganges reading the Vedas…" their buckets "grate together in the same well. The pure Walden water is mingled with the sacred water of the Ganges".

Thoreau, the Concord sage, said, "The Vedanta teaches how by 'forsaking religious rites' the votary may obtain purification of mind." And **"One sentence of the Gita, is worth the State of Massachusetts many times over"**

(source: **The Bhagavad Gita: A Scripture for the Future** Translation and Commentary **By Sachindra K. Majumdar** Asian Humanities Press. 1991. p 5.)

"The reader is nowhere raised into and sustained in a bigger, purer or rarer region of thought than in the Bhagavad-Gita. The Gita's sanity and sublimity have impressed the minds of even soldiers and merchants."

He also admitted that, **"The religion and philosophy of the Hebrews are those of a wilder and ruder tribe, wanting the civility and intellectual refinements and subtlety of Vedic culture."** Thoreau's reading of literature on India and the Vedas was extensive: he took them seriously.

(source: **The Secret Teachings of the Vedas. The Eastern Answers to the Mysteries of Life** - **By Stephen Knapp** volume one. pg- 22).

Like Emerson, the Concord sage, Thoreau, was also deeply imbued with the sublime teachings of Vedanta.

(source: **India And Her People - By Swami Abhedananda** p.235-236).

He was particularly attracted by the **yogic elements** in the Manu Smriti. Thoreau embarked on his Walden experiment in the spirit of Indian asceticism. In a letter written to H. G. O Blake in 1849, he remarked:

"Free in this world as the birds in the air, disengaged from every kind of chains, those who have practiced the Yoga gather in Brahmin the certain fruit of their works. Depend upon it, rude and careless as I am, I would fain practice the yoga faithfully. This Yogi, absorbed in contemplation, contributes in his degree to creation; he breathes a divine perfume, he heard wonderful things. Divine forms traverse him without tearing him and he goes, he acts as animating original matter. To some extent, and at rare intervals, even I am a Yogi.

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p. 86-87 and **Hindu Scriptures and American Transcendentalists - By Umesh Patri** p 98 -240). For more on Thoreau refer to chapter **GlimpsesVI**).

Along with Emerson, he published essays on Hindu scriptures in a journal called **The Dial**.

2. **Arthur Schopenhauer** (1788-1860), German philosopher and writer. He was one of the greatest philosophers of the 19th century. He was the first Western philosopher to have access to translations of philosophical material from India, both Vedic and Buddhist, by which he was profoundly affected. Counted among his disciples are such thinkers as Nietzsche and Wittgenstein, as well as Sigmund Freud, who takes a large part of his psychological theory from the writings of Schopenhauer.

No other major Western philosopher so signalizes the turn towards India, combined with a disenchantment with the European-Christian tradition. **He proclaimed the concordance of his philosophy with the teachings of Vedanta.** His contribution to the propagation and popularization of Indian concepts has been considerable.

(source: **India and Europe: An Essay in Understanding - By Wilhelm Halbfass** p. 436).

Schopenhauer became acquainted with the thought of the **Upanishads** through a Latin translation from Persian by a Frenchman, Anquetil Duperron. His eulogy is well known.

"The Indian air surrounds us, the original thoughts of kindred spirits.....And O! how the mind is here washed clean of all its early ingrafted Jewish superstition! It is the most profitable and most elevating reading which is possible in the world."

(source: **Eastern Religions and Western Thought - by Dr. S. Radhakrishnan** pg 248 and **Hinduism Invades America - By Wendell Thomas** p. 240 published by The Beacon Press Inc. New York City 1930).

Schopenhauer was in search of a "philosophy which should be at once ethics and metaphysics." India

did not disappoint him. He found it in the Upanisadhic "**tat twam asi**", "that thou art".

"From every sentence (of the Upanishads) deep, original and sublime thoughts arise, and the whole is pervaded by a high and holy and earnest spirit...."In the whole world there is no study so beneficial and so elevating as that of the Upanishads. They are destined sooner or later to become the faith of the people." Schopenhauer, who was in the habit, before going to bed, of performing his devotions from the pages of the Upanishads, regarded them as:

" It has been the solace of my life -- it will be the solace of my death."

(source: **The Discovery of India - By Jawaharlal Nehru** Oxford University Press. 1995. pg 92 and **The Upanishads** Translated for the Modern Reader By **Eknath Easwaran** Nilgiri Press. 1987 p. 300 and **Outlines of Hinduism - By T. M. P. Mahadevan** - p.30).

He anticipated later speculations with his claim that Christianity had "Indian blood in its veins" and that the moral teachings of the New Testament had their historical source in Asia beyond Israel: "Christianity taught only what the whole of Asia knew already long before and even better"

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p.68-69).

To **Schopenhauer** the Upanishads were documents of 'almost superhuman conception,' whose authors could hardly be thought of as 'mere mortals.'

He also remarked: "How every line is of such strong, determined, and consistent meaning! And on every page we encounter deep, original, lofty thoughts, while the whole world is suffused with a high and holy seriousness."

(source: cited in German in **Upanishaden: Altindische Weisheit** (Upanishads: Ancient Indian Wisdom) **- By Alfred Hillebrandt** (Dussseldorf-Koln, Germany; Diederichs Verlag, 1964 p. 8).

He spoke of India as the 'fatherland of mankind' which 'gave the original religion of our race,' and he expressed the hope that European peoples, 'who stemmed from Asia,...would re-attain the religion of their home.'

He believed that the Upanishads, together with the philosophies of Plato and Kant, constituted the foundation on which to erect a proper philosophy of representation. It was the **Upanishads' analysis of the self** which caused Schopenhauer to stamp them as **" the product of the highest human wisdom".** He dedicated himself to this task, producing his magnum opus, **The World as Will and Representation,** in 1819. This is what he says in this book:

"We, on the contrary, now send to the Brahmans English clergymen and evangelical linen-weavers, in order out of sympathy to put them right, and to point out to them that they are created out of nothing, and that they ought to be grateful and pleased about it. But it is just the same as if we fired a bullet at a cliff. **"In India, our religions will never at any time take root; the ancient wisdom of the human race will not be supplanted by the events in Galilee. On the contrary, Indian wisdom flows back to Europe, and will produce a fundamental change in our knowledge and thought."**

(source: **The World as Will and Representation** - **By Arthur Schopenhauer** Volume I, & 63, pg. 356-357).

Schopenhauer regarded the **Hindus as deeper thinkers** than Europeans because their interpretation of the world was internal and intuitive, not external and intellectual. For intuition unites everything, the intellect divides everything. The Hindus saw that the "I" is a delusion, that the individual is merely phenomenal, and that the only reality is the Infinite One **"That art Thou"**

(source: **India and World Civilization By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 254).

Schopenhauer wrote in the preface of his "**The World as a Will and Representation**"

"According to me, the influence of Sanskrit literature on our time will not be lesser than what was in the 16th century Greece's influence on Renaissance. **One day, India's wisdom will flow again on Europe and will totally transform our knowledge and thought."**

Schopenhauer, had extracted from Indian philosophy its contempt for the mere intellect. **He admitted extracting his philosophical outlook from the Vedanta and attempting to weld "empirical realism" with transcendental idealism."**

"Schopenhauer went on from there to vindicate Indian philosophy's rightful place in the world.." He even went so far as to express pleasure at the continuous failure of West-Christian proselytism in Asia and added: "Our religions will never at any time take root; the ancient wisdom of the human race will not be supplanted by the events in Galilee. On the contrary, Indian wisdom flows back to Europe, and will produce a fundamental change in our knowledge and thought." His anti-Christianism was largely based on a fierce anti-Biblism; .....he attributed systematically to subtle influences originating on the "holy-banks of the Ganges."

(source: **The Soul of India - By Amaury de Riencourt** p 274-275).

It is well-known that the book 'Oupnekhat' (Upanishad) always lay open on his table and he invariably studied it before retiring to rest. He called the opening up of Sanskrit literature '**the greatest gift of our century',** and predicted that the philosophy and knowledge of the Upanishads would becomes the cherished faith of the West.

(source: **Western Indologists: A Study in Motives - P B Dutt**
http://www.philosophy.ru/library/asiatica/indica/authors/motives.html).

The **Upanishads** came to Schopenhauer as a new Gnosis or revelation. **"That incomparable book," he says, "stirs the spirit of the very depths of the soul."**

(source: **The Legacy of India - edited by G. T. Garratt** p. 32).

Schopenhauer was fond of saying that the first intuition of the work he was to do came to him while reading these texts, of which he was later to say that they had been "his life's consolation."

(source: **Yoga and the Hindu Tradition - by Jean Varenne** p. 186 - 187).

3. **Lord Warren Hastings** (1754-1826), was the first governor general of British India. **Hastings** was very much impressed and overwhelmed with Hindu philosophy:

He wrote with a prophetic and resounding pronouncement on the whole body of Indian writings:

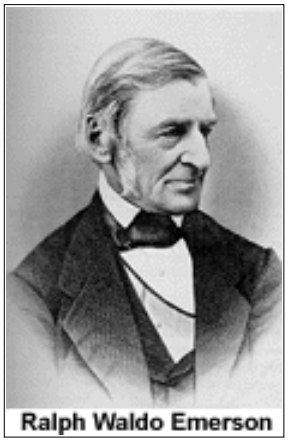
"The writers of the Indian philosophies will survive, when the British dominion in India shall long have ceased to exist, and when the sources which it yielded of wealth and power are lost to remembrances."

(source: **Philosophy of Hinduism - An Introduction - By T. C. Galav** Universal Science-Religion. Pg 19).

" I hesitate not to pronounce the Gita a performance of great originality, of sublimity of conception, reasoning and diction almost unequalled; and a single exception, amongst all the known religions of mankind.."

(source: **India Discovered - By John Keay** p- 25).

4. **Ralph Waldo Emerson** (1803-1882) author, essayist, lecturer, philosopher, Unitarian minister who lectured on theology at Harvard University, was becoming increasingly disillusioned with aspects of Christian teaching that just did not make sense to his active and inquiring intelligence. He was influenced by Indian Scriptures the most. His initial rebellion against Christianity in its various forms prompted him to find a ready refuge in the idealism of Hinduism.



Historian **Protap Chunder Mazumdar** has said about Emerson that he was the best of Brahmin and "Amidst this ceaseless, sleepless din and clash of Western materialism, this heat and restless energy, the character of **Emerson shines upon India serene as the evening star**. He seems to some of us to have been a geographic mistake, he ought to have been born in India. Perhaps Hindoos were closer kinsmen to him than his own nation because every typical Hindoo is a child of Nature."

For Emerson, the idealism of the Hindus propounded in the Upanishads, the Bhagavad Gita and other Indian scriptures, was based on fundamental concepts. He turned eastward towards India very early in life, when he was in his teens.

He said this about the Gita:

" I owed a magnificent day to the Bhagavad-Gita. It was as if an empire spoke to us, nothing small or unworthy, but large, serene, consistent, the voice of an old intelligence which in another age and climate had pondered and thus disposed of the same questions which exercise us."

(source: **Philosophy of Hinduism - An Introduction - By T. C. Galav** Universal Science-Religion. p 65 and **Hinduism - By Linda Johnsen** p.42 and **Hindu Scriptures and American Transcendentalists - By Umesh Patri** p. 22-23).

Ralph Waldo Emerson

In his Journal, Emerson paid homage to **Vedic thought**:

" It is sublime as night and a breathless ocean. It contains every religious sentiment, all the grand ethics which visit in turn each noble poetic mind....It is of no use to put away the book; if I trust myself in the woods or in a boat upon the pond. Nature makes a Brahmin of me presently: eternal compensation, unfathomable power, unbroken silence....This is her creed. peace, she saith to me, and purity and absolute abandonment - these panaceas expiate all sin and bring you to the beatitude of the Eight Gods."

(source: **India's Priceless Heritage - By Nani A. Palkhivala** 1980 p.9 - 24).

Repelled by the increasing materialism of the West, **Emerson** turned to India for solace:

"The Indian teaching, through its clouds of legends, has yet a simple and grand religion, like a queenly countenance seen through a rich veil. It teaches to speak truth, love others, and to dispose trifles. The East is grant - and makes Europe appear the land of trifles. ...**all is soul and the soul is Vishnu** ...cheerful and noble is the genius of this cosmogony. Hari is always gentle and serene - he translates to heaven the hunter who has accidentally shot him in his human form, he pursues his sport with boors and milkmaids at the cow pens; all his games are benevolent and he enters into flesh to relieve the burdens of the world."

Emerson refers to the Indian doctrine of transmigration calling it easy of reception and used the idea in his essay on History. As early as 1821 he speaks of the intimate relationship between man and nature and the system of emanations in Indian thought. He wrote poems such as Brahma and Hamatreya.

(source: **India in the American Mind - By B. G. Gokhale** p. 120-21 and **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 254).

Emerson's Oversoul is the paramatman of the Upanishads.

"All science is transcendental or else passes away. Botany is now acquiring the right theory - the avatars of Brahman will presently be the text-books of natural history."

(source: **India's Priceless Heritage - By Nani A. Palkhivala** 1980 p.9).

Ralph Waldo Emerson says: "Plato was synthesis of Europe and Asia, and a decidedly Oriental element pervades his philosophy, giving it a sunrise color."

(source: **India And Her People - By Swami Abhedananda** p.223).

He felt that the genius of the Hindus was unsurpassed "in the grandeur of their ethical statement." Emerson's interest in India which began in 1818 continued well into the 1860s. He admired the "Largeness" or sweep of the Indian vision which should be a vital part of the Transcendental wisdom.

In 1848 he says that he owed a "magnificent day to the reading of the Bhagavat-Gita" and adds that **England could not produce such a book as the Gita.** He found Indian books "excellent gymnastic for the mind as showing treatment - imagination, volatility etc."

In 1859 he felt: **"When India was explored and the wonderful riches of Indian theological literature found that dispelled once and for all the dream about Christianity being the sole revelation."**

(source: **India in the American Mind - By B. G. Gokhale** p. 16).

His famous poem "**Brahma**" is an example of his Vedantic ecstasy. If there is one piece that beautifully and succinctly expresses Emerson's vision of India it is in his poem Brahma.

(source: **Story of Civilization: Our Oriental Heritage By Will Durant** MJF Books. 1935. pg 415).

Emerson wrote a third poem with a Hindu title in addition to "Brahma" and "**Hamatreya**"; this little poem, entitled "**Maya**", begins,

"Illusion works impenetrable,
Weaving webs innumerable.

The poem is called Maya for Hindu Goddess who keeps mankind under the spell of illusions. For Emerson, life was a riddle; he loved the Hindus because they had attempted to find a satisfactory answer to it. In "Poetry and Imagination" the sage of Concord tells us how ephermeral are man's various conditions in life: youth, age, property - all like a great dream." ...successive Mayas through which Vishnu mocks and instructs the soul" But it is not only the Vishnu Purana that inspired Emerson. Another Hindu work stimulated his mind a great deal: The Katha Upanishad. In 1856, when he was fifty-three, he wrote in his Journal:

"A grander legend than Western literature contains, is the story of Nachiketas."

We have noticed how strong had been the influence of Indian thought in shaping the intellectual and spiritual growth of the sage of Concord. He felt his own spiritual affinity for the Hindus and wrote once to a friend, "nature makes a Brahmin of me presently."

(source: **Elements of Brahmanism in the Transcendentalism of Emerson - By Leyla Goren** p. 42-45).

Emerson's essays like The Oversoul and Circles and poems like Brahma are Upanishadic wisdom, pure and simple. At one stage of his life he writes, **"Nature makes a Brahmin of me presently."**

(source: **The Soul of India - By Satyavrata R Patel** p.74).

Emerson's Transcendentalism earned him the appellation of "the Boston Brahmin."

(source: **Indian Philosophy and Modern Culture - By Paul Brunton** p. 35 London. Rider & Co.).

Fredric Ives Carpenter in his book, **Emerson and Asia** (1930) says, that Emerson was the first American thinker to plant Oriental, especially Indian thought, on the American soil and draw spiritual inspiration from it. The poem **Brahma** became a controversial poem from the very beginning because of its anti-Christian attitude and the direct treatment of the Upanishadic mysticism. He further says that this poem expresses the fundamental Hindu concept "more clearly and concisely than any other writing in the English language perhaps better than any writing in Hindu literature itself. Emerson got his central idea of the poem from his reading of **Katha Upanishad.**..If the slayer thinks I slay.....does not slay nor is it slain."

The idea of rebirth or reincarnation is found throughout Emerson's work and journals. "The transmigration of souls is no fable...."

Faith in transmigration of souls though antithetical to Christianity, appealed to him because it countered the nation of finality, inherent in Christianity, and embodied a vision of correction through successive stages of development until one achieves beatitude and divine bliss.

(source: **Hindu Scriptures and American Transcendentalists - By Umesh Patri** p. 22 -23 and 79).

Emerson, talking of the Upanishads and the Vedas, said that having read them, he could not put them away. **"They haunt me. In them I have found eternal compensation, unfathomable power, unbroken peace."**

(source: **The Commemorative Sanskrit Souvenir 2003 of the Bharatiya Vidya Bhavan -** p. 28).

"When Confucius and the Indian Scriptures were made known, no claim to monopoly of ethical wisdom could be thought of" Emerson joyfully proclaimed. "It is only within this century (the 1800's) that England and America discovered that their nursery tales were old German and Scandinavian stories; and now it appears that they came from India, and are therefore the property of all the nations."

(source: **Hinduism Today** - April/May/June 2004 issue - p 59).

5. **Wilhelm von Humboldt** (1767- 1835) Prussian minister of education, a brilliant linguist and the founder of the science of general linguistics. **Humboldt** began to learn Sanskrit in 1821 and was greatly moved by Schlegel's edition of the Bhagavad Gita, on which he published an extensive study. The Bhagavad Gita made a great impression on Humboldt, who said that " this episode of the Mahabharata was:

"The most beautiful, perhaps the only true philosophical song existing in any known tongue ....perhaps the deepest and loftiest thing the world has to show."

(source: **Philosophy of Hinduism - An Introduction By T. C. Galav** Universal Science-Religion. Pg 650)

He devoted to it a long treatise in the **Proceedings of the Academy of Berlin** (1825-6).

He thanked God for having permitted him to live long enough to become acquainted with the Gita.

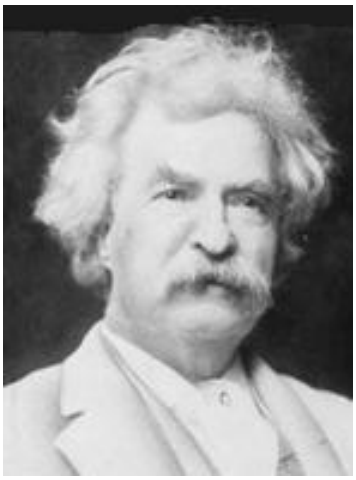
(source: **Vedanta: Heart of Hinduism - By Hans Torwesten** An Evergreen Book. Grove Press. 1985. pg 6.

On June 30 1825, Humboldt lectured to the Berlin Academy of Sciences on the Gita, placing it firmly in the mainstream of the scholarship of the period. **He found in the Bhagavad Gita his own "spiritual ancestors". What appealed to him was its originality and its simplicity.** Krishna's doctrine, he wrote,

" ...develops in such a peculiarly individual way, (and) it is, so far as I can judge, so much less burdened with sophistry and mysticism, that it deserves our special attention, standing as it does as an independent work of art..."

(source: **The Universal Gita: Western Images of the Bhagavad Gita a Bicentenary Survey** - **By Eric J. Sharpe** p. 19).

Humboldt studied Sanskrit with Franz Bopp in London. For Humboldt, **Sanskrit with its wealth of grammatical forms is the climax of inflecting languages.**



(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen**. p.5-6).

6. **Mark Twain** (1835-1910) also known as Samuel Clemens, one of the most widely loved and celebrated American writers since his first books were released in the late 1860s. Many of his writings have reached the pinnacles of American and world literature, including the timeless Adventures of Huckleberry Finn, The Adventures of Tom Sawyer, A Connecticut Yankee In King Arthur's Court and Following the Equator. Besides these easily recognizable classics, Twain wrote fascinating Travelogue detailing his experiences in Asia.

"So far as I am able to judge, nothing has been left undone, either by man or nature, to make India the most extraordinary country that the sun visits on his rounds. Nothing seems to have been forgotten, nothing overlooked."

"Land of religions, cradle of human race, birthplace of human speech, grandmother of legend, great grandmother of tradition. The land that all men desire to see and having seen once even by a glimpse, would not give that glimpse for the shows of the rest of the globe combined."

"India had the start of the whole world in the beginning of things. She had the first civilization; she had the first accumulation of material wealth; she was populous with deep thinkers and subtle intellects; she had mines, and woods, and a fruitful soul."

Varanasi or Banaras has been continuously populated for more than 3,000 years, and has often been called the oldest city in the world. It was the contemporary of Thebes and Babylon. Early visitors were struck by the "spectacle" the "panorama" of the Banaras riverfront.

In his around-the-world adventures, **Following the Equator**, Mark Twain wrote:

"The Ganges front is the supreme showplace of Benares. Its tall bluffs are solidly caked from water to summit, along a stretch of three miles, with a splendid jumble of massive and picturesque masonry, a bewildering and beautiful confusion of stone platforms, temples, stair flights, rich and stately palaces....soaring stairways, sculptured temples, majestic palaces, softening away into the distances; and there is movement, motion, human life everywhere, and brilliantly costumed - streaming in rainbows up and down the lofty stairways, and massed in metaphorical gardens on the mile of great platforms at the river's edge."

(source: **Banaras: City of Light - By Diana L Eck** p.14).

He had said in his inimitable style: **"Varanasi"** or Banaras is older than history, older than tradition, older even than legend, and looks twice as old as all of them put together."

(source: **Soul of a Nation - The Hindustan Times**).

Mark Twain remarked: "India has two million gods, and worships them all. In religion all other countries are paupers; India is the only millionaire." When traveling through India, he had exclaimed that though a week had only seven days, Indians seemed to celebrate eight festivals every week.

He observed that having had only the briefest glimpse of India, you would not trade the experience for all the riches in the world. This is what he wrote about India in 1896:

"India had the start of the whole world in the beginning of things. She had the first civilization; she had the first accumulation of material wealth; she was populous with deep thinkers and subtle intellect; she had mines, and woods, and a fruitful soul."

(source: **Hinduism Today** July/August/September 2002 p. 52).

"Our most valuable and most instructive materials in the history of man are treasured up in India."

Twain was awed by **Hindu tradition**. He said, "the one land that all men desire to see, and having once seen, by even a glimpse, would not give that glimpse for all the shows of all the rest of the globe combined."

(source: **Hinduism - By Linda Johnsen** p. 364).

"India is a country "whose yesterday's bear date with the mouldering antiquities of the rest of nations."

7. **Dr. Arnold Joseph Toynbee** (1889-1975) the great British historian. His massive research was published in 12 volumes between 1934 and 1961 as `A Study of History'. Author of several books, including **Christianity: Among the Religions of the World** and **One World and India**. Toynbee was a major interpreter of human civilization in the 20th century.

"It is already becoming clear that a chapter which had a Western beginning will have to have an Indian ending if it is not to end in self-destruction of the human race. **At this supremely dangerous moment in human history , the only way of salvation is the ancient Hindu way.** Here we have the attitude and spirit that can make it possible for the human race to grow together in to a single family."

The tolerance of Hinduism was recognized by Toynbee, who on many occasions contrasted the exclusivity of the Jewish religion, based on the Jewish belief that the Jews are the chosen people with the **large tolerance of the Hindus and Buddhist.** This plague of exclusiveness, he claims, was inherited by both the Christians and Muslims: hence their lamentable record.

(source: **Concordant Discord - By R. C. Zaehner** pp-22-23).

‘‘There may or may not be only one single absolute truth and only one single ultimate way of salvation. We do not know. But we do know that there are more approaches to truth than one, and more means of salvation than one.’’‘‘This is a hard saying for adherents of the higher religions of the Judaic family (Judaism, Christianity, and Islam), **but it is a truism for Hindus. The spirit of mutual good-will, esteem, and veritable love ... is the traditional spirit of the religions of the Indian family. This is one of India’s gifts to the world.’’**

(source: **Britannia Perspectives -** Quoted By **T. V. R. Shenoy** in **Secularism is not for Hindus alone**).

Toynbee predicted: "At the close of this century, the world would be dominated by the West, but that in the 21st century *"***India will conquer her conquerors."**

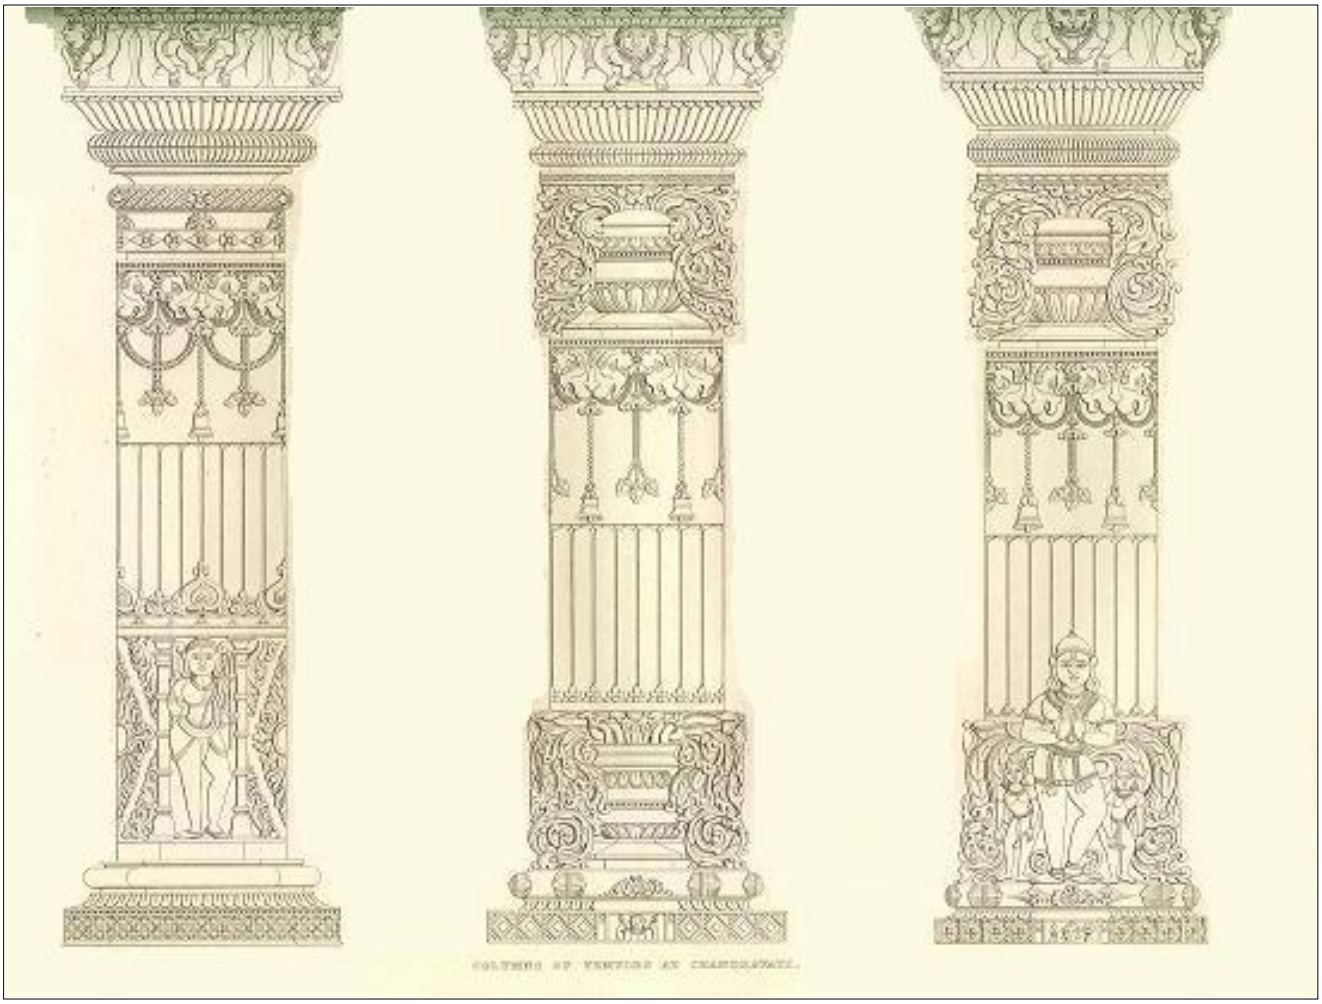
(source: **Spiritual Heritage of India - By Swami Prabhavananda** Vedanta Press 1997).

"India is a whole world in herself; she is a society of the same magnitude as our Western society."

(source: **Civilization on Trail and the World and the West - By Arnold Toynbee** Meridian Books. p. 257).

In 1952, Toynbee had observed: “In fifty years, the world would be under the hegemony of the USA, but in the 21st century, as religion captures the place of technology, it is possible that India, the conquered, will conquer its conquerors.”

(source: **Power of the Indian mind: our heritage & asset - by Jagmohan** - tribuneindia.com - editorial - Sunday February 23 2003).



"India is not only the heir of her own religious traditions; she is also the residuary legatee of the Ancient Mediterranean World's religious traditions." "Religion cuts far deeper, and, at the religious level, India has not been a recipient; she has been a giver. About half the total number of the living higher religions are of Indian origin."

(source: **One World and India - By Arnold Toynbee** Indian Council for Cultural Relations New Delhi. 1960 p. 42- 59).

Toynbee explains his position in clear terms: In our spiritual struggle, he says "I guess that both the West and the world are getting to turn away from man - worshipping ideologies - Communism and secular individualism alike - and become converted to an Oriental religion coming neither from Russia

nor from the West. I guess that this will be the Christian religion that came to the Greeks and the Romans from Palestine, with one or two elements in traditional Christianity discarded and **replaced by a new element from India,** I expect and hope that this avatar of Christianity will include the vision of God as being Love. But I also expect and hope that it will discard the other traditional Christian vision of God as being a jealous god, and that it will reject the self-glorification of this jealous god's "chosen people" as being unique. **This is where India comes in, with her belief that there may be more than one illuminating and saving approach to the mystery of the universe."**

(source: **East and West: Some Reflections - By S. Radhakrishnan** p.128).

Column of temples at Chandravati
*(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India - By Colonel James Tod**).*

8. **Annie Wood Besant** (1847-1933) was an active socialist on the executive committee of the Fabian Society along with George Bernard Shaw. George Bernard Shaw regarded her the " greatest woman public speaker of her time." Was a prominent leader of India's freedom movement, member of the Indian National Congress, and of the Theosophical Society. Dr. Annie Besant was a housewife, a propagator of atheism, a trade unionist, a feminist leader and a Fabian Socialist.

She was also fundamentally instrumental in freeing the country she lost her heart and sublimed her soul to: India. Besant is an indivisible part of the composite struggle for independent India because she declared most passionately,

"I love the Indian people as I love none other. My heart and my mind... have long been laid on the alter of the Motherland."

(source: **Hindustan Times** 01/25/02).

Annie Besant, proponent of the philosophy of Theosophy, gave many a lecture in which she aired her views that India was a victim of the mischief wrought by Christian missionaries. A friend of Swami Vivekananda, Mrs. Besant was trying to lead Indians back to their own gods and arouse their sense of self-respect and pride in the greatness of their religions.

This is what she said on India and Hinduism :

"After a study of some forty years and more of the great religions of the world, I find none so perfect ,none so scientific, none so philosophical and no so spiritual that the great religion known by the name of Hinduism. **Make no mistake, without Hinduism, India has no future**. Hinduism is the soil in to which India's roots are stuck and torn out of that she will inevitably wither as a tree torn out from its place. And if Hindus do not maintain Hinduism who shall save it? If India's own children do not cling to her faith who shall guard it. India alone can save India and India and Hinduism are one. "

Annie Besant thought that "among the priceless teachings that may be found in the great Indian epic **Mahabharata, there is none so rare and priceless as the Gita."**

"This is the India of which I speak - the India which, as I said, is to me the **Holy Land.** For those who, though born for this life in a Western land and clad in a Western body, can yet look back to earlier incarnations in which they drank the milk of spiritual wisdom from the breast of their true mother - they must feel ever the magic of her immemorial past, must dwell ever under the spell of her deathless fascination; for they are bound to India by all the sacred memories of their past; and with her, too, are bound up all the radiant hopes of their future, a future which they know they will share with her who is their true mother in the soul-life."

(source: **India: Essays and Lectures Vol. IV - By Annie Besant** London. The Theosophical Publishing Co. p. 11.1895).

Mrs. Besant remarked at Calcutta: **"India is the mother of religion. In her are combined science and religion in perfect harmony, and that is the Hindu religion, and it is India that shall be again the spiritual mother of the world."**

(source: **Hindu Superiority - By Har Bilas Sarda** - Besant's lecture at the Grand Theatre, Calcutta on Jan 15th 1906).

"During the early life of a Nation, religion is an essential for the binding together of the individuals who make the nation. **India was born, as it were, in the womb of Hinduism, and her body was for long shaped by that religion.** Religion is a binding force, and India has had a longer binding together by religion than any other Nation in the world, as she is the oldest of the living Nations."

(source: **Hindu Rashtra-What It Means - By Prof. V. Rangarajan**).

Besant held Hinduism in high esteem and very well advised in her book, **In Defense of Hinduism**:

"Based on knowledge it need not fear any advance in knowledge; profound in spirituality, the depths of the spirit find in it deeps answering into deep, it has nothing to dread, everything to hope, from growth in intellect, from increasing sway of reason."

(source: **India Rediscovered - By Dr. Giriraj Shah** p. 31 Abhinav Publications New Delhi 1975).

9. **Victor Cousin** (1792-1867) eminent French philosopher, whose knowledge of the history of European philosophy was unrivalled, believes that:

"When we read with attention the poetical and philosophical monuments of the East--above all, those of **India**, which are beginning to spread in Europe--we discover there many a truth, and **truths so profound, and which make such a contrast with the meanness of the results at which European genius has sometimes stopped, that we are constrained to bend the knee before the philosophy of the East, and to see in this cradle of the human race the native land of the highest philosophy."**

(source: **Is India Civilized: Essays on Indian Culture - By Sir John Woodroffe** p. 132).

He has observed:

“The history of Indian philosophy is the abridge history of the philosophy of the world.”

(source: **The Bible in India: Hindoo origin of Hebrew and Christian revelation - By Louis Jacolliot** p 9).

" India contains the whole history of philosophy in a nutshell."

(source: **India And Her People - By Swami Abhedananda** - p. 11-12).

10. **Jules Michelet** (1798 -1874) French writer and the greatest historian of the Romantic school said:

"At its starting point in India, the birthplace of races and religions, the womb of the world."

While seeking for the wisdom of ages, he cried at the commencement of his work, “The Bible of Humanity”: “The year 1863 will remain dear and blessed to me.” Why? Because he had read India’s sacred poem, the **Ramayana**.

"Divine poem, ocean of milk!"

cried Michelet on discovering this ancient Scripture.

In what moving terms he then wrote about India. We can but transcribe his burning words:

“Each year, it is necessary to respire, to take breath again, to revive ourselves at the great living sources that forever keep their eternal freshness. Where can we find them if not at the cradle of our race, on the sacred summits from where descend the Indus and the Ganges....?

(source: **The Fragrance of India : landmarks for the world of tomorrow - By Louis Revel** p. 16 Kitabistan Allahabad 1946).

This is what **Michelet** said of the Ramayana:

"Whoever has done or willed too much let him drink from this deep cup a long draught of life and youth.....Everything is narrow in the West - Greece is small and I stifle; Judea is dry and I pant. Let me look toward lofty Asia, and the profound East for a little while. There lies my great poem, as vast as the

Indian ocean, blessed, gilded with the sun, the book of divine harmony wherein is no dissonance. A serene peace reigns there, and in the midst of conflict an infinite sweetness, a boundless fraternity, which spreads over all living things, an ocean (without bottom or bound) of love, of pity, of clemency."

Such was the first and enduring impression made on Michelet by the Ramayana.

(source: **Philosophy of Hinduism - An Introduction - An Introduction By T. C. Galav** Universal Science-Religion. Pg 149. **The Fragrance of India : landmarks for the world of tomorrow - By Louis Revel** p. 16 Kitabistan Allahabad 1946).

" From India comes to us a torrent of light, a river of Right and Reason" .....

(source: **Arise O' India - By Francois Gautier** ISBN 81-241-0518-9 Har-Anand Publications 2000. p. 25).

" Whereas, in our Occident, the most dry and sterile minds brag in front of Nature, **the Indian genius**, the most rich and fecund of all, knows neither small nor big and has generously embraced universal fraternity, even the identity of all souls."

(source: **La Bible de l'Humanite in OEuvres - By Louis Michelet** (Paris : Larousse, 1930, vol. 5, p. 119.).

11. **Francois Marie Arouet Voltaire** (1694-1774) France's greatest writers and philosophers, was a theist, and a bitter critic of the Church, which he looked upon as the instigator of cruelty, injustice, and inequality. No wonder that Voltaire, who strongly opposed the Church's totalitarian grip over men's lives, and may count as one of the ideologues of secularism, mentioned the religions of India and China as a model of how religion could be a free exploration by the individual. He said :

"We have shown how much we (Europeans) surpass the Indians in courage and wickedness, and how inferior to them we are in wisdom. Our European nations have mutually destroyed themselves in this land where we only go in search of money, while the first Greeks traveled to the same land only to instruct themselves."

Voltaire concluded, **" I am convinced that everything has come down to us from the banks of the Ganges, - astronomy, astrology, metempsychosis, etc."**

" It is very important to note that some 2,500 years ago at the least Pythagoras went from Samos to the Ganges to learn geometry...But he would certainly not have undertaken such a strange journey had the reputation of the Brahmins' science not been long established in Europe..."

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 18).

Voltaire (Fragments relating to some revolutions in India), spoke of the Hindus as "a peaceful and innocent people, equally incapable of hurting others or of defending themselves."

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** p. 36).

He found that India was the home of religion in its oldest and purest form. He described India as a country **"on which all other countries had to rely, but which did not rely on anyone else."** He also believed that Christianity derived from Hinduism. He wrote to and assured **Fredrick the Great of Prussia** that **"our holy Christian religion is solely based upon the ancient religion of Brahma."**

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 101-102).

It is in such a context, that a man like Voltaire considered **India "famous for its laws and sciences"**

and deplored the mounting European preoccupation (both individual and national) of those in India with the amassing of "immense fortunes." This quest for riches intensified the struggles, plunder, etc. during his own time, and made him remark that "If the Indians had remained unknown to the Tartars and to us, they would have been the happiest people in the world."

(source: **Indian Science and Technology in the Eighteenth Century: Some Contemporary European Accounts - By Dharampal** Impex India. p. LXIII).

Voltaire among others held up Hinduism as an example of a natural deistic religion with a pedigree much older than that of Judeo-Christianity.

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p.50).

12. **Will Durant** (1885-1981) American historian, would like the West to learn from India, tolerance and gentleness and love for all living things:

"It is true that even across the Himalayan barrier India has sent to us such questionable gifts as grammar and logic, philosophy and fables, hypnotism and chess, and above all our numerals and our decimal system. But these are not the essence of her spirit; they are trifles compared to what we may learn from her in the future."

"Perhaps in return for conquest, arrogance and spoliation, India will teach us the tolerance and gentleness of the mature mind, the quiet content of the unacquisitive soul, the calm of the understanding spirit, and a unifying, a pacifying love for all living things."

(source: **Philosophy of Hinduism - An Introduction - By T. C. Galav** Universal Science-Religion. Pg 20)

"India was the motherland of our race, and Sanskrit the mother of Europe's languages: she was the mother of our philosophy; mother, through the Arabs, of much of our mathematics; mother, through the Buddha, of the ideals embodied in Christianity; mother, through the village community, of self-government and democracy. **Mother India is in many ways the mother of us all."** Nothing should more deeply shame the modern student than the recency and inadequacy of his acquaintance with India....This is the India that patient scholarship is now opening up like a new intellectual continent to that Western mind which only yesterday thought civilization an exclusive Western thing."

"As flowing rivers disappear in the sea, losing their name and form, thus a wise man, freed from name and form, goes to the divine person who is beyond all." Such a theory of life and death will not please Western man, whose religion is as permeated with individualism as are his political and economic institutions. **But it has satisfied the philosophical Hindu mind with astonishing continuity.**

Durant felt that

"Even in Europe and America, this wistful theosophy has won millions upon millions of followers, from lonely women and tired men to Schopenhauer and Emerson. Who would have thought that the great American philosopher of individualism would give perfect expression to the Hindu conviction in his poem **'Brahma',** that individuality is a delusion? "

(source: **Story of Civilization: Our Oriental Heritage By Will Durant** MJF Books. 1935. pg 415)

13. **Aldous Huxley** (1894-1963) the English novelist and essayist, born into a family that included some of the most distinguished members of the English ruling class, says that the Gita is for the whole world. He is one of those who enriched the West greatly with the wisdom of the East.

"**The Bhagavad-Gita is the most systematic statement of spiritual evolution of endowing value to mankind. The Gita is one of the clearest and most comprehensive summaries of the spiritual thoughts ever to have been made.**"

Hence **Huxley** thought its enduring value, not only for Indians, but for all mankind."

(source: **Philosophy of Hinduism - An Introduction - By T. C. Galav** Universal Science-Religion. Pg 65).

In his latest books, **Eyeless in Gaza** and **Ends and Means**, Aldous Huxley invites our attention to the discipline essential for spiritual insight and argues for the acceptance of the **Yoga** method. The influence of Indian thought is not so much a model to be copied as a dye which permeates.

(source: **Eastern Religions and Western Thought -By Dr. S. Radhakrishnan** pg 250).

He observed that while historical religions have been violent, eternity-philosophies like "Hinduism and Buddhism have never been persecuting faiths, have preached almost no holy wars and have refrained from that proselytizing religious imperialism, which have gone hand in hand with the political and economic oppression of the colored people."

(source: **On Hinduism Reviews and Reflections - By Ram Swarup** p. 149).

"The Gita occupies an intermediate position between scripture and theology, for it contains the poetical qualities of the first with the clear-cut methodicalness of the second."

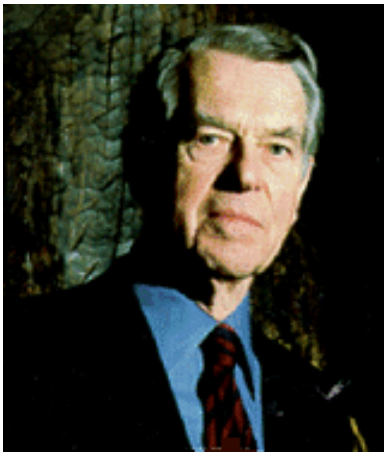
(source: **India's Empire of Mind - By Sudhansu Bimal Mookherji** p. 93).

14. **Alfred North Whitehead** (1861-1947), British mathematician, logician and philosopher best known for his work in mathematical logic and who, in collaboration with Bertrand Russell, authored the landmark three-volume **Principia Mathematica** (1910, 1912, 1913).

Whitehead is reported to have remarked:

" Vedanta is the most impressive metaphysics the human mind has conceived."

(source: **Huston Smith: Essays on World Religion edited by M. Darrrol Bryant** Paragon House 1992 page 135).



15. **Joseph Campbell** (1904-1987) was one of the foremost interpreters of myth in our time. **Campbell** was a prolific writer, dedicated editor, beloved teacher, inspiring lecturer, and an avid scholar of spiritual and cultural development.

"It is ironic that our great western civilization, which has opened to the minds of all mankind the infinite wonders of a universe of untold billions of galaxies should be saddled with the tightest little cosmological image known to mankind? The Hindus with their grandiose **Kalpas** and their ideas of the divine power which is beyond all human category (male or female). **Not so alien to the imagery of modern science that it could not have been put to acceptable use.**"

(source: **Myths to Live By - By Joseph Campbell**. A Bantam Book 1988. page 90).

"The first principle of Indian thought, therefore, is that the **ultimate reality is beyond description.** It is

something that can be experienced only by bringing the mind to a stop; and once experienced, it cannot be described to anyone in terms of the forms of this world. The truth, the ultimate truth, that is to say, is transcendent. it goes past, transcends, all speech all images, anything that can possibly be said. But, as we have just seen, it is not only transcendent, it is also immanent, within all things, Everything in the world, therefore, is to be regarded as its manifestation. There is an important difference her between the Indian and the Western ideas.

"There is an important difference between the Hindu and the Western ideas. In the Biblical tradition, God creates man, but man cannot say that he is divine in the same sense that the Creator is, **where as in Hinduism, all things are incarnations of that power. We are the sparks from a single fire. And we are all fire. Hinduism believes in the omnipresence of the Supreme God in every individual. There is no "fall". Man is not cut off from the divine. He requires only to bring the spontaneous activity of his mind stuff to a state of stillness and he will experience that divine principle with him."**

(source: **Philosophy of Hinduism - An Introduction - by T C Galav** Universal Science-Religion. Pp 19 and **Joseph Campbell Foundation**).

"There is an illuminating story told of the deity Krishna, who, in the form of a human child, was raised among a little company or tribe of herdsmen. One day he said to them, when he saw them preparing to worship one of the great Gods of the Brahminical pantheon: "But why do you worship a deity in the sky? The support of your life is here, in your cattle. Worship these! " Whereupon, they hung garlands around the necks of their cattle and paid them worship. **This wonderful art of recognizing the divine presence in all things, as a ubiquitous presence, is one of the most striking features of Oriental life, and is particularly prominent in Hinduism."**

'I have seen very simple people out in the country, climbing a hill, who, when they became tired and paused to rest and eat, set up a stone, poured red paint around it, and then reverently placed flowers before it. The pouring of the red paint set that stone apart. The idea was simply that those people were now going to regard it, not as a stone, but as a manifestation of the divine principle that it is immanent in all things. The pouring of the red paint and placing of the flowers were typical acts of Bhakti, Devotional Yoga: simple devices, readily available to anyone, to shift the focus of the mind from the phenomenal aspect of the object as a mere stone to its mystery of a miracle of being. And this popular form of yoga, no less than the very much sterner and more difficult discipline of Patanjali's Yoga Sutras, to which I first alluded, is **a technique to link consciousness to the ultimate truth: the mystery of being. The sense of the whole universe as a manifestation of the radiance of God and of yourself as likewise of that radiance, and the assurance that this is so, no matter what things may look like, round about, is the key to the wisdom of India..."**

(source: **Joseph Campbell Foundation**).

Joseph Campbell, traveled widely in India and was a good friend of Hindu teacher J. Krishnamurti. He also assisted in the translation of one of the greatest classics of modern times, The Gospel of Sri Ramakrishna. At one point, **he admitted that discovering the Mandukya Upanishad affected him more profoundly than the beginning of the World War II.**

(source: **Hinduism - By Linda Johnsen** p. 364).

16. **Sir Monier Monier-Williams** (1860-1888) Indologist and head of the Oxford's Boden Chair said:

"The strength of Hinduism lies in its infinite adaptability to the infinite diversity of human character and human tendencies. It has its highly spiritual and abstract side suited to the philosopher, its practical to the man of the world, its aesthetic and ceremonial side attuned to the man of the poetic feeling and imagination; and its quiescent contemplative aspect that has its appeal for the man of peace and the lover of seclusion."

The Hindus, according to him, were Spinozists more than 2,000 years before the advent of

Spinoza, and Darwinians many centuries before Darwin and Evolutionists many centuries before the doctrine of Evolution was accepted by scientists of the present age.

"I have found no people in Europe more religious, none more patiently persevering in common duties."

(source: **Indian Culture and the Modern Age - By Dewan Bahadur K. S. Ramaswami Sastri** Annamalai University. 1956 p.22).

"Starting from the Vedas, Hinduism has ended in embracing something from all religions, and in presenting phases suited to all minds. It is all tolerant, all-compliant, all-comprehensive, all-absorbing."

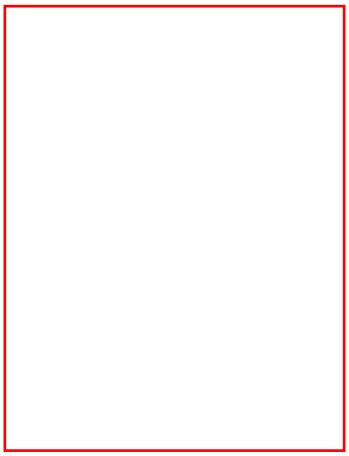
The following passages about the **Hindu Epics** (Ramayana and Mahabharata) are noteworthy for their beauty and for their insight:

"It must be admitted, however, that, in exhibiting pictures of domestic life and manners, the Sanskrit epics are even more true and real than the Greek and Roman. In the delineation of women the Hindu poet thrown aside all exaggerated coloring and drawn from nature - Kaikeyi, Kausalya, Mandodari (favorite wife of Ravana), and even the humble-backed Manthara are all drawn to the very life. Sita, Draupadi, and Damayanti engage our affections and our interest for more than Helen or even Penelope. Indeed Hindu wives are generally perfect patterns of conjugal fidelity; can it be doubted that, in these delightful portraits of the Pativrata or purity and simplicity of Hindu domestic manners in early times."

"Indeed, in depicting scenes of domestic affection, and expressing those universal feelings and emotions which belong to human nature in all time and in all places, Sanskrit epic poetry is unrivalled even by Greek Epics.....In the Indian epics, such passages abound, and besides giving a very high idea of the purity and happiness of domestic life in ancient India, indicate a capacity in Hindu woman for the discharge of the most sacred and important social duties."

"Yet there are not wanting indications in the Indian Epics of a higher degree of civilization than that represented in the Homeric poems. The battlefields of the Ramayana and Mahabharata,.....are not made barbarously wanton cruelties; and the description of Ayodhya and Lanka imply far greater luxury and refinement than those of Sparta and Troy."

"He (Rama) is the type of a perfect husband, son, and brother. Sita also rises in character far above Helen and even above Penelope, both in her sublime devotion and loyalty to her husband, and her indomitable patience and endurance under suffering and temptation.....it may be affirmed generally that the whole tone of the Ramayana is certainly above that of the Iliad."



(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p. 153-157).

In the words of Monier Williams, India is 'in all respects a complete world in itself'.

(source: **India Through the Ages - Madan Gopal -** under details).

"It may be with truth be asserted that no description of Hinduism can be exhaustive which does not touch on almost every religious and philosophical idea that the world has ever known. It is all-tolerant, all-comprehensive, all-compliant, all-absorbing. It has its spiritual and its material aspect; it's esoteric and exoteric; it's subjective and objective; it's rational and irrational. It has one side for the practical; another for the severely moral; another for the devotional and the imaginative; another for the philosophical and speculative."

(source: http://www.geocities.com/hindusoc/special/hindintr.htm).

Sir Monier Monier-Williams, in his **Brahmanism and Hinduism : or, Religious thought and life in India, as based on the Veda and other sacred books of the Hindus** , declares:

"Indeed, if I may be allowed the anachronism, the Hindus were Spinozites more than two thousand years before the existence of Spinoza; and Darwinians may centuries before Darwin; and evolutionists many centuries before the doctrine of evolution had been accepted by the scientists of our time, and before any word like 'evolution' existed in any language of the world."

(source: **India And Her People - By Swami Abhedananda** - p.16).

He said that Pythagoras and Plato both believed in this doctrine, and that they were indebted for it to Hindu writers.

(source: **Indian Wisdom - By Sir M. Monier Williams** p. 68).

About the **Niti Shastras** he says: " Anyone who studies the best Hindu writings cannot but be struck by the moral tone which everywhere pervades them...constantly represent the present condition of human life as the result of actions in the previous existence. Hence a right course of present conduct becomes an all-important consideration as bearing on future happiness...."

Sir Monier Williams says that whatever conclusions we form as to the source of the first astronomical ideas in the world it is probable that we owe to the Hindus the invention of algebra and its application to astronomy and geometry. And that from them the Arabs received the numerical symbols and decimal notation, which now used everywhere in Europe have rendered untold services to the cause of science.

And again: “The motions of the sun and moon were carefully observed by the Hindus and with such success that their determination of the moon’s synodical revolution is a much more correct one than the Greeks ever achieved. They introduced the period of Jupiter with those of the sun and moon into the regulation of their calendar in the form of sixty years common to them and the Chaldeans. They were keenly interested in logic and grammar, and in medicine and surgery they once kept pace with the most enlightened people of the world.”

(source: **The Story of Oriental Philosophy - By L. Adams Beck** p. 10 - 13).

17. **Friedrich Maximilian Müeller** (1823-1900) German philologist and Orientalist. He repeatedly drew attention to the uniqueness of the Vedas and awakened interest in Indology among educated people. He did more than any other scholar to popularize philology and mythology, e.g., his lectures Science of Language.

Muller is best known for his series **Sacred Books of the East**.

He wrote:

"If I were asked under what sky the human mind has most fully developed some of its choicest gifts, has most deeply pondered over the greatest problems of life, and has found solutions of some of them which well deserve the attention even of those who have studied Plato and Kant, I should point to India." And if I were to ask myself from what literature we who have been nurtured almost exclusively on the thoughts of Greeks and Romans, and of the Semitic race, the Jewish, may draw the corrective which is most wanted in order to make our inner life more perfect, more comprehensive, more universal, in fact more truly human a life...again I should point to India."

(source: **The World's Religions - By Huston Smith**. Harper San Francisco. 1991 pg 12)

"I maintain that for everybody who cares for himself, for his ancestors, for his history, for his intellectual development, a study of Vedic literature is indispensable ".

"The Upanishads are the.....sources of .....the Vedanta philosophy, a system in which human speculation seems to me to have reached its very acme." "I spend my happiest hours in reading Vedantic books. They are to me like the light of the morning, like the pure air of the mountains - so simple, so true, if once understood."

(source: **Philosophy of Hinduism - An Introduction - By T. C. Galav** Universal Science-Religion. Pp 19).

"The conception of the world as deduced from the Veda, and chiefly from the Upanishads, is indeed astounding."

(source: **The Six Systems of Indian Philosophy - By Max Muller** (London: Longmans, Green & Co., 1916), p. xiv.

"The transcendent temperament acquired, no doubt, a more complete supremacy in the Indian character than anywhere else."

In **History of Ancient Sanskrit Literature** (p 557), Max Muller observed, **"In the Rig Veda we shall have before us more real antiquity than in all the inscriptions of Egypt or Ninevah...the Veda is the oldest book in existence.."**

"Historical records (of the Hindus) extend in some respects so far beyond all records and have been preserved to us in such perfect and legible documents, that we can learn from them lessons which we can learn nowhere else and supply missing links."

(source: **India - What It Can Teach Us - By Max Muller** p. 21).

"The Vedic literature opens to us a chamber in the education of human race to which we can find no parallel anywhere else. Whoever cares for the historical growth of our language and thought, whoever cares for the first intelligent development of religion and mythology, whoever cares for the first foundation of Science, Astronomy, Metronomy, Grammar and Etymology, whoever cares for the first intimation of the first philosophical thoughts, for the first attempt at regulating family life, village life and state life as founded on religion, ceremonials, traditions and contact must in future pay full attention to the study of Vedic literature."

(source: **Hinduism: The Eternal Religion - By M. D. Chaturvedi** p.12-13).

"The whole of their (Hindu) literature, from one end to the other, is pervaded by expression of love and reverence for truth.'

(source: **Popular Hinduism: The Religion of the Masses - By L S S O'Malley** p. 82).

He declared: "None of our philosophers, not excepting Heraclitus, Plato, Kant, or Hegel, has ventured to erect such a spire, never frightened by storms or lightnings. Stone follows on stone, in regular succession after once the first step has been made, after once it has been clearly seen that in the beginning there can have been but One, as there will be but One in the end, whether we call it Atman or Brahman."

(source: **The Six Systems of Indian Philosophy - By Max F. Muller** p. 239).

Muller says that from Indian literature the Christian world "may draw that corrective which is most wanted in order to make our inner life more perfect, more comprehensive, more universal, in fact more truly humane, a life not for this only, but a transfigured and eternal life."

(source: **India - What It Can Teach Us - By Max Muller** p. 6).

In **Three Lectures on Vedanta Philosophy** published in 1896, Muller writes: *"***What distinguishes the Vedanta philosophy from all other philosophies is that it is at the same time a religion and a philosophy."** (pp 11-12).

About the love of truth experienced by the sages of the Upanishads, Prof. Max Muller says, " If it seems strange to you that the old Indian Philosophers should have known more about the soul than Greek or medieval or modern philosophers, let us remember that however much the telescopes for observing the stars of heaven have been improved, the observatories of the soul have remained much the same."

He went on to say: **"It is surely astounding that such a system as the Vedanta should have been slowly elaborated by the indefatigable and intrepid thinkers of India thousands of years ago, a system that even now makes us feel giddy,** as in mounting last steps of the swaying spire of a Gothic cathedral. None of our philosophers, not excepting Heraclitus, Plato, Kant or Hegel, has ventured to erect such a spire, never frightened by storms or lighting. Stone follows on stone after regular succession after once the first step has been made, after once it has been clearly seen that in the beginning there can have been One, as there will be but One in the end, whether we call it Atman or Brahman."

(source: **Three Lectures on the Vedanta Philosophy**, London. 1894. p. 7).

Prof Max Mueller, an authority on ancient India, says: "I do not deny that the manly vigor, the public spirit and the private virtues of the citizens of European states represent one side of the human destiny." But, surely, he asserts, "there is another side to our nature and possibly another destiny open to man." And he points to **India**, "Where the climate was mild and the soil fertile." He asks: "Was it not, I say, natural then, that another side of human nature should be developed — not the active, the combative and acquisitive, **but the passive, the meditative and reflective?"**

"If philosophy is meant to be a preparation for a happy death, or Euthanisia, I know of no better preparation for it than the Vedanata philosophy."

(source: **India And Her People - By Swami Abhedananda** p.234).

"Whatever sphere of the human mind you may select for your special study, whether it be language, or religion, or mythology, or philosophy, whether it be law or customs, primitive art or primitive science, everywhere you have to go to India, whether you like it or not, because some of the most valuable and instructive materials of the history of man are treasured up in India and India only."

(source: **Yoga: A Vision of its Future - By Gopi Krishna** p. 119).

"The Hindus," says Max Muller, "were a people remarkably gifted for philosophical abstraction."

(source: **Hindu Superiority - Har Bilas Sarda** p. 276).

"The earliest of these Upanishads will always maintain a place in the philosophic literature of the world among the most astounding products of the human mind."

(source: **Hinduism Invades America - by Wendell Thomas** p. 240 published by The Beacon Press Inc. New York City 1930).

18. **Count Hermann Keyserling** (1880-1946) philosopher, author, public speaker. He is the first Western thinker to conceive and promote a planetary culture, beyond nationalism and cultural ethnocentrism, based on recognition of the equal value and validity of non-western cultures and philosophies. **Keyserling** founded the School of Wisdom in Darmstadt, Germany in 1920 based on the original Schools of Wisdom which prospered over two thousand years ago in Northern India.

Keyserling was much impressed with the metaphysical profundity of India. **He used Indian thought to measure European standards of conduct and morality.** The influence of Keyserling on the European intelligentsia after World War I, especially in Germany was deep but short-lived. Germany shattered from the disastrous war, had returned its attention towards India for solace and new inspiration as is indicated by the publication of innumerable novels and poems with a predominantly Asian background.

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 240).

"I have not found in Europe or America, poets, thinkers or popular leaders equal, or even comparable, to those of India today."

(source: **The Discovery of India - By Jawaharlal Nehru** Oxford University Press. 1995. pg 89).

" Hinduism at its best has spoken the only relevant truth about the way to self-realization in the full sense of the word.'

(source: **Huston Smith: Essays on World Religion. edited by M. Darrrol Bryant** Paragon House 1992 page 29-30).

India, says Keyserling,

"**has produced the profoundest metaphysics that we know of** " and he speaks of **" the absolute superiority of India over the West in philosophy; poetry from the Mahabharata, containing the Bhagavad-Gita, "perhaps the most beautiful work of the literature of the world."**

source: **The Case for India - By Will Durant** Simon and Schuster, New York. 1930 p.6).

Count Keyserling, who left Europe shortly before World War I to journey around the world, wrote

an account of the city of Banaras:

"Benares is holy. Europe, grown superficial, hardly understands such truths anymore.....I feel nearer here than I have ever done to the heart of the world; here I feel everyday as if soon, perhaps even today, I would receive the grace of supreme revelation...The atmosphere of devotion which hangs above the river is improbable in strength; stronger than in any church that I have ever visited. Every would be Christian priest would do well to sacrifice a year of his theological studies in order to spend his time on **the Ganges; here he would discover what piety means."**

(source: **Banaras: City of Light - By Diana L Eck** p. 17).

19. **Romain Rolland** (1866-1944) French Nobel laureate, professor of the history of music at the Sorbonne and thinker. He authored a book on the **Life of Ramakrishna**

This is what he said about India: **"If there is one place on the face of the earth where all the dreams of living men have found a home from the very earliest days when man began the dream of existence, it is India....**For more than 30 centuries, the tree of vision, with all its thousand branches and their millions of twigs, has sprung from this torrid land, the burning womb of the Gods. It renews itself tirelessly showing no signs of decay."

"Let us return to our eagle's nest in the Himalayas. It is waiting for us, for it is ours, eaglets of Europe, we need not renounce any part of our real nature...whence we formerly took our flight."

(source: **Philosophy of Hinduism - An Introduction By T. C. Galav** Universal Science-Religion. Pp 20.)

"Religious faith in the case of the Hindus has never been allowed to run counter to scientific laws, moreover the former is never made a condition for the knowledge they teach, but there are always scrupulously careful to take into consideration the possibility that by reason both the agnostic and atheist may attain truth in their own way. Such tolerance may be surprising to religious believers in the West, but it is an integral part of Vedantic belief."

Romain Rolland thought: "The true **Vedantic spirit** does not start out with a system of preconceived ideas. It possesses absolute liberty and unrivalled courage among religions with regard to the facts to be observed and the diverse hypotheses it has laid down for their coordination. Never having been hampered by a priestly order, each man has been entirely free to search wherever he pleased for the spiritual explanation of the spectacle of the universe."

He points outs out that "a hundred facts testify to how great an extent the East (India) was mingled with Hellenic thought during the second century of our era."

(source: **Romain Rolland** has given a long Note as an appendix to his book on **Vivekananda** - 'On the Hellenic-Christian Mysticism of the First Centuries and its Relationship to Hindu Mysticism.').

He wrote: "The greatest human ideal is the great cause of bringing together the thoughts of Europe and Asia; **the great soul of India will topple our world."**

(source: **The Genius of India - By Guy Sorman** (**Le Genie de l'Inde**) Macmillan India Ltd. 2001. ISBN 0333 93600 0 p. 157-158).

MAHATMA GANDHI

20. **Mahatma Gandhi** (1869-1948) was among India's most fervent nationalists, fighting for Indian independence from British rule. Gandhi rose to the eminence of being called "amoral genius" by no less a person than the celebrated British philosopher **C. E. M Joad**. (For more on Joad refer to **Quotes301_320**).

He was disillusioned by the hypocrisy of the Western civilization. He denounced England's devilish acts in India, and proclaimed it as a "Satanic Power'. Then, gave the cry for the 'Quit India' movement. While in London, Gandhi wrote: **"Looking at this land, I at any rate have grown disillusioned with Western civilization.** They spend, their days in luxury or in making a bare living and retire at night thoroughly exhausted. In this state of affairs, I cannot understand when they can devote themselves to prayers."

(Indian Opinion: Mahatma Gandhi quoted by Judith M. Brown. 1994:5 - Modern India: The Origins of an Asian democracy). It is said that Gandhi was once asked what he thought of Western civilization, and answered that he felt it might be a good idea.

(source: **OutlookIndia.com**).

He claimed: **"I am a proud staunch Sanatani Hindu."** He took considerable pride in this self-identification. Far from being a dirty word as it would soon become even for some so-called Hindu leaders, the word "Hindu" conveyed to him all that was noble and elevating. He did not feel that he was being "communal" when he called himself a Hindu. For him Hinduism was a a vast, spiritual vision beckoning man to rise to the highest heights.

He has further stated:

"Hinduism has made marvelous discoveries in things of religion, of the spirit, of the soul. We have no eye for these great and fine discoveries. We are dazzled by the material progress that Western science has made. Ancient India has survived because Hinduism was not developed along material but spiritual lines."

"Hinduism is a relentless pursuit of Truth. "Truth is God" and if today it has become moribund, inactive, irresponsive to growth, it is because we are fatigued; and as soon as the fatigue is over, Hinduism will burst upon the world with a brilliance perhaps unknown before."

(source: **Young India, 24/11/1924** p. 390-396 and **The Discovery of India - By Jawaharlal Nehru**. Oxford University Press. 1995. pg 75).

"The tendency of Indian civilization is to elevate the moral being, that of the western civilization is to propagate immorality. The latter is godless, the former is based on a belief in God."

(source: **Popular Hinduism: The Religion of the Masses - By L S S O'Malley** p. 46).

"I believe that the civilization India has evolved is not to be beaten in the world. Nothing can equal the seeds sown by our ancestry. Rome went; Greece shared the same fate; the might of the Pharaohs was broken; Japan has become westernized; of China nothing can be said; but India is still, somehow or other, sound at the foundation."

(source: **Hindu Swaraj or Indian Home Rule** Chapter xiii)

This is what **Gandhi** wrote about the **Bhagavad Gita:**

"The Geeta is the universal mother. I find a solace in the Bhagavadgeeta that I miss even in the Sermon on the Mount. When disappointment stares me in the face and all alone I see not one ray of light, I go back to the Bhagavad Gita. I find a verse here and a verse there , and I immediately begin to smile in the midst of overwhelming tragedies - and my life has been full of external tragedies - and if they have left no visible or indelible scar on me, I owe it all to the teaching of Bhagavadgeeta."

About the Bhagawad-Gita, Gandhi, says: “Today the Gita is not only my Bible or my Koran, it is more than that—it is my mother... When I am in difficulty or distress I seek refuge in her bosom.” (source: **Harijan** 24-8-1934).

"Hinduism is a living organism liable to growth and decay subject to the laws of Nature. One and indivisible at the root, it has grown into a vast tree with innumerable branches. The changes in the season affect it. It has its autumn and its summer, its winter and its spring. It is, and is not, based on scriptures. It does not derive its authority from one book. "Non violence has found the highest expression and application in Hinduism.

(source: **Hindu Dharma - M. K. Gandhi**. Chapter on **Why I am a Hindu** p.1-8).

I think I have understood Hinduism correctly when I say that it is eternal, all-embracing and flexible enough to suit all situations. (**Navjeevan** 27-9-1924). Hinduism contains the essence of all religions. What it does not contain is not worth knowing (Navjeevan 17-9-1925).

Since Hinduism is based on truth and nonviolence , it can never oppose any other religion. Hinduism strives for the betterment of all religions, and through them of the entire world (From a speech made on 25-3-29 while inaugurating Shri Laxminarayan Temple.).

I am a Hindu because it is Hinduism which makes the world worth living. (source: **Young India** 1-12-26). I am a Hindu hence I Love not only human beings, but all living beings.

He considered the **Bhagavad Gita** as a book ' **par excellence'** for the knowledge of Truth (God).

Gandhi called the Gita the 'Gospel of Selfless Action'.

"India is to me the dearest country in the world, because I have discovered goodness in it. It has been subject to foreign rule, it is true. But the status of a slave is preferable to that of a slave holder."

“Hinduism is a living organism. One and indivisible at the root, it has grown into a vast tree with innumerable branches. Knowledge is limitless and so also the application of truth. Everyday we add to our knowledge of the power of Atman (soul) and we shall keep on doing so.”

He was a Hindu to the core. Defining his attitude to a prominent Indian Christian, Kali Charan Banerjee (1847-1902) he said:

"I am unable to identify with orthodox Christianity. I must tell you in all humility that Hinduism, as I know it, entirely satisfies my soul, fills my whole being, and I find solace in the Bhagavad Gita and the Upanishads that I miss even in the Sermon on the Mount....I must confess to you that when doubts haunt me, when disappointments stare me in

the face, and when I see not one ray of light on the horizon I turn to the Bhagavad Gita, and find a verse to comfort me; and I immediately begin to smile in the midst of overwhelming sorrow. My life has been full of external tragedies and if they have not left any visible and indelible effect on me, I owe it to the teachings of the Bhagavad Gita."

(source: **The Collected Works - By M. K. Gandhi** Volume 27, New Delhi, 1968 p. 434-435 and **India and World Civilization** By **D. P. Singhal** Pan Macmillan Limited. 1993. Pg 258).

Gandhi wrote in his book **Autobiography or the Story of My Experiments with Truth**:

As "philosophically there was nothing extraordinary in Christian principles" no one, much less a Hindu, would ever give it a second look.

(source: **Christian Conversions and abuse of Religious Freedom in India - By Brahm Datt Bharti** p. 20).

Mahatma Gandhi told **Romain Rolland** in Switzerland on his way back to India from the Round Table Conference (1911) that Christianity is an echo of the Indian religion and Islam is the re-echo of that echo."

(source: **India in Primitive Christianity - Arthur Lillie**).

" I have no other wish in this world but to find light and joy and peace through Hinduism."

(source: **Outlines of Hinduism - By T. M. P. Mahadevan** - p. foreword).

"If all The Upanishads and all the other scriptures happened all of a sudden to be reduced to ashes, and if only the first verse in the Ishopanishad were left in the memory of the Hindus, Hinduism would live for ever."

(source: **The Upanishads** Translated for the Modern Reader By **Eknath Easwaran.** Nilgiri Press. 1987. pg 205).

Gandhi has written: **"The Gita "struck me as one of priceless worth."**

(source: **The Collected Works of Mahatma Gandhi** Volume 39 New Delhi 1970 p. 32)

Gandhi was a proud and combative Hindu, his first and foremost loyalty was towards Hindu society and Hinduism, says **Koenraad Elst** in his book **Negationism in India: Concealing the Record of Islam** p. 84).

'The Bhagavad Gita is my mother,' he once said; and the name of Sri Rama was his shield.'

(source: **Freeindia.org**)

He accords the highest honor to Hindu scriptures - the Vedas, the Upanishads, the Puranas, the Gita, the Mahabharata, the Ramayan, the Bhagavata. He defends the "much-maligned Brahman" and entertains " not a shadow of doubt" that "if Brahmanism does not revive, Hinduism will perish".

He upholds the "spirit behind idol-worship" and is prepared "to defend with my life the thousands of holy temples which sanctify this land." For him cow protection "is the dearest possession of the Hindu heart" and "no one who does not believe in cow-protection can possibly be a Hindu." The sacred threat has "deep meaning for him" as it is "the sign of the second birth, that is spiritual." **He says that varnashrama is "inherent in human nature, and Hinduism has simply made a science of it."**

(source: **Hindu Dharma - M. K. Gandhi** p. 7-374).

"What the divine author of the Mahabharata said of his great creation is equally true of Hinduism. Whatever of substance is contained in any other religion is always to be found in Hinduism, and what is not contained in it is insubstantial or unnecessary."

(source: **Young India** 27-9-1925).

"Hinduism insists on the brotherhood of not only all mankind but of all that lives."

(source: **Harijan** 28-3-1936).

"Hinduism is like the Ganga,, pure and unsullied at its source but taking in its course the impurities in the way. Even like the Ganga it is beneficent in its total effect. It takes a provincial form in every province, but the inner substance is retained everywhere."

(source: **Young India** 8-4-1926)

" On examination, I have found it to be the most tolerant of all religions known to me. Its freedom from dogma makes a forcible appeal to me inasmuch as it gives the votary the largest scope for self-expression." He saw no reason to for changing his belief or his religion. He found it impossible "to believe that I could go to heaven or attain salvation only by becoming a Christian." "Philosophically there was nothing extraordinary in Christian principles. From the point of view of sacrifice, it seemed that the Hindus greatly surpassed Christians. It was impossible for me to regard Christianity as a perfect religion or the greatest of all religions."

(source: **The Collected Works of Mahatma Gandhi** Volume 34 New Delhi 1970 p.112- 261).

London Times editorial said on the day after his death: "No country but India and no religion but **Hinduism** could have given birth to a Gandhi."

(source: **India and World Civilization By D. P. Singhal** Pan Macmillan Limited. 1993. p. 258).

"Hindu Dharma is like a boundless ocean teeming with priceless gems. The deeper you dive the more treasures you find."

(source: **The Essence of Hinduism - By M. K. Gandhi** p. 205).

"Hinduism is like Ganges, pure and unsullied at its source, but taking in its course the impurities in the way".

(source: **Non-Renunciation: Themes and Interpretations of Hindu Culture - By T.N. Madan**)

He affirmed, again, and again not only the fundamentals of Hindu spirituality but also the framework of Hindu culture and social life. He valued "the spirit behind idol-worship" and declared his determination "to defend with my life the thousands of **holy temples which sanctify this land of ours."**

"**Cow-protection is an article of faith in Hinduism.** Apart from its religious sanctity, it is an ennobling creed. Cow protection is the dearest possession of the Hindu heart. It is the one concrete belief common to all Hindus. No on who does not believe in cow-protection can possibly be called a Hindu. It is a noble belief. I endorse every word of what Prof. Vaswani has said in praise of the cow. For me the cow is the personification of innocence. Cow protection means that protection of the weak and helpless."

(source: **Hindu Dharma - M. K. Gandhi** p. 108-18). For more on Gandhi refer to **The Story of my Experiments with Truth**).

"I bow my head in reverence to our ancestors for their sense of the beautiful in nature and for their foresight in investing beautiful manifestations of Nature with a religious significance."

(source: **Glimpses of Indian Culture - By Dr. Giriraj Shah** p. 106).

Thoreau and **Gandhi** both believed in non-violence, had religious temperament, were vegetarians, and admired the teachings of the **Bhagavad Gita**. The appreciated poverty and lived the simple life. **Webb Miller** in his book **I found no peace** p. 240, wrote: “Gandhi received back from America **what was fundamentally the philosophy of India** after it had been distilled and crystallized in the mind of Thoreau.” The nationalist movement of Congress, and its political vision of a free India, was as thoroughly suffused with the **spirit of Hinduism**. Nationalism and religion were thus allied in Gandhi's

teachings. **Gandhi found the substance of India's life in Hinduism.** His political vocabulary of **Ram rajya**, ahimsa, satyagraha, swaraj, bharat mata, swadeshi etc. He passionately rejected the British project of Westernizing India.

(source: **Hindu Scriptures and American Transcendentalists - By Umesh Patri** p 98 -135 and **Dharma, India and the World Order - By Chaturved Badrinath** p. 166 -169).

(For more quotes by Gandhi refer to chapter on **Conversion** and **GlimpseVI**).

Guest Book

Updated - December 19, 2003

In spite of the reverence, these intellectuals had for Hinduism, (refer to chapter on Quotes) there seems a constant effort at defamation in the media in the west. Hindu idols are routinely disparaged in all walks of life. At Disney World there is statue of Lord Ganesh in one of the jungle rides! There are no other religious icons of any faith in the park. Recently, News India-Times published a front page story on $10 Express, a Jackson Heights N.Y. shoe store that was selling $5 sandals with images of Shiva, Ganesh, and Gayatri. This week, Sittin' Pretty, a Seattle-based manufacturer of designer toilet seats, is marketing toilet seats decorated with images of Lord Ganesha and Goddess Kali. (for more information go to Deccan Chronicle and rediff.com) Bashing Hinduism on air in Chicago. (for more information go to Hindu-bashing Chicago Radio and TV talk show airs). Offensive image of Lord Ganesha appeared in Australian Financial Review 27 May 02. (refer to Hindu Council of Australia for the image and Yahoo.com for the article). "Media opinions in America, are at best condescending, and patronizing, and at worst disparaging and hostile. Hinduism is routinely branded as polytheistic, caste, women's issues, as exotic, strange, world negating, and cultish." (source: Stereotyping Hinduism in American Education - By Rajiv Malhotra).

Recently, American Eagle Outfitters, a North American clothing retail chain is marketing flip-flops (slippers) with an illustrated depiction of the revered Hindu Lord Ganesha (Ganesh)." Why Hindu gods alone are singled out for such honor. I do not believe the incidents are innocent, harmless or accidental. India has been associated with the spiritual quest since the dawn of civilization; the dullest soul in the world knows the esteem in which gods are held in this land. For a god as universally renowned as Ganesh to land up beneath human feet is to my mind a very intentional insult. **I believe these cultural shock and awe tactics are related to the consistent White Christian goal of eradicating all native faiths and traditions in the world. What better way than by eroding the sanctity of other gods?"** (source: Hindu gods & gospel untruths - By Sandhya Jain - dailypioneer May 5 ' 2003).

***

Why such disrespectful treatment to such an ancient and noble religion?

Hindu scriptures such as **Mahabharata,** are often called myths. In reality, the great Hindu epics are formidable in their recording of events over a vast expanse of time. In the early eighties an important archaeological site was found in India, at Dwaraka, the site of the legendary city of Lord Krishna. **Dwaraka** was submerged by the sea right after the death of Lord Krishna. This was regarded as a grandiose metaphor, part of a story filled with great myths. Now, it is discovered that the whole coast of western India sank by nearly 40 feet around 1500 B .C. E. In contemporary world religions, the scriptural stories are not referred to as myths. For example, in Christianity the biblical story of the virgin birth of Jesus is considered true even today.

Stephen Cross, in his book on **Hinduism**, pg 1, says, "It is no secret that we in the West live in a time of spiritual crisis. Western civilization has been guided by Christianity. Now it appears that this period is drawing to a close. Both religious institutions and social structures are in disarray. A great many things that were considered basic assumptions of western thought are being challenged. The reality of the external world, the soul, the linear nature of time.

Swami B. V. Tripurari, in his book, **Ancient Wisdom for Modern Ignorance** points out that, "Those now disenchanted with industrialization and scientific materialism as well as pseudo-spirituality, India's ancient spiritual heritage provides a rich alternative. Eastern philosophy, and the devotional heart of India's Vedanta in particular, can fill the empty shopping bag of our Western accomplishments." Whoever reads the Bhagvad Gita for the first time will be struck by the beauty and depth of this work.

Author **Beatrice Pitney Lamb** has noted: "Recently, increasing numbers of Westerners in revolt against what they have found to be the **shallow, gadget-dominated, spiritually empty civilization of the West** have turned to "Hinduism" in search of greater meaning or purpose in life. There is no doubt that the great Hindu tradition offers profound spiritual insights, as well as techniques for attaining self-realization, detachment, and even ecstasy.

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 358).

W. J. Grant wrote: "India indeed has a preciousness which a materialistic age is in danger of missing. Some day the fragrance of her thought will win the hearts of men. This grim chase after our own tails which marks the present age cannot continue for ever. The future contains a new human urge towards the real beauty and holiness of life. When it comes India will be searched by loving eyes and defended by knightly hands."

"**The religion of the Hindus is rich in legend and stupendous allegory. It is a religion of great dignity and beauty. Its wrestlings with reality are as courageous as any in the whole history of mankind..' Indian thought has generally been contemplative, it has seldom been enamored of the material side of life.'**

In the realm of religious philosophy she has given to us the most searching examination of the ethical law the world is ever likely to have. **No Greek was more splendid in his scientific fidelity than the quiet company of Indian thinkers who made the Upanishads and traced the whole beauteous outline of the Eastern spirit. "**

There are cities in India whose grace and charm are matched only by the sweetness of an immemorial religion. Nowhere else in the world have I been so exquisitely invaded by the mystic quality of life."

(source: **The Spirit of India - By W. J. Grant** London published by B. T. Batsford Ltd. 1933 p. vi - 58).

Sir John Woodroffe (1865-1936) the well known scholar, Advocate-General of Bengal and sometime Legal Member of the Government of India, has said: "Indian thought, with its usual profundity and avoidance of arbitrary divisions, regards Philosophy as religious and Religion as philosophical. The "liberty-loving nations of the West" have been in the past greatly, and still are to some extent, behind India in the matter of intellectual and

religious freedom. As has been finely said in India, Satyannasti paro dharmah (there is no religion higher than truth) and as the Vedas have proclaimed, "Truth will conquer." (Satyam jayate).

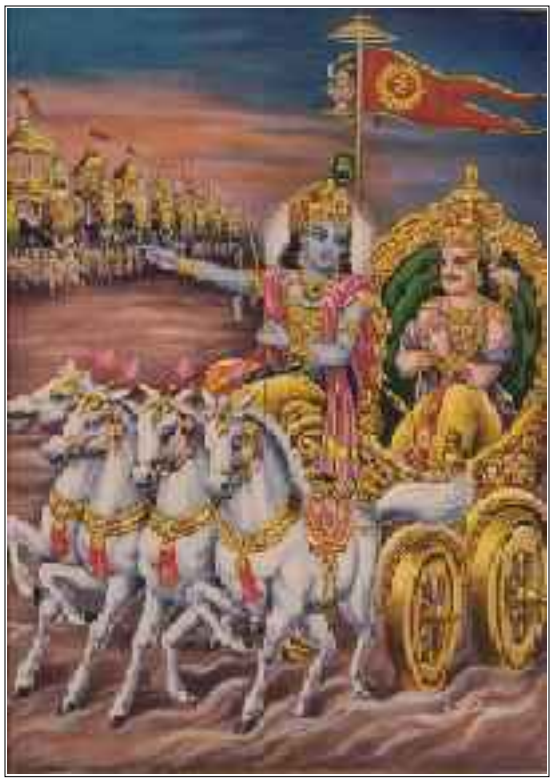
(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** Ganesh & Co. Publishers 1922 p.44).

According to **President S. Radhakrishnan**, "In the history of the world, Hinduism is the only religion, that exhibits a complete independence and freedom of the human mind, its full confidence in its own powers. Hinduism is freedom, especially the freedom in thinking about God. **"In the search for the supernatural, it is like traveling in space without a boundary or barrier."**

(source: **Bhagavad Gita - By S. Radhakrishnan** pg - 55).

Dr. Matheson wrote: "It is not too much to say that the mind of the West with all its undoubted impulses towards the progress of humanity has never exhibited such an intense amount of intellectual force as is to be found in the **religious speculations of India**.....These have been the cradle of all Western speculations, and wherever the European mind has risen into heights of philosophy, it has done so because the Brahmin was the pioneer. There is no intellectual problem in the West which had not its earlier discussion in the East, and there is no modern solution of that problem which will not be found anticipated in the East."

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** p.138-139).



Hinduism may not be called a religion in the sense other religions are known. It is much more than a religion, it is a total way of life. Hinduism has no founder. Its authority is **Eternal Truth**. The cumulative record of metaphysical experimentation. Behind the lush tangle of religious imagery, is a clear structure of thought. Compared to the rugged originality of the Indian traditions, the language of today's philosophers concerned with being often sound a little contrived. Hindus have always been metaphysicians at heart. It is the underlying ideas, and not the images which count. The forms are many, the reality is one. As stated at the outset in the Rig Veda:

"Truth is one, the wise call it by various names."

Hinduism is a monotheistic religion that springs from the Trinity (**Trimurti**). Brahma, Vishnu, Shiva. Three aspects of one God. Creation, preservation, destruction. Many in the west have tried to denounce it as the worship of idols. Swami Vivekananda, said: "If a person wants to drink milk, he uses a cup as he cannot drink it directly. Idols are nothing but symbols through which divinity can be comprehended. It helps undeveloped minds to grasp high spiritual truths.

Lord Krishna said:

"In whatever way men love Me, in the same way they find My love; various are the ways of men, but in the end they all come to Me."

The statue of Nataraja (dance pose of Lord

Shiva) is a well known example for the artistic, scientific and philosophical significance of Hinduism. The dancing Shiva is the most sublime artistic attempt to capture the mystery of the universe in form. The late scientist, **Carl Sagan**, in his book, **Cosmos** asserts that the **Dance of Nataraja** (Tandava) signifies the cycle of evolution and destruction of the cosmic universe (Big Bang Theory).

"It is the clearest image of the activity of God which any art or religion can boast of." Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but also the very essence of inorganic matter.

He further says: **" The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation Nataraja, the Dance King. In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."**

(source: **Cosmos - By Carl Sagan** p. 213-214).

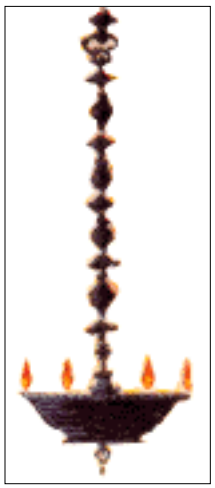
For modern physicists, then, Shiva's dance is the dance of subatomic matter. Hundreds of years ago, Indian artist created visual images of dancing Shivas in a beautiful series of bronzes. Today, physicist have used the most advanced technology to portray the pattern of the cosmic dance. Thus, the metaphor of the cosmic dance unifies, ancient religious art and modern physics. The Hindus, according to **Sir Monier-Williams,** were Spinozists more than 2,000 years before the advent of Spinoza, and Darwinians many centuries before Darwin and Evolutionists many centuries before the doctrine of Evolution was accepted by scientists of the present age.

The French historian **Louis Jacolliot** as quoted by Galav in the **Philosophy of Hinduism** page 17 says, "Here to mock are conceit, our apprehensions, and our despair, we may

read what **Manu** said, perhaps 10,000 years before the birth of Christ about Evolution:

' The first germ of life was developed by water and heat.' (Book I, sloka 8,9)
' Water ascends towards the sky in vapors; from the sun it descends in rain, from the rains are born the plants, and from the plants, animals.' (Book III, sloka 76).

According to **Guy Sorman,** visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France:



" Temporal notions in Europe were overturned by an India rooted in eternity. The Bible had been the yardstick for measuring time, but the infinitely vast time cycles of India suggested that the world was much older than anything the Bible spoke of. **It seem as if the Indian mind was better prepared for the chronological mutations of Darwinian evolution and astrophysics."**

(source: **The Genius of India - By Guy Sorman** (**'Le Genie de l'Inde**') Macmillan India Ltd. 2001. ISBN 0333 93600 0 p. 195).

The theory of animal life and particularly of man was correctly understood by the ancient thinkers. The **Brihat Vishnu Purana** states that "the aquatic life precedes the monkey life" and that "the monkey life is the precursor of the human life." The same theory was explained in an interesting way by the dashavatara (ten incarnations). But evolution, as everything else, was the manifestation of the supreme spirit (Atman) as is testified by **Chandogya Upanishad.**

(source: **Ancient Indian History and Culture - By Chidambara Kulkarni** Orient Longman Ltd. 1974. p.268).

According to the **Bhagavad-Gita**, Creation has been under way from all eternity as the spontaneous outpouring of the Lord's creative energy, as the workings of his prakriti (primordial Nature). Yet all this spontaneity and freedom, so natural to God, has yet to be discovered and realized by the numberless creatures involved in this process. (It is as if Creation were playing hide-and -seek with itself). were

Hinduism is a positive religion in which there are no infidels or heretics. It does not look with contempt even upon an atheist. It doesn't approve of proselytism as means of increasing the number of its adherents. It contains no childish dogma of sin,_superstition, fear, false hope and damnation like other religions. The serpent which, in Christianity, brought about the Fall of Man and became his lasting enemy, is in Hinduism found entwined around the neck of Shiva, and as the couch upon which Vishnu reclines.

In India, science and religion are not opposed fundamentally, as they often seem to be in the West, but are seen as parts of the same great search for truth and enlightenment that inspired the sages of Hinduism, Buddhism, and Jainism. Hindu India has also had no history of book-burning, of executing heretics or confining dissidents to lunatic asylums. The Buddha could preach his heterodox doctrine till his old age without ever being persecuted. Even the Greeks who were good in logic and science like the Hindus, put Socrates to death forcing him to drink Hemlock, the poison. You never hear of such things in ancient India.

Galileo Galilei (1564-1642) scientist, was condemned of heresy by the Church for his belief that the Earth rotates round the sun. Giordano Bruno (1548-1600) philosopher, was excommunicated and suffered a cruel death for his dangerous ideas. He was kept in a

dark dungeon for eight years by the Church and roasted to death by fire. Later, philosophy and science both disputed Descartes' notions, and even the Church viewed him as a threat to its authority. In fact, in 1663, the Church condemned his books, but by then it was too late. Descartes reasoning helped bring in the Age of Enlightenment throughout Europe and North America. Like in other ancient civilizations, **in Hindu India priests and scientists were often the same persons; the conflict between religion and reason is not the primitive condition** but a contingent historical development in post-classical Europe, paralleled to an extent by the stagnation of Muslim culture from the 12th century onwards.

Hinduism has admittedly been the least politically minded among religions; otherwise the history of India would have been altogether different. Religious persecution too has not disfigured the annals of Hinduism as has unfortunately been the rule with religions in other countries.

(source: **Hindu Culture - By K. Guru Dutt** (with a foreword by Sir C. P. Ramaswami Aiyar p. 233).

K. M. Panikkar wrote: "Another major aspect of Indian culture is its open attitude to science. India's religious ideas deal only with the relations of god and man, and, consequently, there are no dogmatic views regarding material aspects of the universe. You are no doubt aware of the tremendous shock to the European world of belief when the discovery of Copernicus, that it is the earth which rotates round the sun, was announced. It took many decades before the discovery could be publicly stated. And yet Aryabhatta had made the same discovery more than a thousand years before the time of Copernicus, without causing any flutter in India. This shows the open attitude of Indian Culture to science was not shared generally even by Europe.

(source: **Essential Features of Indian Culture - By K. M. Panikkar** Bharatiya Vidya Bhavan. Mumbai.1964.p.14-15).

Hinduism comes before us as an old and authentic path, tested by many centuries of human experience. With its respect for the earth and her bounty. It is truly a joyous religion as those who have witnessed it during its many festivals. **It is based on personal discovery. "Know thy self and be free." In such an open laboratory, Hindu spirituality has grown over the millennia, so diverse and rich, that it defies definition. If the Indian mind went beyond form to the formless, it also reveled in a riotous feast of forms - in a world of imagination. It has flourished in exuberance...**

Klaus L. Klostermaier professor of Religious Studies at the University of Manitoba, Canada says in his book, **A Survey of Hinduism**

"Hinduism has proven much more open than any other religion to new ideas, scientific thought, and social experimentation. Many concepts like **reincarnation, meditation, yoga** and others have found worldwide acceptance. It would not be surprising to find Hinduism the dominant religion of the twenty-first century. It would be a religion that doctrinally is less clear-cut than mainstream Christianity, politically less determined than Islam, ethically less heroic than Buddhism, but it would offer something to everybody. It will appear idealistic to those who look for idealism, pragmatic to the pragmatists, spiritual to the seekers, sensual to the here-and-now generation. Hinduism, by virtue of its lack of an ideology and its reliance on intuition, will appear to be more plausible than those religions whose doctrinal positions petrified a thousand years ago." But man must go beyond the gratification of the senses. He must progress in thought. This cannot come, says **Sri Aurobindo**, "if we chain the spirit to some fixed mental idea or system of religious cult, intellectual truth, aesthetic norm, ethical value, practical action... "

According to **M. S. N. Menon,** "For the Hindus, we are like pilgrims on a long march. Some are in the lead. They have lighted torches in their hands. They are nearer to Bliss. Some are in the rear. They are somewhat in the dark. They are still in the thrill of the senses. And this is how it is going to be for ages. Before us is a great goal - the progressive divination of men. Those who are at the rear will seek to gratify their senses and those who are in the lead will raise their consciousness.

According to **Hans Torwesten**, in his book **Vedanta - Heart of Hinduism**

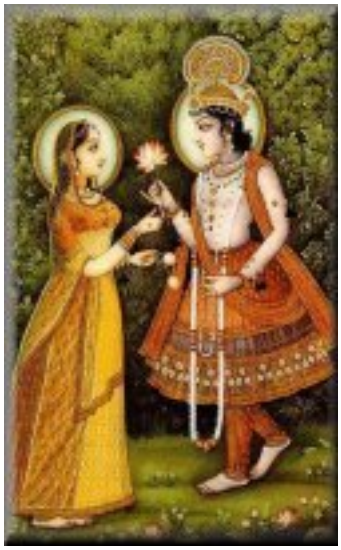
"A fair number of leading physicists and biologists have found parallels between modern science and Hindu ideas. In America, many writers such as **J. D. Salinger** (An Adventure in Vedanta: J.D. Salinger's the Glass Family), **Henry Miller, Aldous Huxley, Gerald Heard, and Christopher Isherwood,** were in contact with the Vedanta. Most of them came from elevated intellectual circles which rejected the dogmatism of the Christian Churches yet longed for spirituality and satisfactory answers to the fundamental questions of existence. In Vedanta, they found a wide-open, universal, and philosophically oriented religion where even the penetrating scientific mind could find something to its taste".

European philosophers rhapsodized about the profundity and beauty of these writings. Here they encountered a fusion of philosophy and religion, a deep wisdom and a concern with the ultimate, that had no parallel in either contemporary Western philosophy or Western religion. **George Feuerstein**, in his book **Introduction to the Bhagavad Gita: Its Philosophy and Cultural Setting** says: "The ant-heap behavior of modern human society, with its soul-destroying mechanical routine and organized aggression and violence, is only one of the negative aspects of the present crisis. **Thorough discontentment with the inherited Western - Christian - tradition, especially with the 'God out there' dogma, has kindled a large-scale authentic search for truth in the 'heathen world', above all the spiritual heritage of India.** As was to be expected after the disappointment with Christian Theism, it is more the monistic school, like Advaita-Vedanta and Zen, which captivate the interest of the disillusioned Westerner."

God is not dead in India and not a mere memory of the past. Numerous "living gods" and "Incarnations" are everywhere in India today. It is not poverty that you find here - its the absolute core of a living faith so alien to Westernized minds that it can be seen terrifying. Many people in the West have come to realize more and more that organized and denominationalized Christianity (called **Churchanity** by Hindus) does not even represent the essence of Christianity, let alone that of religion, a new broader, and looser understanding of religion is emerging that approaches the Hindu notion of dharma.

That distinguished thinker **Professor G. Lowes-Dickinson** and author of **An Essay on the Civilizations of India, China & Japan**, in an essay which seeks with justice to define the character of Indian civilization, profoundly remarks, that it is so unique that the contrast is not so much between East and West as between India and the rest of the world. **Thus India stands for something which distinguishes it from all other peoples, and so she calls Herself a Karma-bhumi as opposed to the Bhoga-bhumi of all other peoples.** For this She has been wonderfully preserved until today. Even now we can see the life of thousands of years ago. Standing on the Ghats at Benares or by any village well we are transported into the beautiful antique world.

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** p.136-137).



Joseph Campbell, was an avid scholar of spiritual development, in his book **Myths to Live By** states: " We in the West have named our God, or rather, we have had the Godhead named for us in a book from a time and place that are not our own. And we have been taught to have faith not only in the absolute existence of this metaphysical fiction, but also in its relevance to the shaping of our lives." In the Great East, on the other hand, the accent is on experience: on one's own experience, not a faith in someone else's." **In the Christian West, there was that Fall, back there, in the Garden, and we have all been congenital sinners ever since." "Whereas in the East there is the idea of the inherent innocence of Nature,** even in what appears to our human eyes and sentiments to be its cruelties, the World, as they say in India, is God's Play (**Maya**). It is a wondrous, thoughtless play: a rough play, the roughest, cruelest, most dangerous, most difficult with no holds barred."

(source: **Myths to Live By - Joseph Campbell** p. 96).

According to **Sri Aurobindo,** in his book, "**India's Rebirth**" (ISBN 2-902776-32-2) page 141, says:

"The mentality of the West has long cherished the aggressive and quite illogical idea of a single religion for all mankind, a religion universal by the very force of its narrowness, one set of dogmas, one cult, one system of ceremonies, one array of prohibitions and injunctions, one ecclesiastical ordinance. That narrow absurdity prances about as the one true religion which all must accept on peril of persecution by men here and spiritual rejection or fierce eternal punishment by God in other worlds. This grotesque creation of human unreason, the parent of so much intolerance, cruelty, obscurantism and aggressive fanaticism, have never been able to take firm hold of the free and supple mind of India".

To quote **Sir Sarvepalli Radhakrishnan**, "The intolerance of narrow monotheism is written in letters of blood across the history of man from the time when first the tribes of Israel burst into the land of Canaan. **The worshippers of the one jealous God are egged on to aggressive wars against people of alien cults.** They invoke divine sanction for the cruelties inflicted on the conquered. The spirit of old Israel is inherited by Christianity and Islam, and it might not be unreasonable to suggest that it would have been better for Western civilization if Greece had molded it on this question rather than Palestine. Wars of religion which are the outcome of fanaticism that prompts and justifies the extermination of aliens of different creeds were practically unknown in Hindu India."

The Vedas say that " the wise call the One by many names", and exhort us to "let good thoughts come to us from everywhere"; in the Bhagavad Gita, Lord Krishna assures the adherents of all religions that "those who pray with devotion to another god, it is to Me that they pray."

Many foreign groups of people persecuted for their religion came to seek refuge in India. The Parsis have thrived. The heterodox Syrian Christians have lived in peace until the Portuguese came to enlist them in their effort to christianize India. The Jews have expressed their gratitude when they left for Israel because India was the only country where their memories were not of persecution but of friendly co-existence. All these groups were not merely tolerated, but received land and material support for building places of worship. **Yuan Chwang**, the Chinese traveler, reports that at the great festival of Prayaga, King Harsha dedicated on the first day a statue to the Buddha, another to the sun, the favorite deity of his father, on the second, and to Shiva on the third. The famous Kottayam plates of Sthanuravi (ninth century AD) and the Cochin plates of Vijayaragadeva bear eloquent testimony to the fact that the Hindu kings not only tolerated Christianity but granted special concessions to the professors of that faith. Today, The Tibetan Buddhist and their spiritual head, the Dalai Lama have taken refuge in India, from the persecution of Communist China.

As Dutch Indologist **Sjoerd de Vries** writes: "In Indian society, am amazing tolerance vis-a-vis people of unusual opinions has existed for ages.. Only very few instances are known where conflicts erupted for the sake of religion. Not until the advent of Islam did India get acquainted with religious persecution."

(source: **Hindoeisme voor beginners - By Sjoerd de Vries** p. 79).

Infinite tolerance is the hallmark of Hinduism. It firmly believes in "**Vasudhaiva Kutumbakam**" (the world is one family - an ancient Vedic term). It does not subscribe to just one belief, one philosophy, one dogma but is ready to absorb any thought. That is why it is different from other religions. Secularism in Europe was the denial of religion in matters of State. In Indian context, secularism stands for tolerance of all religions. India is a secular democracy because of its Hindu ethos. No country in the world has harmonized cultures derived from the great religions the way India has. **All cultures have thrived and been transformed in the civilizational crucible of Hindustan. Al-Biruni** (12th c AD), a great scholar of Islam, **marveled at the religious tolerance and lack of theological disputations in India.**

Says **Father Peter Hans Kolvenbach**, former Superior General of the Jesuit Order: “How people with many languages, religions and cultures live together in India is a lesson to learn. India has an important role to play in shaping the destiny of mankind.” Coming as it did from the Jesuit Order, it was high praise. But the children of Macaulay are not impressed. They have not thought of it as a fit subject for study. They prefer to imitate the West. India considered mankind as one large family — **“Vasudaiva Kutumbakam”. There is no scope here for heathens or pagans, for infidels or Darul Harbs. India’s is a universal spirit. Never parochial.**

(source: **Can India be a world model? - By M. S. N. Menon** - Tribuneindia.com).

Hinduism, is the most syncretic of all religions: the original Saibaba of Shirdi had both Hindu and Muslim followers. **Cyril Edwin Mitchinson Joad** (1891-1953) English philosopher and author, has said:

"Indian history has been distinguished throughout by a tendency towards toleration. Other peoples' faith have been preserved, other people's customs respected; and not only preserved and respected, but assimilated. **Such toleration is a very rare thing in the history of mankind, as rare as it is invaluable.** Throughout the whole course of Indian history, the characteristic Indian endeavor has been to look for the common element in apparently different things, the single reality that underlies the apparently many appearances. It is interesting then, to note this same insistence upon unity, the same endeavor to unite many into one as exhibited by the very early lawgivers and administrators of India. At the very beginning of Indian history, we find men trying to reconcile the conflicting ideas held by different people with regard to the right way of living together in society and the right way of conceiving God." **"Whatever the reason, it is a fact that India's special gift to mankind** has been the ability and willingness of Indians to effect a synthesis of many different elements both of thoughts and peoples, to create in short, unity our of diversity." "They are cosmopolitan in outlook, tolerant in behavior, and open minded in thought."

(source: **The Story of Indian Civilization - By C. E. M. Joad** p. 5 - 26).

Buddhism, Jainism and Sikhism originated as offshoots of Hinduism. Their founders were neither crucified nor exiled. The ancient history of India attests to the symbiotic existence of multiple religions in that subcontinent. **Religious tolerance has been the norm in India for thousands of years.**

(source: **Proselytization In India: An Indian Christian's Perspective - By C Alex Alexander - sulekha.com**).

"If Hindus were intolerant, there wouldn't be 200 million Muslims in India today. You can hardly say 200 million Muslims are a minority in India? or that Indian government pays each Muslim 20,000 rupees to go to Mecca when Hindus do not get a single paisa to go to Kashi?

(source: **Lets be Hindus First - Letter to the Editor India Abroad** April 19, 02).

Hindu culture is intrinsically secular and tolerant. Not only many Hindu leaders, even **Javed Habib**, one of the BMAC leaders, is on record as saying: **"India has survived as a secular nation because the majority is Hindu."**

(source: **Ayodhya and After - By Koenraad Elst** p. 131).

K. P. Mukherji wrote: "The essential point which Westerners and Westernized Indians have to bear in mind, is that the Hindu Culture is through through synthetic, it aims at the synthesis of the here and hereafter, the world and the other world, the appearance that is many and the reality that is one, the temporal and the eternal, the positive and the transcendental."

(source: **Ancient Indian History and Culture - By Chidambara Kulkarni** Orient Longman Ltd. 1974. p. 266).

According to **Dr. Koenraad Elst**: "Hindus and likewise India make it all the worse for themselves by simply being so tolerant. When it comes to tolerating difference, there is hardly a place like India, as a well-known Muslim (Salman Rushdie) testifies: "I come from an Indian Muslim family, but I experience India as a very pleasant country, whereas in Pakistan I feel ill at ease. You would think it should be the reverse. But in spite of its many

defects, India is a rich and open society, while Pakistan is culturally an impoverished and closed society."

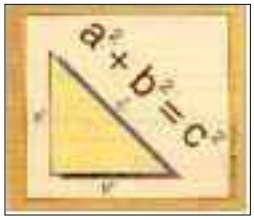
(source: **The Tolerant Hindu** - **Decolonizing the Hindu Mind - by Koenraad Elst**).

Hinduism is not a religion for occasional airings on Sundays or to be pulled out to celebrate births, marriages and deaths. It is part of everyday activity. To survive and flourish over a long period (over more than five millennia) is a striking testimony to Hinduism's ability to adapt itself to changing circumstances, an ability often insufficiently appreciated because of the apparent dominance of traditional attitudes. **Hinduism is by definition (actually it defies definition) formless and seamless; its beauty lies in its refusal to be contained, least of all by national boundaries.** Hinduism continues to show amazing life and vigor. In all the historic encounters between Hinduism and other religions Hinduism has always emerged the stronger and richer and succeeded in absorbing the other elements. According to **Nirad C. Chaudhuri**: "The faith which the Hindus had in their religion never wavered even in its worst days. It has had waxings and wanings which has kept the balance even." " In judging the vitality of Hinduism the point should be emphasized that it has maintained itself through the ages and enforced obedience to itself without support from any kind of organization, secular or spiritual."

(source: **Hinduism: a religion to live by** **- Nirad C. Chaudhari** p. 116-120)

Hinduism is an inclusive faith, with many branches and many spiritual leaders, its strength is the unity which underpins the diversity.

In conclusion, " Hinduism it is said, compares to the River Ganges, which arises from the mighty Himalayas. She descends to the world of man and of everyday life, bringing great floods of life-giving waters to the plains. As she progresses, small tributaries and great streams join her, swelling her volume and joining in her progress to her ultimate home, the infinitude of the ocean. So it is with Hinduism. It is the oldest of the great religions. Rather than a single doctrine or a single system of worship it is a broad confluence of ideas and attitudes."



" Into the bosom of the one great sea
Flow streams that come from hills on every side
Their names are various as their springs,
And thus in every land do men bow down
To one great God, though known by many names."

- (**The Folks Songs of Southern India By Gover** 1871 p. 165)

Did You Know?

Pythagorean Theorem was first postulated by Indian mathematician - Baudhayana

The Formula known today as the Pythagorean Theorem was first postulated by Indian mathematician - Baudhayana in the 6th century C.E. long before Europe's math whizzies. In 497 C.E. Aryabhatta calculated the value of "pi" as 3.1416. Algebra, trigonometry and the concepts of algorithm, square root originated in India. Quadratic equations were propounded by Sridharacharya in the 11th century. The largest number used by Greeks and Romans were 106, whereas Hindus used numbers as big as 10 to the power of 53, as early as 5000 BCE. Even geometry called Rekha Ganita in ancient India, was applied to draft mandalas for architectural purposes and for creating temple motifs.

(for more information please refer to chapter on **Hindu Culture**).

Caste

"There is no superior caste. The Universe is the work of the Immense Being. The beings created by him were only divided into castes according to their aptitude."

- Mahabharata, Shanti Parva, 188

(for more information please refer to chapter on **Caste System**).

Transportation

The Rig Veda, the oldest document of the human race includes references to the following modes of transportation:

Jalayan - a vehicle designed to operate in air and water. (Rig Veda 6.58.3)
Kaara- a vehicle that operates on ground and in water. (Rig Veda 9.14.1)
Tritala- a vehicle consisting of three stories.(Rig Veda 3.14.1)
Trichakra Ratha - a three-wheeled vehicle designed to operate in the air.(Rig Veda 4.36.1)
Vaayu Ratha- a gas or wind-powered chariot. (Rig Veda 5.41.6)
Vidyut Ratha- a vehicle that operates on power.(Rig Veda 3.14.1)

(for more information please refer to chapter on **Vimanas**)

Hinduism is among the oldest of the world's faiths. It is a total way of life. It is a dharma or way of life evolved by the great sages and seers of ancient India. Its traditions extend back before recorded history. The early phase of the Vedic tradition in India is dated between 10,000 - 7,000 BCE. Yet, in spite of the fact that it first evolved more than 5,000 years ago, Hinduism (Sanatana Dharma) is also very much a living tradition. And as such, Hindus are arguably the most intensely religious people on the earth.

For thousands of years India has been a veritable laboratory of religion: everything imaginable has been tried out, and nothing ever has completely been rejected. In spite of many attacks on Hinduism by varied invaders, in spite of rumors of decay and disarray, Hinduism has outlived all announcements of its impending demise.

पूजा पूजा पूजा पूजा पूजा पूजा पूजा पूजा पूजा

Introduction

The first fundamental principle of Hindu Dharma is that **"the Reality is one without a second." This reality is beyond description by human mind.** Hence it is indicated by a single world, "Brahman". "Infinite, eternal, changeless existence is the All; from that All, All comes forth; to that All, all returns," that is what the Candogya Upanishad (vi.2.1) tells us.

Hinduism may not be called religion in the sense other religions are known. It has no founder. It is much more than a religion. **It is a total way of life.** When religion becomes organized, man ceases to be free. It is not God that is worshipped but the group or the authority that claims to speak in his name. It is not faith, but just social idolatry. God is not like a father in a patriarchal society, who has His favorite children to whom He communicates. This idea seems rather archaic and crude. Hinduism believes in behavior than belief and experience over authority. **Prophetic religion is severe, militant, uncompromising, intolerant, while mystic religions are renouncing, and peaceful. Sir. S. Radhakrishnan** asks, " Is it an accident that Hitler and Mussolini, have been brought up in Roman Catholic societies, where it is blasphemous to criticize infallible authority?"

Hinduism's greatest feature has been its positive ideas and those who do not belong to it are not infidels or heretics. Hinduism does not believe in bringing about a mechanical uniformity of belief and worship by a forcible elimination of all that is not in agreement with a particular creed. Hindus have never conquered, plundered or committed genocides on other peoples and they never will, primarily because the deeper values enshrined in the Sanatana Dharma are against such mindless violence and expansionism. At one level every true Hindu sees his/her self being one with the Universal Self . At a more samsaric level, a Hindu also understands more than any other religionist in the world, the concept of a harmonious global society that should unite, prosper and live in peace. 'lOkAsamastA sukhinO bhavantu' and 'vasudhaiva kuTumbakaM' are not mere empty words spoken by Rsis a long long while ago.

Hindus were the first to discover that truth had many facets. They, therefore, never committed the error of imagining, as some people did, that they knew the ultimate truth, and that no further enquiry was required. Says Dr S. Radhakrishnan: "The Aryan did not possess the pride of the fanatic that his was the true religion." The genius of Hinduism is assimilative. Puritanism is alien to its life and thought. It never opposed scientific enquiry. While all Semitic religions have opposed the pursuit of science at one time or another, India has

always welcomed scientific enquiry. India is not afraid of knowledge. The path of knowledge, the path of enquiry, the **Gyana Marga,** is considered to be one of the ways to salvation by the Hindus. No other religion gives this liberty.

Hinduism encompasses all, finds a place for all, and establishes the functional relations between diverse traditions. Those who are not Hindu in their spiritual orientation still find a place in India by the virtue of this arrangement. Hinduism has not approved proselytism as a means of increasing the number of its adherents. A Hindu does not believe that salvation is to be had only through any one particular religion. God does not refuse his truth, his love and his grace to any who, in sincerity, seek him, wherever they may be and whatever creeds they may profess. All missionary religions, like Islam and Christianity profess that they have the highest truth. **But in Hinduism, religious propaganda is discouraged and frowned upon, for Truth (God) needs no trumpeting.** Hinduism is wholly free from the strange obsession of some faiths that the acceptance of a particular religious metaphysics is necessary for salvation, and non-acceptance thereof is heinous sin meriting eternal punishment in hell.

(source: **The Hindu View of Life - By S. Radhakrishnan** p. 24-35).

The history of religions illustrates the tragic effect of intolerant and exclusive faiths. God has no special favorites. God as a jealous one and there will be no peace in the religious world. According to the **Bhagavad Gita**:

"I am alike to all being." "None is hateful or dear to me. But those who worship me with devotion are in me and I in them." " The Rig Veda, the Upanishads, the Bhagavad Gita hold that all paths lead to the summit. "As men approach me so do I accept them. Men on all sides follow my path." God is leading all people of the world on to the fullness of life by diverse paths. **The Hindu seer has no contempt for other religions.** He does not believe that salvation is to be had only through any one particular religion. God does not refuse his truth, his love and his grace to any who, in sincerity, seek him, wherever they may be and whatever creeds they may profess. It is unfair to God's love and mercy to assume that he left millions of men to stagnate for thousands of years, practically without hope in the darkness of ignorance.

(source: **Recovery of Faith - By S. Radhakrishnan** ISBN: 81-7223-145-8 p. 143-172.. **Religion and Culture - By S. Radhakrishnan** p. 64).

Esoteric Hinduism has also been a fertile ground for something far more than itself: out of it has grown the most sublime spiritual wisdom that the world has ever known. **India, is the motherland of the spiritual quest. Her ascetic tradition is older than history itself.** Hinduism is not just a religion. **It synonymies the five millennia of India's cultural heritage.** Hindu philosophy in comparison with which, in the words of German Scholar, Schlegel, **"even the loftiest philosophy of the Europeans" appears "like a feeble Promethean spark in the full flood of heavenly glory of the noonday sun faltering and feeble and ever ready to be extinguished."**

(source: **A History of Hindu Civilization During British Rule - By Pramatha Nath Bose** volume I p. x).

The Hindu mind soared to the highest flights, and grasped, some of the grandest principles ever discovered in ancient or modern times. For millennia, individuals on the sub-continent have stepped outside of the conventional norm to conduct their own personal search for the divine. Hinduism, unlike other religions, has continuously reflected the evolving needs of the times and the people. This is true today as it was in the past. In the face of growing consumerism and Western values, the spiritual streams of India still as yet, retain their fertility.

The word Hindu is a geographic rather than a religious term. Hindus call their religion **Sanatana Dharma - 'Eternal law'.**

It is based on the practice of **Dharma, the code of life.** Since Hinduism has no founder, anyone who practices Dharma can call himself a Hindu. **Hinduism lays emphasis on direct Experience rather than on authority. Indian people have been powerfully and continuously affected from ancient times by the idea of religion as direct experience of the Divine.**

Dr. S. Radhakrishnan has written: " From the beginning, India believed in the superiority of intuition or the method of direct perception of the supersensible to intellectual reasoning. **The Vedic rishis ' were the first who ever burst into the silent sea' of ultimate being and their utterances about what they saw and heard.** The Kena Upanishad says: "The eye does not go thither, nor speech nor mind. We do not know, we do not understand how one can teach it. It is different from the known, it is also above the unknown." Hindu thinkers are not content with the postulating a being unrelated to humanity, who is merely the Beyond, so far as the empirical world is concerned. From the beginnings of Hindu history, attempts are made to bring God closer to the needs of man. Though it is impossible to describe the ultimate reality, it is quite possible to indicate by means of symbols aspects of it, though the symbolic description is not a substitute for the experience of God."

(source: **The Legacy of India - ed. G.T. Garratt.** p. 256 -286).

An important concept is the search or quest for Truth. **Hinduism is a relentless pursuit of Truth. "Truth is God."**

Knowledge, vision, wisdom, is the goal of the Upanishads. It is a new kind of thinking in which the whole man in implicated. The aim is not intellectual conformity to inherited doctrine, but one of attainment of knowledge. He can question the authority of any scripture, or even the existence of the Divine. Despite being the oldest religion, the truth realized by the seers prove that the Truth and path provided by Hinduism is beyond time. Its concern is with the absolute Truth, not with systems of belief. The absolute Truth is universal, and forever impersonal. No one has a proprietary claim to it. Hinduism is a religion that bears a great intellectual heritage with six schools of classical philosophy. Hinduism extends into every aspect of the believer's life.

Hindus have never been communal. They represent an ancient civilization not known either to draw a boundary between the faithful and the faithless, the blessed and the damned, or to engage in heresy hunting and its counterpart, persecution of other faiths. **J. Abbe Dubois**, (1765-1848) French missionary, has said that India is:

"the only nation perhaps in the universe which has never sunk into barbarism, and which...may deserve to fix the attention of the philosopher."

(source: **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarti** p. 87).

To the Hindu, religion is an awareness of ultimate reality, not a theory about it; religion is psychology and method rather than theology and dogma. Hindus have been able to rise above their biological boundaries and roam at will in transcendental realms from which the intellect is forever barred. The spiritual and religious ethos of India is less vulnerable to scientific criticism than the Western creed because it is not connected with history.

(source: **The Soul of India - By Amaury de Riencourt** p.113- 15 and 399).

Narrowness of the spirit, peculiar to Semitic faiths, has been alien to India. Nazism, fascism, and communism have been expressions of the same Semitic spirit in the secular realm. Hindus, are in Western terms, pagans. Religion is a Semitic enterprise and is alien to their spirit and ways. Unlike the traditions of the Middle East, classical **Hinduism is not a religion of the book: it is a 'heard' tradition.** Its scriptures are recited, or sung not read. Though the Rig Veda is very ancient, it was not written down until almost 3,000 years later. The script was available, but the verses were considered so powerful that they were protected from possible misuse by being transmitted orally from master to disciple, father to son. Even today they are treated with the utmost respect. Sacred texts are always covered in a cloth, and if they become damaged, they are not restored, but consigned solemnly to the River Ganga.

"Hinduism has provided a complex and sophisticated philosophy of life and a religion of enormous emotional appeal. Hinduism also inspired and preserved, in Sanskrit and the major regional languages

of India, the vast literature that is India's priceless literary heritage."

(source: **A History of World Societies To 1715- Mckay, Hill, & Buckler** vol. 1 p. 77).

Hinduism, after all, is indigenous, it has shaped Indian society and mentality for thousands of years, it is flexible and, in the opinion of most Hindus, far superior in its philosophy to any other religion or philosophy.

(source: **A Survey of Hinduism - By Klaus K. Klostermaier**. State University of New York Press. 1994 p. 472).

No other living tradition can claim scriptures as numerous or as ancient as Hinduism; none of them can boast of an unbroken tradition as faithfully preserved as the Hindu traditions.

According to **Thomas Berry**, **"In quality, in quantity, in significance for man's intellectual, cultural, and spiritual life, this literature in its totality is unsurpassed among all other literary traditions of the world."**

"**Hinduism is a process** - for this reason, Hinduism must be studied not as a fixed body of doctrine, but as a developing tradition that has changed considerably throughout the centuries and which is still changing in a creative direction. Everything in India makes sense in the light of the changing process. Nothing makes sense without it. Hinduism is still a living, changing process and must be seen as such."

(source: **Religions of India: Hinduism, Yoga, Buddhism - Thomas Berry** p. 3-16).

The most sacred of Hindu texts - **The Vedas, the Brahmanas, the Aranyakas, and the Upanishads -** are all **'sruti'** meaning 'what is heard' from the original Vedic Rishis, whose inspired utterances were passed down. While sruti works are considered to be divine revelations, the **'smriti'**, thought still sacred, are acknowledged to have been crafted by men. They include the epics - **The Ramayana, The Mahabharata - the Dharma Sutras** (of which the most famous are the **Manusmriti**, Laws of Manu) and the **Puranas**.

Idol Worship (Symbolism)

Yes, said he, but just how many gods are there Yajnavalkya?" "Thirty three". "yes," said he, but just how many gods are there, Yajnavalkya?" "One."

- Brhadaranyaka Upanishad III, IX, I

Hindus have represented God in innumerable forms. Each is but a symbol that points to something beyond; and as none exhausts God's actual nature, the entire array is needed to complete the picture of God's aspects and manifestations. Nowhere else in the world do we find such a profusion of gods and goddesses, divine beings and demons, ramifications of genealogies of gods, and manifestations of the divinity in human and animal forms. **But that is only the surface of Hinduism, the colorful appearance of a tradition that has enormous depths.**

Perhaps the first thing to strike a Western observer about Hindu deities is the multiplicity of limbs they display. Nineteenth-century writers, brought up on Greek sculpture, found this grotesque and inexplicable. Yet the reason why the Hindu deities are represented in this way is simple: it is to show that they are gods, that they differ from human beings and have more and greater powers that they. A symbol such as a multi-armed image, graphically portraying God's astounding versatility and superhuman might. The use of symbolism extends to every detail of the image of a deity.

It is therefore, obtuse to confuse Hinduism's images with idolatry, and their multiplicity with polytheism. They are runaways from which the sense-laden human spirit can rise for its "flight of the alone to the Alone." Even village priest will frequently open their temple ceremonies with the following beloved invocation:

O Lord, forgive three sins that are due to my human limitations:
Thou art everywhere, but I worship you here;

Thou art without form, but I worship you in these forms;
Thou needest no praise, yet I offer you these prayers and salutations,
Lord, forgive three sins that are due to my human limitations.

Even if questioned about how many gods there are even an illiterate Hindu villager will answer, **"Bhagvan ek hi hai."** - the Lord is One.

Only in India the mind went beyond monotheism to monism, from **dvaita to advaita** — to a god without form and attributes. One cannot go beyond that.

Behind the lush tangle of religious imagery, is a clear structure of thought. Hinduism, in its plethora of symbols and images**,** is endlessly complex and therefore endlessly misunderstood, but its true mission is both simple and universal: soul-enlightenment. Hinduism is **goal-oriented, not way-oriented.** In other words, its focus is the ultimate attainment, Self-realization, in God. Symbolism helps the seeker to concentrate his mind on the worship and meditation of god.

God's innumerable forms, and the acknowledgement of His Presence in everything, are an expression of the extraordinary vitality of India's collective imagination down through the ages.

Idol or image is a kind of yantra or a device for harnessing the eye and mind on God. As the **Vishnu Samhita** puts it:

"Without a form how can God be mediated upon? If (He is) without any form, where will the mind fix itself? When there is nothing for the mind to attach itself to, it will slip away from meditation or will glide into a state of slumber. Therefore the wise will meditate on some form, remembering, however, that the form is a superimposition and not a reality."

Symbolism in Hinduism is sublime and profound. Each act of Hindu worship reflects some deep spiritual significance.

The Hindu, for his part, is nonplussed by the Western antipathy to spiritual imagery. Don't Christians, have their cross? their images of Jesus and Mary? their paintings of scenes from the Bible? And don't the Jews have their Star of David? their holy tabarnacle? Guru Nanak, the first of the Sikhs gurus, said to Muslims that they bowed to the Black Stone in Mecca, which is also an image.

Where is the harm, the Hindus wonder, in images that remind one of God and that inspire devotion to Him? The value of (symbols and myths) these things lies in their power to recall our minds from the world's distractions to the thought of God and God's love. In singing God's praises, in praying to god with wholehearted devotion, in meditating on God's majesty and glory, in reading about God in the scriptures, in regarding the entire universe as God's handiwork, we move our affections steadily in God's direction.

As **Lord Krishna** said in the **Bhagavad Gita**: **"Those who meditate on Me and Worship Me without any attachment to anything else, those I soon lift from the ocean of death".**

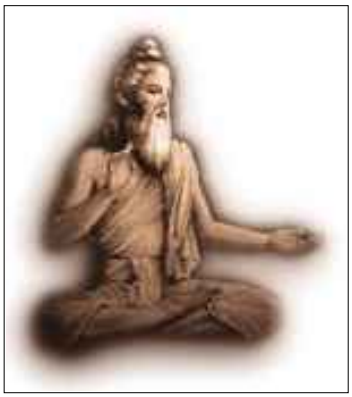
Foreigner have scorned the Hindu love of idols for centuries. What they have never understood is that the **Hindus are not idol worshippers.** They know as anyone - probably more so - that God can never be reduced to an image. What the devotee's gaze is fixed on in **darshan** is the eyes of the idol. Through those eyes streams the power that lives in the image through the grace of God and the invocations of the priesthood. That is why the eyes are always larger in proportion than the rest of the image, and why a red eye is daubed on the stones that are sacred to the goddess of a village. it is not the image, but the power in the image, that is worshipped by the devotee. It is a two-way process: the god sees the devotee, just as the devotee sees the god. In this meeting of eyes, the devotee and the lord become one.

Diane L. Eck, has noted: "**Hinduism is an imaginative, an "image-making, religious tradition in which the sacred is seen as present in the visible world** – the world we see in multiple images and deities, in sacred places, and in people. India is a visual and visionary culture, one in which the eyes have a prominent role in the apprehension of the sacred. For most ordinary Hindus, the notion of the divine as "invisible" would be foreign indeed. **God is eminently visible, although human beings have not always had the refinement of sight to see. Furthermore, the divine is visible not only in temple and shrine, but also in the whole continuum of life – in nature, in people, in birth and growth and death.** Although some Hindus, both philosophers and radical reformers, have always used the terms "nirguna" (quality less) and nirakara (form

less) to speak of the One Bramh. Yet the same tradition has simultaneously affirmed that Bramh is also saguna (with qualities) and that the multitude of "names and forms" of this world are the exuberant transformations of the One Bramh.

(source: **Darsan - Seeing the Divine Image in India** p.10 - 12) Please refer to chapter on **Symbolism in Hinduism**).

Puja



Puja is the daily ritual by which devotees seek communion with the divine. Puja symbolizes a devotee's desire to offer love and devotion to the Lord, thereby surrendering his or her individuality to Him. Hinduism recognizes self-surrender as a supreme path to salvation.

The entire **puja** (worship) is a progressive identification of man and god, culminating in the meeting of eyes and the passing of the flame, the **arati**, that ends the ritual.

The flame is passed before the image of the god, and then brought to the devotees for them to pass their hands through and put them to their eyes. The god sees the face of the individual in the flame, and his power is transmitted through the flame into the person's eyes. Even a blind person goes to the temple for **darshan.** It is not the physical eye, as much as the inner eye, or the third eye that receives the darshan of the lord. The meeting happens in the intuitive, supersensible realm.

(Please visit **ONLINE DARSHAN** for performing Pooja and Aarti.

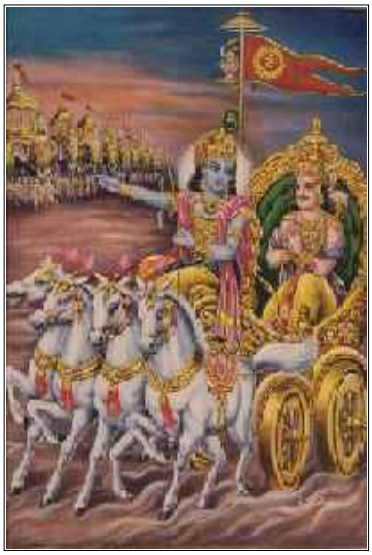
Hindu Concept of God

The **Rig Veda** has declared the Ultimate Reality (God) as:

"Ekam sat vipraha, bahudha vadanti" (Sanskrit)

"Truth (God) is one, the wise call it by various names"

and exhort us to "let good thoughts come to us from every where" in the **Bhagavad Gita**, **Lord Krishna assures the adherents of all religions that "those who pray with devotion to another god, it is to Me that they pray."**



The Truth (God) was called Bramh by the sages. The root of the word Bramh is "Brih" which means to expand. According to the Hindu view, the Supreme Reality can be viewed from two aspects:

Transcendent (impersonal) and **Immanent** (personal).

In the transcendent aspect, the Supreme Reality is called **Nirguna Bramh**, that is Bramh, **without attributes.** "Bramh is He whom speech cannot express, and from whom the mind is unable to reach Him, comes away baffled" states the Taittiriya Upanishad.

Nirguna Bramh is not an object of prayer, but of meditation and knowledge. It cannot be described, and the most one can say is that It is absolute existence, absolute knowledge, and absolute bliss (***sat-chi-ananda***). It is unborn, self-existent, all-pervading, and the essence of all things and beings in the universe. It is immeasurable, unapproachable, beyond conception, beyond birth, beyond reasoning, and beyond thought". God cannot be defined in terms of any specific manifestation, nor indeed in terms of their sum total. He is beyond all possibility of definition. The Bhagavad Gita, the best-known scripture of India, states this point clearly:

"Though I manifest Myself in all things, I am identified with none of them".

In its **Immanent (personal) aspect,** the Supreme Reality, is called **Saguna Bramh.** He is the personal God, the creator, the preserver, and the controller of the universe. In Hinduism, the immanent (personal) aspect of Bramh is worshipped in both male and female forms. In the male form, he is worshipped as Ishvara, Maheshvara, Paramatma, Purusha. In the female form, as the Divine Mother, Durga, and Kali. The Vedic God has no partisan attitude of the jealous and vindictive God.

God in Hinduism is not the creator of the individual soul, (atman). The atman is divine and eternal. **Greater wisdom was never compressed into three words than by the Chandogya Upanishad which proclaimed the true Self of Man as part of the Infinite Spirit - Tat twam asi : That Thou Art".**

In the beautiful words of **Vedanta**: "Samvit or pure consciousness is one and non-dual, ever self-luminous, and does not rise or set in months and years and aeons, past or future."

Hinduism provides for the ultimate Truth but not for a final and last statement of that Truth. Hinduism provides for self-renewal. The concept of **Kalabrahma** or **Kaladharma** is central to the Hindu way of thinking. Thus making for effective use of the built-in mechanism for change for centuries. **It accepts explicitly the inevitably of change with the passage of time.** The past is not superseded but modified according to the demands of the spirit of the times. Thus, the Vedas are followed by the Upanishads and these by the Epics and the Puranas; nothing is final. Hence, Hinduism's striking ability to adapt itself to changing circumstances and conditions.

Hinduism emphasizes Experience of Reality and Truth rather than belief.

It does not believe in concepts of proselytization, heresy hunting, Holy wars, proclamation of chosen people or a jealous God. Hinduism is an inclusive faith which provides for every form of religious experience and belief; there can by no heresy or Kufr in Hinduism.

Sin in Hinduism

Christianity and Judaism are religions of exile: Man was thrown out of the Garden of Eden resulting in his "fall."

Man is not born as a sinner in Hinduism. "Each soul is potentially divine." The Upanishads teach us that Reality is the essence of every created thing, and the same Reality is our real Self, so that each of us is one with the power that created and sustains the universe. In the late nineteenth century, the Dutch poet Willem Kloos (1859-1938) wrote: "*Ik ben een god in het diepst van mijn gedachten*" (I am a god in the deepest of my thoughts).

"God sleeps in the rocks," proclaims the Indian scriptures, "dreams in the plants, stirs toward wakefulness in the animals, and in mankind is awake to his own ego individuality." In the enlightened stage, finally, he awakens to the full reality of who he truly is, in His infinite Self.

As **Willem Kloos** (Johan Theodoor) (1859-1938) Dutch poet and critic, who was the driving intellectual force of the 1880 Dutch literary revival wrote: "Ik ben een god in het diepst van mijn gedachten" (**I am a god in the deepest of my thoughts**).

Both Protestants and Catholics expressed their indignation at this sacrilegious statement.

(source: **Psychology of Prophetism - By Koenraad Elst**).

The goal is to **manifest this divinity** within, by controlling nature (both) external and internal. "This can be done either by work, or worship, or psychic control, or philosophy (by one or more) and be free". The doctrine of sin as expounded by Christianity is not accepted by Hinduism. According to Hindu view, man commits sin, only because of his ignorance of his own true nature. Ignorance of Self is the root cause of all evils in the world. Self-knowledge is thus essential for eliminating evil.

Thus, says, **Lord Krishna** in the **Bhagavad-Gita:**

"Even if thou art the worst of sinners thou shalt cross the ocean of sin by the bark of wisdom". (**BG 4.36**)

Freedom and tolerance in Hinduism

Freedom was born in India. Doubt, the mother of freedom, was born with the **Rig Veda,** the most sacred scripture of the Hindus which has the following:

What are words, and what are mortal thoughts!
Who is there who truly knows and who can say,|
Whence this unfathomed world
And from what cause!

Freedom of the mind created the wondrous world of the intellect — the world of Hindu rishis, philosophers, poets and dramatists.

India has had an unrivalled tradition of religious freedom and tolerance. That tradition was born of the consciousness that truth can never be the monopoly of any one sect or creed.

The words of the Rig Veda are world famous: "Let noble thoughts come to us from every side."

The Rishis (sages) realized that each man had to work out his own salvation and that everyone's own spiritual experience is vital to the attainment of the ultimate state of the soul's evolution. A blind obedience to authority is the surest prescription for spiritual paralysis.

Hinduism allows absolute freedom to the rational mind of man. Hinduism never demands any undue restraint upon the freedom of human reason, the freedom of thought, feeling and will of man. Dogmatism, on the other hand, stifles mental elasticity and turns people into "psychological antiques." In Hinduism, the attitude of freedom and generosity to other faiths is bound up with the conviction that the religious life has its source and certainty in the eternal deeps of man's soul.

(source: **Eastern Religions & Western Thought - By S. Radhakrishnan** p. 288).

Tolerance: This basic feature of Hindu religion which separates it from revealed religions believing in the finality of their revelations as a fundamental doctrine. While **Lord Krishna** says in the **Gita**:

Ye yathaa maam prapadyante
Taamstathaiva bhajaamyaham.

He proclaims a doctrine which is fundamental to all Hindu thought; that is, religion is not a matter of exclusive dogma. It is a wide tolerance, a feeling that others may be equally right in the methods they follow, that is the essence of Hindu teaching.

(source: **Essential Features of Indian Culture - By K. M. Panikkar** Bharatiya Vidya Bhavan. Mumbai.1964 p. 6).

Hinduism is a **religion of freedom**. It allows the widest freedom in matters of faith and worship. It allows absolute freedom to the human reason and heart with regard to questions such as the nature of God, soul, creation, form of worship, and goal of life. It does not force anybody to accept particular dogmas or forms of worship. **When religion becomes organized, man ceases to be free. For it is not God that is worshipped but the group or the authority that claims to speak in his name. Thus, it becomes a kind of social idolatry.** Highly individualistic, Hindus have always resisted any regimentation of thought. Religion is an experience. To think that any human being or institution has the monopoly of God's truth is to commit the sin of pride.

Exclusivism and intolerance in matters of faith are features of Semitic religions—Judaism, Christianity, Islam. Contrary to these desert-born religions, **intolerance and persecution were alien to Hinduism.** **Encyclopaedia Brittannica** defines Hinduism as: "In principle, Hinduism incorporates all forms of belief and worship without necessitating the selection or elimination of any. The Hindu is inclined to revere the divine in every manifestation, whatever it may be, and is doctrinally tolerant.... A Hindu may embrace a non-Hindu religion without ceasing to be a Hindu...he tends to believe that the highest divine powers complement each other for the well being of the world and the mankind."

(source: **The Hindu Soul in search of Its Body - Balbir Punj**).

According to **Sri Aurobindo**: "The inner principles of Hinduism, the most tolerant and receptive of religious systems, is not sharply exclusive like the religious spirit of Christianity or Islam. Europe where men have constantly fought, killed, burned, tortured, imprisoned, persecuted in every way imaginable, by human stupidity and cruelty for the sake of dogma....**Hinduism is in the first place a non-dogmatic inclusive religion,** and would have taken even Islam and Christianity into itself, if they had tolerated the process."

(source: **India's Rebirth - By Sir Aurobindo** p. 143).

The great German thinker **Paul Natorp** (1854-1924) reminds us of an Indian (Hindu) teacher who adopts silence as the best expression of the great mystery. Truth exists by its own majesty. Its language is silence. When we sense the consuming heat and the kindling light of his spirit. He creates a mood, a temper rather than a conviction or a belief.

(source: **Religion and Culture - By S. Radhakrishnan** ISBN: 81-222-0012-5 p. 104).

Dr. L. P. Jacks, eminent English cleric, editor of the Hubbert Journals and author of the book **Two Letters** 1934, p. 26, has referred to this feature: "The spiritual men of India, a great and watchful multitude whose spiritual status is un-attainable, are many of them catholics in a deeper sense than we of the West have yet given to the word...."

(source: **Eastern Religions & Western Thought - By S. Radhakrishnan** p. 342).

Hinduism allows everybody to reflect, investigate, enquire and cogitate. Hence, all sorts of religious faiths, various forms of worship or Sadhana, diverse kinds of rituals and customs, have found their honorable place side by side within Hinduism, and are cultured and developed in harmonious relationship with one another.

Hinduism, unlike other religions, does not dogmatically assert that the final emancipation is possible only through its means and not through any other. It is only a means to an end, and all means which will ultimately lead to the end are equally approved.

Sir. S. Radhakrishnan has observed, " Hinduism recognizes that each religion is inextricably bound up with its culture and can grow organically. While it is aware that all religions have not attained to the same level of truth and goodness, it insists that they all have a right to express themselves. Religions reform themselves by interpretation and adjustment to one another. **The Hindu attitude is one of positive fellowship, not negative tolerance."**

"As a result of this tolerant attitude, Hinduism itself has become a mosaic of almost all the types and stages of religious aspiration and endeavor. **It has adapted itself with infinite grace to every human need and it has not shrunk from the acceptance of every aspect of God conceived by man, and yet preserved its unity by interpreting the different historical forms as modes, emanations, or aspects of the Supreme."**

(source: **Eastern Religions & Western Thought - By. Dr. S. Radhakrishnan** p 313).

"India did not till recently take to the cult of the nation. We did not make our country a national goddess, with an historic destiny, a sacred mission, and a right of expansion. We did not worship Mother India (Bharatmata) as others do, 'Britannia', 'La France', 'The Fatherland'. We did not tell the people that the enemy of India is the enemy of God and if the enemy had a god, he could only be a false god. Our leaders did not proclaim to be the finest people on earth, the chosen race of the universe"

(source: **Eastern Religions and Western Thought - By Dr. Sarvepalli Radhakrishnan** p. 54).

In an age that celebrates tolerance and pluralism, the claim that there is the only way to God is offensive and could be considered as "spiritual racism."

The religious hospitality of Hinduism is proverbial. Hinduism is extremely catholic and liberal. This is the fundamental feature of Hinduism. **Hinduism pays respects to all religions**. Hence, its tolerance to all. It does not revile any other religions. It accepts and honors truth, wherever it may come from and whatever garb it may put on. Eastern religions, **Hinduism, Buddhism and others influenced by them have been looking upon different religions not as rivals but as friendly partners in nourishing the spiritual life of mankind.** Their approach to religion has been essentially empirical.

The law of Karma: (laws of cause and effect)

"This vast universe is a wheel. Upon it are all creatures that are subject to birth, death and rebirth. Round and round it turns and never stops. It is the wheel of Bramh. As long as the individual self thinks it is separate from Bramh, it revolves upon the wheel in bondage to the laws of birth, death and rebirth. But when through the grace of Bramh it realizes its identity with him, it evolves upon the wheel no longer. It achieves immortality."

- Svetasvatara Upanishad

Karma is one of the natural laws of the mind, just as gravity is a law of matter. It simply means "cause and effect." What happens to us that is apparently unfortunate or unjust is not God punishing us. It is the result of our past actions. The Vedas, Hinduism's revealed scriptures, tells us that if we sow goodness, we will reap goodness; if we sow evil, we will reap evil. The divine law is: whatever karma we are experiencing in our life is just what we need at the moment, and nothing can happen but that we have the strength to meet it. Even harsh Karma, when faced in wisdom, can be the greatest catalyst for spiritual unfoldment.

The human predicament in the midst of the omnipresent and universal change and suffering is often expressed in Vedanta and Buddhism by the image of the wheel. **Lord Krishna** speaks of the terrible wheel of birth and death which binds the individual down to the phenomenal world of time and circumstance: "The spirit of man when in nature feels the ever-changing conditions of nature. When he binds himself to things ever-changing, a good or evil fate whirls him round through life-to-death. Even Gautam Buddha alludes to the wheel of existence, which he calls **samsara**. In Europe, during the Renaissance, the wheel was absorbed into a popular adage - God is a Circle, whose circumference is nowhere and whose center is everywhere.

(source: **T. S. Eliot Vedanta and Buddhism - By P. S. Sri** p. 35-36).

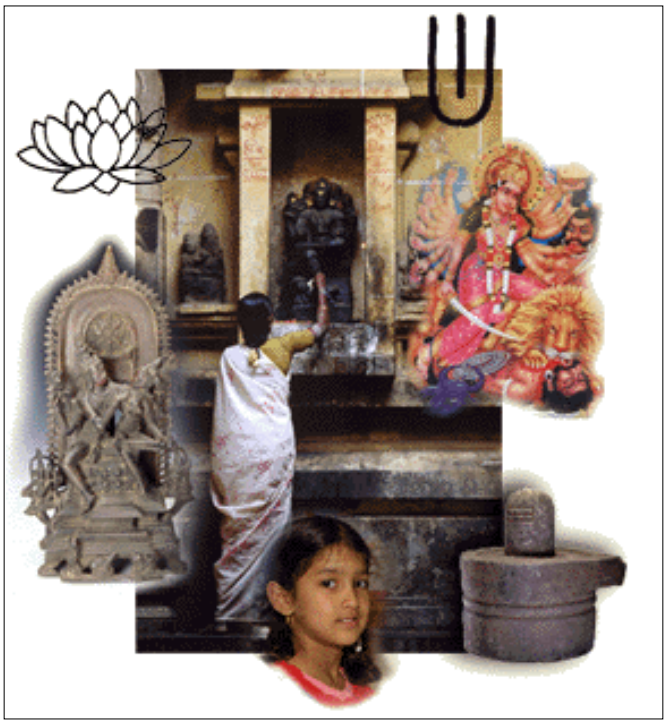
According to **Nani A. Palkivala** (1920 -) India's best known constitutional lawyer, author, former Indian ambassador to the USA:

"The law of Karma postulates that in this world there are no rewards or punishments; it is simply a case of inevitable consequences. As you sow, so shall you reap. Sometimes others reap what you have sown. There is an interlinking and inter-connection all round and at every level, in time and in space. No one lives, or can possibly live, in isolation. The past is linked to the future, the world to the next, men to their fellow-men, thoughts to actions, actions to reactions, the living spirits to the departed ones. The law of karma governs all."

(source: **India's Priceless Heritage - By Nani A. Palkhivala** 1980 p. 32-33).

To quote in the words of **Sir. S. Radhakrishnan,** philosopher, and former president of India:

“The cards in the game of life are given to us, we do not select them. They are traced to our past karma, but we can call as we please, lead what suit we will, and as we play, we gain or loose. And there is freedom.”



We must also be very careful about our thoughts, because thoughts create, and thoughts also make karmas, good, bad and mixed.

What happens when we die?
According to Hinduism, the body alone dies, the soul never dies. But the path the soul takes is decided upon by the past actions or Karmas. Past actions are attached to the soul and they decide the path of the soul’s travel. So if you are born with a disease or a handicap, it is the result of your past actions done in past lives. If you live a good moral pious life, then you will be born in better situation and ideal life.

According to Hinduism, the soul continues this journey with a heavy load of Karmas, (good or bad) until it exhausts all Karmas by undergoing pain or pleasure sensations in the body. Then the individual soul, will merge with the Absolute Soul or infinite power. This merging process is known as Salvation.

God does not punish us. God created man near to perfection and has given him the free will to decide whatever he wants. There is no such thing as being cursed. Hindus believe even God is bound by the law of Karma once He takes human form. Lord Krishna was killed by a hunter. He was obeying the law of Karma, the unwritten law of the Universe.

Karma is a very just law, too, as it is equal in repayment. Karma, like gravity, treats everyone the same.
Karma is a rational explanation for inequalities among human beings which cannot be given. The possibility of rebirth makes death more acceptable. In fact, the rishi of the Isa Upanishad welcomes death when it comes, in the following words: Let my breadth mix with the eternal air and let my body be burnt. And then I will recount all that happened in the past.

Individual souls, or jivas, enter the world mysteriously; by God's power we may be sure, but how or for what reason we are unable fully to explain. Like bubbles that form on the bottom of a boiling teakettle, they make their way through the water (universe) until they break free into the limitless atmosphere of illumination (liberation). They begin as the souls of the simplest forms of life, but they do not vanish with the death of their original bodies.
In the Hindu view, spirit no one depends more on the body it inhabits that body depends on the clothes it wears or the house it lives in. When we outgrow a suit or find our house too cramped, we exchange these for roomier ones that offer our bodies freer play. **Souls do the same.**

" Worn-out garments Are shed by the body:
Worn-out bodies Are shed by the dweller. "

-

(**Bhagavad-Gita, II:22**)

This process by which an individual **jiva** (soul) passes through a sequence of bodies is known as reincarnation or transmigration of the soul - in Sanskrit **samsara**, a word that signifies endless passage through cycles of life, death and rebirth.

Hinduism believes that God, who is all-loving and merciful, does not punish or reward anyone. He molds our destinies based upon our own thoughts and deeds. Every action of a person, in thought or deed, brings results, either good or bad, depending upon the moral quality of the action, in accordance with the adage, *As you sow, so shall you reap.* Moral consequences of all actions are conserved by Nature. **"God keeps an accurate record of all things good and bad. There is no better accountant on earth,"** says **Mahatma Gandhi.** Until we reach the end of our journey we are subject to the law of Karma which makes out that our desires and acts determines the pace of our progress. Our present state is conditioned by our past and what we do now will determine our future. Death and rebirth do not interrupt this process. Four our present condition, we are ourselves responsible. We not blame God or the existing social order. **Mahabharata** says that there is no external judge who punishes us; our inner self is the judge.

na yaman yamah ity ahuh atma vai yama ucyate
atma samyamito yena yamas tasya karoti kim?

If a person lives a good life on earth, he or she will be born into a better life in the next incarnation. For example, a sinner who leads an immoral life will be born as a poor human or as an animal in the next incarnation. A person born again and again to reap the fruits of his or her own actions. This cycle of birth and death continues until the person attains moksha or freedom from the cycle of birth and death. In all forms of Indian thought, time is symbolized by birth and death. The world is represented by wheel of time, of births and deaths.

Count Maurice Maeterlinck (1862-1949) was a Belgian writer of poetry and a wide variety of essays. He won the 1911 Nobel Prize for literature. In his book **Mountain Paths**, in the doctrine of Karma, he finds "the only satisfactory solution of life's injustices."

Reincarnation

Reincarnation is interlinked with karma: successive lives afford the requisite scope in which the law of karma operates. It is the natural way the soul evolves from immaturity to spiritual illumination. When all the lessons are worked out and all the lessons of life are learnt, one attains enlightenment and *moksha* (liberation). This means you will exist, but will no longer be pulled back to be born in a physical body.

Reincarnation is called **Samsara** in the Vedas and means being bound to the cycle of repeated birth and death. The materially conditioned soul transmigrates through different bodies according to his desires and past activities. It is stated, that as a man sows, so shall he reap.

Lord Krishna said to **Arjuna, " Both you and I have passed through many births. You know them not; I know them all."**

Nonetheless, one is not condemned to stay in this cycle of repeated birth and death forever. There is a way out. In the human form one can attain the knowledge of spiritual realization and attain release from Samsara. This is why every religious process in the world encourages people not to hanker for sensual enjoyments which bind them to this world but to look forwards what is spiritual and gives eternal freedom from Samsara. In fact, the only religion, which does not acknowledge this science of reincarnation is modern day Christianity.

A partial list includes the Greek philosophers such as Socrates, Pythagoras, and Plato, Italy's philosopher and poet of the Renaissance Giordano Bruno (who was later burned at the stake by the Inquisition because of his beliefs), as well as the great French philosopher Voltaire.

Plotinus, Origen, St. Augustine, Cicero, Marcus Aurelius, Hume, Kant, Hegel, Schopenhauer, Nietzsche, William James, Henri Bergson, Goethe, Hugo, Sand, Blake, Wordsworth, Whitman, Shelley, Kipling, Tennyson, Browning, Alcott, Emerson, Thoreau, Poe, Whitman, Wagner, da Vinci, Benjamin Franklin, Luther Burbank, Edison, Henry Ford, Edgar Cayce and General Patton all believed in reincarnation. Poets, in their moments of inspiration and intuitive insights, have written about rebirth. There are passages in Shelley, Wordsworth, Tennyson, Browning, Rossetti, Longfellow and Whitman, which evince the poet's interest in reincarnation. In a poem to **Evelyn Hope**, a girl whose life was snuffed out at the age of sixteen, poet **Robert Browning** (1812-1889) sang of lives to be:

"I claim you still, for my own love's sake!
Delayed it may be for more lives yet,
Through worlds I shall traverse, not a few;
Much is to learn and much to forget
Ere the time be come for taking you."

John Masefield (1878-1967) poet laureate has been explicit in his poem **A Creed**:

"I hold when a person dies
His soul returns again to earth;
Arrayed in some new flesh-disguise,
Another mother gives him birth.
With sturdier limbs and brighter brain
The old soul takes the road again.

(source: **India's Priceless Heritage - By Nani A. Palkhivala** 1980 p. 32-34).

William Wordsworth, the poet, was bold enough to believe in a life beyond death. He succeeded in keeping pessimism at bay by drawing inspiration from the belief that the soul had its beginning elsewhere and lived endlessly.

Some of America's founding fathers, such as Benjamin Franklin, as well as former Presidents John Adams and Thomas Jefferson, also believed in reincarnation. **Benjamin Franklin** stated that "I believe I shall, in some shape or other, always exist; and, with all the inconveniences human life is liable to, I shall not object to a new edition of mine, hoping, however, that the errata of the last may be corrected." Napoleon made mention of his accepting reincarnation as did the German poet Wolfgang von Goethe. In Russia, Count Leo Tolstoy, believed in reincarnation as did such early American philosophers and poets as Ralph Waldo Emerson, Walt Whitman, Henry David Thoreau, and Charles Dickens, who mention their beliefs in many of their writings.

We can also include U.S. auto magnate Henry Ford, U.S. General George S. Patton, Nobel Laureates Herman Hesse and Isaac Bashevis Singer, Psychologist Carl Jung, British biologist Thomas Huxley, American Psychoanalyst Erik Erikson and Mahatma Gandhi.

Dr. S Radhakrishnan has written: **"The development of the soul is a continuous progress, though it is broken into stages by the baptism of death."**

(source: **The Story of Oriental Philosophy - By L. Adams Beck** p. 46).

Moksha (Freedom or Salvation)

Moksha means freedom from the cycle of birth and death. The ultimate goal of Hindu religious life is to attain freedom from the cycle of birth and death, or union with God. This union is achieved through true knowledge (jnana), devotion (bhakti), or right work (karma). Purity, self-control, truthfulness, non-violence, and compassion toward all forms of life are the necessary prerequisites for any spiritual path in Hinduism. There is no concept of Savior. You have to free yourself by your own effort. No savior can help you achieve God realization without your personal effort.

Four Stages of Life

All cycles in the world we perceive are characterized by the number four, which is the number of the Earth. Like all things terrestrial, man's life thus divides into four periods - the four stages of life. All life has a springtime, summer, autumn, and winter, as also its morning, noon, evening, and night. These four periods of life are called "the four stages of action": the four ashramas.

1. The First Stage of Life : The quest for knowledge (Brahmacharya) - the student
2. The Second Stage of Life: Family Life (Grihastha) - dedicated to domestic affairs.
3. The Third Stage of Life: Retreat into the Forest - (Vana-Prastha) - to devote to study and reflection.
4. The Fourth Stage of Life: Renunciation (Sanyasa) - Renunciation all attachments, the spiritual and physical preparation for death.

Guy Sorman, author and visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France, has commented on these wise division of life: "Here is a philosophy far removed from the grotesque refusal to grow old in the West, where wisdom has been replaced by cosmetic surgery and psychiatric help."

(source: **The Genius of India - By Guy Sorman** (**'Le Genie de l'Inde**') Macmillan India Ltd. 2001. ISBN 0333 93600 0 p.122).

Six Schools of Philosophy (Darshana)

Indian philosophical thought, in contrast to the Western tradition, has remained more stable and more clearly continuous. In spite of its metaphysical nature and religious overtones, Indian philosophy is essentially practical, aiming at realizing spiritually what is known intellectually. Knowledge without vision is meaningless. Hence, **Indians call their philosophy darshan, vision. Philosophy and religion in India are intertwined, because religion for the Hindu is experience or an attitude of mind, a transformation of one's being, a consciousness of the ultimate reality, not a theory about God. Whatever view of god the Hindu many adopt, he believes that the divine is in man.**

Philosophy, as religion, is seen in India as a means to an end, not as an end in itself. Hence, there is no room for dogma or intolerance in Indian tradition because the roads to truth are more than one. The infinite reality cannot be comprehended by the finite human mind.

(source: **India and World Civilization By D. P. Singhal** Pan Macmillan Limited. 1993. p. 23 - 25).

The Hindu religious system can be divided into two major systems. The Orthodox system (called astika in Sanskrit) accepts the authority of the Vedas.

1. **Sankhya** - founder Sage Kapila
2. **Yoga** - Sage Patanjali
3. **Mimamsa** - Sage Vyasa / Sage Jaimini
4. **Vedanta** - Shankaracharya, Ramanuja/Chaitanya/ Madhava/Vallabha
5. **Nyaya** - Sage Gautama (not Buddha)
6. **Vaisheshika** - Sage Kanda

The Heterdox (Nastika) system rejects the authority of the Vedas. This system includes Carvaka (materialism), Jainism, and Buddhism. The Carvaka system denies existence of the individual self(atman) apart from the body and rejects the notion of moksha (salvation) for the atman. This system never gained popularity among the Hindus.

Concept of Time

The transcendence of time is the aim of every Indian spiritual tradition. Time is often presented as an eternal wheel that binds the soul to a mortal existence of ignorance and suffering. "Release" from time's fateful wheel is termed **moksha**, and an advanced ascetic may be called **kala-attita** (' he who has transcended time').

Hindus believe that the universe is without a beginning (**anadi**= beginning-less) or an end (**ananta** = end-less). Rather the universe is projected in cycles.

Each cycle is divided into four **yugas** (ages of the world).

Satya yuga	(golden age)	4,000,000 years
Treta yuga	(silver age)	3,600,000 years
Dvapara yuga	(copper age)	2,400,000 years
Kali yuga	(iron age)	1,200,000 years
Pralaya	(cosmic deluge)	4000,000 years
New Creation		400,000 years
Duration of One Cycle		12,000,000 years

Total duration of the four yugas is called a **kalpa**. At the end of kalyuga the universe is dissolved by pralaya (cosmic deluge) and another cycle begins. Each cycle of creation lasts one kalpa, that is 12,000,000 human years (or 12,000 Brahma years). For more on yugas, refer to **One Cosmic Day of Creator Brahma**).

Time in Hindu mythology is conceived as a wheel turning through vast cycles of creation and destruction (pralaya), known as kalpa. In the words of famous writer, **Joseph Campbell:**

"The Hindus with their grandiose **Kalpas** and their ideas of the divine power which is beyond all human category (male or female). Not so alien to the imagery of modern science that it could not have been put to acceptable use."

According to **Carl Sagan**, (1934-1996) astro-physicist, in his book **"Cosmos"** says:

"The Hindu religion is the only one of the world's great faiths dedicated to the idea that the Cosmos itself undergoes an immense, indeed an infinite, number of deaths and rebirths. **It is the only religion in which the time scales correspond, to those of modern scientific cosmology.**

According to **Guy Sorman,** visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France:

" Temporal notions in Europe were overturned by an India rooted in eternity. The Bible had been the yardstick for measuring time, but the infinitely vast time cycles of India suggested that the world was much older than anything the Bible spoke of. **It seem as if the Indian mind was better prepared for the chronological mutations of Darwinian evolution and astrophysics."**

(source: **The Genius of India - By Guy Sorman** (**'Le Genie de l'Inde**') Macmillan India Ltd. 2001. ISBN 0333 93600 0 p. 195).

Swami Kriyananada (**J. Donald Walters**) World renowned as a singer, composer, and lecturer, founder of the Ananda Village is perhaps the most successful intentional community in the world writes:

"Hindu cosmography, for example born in hoary antiquity, strikes one in certain ways as surprisingly modern. India has never limited its conception of time to a few crowded millennia. Thousands of years ago India's sages computed the earth's age at a little over two billion years, our present era being what is

called the seventh Manuvantra. This is a staggering claim. Consider how much scientific evidence has been needed in the West before men could even imagine so enormous a time scale."

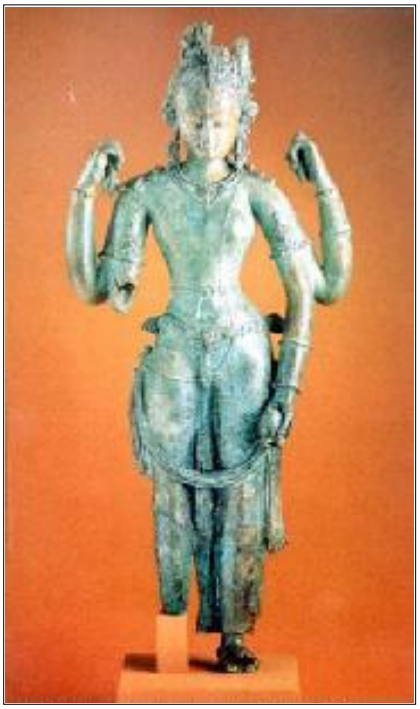
(source: **Crises in Modern Thought: The Crises of Reason - By Swami Kriyananda (J. Donald Walters)** vol. 1 p - 94)

Princeton University's **Paul Steinhardt** and Cambridge University's **Neil Turok**, have recently developed The Cyclical Model.

They have just fired their latest volley at that belief, saying there could be a timeless cycle of expansion and contraction. **It's an idea as old as Hinduism, updated for the 21st century.** The theorists acknowledge that their cyclic concept draws upon religious and scientific ideas going back for millennia — echoing the "oscillating universe" model that was in vogue in the 1930s, **as well as the Hindu belief that the universe has no beginning or end, but follows a cosmic cycle of creation and dissolution.**

(source: **Questioning the Big Bang - msnbcnews.com).**

According to **Alain Danielou**: "The Hindu lives in eternity. He is profoundly aware of the relativity of space and time and of the illusory nature of the apparent world."



(source: **Virtue, Success, Pleasure, & Liberation : The Four Aims of Life in the Tradition of Ancient India** p. 9).

The Hindus, according to **Sir Monier-Williams,** were Spinozists more than 2,000 years before the advent of Spinoza, and Darwinians many centuries before Darwin and Evolutionists many centuries before the doctrine of Evolution was accepted by scientists of the present age.

The French historian **Louis Jacolliot** says, "Here to mock are conceit, our apprehensions, and our despair, we may read what **Manu** said, perhaps 10,000 years before the birth of Christ about Evolution:

' The first germ of life was developed by water and heat.' (Book I, sloka 8,9)
' Water ascends towards the sky in vapors; from the sun it descends in rain, from the rains are born the plants, and from the plants, animals.' (Book III, sloka 76).

(source: **Philosophy of Hinduism - By T C Galav** p 17).

Sir John Woodroffe, (1865-1936) the well known scholar, Advocate-General of Bengal and sometime Legal Member of the Government of India. He served with competence for eighteen years and in 1915 officiated as Chief Justice. He has said:

"Ages before Lamarck and Darwin it was held in India that man has passed through 84 lakhs (8,400,000) of birth as plants, animals, as an "inferior species of man" and then as the ancestor of the developed type existing to-day. **The theory was not, like modern doctrine of evolution, based wholly on observation and a scientific enquiry into fact but was a rather (as some other matters) an act of brilliant intuition in which observation may also have had some part**."

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** p. 22).

Count Maurice Maeterlinck (1862-1949) was a Belgian writer of poetry and a wide variety of essays. He won the 1911 Nobel Prize for literature. In his book **Mountain Paths**, he says:

"he falls back upon the earliest and greatest of Revelations, those of the Sacred Books of India with a Cosmogony which no European conception has ever surpassed."

(source: **Mountain Paths - By Maurice Maeterlinck**).

The **Laya Yoga Samhita** stated that just as the beams of sunlight entering a room reveal the presence of innumberable motes, so infinite space is filled with countless brahmandas (solar systems). The atomic structure of matter was discussed in the ancient Vaisesika treatises. And in the Yoga Vashista it was stated, in a passage very similar to the foregoing: "There are vast worlds all placed way within the hollows of each atom,

multifarious as the motes in a sunbeam."

(source: **Crises in Modern Thought: The Crises of Reason - By Swami Kriyananda (J. Donald Walters)** vol. 1 p - 95).

Thus, in Hinduism, **science and religion are not opposed fundamentally**, as they often seem to be in the West, but are seen as parts of the same great search for truth and enlightenment that inspired the sages of Hinduism. Fundamental to Hindu concept of time and space is the notion that the external world is a product of the creative play of **Maya** (illusion).

Om

Matter is said to be created from sound and Om is the most sacred of all sounds, the syllable that preceded the universe and from which the gods were made. It is the "root" syllable (mula mantra), the cosmic vibration that holds together the atoms of the world and heavens. Since Om precedes all things, it is used as an invocation to prayer or sacred singing.

Omkar is the most sacred word for the Hindus. For them, it is synonymous with the Supreme Godhead, the Impersonal as well as the Personal God. It is the all-comprehensive Symbol and Name of God. It is also deemed as the *Maha Mantra* , the best aid and means for man to realize God.

Philo (50 BC) an Alexandrian philosopher, who knew of the Indian Gymnosophists set forth the theory of Logos which passed into Christianity in the Gospel of St. John and is verily the Indian conception of **Vak** (word) which is personified in the Vedas as a Divine Power.

(source: **The Soul of India - By Satyavrata R Patel** p.12).

There is a Vedic verse as follows :

Prajapati vai idam agra asit
Tasya vak dvitiya asit
Vag vai paramam Brahma

"In the beginning was Prajapati, the Bramh with whom was the Word,
and the Word was verily the Supreme Bramh."

(source: The Pranava Om - The source of Creation - An extract from the book **Art Of God Symbolism - By Swami Chinmayanand** and **Omkaar - The Source of Creation**).

Conclusion:

Hinduism is a religion that is doctrinally less clear cut than say Christianity, politically less determined than Islam. It offers something for everyone, including the atheist. It has delighted its followers, with its richness, its antiquity and its depth. Hinduism, is a philosophy that appeals to reason, love, tolerance, harmony, unity and truth. It motivates us to live life to the fullest, to achieve and realize our goals, keeping in mind that all things are connected in this universe and respecting them thereof. Religion in India is the cultivation of the interior life. It is the attainment of spiritual freedom. In the West, religion is a social phenomenon, a matter of the ecclesia, of the community. The Western mind sees the divine as largely external to man but to the Hindu it is about improving his being, or inner self. Hinduism traditionally does not recognize the borderlines within which religion in the West has been confined for some centuries - politics, social structures, hygiene, science - everything is assimilated and considered part of the divine reality.

Hinduism is alive and vigorous and has withstood attacks from within and without. It seems to be possessed of unlimited powers of renewal. Its historic vitality, the abounding energy which it reveals, would alone be evidence of its spiritual genius.

"O Goddess Earth, the consort of Visnu,
you whose garments are the oceans and
whose ornaments are the hills and mountain ranges;
please forgive me as I walk on you this day."

This shows the utmost respect for the earth....and with such humility.

No other religion can truly claim to be a universal religion, except Hindu religion not in terms of its propagation but because of its broadness, toleration and absorbing abilities.

Hinduism is both monotheistic and polytheistic believing in one God as well as some demigods and is based on scriptures and evolving proven spiritual and mystical experiences of many individual souls. Hindus believe in God and demigods, past and present prophets, saints and sages and their supernatural power belonging to this world and outside this world for their spiritual and material prosperity unlike other religions which believe in God sitting in heaven alone and ruling the world spiritually and materially. It is natural for the Hindu worshipper to address God with a fondness that amounts sometimes to familiarity. **And why not? God is our very own.** The Bengali song says:

"I will follow him (Krishna) to Mathura, where he now dwells. And if I find him, though I know his consciousness is as infinite as the ocean, I will bind him with my sari and drag him home with me!".

What Western hymnist would dare to express himself to god in terms of such intimacy?

and yet, again: Why not? If we really love God, is it not natural to hold him close? The Hindu imagines God smiling from the hearts of trees, from the flowers, from the rocks, from the hearts of clouds. To worship God for the Hindus, means love. It means childlike trust. Indian devotional songs often express such sentiments, as *" I will make Thee prisoner of my heart's love".*

For this reason Hinduism is still strong and surviving and can not decline even against the aggressive conversions carried out most often in disguise in the name of love for the people, social services and education by other foreign religions for the last 2000 years.

For Hinduism is the most ancient expression of Sanatan Dharma, the eternal and universal religion. The true message of Hinduism, is inward, not outward. It is a message of soul-upliftment, of inner purification, and of deepening awareness and love. Behind all the symbolism, Hinduism teaches communion with God.

A need for commitment from all Hindus Worldwide:

In the words of **Prof. Bhagwan S.Gidwani**, in his book "**The Return of the Aryans"**, (ISBN 0-14-024053-5)

" We have inherited an ancient culture. It has faced many waves of invasions, among others, from the Greek, Persian, Pathan, Mongol, French, Dutch and the English. Often with savagery they attempted to suppress our culture; yet the flame of hope burnt brightly against the dark background of foreign rule. Our religion endured, though our land has shrunk to less than half its size compared to the past.

What often saved us in the past was the awareness of our age-old religion and culture and the need to hold fast to it, while weaving and refining it for the future generations to come. What might indeed doom us in the future is the ignorance of our traditions, with no roots to cling to.

Culture is tradition and tradition is memory.

The ancients knew that and that is why Bharat, who led the Sindhu clan, introduced the Memory songs in 5095, to keep alive the knowledge of the past, lest we run the risk of building our future without foundation of the past.

In the era of vanishing worth and fading memory, it is imperative to rekindle the dying embers of life and light in our society. We need to teach the new generation of Hindus about Sanatan Dharma and be proud of it. He who fails to guard his house - be it the scholar, priest or the nation itself - must learn to tolerate an intruder. "

Jai Hind!

Did You Know?

Shakti is the Divine power found in everything?

Shakti is the divine feminine power found in everything. One of the things most misconstrued about India and Hinduism is that it's a male-dominated society and religion. It is not. It is a culture whose only words for strength and power are feminine -- ``shakti'' means ``power'' and ``strength.'' All male power comes from the feminine. And Shakti is the fundamental strength of the feminine that infuses all life and is viewed as a goddess. And one of the forms of that goddess is Kali.

Kali is the personification of the most dynamic aspect of feminine strength: We often see her in the horrific form that she assumes to destroy evil and to rescue the universe from destruction. In this photograph, Kali is destroying evil shown in the guise of beauty. Beauty is often beguiling. Kali is often depicted in a form as conqueror, which to many might appear horrific. But to her devotees, she is considered beautiful, maternal and kind.

Updated - December 19, 2003

Hinduism is often labeled as a religion of 330 million gods. This misunderstanding arises when people fail to grasp the symbolism of the Hindu pantheon. Hindus worship the nameless and formless Supreme Reality (Bramh) by various names and forms. These different aspects of one reality are symbolized by the many gods and goddesses of Hinduism. For example, Brahma (not to be confused with the over-arching Bramh) is that reality in its role as creator of the universe; in Vishnu it is seen as the preserver and the upholder of the universe; and Shiva is that same reality viewed as the principle of transcendence which will one day 'destroy' the universe. These are the Trimurti, the ' three forms,' and they are not so much different gods as different ways of looking at the same God. Each emphasizes a particular aspect or function of the one reality. The forms are many, the reality is one; the principle is very deeply rooted in Hindu thought, and was stated at the very outset in the **Rg Veda**:

They call him Indra, Mitra, Varuna, Agni
And he is heavenly nobly-winged Garutman.
To what is One, sages give many a title:
They call it Agni, Yama, Matarisvan.

It is the same with all the gods and goddesses: they are not rivals but aspects of a single principle. Hindus have represented God in innumerable forms. Each is but a symbol that points to something beyond; and as none exhausts God's actual nature, the entire array is needed to complete the picture of God's aspects and manifestations. It has been said that images are to the Hindu worshipper what diagrams are to the geometrician. The Hindu devotee, while he will generally have one particular form of god - his or her ishta deva, or chosen deity - on whom his devotion centers, moves easily between one god and another. The same idea carries over into the human sphere. Krishna and Rama are not strictly speaking gods, but avatars, 'descents' - human incarnation of Vishnu - since he is the 'upholder' of the world. This idea is brought forth clearly in the following doctrine of the **Artharva Veda**:

" He is the one, the one alone, in Him
all deities become One alone."

Introduction

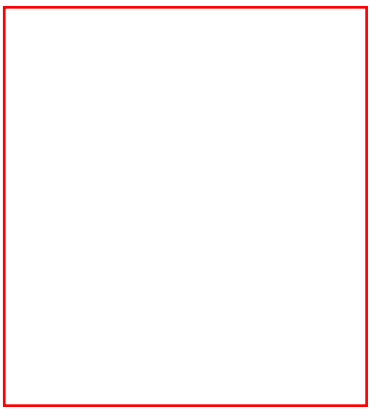
"Yes, said he, "but just how many gods are there, Yajnavalkya?" "Thirty-three." ..."Yes," said he, "but just how many gods are there, Yajnavalkya?" "One..." - **Brhadaranyaka Upanishad III, IX, I**

God's innumerable forms, and the acknowledgment of His Presence in everything, are an expression of the extraordinary vitality of India's collective imagination down through the ages.

(source: **Travel through Sacred India** - **By Roger Housden** p. 58).

Idol or image is a kind of yantra or a device for harnessing the eye and mind on God. As the **Vishnu Samhita** (ch 29, v 55-7) an ancient ritual text, persuasively endorses the use of imagery and puts it:



"Without a form how can God be mediated upon? If (He is) without any form, where will the mind fix itself? When there is nothing for the mind to attach itself to, it will slip away from meditation or will glide into a state of slumber. Therefore the wise will meditate on some form, remembering, however, that the form is a superimposition and not a reality."

Symbolism, for two reasons, plays a greater role in the religion and art of India than in those of other nations. For one thing, India's is the oldest continuous civilization in the world. **Its traditions extend back long before recorded history. For another, the Indian mind, having established itself firmly in the belief in a transcendental reality, is completely comfortable with an exuberance in its expression of images and allegories that comes from knowing and accepting that everything is illusory anyway.**

"Aham Brahm asmi (I am Bramh/the spirit or essence of everything)," "Tat twam asi (Thou art that/Bramh alone exists and is the essence of everything), "Aham sa (I am He(Bramh)/an individual is a soul wrapped up in a physical body)," ? Since the unenlightened mind hasn't the capacity to perceive these statements as proceeding from the ultimate refinement of consciousness. **These lofty teachings of the Vedas and Upanishads had to be clothed in symbolism, and presented in allegories.** The purpose of concealing them in part to protect the truth from profanation, and in part also to ensure their endurance during centuries of spiritual darkness. The hope was to suggest to deep truth seekers, at least, that there are levels of truth beyond any of those suggested by orthodox religions.

A painting of Lord Krishna playing his flute awakens devotion in the hearts of Hindu devotees, because it reminds them of God calling the soul to eternal wakefulness in Him.

(source: **The Hindu Awakening: Its Revelation, Its Symbols** - **By Swami Kriyananda (J Donald Walters)** p. 28--49).

The idea of Bramh put forward in the Upanishads is not one which can satisfy the demands of the mind. The 'knowing' of which the Upanishads speaks is of a different order. Bramh-Atman can only be known by identify with it, by direct intuition. It is therefore not surprising that in the period succeeding the Upanishads the idea of Bramh came to be clothed in forms which the human mind and the imagination can grasp. The result was a vigorous development of theism, during which gods and goddesses which today characterize Hinduism assumed much of its character. Gods and goddesses are the varied expressions of the one all-pervasive Reality.

The Hindu deities are not viewed as separate and rival powers, but as different functions, different aspects, different ways of understanding and approaching the one Reality.

Perhaps the first thing to strike a Western observer about Hindu deities is the multiplicity of limbs they display. Nineteenth century writers, brought up on Greek sculpture, found this grotesque and inexplicable. Yet the reason why the Hindu deities are represented in this way is very simple: it is

to show that they are gods, that they differ from human beings and have more and greater powers than we do. Thus, Vishnu is usually shown with four arms, but his avataars or incarnations, Rama and Krishna, who have human forms, are invariably represented with two.

(source: **The Elements of Hinduism - By Stephen Cross** 30 -32).

T. A. Gopinath Rao, author of **Elements of Hindu Iconography** writes: **"It has been said that images are to the Hindu worshipper what diagrams are to the geometrician."**

(source: **The Spirit of Modern India - Edited by Robert A McDermont and V. S. Naravane** p. 136).

Dr. Ananda Coomaraswamy (1877-1947) The late curator of Indian art at the Boston Museum of Fine Arts, was unexcelled in his knowledge of the art of the Orient, and unmatched in his understanding of Indian culture, language, religion and philosophy. He is the author of ' The Dance of Shiva: Essays on Indian Art and Culture'

To conceive of Hinduism as a polytheistic system is in itself a naivete of which only a Western student, inheriting Graeco-Roman concept of "paganism" could be capable. The Hindu Ishavara (Supreme God) is not a jealous God because all gods are aspects of Him, imagined by His worshippers; in the words of **Lord Krishna**: "When any devotee seeks to worship any aspect with faith, and when by worshipping any aspect he wins what he desires, it is none other than Myself that grants his prayers. Howsoever men approach Me, so do I welcome them, for the path men take from every side is Mine."

This was the Hindu method; Indian religion adapts herself with infinite grace to every human need.

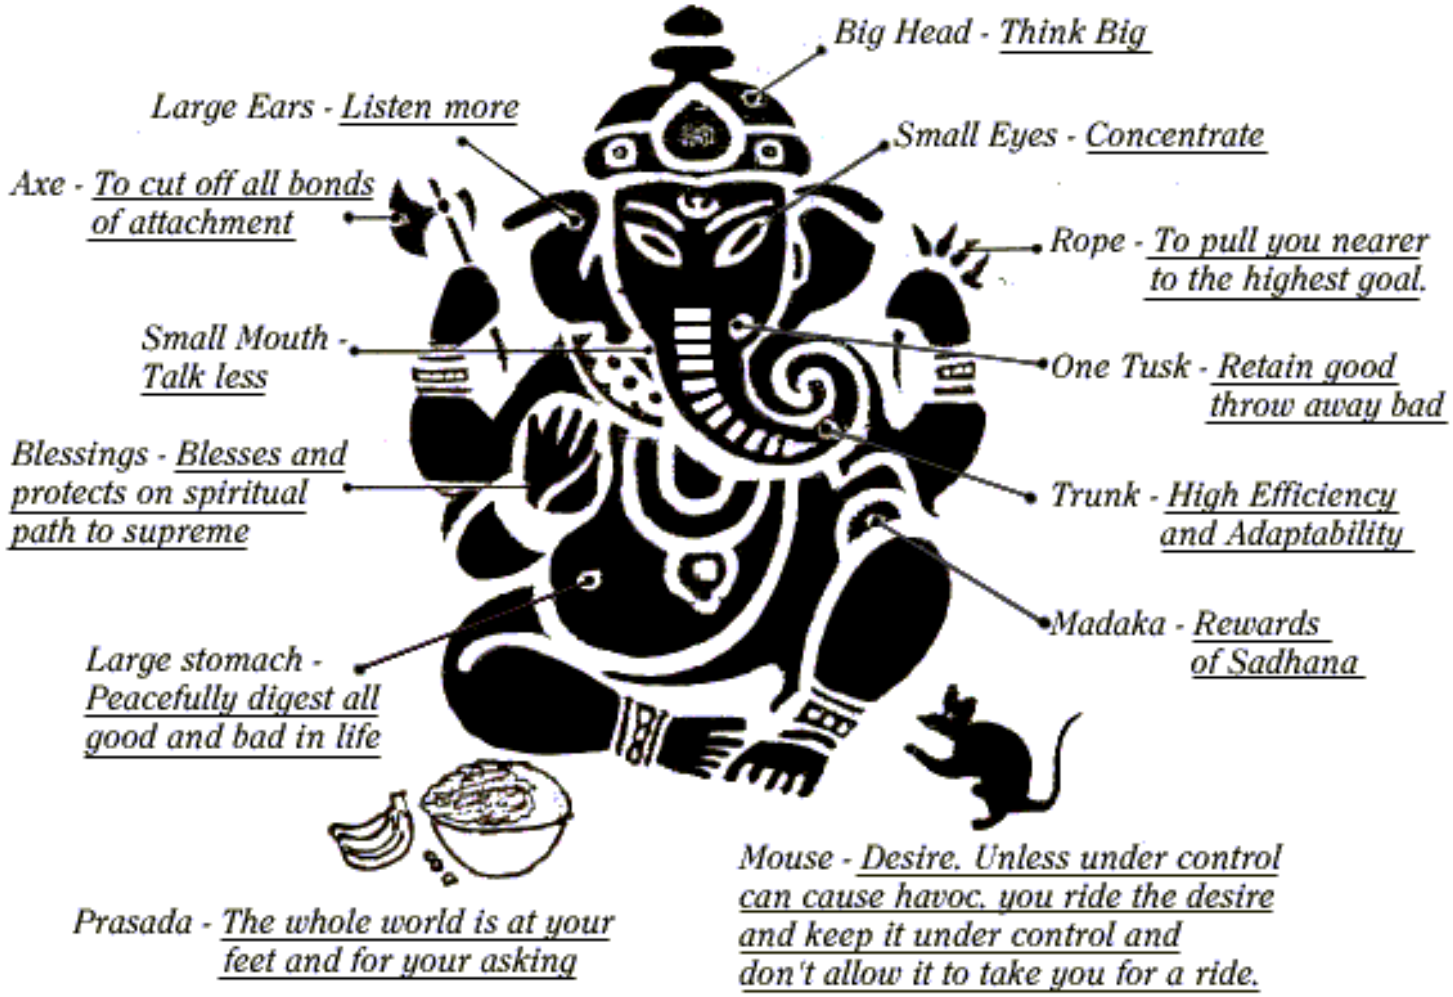
Ganesha - The Lord of Beginnings

Lord Ganesha, popularly known and easily recognized as the Elephant-God, is one of the most important deities of the Hindu patheon. Before every undertaking, be it laying of the foundation of a house, or opening of a store or beginning any other work, Lord Ganesha is first worshipped so at to invoke his blessings.



Ganesha has many names. The main ones are Ganapati (lord of the ganas, or attendants), Vighneshwara (controller of all obstacles), Vinayaka (the prominent leader), Gajaanana (elephant-faced), Lambodara (pendant-bellied), and Ekdanta (having one tusk).

Lord Ganesha - the lord of beginnings
(source: Indian Art - By Vidya Dehejia)

Lord Ganesha, also called Ganapati or Vinayaka, is presented in the form of a human body with the head of an elephant. This blend of human and animal parts is a symbolic representation of a perfect human being, as conceived by Hindu sages. His head symbolizes wisdom, understanding, and a discriminating intellect that one must possess to attain perfection in life. By worshipping Ganesha, a Hindu seeks God's blessings for achieving success in one's endeavors in the physical world and for attaining perfection thereafter. **Hence, Hindus worship Ganesha to seek God's blessings before beginning such activities.**

Lord Ganesha is the son of Lord Shiva and Goddess Parvati (a form of Goddess Durga). The other son of Lord Shiva is Karttikeya also known as Muruga, Skanda, Subramanya, Shanmukha. Ganesha has got two wives, one named Siddhi (Success) and the other named Riddhi (Prosperity). One who pleases the Lord, automatically comes in the good books of his two wives. Ganesha, the embodiment of wisdom, is also depicted as the scribe to whom sage Vyasa dictated the Mahabharata. He is accepted as the god of learning and the patron of letters.

The ancient sages, in their infinite wisdom, have designed Hindu deities with specific Vedantic attributes in mind.

***

Ganesha was born on the fourth day of the month of Bhadrapad, the sixth month of the Hindu lunar calendar. In the south, especially in Maharashtra people celebrate 'Ganesh Chaturthi' by buying or making of clay image of Ganesha, worshipping the idol at home or a community center and then taking it in a procession to be immersed in a river, lake or sea.

Vighneshwara (Remover or controller of all obstacles), Who is Ganapati/Ganesa? Ganapati is the Self. In a sentence, Ganesa simply means **"Self-realization is but the removal of obstacles to the recognition of the eternal, immanent, inner self, here and now."**

(source: **Ganapati: Song of the Self - By John A. Grimes** p. 194).

Ganesha has been a major deity, since the seventh and eighth centuries, in Thailand, Cambodia and Vietnam. It is from Vinayaka that the old Myanmar name for Ganesha, Mahapinary purha, was derived. Other names with a similar meaning occur frequently in Cambodian inscriptions, such as Vighnesha and Vignesvara, both of which mean "Lord of removing obstacles". A popular temple at Futako Tamagawa, Tokyo, Japan, displays Ganesha far more prominently than Buddha. Ganesha was extremely popular in the art of Indonesian islands, especially of Sumatra and Java and compare favorably with the eighth-century Ellora caves, in images, style and iconography. At Candi Sukuh in central Java, a remarkable fifteenth century relief shows three figures, with a dancing Ganesha in the centre. There are

paintings and stone sculptures of the deity found in China, apart from the textual references to Ganesha in the Chinese Buddhist canon. In Japan, there is the Shingon ritual practice that centers on Ganesha, with texts tracing back to China. In the Tibetan Buddhism, the practice associated with Ganesha, as Buddhist Tantric deity, survives up to this day. In Jainism, Ganesha occasionally found a place alongside Mahabir. The Tibetan Ganesha appears, besides bronzes, in the resplendent Thangka paintings alongside the Buddha. In a single Kathmandu valley of Nepal, there are four principal manifestations of "Binayak" in a protective role: Ashok, Surya, Chandra and Bighna. In that valley, Ganapati guards the Buddhist viharas where bhajans are sung in his praise. In Greece, Janus, the god in Greek mythology after whom the month of January was named, has the head of an elephant. Sometimes, he is depicted as a two-headed deity. Like Ganesha, Janus is worshipped at the beginning of any auspicious occasion. In Sri Lanka, the oldest image of Ganesha is found in the Kantak Chaitya in Mihintale which is dated to 1st century BC. The Ganesha idol at Subrahmanyam temple in Katargama town is still worshipped. People who do not practice Hinduism also visit this temple for this Ganesha is believed to grant the wishes of his devotees. For more refer to chapter on **Suvarnabhumi** and **India and China**.

Trimurti - (Lord Brahma, Lord Vishnu & Lord Shiva)

Trimurti - the three apparently contradictory aspects of existence:
"creation, conservation and dissolution, which are "one and the same thing as to the origin, the significance and the term."

***

According to French art historian, **Rene Grousset** (1885-1952) who speaks of the Trimurti statue at **Elephanta Caves**:

"Universal art has succeeded in few materialization of the Divine as powerful and also as balanced. He believed that it is "the greatest representation of the pantheistic god created by the hands of man." He concludes with poetic enthusiasm: "Never have the overflowing sap of life, the pride of force superior to everything, the secret intoxication of the inner god of things been so serenely expressed."

(source: **The India I Love - By Marie-Simone Renou** p. 88-93).

In the words of Rene Grousset, " The three countenances of the one being are here harmonized without a trace of effort. There are few material representations of the divine principle at once as powerful and as well balanced as this in the art of the whole world. Nay, more, here we have undoubtedly the grandest representation of the pantheistic God ever made by the hand of man...Indeed, never have the exuberant vigor of life, the tumult of universal joy expressing itself in ordered harmony, the pride of a power superior to any other, and the secret exaltation of the divinity immanent in all things found such serenely expressed."

(source: **The Civilization of the East – India - by Rene Grousset** p.245-6).

The Hindu Trinity also called Trimurti (meaning three forms), is the **representation of the three manifestations of the Supreme Reality**, as Brahma, Vishnu and Shiva. Brahma symbolizes creation, Vishnu preservation and renewal, and Shiva dissolution or destruction necessary for recreation. It must be understood that the members of the Hindu Trinity are not three different and independent gods, but three aspects of one Supreme Reality called Bramh by the seers of the Upanishads.

1. Lord Brahma - the first member of the trinity though much less important than the other two, namely Vishnu and Mahesha, is manifested as the active creator of this universe. The name Brahma is not found in the Vedas and the Brahmanas, where the active creator is merely known as Golden-embryo **(Hirayna-garbha)** or the Lord of Progeny (Praja-pati). The Mahabharata considers him as born from the embryo which took shape in Vishnu's mind when he began to think of creation.

After the destruction of one universe Vishnu falls asleep, floating on the causal waters. When another universe is to be created, Brahma appears on a lotus, which springs from the navel of Vishnu. Hence Brahma is also called Navel-born (Nabhi-ja) or the Lotus-born (Kinja-ja). When Brahma creates the world it remains in existence for one of his days, which means 2,160,000,000 years in terms of Hindu calendar.

When Brahma goes to sleep after the end of his day, the world and all that is therein is consumed by fire. When he awakes he again restores the whole creation. This goes on till the hundred years of Brahma's life is completed. When this period ends he himself loses his existence, and he all gods and sages, and the whole universe are dissolved into their constituent elements.

Today though Brahma's name is invoked in many religious services, his image is worshipped in only a few temples. Brahma seems to have been thrown into shade probably because in Hindu mind he has ceased to function actively after creation of the world, though he will exert himself again while creating a new universe when this present one will meet its end. Understandably, the legends about this god are not so numerous or rich as those centered round the other two of the trinity.

Brahma has four arms and he holds a lotus flower, his sceptre, his bow parivita, a string of beads, a bowl containing the holy water and the Vedas. He has four heads and is therefore called Chaturanana or Chaturmukha. His vehicle is the swan or goose, the symbol of knowledge. He is therefore said to be riding on the swan (hansa-vahana). He is the source of all knowledge and his consort, **Saraswati**, is the goddess of knowledge.

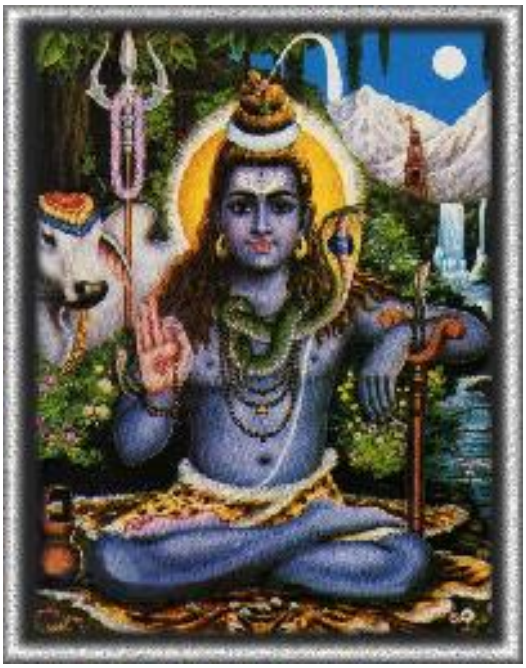
2. Lord Vishnu is the central and major deity of the trinity. He is the preserver and for all practical purposes he is deemed to be omnipotent, omnipresent and omniscient. The name Vishnu comes from the root vish, which means to spread in all directions, "to pervade." Hence, Vishnu is the Pervader.

Lord Vishnu symbolizes the aspect of the Supreme Reality (Bramh of the Upanishads) that preserves and sustains the things and beings in the world. He is symbolized by a human body with four arms. He is portrayed as carrying a conch (shankha), a mace (gada), and discus (chakra). He is blue body and wears yellow clothes. The worship of Lord Vishnu is very popular among Hindus, especially among the followers of the Vaishanava tradition (Vaishnavism). He is the second member of the Hindu Trimurti (trinity). He is also known by other names , such as Vasudeva, Hari, Kesava, Purusottama and Narayana.

It is said that Vishnu is the god of Time, Space and Life. It is also said that he is the god of Joy and that his footsteps are impregnated with infinite sweetness and felicity."

The worshippers of Vishnu, known as Vaishnavas, recognize in him the Supreme Being, out of whom emerge Brahma, the active creator, Vishnu himself the preserver, and Shiva or Rudra, the destructor. Vishnu's preserving, restoring and protecting powers have been manifest on earth in a variety of forms, called Avataras, in which one or more portions of his divine attributes were embodied in the shapes of a human being or an animal or a human-animal combined forms. He is bleu-skinned and in all images and relief he is seen in rich ornaments and regal garments. His wife is Lakshmi or Sri, the goddess of wealth and fortune. His place of abode is Vaikuntha (heaven) and his vehicle is Garuda, a giant-sized eagle .

Vishnu is the infinite ocean from which the world emerges. The blue body of the Lord signifies that He has infinite (as the universe) attributes. The Lord is shown standing or lying down on a thousand-headed snake (named **Shesha or Ananta Nag - timeless or ageless snake**). The snake stands with its hoods open over the head of the Lord.



The following ten incarnations of Lord Vishnu are described in Hindu mythology and are popular. These incarnations reveal the help rendered by God during various stages of human evolution. The first two incarnations are in the animal form, the third one is half-human and half-animal, and the fourth and the subsequent ones are all in human form. **These incarnations relate to human evolution, from aquatic life to human life, and are consistent with modern theory of evolution.**

1. **Matsya (fish) -** saves Sage Manu from floods and recovers the Vedas from demons. The only (ancient) temple for Matsya Vishnu's incarnation at the time of the "great flood" is only found at Shankhodhara in Bet Dwaraka.
2. **Kurma (tortoise) -** sustains the earth on his back.
3. **Varaha (boar) -** brings the earth back from the bottom of the ocean where it was dragged down by a demon, known as Hiranyaksha; Varaha kills the demon.
4. **Narasimha (man-lion) -** kills the demon King Hiranyakashipu, who was planning to kill his own son, a devotee of Lord Vishnu.
5. **Vamana (dwarf) -** the first human incarnation of the Lord, kills the demon King Mahabhali, who had

deprived the gods of their possessions.
6. **Parasurama (the warrior with an axe) -** saves Brahmins from the tyranny of the arrogant Khastriya.
7. **Rama** - kills Ravana, the demon king of Lanka.
8. **Sri Krishna** - the most popular incarnation; Krishna's contributions throughout his life include the teachings of the Bhagavad Gita to Arjuna.
9. **Buddha -** Hindus consider Buddha as an incarnation of Lord Vishnu and accept his teachings, but do not directly worship him.
10. **Kalkin - (a man on a white horse) -** this incarnation is yet to come and will mark the end of all evil in the world.

(For more on Vishnu avatars refer to **The Hindu Mind - By Bansi Pandit** p. 167 and **A Survey of Hinduism - by Klaus K Klostermaier** p. 146 and 241and **Hinduism - By Linda Johnsen** p. 184-193).

3. Lord Shiva - The Grace and the Terror of God

Lord Shiva represents the complete cyclic process of generation, destruction, and regeneration. The all embracing nature of Lord Shiva is reflected in his 1008 names. Lord Shiva represents the aspect of the Supreme Reality (Bramh of the Upanishads) which continuously recreates, in the cyclic process of creation, preservation, dissolution and recreation. He annihilates evil, grants boons, bestows grace, destroys ignorance, and awakens wisdom in His devotees. He is also called Rudra. In Yajur-Veda, Rudra is also called "Mahadeva."

One of the three great gods of Hinduism, Siva is a living god. The most sacred and most ancient book of India, the Rg Veda, evokes his presence in its hymns; Vedic myths, rituals, and even astronomy itself testify to his existence from the dawn of time. From the dawn of creation, the Great Yogi, the sum of all opposites, has been the guardian of the absolute. **He is the totality of existence - male and female, light and dark, creation and destruction.**

Shiva is shown in various ways. Shiva another well-known name is **Yogiraja**, i.e. the Lord of Yoga.

He is seated on a skin of a tiger, a number of cobras all around his neck, his long matted hair into a mop atop of his head, the crescent that he wears on the mop of his hair, the sacred river **Ganga** falling from his head and flowing by his side who was brought down from heavens by Bhagiratha, the trident (**trishula**), the symbol of his power, the sacred bull (**Nandi**), and the mendicant's bowl. Besides, these symbols another very important physical characteristic of Shiva is his vertical third eye. In **Mahabharata**, the great Hindu epic, the legend of how Shiva got the third eye is given this way. One day his beautiful consort **Parvati** (daughter of the King of Himalayas), stealthily went behind Shiva and playfully placed her hands over his eyes. Suddenly darkness engulfed the whole world and all beings trembled in great fear as the lord of the universe had closed his eyes. Suddenly a massive tongue of flame leapt from the forehead of Shiva; a third eye appeared there and this gave light to the world.

Another popular image of Shiva has no human form but is represented by **Linga - The Linga of Light**

The myth is one of the most popular of the entire **Puranic** corpus and is told many times in various settings. It recounts the first appearance of Shiva linga which pierced the three worlds as a brilliant shaft of light and was witnessed by Brahma and Vishnu long ago.

The **Vedas,** however, testify one by one that neither Brahma nor Vishnu, but Shiva is supreme. As the two stand in disbelief, **a huge column of fire splits the earth between them and blazes up through the sky to pierce the highest heavens.** Astounded, Brahma and Vishnu decide to determine the source and extent of this brilliant pillar of light. Vishnu becomes a boar and burrows deep into the netherworlds. Brahma mounts his goose and flies as far up as the heavens reach. But even after thousands of years they cannot find the bottom or the top of the shaft of light. When they have returned to their starting place, Shiva emerges from the light in

his “partial” bodily form.

The linga of light is thus the image of the supremacy of Shiva. It is as what Mircea Eliade has called the **axis mundi** or **the pillar at the center of the world, originating deep in the netherworlds, cracking the surface of the earth, and splitting the roof of the sky.** In this linga Shiva is not one god among others, but the unfathomable One. This light is the mysterium tremendum which finally cannot be described or comprehended by any or all faces and attributes.

The linga of light was the first linga. After that, Shiva vowed that this unfathomable linga would become small so that people might have it as an emblem for their worship. Wherever, the linga is, there is a tirtha, because the linga by nature is a “crossing place” where the worlds are knit together by the shaft of Shiva. Other deities have murits, images, but only Shiva has the world-spanning form of a linga.”

The word linga means an **emblem, symbol or a mark** and the worship of this shaft alarmed and horrified many early Western visitors to India. In Varanasi, at the famed Kedarnath temple there is a Sivalingam in the main sanctum, which is a low flat rock with speckled light granite on one side, a line of white granite going across the rock and on the other side dark speckled granite. The **Puranic** story is that this lingam represents a plate of rice and lentils. The linga is certainly a bisexual symbol but not a phallic symbol alone. The shaft of the linga of Shiva is set in a circular base, called a "seat." It is the seat of that **divine energy** (shaki) personified as Shiva's **female half** and often called by the proper name **Shakti.**

Many ancient civilizations recognized the wonder of this concept- including the Chinese, who represent it somewhat more abstractly in the symbol of Yin and Yang. Thus it depicts the generative symbol or the fountain-source of light, this Linga represents the Lord of the Universe. The phallus aspect has been overdone by **western scholars** though Linga actually means a 'sign', 'mark' or 'symbol.

(source: **Banaras: City of Light - By Diana L. Eck** p 107-109).

The **Sanskrit-English Dictionary** edited by P. K. Gode and C. G. Karve is widely regarded as an authoritative work and it gives a wide range of meanings for lingam:

"**The primary meaning given is: “A mark, sign, token, an emblem, a badge, symbol, distinguishing mark, characteristic.”**

Shiva-lingam is a sign by which Shiva is symbolized. Note that besides the popular Shiva-lingam of the column or round egg-shaped sign, the Natraja is also the lingam of the dancing Shiva, symbolizing the universe’s creation, sustenance and dissolution. The trishul (“weapon” that pierces the veil of ignorance) is his lingam in the context of yoga, as he is also considered the supreme yogi. The Maitrayaniya-Upanishad (6.10) applies the term lingam to the entire “creation extending from the first principle (mahat)to the particulars (vishesha). It contrasts this with the linga that is “without foundation”, i.e. the unthinkable Reality itself.

In the Mahabharata (12.195.15) the linga is the vehicle, or body, of the transmigrating psyche. The term linga can also denote the phallus or, by extension, the cosmic principle of creativity.

(source: **The Meaning of Lingam - By Rajeev Malhotra**).

God, to us is not the creator who lives apart from the Universe but has manifested Himself as the Universe and pervades everything within. Thus, He is the indweller in all beings, material and energy. He has no form but at the same time, all forms are His. **Linga Purana** states, 'The foremost Linga which is devoid of smell, color,

taste, hearing, touch, etc, is spoken of as prakriti (nature).

Linga means a "mark" in Sanskrit. It is a symbol that points to an inference.

When one sees a big flood in a river, one infers that there had been heavy rain earlier. When one sees smoke, one infers that there is fire. This vast Universe of countless forms is a Linga of the omnipotent Lord. When a Hindu looks at the Linga, his mind is at once elevated and he thinks of the Lord, especially Lord Siva. A Hindu knows that Lord Siva is formless. Lord Siva has no form of his own; and yet, all forms are His forms. Lord Siva pervades all forms. Every form is the form or Linga of Lord Siva. **The Linga is only the outward symbol of the formless being, Lord Siva— Lord Siva incarnate, who is the indivisible, all-pervading, eternal, auspicious, ever-pure, immortal essence of this vast universe, who is the undying soul seated in the chambers of one's heart, who is one's Indweller, innermost Self or Atman and who is identical with the Supreme Brahman.**

(source: **Sivalinga, the Formless Form** - **Hinduismtoday.com** 2001).

Another image of **Ardhanarishwara**, represents Lord Shiva as the **union of substance and energy**, the life principle and **Shakti.**

Shiva, as Destroyer, needs plenty of power and energy. This is what Parvati, or Durga or Shakti as she is called, provides. **It is only the Hindu tradition, which provides, even at the conceptual level, this picture of the male and female principles working together, hand in hand, as equal partners in the universe.** This concept is carried further to its logical climax in the form of Ardhanarishwara, formed by the fusion of Shiva and Shakti in one body, each occupying one half of the body, denoting that one is incomplete without the other.

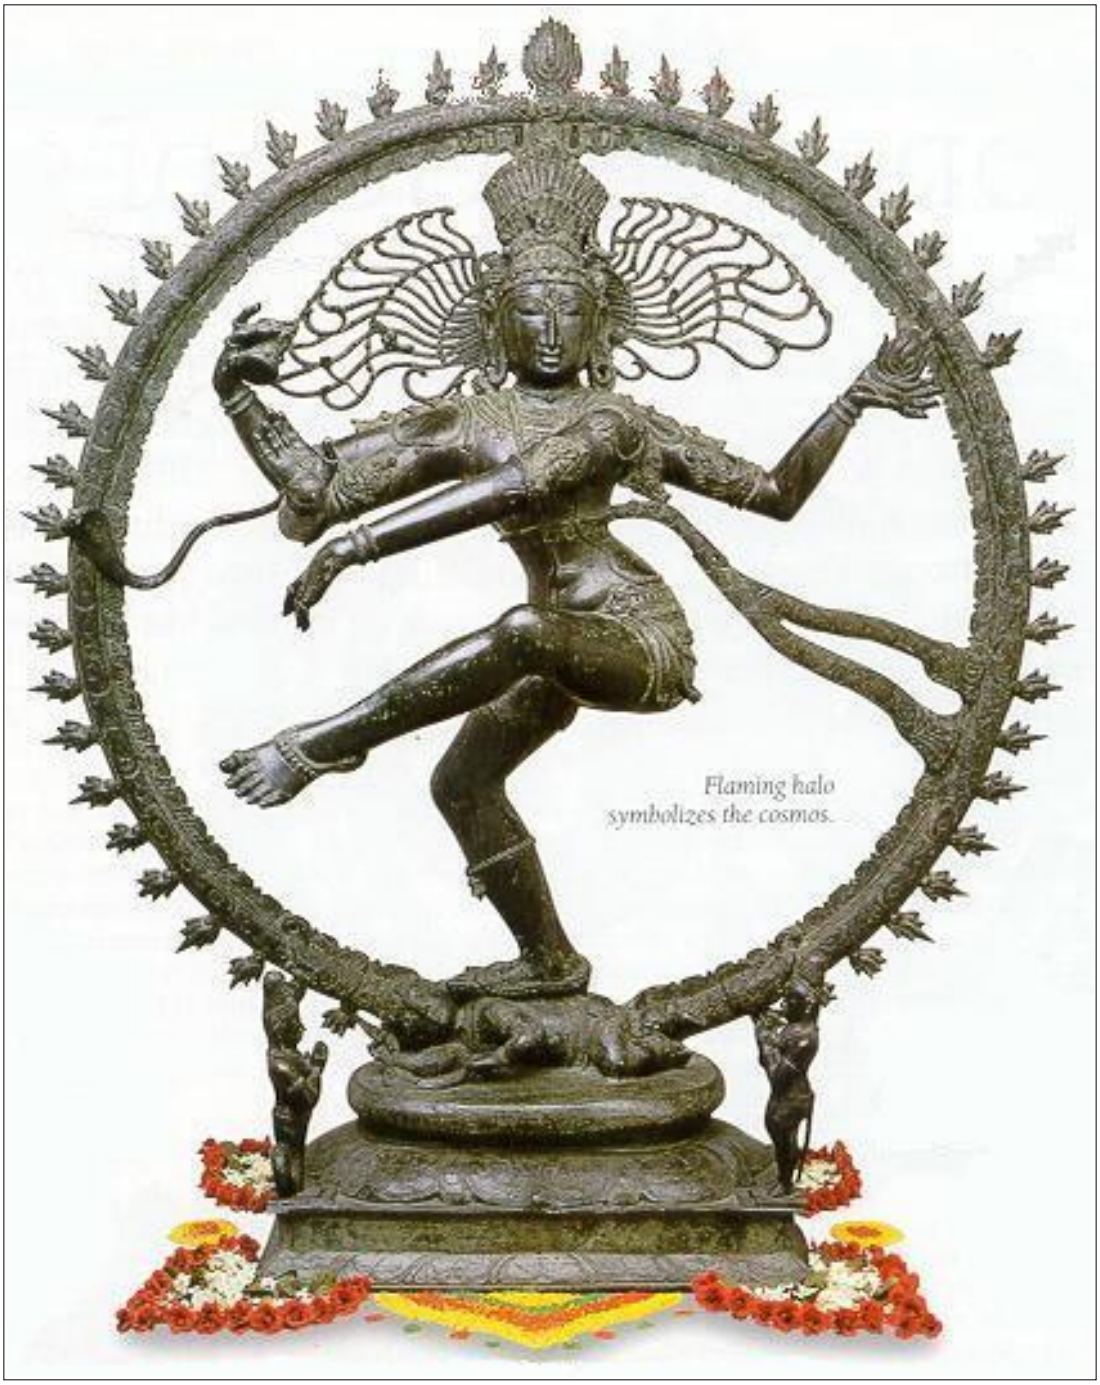
Shivaratri, i.e. Shiva's Night is the famous festival in honor of Lord Shiva. It is held on the 14th night of the dark half moon in the month of Magha (Jan-Feb).

Marriage of Shiva and Parvati

The most celebrated Shiva motif is that of the **Nataraja, the Lord of the Dance. The Cosmos is His theatre, there are many different steps in His repertory, He Himself is actor and audience.** This is the pose in which Shiva Nataraja has been immortalized in countless beautiful sculptures, especially in South India, each detail of this image is invested with meaning. This image symbolizes the divine activities of God. " Creation

arises from the drum, (sound) protection proceeds from the hand of hope, from fire proceeds destruction, from the foot that is planted upon muyalahan (dwarf) proceeds the destruction of evil, the foot held aloft gives deliverance." His serene smile shows his uninvolved transcendence, the three eyes are interpreted as sun, moon, and fire, or as the three powers of Shiva: will, knowledge, and action. The garland of skulls around his neck identifies him as time, and the death of all beings. Chidambaram is where Shiva is said to dance his cosmic drama.

"Grandest of all such representations symbolizing a synthesis of science, art and religion is the image of Nataraja as the Cosmic Dancer. The central idea of the dance is creation, preservation, destruction, giving rest and release.



Rene Grousset's (1885-1952) French art historian, gives a fine interpretation of the image:

"Whether he be surrounded or not by the flaming aureole of the Tiruvasi (Pabhamandala) – the circle of the world which he both fills and oversteps – the King of the Dance is all rhythm and exaltation. The tambourine which he sounds with one of his right hands draws all creatures into this rhythmic motion and they dance in his company. The conventionalized locks of flying hair and the blown scarfs tell of the speed of this universal movement, which crystallizes matter and reduces it to powder in turn. One of his left hands holds the fire which animates and devours the worlds in this cosmic whirl. One of the God's feet is crushing a Titan, for "this dance is danced upon the bodies of the dead", yet one of the right hands is making a gesture of reassurance (abhayamudra), so true it is that, seen from the cosmic point of view…the very cruelty of this universal determinism is kindly, as the generative principle of the future. And, indeed, on more than one of our bronzes the King of the Dance wears a broad smile. He smiles at death and at life, at pain and at joy, alike, or rather,..his smile is death and life, both joy and pain…**From this lofty point of view, in fact, all things fall into their place, finding their explanation and logical compulsion. Here art is the faithful interpreter of a philosophical concept.** The plastic beauty of the rhythm is no more than the expression of an ideal rhythm. The very multiplicity of arms, puzzling as it may seem at first sight, is subject in turn to an inward law, each pair remaining a model of elegance in itself, so that the whole being of the Nataraja thrills with a magnificent harmony in his terrible joy. And as though to stress the point that the dance of the divine actor is indeed a sport, (lila) – the sport of life and death, the sport of creation and destruction, at once infinite and purposeless – the first of the left hands hangs limply from the arm in the careless gesture of the gajahasta (hand as the elephant's trunk). And lastly, as we look at the back view of the statue, are not the steadiness of these shoulders which uphold world, and the majesty of this Jove-like torso, as it were a symbol of the stability and immutability of substance, while the gyration of the legs in its dizzy speed would seem to symbolize the vortex of phenomena."

(source: **The Civilization of the East – India - by Rene Grousset** p. 252 - 53).

"Be it in the Vedas, the Upanishads or the Puranas, the Lord Shiva is always referred to with great reverence as well as under different names. The conception of Shiva is not simply that of a godhead whose powers have become concentrated in a single figure dominating a certain period of Indian history. Shiva is identified with the Eternal and All powerful; he is the Primal Soul and the great Soul from which unaccounted other souls have sprung. Shiva is beauty, Shiva is all, he is everywhere. There is no life, no motion and no rhythm without Siva, for he is the Cosmos itself."

(source: **La Danse Hindoue - by Usha Chatterji** Translated from the English By Manah Garreau-Dombasle).

Nataraja, the King of the Dance

An entire cosmology, theology and way of salvation are embodied in this single form. To really see the meanings of Nataraja is to see into the inner workings of our own existence. Though all sacred art in India is deeply symbolic, the one figure of Nataraja can lay the workings of our life before us.

(source: **Travel through Sacred India** - **By Roger Housden** p. 110).

The Form of Nataraja, the Cosmic Dancer, **"a symbol of superhuman lyricism by which....medieval India has expressed its heroic adhesion...to Joy, Pain and Universal Force."**

To summarize the whole interpretation of Shiva's dance: The Essential Significance of Siva's Dance is threefold: First, it is the image of his Rhythmic Play as the Source of all Movement within the Cosmos, which is Represented by the arch; Secondly, the Purpose of his Dance is to Release the Countless souls of men from the Snare of Illusion; Thirdly, the Place of Dance, Chidambaran, the Center of the Universe, is within the Heart.

The cosmic activity is the central motif of the dance.

Ananda K Coomaraswamy (1877-1947) the late curator of Indian art at the Boston Museum of Fine Arts, was unexcelled in his knowledge of the art of the Orient, and unmatched in his understanding of Indian culture, language, religion and philosophy. Praising this grand achievement of art, he writes:

"This conception itself is a synthesis of science, religion and art. In the night of Brahma, Nature is inert, and cannot dance till Shiva wills it. He rises from His rapture, and dancing sends through inert matter pushing waves of awakening sound, and lo! matter also dances appearing as a glory round about Him. This is poetry; but nonetheless, science.

Whatever the origins of Siva's dance, it became in time the clearest image of the activity of God which any art or religion can boast of.

"How amazing the range of thought and sympathy of those rishi-artists who conceived such a type as this, affording an image of reality, a key to the complex tissue of life, a theory of nature, note merely satisfactory to a single clique or race, not acceptable to the thinkers of a country only, but Universal in its appeal to the philosopher, the lover and the artist of all ages and all countries…"

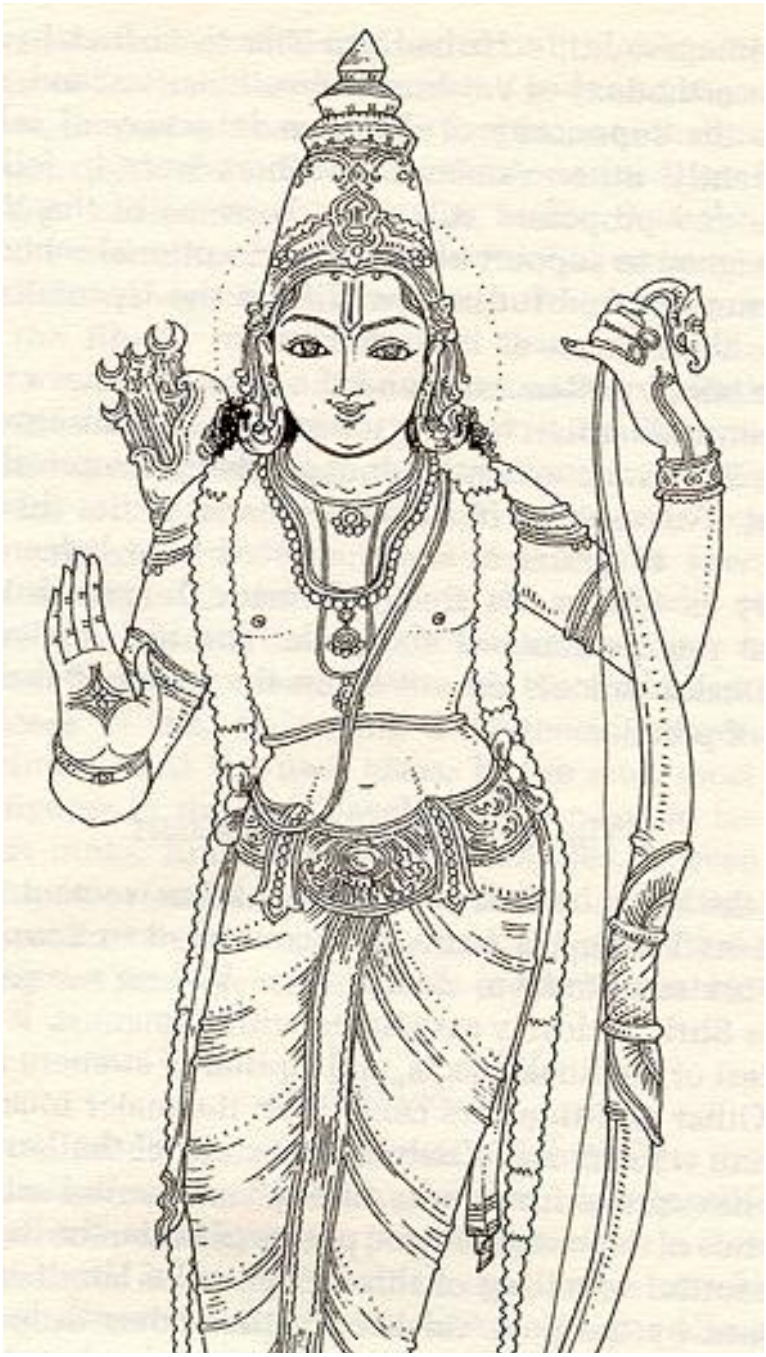
"Every part of such an image as this is directly expressive not of any superstition or dogma, but of evident facts. **No artist of today, however great, could more exactly or more wisely create an image of that Energy which science must postulate behind all phenomena.** "It is not strange that the figure of Nataraja has commanded the adoration of so many generations past; familiar with all skepticisms, expert in tracing all beliefs to primitive superstitions, explorers of the infinitely great and infinitely small, we are worshippers of Nataraja still."

(source: **The Dance of Shiva - By Dr. Ananda K Coomaraswamy** p. 57-66).

The late astrophysicist, **Carl Sagan** (1934-1996) in his book, Cosmos, asserts that the **Dance of Nataraja** (Tandava) signifies the cycle of evolution and destruction of the cosmic universe (Big Bang Theory). "It is the clearest image of the activity of God which any art or religion can boast of." Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but also the very essence of inorganic matter. For modern physicists, then, Shiva's dance is the dance of subatomic matter. Hundreds of years ago, Indian artist created visual images of dancing Shivas in a beautiful series of bronzes. Today, physicist have used the most advanced technology to portray the pattern of the cosmic dance. Thus, the metaphor of the cosmic dance unifies, ancient religious art and modern physics.

He further says: **" The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation Nataraja, the Dance King. In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."**

(source: **Cosmos - By Carl Sagan** p. 213-214).



Fritjof Capra (1939 -) Austrian-born famous theoretical high-energy physicist and ecologist wrote:

"Modern physics has thus revealed that every subatomic particle not only performs an energy dance, but also **is** an energy dance; a pulsating process of creation and destruction. The **dance of Shiva is the dancing universe**, the ceaseless flow of energy going through an infinite variety of patterns that melt into one another''.For the modern physicists, then Shiva's dance is the dance of subatomic matter. As in Hindu mythology, it is a continual dance of creation and destruction involving the whole cosmos; the basis of all existence and of all natural phenomenon. Hundreds of years ago, Indian artists created visual images of dancing Shivas in a beautiful series of bronzes. In our times, physicists have used the most advanced technology to portray the patterns of the cosmic dance."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p. 241-245). For more refer to chapters **Quotes251_270**, **Advanced Concepts**, **Hindu Cosmology** and **Hindu Art**).

Lord Ram

Lord Ram, the **dark skinned God** - is the seventh Avatar (incarnation) of Vishnu. Born during the second age of the world called Treta Yuga, he is the immortal hero of the great religious epic of India, the **Ramayana**. Lord Ram, the most famous incarnation of God, appeared on Rama-navami (Chaitra 9). He is known as **Maryada Purusottama** and is the emblem righteousness.

Ram occupies a very reverential place in the religious life of India and in the religious history of the world. He is the embodiment of righteousness and is believed to be incarnation of the solar aspect of Lord Vishnu.

The Ramayana was written by **Rishi Valmiki**, who is also considered as the father of epic style of poetry. Innumerable temples are scattered all over India with the images of Ram, his younger brother Lakshman and his consort Sita, and sitting in devotional posture is Hanuman, the greatest devotee of Lord Ram.

Raama was dark; like Vishnu; MeghaVarnam, KaalaMegham, MeghaShyaamam are the various descriptions of Vishnu.

Lord Ram is depicted to be having two arms and not four, which emphasizes the character of Ram as a human being and the way god Vishnu preferred to adopt this form just to re-establish the golden age of justice and happiness. The expression of **Rama Rajya** even today means the reign in which peace and prosperity prevails.

Ram lived during the end of the **Treta Yuga** or the second age of the world, when the sages, the holy men and even gods were terrorized and alarmed by the misdeeds of **Ravana,** the demonic king of Lanka. Ravana had pleased Brahma, who had given the boon of invulnerability from the wrath of

god or goddess. Ravana misused his power, and to provide deliverance, Lord Vishnu promises to descend on the earth in the form of a man by taking birth as a son to Dasharatha, a king of Ayodhya.

The festivals associated with Rama's incarnation and celebrated in India are Ram Navmi, Dussehra and Diwali. The first one is associated with the birth of Lord Rama. Dussehra is the culmination of the ten-day celebrations, organized to exhibit the episodes of the life of Lord Rama. On the tenth day the last episode of Rama's victory over Ravana is shown and the effigies of Ravana, his brother Kumbhakarna and his son Indrajit are burnt amidst loud rejoicing. Diwali is celebrated on the day on which Rama was crowned after his return to Ayodhya with Sita.

According to one of the Upanishads, named **Rama-purv-tapni Upanishad**, "Just as the whole nature of the large banyan tree is contained in its tiny seed, so also the whole universe moving and unmoving, is contained in the seed word Rama."

हरी ॐ , जय राम जी की !

हरी ॐ , जय राम जी की !

Lord Krishna

The Lotus-Eyed God. Keshava, One Who Has Long, Black Matted Locks. **Krishna, Dark-Complexioned Lord.**

Krishna, the god who delivered the message of the **Bhagavad Gita** (**the timeless masterpiece of Spiritual wisdom**) to **Arjuna**, is worshipped in thousands of temples throughout India.

Krishna, "the Dark One," because of the dark color of his skin, was born to Devaki in prison. As a lovable child, as a shrewd diplomat, as a great sage and even as a fearless man of action, Krishna's personality has fascinated for ages not only Indians but also thinkers of other lands.

Krishna's picture is depicted in so may styles; in fact Lord Krishna has probably been the subject of numerous masterpieces of art. Sometimes he is shown as a child eating butter, at other times he is seen dancing with maidens or playing the flute or advising Arjuna in the battlefield of **Kurukshetra.** Krishna's skin color is blue the color of the sky.

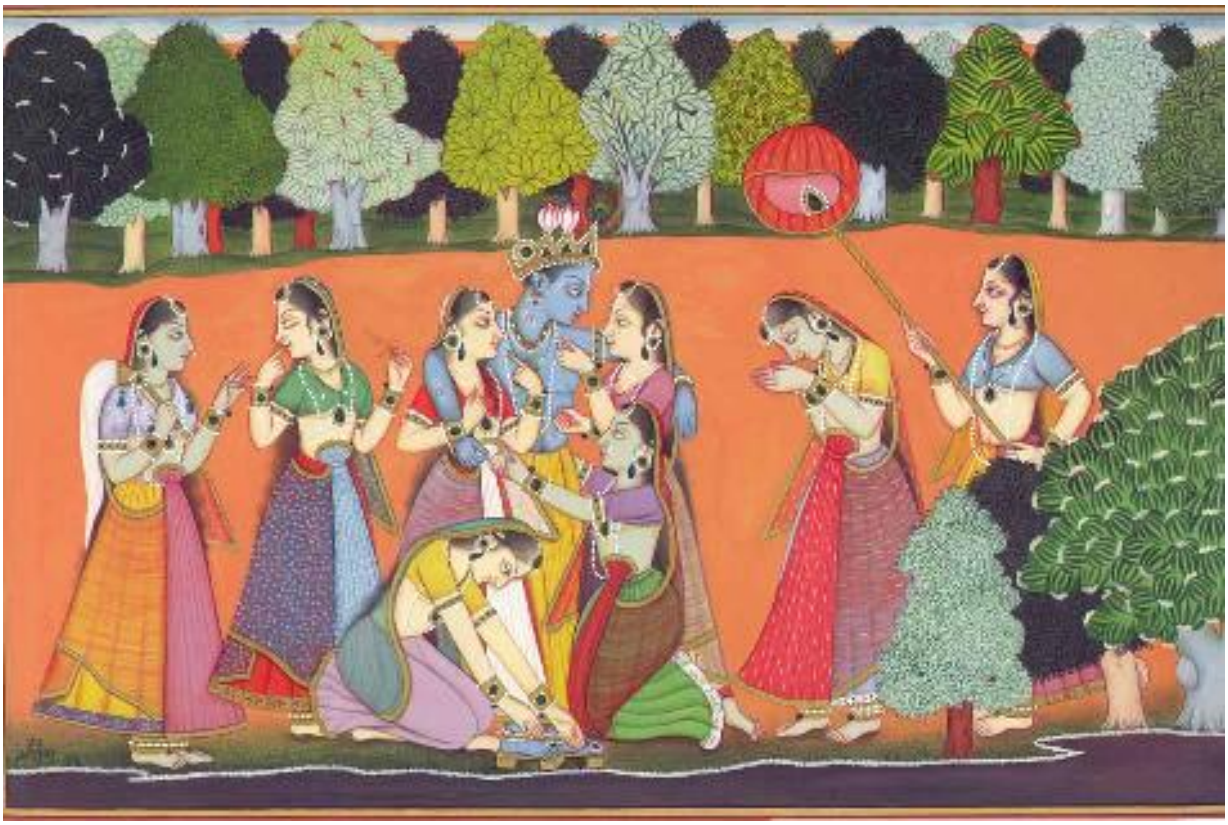
The eighth incarnation of Vishnu, Krishna, has evolved into a distinct and composite persona over the millennia. Krishna devotees ardently look upon him as the Godhead, more emotively evocative than most of the other avatars.

His birthday on the eighth day in the dark fortnight of Sravana, in or around the month of August, is still celebrated with great joy and enthusiasm every year as Janmashtami. In many places, especially in Mathura, where he was born, *jhankis*, comprising glimpses into his childhood episodes, are displayed with lights and images of the divine child. In Maharashtra, pots of curd and buttermilk are hung high in the streets and human pyramids are formed to go up and reach out for their contents, reminiscent of the child Krishna's playful exploits for wresting milk and butter from the pots kept beyond his reach. A similar ceremony is observed in south India, where people climb up poles to win the prize money. The **Jagannath temple** at Puri has wooden images of Jagannath (Krishna), a Balabhadra (Balaram) and Subhadra, their sister.

Lord Krishna's awesome cosmic form

As for the theophany in the eleventh chapter of the Bhagavad Gita, **Arjuna has a vision of Krishna's awesome cosmic form and feels overwhelmed.** The Lord assures him that those with an unswerving devotion to him, in the true spirit of bhakti, can see him. A complex amalgam of the human and the Divine, he is seen differently by different people. To the Pandavas he was their true friend and guide, to the cowherds he was just one of their own, to the Vrajagopis the highest object of love and the yogis saw him as the absolute truth. The Kurukshetra war symbolizes the perennial fight between the forces of light and darkness. The forces of light are guided by Krishna, the one who embodies cosmic consciousness, the Divine Incarnate who has come to lead humanity toward its greater destiny.

In the **Bhagavad Gita**, Krishna points out that to a warrior nothing is nobler than a righteous war and declares that one should do his duty without any attachment for results. He explains to Arjuna the three noble paths. First, is that of **Yoga** (knowledge), which means yoking mind and body to achieve perfect unity beyond the limits of thought and language; second is that of **Dharma** (righteousness), which means religious duties and customs, while the third is that of **Bhakti** (devotion). Devotion implies love to a personal God and complete surrender to



Him. This is the path that commands the strongest approval of Krishna. He says:

"Have your mind in Me, be devoted to Me, to Me shall you come...Though I am unborn, the changeless Self...to save the good and destroy evil doers, to establish the right, I am born from time to time."

Bhakti, as advocated in the Gita entailed total self-surrender to the supreme Lord in the form of Krishna, shorn of the wasteful accessories of costly rites and rituals, as a simple way to salvation, without displacing the methods of moksha through karma and gyana which evolved out of the Vedic religion.

***

Krishna and the Gopis: Symbolic representation of a Passionate Lover to Inspire Souls.

Lord Krishna and gopikas

Krishna, the youthful and delightful flute-player: as **Murali-manohar**, "the handsome one with a flute" he is often depicted standing beneath a sacred Kadamba tree, with his flute to his lips, his leg crossed in a graceful pose, a garland of flowers round his neck, a milk cow at his side affectionately licks his foot. It is this image that has inspired much of the devotion of the **Alvar poets - Andal**, for example often imagines herself as one of the Gopis. Full of devotional fervor and charming detail, it has become the classical expression of devotion to Krishna. From then on the imagery of Krishna's love affair with the Gopis became irresistible. It swept across the whole of India as poet after poet poured out his or her devotion to Krishna. For a thousand years the arts of Hindu India - poetry and music, drama, painting and dance - have found their greatest inspiration in this vision of love in the blessed land of Braj.

The notes of Krishna's flute drifting through the woods are the call of the divine. Thus the objective of Bhakti is fulfilled, and the emotional life of man in all its richness and energy is sublimated and lifted onto the plane of the spiritual life. And, as in all real love, the individual forgets himself utterly and entirely: only the object of love, the divine Krishna, the Lord, the inner Self of man, remains.

The **Gita** says: **"God is the immutable center of infinite mobility."** and Krishna is the symbol of this.

Central to Krishna's childhood was his dance with the gopis, called **raasa-lila**, which later became the object of worship by many of the devotional sects. Scenes from raasa-lila are now enacted with great verve not only in

the Mathura-Vrindavan region but also in Assam and Manipur, sometimes in the Manipuri dance style.

The tales of women abandoning their families to run after him served as poetic expressions of the soul's quest for union with divinity. Worshippers of Krishna were expected to neglect all worldly duties to devote themselves single-mindedly to the adoration of the god.

Krishna's popularity derives partly from the fact that unlike other deities, Krishna appears in all the aspects of life usually associated with childhood, adolescence and adulthood--as a flute-playing trickster, lover of cowgirls and, finally, as a royal advisor on statecraft. What's endearing about Krishna is not so much his superhuman deeds but his human characteristics, captured in literature and art against the idyllic, pastoral background that still defines much of the Indian landscape. The Bhakti movement is broad and many-sided, and we can only touch on some of its aspects. It is first seen as distinct form around the fourth century B.C. Vasudeva (the good god), Bhagavan (the Adorable One), Narayana and Hari are several other names.

Numerous heroic incidents happened before Krishna left the human body and returned to his heavenly abode. Legend says that the gods, headed by Brahma and Shiva approached Krishna begging him to return as the latter's mission on earth had been completed. Krishna promised the gods that within seven nights he would complete the destruction of Yadavas and return to his perennial home. Bad omens started appearing in Dwaraka; strong hurricanes, screaming birds, wailing cats and dogs, howling jackals and headless spirits drew the attention of all Yadavas in Dwaraka. Krishna advised the residents to leave Dwaraka and move to Prabhasha, a site further inland.

Only Krishna and Daruka, his charioteer were left. Only those left behind at Dwarka were spared to continue the race of this tribe. Balarama, his brother and companion of Krishna, went to the seashore, performed yoga and left his body returning to his real self, viz. Sheshanaga, the serpent of eternity. Once when Krishna was sitting under a fig tree in a yogic posture a poisonous arrow by a hunter, mistakenly struck the sole of his left leg which served as a prelude for his final departure. He instructed Daruka, his charioteer, to go to Dwaraka and break the news to the residents about his end. Finally the ocean came up and swallowed the city of Dwaraka engulfing everything except the temple. (for more on Dwaraka, please refer to the chapter on **Dwaraka**).

The entire legend of Krishna's life and his *leelas* (deeds) provide a great opportunity for presentation of those events through architecture, poetry, art, music and dancing. The many facets of his endearing activities have fired the imagination of people, which no other incarnation has done. **He is a naughty boy, a romantic lover, a heroic warrior, a shrewd diplomat and a great 'Sanyasi' (ascetic).** Krishna is the impish prankster whose leela brings the country to a standstill. He is not only the pivotal character of an epic, the **Mahabharata**, but also the author of one of the most sacred books of the Hindus - a treasure house of philosophy and a fountain of solace to the troubled hearts.

But while rendering advice to Arjuna at Kurukshetra, Krishna unabashedly reveals — in the **Bhagavad Gita** — that he is infinite, his vibhutis or divine manifestations and opulences being unlimited. No one, not even the gods, can know him completely. Krishna then proceeds to impart what he calls the most sovereign knowledge and profound mystery, contemplating on which alone one can attain moksha or liberation.

Krishna said: "Everything that one can see or know emanates from me. I am...the generating seed of all existence; the source of both the mundane and spiritual wor-lds. All this world is pervaded by me... I am its creator, maintainer and destroyer... **I am antaryami, residing in the heart of every jiva. I am the goal, support, Lord, abode, refuge, and friend of all.** I am immortality and death, being and non-being.

No entity, either moving or non-moving, can exist separately from Me...

"I am the syllable Om. I am Vishnu, Shiva and Brahma. As the substratum of the material universe, I support it; as the presiding authority, I preside over it, and as the controller, I control it; being all-pervasive, I pervade it and as the creator, I am its cause. My vibhutis are endless; what I have described to you is a mere indication of them. And yet, although everything emanates from me, I remain the same, unchanged and transcendental."

It has been said that in Krishna we have the fullest and the most perfect manifestation of the Divine.

Swami Ramdas: "Krishna is an avatar of perfect love. The word Krishna is derived from akarshana which means attraction. So the name itself signifies that Krishna is the Supreme Truth, manifest in human form, to attract the whole world towards Him."

"Such as would be the radiance of a thousand suns bursting forth suddenly in the sky, such was the radiance of that Mighty Spirit. There the son of Pandu beheld the whole world with all its differences, gathered together in the body of that God of gods. "

- **Bhagavad Gita** chapter 18, verses 64-6.

Goddesses

One of the most striking characteristics of the ancient and multi-faceted Hindu tradition is the importance of goddess worship. No other living religious tradition displays such an ancient, continuous, and diverse history of goddess worship.

Saraswati - The Goddess of Speech

Saraswati means "the essence of one's own self." Saraswati denotes that aspect of the Supreme reality which represents knowledge, learning, and wisdom. In Hindu mythology Saraswati is the divine spouse of Brahma, the god of creation. **Goddess Saraswati** is the embodiment of the mighty **Saraswati River of the Vedas**. Saraswati means "the essence of one's own self." The Sanskrit word '*sara*' means essence and '*swa'* means 'self'. **She is the earliest goddess who is associated with a river in the Indian tradition.** She is the divine spouse of Lord Brahma, the creator. Since knowledge is necessary for creation, Saraswati symbolizes the creative power of Lord Brahma. She is also praised for her ability both to cleanse and fertilize the earth, and has been equated with the goddess of learning, poetry, music, and culture. She is associated with speech- Vac: the goddess of riverlike, streaming speech.

Saraswati - The goddess of learning

Saraswati is typically shown seated on a lotus. Like the swan, the lotus seat of the goddess suggests her transcendence of the physical world. She floats above the muddy imperfections of the physical world, unsullied, pure, beautiful. Although rooted in the mud (like man rooted in the physical world), the lotus perfects itself in a blossom that has transcended the mud. She inspires people to live in such a way that they may transcend their physical limitations through the ongoing creation of culture. Goddess Saraswati is worshiped throughout India and on her special day in spring, Vasant Panchmi, she is worshipped by school children as the patron goddess of learning. The **Benaras Hindu University** was also founded on this day.

Saraswati Vandana is a beautiful poem to art, culture and spirituality. It is a praise of learning and among those who approved the singing of Vande Mataram at the Nagpur Congress was Mahatma Gandhi.

Goddess Shakti - Parvati/Durga

Shakti, the divine source from which all arises, is thought of as the ' wife' of Shiva. She has many mythological forms. Often she is simply Devi, ' the Goddess ', or Mahadevi, ' the Great Goddess'. She is also Jagad Mata,

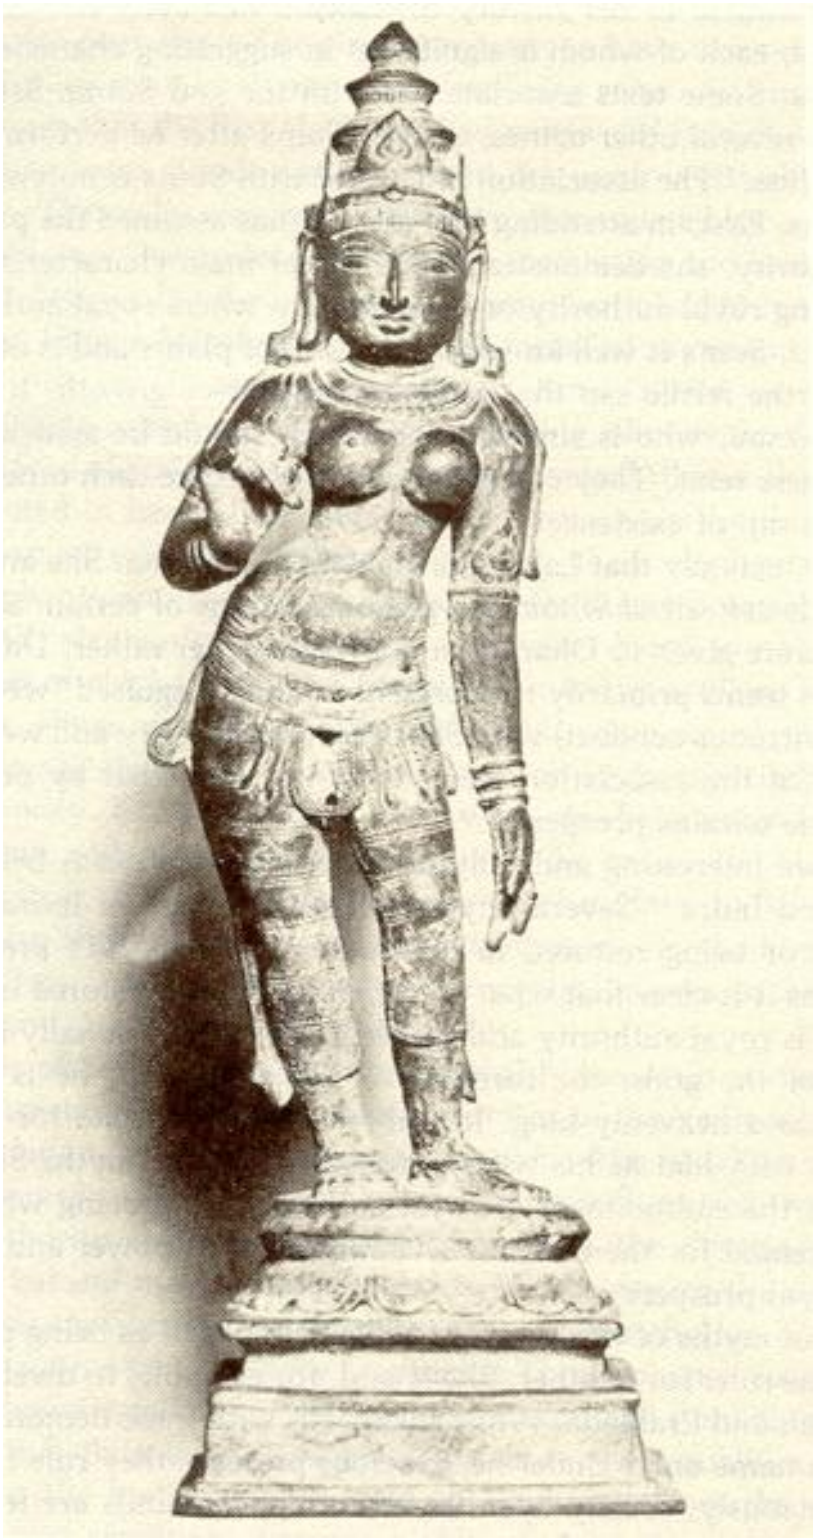
'World Mother'; Ambika, 'Gauri' ' Mother'; Uma, who nourishes the world; Parvati, the dutiful wife of Shiva, who seated high in the Himalayas by the side of her Lord represents the stability and continuity of life; the smiling and auspicious Lalita, especially worshipped in South India; the ceaselessly warring Durga; and Kali, the destroyer.

Parvati, which means "she who dwells in the mountains" or "she who is of the mountains" She is the mother of Karttikeya and Ganesha.

Durga -renowned slayer of demons, wife of Shiva personifying Shakti or divine energy.

It is Durga that the Goddess is most widely worshipped and it is she who most fully expresses the energy and complexity of Shakti. Her great festival, Durga Puja or Dussera, lasting for ten days, is an event of great importance. A Distinct group - that of the **Shaktas**, or worshippers of Shakti - center on her, is especially strong in Bengal. For them, the Goddess is the supreme deity, Bramh itself in feminine form. It is the third most popular group within Hinduism, giving place only to the worship of Vishnu and Shiva in importance. The name Durga indicates one who is 'hard to approach' and Durga is represented with a stern expression, suitable to the unswerving force which drives the universe. At once supremely beautiful and fierce, Durga rides upon a lion. She may be pictured with four, eight, ten or twenty arms, and in these she brandishes an impressive array of instruments and weapons - conch, discus, trident, bow, arrow, sword, dagger, serpent, mace and other objects. Each has its specific meaning, and taken together they express the ceaseless activity and complexity of Shakti.

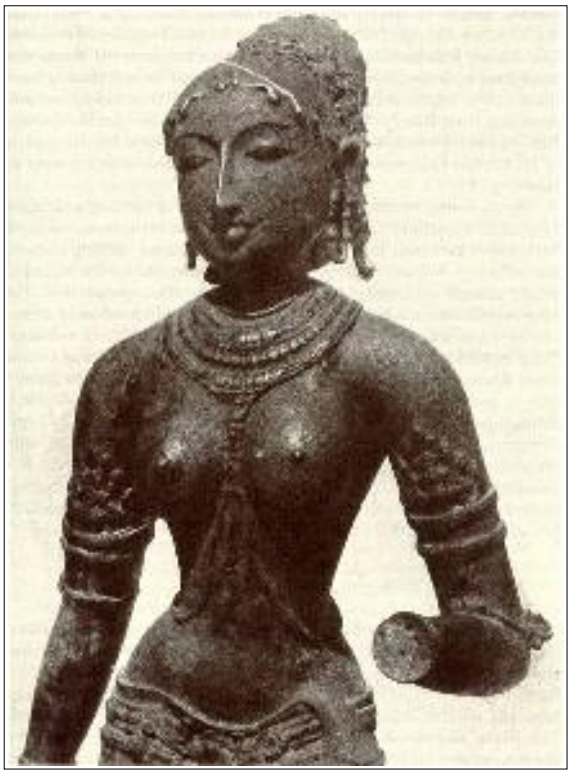
She is first and foremost a slayer of demons. She is the goddess of warfare, and in medieval India military campaigns were commenced on the last day of her festival. In Bengal and some other areas blood sacrifices are made to Durga and to Kali, although, as the only blood sacrifices to survive in Hinduism, they are regarded with distaste by the majority of Hindus. Yet at the same time Durga is the all-merciful Mother who nourishes the universe and bestows both material and spiritual wealth. Full of tenderness to those who turn to her, she is greatly beloved by her devotees.



Kali is said to have come forth from the forehead of Durga. If Durga is the fierce side of the Mahadevi, Kail is her terrible aspect: She is represented with a hideous and terrible countenance, dripping with blood, encircled with snakes, bung round with skulls and human heads, and in all respects resembling a fury rather than a goddess.

Explanations are offered for the image, black color refers to her ultimate nature, which lies beyond manifestation and is therefore unknowable, the cremation ground on whihc she is often shown dancing is where all worldly desires are burnt away, the necklace of severed heads is the universe of names and forms which she, as Shiva's power, creates and destroys; she is, as the name Kali suggests, **the destructive aspect of time.**

Kali is life, seen with all its dangers, bloodshed, suffering, fierce, competition, and inevitable destruction.



Top of Page

Goddess Lakshmi - Prosperity and well-being

The goddess Sri, who is also commonly known as Lakshmi and is the consort of Lord Vishnu.

She is associated with prosperity, well-being, royal power, and illustriousness. Lakshmi in the Hindu pantheon of gods and goddesses is personified as the goddess of fortune and also as the embodiment of loveliness, grace and charm. She is seated on a lotus flower though sometimes she is also seen as standing on a lotus. In pictures, gold coins are seen dropping down from the palms of this goddess of prosperity.

Sita

Her emergence in the world is connected with a famous episode in the Hindu myth called **Samudranmanthan** (Churning of the Cosmic ocean), when with great efforts, by churning, the ocean was made to give up all its treasures and benefits to the world. She is the most faithful companion of life, has always appeared as the life partner in every incarnation of Vishnu. When Vishnu assumes his various avatars in order to uphold dharma, she incarnates herself as helpmate, on earth. When Vishnu came as Vamana (the Dwarf), she came to earth as Lotus (Padma), when he came her as Parshuram, Lakshmi followed him as his wife Dhari, when Vishnu appeared as Rama, she came here as **Sita**, and when Vishnu appeared as Krishna, she came in two forms, first as Radha, and later as his wife Rukmini.

Symbols

Om - the sound of the universe itself.

The imperishable sound
is the seed of all that exists.
The past, the present, the future.
- all are but the unfolding of OM.
And whatever transcends the three realms of time.
That indeed is the flowering of OM.

For millennia, mystics have recounted their experience of this energy, which is said to manifest in our hearing awareness as a humming vibration around and within everything else. In the Sanskrit tradition, this sound is called "Anahata Nada," the "Unstruck Sound." So, sound that is *not* made of two things striking together is the sound of primal energy, **the sound of the universe itself.** And the ancients say that the audible sound which most resembles this un struck sound is the syllable OM. Tradition has it that this ancient mantra is composed of four elements: the first three are vocal sounds: A, U, and M. The fourth sound, unheard, is the *silence* which begins and ends the audible sound, the silence which surrounds it. There are several traditional and allegorical interpretations of this ancient sound.

The loveliest explanation of OM is found within the ancient Vedic and Sanskrit traditions.

"Aum stands for the supreme Reality.
It is a symbol for what was, what is,
And what shall be. A U M represents also
What lies beyond past, present and future."

\- **Mundakya Upanishad**

There is a Vedic verse as follows :

Prajapati vai idam agra asit
Tasya vak dvitiya asit
Vag vai paramam Brahma

"In the beginning was Prajapati, the Bramh with whom was the Word,
and the Word was verily the Supreme Bramh."

Omkar Prayers:

Omkaram bindu samyuktham
Nityam dhyanathi Yoginah
Kamadam mokshadam chaiva, Omkaraya namo namah

****

Swastika - an auspicious symbol

is an auspicious symbol, an elaboration of the equal armed cross, but with the arms bent, hence also called the 'limbed cross'. Its name is said to be a combination of su (well) asti (is) ka (a noun ending) i.e., 'It is well.'

In Hinduism, the swastika is believed to be derived either from the wheel, symbolically reduced to four spokes and set at right angles to indicate the cardinal points, or from the two fire sticks of the Vedic sacrificial fire which were always set down in the form of a cross. As a fire and sun symbol it was also called the fire cross or solar cross.

This symbol was well known among the ancients. The archaeological discoveries in Egypt; in Hissarlik, site of Homer's Troy; in China, Greece, Scandinavia, Scythia, Mexico and Peru have proved its widespread usage.

The swastika symbol is supposed to be marked on the hood of the cobra, and is often associated with the heliolithic culture of snake-worshipping peoples such as the Nagas. It is a symbol of good luck, is often found stamped on various objects or used as motif for border designs on textiles. The rainy season is especially devoted to its honor in Maharashtra, when women draw swastikas on floors and worship them.

(source: **Gods and Goddesses of India - By Kailash Nath Seth and B. K. Chaturvedi** p. 180-181).

According to Belgium scholar, Koenraad Elst, in his book Swastika Saffron: "A good luck asana in yoga named swastikasana is sometimes assumed in meditation in the form of an enclosed as distinct from an outstretched cross. The swastika is and remains the symbol of auspiciousness, of the eternal Cosmic Law (rta). Indeed the swastika is an obvious symbol of cosmic cyclicity, hence of endlessness or eternity. Cyclicity is a luck force in that every decline brings the perspective of future revival, and that eternity lurks behind every fleeting phenomenon. It suggests that the world never started and will never end, that every cycle is preceded and followed by more cycles. For **Jains** even more than for the Hindus and Buddhists, the swastika is part of their identity: **a hand with a swastika on it is the official symbol of Jainism."**

(source: **The Saffron Swastika - By Koenraad Elst** Voice of India ISBN 8185990697).

Conclusion

Hinduism is greatly misunderstood in the West. Most occidentals do not realize that Hinduism is a monotheistic belief in one God, who as Creator is beyond time, space and physical form. The entire pantheon of Hindu gods and goddesses are merely symbolic representations of different attributes of the One, Unmanifested spirit.

Dr. S. Radhakrishnan has written: " From the beginning, India believed in the superiority of intuition or the method of direct perception of the supersensible to intellectual reasoning. **The Vedic rishis ' were the first who ever burst into the silent sea' of ultimate being and their utterances about what they saw and heard.** The Kena Upanishad says: "The eye does not go thither, nor speech nor mind. We do not know, we do not understand how one can teach it. It is different from the known, it is also above the unknown." Hindu thinkers are not content with the postulating a being unrelated to humanity, who is merely the Beyond, so far as the empirical world is concerned. From the beginnings of Hindu history, attempts are made to bring God closer to the needs of man. Though it is impossible to describe the ultimate reality, it is quite possible to indicate by means of symbols aspects of it, though the symbolic description is not a substitute for the experience of God."

(source: **The Legacy of India - ed. G.T. Garratt.** p. 256 -286).

Hinduism created a different deity for each of God's numerous qualities to make God seem more real and approachable.

(source: **India Unveiled - By Robert Arnett** p. 8).

Fritjof Capra (1939-) the famous theoretical high-energy physicist has observed:

"The rich Indian imagination has created a vast number of gods and goddesses whose incarnations and exploits are the subjects of fantastic tales, collected in epics of huge dimensions. **The Hindu with deep insight knows that all these gods are creations of the mind, mythical images representing the many faces of reality**. On the other hand, he also knows that they were not merely created to make the stories more attractive, but are essential vehicles to convey the doctrines of a philosophy rooted in mystical experience. The Ultimate reality called Brahman, is the unifying concept which gives Hinduism its essential monistic character in spite of the worship of numerous gods and goddesses.

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p.43 and 87).

Image worship is a symbolic worship. It is the worship of supernatural realities through the symbols which are thought to represent them best. It is the translation for the present, of the infinite in terms of the finite, of the spiritual in terms of the material. A great pantheon of gods, goddesses, semi-divine beings and lesser deities unfolds in the countless myths of Hinduism which exist in numerous versions throughout Indian literature, particularly the Puranas and Epics. The myths present the collective wisdom of a timeless, anonymous and many-sided civilization and are much more than just fanciful 'biographies' of the gods. **Like the great philosophical systems of India, the myths of Hinduism, reveal the ultimate reality of the universe by giving symbolic expression to that which cannot be discursively expressed.**

(source: **The Hindu Temple - By George Michell** p. 20).

René Guénon (1886-1951) has pointed out: “In India, in particular, a symbolic image represents one or another of the ‘divine attributes’, which is called pratika, for it is neither an ‘idol’, nor does it take on any qualities from that thing which it really is, an aid to meditation and a supplementary means toward realization.”

(source: **Introduction a l'etude des doctrine hindoues - by René Guénon** p. 209).

Hindus believe in the existence of one and only one Supreme Being (the Bramh of the Upanishads), but worship Him in various forms known as deities or gods (note small g). This worship of many deities (gods) is not polytheism, but monotheistic polytheism. The monotheistic Hindu pantheon is an affirmation that the Supreme Being can be known in many ways and worshipped in many forms. Hinduism recognizes the diversity of the human mind and the potential for a different level of spiritual development in each individual. Hinduism does not, therefore, throw everyone into the pigeonhole of a single creed. The **Mahabharata** declares:

"Just as the rain water that falls from the sky eventually reaches the ocean, so also all the worship offered to Him, by whatever name you wish, or in whatever form you like, ultimately goes to the one ultimate, infinite, Supreme Reality."

(source: **The Hindu Mind - Fundamentals of Hindu Religion and Philosophy for All Ages - By Bansi Pandit** p. 37-38).

Huston Smith has said: " Enter Hinduism's myths, her magnificent symbols, her several hundred images of God, her rituals that keep turning night and day like never-ending prayer wheels. It is obtuse to confuse Hinduism's images with idolatry, and their multiplicity with polytheism. They are 'runways' from which the sense-laden human spirit can rise for its "flight of the alone to the Alone". Even village priest will frequently open their temple ceremonies with the following beloved invocation:

O Lord, forgive three sins that are due to my human limitations:
Thou art everywhere, but I worship you here;
Thou art without form, but I worship you in these forms;
Thou needest no praise, yet I offer you these prayers and salutations,
Lord, forgive three sins that are due to my human limitations.

(source: **The World's Religions** - **By Huston Smith** p. 34).

Diane L. Eck observes: "Hinduism is an imaginative, an "image-making, religious tradition in which the sacred is seen as present in the visible world – the world we see in multiple images and deities, in sacred places, and in people. The notion of darsan call attention as students of Hinduism, to the fact that India is a visual and visionary culture. God is eminently visible, although human beings have not always had the refinement of sight to see. Furthermore, the divine is visible not only in temple and shrine, bit also in the whole continuum of life – in nature, in people, in birth and growth and death. Although some Hindus, both philosophers and radical reformers, have always used the terms "nirguna"(quality-less) and nirakara (formless) to speak of the One Bramh. Yet the same tradition has simultaneously affirmed that Bramh is also saguna (with qualities) and that the multitude of "names and forms" of this world are the exuberant transformations of the One Bramh. Hinduism is sensuous in that it makes full use of the senses – seeing, touching, smelling, tasting and hearing. One "sees" the image of the deity (darsan). One "touches" it with one's hands (sparsa), and one also "touches" the limbs of one's own body to establish the presence of various deities (nyasa). One "hears" the sacred sound of the mantras (sravana). The ringing of bells, the offering of oil lamps, the presentation of flowers, the pouring of water and milk, the sipping of sanctified liquid offerings, the eating of consecrated foods- prasad – these are the basic constituents of Hindu worship, Puja.

(source: **Darsan - Seeing the Divine Image in India - By Diane L. Eck** p. 10 - 12).

Huston Smith says: "Its all together wrong to think that the images are idols as though the copper itself is being worshipped – **they are reminders that the God who dwells in the depth of our souls.** Wherever an alter is raised, there is the center of the universe. The world's axis passes through it, yet no visible alter is no more than a symbol for the one time alter – the human heart and to say the cosmic axis pierces it is to say that it is in direct touch with the infinite. **Man is not just made in the image of God – He is God.** It is difficult for us to fathom the sheer immensity of the Self of notion involved. When we see ritual acts being performed they look like they are directed at some far of celestial potentate – and so they doubtlessly appear to the beginning of the journey – but further along they begin to look like chemical formulae – **a science of transformation to awaken us to the realms of gold that lies buried in our depths** – for we are kings who have fallen victim to amnesia and wander through our kingdom in tatters not knowing who we truly are."

Did You Know?

Antiquities from Indian shore - stolen heritage

Fifty-four years past India's independence, Britain continues to be the largest market for precious artifacts leaving the country illegally

Indian temple towns are also an ideal hunting ground for antiquities, where the temple priests are often the chief collaborators. **The panchadhaatu (five metals: gold, zinc, copper, silver, and iron) idols of the gods and goddesses, which are in high demand in the underground markets, are quietly replaced by fakes and taken through the quickest route out of the country.** The theft is rarely discovered because no one but the priest ever goes inside the sanctum sanctorum of the temple.

Tandav: Shiva and the pose of death

"The real enemy is the massive poverty and ignorance at home combined with the high prices that items such as **Chola bronzes** command abroad. Often foreigners, who are likely to be more aware of the true value of antiquities than the impoverished villagers who live near archaeological sites, are involved in the thefts," says Dr D. K. Sinha, retired director of the Archaeological Survey of India (ASI).

"It is possible that many idols that are now in the temples of Tamil Nadu may be fake, with the originals having long been spirited away", says M Ram, the superintendent of the antiquities wing of the Central Bureau of Investigation (CBI). Sinha agrees: "Theft or disappearance of ornaments used on deities are not uncommon and simply cannot happen without the knowledge of priests, many of whom consider it their sole right to dispose off temple property".

In one of the uncommon discoveries of such a theft at **Kondhali's 200-year old Taka Deosthan temple**, a devotee who looked into the sanctum sanctorum found the idols of the gods missing.

In the rare case when thefts or sale of stolen artifacts are traced, winning court cases become difficult. Sale often is organized through reputed and powerful institutions such as **Sotheby's**, which conducts a thriving trade in Indian antiquities. (In fact, the CBI has been taking a close look at the activities of agents for Sotheby's who have been scouring the Indian countryside with the connivance of Indian art smugglers for items for their famed auctions.)

However, there are reports of idols that have returned home from sojourns - reports which evoke hope among those concerned about the fate of Indian antiquities. **In one instance, a Nataraja stolen from the Easwaran temple in the Tiruvilakkudi village, Thanjavur, in 1978, was traced with the help of Interpol to the Kimbell Art Museum, Fort Worth, Texas and returned to its sacred seat.**

Three ancient idols were found missing from the 13th century **Sri Jagannath temple in Puri** on Sunday, temple administration sources said. One of the missing idols was that of Lord Madan Mohan. The two-feet high idol, made of *Astadhatu* (eight metals) are regarded as a representative of Lord Jagannath have been just recovered.

Guest Book

Updated - December 19, 2003

Hinduism has always been an environmentally sensitive philosophy. No religion, perhaps, lays as much emphasis on environmental ethics as Hinduism. The Mahabharata, Ramayana, Vedas, Upanishads, Bhagavad Gita, Puranas and Smriti contain the earliest messages for preservation of environment and ecological balance. Nature, or Earth, has never been considered a hostile element to be conquered or dominated. In fact, man is forbidden from exploiting nature. He is taught to live in harmony with nature and recognize that divinity prevails in all elements, including plants and animals. The rishis of the past have always had a great respect for nature. Theirs was not a superstitious primitive theology. They perceived that all material manifestations are a shadow of the spiritual. The Bhagavad Gita advises us not to try to change the environment, improve it, or wrestle with it. If it seems hostile at times tolerate it. Ecology is an inherent part of a spiritual world view in Hinduism.

According to Swami B. V. Tripurari, in his book, **Ancient Wisdom for Modern Ignorance**, " Our present environmental crisis is in essence a spiritual crisis. We need only to look back to medieval Europe and the psychic revolution that vaulted Christianity to victory over paganism to find the spirit of the environmental crisis. Inhibitions to the exploitation of nature vanished as the Church took the "spirits" out of the trees, mountains, and seas. Christianity's ghost-busting theology made it possible for man to exploit nature in a mood of indifference to the feelings of natural objects. It made nature man's monopoly. This materialist paradigm has dominated the modern world for last few centuries. The current deplorable condition demands a spiritual response. A fundamental reorientation of human consciousness, accompanied by action that is born out of inner commitment, is very much needed. One of the measures that could help a great deal to fulfill this need is to regenerate and rejuvenate basic values of Hindu culture and propagate them."

Introduction

Throughout the long history of India, Hindus have shared a fascination with, and respect for, Nature and animals. This attitude went beyond the usefulness. It had to do with reverence for all of God' creation. Our ancestors worshipped trees, rivers, birds and stones and connected to the universal principle through Shiva. As we are growing more materialistic, we are losing this connection. Our ancestors saw Nature as being a manifestation of God. There was, therefore, a gratitude towards nature.

The tradition of maintaining sacred groves and sacred trees vanished from most countries, due mainly to the rise of dogmatic religions like Christianity and Islam, which advocated faith in one god and were explicitly for the eradication of ‘pagan’ practices. The underlying theme in Semitic religions is that of a chosen people who have been divinely granted ownership of the earth and all living things, and permission to exploit them. The Semitic perception that humans have more "dignity" than animals has gone a long way into the enormous decimation and extinction of non-human life on our planet not to mention the massacre of non-believing human beings. Hindu philosophy has always had a humane and dignified view of the sacredness of all life, and that humans are but one link in the symbiotic chain of life and consciousness.

According to **Guy Sorman**, visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France, author of **The Genius of India** (Macmillan India Ltd. 2001. ISBN 0333 93600 0)says:

"The Indian tradition, on the other hand, is that men submit to nature and form part of it, there nature preserves its sacredness, lost in the West since the Industrial Revolution." He further states that the idea of feminism and **ecology came from the 1968 movement, from the meeting between India and the West.** He says: **"There is hardly anything in**

European thought to predispose the West to reject virility, the respect for authority, the mastery over nature. India too has a warrior (khastriya) tradition of virility as exemplified in the **Mahabharata**, only it is secondary. First, comes the veneration of thousands of goddesses - for the Indians, India is above all **Mother India.** India's femininity and sexual ambiguity, is the very antithesis of Western virility. For example, when the British scaled earth's highest peak, the exploit was widely hailed as the **"conquest of the Everest."** It was not realized and is often not realized still, that the word "conquest" was totally out of place in the context of the peak which is considered an object of reverence by many. One does not "conquer" nature. Nature humors at times, man's curiosity. Conquest is, therefore, an irreverent word." **Francis Bacon**, (1561-1626) said: "Nature was to be bound into service and made a 'slave and 'put in constraint.' In short, nature was to be conquered, not enjoyed and certainly not revered. (source: **The Dark Side of Christian History - By Helen Ellerbe** p.155). Nature is to be revered and befriended. 'Paganism' was a term of contempt invented by Christianity for people in the countryside who lived close to and in harmony with Nature, and whose ways of worship were spontaneous as opposed to the contrived though-categories constructed by Christianity's city-based manipulators of human minds.

"I bow my head in reverence to our ancestors for their sense of the beautiful in nature and for their foresight in investing beautiful manifestations of Nature with a religious significance." **- Mahatma Gandhi**

(source: **Glimpses of Indian Culture - By Dr. Giriraj Shah** p. 106).

Kewal Motwani (1899 -) author of several books including **Science and Society in India** has observed:

"Unity between nature and man - **The civilization of India had its birth in the bosom of Mother Nature.** At the time when her history began, India was a land of vast forests. Those forests not only administered to the daily needs of the people, giving them shelter from heat of the sun and ravages to storms, green pastures for cattle and abundant fuel for sacrificial and architectural purposes, but they also made a permanent impression on the minds of the people. **Their religion had no aggressive frontiers**; no walls of brick and mortar set people apart from one another. The people lived in one vast embrace of nature, as one family. **There was no "divide and rule" mentality, no aggressive, ruthless exploitation of nature,** no assertive individualism which has been the characteristic of civilizations nurtured within the city walls. There was harmony within and without, and inward realization of the Eternal became dominant aspiration of people's lives. **There was an attitude of identification, not conflict, a search of the One, not of the many."**

(source: **India: A synthesis of cultures – by Kewal Motwani** p. 47).

According **Dr. David Frawley** eminent teacher and practitioner of Ayurvedic medicine:

"No religion, perhaps, lays as much emphasis on environmental ethics as does Hinduism. It believes in ecological responsibility and says like Native Americans that the Earth is our mother. It champions protection of animals, which it considers also have souls, and promotes vegetarianism. It has a strong tradition of non-violence or ahimsa. It believes that God is present in all nature, in all creatures, and in every human being regardless of their faith or lack of it."

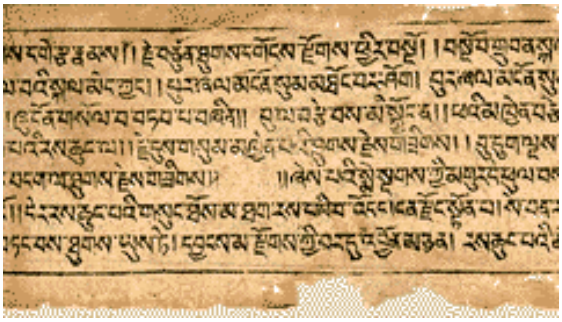
In the ancient spiritual traditions, man was looked upon as part of nature, linked by the indissoluble spiritual and psychological bonds to the elements around him. This is very much marked in the Hindu tradition, the oldest living religious tradition in the world. The Vedas, the oldest hymns composed by great spiritual seers and thinkers which are the repository of Hindu wisdom, reflect the vibrancy of an encompassing world-view which looks upon all objects in the universe, living or non-living, as being pervaded by the same spiritual power. Hinduism believes in the all-encompassing sovereignty of the divine, manifesting itself in a graded scale of evolution. The human race, though at the top of the evolutionary pyramid at present, is not seen as something apart from the earth and its multitudinous life forms.

A Hindu woman performing a religious ceremony around the tulsi plant by D.V. Dhurandhar, Bombay, C.1890 (courtesy V&A Museum, London).

Our natural environment – comprising mountains and hills, rivers and dales, trees and plants – is considered **auspicious enough to provide space for meditation**. There are thousands of spots whose special sanctity is enhanced by the performance of daily rituals. Retreats in the Himalayas or on the river banks shelter sages who are credited with universal knowledge. Especially hallowed are the sources and confluence of rivers. Harmony with the natural world receives strong emphasis as a pervasive element in Indian spiritual beliefs and rituals. Evergreen trees were regarded as symbols of eternal life and to cut them down was to invite the wrath of the gods. Groves in forests were looked upon as habitations of the gods. It was under a banyan tree that the Hindu sages sat in a trance seeking enlightenment and it was here that they held discourses and conducted holy rituals.

The **Artha-Veda** has the magnificent **Hymn to the Earth (Bhumi-Sukta)** which is redolent with ecological and environmental values.

"Earth, in which lie the sea, the river and other waters,
in which food and cornfields have come to be,
in which lives all that breathes and that moves,
may she confer on us the finest of her yield.
Earth, in which the waters, common to all,
moving on all sides, flow unfailingly, day and night,
may she pour on us milk in many streams,
and endow us with luster,
May those born of thee, O Earth,
be of our welfare, free from sickness and waste,
wakeful through a long life, we shall become bearers of tribute to thee.
Earth, my mother, set me securely with bliss in full accord with heaven,
O wise one, uphold me in grace and splendor."



Not only in the Vedas, but in later scriptures, such as the Upanishads, the Puranas and subsequent texts, the Hindu viewpoint on nature has been clearly enunciated. It is permeated by a reverence for all life, and an awareness that the great forces of nature – the earth, the sky, the air, the water and fire – as well as various orders of life including plants, trees, forests and animals, are all bound to each other within the great rhythms of nature. The divine is not exterior to creation, but expresses itself through natural phenomena.

Thus, in the **Mudaka Upanishad** **the divine** is described as follows:

“Fire is head, his eyes are the moon and the sun;
The regions of space are his ears, his voice the revealed Veda,
The wind is his breadth, his heart is the entire universe,
The earth is his footstool,
Truly he is the inner soul of all.”

India is a vast network of sacred places. There are seven sacred rivers, seven sacred mountains, sacred trees and plants, sacred cities. The sacrality of the land of India, gives a sense of unity to this country of so many religions, cultures, races and languages.

The Indian tradition is strongly cosmocentric, where man lives as part of a system in which everything is related to everything else. Creation and destruction take place simultaneously. Materials and energy move from organism to organism. Matter is arranged in precise order in every organism, but in death this order is followed by disorder: cycling of materials through organisms brings order once again. But today, rapidly drifting from our traditions of sustainable use and coexistence, we seem to be entering a man-centered world that implies the decimation of nature.

The **Mahabharata, Ramayana, Vedas, Upanishads, Bhagavad Gita, Puranas and Smriti** **contain the earliest messages for preservation of environment and ecological balance. Nature, or Earth, has never been considered a hostile element to be conquered or dominated.** In fact, man is forbidden from exploiting nature. He is taught to live in harmony with nature and recognize that divinity prevails in all elements, including plants and animals.

Atman, the world-soul, is the whole world. **God is in all things, and all things are in God.**

The **Mahabharata** hints that the basic elements of nature constitute the Cosmic Being -- the mountains His bones, the earth His flesh, the sea His blood, the sky His abdomen, the air His breath and agni (fire) His energy. **The whole emphasis of the ancient Hindu scriptures is that human beings cannot separate themselves from natural surroundings and Earth has the same relationship with man as the mother with her child.** Planting and preservation of trees are made sacred in religious functions.

Ancient India sanctified plants, animals as a recognition of biodiversity.

The **Rig Veda** **is a celebration of nature**, its hero the God of Rain. Dawn was beautiful Ushas, dressed in a veil of light crimson, whose dancing appearance is heralded with the fragrance of the flowers. The lotus, said **Kalidasa**, welcomes the touch of the sun. The beautiful Chola temple at Gangaikondacholapuram in Tamilnadu contains a rare and exquisite representation of Surya in a navagraha stone - a lotus encircled by the planets. **But the greatest tribute to the sun was at Konarak, the giant chariot reflecting the Sun God in all his glory.**

In a sculpture in the rock-cut cave temple of Bhaja (2nd century B.C.) Surya, in his chariot, destroys the demon of darkness. Surya is invariably depicted in a chariot driven by seven horses representing the seven days, encircled by a halo, and wearing boots, for his feet could scorch the earth!

Animals were revered too. Kamadhenu was the wish-fulfilling cow, whose offspring are all the cattle on earth. The word "go" or cow was very important: gopura was the entrance to the village, gotra was the clan to which a person belonged, goshti was an assembly of good men, gosarga and godhuli represented dawn and dusk, while gopa and govalla were officials. Krishna even lifts Mount Govardhana to save cattle from Indra's wrath, a recurring theme in Indian art. **But the greatest honour given to animals was their elevation as the vehicles of the gods,** and as the incarnations of Vishnu, roles that are repeated in sculpture and painting. Shiva rode the bull, Vishnu the eagle, Brahma the swan, and so on.

By recognizing the five elements that were essential for life and elevating every species of plant and animal to sanctity, Ancient Indians recognized and respected the importance of biodiversity. **By secularizing rivers and lands, plants and animals, they were scientifically correct.** But today people pollute and destroy with impunity. The earth and its bounties are sacred creations. Unless we revere them and revive a respect for their sanctity, we have little chance of saving them.

(source: **Grounded in wisdom - by Nanditha Krishna - newindpress.com**).

The **Varah Purana** says, "One who plants one peepal, one neem, one bar, ten flowering plants or creepers, two pomegranates, two oranges and five mangos, does not go to hell."
In the **Charak Sanhita**, destruction of forests is taken as destruction of the state, and reforestation an act of rebuilding the state and advancing its welfare. Protection of animals is considered a sacred duty.
Our scriptures warn, **"Oh wicked persons! If you roast a bird, then your bathing in sacred rivers, pilgrimage, worship and yagnas are useless."** In our ancient stories, birds and animals have always been identified with gods and goddesses.
The **Padmapurana** warns: **"A person who is engaged in killing creatures, polluting wells, and ponds and tanks, and destroying gardens, certainly goes to hell." Padmapurana, Bhoomikhanda** 96.7-8

Welfare of all creatures: The Vedantic concept is that of the welfare of all creation, not only of human beings but also of what we call the lower creatures. **Dr. Karan Singh** states:

"In our arrogance and ignorance we have destroyed the environment of this planet. We have polluted the oceans, we have made the air unbreathable, we have desecrated nature and decimated wildlife. But the Vedantic seers knew that man was not something apart from nature, and, therefore, they constantly exhort us that, while we work for own salvation, we must also work for the welfare of all beings."

(source: **Essays in Hinduism - By Dr. Karan Singh** p. 47)

An Indian's relation with nature differs from that of a Western man. In the West, man has separated himself from nature, mastered it, he believes, and used it to serve his own purpose. Love of animals and of nature in the West is a personal attitude, not a natural law. **As the vine embraces, the tree, and could not live without it, so the Hindu unites himself with nature. From nature he came; to nature he returns, as ashes. The relationship between a Hindu and nature is one of adaptation and coexistence rather than of mastery and subjection.**

"As the curtain of the new millennium rises, the drama of life and humans seems tragic. More than six billion people are on a march of materialism, which means that acquisition, accumulation, possessions and consumption of material goods is the ultimate "good" of life. The philosophy assumes that the material resources are unlimited. Human beings are proliferating at the rate of 80 million a year and 90% of the growth is in the developing world. There, almost four out of ten people live at the edge of survival. In India alone, 320 million out of one billion are living marginally. It is not until 2100, according to the United Nations Fund for Population Activities (UNFPA), that the Earth's population may stabilize at 10.5 to 11 billion people.

The Earth is endangered, according to a warning from the Union of Concerned Scientists in December 1992. A declared report states that: "Most biological systems, which have sustained life on the planet for millions of years, will collapse some time during the early part of the next century." Everywhere, the human spirit is in revolt. Extinction cannot be the future of this beautiful Earth. The perversion of technological systems must be challenged--a society on the march towards doom must accept the wisdom of the ancients that all life is sacred and its existence rests on the harmony established by evolution in the total scheme of life."

(source: **Hinduism Today - July/August 2000** p 20-23).

The current deplorable condition demands a spiritual response. A fundamental reorientation of human consciousness, accompanied by action that is born out of inner commitment, is very much needed. One of the measures that could help a great deal to fulfill this need is to regenerate and rejuvenate basic values of Hindu culture and propagate them.

(source: **http://www.hindunet.org/alt_hindu/1994/msg00953.html**).

Whatever I dig up of you, O earth,
May you of that have quick replenishment!
O purifying one,
May my thrust never reach
unto your vital points, your heart.
May your dwellings, O earth,
free from sickness and wasting,
flourish for us!
Through a long life watchful,
May we always offer to you our tribute.

— **Atharva Veda**

The ancient Tamil scripture, **Tirukural**, advises in verse 324, "What is the good way? It is the path that reflects on how it may avoid killing any living creature;" and in verse 327, "Refrain from taking precious life from any living being, even to save your own life."

Although Indian philosophers believed that the world goes through a cycle of evolution and decline, it always admonished reverence for life--respect for all forms of life and preservation of biodiversity--a continuation of evolution. The new philosophy of life challenges the arrogance of humans. The Earth is not for humans only. It is for all life--life in its various forms and structures. While individuals have a short and transient existence, evolution continues inexorably. The consciousness and spirits are beyond material existence, beyond time and space. They are eternal, an integral part of Brahman.

The **Rig Veda 1.6.3 states:**

"Nature's beauty is an art of God. Let us feel the touch of God's invisible hands in everything beautiful.
By the first touch of His hand rivers throb and ripple. When He smiles the sun shines, the moon glimmers, the stars twinkle, the flowers bloom.
By the first rays of the rising sun, the universe is stirred; the shining gold is sprinkled on the smiling buds of rose; the fragrant air is filled with sweet melodies of singing birds, the dawn is the dream of God's creative fancy."

Dharma: ecological balance

The king was the administrator of dharma. He was to be guided by this principle of balance, harmonizing relationships between all kingdoms of nature, mineral, vegetable, animal and man, various groups and administrative units. **Dharma was the underlying principle of political, economic and social relations in a state, and this principle was to be extended even to the earth and its products.** We catch a glimpse of this knowledge of ecological balance in the coronation oath which was administered to a king. **Aitareya Brahmana** gives the promise which Purohita took from the king to the following effect:

"Between the night I am born and the night I die whatever good I might have done, my heaven, my life, my progeny, may I be deprived of it, if I oppress you. (Book viii, chapter 4). **Satapatha Brahmana** states that the king should take consent of the earth at the time of the Rajasuya ceremony thus:

"Mother Prithvi (Earth), injure me not, nor I thee."

It was a bounden duty of the king to see to it that the earth was not subjected to undue strain, her resources not unduly depleted. The earth was the mother, she sustained life with her products.

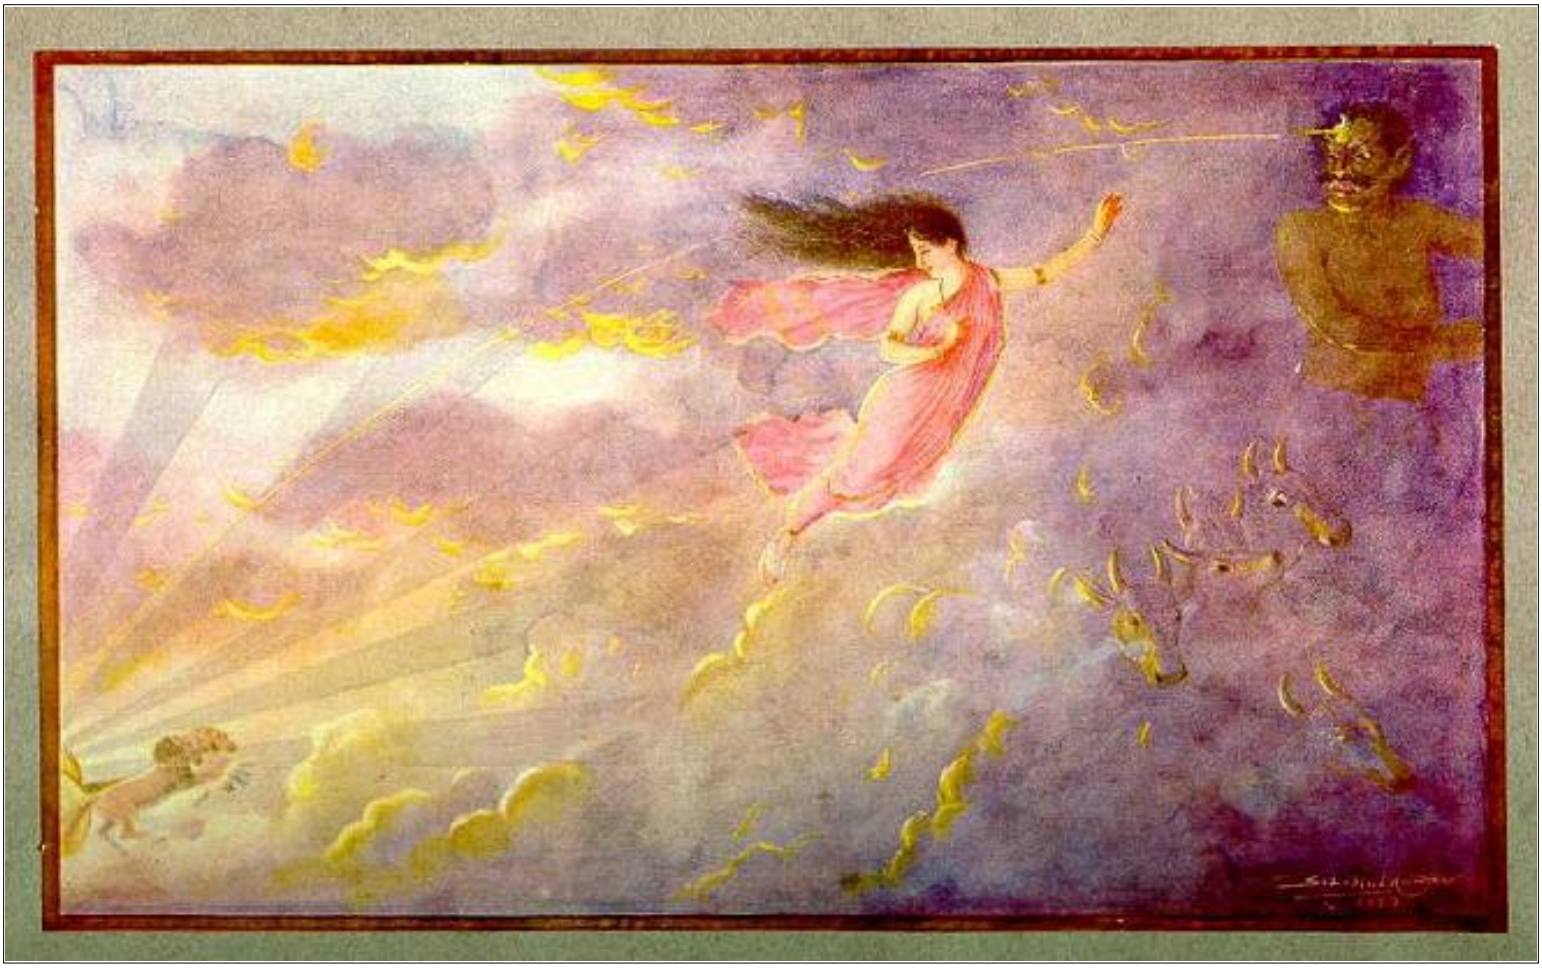
Somadev in his **Niti Vakyamrita** gives a hymn which it was incumbent upon the king to recite every day:

"I am protecting this cow (earth) which bears the milk of four oceans, whose calf is dharma, whose tail is enterprise (purushartha), whose hoofs are varna and ashrama (four groups and four orders), whose ears are desire and action (karma and artha), whose horns are diplomacy and valor, whose eyes are truth and purity, and whose face is law…I shall not be patient with anyone who injures her."

This is probably the earliest record in all human history of man's clear realization of the ecological state to preserve. Nations that have flouted this most significant fact of social life have disappeared and their wrecks lie scattered along the shores of history. India knew this principle and honored it in practice.

Place of nature in Indian literature

India's attitude to nature was one of comradeship. Flowers, birds, beasts and men shared the one life, facing the same suffering and pain of the upward travail, entertained the same sentiments and affections. **The early Vedic Indians became**



lyrical in their adoration of nature and its manifestations. This is a description of the Dawn in the **Rig Veda**:

Usha, the dawn, is often invoked, and is the subject of some of the most beautiful hymns that are to be found in the lyrical poetry of any ancient nation.

Beautous daughter of the sky!
Hold they ruddy light on high,
Grant us wealth and grant us day,
Bring us food and morning's ray.
White-robed goddess of the morning sky,
Bring us light, let night's deep shadows fly.

This light, most radiant of lights, has come; this gracious one who illumines all things is born. As night is removed by the rising sun, so is this the birthplace of the dawn....We behold her, daughter of the sky, youthful, robed in white, driving forth the darkness. Princess of limitless treasure, shine down upon us throughout the day." - Rig Veda I. 113.

"We gaze upon her as she comes
The shining daughter of the sky
The mighty darkness she uncovers,
And light she makes, the pleasant one that we see."

Usha! (Dawn) Hail, Beautous daughter of the sky!
*(source: **The Splendour That Was 'Ind' - By K T Shah**).*

Of the hymns to other deities, the hymns to those to Usha, the Dawn, are especially beautiful. Some of the loveliest nature poetry of this period is dedicated to her, depicted as a young maiden who comes to mankind in the special characteristics of the dawn. Dawn bring a feeling of hope and refreshment, of entering into the activity of the universe.

The Aryas worshipped Nature. They were fascinated by their natural surroundings. Gods representing the forces of nature are mentioned in the hymns of Rig Veda. Rta was the term used to mean the natural law of the cosmic order and morality. It was the regulator of the whole Universe. The lotus keeps its vigil during the night and opens its heart to the life-giving touch

of the sun in the early morn. The bee and flower play a game of hide and seek. All nature, flowers, trees, birds and deer grieve over Shakuntala's departure from her father's hermitage and her leave-taking is one of the most touching scenes in the drama of Kalidasa. The swan paints a poetic picture of Nala on whom Damyanti had set her heart. The bird Jatayu gives a fight to Ravana to rescue Sita as she is being kidnapped to Lanka. Indian literature is suffused with a feeling of tenderness towards all sub-human manifestations of life.

Mountains - The Abode of the Gods

"Of the immovable things
I am the mighty Himalayas".
- Tenth Discourse; Shloka 2.5

In the words of the ancient Indian poet, **Kalidasa:**

"The Himalaya is a great devatatma, a great spiritual presence, stretching from the west to the eastern sea like a measuring rod to gauge the world's greatness." The creativity of this genius was that he was able to see it as a single unity this overwhelmingly powerful image of the mighty Himalayan range.

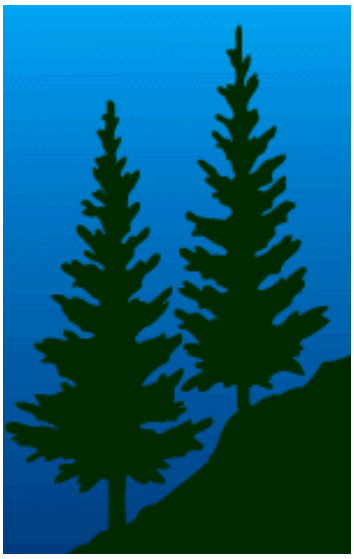
Even the mention of mountains in India brings the word **Himalaya** immediately to the mind. The Himalayan range as a whole is sacred because it is in the north, which for Hindus is the direction of wisdom and spiritual rebirth. It also includes the highest peaks in the world, which are a sight to inspire awe and wonder in people of any race or creed. Even Mount Olympus in Greek mythology would pale in front of the reverence shown to the Himalayas in the Hindu stories. Neither is Mount Fuji as significant to the Japanese as the Himalayas to Hindus. From times immemorial, the Himalayas have given out speechless invitations to sages, anchorites, *yogis*, artists, philosophers et al. The western Himalayas teems with esteemed pilgrimages so much so that the entire Kumayun range can be called **Tapobhumi** or land of spiritual practices. Where else apart from Kailash and Manas-sarovar in the Himalayas could an all-abnegating Shiva roam with his bull?

From the Himalayas has originated so many life-giving perennial rivers that have sustained such a rich civilization.

Of these the Ganges is the most respected one. **Shankaracharya** (788-820), who propounded the Mayavad doctrine, referred to the holy river as the goddess of divine essence, and established one of the four cardinal hermitages in the Garhwal Himalayas.

Scientist **J C Bose**(1858-1937), also ventured into the Himalayas, as expounded in his sagely philosophical essay **Bhagirathir Utsha Sandhane**, to explore how the Ganges flows down from the "matted locks of Shiva".

Apart from being a natural heritage, the Himalayas is a spiritual heritage for the Hindus. The most visited places of pilgrimage in India are located in the Himalayas. Prominent among them are the Nath troika of **Amarnath, Kedarnath** and **Badrinath.** There are also three seminal Sikh pilgrimage spots in the Uttarakhand Himalayas. **All sages and prophets have found the Himalayas best for spiritual pursuits.** Swami Vivekananda founded his Mayavati Ashram 50 km from Almora. The Mughul emperor Jehangir said about Kashmir, the westernmost extent of the Himalayas: "If there is a paradise on earth, it's here".



As the loftiest mountains on Earth, the Himalayas have come to embody the highest ideals and aspirations. The sight of their sublime peaks, soaring high and clean above the dusty, congested plains of India, has for centuries inspired visions of transcendent splendor and spiritual liberation.

Invoking such visions, the **Puranas**, ancient works of Hindu stories, have this to say of Himachal, or the Himalayas:

"In the space of a hundred ages of the Gods, I could not describe to you the glories of Himachal; that Himachal where Siva dwells and where the Ganges falls like the tendril of a lotus from the foot of Vishnu. There are no other mountains like Himachal, for there are found Mount Kailas and Lake Manasarovar. As the dew is dried up by the

morning sun, so are the sins of mankind by the sight of Himachal."

The Himalayas are sacred for followers of five Asian religions--**Hinduism, Buddhism, Jainism, Sikhism and the indigenous Bon tradition of Tibet.** These religions revere the mountains as places of power where many of their most important sages and teachers have attained the heights of spiritual realization. Himalayas are often refered to as **devatma** or God-souled. **Giri-raj** or the King of Mountains, as the Himalayas is often called, is also a deity by itself in the Hindu pantheon. Hindus view the Himalayas as supremely sacred, as a corollary to seeing god in every atom of the universe. The mighty altitude of the Himalayas is a constant remembrance to the loftiness of the human soul, its vastness. a prototype for the universality of human consciousness. Mt Everest being the highest spot on earth has been truly recognised as the crowing glory of the Himalayas. It is the mother goddess for Sherpas, who worship it as Chomolungma while the Nepalese call it Sagarmatha.

Hindus, by far the largest group in India with more than 800 million adherents, regard the entire range as the God Himalaya, father of Parvati, the wife of Siva. King of the mountains, Himalaya lives high on a peak with his queen, the Goddess Mena, in a palace ablaze with gold, attended by divine guardians, maidens, scent-eating creatures and other magical beings. His name, composed of the words hima and alaya, means in the Sanskrit language of ancient India the **"abode of snow."** As a reservoir of frozen water, the body and home of the God Himalaya is the divine source of sacred rivers, such as the Ganges and Indus, that sustain life on the hot and dusty plains of northern India.

The grandeur of Himalayas

Ernest B. Havell has observed: “The Himalayas offer equal opportunities for artistic research: they have always been the pivot of Indian religious art…The Indian order of architecture, the design of Indian temples, and the symbolism of the principal figures in Indian iconography, are all focused in the Himalayas.” Take only a cursory survey of Indian literature, he further says, and you will find that all Indian poetry and mythology, point to the Himalayas as the center of the world, and as the throne of the great gods. According to the **Vishnu Purana**, Brahma has his throne in this region, shaped like the seed-vessel of a lotus. Even in the farthest corners of South India, the Hindu regards the Himalayas, not from the point of view of the mountaineering sportsman, or that of the scientific explorer, but as the Muslim thinks of Mecca and the Christian of Jerusalem.”

(source: **The Himalayas in Indian Art – by E B Havell** v. 4, 6).

W J Grant has written eloquently about scenic India:

"India has stupendous mountains and quiet, village dotted plains. Her rivers sweep majestically on the plains and sing silver songs among the hills. The Himalayas form a great northern battlement with an average height of about 18,000 feet.

The grandeur of this region outwits description, its scale is so baffling. It is a dwelling place for gods. A throne of stupendous whiteness, mystery, power majesty. But above all, mystery – that mystery which no science can banish and no reason conquer. This is where Supernatural walks with regal feet. At Darjeeling, with the majesty of the Himalayas looking down on one’s littleness. It does one no good. The air is pure and strong. The scenic vastness kills petty conceits…”

(source: **The Spirit of India - By W. J. Grant** London published by B. T. Batsford Ltd. 1933 preface and p. 11-13).

E. Kawaguchi, a Japanese Buddhist abbot, was so captivated by the grandeur of the Himalayas near Manosarovar and Mt. Kailas, that he described it as 'unique and sublime.' Mt. Kailas, he says, 'towers so majestically above the peaks around, that I fancied I saw the image of our Mighty Lord Buddha, calmly addressing his five hundred disciples: verily, verily, it was a natural Mandala!'

(source: **Our Heritage and Its Significance - By Shripad Rama Sharma** p. 15-16).

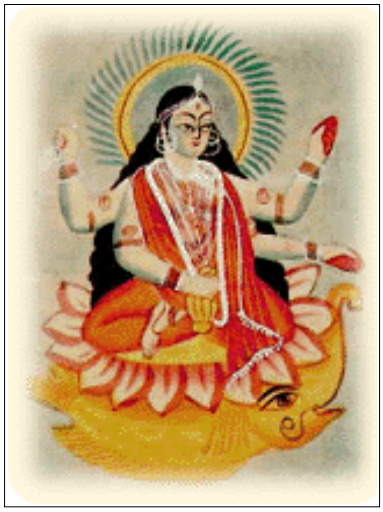
The ancient poets and sages regarded the range as more than a realm of snow; they saw it as an earthly paradise sparkling with streams and forests set beneath beautiful peaks. Above and beyond the earthly paradise of the Himalayas lie the heights of heaven.

1. Mount Kailash: One peak in the Himalayan region stands out above all others as the ultimate sacred mountain for more than half-a-billion people in India, Tibet, Nepal and Bhutan. Hidden behind the main range of the Himalayas at a high point of the Tibetan Plateau northwest of Nepal, Mount Kailas rises in isolated splendor near the sources of four major rivers of the

Indian subcontinent--the Indus, Brahmaputra, Sutlej and Karnali. Hindus also regard Kailash as the place where the divine form of the Ganges, the holiest river of all, cascades from heaven to first touch the Earth and course invisibly through the locks of Siva's hair before spewing forth from a glacier 140 miles to the west.

At only 22,028 feet, Kailash is thousands of feet lower than Everest and other Himalayan peaks. Yet its extraordinary setting and appearance more than make up for its modest height. Kailash retains its grandeur when viewed from a distance. More than any other peak in the Himalayas, it opens the mind to the cosmos around it, evoking a sense of infinite space that makes one aware of a vaster universe encompassing the limited world of ordinary experience. It has served as an inspiration for numerous Hindu temples and shrines in the distant plains of India. **The sight of the peak has a powerful effect, bringing tears to the eyes of many who behold it, leaving them convinced that they have glimpsed the abode of the Gods beyond the round of life and death. Neither Hindus, Buddhists, nor any Tibetans would ever contemplate trying to climb Kailash.**

Hindus view Kailash as the divine dwelling place of God Siva and Goddess Parvati. There, as the Supreme Yogi, naked and smeared with ashes, His matted hair coiled on top of His head, He sits on a tiger skin, steeped in the indescribable bliss of meditation. From His position of aloof splendor on the summit, His third eye blazing with supernatural power and awareness, the lord of the mountain calmly surveys the joys and sorrows, the triumphs and tragedies, the entire play of illusion that make up life in the world below. The power of His meditation destroys the world of illusions that bind people to the painful cycle of death and rebirth. When He rises to dance, He takes on the functions of Brahma and Vishnu and creates and preserves the universe itself.



Sagarmatha or Mt. Everest

Why it is called Everest is given in a book "Science and the Raj: 1857-1905" by Deepak Kumar. George Everest was Surveyor General of India from 1830-43. However, in 1852 an Indian named Radhanath Sikdar was one of the first to compute that that peak XV was the highest point on Earth. When Radhanath told Colonel Waugh, the new SGI, Waugh immediately named it Everest after his predecessor and benefactor even though the peak had **local names like Sagarmatha. According to Kumar the Nepalese names were Devadungha and Gaurishankar and the Tibetan name Jamokangkar.**

The Royal Geographical Society approved of the name Everest but the Royal Asiatic Society repudiated it. Later S. G. Burrard, another SGI, admitted that **"when the Gaurishankar controversy opened, the name Everest was an interloper on the map of Asia".** Of course, the racist British, keen to play down the scientific capabilities of Indians, did not mention that it was Raghanath Sikdar in Calcutta who had first realized the importance of peak XV.

2. Goddess of Bliss: Nanda Devi

In addition to the paradise She shares with Siva on Kailas, Parvati has her abode on a number of other mountains. As

Nanda Devi, the **"Goddess of Bliss,"** She dwells in beauty on the lovely peak of that name in the Himalayas northeast of Delhi. The highest mountain in India outside the principality of Sikkim, Nanda Devi soars in alluring curves of rock and ice to culminate in a delicate summit, poised at 25,645 feet above a ring of snow peaks that form a sanctuary protecting the Goddess from all but Her most determined admirers. The only break in their otherwise impregnable wall of rock and snow is the terrifying gorge of the **Rishi Ganga**, one of the sources of the sacred Ganga, named after seven sages of Hindu stories, who fled the oppression of demons to seek refuge with the Goddess before departing this world to become enshrined as seven stars in the constellation of Ursa Major. Shepherds and porters from nearby villages who venture into the area believe that they can sometimes hear the sounds of these sages--drums beating, the blare of trumpets and the eerie barking of dogs. The few foreign mountaineers who manage to penetrate the gorge, inching their way along the sides of sheer cliffs that plunge thousands of feet into the river roaring below, find themselves in a paradise of gentle meadows filled with flowers at the foot of the sacred peak, which stands like a temple in the middle of the sanctuary itself.

Nanda Devi lies in Uttarakhand, the principal area of pilgrimage in the Indian Himalayas. This region ranks second only to Kailash and Manasarovar in the degree of its sanctity for Hindus. Closer to the lowlands and much more accessible, it is visited by many more pilgrims, who come by the tens of thousands to bathe at Gomukh, the glacial source of the Ganga, and to worship at Kedarnath and Badrinath, lofty temples of Siva and Vishnu sequestered in narrow valleys beneath the icy thrones of the Gods themselves. The region is also the favorite haunt of holy men and wandering yogis, who come to follow the example of Siva and meditate in the sharp clear air of the heights, within sight of the peaks that lead to heaven and the goal they seek.

As the Goddess who resides on the highest mountain in the region, Nanda Devi has many shrines and temples dedicated to Her. One of the better-known ones is in the hill station of Almora, which affords one of the best views of the peak itself and the mountains that surround it. Although primarily a benevolent deity, Nanda can take on the form of **Durga,** the wrathful Goddess. The people of the region also view Nanda Devi as a benevolent source of life and renewal. According to ancient Hindu tales, a flood once covered the entire world. A sage named Manu was warned of the impending disaster and built a boat in which he survived. Vishnu incarnated himself as a fish and towed the craft to safety on a mountain peak. As the waters receded, Manu together with his family and the remnants of all living creatures went down the slope to repopulate the Earth. The people of Uttarakhand identify the mountain of the flood as Nanda Devi, and one local group, the Rajis, still regard the peak as the abode of their ancestors. According to one legend, the seven sages accompanied Manu and remained behind to dwell in the company of the Goddess.

3. Annapurna and Machapuchare: Goddess **Parvati** dwells in yet another form on sacred Annapurna One, named like Nanda Devi for the deity said to reside on its summit. A range of peaks that includes Gangapurna, Machapuchare and Annapurnas One through Four, Annapurna rises in one long sweep above the lush green hills of central Nepal. Seen from the tropical valley of Pokhara in the twilight before dawn, the range's peaks appear to float like bluish-gray icebergs on a sea of liquid shadows. Etched with shadowed flutings, the corrugated face of Annapurna One--the highest summit at 26,545-feet--becomes a golden backdrop to the slender pointed peak of Machapuchare, the "Fish's Tail."

Annapurna means in **Sanskrit "She who is filled with food."** Unlike Nanda Devi, who can take on the wrathful form of Durga, Annapurna is regarded as a purely benevolent deity. A kindhearted Goddess of plenty, She is the Queen of Banaras, the holy city of the Hindus on the banks of the Ganga south of Nepal. Each year, after the autumn harvest, the people of Banaras celebrate a festival dedicated to Her called Annakuta, the "Food Mountain," in which they fill Her temple with a mountain of food--rice, lentils, and sweets of all kinds to be distributed to those who come to receive Her blessings.

Within the heart of the range lies a hidden basin of beautiful meadows and glaciers, resembling the sanctuary surrounding Nanda Devi. A curtain of rock and ice draped between mountains soaring to over 26,000 feet completely encloses this natural amphitheater, dropping nowhere lower than 19,000 feet except at one place. There, an incredible gorge 12,000 feet deep slices through this otherwise impregnable barrier, right beneath the overhanging cliffs and glaciers of Machapuchare, one of the loveliest peaks in the Himalayas.

Arunachala of Tamil Nadu

One of the best place to see how mountains are venerated is far to the south, where Arunachala juts out of the Tamil plain, a hundred miles from Chennai. At the foot of Arunachala is the ashram of **Ramana Maharshi,** one of the greatest spiritual masters of this century. Though he died in 1950, Ramana's ashram today is one of the most potent spiritual places in India, drawing people from all over the world. The only writing Ramana ever did consisted of devotional poems to the mountain. Arunchala, he was to say later, is the physical embodiment of Shiva, of God Himself. Why go anywhere else?

According to **Shiv Purana,** Brahma and Vishnu emerged from Shiva, the Unmanifest Source of all. No sooner had they come into form than they began to argue about which of them had the superior role, as the creator, and the protector of the universe. To stop their quarrelling, Shiva manifested as a column of light so radiant that both Brahma and Vishnu were temporarily blinded, and had to stop their bickering.

Rivers/Oceans/Lakes

The rhythm of life is dictated by water and Hindus hold rivers in great reverence. India is a country that not only nurtures the resources nature has bestowed upon it, but also worships them for the all-round prosperity they bring in their wake. Rivers are one such gift which are considered highly sacred throughout the length and breadth of the country. This is primarily because these mighty rivers have perennially been a source of livelihood to millions of people living in areas lying along their courses. No wonder people see in them a manifestation of divine female power (shakti).

Ambitame, naditame, devitame, Sarasvati. O best of mothers, O best of rivers, O best of goddesses, Sarasvati. About 4,500 years ago the Sarasvati was eulogised thus in the Rig Veda.

The rivers are female divinities, food and life bestowing mothers. As such, they are prominent among the popular divinities represented in the works of art of the classical period. The most holy of rivers, the best known and most honored, is the Ganga or Ganges. She is personified as Goddess Ganga. The sacred river Ganga not only provides water for the land; **the water is itself the symbol of life without end.** The river rises from an ice bed, 13,800 feet above the sea level in the Garhwal Himalayas. Devotees traverse long distances to partake and procure the "Gangajal" (water of Ganga), as it is almost thought to be divine. Because the Gangajal procured from the "Har ki Pauri" in Hardwar perennially remains fresh! In mythology, Ganga is depicted as a beautiful young woman, holding a lotus in one hand, cascading down the tresses of Lord Shiva The story of Goddess Ganga is one of the most important themes in Indian mythology which has inspired the artists and sculptors. The doorway of every temple in India is guarded by an anthropomorphic representation of river Ganga.

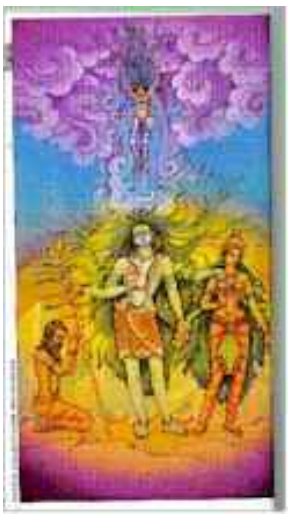
**'O Mother Ganga, may your water,
abundant blessing of this world,
treasure of Lord Shiva, playful Lord of all the earth,
essence of the scriptures and
embodied goodness of the gods,
May your water, sublime wine of immortality,
Soothe our troubled souls.'**

The ancient city of Allahabad (formerly known as **Prayag**) lies at the confluence of the Ganga (Ganges) and the Yamuna, two sacred rivers that have been cradles of the Indian civilisation. The city is mentioned in the oldest Indian literature such as the Vedas, Ramayana, Mahabharata and the Puranas. According to Hindu tales, Lord Brahma, the creator chose a place where three of the holiest rivers on earth could meet in harmony. The city is also referred to as `Tirth Raj' or the `king of pilgrimage centers'.

"The Ganga is a living presence, a protector, a healer of ills. The Ganga is as alive as it ever was with the hopes and dreams of an entire culture.

Even Jawaharlal Nehru, that arch-modernists, asked that his ashes be cast into the Ganga at Prayag.

" I am proud of this noble heritage which was and still is ours, and I am aware that I too, like all of us, am a link in that uninterrupted chain which finds its origin in the dawn of history, in India's immemorial past. It is in testimony of this and as a last homage to the cultural heritage of India that I request that a handful of my ashes be thrown in the Ganges at Allahabad, so that they may be borne to the vast ocean that bears on the shores of India."

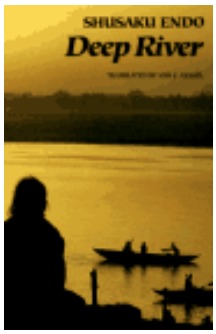


(source: **The India I Love - By Marie-Simone Renou** p.128).

Kashi is the holiest place for Hindus. It is considered holier than the sky.

It is at Kashi that **Count Keyserling** describes the ecstasy that Hindu devotion means.

*"*The whole Hindu world still comes to her banks, to sing, to pray, to wash, to ask favors and blessings, to barter, to die. The Ganga is a living symbol of an ancient culture's way of life and of the sacred dimension of nature itself. Of all the goddesses, Ma Ganga, is the only one without a shadow. She is the unequivocal fountain of mercy and compassion, here in this world only to comfort her children. Her waters are the milk, the nectar of immortality, source of all life, and abundance. Countless flowers are strewn across her body daily; millions of lights set sail every evening upon her waters. While stories of gods and goddesses come and go with the ages, while stories replaces or rivals another, the organic presence of Ganga continues as ever, absorbing her devotees' offerings and ashes in the same way she has done since time immemorial."



(source: **Travel Through Sacred India - By Roger Housden** p. 22-23).

Of particular sanctity in India are the perennial rivers, among which the Ganga stands first. This river, personified as a goddess, originally flowed only in heaven until she was brought down by **Bhagiratha** to purify the ashes of his ancestors. She came down reluctantly, cascading first on the head of Siva, in order to break her fall, which would have shattered the Earth. Confluences are particularly holy, and the Gangas' confluence with the Yamuna at Allahabad is the most sacred spot in India. Another river of importance is the Saraswati, which loses itself in desert; it was personified as a goddess of eloquence and learning.

Kumbh Mela: The magic of the mystical Ganga. According to devotees, those who come to the river with a prayer, never leave back unsatisfied. *Faith in the power of the river, to heal, to resurrect the dead from the grave.* The recent **Mahakumbh** at Tirthanagari Prayag, has witnessed a mindboggling rush among people, both Indian and foreign, to take a dip in the water of the river, whose origin is as deep as the Himalayas themselves. *"Ganga Maiyya (Mother Ganga)* will take care of us," The belief among the devotees, startles many first timers to this mela. The sheer scale of the Kumbh mela is so mind-boggling. **It's extraordinary to witness this sort of mass spiritual communion between so many people and the river**. The varied images from Kumbh attracts everyone from Boston to Benaras." -- the biggest spiritual event in the globe. **Bishambhar Bhushan,** poor and blind, traveled two days in a cramped train from his village of Dhanvani in central Madhya Pradesh state. Bhushan, 80, scooped up the cold river with his hands, and offered it to the heavens in a centuries-old gesture. "I told Mother Ganga, take me across life, mother," he said, his eyelids twitching with excitement. "My life's ambition is fulfilled."

Together, the Kalpavasis and the Sanyasis, provide a glimpse into the spiritual mindset of the people of India set in their pursuit of salvation. Kalpavasis, are people who survive on minimal food and clothing, and whose number runs into tens of thousands. They sleep in the open during the freezing winter nights on the river banks, revealing the spirit of the Kumbh as much as the sadhus who come in hoards with their respective flag-bearers. In perhaps one of the largest gatherings ever, millions of pilgrims took a dip at the seven ghats at Sangam - the confluence of the Ganga and the Yamuna - on Wednesday, stretching the administration and the police to their limits, but reinforcing the fact the Indian milieu had not lost touch with the divine.

In his moving novel, **Deep River**, **Shusaku Endo** (1923-1996) a major Japanese author writes about a group of Japanese tourists, each of whom is wrestling with his or her own demons, travels to the **River Ganga** on a pilgrimage of grace. Each has come to India and the holy river Ganga on a spiritual quest, and each discovers that God has "many faces."

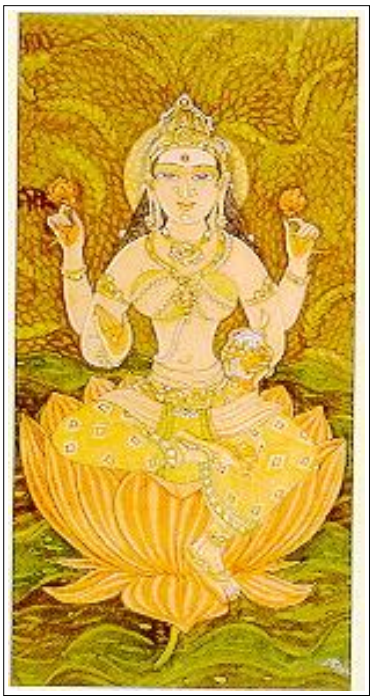
(For more on Kumbh mela please refer to the **Trivia** chapter).

"Like a moonless night, like flowerless trees,
such are the countries and regions deprived of the Beneficial virtues of the Ganges.
Like a sunless sky, an earth without mountains, an atmosphere without wind -
thus undoubtedly are the countries and regions that the Ganges does not bathe.
If the wind which has caressed the waves of the Ganges touches a man's skin,
it immediately carries off all the sin he has committed. As small children tormented by hunger crowd around their mother begging, so men here below, desirous of attaining their salvation, hurry
imploringly to the Ganges!"

- such are the virtues of the Ganga celebrated in the **Mahabharata**.

Reverence for Water

Waters contain
All disease-dispelling medicaments,
Useful for the upkeep of our body,
So that we may live long
To enjoy the bright sun.
That there is ambrosia in waters,
There is healing balm in them,
And there are medicinal herbs,
Know this all,
And by their proper use become wiser.



- Rig Veda 1.23

I seek the Lord of the Waters of golden appearance.
May he hear our entreaty and grant us a place of ablution.
Whatever food I have taken in the house of the wicked, whatever gift I have received at the hands of the crafty, whatever sin of thought or word or deed I have committed, from this may Indira, Varuna, Brhaspati and Surya cleanse me again and again.
I have eaten or drunk to excess, or consorted with people of violent ways, may king Varuna wipe it all away.
Thus, rid of impurity and evil and free from my sin, may I find liberation and pass to the world of the Lord of creation.

- **Taittiriya Aranyaka 1.12-13**

***

Not far from the foot of the peak itself, at nearly 15,000 feet above sea level, reflecting the light of its snows, repose the calm blue waters of the most sacred lake of Hindu religion and stories -holy **Lake Manasarovar, "Lake of the Mind."** The hardiest of Hindu pilgrims aspire to take the long and dangerous journey over high passes to bathe in Manasarovar's icy waters and cleanse their minds of the sins that threaten to condemn them to the suffering of rebirth.

Goddess Saraswati is the embodiment of the mighty **Saraswati River of the Vedas**. Saraswati means "the essence of one's own self." The Sanskrit word '*sara*' means essence and '*swa'* means 'self'. **She is the earliest goddess who is associated with a river in the Indian tradition.** She is the divine spouse of Lord Brahma, the creator. Since knowledge is necessary for creation, Saraswati symbolizes the creative power of Lord Brahma. She is also praised for her ability both to cleanse and fertilize the earth, and has been equated with the goddess of learning, poetry, music, and culture. She is associated with speech- Vac: the goddess of riverlike, streaming speech.

Saraswati is typically shown seated on a lotus. Like the swan, the lotus seat of the goddess suggests her transcendence of the physical world. She floats above the muddy imperfections of the physical world, unsullied, pure, beautiful. Although rooted in the mud (like man rooted in the physical world), the lotus perfects itself in a blossom that has transcended the mud. She inspires people to live in such a way that they may transcend their physical limitations through the ongoing creation of culture. Goddess Saraswati is worshiped throughout India and on her special day in spring, Vasant Panchmi, she is worshipped by school children as the patron goddess of learning. The **Benaras Hindu University** was also founded on this day.

Brahmputra is the mighty river that dominates the landscape of north-east India. Emanating from the Mansarovar region in the Himalayas, it incessantly gushes down with a massive force through the dense forests of north-eastern states of India, particularly Assam. Brahmputra may not be revered as much as the Ganga is, but she is considered to be more beautiful. Despite its masculine-sounding name, Brahmputra is essentially feminine and exceeds Ganga by a good 450 kilometers in length. The most unique feature of this great river is its navigability at an astounding altitude of ten thousand feet! Like the Ganga, its waters too are snow-fed and are generously rainfed, thus making it flow throughout the year.

The Saraswati, Ganga, Yamuna, Brahmaputra, Krishna, Kaveri, and other rivers represent an ever-flowing stream of celestial grace which purifies and fertilizes the earth.

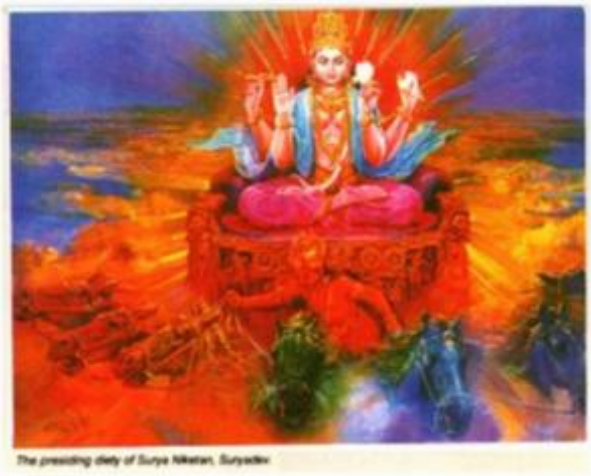
Top of Page

Mother Earth/Sun & Planet

"O Goddess Earth, the consort of Visnu,
you whose garments are the oceans and
whose ornaments are the hills and mountain ranges;
please forgive me as I walk on you this day."

In the **Artha-Veda,** composed five-thousand years ago by the Rshis, a hymn to the Earth.

May She, Queen of what has been and will be,
make a wide world for us.
Earth that bears plants of various healing powers,
may she spread wide for us and thrive.



O Earth - brown, black, red and multi-colored
the firm Earth protected by Indra,
on this Earth may I stand -
unvanquished, unhurt, unslain.

This earth, our mother, has nurtured consciousness from the slime of the primeval ocean billions of years ago and has sustained the human race for countless centuries. Will we repay our debts to our mother by converting her into a burnt out cinder circling the sun into eternity?

Rock, soil, stone and dust with these
Earth is held together and bound firm.
My obeisance to gold-breasted Earth...
Rising or sitting, standing or walking,
May we, either with our right foot or our left,
Never totter o the earth. - **Atharva Veda** 12.1.26, 28

Sun/Dawn/Fire/ Worship

"We meditate upon the supreme effulgence of the Divine creative Sun, that he may give impulse to our intelligence." Rig Veda III 62.10

The Sun (Surya) is the visible presence, the vision of the Divine, the cosmic symbol for the Supreme. He is the Divine light and presence that fills all the worlds. The Sun of illumination follows in love affair the Dawn (**Usha**) of awakening. Usha or dawn represents Human aspiration as the Spiritual dawn.

Surya is possibly the most Vedic God. In the RgVeda, he is worshipped as Savitr. As the source of life, light and warmth. He is also the source of inner enlightenment as the famous Gayatri mantra suggests. At dawn, the householder and his wife rise, purify themselves with a bath--usually in a temple pool or a river if one is available--and then make an offering to the fire-god **Agni** in their household fire. Agni represents the consciousness force, the Sacred Fire. The man will then turn towards the rising sun and ask for blessing and understanding.

The **Gayatri mantra** (chant), which forms the core of the Hindu faith, is actually addressed to Surya:

"O splendid and playful sun,
we offer this prayer to thee.
Enlighten this craving mind.
Be our protector.
May the radiance of the divine ruler guide our destiny.
Wise men salute your magnificence with oblations and words of praise."

Lord Rama was also taught, by sage Agastaya, the *Adityahridayam*, a prayer addressed to the sun god.

" The Sun is the foremost physical manifestation of divine creative power. In the glorious morning the faithful bend towards the giver of life in one single gesture of adoration. "

Top of Page

Plants/Animals

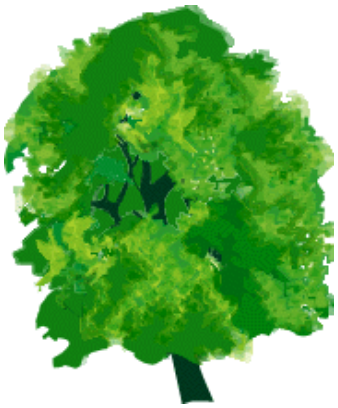
Forests and groves were considered sacred, and flowering trees received special reverence. Just as various animals were associated with gods and goddesses, different trees and plants were also associated in the Hindu pantheon. The **Mahabharata** says that 'even if there is only one tree full of flowers and fruits in the village, that place becomes worthy of worship and respect.'

Hindus see divinity in all living creatures. Animal deities therefore, occupy an important place in Hindu dharma. Animals, for example, are very common as form of transport for various Gods and Goddesses. The entire clan of Shiva is replete with ecological symbolism. Shiva's consort Parvati is considered the daughter of the mountain. She is the personification of Mother Earth. In Hindu stories and iconography, there is a close relationship between the various deities, and their animal or bird mounts. Each divinity is associated with a particular animal or bird, and this lends a special dimension to the animal kingdom.

As the sheep is to Christianity, the cow is to Hinduism. Lord Krishna was a cowherd, and the bull is depicted as the vehicle of Lord Shiva. Today the cow has almost become a symbol of Hinduism. As opposed to the West, where the cow is widely considered as nothing better than walking hamburgers, in India, *the cow is believed to be a symbol of the earth - because it gives so much yet asks nothing in return.* Because of its great economic importance, it makes good sense to protect the cow. It is said Mahatma Gandhi became a vegetarian because he felt cows were ill-treated. Such is the respect for the cow, notes scholar Jeaneane Fowler, that Indians had offered to take in millions of cows waiting for slaughter in Britain as a result of the crisis in beef production in 1996.

Snakes are a symbol of healing and primal energy. In art, the *Naginis* are figures of beauty.Vishnu reclines on the serpent **Ananta** eternally. In Kerala, snakes are worshipped as guardians of the home; and it is said that when a snake enters your life, there will be a new birth of creativity and wisdom. In Bengal, the goddess Manasa, a divine nagini, is worshipped for her powers to vanquish illness. Dogs have always been man's faithful friends, loyal and loving. Yudhishthira refused to enter heaven without his dog. After the Pandavas crossed over to the celestial zones, Yudhishthira's dog became dharma personified. He told Indra, ``This dog, O Lord, is highly devoted to me. He should go with me. My heart is full of compassion for him".

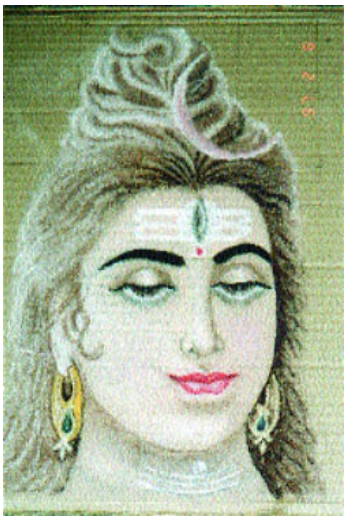
Even e Lord Krishna always wore a peacock feather in his crown.



Ganesha, the son of Shiva, is a combination of elephant and man. The elephant is worshipped in this country and even today forms an integral part of many temples and festivals. **Muruka or Subramanyan**, another son of Shiva, also with the trident as his favorite weapon, and the peacock as his vehicle, is a deity of woods and mountains in South India. Animals also appear as independent divine creatures.

Sacred Groves and Trees

The *pipal* tree or *asvatta* (*Ficus religiosa*) has had a conspicuous position in the cultural landscape of north India and human collective memory for more than 5,000 years. It was depicted even on Mohenjo Daro seals. Buddha himself found enlightenment under a *pipal* tree (Mansberger, 1988). Buddha is reported to have been born in a sacred grove, Lumbinivana, full of *sal* trees (Gadgil, 1985).



For Hindus the *bel* tree, *Aegle marmelos,* is associated with Shiva, *tulasi* with Vishnu, and fig (*Ficus glomerata*) with Dattatreya, the son of Trimurty.

Nakeera, the Tamil poet of the Sangam period, states that Lord Muruka could be found in the forest, in a place surrounded by water, rivers, tanks, meeting places under trees, new-grown groves, etc. The *kadampa* tree is likened to Lord Muruka himself. Sangam tradition holds that he is the owner of all the hilly tracts with rich groves (Ramachandran, 1990). Ayyappa, Aiyanar and Sasta (all considered to be the same) of south India is essentially a deity of the woods, whose province is to guard the fields, crops and herds of the peasantry and to drive away their enemies.

No temples existed in India during the Vedic period. They were not to be found in the pre-Buddhist period except for wooden ones. The ancient Buddhist sacred place was the *stupa* (Hastings, ed., 1934). The various gods and goddesses whom the indigenous population of peninsular India worshipped were not accustomed to dwell in the secluded atmosphere of temples; they loved the open air. *Even today, for the gramadevata (village goddess) of south India there are no temples in many villages.* The deity may be in the shadow of a big tree. Generally they are lodged in small shrines. In a good number of villages no object is placed to represent the deity and the tree itself is regarded as the embodiment of the deity.

An interesting stage in the transformation of the sacred tree into the anthropomorphic form was observed by the Italian traveller Della Valle, who visited India in 1623–25. He found in Surat the worship of Parvati in the form of a tree. Her face was painted on the tree and offerings were of vegetable origin (Wheller and Macmillan, 1956).

In the personification of Lord Shiva, for instance, we may observe the evolution of Indian traditional thought of living in partnership with nature. He is as old as Indian thought and his origin probably merges with oblivion in the Indus Valley culture. He has mountains and wild places as his abode. His entangled hair symbolizes the primeval untamed forest. The **Ganga** originating from his tress depicts the watershed function of sacred groves. Serpents coiled around his neck symbolize coexistence with the denizens of the ecosystem. By his trident and leopard skin attire he brings to our mind the picture of the hunter-gatherer. This destruction is followed by creation; incorporating the elements (*bhutas*) from Mother Earth sprouts crops and grasses and once again forests. The sacred grove, on the other hand, was aboriginal forest which enhanced overall landscape heterogeneity and thereby greater plant and animal diversity. The necklace of *rudraksha* (*Elaeocarpus* spp.) adorning Shiva's neck also highlights his links with the forest.

Various trees, fruits and plants have special significance in Hindu ritual. Hindu religious scripts, stories, and rituals have attempted to drive home the importance of preserving nature by deifying it through the centuries. **Lord Krishna** says in the **Bhagavad Gita** (9.26):

Patram Pushpam phalam toyam, yo mey bhaktya prayachchati Tadaham bhakt yupahrutam asnaami prayataatmanaha

I accept a leaf, flower, fruit or water Or whatever is offered with devotion.

The **neem** tree is sacred and its flower is offered to God and eaten on New Years day although it is sour. The **bilva** tree, its flowers and fruits are very sacred for Shiva worship. The **tulsi** plant is regarded as the abode of Krishna and is important in all pujas. **Sandal wood**, its paste and oil are important in worship of gods.

All plants and flowers have medicinal value in the Hindu system of medicine (ayurveda) brought by the divine medicine man **Dhanvantari** during **Samudra mathana (churning of oceans).**

The **coconut** tree and the coconut are sacred and are offered to God during worship. **Mango** leaves are used as festoons during pujas and auspicious events. All flowers and leaves of plants are used during worship for pushpa puja and patra puja. The **lotus** is a sacred flower and plant for Hindus. The **banana** plant and leaves are used for ornamentation and worship.

The 'tulsi' plant or Indian basil is an important symbol in the Hindu religious tradition. The name 'tulsi' connotes "the incomparable one". Tulsi is a venerated plant and Hindus worship it in the morning and evening. Tulsi grows wild in the tropics and warm regions. Dark or *Shyama* tulsi and light or *Rama* tulsi are the two main varieties of basil, the former possessing greater medicinal value. Of the many varieties, the *Krishna* or *Shyama* tulsi is commonly used for worship.

Tulsi As A Deity

The presence of tulsi plant symbolizes the religious bent of a Hindu family. A Hindu household is considered incomplete if it doesn't have a tulsi plant in the courtyard. Many families have the tulsi planted in a specially built structure, which has images of deities installed on all four sides, and an alcove for a small earthen oil lamp. Some households can even have up to a dozen tulsi plants on the verandah or in the garden forming a "tulsi-van" or "tulsivrindavan" - a miniature basil forest.

Vaishavites or believers of **Lord Vishnu** worship the tulsi leaf because it's the one that pleases Lord Vishnu the most. They also wear beaded necklaces made of tulsi stems. The manufacture of these tulsi necklaces is a cottage industry in pilgrimages and temple towns.

Tulsi As An Elixir: Apart from its religious significance it is of great medicinal significance, and is a prime herb in Ayurvedic treatment. Marked by its strong aroma and a stringent taste, tusli is a kind of "the elixir of life" as it promotes longevity. The plant's extracts can be used to prevent and cure many illnesses and common ailments like common cold, headaches, stomach disorders, inflammation, heart disease, various forms of poisoning and malaria. Essential oil extracted from *karpoora* tulsi is mostly used for medicinal purposes though of late it is used in the manufacture of herbal toiletry.

According to Jeevan Kulkarni, author of *Historical Truths & Untruths Exposed*, when Hindu women worship tulsi, they in effect pray for "less and less carbonic acid and more and more oxygen - a perfect object lesson in sanitation, art and religion". The tulsi plant is even known to purify or de-pollute the atmosphere and also works as a repellent to mosquitoes, flies and other harmful insects. Tulsi used to be a universal remedy in cases of malarial fever. Prof Shrinivas Tilak, who teaches Religion at Concordia University, Montreal has made this historical citation: In a letter written to *The Times*, London, dated May 2, 1903 Dr George Birdwood, Professor of Anatomy, Grant Medical College, Bombay said, "When the Victoria Gardens were established in Bombay, the men employed on those works were pestered by mosquitoes. At the recommendation of the Hindu managers, the whole boundary of the gardens was planted with holy basil, on which the plague of mosquitos was at once abated, and fever altogether disappeared from among the resident gardners."

Tulsi In Legends: According to one legend, Tulsi is also mentioned in the stories of Meera and of Radha immortalised in Jayadev's Gita Govinda. The story of Lord Krishna has it that when Krishna was weighed in gold, not even all the ornaments of Satyabhama could outweigh him. But a single tulsi leaf placed by Rukmani on the pan tilted the scale. In the Hindu stories, tulsi is very dear to Lord Vishnu. Tulsi is ceremonially married to Lord Vishnu annually on the 11th bright day of the month of Karttika in the lunar calendar. This festival continues for five days and concludes on the full moon day, which falls in mid October. This ritual, called the 'Tulsi Vivaha' inaugurates the annual marriage season in India.

Conclusion:

So long as this land,
Will have mountains, forests and pastures
That long will the Earth survive,
Sustaining you and the coming generations.

- **Devistotra. A Hindu Shastra**

Harmony with nature is an important aspect of Indian culture. The mountains, rivers, trees, flowers and animals have a special significance in Indian life. There is no mountain range in India from the Himalayas to Sahyadri which is not somehow integrated with Indian life. The Himalaya is the devatatma and the mount Kailasa is the abode of Shiva. The Vindhyas are also sacred; the Aravaliis with Mount Abu and Amba Devi are centers of pilgrimage. When we come to the rivers, it is not only the Ganga and Yamuna that are sacred, but Narmada, Godavari, Kaveri and others are also holy. To each locality its river is sacred as Ganga. The Peepal, Banian, Neem trees, Tulasi etc., are also the useful part of our life. **In fact the Hindu culture, like the Hindu temple, is permeated with reverence for nature.** It is the harmony of man and nature that is the basic concept of our life and culture.

What is needed today is to remind ourselves that nature cannot be destroyed without mankind ultimately being destroyed itself. Centuries of rapacious exploitation of the environment has finally caught up with us, and a radically changed attitude towards nature, is now not a question of spiritual merit or condescension, but of sheer survival. This earth, so touchingly looked upon in the Hindu view as the Universal Mother, has nurtured mankind up from the slime of the primeval ocean for billions of years.

Let us recall the ancient Hindu dictum:

"The earth is our mother, we are all her children." Mountains are mystical realms of Gods, heaven and spiritual masters. Trees and termites, all of Nature has been venerated by ancient Hindus, Greeks, Native Americans and other Pagan religions around the world. They worshipped Nature and to treat the forces of Nature as heavenly superhuman powers. Zeus, Apollo the Sun god, has his own attending ministers; Minerva, the Goddess of wisdom, a western Saraswati, for whom learning springs from the head of love."

" God sleeps in the rocks, proclaims the Hindu scriptures, "dreams in the plants, stirs toward wakefulness in the animals, and in mankind is awake to his own ego individuality. "

" Vasudhaiva Kutumbakam -- The Whole Universe is one Family. "

'West has always benefited from Indian medicine'

PANAJI: If you thought the benefits of medicine flowed into India via a one-way street, American researcher Timothy Walker would like to convince you that is not the case. This researcher of early European colonial history is currently scouring the archives of Goa to show how Indian medicine influenced the West.

"Indian medicine's influence on Portugal was fairly wide. You had echoes of Indian or ayurvedic practices that come into Portuguese usage. And you can see those echoes reflected in the medicines that Portuguese physicians and surgeons are supplying and prescribing for patients in Indian hospitals and infirmaries," Walker said.

What got him particularly interested is the differences between "popular" and "university trained" medicine. "For my doctoral program, I focused on early modern Europe and colonial America. My dissertation work was on Portugal in the 17th and 18th century. I looked at how popular medicine was being oppressed by licensed physicians and surgeons," he says.

In turn, he got led to India "because at that time a lot of the medicines coming out of India were being shipped to Portugal." Finally, he began looking how Indian medicine influenced European medicine, via Portugal - the earliest European colonial power in Asia.

Goa has one of the richest archives of early colonial history, because the Portuguese settled here in the early 16th century. Walker is locating interesting examples of drugs that were shipped out to Portugal in early colonial times.

Indian influences are also noticeable in drugs in Portuguese pharmacies. "You can see it (the influence of Indian medicine on the west) thorough documentation from the 17th and 18th century," says Walker.

Tamarind, for example, is a plant widely used in ayurveda. It is applied in Portuguese hospitals. It is used as a cooling agent, in combination with other medicinal plants to help the absorption of those plants and it is used in a poultice, placed on the skin.

Early Portuguese colonies in India proved to be the first meeting grounds for the east and the west, particularly Goa and the enclaves of Daman and Diu around the coastline of present day Gujarat, he says.

There's a lot of scholarship in the west that speaks of the way Western medicine was brought to the east, and of how 'scientific' medicine was taught to Indian people. But what is often not so strongly appreciated is how much the West learnt from the east," he points out.

Walker says he has been able to locate documents that show the extent of Portuguese buying medicines from local merchants and traders. "So you have a lot of opportunities for shared medical knowledge, which I don't think was the same case with other colonial powers that were in India at the time.

"In terms of documentation, you have a real gem here in Panjim. He points out there were 12,000 to 15,000 volumes of material that relatively are in very good condition. It has been well preserved and well catalogued.

"This probably is the best source of documentation for people who want to look at this whole question of the West meeting the east specially in the early stages." (IANS).

Ashwagandha next on patent hunters list
http://www.timesofindia.com/today/16home7.htm

HYDERABAD: **Neem. Turmeric. Now, Ashwagandha. American and Japanese companies have discovered another Indian treasure -- and they are patenting it.**

According to the officials of the department of science and technology, seven American and four Japanese firms have filed for grant of patents on formulations containing Ashwagandha or extracts of the plant.

Fruits, leaves and seeds of the Indian medicinal plant *withania somnifera* have been used for ages in the Ayurvedic system as aphrodisiacs, diuretics and for restoring loss of memory, the officials said.

The Japanese patent applications are related to the use of Ashwagandha as a skin ointment for cosmetic purposes and for promoting fertility. Natreon of the United States has obtained a patent for "an extract obtained from the Ashwagandha plant taken from steep rocks in the Himalayan mountains", officials of the patent facilitating cell said in their report.

The report said another US establishment, the New England Deaconess Hospital, has taken a patent on an Ashwagandha formulation claimed to "alleviate symptoms associated with arthritis".

"One thing which is very obvious from the above study," the report concluded, "is that Ashwagandha plant is catching attention of scientists and more and more patents related to Ashwagandha are being filed or granted by different patent offices of the world since 1996." *(PTI)*

Abduction of Turmeric - Pirates in the garden of India

The war began thus: In May, 1995 the US Patent Office granted to the University of Mississippi Medical Center a patent [#5,401,504] for "Use of Turmeric in Wound Healing."

Well, well, well. Some discovery, that. Indians grow up with a constant awareness of turmeric. It permeates their life. It is an easy and generous plant [curcurma longa] that grows throughout the sub-continent. The tuber when dried keeps practically forever. Its decoction is a stubborn dye. It is a condiment that adds character to Indian food and helps digestion. Turmeric powder heals open wounds. Drunk with warm milk, it stems coughs, cures colds and comforts throats.

Indians paint doorways with turmeric paste as an insecticide. Women in the south make a depilatory skin cream with it. Add the juice of fresh lime to dry turmeric, let it marinate for three days, dry it in the sun and grind it to a fine powder and voila, you have the brilliant red kunkum that 'dots' Indian women's foreheads and surrounds the gods in the temples. Roots are exchanged between people as a formal symbol of goodwill. Indians place freshly uprooted plants at the altar during Pongal and offer worship .

For Indians turmeric is a benevolent goddess. For sound reasons, it transpires. Indian physicians had always packed their kits with turmeric. Now West's formal research was confirming many of its virtues. It is now believed to be able to treat dysentery, arthritis, ulcers and even some cancers. It is also found to protect the liver. Turmeric's grace is stunning cancer researchers. COX-2 inhibitor drugs have been known to block an enzyme called cyclooxygenase-2 which aggravates arthritis. Dr. Mitch Gaynor at the Strang Cancer Prevention Center, New York uses these drugs in cancer treatment to impede this undesirable enzyme. Turmeric goes one step further: Dr. Chintalapally V. Rao of American Health Foundation, Valhalla, NY believes that while COX-2 inhibitor drugs battle the enzyme, the curcurmin element in turmeric prevents even the formation of the enzyme. Consider the implication of 'turmeric patent' #5,401,504. If an expatriate Indian in America sprinkles turmeric powder -- just as her ancestors in India have done for centuries-- on her child's scrape, she would in fact be infringing US patent laws and was open to prosecution.

(source: **Goodnewsindia.com**).

Curry Spice May Inhibit Tumor Growth A compound found in the curry spice turmeric may suppress production of a protein that spurs tumor growth in the body, researchers report. The researchers mixed human pancreatic cancer cells with different amounts of curcumin, which is the substance that gives turmeric its yellow color.

**

Hundreds of herbs used for centuries by traditional healers in India could soon be on western pharmacy shelves. Clinical trials have shown that herbal remedies for asthma, diabetes and even sexually transmitted diseases may be effective. may be effective. The council is looking at treatments for a range of other conditions used for over a thousand years by practitioners of Ayurveda and Siddha medicine.

Professor Ranjit Roy Chaudhury, a member of the council, said that in some cases the herbs may be more effective than Western-style medicines. "We have plants for bronchial asthma, hepatitis and arthritis," he said.

India Losing on Patents ?

Indraprasth, Dec 8 (UNI) - **After Neem, turmeric and jamun, now it is cow's urine, traditionally used for medicinal purposes in India, which has been patented in the United States as a distilled bio-enhancer.**

The government was aware of this fact and was considering the steps to be taken in this regard, official sources said here.

Cow's urine is a component of 'Panch Gawya,' a mixture of cow's milk, curd, ghee, urine and dung, used from ancient times as a component of food and medicine. It is also used in various ayurvedic medicines.

Though there was no separate strategy for popularizing use of Panch Gawya, it was being popularised as part of the popularisation of the Indian System of Medicine and Health medicines, they said. Now with the patenting of Cow's urine has confirmed the belief of naturopaths that it has got medicinal properties which enhances the life span. Former Prime Minister Morarji Desai was among the staunch supporters of cow' urine.

Earlier, the patenting of turmeric and neem in the US had created a furore in the country as people protested the patenting of traditional Indian knowledge abroad.

Recently, the **Jamun fruits that has been widely used in the Indian system for treatment of diabetes, has been patented in the US.**

Monsanto's chapati patent raises Indian ire NEW

Monsanto, the world's largest genetically modified seed company, has been awarded patents on the wheat used for making chapati - the flat bread staple of northern India.

The patents give the US multinational exclusive ownership over Nap Hal, a strain of wheat whose gene sequence makes it particularly suited to producing crisp breads. Another patent, filed in Europe, gives Monsanto rights over the use of Nap Hal wheat to make chapatis, which consist of flour, water and salt.

Environmentalists say Nap Hal's qualities are the result of generations of farmers in India who spent years crossbreeding crops and collective, not corporate, efforts should be recognised. Greenpeace is attempting to block Monsanto's patent, accusing the company of "bio-piracy".

After the Basmati patent controversy, it is now the turn of Indian wheat, which the US agro produce major Monsanto is attempting to register under its patent name in Europe, where the wheat had once become so popular that it had won first prize for four consecutive years between 1916 and 1920.

The Research Foundation for Science, Technology and Ecology, an NGO, has moved the Supreme Court alleging that the Centre had failed to take the matter vigorously with the European Patent Office (EPO), and sought a direction to the government to take necessary action. The NGO has accused Monsanto of “blatant violation” of patent system while filing a claim before the EPO. **It said the Indian wheat variety had originated in the Indian sub-continent as a result of over a thousand years of “indigenous” knowledge and practice by the farmers. Any intervention by an outside entity to claim patent of the produce, was violative of the World Trade Organisation norms.**

Now, a US patent for atta chakkis

Patent relates to method of producing flour used for rotis

New Delhi, December 9: Now it is the turn of *atta chakkis*. The traditional knowledge of producing atta has become a victim of the patent rights regime. Hundreds of *atta chakkis* and modern flour millers and wheat exporters may fall into the trap being laid by a Nebraska-based company, ConAgra.

The US Patent Office has granted patent rights to ConAgra Inc for the “method for producing an atta flour” vide no 6,098,905.

The patent application filed by ConAgra said “the present invention relates to a method for producing an *atta* flour, which is typically used to produce Asian breads such as *chapati* and *roti*. Deputy DG of ICAR, Dr Mangla Rai, said that not only **attempts should be made to document and preserve our traditional knowledge but also we should make innovations on the basis of our traditional knowledge and patent the same.**

Dr O. P. Agarwal, advisor and head of R&D, CSIR said, “The filing of such patents rights by foreign companies should be a wake-up call for us to not only go for documentation of our traditional knowledge on a war footing but also to immediately identify areas of traditional knowledge which are likely to fall as an easy prey to piracy in a fast growing industrial economy.”

The Mahakumbh: Its Sacred Significance
By Pankaj Dixit
http://www.timesofindia.com/today/20edit5.htm

WATER is the basis of all life on earth. Of the Panchmahabhut or the five natural elements, water is considered to be the key to life. Human beings feel a close affinity to it, since three-fourths of the human body is constituted of water. In this respect, our body is like a microcosm, as the surface of the earth (the macrocosm) is constituted similarly, being three-fourths, water.

The confluence of three rivers Ganga, Yamuna and Saraswati at Prayag stands for the meeting of Ida, Pingala and Sushumna Nadis at Muladhar Chakra known as Yukta Triveni. Kumbha symbolises the arousing of six chakras to reach Ajna Chakra where these three nadis meet again to form the Mukta (Liberation) Triveni for yogis.

The Ganga always flows and rushes very fast to the sound of Gama-Gam (meaning go-go) while the Yamuna moves slowly with a placid flow to the sound of Yam-Yam (meaning control-control). Likewise whether one acts fast in life or acts after deliberate thinking, it must be decided by his knowledge and temperament. And both these aspects should be supported by the invisible Saraswati, the faculty of Jnan (knowledge). The meeting of these three rivers in the spiritual realm represents the three gunas or qualities of the native, i.e. Sattvic or subtle represented by Saraswati; Rajasic or the vibrant Ganga; and Tamasic or the dark Yamuna. These three rivers also signify the three saktis, Mahalakshmi, Mahakali and Mahasaraswati; the three sacred fires of sacrifice; the three Gods Brahma, Vishnu and Mahesh; and the three notes of music, Sa for Saraswati; Re for Yamuna; and Ga for Ganga.

Further deep in the spiritual sphere, these three rivers represent the three phases of time i.e. present, past and future; the triangle or minimum space enclosed in time; Nad, Bindu and Kala; and the three humours, vata, pitta and kapha. The Triveni also denotes the three basic philosophies of the Gita, i.e. Jnan Yoga, Karma Yoga and Bhakti Yoga.

The Kumbha occurs in a cycle of every 12 years - the most sacred or auspicious time is calculated on the basis of a specific planetary configuration, considering its cosmobiological effect on the human body and mind. Various astronomical conjugations during Kumbha represent various stages of the solar cycle which has a direct influence on human beings and the biosphere. The ritual bath or snan on specific days i.e. full moon, new moon and Basant Panchami have been specifically prescribed on the basis of the bio-effects of lunar phases. The imposed electromagnetic fields on water are transmitted into the human beings taking bath in the Holy Prayag giving them great health benefits. The number 12 here signifies time or Kal as there are 12 adityas, 12 zodiac signs, 12 months, and 12 Jyotirlingas (self-emergent sivalingas). The entire world exists in time, moves in time and space, and is controlled by time. According to Atharvaveda, Kumbh is the representation of space situated in Kal supervising all of us. Spiritually the holding of Kumbha at an interval of 12 years symbolises the need for purifying the body by sublimating the inherent vices of the 12 sense organs, i.e. Panchkarmendriyas (five organs of action), Panchjnanedriyas (five organs of perception, the mind and the intellect - and thereby to arouse the six psychic centres or chakras separated from each other at a distance of 12 angulas for attaining the Amrit Kumbha or pitcher of nectar.

There is another mystical explanation of the Kumbha. The human head and neck form an inverted pitcher or Kumbha from where Amrit or nectar flows downwards into the body. The two eyes represent the sun and moon gods, the nostrils represent Ganga and Jamuna, the tongue is Vani or Saraswati and it spans 12 angulas of space.

Astrologically during Kumbha the three grahas, Jupiter, Sun and Moon, play a prominent role in the two Zodiac signs, Taurus and Capricorn respectively. The presence of Sun in Capricorn or Makara signifies the Swadhishtan Chakra, the centre of procreation representing the water element. Makara also signifies the Kama as Kamdev, popularly knows as Makaradhwaj. Accordingly Madam Blavatsky in her famous book Sacred Doctrine records that Capricorn is universal intelligence, which is transformed into human intelligence through water. It is therefore that one of the famous **Shahi Snans** occurs on Basant Panchami, the day of Kamdev. Likewise Jupiter's or Jiva's (life force) presence in Taurus signifies the creative power of universe, Shiva Shakti or the Male and female forces.

Trees with spiritual attributes
Pran Nevile
http://www.tribuneindia.com/20011021/spectrum/main5.htm

From time immemorial, certain trees and plants in India have been invested with divine attributes. Hindus were taught to worship and revere trees and plants in the belief that it would influence their own personal well-being. Evergreen trees were regarded as symbols of eternal life and to cut them down was to invite the wrath of the gods. Groves in forests were looked upon as habitations of the gods.

The banyan tree occupies the pride of place amongst the sacred trees of India. It has aerial roots that grow down into the soil forming additional trunks. It is, therefore, called *bahupada*, the one with several feet. It symbolizes a long life and also represents the divine creator, Brahma. It is invariably planted in front of temples. The numerous stems of the banyan tree are even regarded as the home of gods and spirits. It was under a banyan tree that the Hindu sages sat in a trance seeking enlightenment and it was here that they held discourses and conducted holy rituals. Some banyan trees reached a height of over 100 feet and more than 1000 feet in circumference. No wonder, it is stated that 10,000 men could be covered by a single tree. We come across a mention of the banyan tree in many travelers' accounts.

Bishop Heber (1825) was so impressed by the sight of this tree that he exclaimed: **"What a noble place of worship". Travelers' tales even inspired the great English poet Milton to give description of the banyan tree in Paradise Lost in the following lines.**

The fig-tree at this day to Indians known
In Malabar or Deccan, spreads her arms,
Branching so broad and long, that on the ground
The bended twigs take root, and daughters grow
About the mother tree, a pillar'd shade,
High over-arched and echoing walks between."

In Hindu mythology, the tree is called *Kalpavriksha*, the tree that provides fulfillment of wishes and other material gains. The worship of the tree is also represented in a Buddhist sculpture with its long hanging roots dropping gold pieces in vessels placed below.

Another great tree of India is the *peepul* to be found all over the country. **Known for its antiquity, it finds a mention in many Hindu scriptures as a sacred tree whose worship is regarded as homage to the Trinity — Brahma, Vishnu and Shiva.** The tree is treated as a Brahmin and special offerings made to it in the morning and lamps lit there in the evening. The tree is also associated with the old *vedic* ritual of lighting a sacrificial fire with a twig of the peepul tree.

Indian women engaged in the ceremony of tree worship by William Carpenter, Rajpootana C.1850 (courtesy V&A Museum, London).

Even now, village women may be seen worshipping the tree by watering its roots and placing some milk and eats for the serpents and insects residing there. Every village has its special *peepul* tree and the village elders hold their councils beneath its hallowed foliage. The most famous of these trees is the sacred *peepul* at Gaya under which Buddha sat when he attained Enlightenment. Since then the *peepul* tree is also called the *Bo* or the *Bodhi* tree and Prince Sidharath came to be known as Buddha. It is also believed to be a symbol of fertility and women worship it for progeny. The tree waves its leaves in an uncanny way and their trembling with a fluttering sound is attributed to spirits agitating in each leaf. This puts fear of the gods into the hearts of common folk.

The banyan and the *peepul* trees are symbols of the male and ceremoniously married to those of the female category. **James Forbes**, in his **Oriental Memoirs** (1813), mentions about a wedded banyan tree or the Palmyra and Burr tree united, that he saw at Salsette.

The *bilva* or oak-apple and the *Asoka* trees are associated with different deities. The Asoka tree is sacred to Kama, the god of love, and according to folklore, its buds will open up in full bloom when the foot of a young beautiful maiden touches its roots. The *bilva* with its three leaves resembling the *trishul*, or the trident held by Lord Shiva finds mention in Hindu mythology. Its fruit is a blood purifier.

Besides the sacred trees, there are some sacred plants, notably the *tulsi* plant which is found everywhere in sandy and fallow lands. It is an ancient variety of the basil. *tulsi* is considered to be the wife of Vishnu and worshipped by the Hindus. In homes, *tulsi* is grown in pots and womenfolk offer daily *puja* and pour an oblation of Ganges water. A mere touch of the plant is believed to purify the person and giving a twig of *tulsi* to anyone is considered as a protection from dangers and difficulties. *Tulsi* leaves are also put in the mouth of a dying man for the salvation of the soul. Among other virtues of the *tulsi* are its medicinal properties. Its leaves have a pleasing aroma and act as a cough elixir and cordial. Leaves are also eaten to help digestion and prevent other maladies like cold and chill. No wonder, the Hindus deified the plant for its numerous qualities.

Darbha or *kusha* is a sacred grass essential in all sacrifices. This plant is found in damp marshy ground. It is rough to the touch and pointed at the top. According to an old legend, it was produced at the time of the churning of the ocean by the gods and demons. It is also said that the gods while drinking *amrita* or the nectar of immortality shed some drops on this grass which thus became sacred.

There is a mention of it in the Hindu scriptures and the epics. The *Kusha* grass is therefore worshipped by Brahmins and used in various religious ceremonies as it is believed to have the virtue of purifying everything.

Patent Your Heritage NEW

Globalization has made it easier for companies in wealthy countries to take advantage of poor countries by filing patents for crops, medicines and chemicals that traditional cultures have been cultivating and using for centuries. This year, the poor countries have figured out a way to fight back: they are creating digital libraries for their ancient cultural knowledge.

India, probably the largest victim, is cataloging its traditional knowledge on a protected Web site and on DVD's it will send to patent examiners worldwide. The next time someone proposes patenting the use of a traditional Indian herb or spice for a particular medicinal purpose, examiners will be able to see if Indian Ayurvedic medicine described the process centuries ago.

In June, the United Nations' World Intellectual Property Organization (WIPO) unveiled a Web site with parts of the Indian digital library, as well as a database of patents based on traditional medicine granted in Beijing to Chinese inventors. WIPO is urging other countries to catalog their cultural and biological patrimony, and is asking patent examiners to search these databases when considering relevant applications.

India began the project after it had to spend almost four years fighting a basmati rice patent granted in America to a company called RiceTec, and two years to get another American patent, on the healing properties of turmeric, revoked. "There are 2,000 or 3,000 cases of misappropriation of our traditional knowledge in Washington alone," says V. K. Gupta, the driving force behind India's digital database. "It would cost us a billion dollars to invalidate these wrong patents in court. We needed defensive protection."

The United States patent office, not surprisingly, sees its mission as encouraging innovation through the generous granting of patents, and those who disagree can slug it out before a judge. Woefully overstretched examiners have only a few hours to see whether an idea is new, and they cannot reject a patent application on common sense alone. "Patent offices have terrible problems knowing who's doing what where, especially outside their home countries," says Greg Aharonian, a San Francisco patent consultant. And traditional knowledge -- which often exists only orally -- is especially hard to pin down.

Ayurvedic medicine is written -- in verse. The Indian database translates the verses from Sanskrit to modern languages, updating the names of plants and diseases and grouping them into standard patent classifications. Digital libraries for other Indian traditional medicines are in the works.

Did you Know?

Sissa's request and Chess

Among the fascinating legends told about the origin of chess is the story of Sissa, a scientist and the inventor of the game. In western India, Raja Balhait had asked his advisers to create a game that demonstrated the values of prudence, diligence, foresight, and knowledge. Sissa brought a chessboard to the raja and explained that he had chosen war as a model for the game because war was the most effective school in which to learn the values of decision, vigor, endurance, circumspection, and courage. The raja was delighted with the game and ordered its preservation in temples. He considered its principles the foundation of all justice and held it to be the best training in the art of war.

The raja said to his subject Sissa, "Ask any reward. It will be yours." Being a scientist, Sissa felt rewarded by the pleasure his invention was giving others; but the kind insisted, and finally Sissa said, "Give me a reward in grains of corn on the chessboard (ashtapada). On the first square one grain, on the second two, on the third four, on the fourth double of that, and so on until the 64th and last square."

The raja would not hear of it. He insisted that Sissa ask for something of more worth than grains of corn. But Sissa insisted he had no need of much and that the grains of corn would suffice. Thereupon the raja ordered the corn to be brought; but before they had reached the 30th square, all the corn of India was exhausted. Perturbed, he looked at Sissa, who laughed and told his raja that he knew perfectly well he could never receive the reward he had asked because the amount of corn involved would cover the whole surface of the earth to a depth of nine inches.

The raja did not know which to admire more: the invention of chess or the ingenuity of Sissa's request. The number involved is 18,446,744,073,709,551,615 grains. This number had been previously calculated by the early Indian mathematicians, who incidentally, had invented the decimal system long before it reached the Arabs and Europe.

In India science and religion are not opposed fundamentally, as they often seem to be in the West, but are seen as parts of the same great search for truth and enlightenment that inspired the sages of Hinduism, Buddhism, and Jainism. Thus, in the Hindu scientific approach, understanding of external reality depends on also understanding the godhead. In all Hindu traditions the Universe is said to precede not only humanity but also the gods. Fundamental to Hindu concepts of time and space is the notion that the external world is a product of the creative play of *maya (illusion).* Accordingly the world as we know it is not solid and real but illusionary. The universe is in constant flux with many levels of reality; the task of the saint is find release (*moksha*) from the bonds of time and space.

Unlike the West, which lives in a historical world, India is rooted in a timeless universe of eternal return: everything which happens has already done so many times before, though in different guises. Hinduism arose from the discoveries of people who felt that they had gained an insight into the nature of reality through deep meditation and ascetic practices. Science uses a heuristic method that requires objective proof of mathematical theories. Yet both have proposed similar scenarios for the creation of the universe. Here is a look at Creation, Maya, Churning of Milky Ocean, Shiva's Cosmic Dance, Serpent of Infinity and a few articles on Hindu Cosmology.

Professor Arthur Holmes (1895-1965) geologist, professor at the University of Durham. He writes regarding the age of the earth in his great book, **The Age of Earth** (1913) as follows:

"Long before it became a scientific aspiration to estimate the age of the earth, many elaborate systems of the world chronology had been devised by the sages of antiquity. The most remarkable of these occult time-scales is that of the ancient Hindus, whose astonishing concept of the Earth's duration has been traced back to Manusmriti, a sacred book."

When the Hindu calculation of the present age of the earth and the expanding universe could make Professor Holmes so astonished, the precision with which the Hindu calculation regarding the age of the entire Universe was made would make any man spellbound.

(source: **Hinduism and Scientific Quest - By T. R. R. Iyengar** p. 20-21).

Alan Watts, a professor, graduate school dean and research fellow of Harvard University, drew heavily on the insights of Vedanta. Watts became well known in the 1960s as a pioneer in bringing Eastern philosophy to the West. He wrote:

"To the philosophers of India, however, Relativity is no new discovery, just as the concept of light years is no matter for astonishment to people used to thinking of time in millions of kalpas, (A kalpa is about 4,320,000 years). The fact that the wise men of India have not been concerned with technological applications of this knowledge arises from the circumstance that technology is but one of innumerable ways of applying it."

It is, indeed, a remarkable circumstance that when Western civilization discovers Relativity it applies it to the manufacture of atom-bombs, whereas Oriental civilization applies it to the development of new states of consciousness."

(source: **Spiritual Practices of India - By Frederic Spiegelberg** Introduction by **Alan Watts** p. 8-9).

Dick Teresi author and coauthor of several books about science and technology, including **The God Particle**. He is cofounder of **Omni** magazine and has written for Discover, The New York Times Magazine, and The Atlantic Monthly. He says

"Indian cosmologists, the first to estimate the age of the earth at more than 4 billion years. They came closest to modern ideas of atomism, quantum physics, and other current theories. India developed very early, enduring atomist theories of matter. Possibly Greek atomistic thought was influenced by India, via the Persian civilization."

The cycle of creation and destruction continues forever, manifested in the **Hindu deity Shiva, Lord of the Dance,** who holds the drum that sounds the universe's creation in his right hand and the flame that, billions of years later, will destroy the universe in his left. Meanwhile Brahma is but one of untold numbers of other gods dreaming their own universes.

The 8.64 billion years that mark a full day-and-night cycle in Brahma's life is about half the modern estimate for the age of the universe. The ancient Hindus believed that each Brahma day and each Brahma night lasted a kalpa, 4.32 billion years, with 72,000 kalpas equaling a Brahma century, 311,040 billion years in all. That the Hindus could conceive of the universe in terms of billions.

The similarities between Indian and modern cosmology do not seem accidental. Perhaps ideas of creation from nothing, or alternating cycles of creation and destruction are hardwired in the human psyche. Certainly **Shiva's percussive drumbeat** suggests the sudden energetic impulse that could have propelled the big bang. And if, as some theorists have proposed, the big bang is merely the prelude to the big crunch and the universe is caught in an infinite cycle of expansion and contraction, then ancient Indian cosmology is clearly cutting edge compared to the one-directional vision of the big bang. **The infinite number of Hindu universes is currently called the many world hypothesis,** which is no less undocumentable nor unthinkable.

Huston Smith (?) born in China to Methodist missionaries, a philosopher, most eloquent writer, world-famous religion scholar who practices Hatha Yoga. He has said in Hinduism:

"The invisible excludes nothing, the invisible that excludes nothing is the infinite – the soul of India is the infinite."

"Philosophers tell us that the Indians were the first ones to conceive of a true infinite from which nothing is excluded. **The West shied away from this notion.** The West likes form, boundaries that distinguish and demarcate. The trouble is that boundaries also imprison – they restrict and confine."

"India saw this clearly and turned her face to that which has no boundary or whatever." "India anchored her soul in the infinite seeing the things of the world as masks of the infinite assumes – there can be no end to these masks, of course. If they express a true infinity." And It is here that India's mind boggling variety links up to her infinite soul."

"India includes so much because her soul being infinite excludes nothing." It goes without saying that the universe that India saw emerging from the infinite was **stupendous**."

While the West was still thinking, perhaps, of 6,000 years old universe – India was already envisioning ages and eons and galaxies as numerous as the sands of the Ganges. The Universe so vast that modern astronomy slips into its folds without a ripple."

Creation

Hinduism is the only religion that propounds the idea of life-cycles of the universe. It suggests that the universe undergoes an infinite number of deaths and rebirths. Hinduism, according to **Carl Sagan**, *"... is the only religion in which the time scales correspond... to those of modern scientific cosmology. Its cycles run from our ordinary day and night to a day and night of the Brahma, 8.64 billion years long, longer than the age of the Earth or the Sun and about half the time since the Big Bang"*

Long before **Aryabhata** (6th century) came up with this awesome achievement, apparently there was a mythological angle to this as well -- it becomes clear when one looks at the following translation of **Bhagavad Gita** (part VIII, lines 16 and 17),

"All the planets of the universe, from the most evolved to the most base, are places of suffering, where birth and death takes place. But for the soul that reaches my Kingdom, O son of Kunti, there is no more reincarnation. One day of Brahma is worth a thousand of the ages [yuga] known to humankind; as is each night."

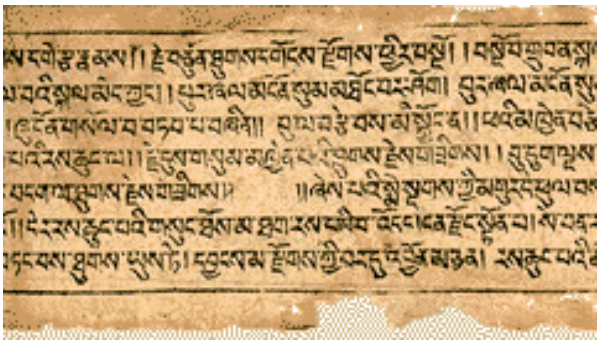
Thus each *kalpa* is worth one day in the life of Brahma, the God of creation. In other words, the four ages of the *mahayuga* must be repeated a thousand times to make a "day ot Brahma", a unit of time that is the equivalent of 4.32 billion human years, doubling which one gets 8.64 billion years for a Brahma day and night. This was later theorized (possibly independently) by Aryabhata in the 6th century. The cyclic nature of this analysis suggests a universe that is expanding to be followed by contraction... a cosmos without end. This, according to modern physicists is not an impossibility.

(source: **Astronomy and Mathematics in Ancient India**).

Hinduism is not a single religion, rather it is a multifaceted matrix of beliefs, philosophies, practices, myths and epics. Within this matrix there are many myths of cosmogenesis. **The Sanskrit word for**

creation is srishti, which means projecting a gross thing from a subtle substance. Srishti does not mean bringing out existence from non-existence or creating something from nothing. Creation implies something arising from nothing, or non-existence becoming existence. Hindus declare that non-existence can never be the source of creation. Thus, the universe is more accurately said to be the projection of the Supreme Being rather than a creation.

To the Vedic sages, creation indicated that point before which there was no Creator, the line between indefinable nothingness and something delineated by attributes and function, at least. Like the moment before the Big Bang Theory. These concepts preoccupy high wisdom, the Truth far removed from mere religion. The Bible begins with the Creation. Before the Creation, however, there was the Creator, but does even He know what was there before He existed ?



Long before such philosophical questions occurred to other historical peoples, **Vedism** posited the existence of something more ultimate than the one God. Whatever must have created Him. That is presuming the absolute and basic reality. Or is it?

Hymn 129 of the **Rig Veda** speaks:

नासदासीन्नो सदासीत्तदानीं नासीद्रजो नो व्योमा परोयत्
किमावरीवः? कुह कः शर्मन्नं वह? किमासीद गहनं गभीरम्...

> Hymn 109 says: " Then neither Being nor not-Being existed, neither atmosphere, nor the firmament, nor what is above it . . . The One breathed windless by its own power. Nought else but this existed then.
>
> In the beginning was darkness swathed in darkness: all this was but unmanifested water. Whatever was, that One coming into being, hidden by the void, was generated by the power of heat.
>
> In the beginning desire which was the first seed of mind overcovered it. Wise seers, searching in their hearts, found the bond of Being in Not-Being . . ." (**Rig Veda** Griffith 575-6)

In this hymn the One, may refer to the creator god Brahma, his breathing and desire bring the world into existence. Before this was a void which can be described only by a paradox, Being nor Not-Being.

Creation accounts in the Vedas speak of a cosmic egg or embryo from which " the lord of creation" was born as the great oceans heated up. But later hymns were increasingly skeptical of such symbolism; the tenth book of the **Rig Veda** includes a verse asking,

" Who truly knows, who could here declare when was born, whence comes this creation?'

Cyclic Creation

In one of the story of **The Upanishads,** referred to by **Joseph Campbell** in his series of interviews with Bill Moyers, Brahma is the creative force behind a series of universes:

Brahma sits on a lotus, the symbol of divine energy and divine grace. The lotus grows from the navel of Vishnu. who is the sleeping god, whose dream is the universe. . . . Brahma opens his eyes and a world come into being . . . Brahma closes his eyes, and a world goes out of being. (Campbell 63)

This story is similar to some modern ideas on the creation of the universe in continuous cycle, like the one proposed by **John Wheeler**, all constants and laws of previous cycles are lost at the end of the contracting phase, and new universes can be created in an infinite number of cycles.

Princeton University's **Paul Steinhardt** and Cambridge University's **Neil Turok**, have recently developed The Cyclical Model.

They have just fired their latest volley at that belief, **saying there could be a timeless cycle of expansion and contraction. It's an idea as old as Hinduism, updated for the 21st century. The theorists acknowledge that their cyclic concept draws upon religious and scientific ideas going back for millennia — echoing the "oscillating universe" model that was in vogue in the 1930s, as well as the Hindu belief that the universe has no beginning or end, but follows a cosmic cycle of creation and dissolution.**

(source: **Questioning the Big Bang - msnbcnews.com).**

A 9th century Hindu scripture, The **Mahapurana by Jinasena** claims the something as modern as the following: (translation from [5])

"Some foolish men declare that a Creator made the world. The doctrine that the world was created is ill-advised, and should be rejected. If God created the world, where was he before creation?... How could God have made the world without any raw material? If you say He made this first, and then the world, you are faced with an endless regression... Know that the world is uncreated, as time itself is, without beginning and end. And it is based on principles."

(source: **Astronomy and Mathematics in Ancient India**).

Continuous Creation

Another view of creation expressed in Hindu literature is the idea that being is **eternal. The universe was not created, it will not be destroyed. It simply is.** This selection from the second teaching of the **Bhagavad-Gita,** speaks of this type of creation:

"Indestructible is the presence that pervades all this; no one can destroy this unchanging reality. It is not born, it does not die; having been, it will never not be; unborn, enduring, constant, and primordial, it is not killed when the body is killed."

The beauty as well as the horror of this ground of being is revealed to Arjuna later in the Gita when Krishna reveals his true form as the god Vishnu. Vishnu is usually referred to as the preserver, the background behind all being. **Stephen Hawking** in describing his mathematical model of the universe has used a similar description.

Whereas in Western religions a creator god precedes man and the universe, the Hindu gods are preceded by creation; the origin of the world is envisaged not so much as an act of creation but as one of organization, the making of order out of chaos. The universe is often said to be born from the sacred syllable **Om**, or from an inert void in which " there was neither being nor non-being ... death nor non-death", a single principle from which emerged the diversity of life. From this void desire was born, and from desire

came humans, gods and creation."

(Note: For more on yugas, refer to **One Cosmic Day of Creator Brahma**).

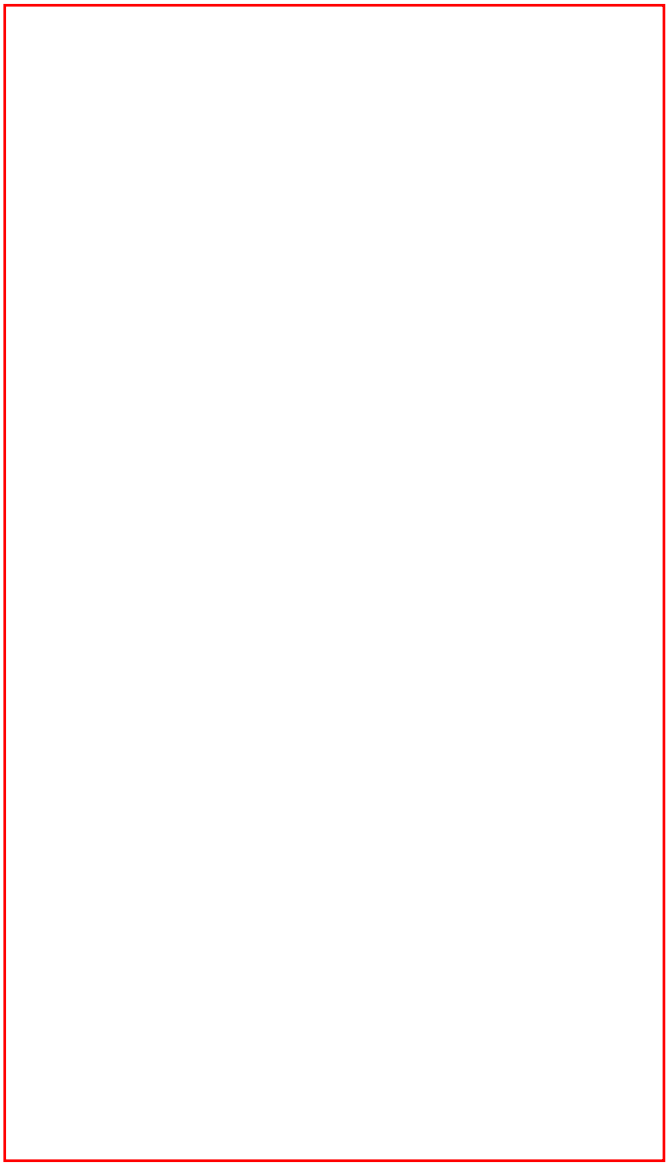
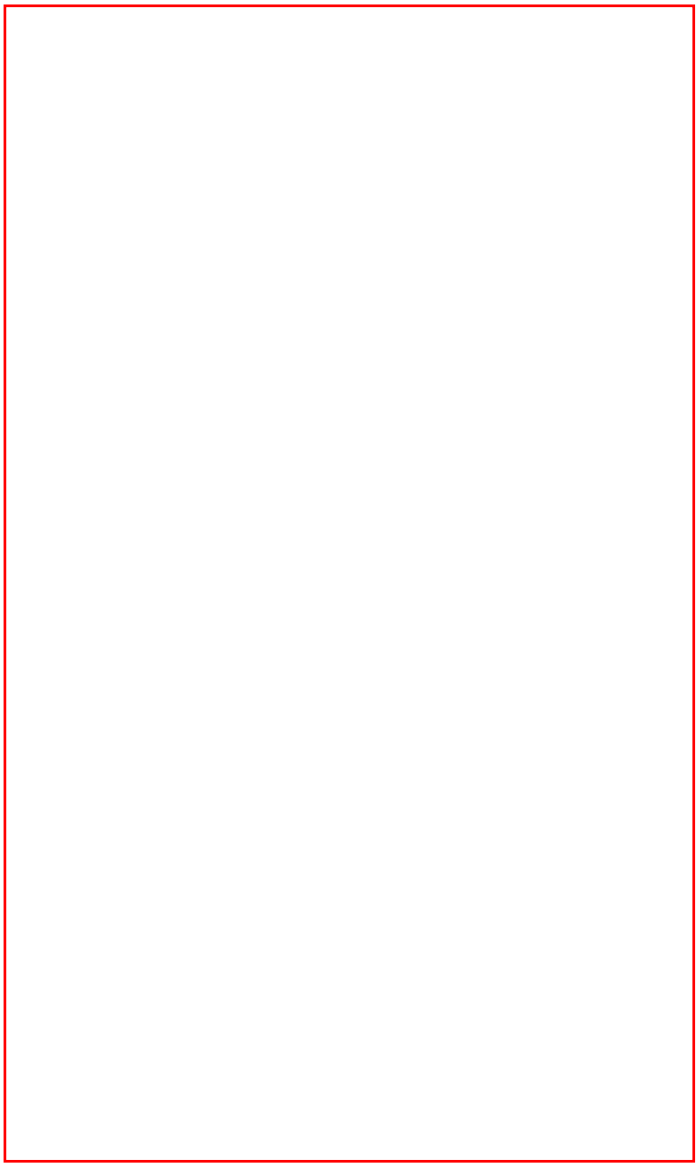
Maya or Illusion

For many thousands of years, it is argued, the mystics have had a cosmological and epistemological view of things that the Western world is just beginning to understand. Cosmologically, Western science has understood only recently that the universe is extremely old. In 1965 the temperature of the universe was measured for the first time, resulting in our present estimate of the age of the universe as 15 billion years old. In the ancient literature of the India one does not, of course, find such precise figures. Instead there are analogies such as the following. Imagine an immortal eagle flying over the Himalayas only once every 1,000 years; it carries a feather in its beak and each time it passes, it lightly brushes the tops of the gigantic mountain peaks. The amount of time it would take the eagle to completely erode the mighty Himalayas is said to be the age of the present manifestation of the universe. **Such a conception of time, which predates modern science by thousands of years, is thought to be remarkable, especially when it is compared to the slow realization of Western science and religion to the possibility of a less humanlike time scale.**



Eastern mysticism is also consistent with the results of quantum physics. The mystics have always rejected the idea of a hidden clocklike mechanism, sitting out there, independent of human observation. The number one truth is that reality does not consist of separate things, but is an indescribable, interconnected oneness. Each object of our normal experience is seen to be but a brief disturbance of a universal ocean of existence. **Maya** is the illusion that the phenomenal world of separate objects and people is the only reality. For the mystics this manifestation is real, but it is a fleeting reality; it is a mistake, although a natural one, to believe that maya represents a fundamental reality. Each person, each physical object, from the perspective of eternity is like a brief, disturbed drop of water from an unbounded ocean. The goal of enlightenment is to understand this--more precisely, to experience this: to see intuitively that the distinction between me and the universe is a false dichotomy. The distinction between consciousness and physical matter, between mind and body, is the result of an unenlightened perspective.



Maya (Sanskrit: "illusion") is a fundamental concept in Hindu philosophy, notably, in the Advaita (Non-dualist) school of the orthodox system of Vedanta. **Maya denotes the power of wizardry with which a God can make human beings believe in what turns out to be an illusion;** by extension it later came to mean the powerful force that creates the cosmic illusion that the phenomenal world is real.

Maya, as per Hindu thought, is illusion, and what mankind understands to be reality is in fact the dream of Brahma. Brahma is the creator and great magician who dreams the universe into being. The dream itself is maintained by Vishnu, the Preserver, who uses maya to spin the complex web that we know as reality. It is not that the world itself is an illusion, only our perception of it. Whereas we suppose the universe to be made up of a multitude of objects, structures and events, the theory of maya asserts that all things are one. Rational categories are mere fabrications of the human mind and have no ultimate reality.

In much of Hindu thought maya is illusion, and what humankind understands to be reality is in fact the dream of Brahma. He is the creator god and great magician who dreams the universe into being. The dream itself is maintained by Lord Vishnu, the Preserver, who uses maya to spin the complex web that we know as reality. It is not that the world itself is an illusion, only our perception of it. Whereas we suppose the universe to be made up of a multitude of objects, structures and events, the theory of maya asserts that all things are one. Rational categories are mere fabrications

of the human mind and have no ultimate reality.

The symbol is that of Ananta, the great Adisesha of infinity and eternity, which is always represented, coiled up in a horizontal figure of 8 just like the leminiscate.

***

Modern Indian spiritual teachers assert that if the West had followed the Greek philosopher Heraclitus rather than Plato, the history of ideas would be very different and the concept of maya would be central to Western as well as to Eastern thought. Although Plato's teaching resembles maya when he writes that "the visible world is a pale shadow of a true reality beyond", he believed that each aspect of the world had a separate, distinct identity. Heraclitus posited instead a theory which was based on the assumption of the inseparable interconnectedness of the universe. His theory of Becoming asserts that all things are in a state of constant flux; always in the process of becoming something else. This hypothesis is echoed today, some 2,500 years later, by **Chaos Theory**, which the American science writer James Gleick defined as "the science of process rather than state, of becoming rather than being".

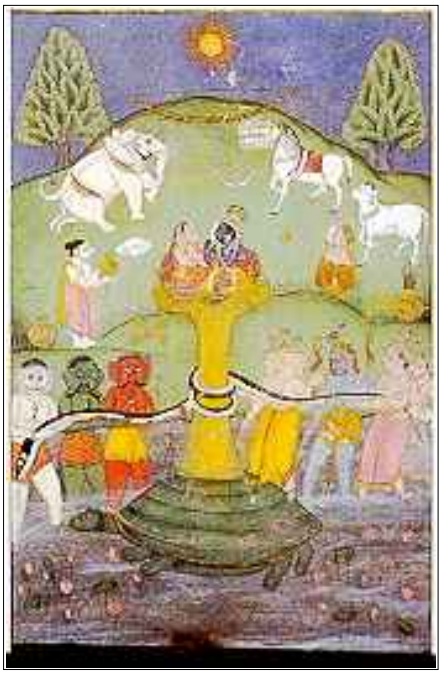
Maya is thus that cosmic force that presents the infinite Brahman (the supreme being) as the finite phenomenal world. Maya is reflected on the individual level by human ignorance (ajñana) of the real nature of the self, which man has mistaken for the empirical ego but which is in reality identical with Brahman.

So why does all this worldly illusion exist? **Ramakrishna** called the world, "The Great Play of the Mother of the World." This is the "play" of Matter--the material world. It is somewhat like a stage play. We are all creatures of spirit with various coatings of matter hiding the spirit from the light. As we act out our Karmic roles in this great play, we remove the coatings of matter and release the light within us. The more light we accumulate within us, the more we can see the light hidden in other people and things. In reality, the whole world play exists for us to seek God Consciousness. All people are either striving toward the light or hiding from it. Those who are hiding are caught up in the Maya.

So, everything which has existence, everything in the phenomenal world is Maya. It is safe to say that "Everything is Maya." How does that affect us in our daily life? It affects the choices we make and therefore the Karma we make for ourselves as a result of those choices. So how should we deal with the Maya of existence? We should try to look for the Reality behind the veils of Maya. Primal Energy is the Infinite Transcendental Essence which permeates all existence. It is like Infinity in manifestation, if such a thing were possible. But to carry this analogy further where it is more understandable, we can best see everything in the universe as a differentiation or gradation of Primal Energy.

Thus, at the root of all existence--all Maya--is Primal Energy. Primal Energy is also the Great Aum, "The Word," or even God, if you will. Thus, when Hindus clasp their hands together and bow towards each other, they are saying, in effect, "The God within me greets the God within you."

Water of Illusion



The Greek philosopher Heraclitus used a river as an analogy for his Theory of Becoming, teaching that one cannot step into the same river twice. Maya, too, is often associated with water, the medium that forever changes as it flows from place to place. Water is often a symbol and an agent of illusion. **When Lord Vishnu is compelled to lift the veils of maya for the benefit of his followers, water is never far away.**

A well-known Hindu parable tells of a sage **(Narada)** who underwent such rigorous penance that he felt entitled to demand fro **Lord Vishnu** the secret of maya. The god responded by ordering the mortal to dive into a nearby river. When the sage emerged, he did so as a woman, oblivious of her former existence. After a lifetime of success and failure, happiness and tragedy, she finally threw herself in despair onto the funeral pyre of her husband who had been murdered. The fire was instantly quenched by water. The sage regained his former body, and in that moment Lord Vishnu appeared. " This is Maya," he said, and the sage came to understand the nature of illusion and the workings of the universe.

Churning of the Milky Ocean or Samudra-Manthana

In this great story of **Samudra-Manthana,** the Devas and the Asuras, the bright and the dark powers, both combined to churn the milky ocean to obtain the elixir of immortality. We do not have the absolute dichotomy of good and evil that is there in the Semitic traditions; the bright and dark powers, the Devas and the Asuras, are, in fact, related within the whole theory of duality. Promising them a share, they invited the demons (Asuras) to take the tail of the serpent Vasuki, wrapped about the giant churning pole like a rope. The pole was fixed to the bottom of the ocean and the waves it made in twisting one way and the other way threatened to destroy the three worlds. Lord Vishnu incarnated himself as a tortoise Kurma, taking the pole on his back to prevent the commotion. Glorious treasures emerged from the churned milk: Kamadhenu, the all-giving cow; Kalpavrksa, the wish-fulfilling tree; Accaisrava, the divine horse; Airavata, the divine elephant; Mahalaxshmi, the goddess of wealth and prosperity. These and other great gifts appeared and were happily divided between Asuras and Devas. The ultimate objective was the pot of ambrosia, the elixir of immortality, the amrta kalasa.

Suddenly, a terrible poison the came forth. **Lord Shiva,** the great primal divinity, aloof from avarice and materialism of the Devas and Asuras, appeared. He collected the poison in a cup, and as he drank it his throat turned blue, hence one of the names of Shiva is nilakantha, the blue-throated one.

ॐ शान्तिः शान्तिः शान्तिः ॐ शान्तिः शान्तिः शान्तिः

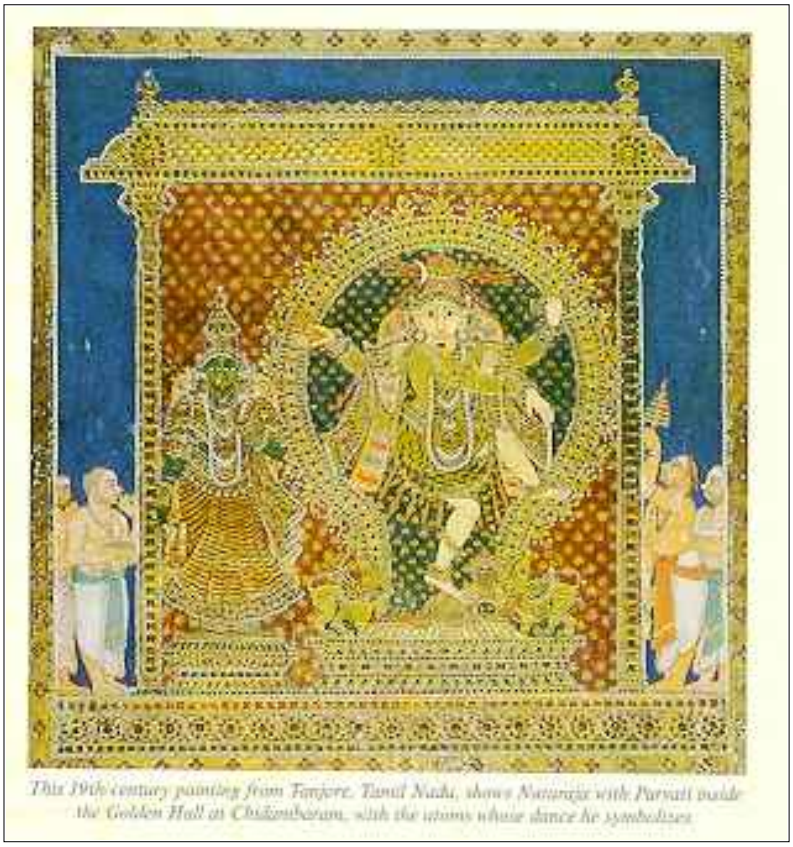
Shiva Natarja (Cosmic Dance)

Throughout southern India, Lord Shiva is worshipped as Shiva Nataraja, Lord of the Dance. In the words of **Ananda Coormaraswamy**, a pioneering Hindu philosopher and historian of Indian art, Shiva's dance is the **"clearest image of the activity of God which any art or religion can boast."** The image of Shiva as Nataraj is indelibly stitched into the Indian imagination.

According to **Sir Jacob Epstein** (1880-1959), leading English Sculptor. After studying with Rodin in Paris, he revolted against the ornate and pretty in art, producing bold, often harsh and massive forms in stone and bronze. His best-known pieces include the Oscar Wilde Memorial (1911; Père-Lachaise, Paris), a marble Venus (1917; Yale Univ., New Haven, Conn.), and a Madonna and Child (Convent of the Holy Child Jesus, London).

Epstein has written about **Shiva Nataraja**:

"Shiva dances, creating the world and destroying it, his large rhythms conjure up vast aeons of time, and his movements have a relentless magical power of incantation. Our European allegories are banal and pointless by comparison with these profound works, devoid of the trappings of symbolism, concentrating on the essential, the essentially plastic."



(source: **Let There Be Sculpture - By Sir Jacob Epstein** 1942 p. 193).

Jawaharlal Nehru (1889-1964) first prime minister of free India, was more than a deeply moral human being. He yearned for spiritual light. He was particularly drawn to Swami Vivekananda and the Sri Ramakrishna Ashram. In his book **- A Discovery of India** he wrote:

"**The statue of Nataraja (dance pose of Lord Shiva) is a well known example for the artistic, scientific and philosophical significance of Hinduism."**

(source: **A Discovery of India - By Jawaharlal Nehru** p. 214).

The late scientist, **Carl Sagan**, in his book, **Cosmos** asserts that the **Dance of Nataraja (Tandava)** signifies the cycle of evolution and destruction of the cosmic universe (Big Bang Theory). **"It is the clearest image of the activity of God which any art or religion can boast of."** Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but also the very essence of inorganic matter. For modern physicists, then, Shiva's dance is the dance of subatomic matter. Hundreds of years ago, Indian artist created visual images of dancing Shiva's in a beautiful series of bronzes. Today, physicist have used the most advanced technology to portray the pattern of the cosmic dance. Thus, the metaphor of the cosmic dance unifies, ancient religious art and modern physics.

This 19th-century painting from Tanjore, Tamil Nadu, shows Nataraja with Parvati inside the Golden Hall at Chidambaram, with the atoms whose dance he symbolizes

Shiva's dance is a symbol of the unity and rhythm of existence. The unending, dynamic process of creation and destruction is expressed in the energetic posture of Shiva. He dances in a ring of fire that refers to the life-death process of the universe. Everything is subject to continual change, as energy constantly assumes new forms in the "play" (lila) of creation, except the god himself whose dance is immutable and absolute. The pictorial allegory of Nataraja indicates the so-called "five acts" of the deity: the creation of the universe, its sustenance in space, its final dissolution at the end of the cycle of four world ages (yugas), the concealment of the nature of the godhead, and the bestowal of true knowledge.

Fritjof Capra (1939 -) Austrian-born famous theoretical high-energy physicist and ecologist wrote:

"Modern physics has thus revealed that every subatomic particle not only performs an energy

dance, but also **is** an energy dance; a pulsating process of creation and destruction. The **dance of Shiva is the dancing universe**, the ceaseless flow of energy going through an infinite variety of patterns that melt into one another''.For the modern physicists, then Shiva's dance is the dance of subatomic matter. As in Hindu mythology, it is a continual dance of creation and destruction involving the whole cosmos; the basis of all existence and of all natural phenomenon. Hundreds of years ago, Indian artists created visual images of dancing Shivas in a beautiful series of bronzes. In our times, physicists have used the most advanced technology to portray the patterns of the cosmic dance."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p. 241-245).

The posture and balance of Nataraja's dancing form show Lord Shiva in the aspect of tamas, the expansive centrifugal force that creates and destroys the universe. This is the first of the three "tendencies" (gunas) that permeate the universe in Samkhya philosophy. Tamas (darkness), symbolized by Shiva, is responsible for the constant birth, change and death of all living things; the force sattva (tranquility) represented by Vishnu the Preserver, holds the atoms of every object together. These two "tendencies" - one holding the atoms of the universe together and the other ripping them apart - create a " friction " (rajas) that "vibrates" the world's atoms and creates the gravity to hold them to the earth. This is the third tendency, symbolized by the deity Brahma. It is the building stuff both of matter and of subtle energies such as perception and thought.

Consciousness inhabits all living things and has permeated the universe since it was created from its original bindu (energy center). The first stave of the universe was filled by "space" : the potential area in which the world will "expand" with the energy of Shiva's aspect as tamas. At the end of Kali Yuga (the current age of ignorance), the expansion accelerates, everything merges and Shiva performs the terrible tandava dance of destruction.

The most important Shiva image during the **Chola dynasty** was that of **Shiva as Lord of the Dance, or Shiva Nataraja.** In this form, Shiva is a summation of Indian religion, philosophy and culture. Shiva's dance is of cosmic significance and represents five principle manifestations of eternal energy: Creation, Destruction, Preservation, Salvation, and Illusion. He holds in his upper right hand a small drum, the symbol of the sound of creation. In his upper left hand is a flame representing the final destruction of the universe. His lower right hand makes the gesture "fear not." With his lower left hand he points to his raised left foot, the place of refuge and salvation for the devotee. His right foot is planted on the back of the demon Apasmara Purusha, the personifying illusion of ignorance over whom Shiva triumphs. In Shiva's hairdo sits the river goddess Ganga, the personification of the Ganges river which is said to spring forth from Shiva's head.

The dancing lord Shiva represents the constant process of creation, preservation and destruction of the universe. He trods on the dwarf, symbolic of Ignorance, which must be eliminated if a believer is to attain release from the eternal cycle of birth and death. In Shiva's upper hands are a drum, symbol of creation, and fire, symbol of destruction. This magnificently modeled bronze image is a superb example of Chola workmanship.

The entire Universe is then engaged in movement and endless activity, in an uninterrupted cosmic dance of energy. In Hindu iconography the images that represent this dance are shown with Nataraja dancing with four arms and waving hair and should be read as pictorial allegories.

The upper right hand holds a small drum shaped as a clepsydra, which according to Zimmer keeps the rhythms of sound, the vehicle of the word transmitting revelation tradition and enchantment. The opposite hand, on the top left, with fingers postured as half moon, (ardhachandra mudra), carries a Flame, the element of destruction of the world on the palm of the hand. In the balance of the hands creation and destruction are shown as counterweights in the game of the cosmic dance made evident even by the quietness and serenity of Shiva's face at the centre between the two hands. The second right hand is making the gesture of 'motto fear ' that gives peace and protection, while the last left hand, suspended at the height of the breast, points toward the left foot symbolising liberation from the enchantment of Maya.

Universally regarded as the quintessential image of Hindu art and culture, representations of the god Shiva dancing in joyous abandonment within a circle of flames graphically depict his five cosmic acts of creation, preservation, destruction, unveiling of illusion, and liberation of the soul. His creative aspect is symbolized by the hourglass-shaped drum, in his proper upper right hand, which reproduces the primordial sound of creation. Shiva’s preservation of the universe is suggested by his lower right hand held in the gesture of reassurance and safety. The flame in his upper left hand and that encircling the aureole represent the fire by which he destroys the universe in order to recreate it. He lifts the veil of illusion through his engendering act of dancing. His liberation of the soul is shown by his upraised left leg, which tramples on a prostrate infant signifying forgetfulness and is thus a source of grace.

While Shiva is believed to dance in various forms and locales for differing purposes, in this pose as Lord of the Dance (Nataraja), he is praised by the renowned eighteenth-century South Indian poet **Thayumanavar** as performing the **“Dance of Bliss in the Hall of Consciousness.”** The dance of bliss is specifically associated with **Chidambaram, the sacred center of Nataraja worship**, where Shiva is said to have first performed it in order to convert a group of holy men who were engaged in heretical practices. Chidambaram is also the site of the great twelfth-century temple specifically dedicated to Shiva’s aspect as Lord of the Dance. The temple has a silver image of the dancing god as its main icon, and the gateway around the complex is adorned with sculpted depictions of the 108 basic postures of classical Indian dance, Bharata Natyam, which has been performed since at least the second century B.C.

South Indian copper alloy images such as this were originally carried in processions during religious festivals; ropes were inserted through the square holes in the base to tie it to support poles. The distinctive elliptical shape of the aureole and slender figural style indicate that it is one of the earliest surviving images of this type.

As Shiva Nataraja, Lord of the Dance, Shiva enacts the end of the world. He is the symbol of death but only of death as the generator of life and as a source of that creative power ever renewed by **Vishnu and Brahma.**

He evokes the most intense adoration from devotees for he fascinates even as he terrifies. He dances for cosmic re-creation. Shiva's dance of bliss is the catalyst for the destruction of one period of time and the creation of a new cosmos. He has a third eye in the center of his forehead, the skull and crescent moon in his headdress.

He has long, matted hair and there is a small female figure of the river goddess Ganga in the loose locks of hair twirling around head. The Indian genius for expressing movement in sculpture derives in large part from the high aesthetic value that dancing holds in Indian tradition. It is the posturings and movements of the dance that inspire the imagination of the sculptor. The four arms display the powers of Shiva. The upper right holds the drum or vibrant rattle of creation. The upper left holds the flame of destruction. The lower right hand is raised in the gesture of protection. The lower left hand points to the upraised foot that symbolizes escape from illusion, represented by the dwarf whom he crushes beneath his right foot. The drum is a symbol of rhythm and sound. The matted hair symbolizes his power (like Samson). Crescent moon is the symbol of growth and birth

Einstein and Shiva's cosmic dance

There is a striking resemblance between the equivalence of mass and energy, symbolized by Shiva's cosmic dance and the Western theory, first expounded by Einstein, which calculates the amount of energy contained in a subatomic particle by multiplying its mass by the square of the speed of light:
E = mc2.

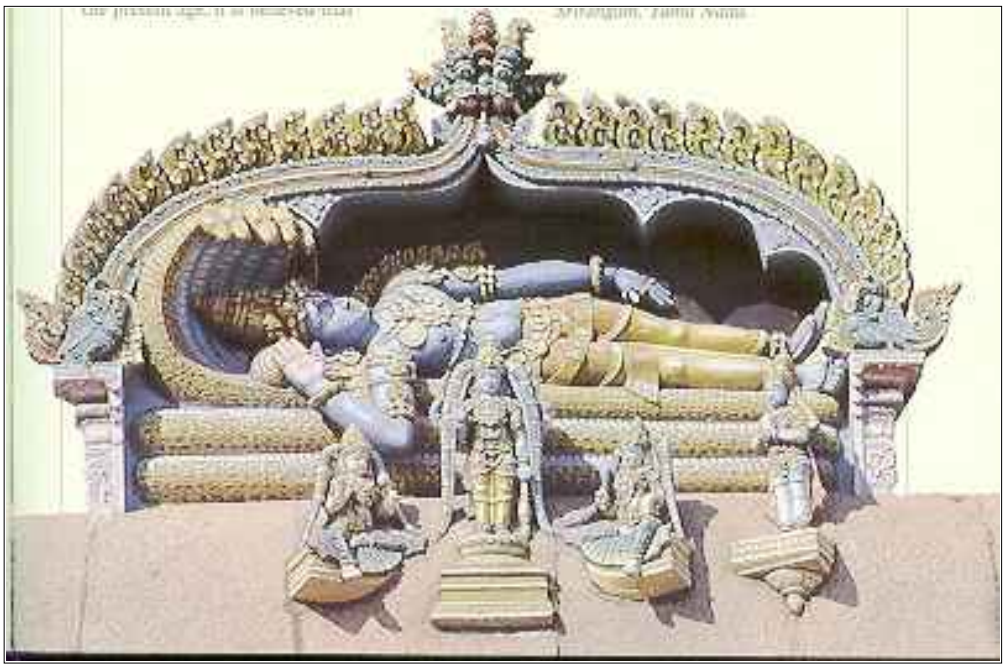
The Serpent of Infinity

The late scientist, **Carl Sagan**, in his book, **Cosmos** asserts that the **Dance of Nataraja**

(Tandava) signifies the cycle of evolution and destruction of the cosmic universe (Big Bang Theory).

"It is the clearest image of the activity of God which any art or religion can boast of." Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but also the very essence of inorganic matter.



For modern physicists, then, Shiva's dance is the dance of subatomic matter. Hundreds of years ago, Indian artist created visual images of dancing Shiva's in a beautiful series of bronzes. Today, physicist have used the most advanced technology to portray the pattern of the cosmic dance. Thus, the metaphor of the cosmic dance unifies, ancient religious art and modern physics. The Hindus, according to Monier-Williams, were Spinozists more than 2,000 years before the advent of Spinoza, and Darwinians many centuries before Darwin and Evolutionists many centuries before the doctrine of Evolution was accepted by scientists of the present age.

"The Hindu religion is the only one of the world's great faiths dedicated to the idea that the Cosmos itself undergoes an immense, indeed an infinite, number of deaths and rebirths. **It is the only religion in which the time scales correspond, to those of modern scientific cosmology.** Its cycles run from our ordinary day and night to a day and night of Brahma, 8.64 billion years long. Longer than the age of the Earth or the Sun and about half the time since the Big Bang. And there are much longer time scales still."

"The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation **Nataraja, the Dance King.** In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."

(source: **Cosmos - By Carl Sagan** Random House ISBN 0375508325 p. 213-214).

According to Hindu belief, the universe is destroyed at the end of each **kalpa** (life of the creator god, Brahma). Between the destruction of the world and its re-creation, at the end of each cycle, Lord Vishnu is said to rest in the coils of Ananta, the great serpent of Infinity, while he waits for the universe to recreate itself. At the end of Kali Yuga, the present age, it is believed that Lord Vishnu will descend in the form of the tenth and final avatar - as Kalki, the warrior, riding upon a white horse. He will destroy ignorance, drive invaders from India, and save the good from whom the people of the golden age, the Satya Yuga will descend.

For more than a century European and American scholars have held to the conclusion that Indian astronomy must somehow have been borrowed from the Greeks following the invasion of Alexander the Great, even though the Indians have no tradition of this, and Indian astronomy has a form quite unlike Greek astronomy. This conclusion is supported by the following facts:

- there was extensive trade between India and the West during the Hellenistic period
- Indian astronomical science is united with a form of astrology very similar to that cultivated by the Greeks during the Hellenistic period
- there are no historical records or accurate chronology to substantiate the Indian's own traditions of the origin of their astronomical science
- These scholars concede that Hindu cosmological time cycles, the form around which Indian astronomy is built, are indigenous to Indian culture, but they believe them to be crude number speculations.

Count Maurice Maeterlinck (1862-1949) was a Belgian writer of poetry, a wide variety of essays. He won the 1911 Nobel Prize for literature. In his book **Mountain Paths**, says:

"he falls back upon the earliest and greatest of Revelations, those of the Sacred Books of India with a Cosmogony which no European conception has ever surpassed."

(source: **Mountain Paths - By Maurice Maeterlinck**).

Swami Kriyananada (**J. Donald Walters**) World renowned as a singer, composer, and lecturer, founder of the Ananda Village is perhaps the most successful intentional community in the world writes:

"Hindu cosmography, for example born in hoary antiquity, strikes one in certain ways as surprisingly modern. India has never limited its conception of time to a few crowded millennia. Thousands of years ago India's sages computed the earth's age at a little over two billion years, our present era being what is called the seventh Manuvantra. This is a staggering claim. Consider how much scientific evidence has been needed in the West before men could even imagine so enormous a time scale."

(source: **Crises in Modern Thought: The Crises of Reason - By Swami Kriyananda** (**J. Donald Walters)** vol. 1 p - 94)

According to **Guy Sorman,** visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France:

" Temporal notions in Europe were overturned by an India rooted in eternity. The Bible had been the yardstick for measuring time, but the infinitely vast time cycles of India suggested that the world was much older than anything the Bible spoke of. **It seem as if the Indian mind was better prepared for the chronological mutations of Darwinian evolution and astrophysics."**

(source: **The Genius of India - By Guy Sorman** (**'Le Genie de l'Inde**') MacMillan January 2001 ISBN 0333936000 p.195).

For many thousands of years, it is argued, the mystics have had a cosmological and epistemological view of things that the Western world is just beginning to understand. Cosmologically, Western science has understood only recently that the universe is extremely old. In 1965 the temperature of the universe was measured for the first time, resulting in our present estimate of the age of the universe as 15 billion years old. In the ancient literature of the East one does not, of course, find such precise figures. Instead there are analogies such as the following. Imagine an immortal eagle flying over the Himalayas only once every 1,000 years; it carries a feather in its beak and each time it passes, it lightly brushes the tops of the gigantic mountain peaks. The amount of time it would take the eagle to completely erode the mighty Himalayas is said to be the age of the present manifestation of the universe. Such a conception of time, which predates modern science by thousands of years, is thought to be remarkable, especially when it is compared to the slow realization of Western science and religion to the possibility of a less humanlike time scale.

Eastern mysticism is also consistent with the results of quantum physics. The mystics have always rejected the idea of a hidden clocklike mechanism, sitting out there, independent of human observation. The number one truth is that reality does not consist of separate things, but is an indescribable, interconnected oneness. Each object of our normal experience is seen to be but a brief disturbance of a universal ocean of existence. **Maya** is the illusion that the phenomenal world of separate objects and people is the only reality. For the mystics this manifestation is real, but it is a fleeting reality; it is a mistake, although a natural one, to believe that maya represents a fundamental reality. Each person, each physical object, from the perspective of eternity is like a brief, disturbed drop of water from an unbounded ocean. The goal of enlightenment is to understand this--more precisely, to experience this: to see intuitively that the distinction between me and the universe is a false dichotomy. The distinction between consciousness and physical matter, between mind and body, is the result of an unenlightened perspective.

'Hindu cosmology's time-scale for the universe is in consonance with modern science'
The Rediff Special / Carl Sagan
http://www.rediff.com/news/jan/29sagan.htm

Carl Sagan, *the distinguished Cornell University astronomer and Pulitzer Prize-winning author, who succumbed to his battle against cancer on December 15, in fact lived for millions of years in the relative time scale of experience.*

This legend in his own lifetime was a first grade philosopher, poet, scientist and a splendid example of human greatness all rolled into one.

His true genius lay in the many esoteric philosophical and scientific endeavours which only specialists can really appreciate. But he became an instant pop science icon when he co-authored COSMOS*, a television series devoted to astronomy and space exploration.*

A part of that awesome series was shot in India. In the early eighties, Sagan met then Indian diplomat Placido P D'Souza *and in a conversation explained the India connection and the relevance of Gandhi.*

You have been host of the television programme *COSMOS* which deals with astronomy and science exploration. And yet India figured in this programme. Could you tell us how India fits into this series?
Let me first say something about the series in general, and something about the Indian part of the series. The television series *COSMOS* is designed to breach the barrier that many people feel about science. They cannot understand it, and it is foreign to them in approach and content. Our experience is that children grow up with an absolute zest and passion for science, and something happens to discourage some of them - sometimes many of them - from pursuing this interest.

We thought it was our job to excite the children, and reawaken the interest in science of adults. So we will use any approach to gain people's attention, and show them that science is something not just that they can understand, but that they can become excited about and can use as part of the way they view the world.

The series has been extraordinarily successful. It has been shown in a year or two in the Soviet Union and the People's Republic of China. I hope some day it will be shown in India. The tenth episode of *COSMOS* is largely about cosmology - the study of the universe in a perspective in which the Earth is like a grain to stand in vast beach or desert - and the way we approach the subject is through Hindu cosmology.

We have done that for several reasons. We went to Tamil Nadu for the festival called Pongal. Like festivals all over the world, it celebrates the changing of the seasons, and remind us that our ancestors were astronomers, who kept calendars and watched the skies. It was essential for extremely practical matters: when to sow seeds and to harvest grain. It was a matter of life and death to be an astronomer.

But the main reason that we oriented this episode of *COSMOS* towards *I***ndia is because of that wonderful aspect of Hindu cosmology which first of all gives a time-scale for the Earth and the universe -- a time-scale which is consonant with that of modern scientific cosmology. We know that the Earth is about 4.6 billion years old, and the cosmos, or at least its present incarnation, is something like 10 or 20 billion years old. The Hindu tradition has a day and night of Brahma in this range, somewhere in the region of 8.4 billion years.**

As far as I know. It is the only ancient religious tradition on the Earth which talks about the

right time-scale. We want to get across the concept of the right time-scale, and to show that it is not unnatural. In the West, people have the sense that what is natural is for the universe to be a few thousand years old, and that billions is indwelling, and no one can understand it. The Hindu concept is very clear. Here is a great world culture which has always talked about billions of years.

Finally, the many billion year time-scale of Hindu cosmology is not the entire history of the universe, but just the day and night of Brahma, and there is the idea of an infinite cycle of births and deaths and an infinite number of universes, each with its own gods.

And this is a very grand idea. Whether it is true or not, is not yet clear. But it makes the pulse quicken, and we thought it was a good way to approach the subject.

And then the Chola bronzes in Tamil Nadu were very lovely to film, and gave us a visual approach to go along with the intellectual approach. It was also a way of de-provincialising our presentation. After all, we claim that science is an endeavor of the human species. To shoot the whole film in the United States or Western Europe would have been extremely provincial. We shot in Japan and 12 or 14 other countries, besides India. Let me also say that the subsidiary benefit for my wife and me is that we had a chance to visit India for the first time, and especially Tamil Nadu which we enjoyed enormously.

You mentioned the Chola bronzes and I see also that in your book *COSMOS* one of the chapters called 'The edge of forever' begins with a picture of Nataraja. Could you say something to explain its relevance in that chapter?
The traditional explanation of the Nataraja is that it symbolises the creation of the universe in one hand and the death of the universe in the other - the drum and the flame - and after all, that is what cosmology is all about. So in addition to being artistically exquisite, the Nataraja provides exactly the kind of symbolism that we wanted. The Nataraja that is photographed in the book *COSMOS* is in a museum in Pasadena, California, but it will be returned to India at some specified time within the next decade.

What were your general impressions about India?
I was absolutely delighted with Tamil Nadu. First of all, there was the sense of an intact cultural framework. I did not have the sense of people greatly alienated from their society - you certainly see a great deal of that in the West. I had a sense of people caring for each other, an intact social fabric, and technology coming along quite fast. Not just large industrial parks.

In a way what impressed me most was the widespread use of the bicycle, not only for carrying agricultural products and manufactures from one place to another, but also as a means for young people to visit neighbouring villages, and a sense of exuberant communication, because now people are not closed in a small village. They have a much wider range of places that they have access to.

We spent some time in Madras and in Bombay. But these were slow stages to get us to Tamil Nadu. We saw mainly tourist things which were certainly pleasant, but we did not have the sense of getting to know the people. We could have, but it did not work out that way, whereas in Tamil Nadu we got to know the people.

I will give you an example. Here we are at 6:30 or 7 in the morning - a group of us consisting of cameramen, soundmen, writers, directors, producers and me, who go marching single file by a pond in which there are lovely lily and lotus blossoms. Going to two small temples of the bull god (Nandi). A boy, less than 10 years old, saw us coming, looked at us, dove into the pond and came up near a lotus flower. He then swam back with it, climbed out of the pond, went up to my wife, gave her the lotus blossom and introduced himself, saying "Hello, my name is…" I forget what his name was. It was done with such elegance and charm and with no thought of reward, but just a sensibility which I found very impressive. Anyway we loved it. How colorful it was…

I must also say the sari is a kind of work of art, especially seeing hundreds of them all together. Also, women washing the saris gives a kind of swatch of color to the landscape… I thought it was wonderful… I had a sense of a healthy society. I didn't know to what extent this is characteristic or not, but I was very impressed and would love to have a chance to go back…

Well, you know you have a standing invitation to visit India…Was that your first visit?

Yes. I had been invited before by a number of people, including J B S Haldane, a British biologist in Bhubaneshwar. I knew him well in the last few years of his life. He even made me promise to visit him in Orissa, but he died before I had a chance to do so.

Did you know any other Indian scientists?

Oh, yes. I knew Vikram Sarabhai who spent a year at Cambridge, Massachusetts, when I was on the Harvard faculty. I was a student of the world-renowned astrophysicist Subramanian Chandrasekhar at the University of Chicago. An old friend from the graduate school days in Kameshwar Wali, now a Professor of Physics at Syracuse University. For 17 years a close colleague who has been working with me in laboratory experiments on the origins of life is Bishun Khare. So I had a succession of fairly close friendships with Indians. I have always felt some natural affinity, I suppose.

Have you seen the Gandhi film?

Yes. It well deserved the Academy awards. I though it was splendid on many different levels. One is the idea that there are ways for the people to move governments by unconventional approaches including civil disobedience - but not only civil disobedience - at a time when, in my view, the people of at least some countries have much more sensible views about the nuclear arms are than their governments. They can affect the policies of governments that seem to be slow-moving, intractable and riddled with a bureaucracy that is decades behind the times.

Also, the American civil rights, movement, of course, was powerfully influenced by the degree to which Martin Luther King, Jr admired Mohandas Gandhi, and I think that it is important for us, Americans, to remember that connection… of the time when events in India were relevant to events in the United States. That kind of thing seems to me to be extremely important.

It has been argued that this kind of movement is all right in a colonial situation and in very special circumstances, but when you have functioning democracies, is it valid to adopt what could be considered extra constitutional measures? Right… or the opposite question: in a country like Nazi Germany, would civil disobedience have in any way been effective? Would the leaders of civil disobedience not have been executed and nothing would have changed? They are both good questions, and my answer is that the approach of Gandhi*ji* is not precisely applicable in every political situation. However, the reminder that there are conventional ways of affecting the perceptions of masses of people on issues of the greatest importance is very important reminder.

In democracies - you talk about functioning democracies - there are traditions. For example, the approaches to the nuclear arms race are institutionalised, and progress is made very slowly. Armaments are increased easily, decreased with great difficulty, and people think about historical analogies of Munich in 1938 and so on without fully having come to grips with the fact that the invention of nuclear weapons has changed everything. And for that reason I think that something other than politics is necessary when all nations and the human species are faced with the extremely grave possibilities of a nuclear war.

I am not saying that civil disobedience is necessarily the answer. But one thing which was so impressive about Gandhi*ji* was the way he was able to communicate to large numbers of people and to excite people's passion and courage. There was a great deal of courage needed to have followed him, especially in the early days of his movement.

I think something along those lines is needed worldwide if we are to break out of this impasse in the nuclear arms race.

Also, I thought the movie was beautifully filmed, and in many places, extremely moving. Maybe the most moving for me was the scene toward the end, in which Gandhi*ji* says to the despairing man who has killed children in a riot: "I know a way out of hell". I found that an enormously moving approach to the problem, that the way for a Hindu, to make recompense for participating in the riots, is to raise a Muslim child as a Muslim and vice versa.

I thought it was a superb movie and well deserving of the acclaim it has gotten here and elsewhere.

It has certainly made an impact, and moved people to think about Gandhi and India. To the extent that it has made people think a little, it has served its purpose. I agree, it demonstrates that extremely unconventional approaches are practical politics. Surely Gandhi has made major achievements in practical politics by methods that the British discounted immediately, and were proved wrong. It is good to remember that…

Chidambaram

Chidambaram, the site of Shiva's cosmic dance, has been the center of Shaivite art and thought for over a millennium. Its great temple, built by successive southern Indian dynasties between the 8th and 12th centuries A.D. is dedicated to Shiva Nataraja, and is said to be the site of his legendary dance in the presence of his consort Parvati. Shiva's dancing icon resides in the Golden Hall, a symbol of the nucleus of the atom and of the center (bindu) of the universe. The Upanishads, Vedas, Puranas and other sacred Hindu texts are represented by parts of the temple complex, the temple as a whole standing for the totality of Hindu knowledge. Shiva's dance to Parvati is celebrated in a great festival in December.

Significance: Chidambaram is one of the most ancient and most celebrated of shrines in India. It is of great religious as well as historic and cultural significance. Chidambaram is associated with Nataraja, or Shiva in his Ananda Tandava pose (the Cosmic Dance of bliss) in the cosmic golden hall and the hall of consciousness (Chit Sabha). Shiva is also worshipped in the "formless form" of the Chidambara Rahasyam, while the temple is known for its Akasa Lingam, an embodiment of Shiva as the formless Space. The word "Koyil" or temple in the Tamil Saivite tradition refers to none other than the Chidambaram Nataraja temple.

Antiquity: The origins of this vast temple are buried in antiquity. Literature talks of a tradition of Shiva (Nataraja) worship in existence even as early as the Sangam period (very early on in the

Christian era), and the Tamil Saints have sung its fame when an established worship tradition was in place. The later Chola Kings (Aditya I and Parantaka I) adorned the roof of the shrine with gold, and the other Chola Kings treated Nataraja as their guardian deity and made several endowments to the temple as temple inscriptions testify. The Pandya Kings who followed them, and the later Vijayanagar rulers made several endowments to the temple. There is a stone image of Krishnadevaraya in the North Gopura which he is said to have erected. In the wars of the 18th century, this temple was used as a fort, especially when the British General Sir Eyre Coote unsuccesfully tried to capture it from the Mysore Kings. During this period, the images of Nataraja and Sivakamasundari were housed in the Tiruvarur Tyagaraja temple for safety.

Muthuswamy Deekshitar, one of the foremost composers in the Karnatic Music tradition sings the glory of this temple in his kriti 'Ananda Natana Prakasam'. The Alwar Poems of the Naalayira Divya Prabandam sing the glory of Vishnu, whose image is also housed in this temple, and his shrine is referred to as 'Tiruchitrakootam'. Adi Sankara is said to have presented a Spatika Lingam which is still under worship in this temple. Sekkizhaar's Periya Puranam, describing poetically the life of the Saivite Saints (63 in number) was composed in the 1000 pillared hall, and was expounded by the author himself in the presence of the Chola emperor Kulottunga II, who had comissioned the work, amidts great festivity and fanfare.

Each of the four most revered Saivite Saints (Appar, Sundarar, Sambandar and Manikkavacakar) has worshipped at Chidambaram, and the bulk of Manikkavacakar's work is in praise of Shiva at Chidambaram. Accordingly, their images are placed in the temple entrances corresponding to their points of entry into the temple. (Sambandar - South, Appar - West, Sundarar - North and Manikkavacakar - East).

Legends associated with this temple: Aadi Sesha, the serpent (couch) of Vishnu, heard from Vishnu the grandeur of Shiva's cosmic dance. Filled with irrepressable desire to witness this dance in person at Chidambaram, Seshan descended to the earth as Patanjali (the one who descended). Vyagrapaadar, another devotee of Shiva prayed to obtain the tiger's claws so that he could obtain with ease the sacred Vilva leaves meant for Shiva's worship at Chidambaram. At the appointed hour, Shiva (with Sivakami) granted to Patanjali and Vyagrapaadar, a visual treat in the form of his Cosmic Dance of Bliss, to the accompaniments of music played by several divine personalities in the Hindu pantheon. This Dance of Bliss is said to have been witnessed by Vishnu, and there is a Govindaraja shrine in the Natarajar temple commemorating this. The dance of bliss of Shiva, is also said to have been enacted upon Shiva's (Bhikshatana) victory over the married ascetics of Daruka Vanam.

Yet another legend, commemorating the dance duel between the doyens of dance Shiva and Kali is associated with Chidambaram. Shiva is said to have lifted his left foot towards the sky in the Urdhuva Tandava posture, a definite male gesture, which out of adherence to protocol, Kaali could not reciprocate, thereby causing Shiva to emerge victorious, delegating Kaali to the status of a primary deity in another temple in the outskirts of Chidambaram. This legend is portrayed in the Nritta Sabha, one of the halls within the Chidambaram temple.

There is another recent legend associated with this temple. The sacred Tamil works of the Nayanmaars had been missing for several years, and it was during the period of Raja Raja Chola (the builder of the Grand temple at Tanjavur) that formal research was initiated to trace these fine works of devotional literature. These works of the Saivite Saints - rich in musical content were recovered in a dilapidated state in one of the chambers in this vast temple, after the monarch brought images of the Saint trinity in procession to the temple.

In Hindu cosmology we are all manifestations of the divine, playing at life, forgetting, as children forget themselves in the middle of a game, that we are aspects of divinity at play. In the game, as in the delusions from which the Buddha of legend hoped to free the world, we experience ourselves as distinct personalities; to be liberated is to understand that the game, the personality, our individual suffering, are not the big picture. That we die and are reborn with each moment that passes. That death and birth are aspects of one another, just as creation and destruction are both embodied in Shiva, a single Hindu deity. That we are not separate from the great cosmic dance.

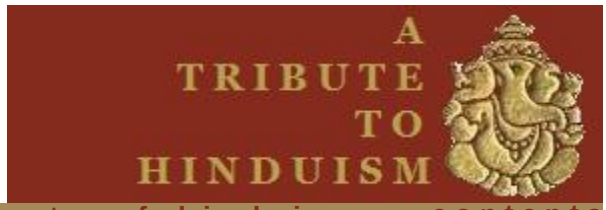
Did You Know

A Celtic Deity



Like their Indo-European Hindu counterparts, many of the Celt's Deities are depicted in full lotus posture, as on this enamel piece. The stylized swastika pattern on the chest is identical to Hindu versions. Even the vocabulary is amazingly similar. The following are just a few examples:

Sanskrit	Old Irish
arya (freeman)	aire (noble)
naib(good)	noeib (holy)
badhira (deaf)	bodhar (deaf)
names (respect)	nemed (respect)
raja (king)	righ (king)

The ancient Irish law system, The Laws of the Fenechus, is closely parallel to the Laws of Manu.

The Vedas have guided Indian civilization for thousands of years. They are the pillars of Hinduism. "Veda is the source of all Dharma" declares Manusmirti (2.6.) There is no major religion on the planet, which has not been influenced by the Vedas. The creation stories of all major religions are based on Vedas. Though all other religions have forgotten their Vedic root or have been forgotten, there is one religion, Hinduism, that has kept the flame of the Vedic wisdom burning continuously. Vedas which means ' knowledge' contain a good deal of scientific knowledge that was lost over millennia, which needs to be recovered. The Vedic sages had discovered the subtle nature of reality, and had coded it in the form of the Vedas.

According to Raja Ram Mohan Roy, author of Vedic Physics, "The knowledge contained in the Vedas is very abstruse, and is well beyond the comprehension of ordinary human beings. Therefore Vedic sages coded the knowledge in a simple form in which it could be understood by everyone. The Rig Veda itself testifies that it has a hidden meaning in verse 4.3.16. Sage Bharata in his Natyasastra 2.23 refers to the sages who knew the hidden meaning of the Vedas. This coding of knowledge proved to be very successful in disseminating the knowledge to common folks. This would also explain why extraordinary steps were taken to preserve the Vedas, and the honor given to the Vedas by Hindus, even though its meaning is little understood today. "On the eve of the "Mahabharata War" our ancestors believed that their knowledge was in danger of being lost. They could have written it down, but writings could be destroyed. Therefore, it was memorized and passed on orally. Today, the Avesta, religious scripture of ancient Iranians, only a fraction of it is available. Alexander captured Iran in 326 B.C. and after a bloody war, destroyed each copy of the Avesta available."

Author Dick Teresi says "Indian cosmologists, the first to estimate the age of the earth at more than 4 billion years. They came closest to modern ideas of atomism, quantum physics, and other current theories. India developed very early, enduring atomist theories of matter. Possibly Greek atomistic thought was influenced by India, via the Persian civilization."

Introduction

Max Muller, in his book **In History of Ancient Sanskrit Literature**' (p. 557) observed: " In the Rig-Veda we shall have before us more real antiquity than in all the inscriptions of Egypt or Ninevah....the Veda is the oldest book in existence...."

Louis Jacolliot (1837-1890), who worked in French India as a government official and was at one time President of the Court in Chandranagar, translated numerous Vedic hymns, the **Manusmriti,** and the Tamil work, **Kural** His masterpiece, **La Bible dans l'Inde**, stirred a storm of controversy. He praised the Vedas in his Sons of God, and said,:

"The Hindu revelation, which proclaims the slow and gradual formation of worlds, is of all revelations the only one whose ideas are in complete harmony with modern science. "

Jacolliot feels India has given to the West much more than she is credited with when he says:

" Besides the discoverers of geometry and algebra, the constructors of human speech, the parents of philosophy, the primal expounders of religion, the adepts in psychological and physical science, how even the greatest of our biological and theologians seem dwarfed! Name of us any modern discovery, and we venture to say that Indian history need not long be searched before the prototype will be found on record. Here we are with the transit of science half accomplished, and all our Vedic ideas in process of readjustment to the theories of force correlation, natural selection, atomic polarity and evolution. And here, to mock our conceit, our apprehension, and our despair, we may read what **Manu** said, perhaps 10,000 years before the birth of Christ:

' The first germ of life was developed by water and heat.' (**Manusmriti -** Book I, sloka 8,9)

' Water ascends towards the sky in vapors; from the sun it descends in rain, from the rains are born the plants, and from the plants, animals.' (**Manusmriti** - Book III, sloka 76)

(source: **Krishna and Christ - By Louis Jacolliot** p. 15).

Sir John Woodroffe (1865-1936) the well known scholar, Advocate-General of Bengal and sometime Legal Member of the Government of India. He served with competence for eighteen years and in 1915 officiated as Chief Justice. He has said:

"Ages before Lamarck and Darwin it was held in India that man has passed through 84 lakhs (8,400,000) of birth as plants, animals, as an "inferior species of man" and then as the ancestor of the developed type existing to-day. **The theory was not, like modern doctrine of evolution, based wholly on observation and a scientific enquiry into fact but was a rather (as some other matters) an act of brilliant intuition in which observation may also have had some part**."

(source: **Is India Civilized - Essays on Indian Culture - By Sir John Woodroffe** Ganesh & Co. Publishers Date of Publication: 1922 p. 22).

"To the philosophers of India, however, Relativity is no new discovery, just as the concept of light years is no matter for astonishment to people used to thinking of time in millions of kalpas, (A kalpa is about 4,320,000 years). The fact that the wise men of India have not been concerned with technological applications of this knowledge arises from the circumstance that technology is but one of innumerable ways of applying it."

It is, indeed, a remarkable circumstance that when Western civilization discovers Relativity it applies it to the manufacture of atom-bombs, whereas Oriental civilization applies it to the development of new states of consciousness."

(source: **Spiritual Practices of India - By Frederic Spiegelberg** Introduction by **Alan Watts** p. 8-9).

Mr. Thorton, in his book **History of British India**, states: **" Hindus are indisputably entitled to rank among the most ancient of existing nations, as well as among those most early and most rapidly civilized....**ere yet the Pyramids looked down upon the Valley of the Nile... when Greece and Italy, these cradles of modern civilization, housed only the tenants of the wilderness, India was the seat of wealth and grandeur..."

(source: **Proof of Vedic Culture's Global Existence - By Stepehn Knapp** p. 7).

Count Maurice Maeterlinck (1862-1949) was a Belgian writer of poetry, a wide variety of essays. He won the 1911 Nobel Prize for literature. In his book **Mountain Paths**, says:

"he falls back upon the earliest and greatest of Revelations, those of the Sacred Books of India with a Cosmogony which no European conception has ever surpassed."

(source: **Mountain Paths - By Maurice Maeterlinck**).

Huston Smith (?) born in China to Methodist missionaries, a philosopher, most eloquent writer,

world-famous religion scholar who practices Hatha Yoga. He has said in Hinduism:

"The invisible excludes nothing, the invisible that excludes nothing is the infinite – the soul of India is the infinite."

"Philosophers tell us that the Indians were the first ones to conceive of a true infinite from which nothing is excluded. **The West shied away from this notion.** The West likes form, boundaries that distinguish and demarcate. The trouble is that boundaries also imprison – they restrict and confine."

"India saw this clearly and turned her face to that which has no boundary or whatever." "India anchored her soul in the infinite seeing the things of the world as masks of the infinite assumes – there can be no end to these masks, of course. If they express a true infinity." And It is here that India's mind boggling variety links up to her infinite soul."

"India includes so much because her soul being infinite excludes nothing." It goes without saying that the universe that India saw emerging from the infinite was **stupendous**."

While the West was still thinking, perhaps, of 6,000 years old universe – India was already envisioning ages and eons and galaxies as numerous as the sands of the Ganges. The Universe so vast that modern astronomy slips into its folds without a ripple."

(source: **The Mystic's Journey - India and the Infinite: The Soul of a People – By Huston Smith**).

Dick Teresi (?) author and coauthor of several books about science and technology, including **The God Particle**. He is cofounder of **Omni** magazine and has written for Discover, The New York Times Magazine, and The Atlantic Monthly.

"The big bang is the biggest-budget universe ever, with mind-boggling numbers to dazzle us – a technique pioneered by fifth-century A.D. **Indian cosmologists, the first to estimate the age of the earth at more than 4 billion years.**

The cycle of creation and destruction continues forever, manifested in the **Hindu deity Shiva, Lord of the Dance,** who holds the drum that sounds the universe's creation in his right hand and the flame that, billions of years later, will destroy the universe in his left. Meanwhile Brahma is but one of untold numbers of other gods dreaming their own universes.

The 8.64 billion years that mark a full day-and-night cycle in Brahma's life is about half the modern estimate for the age of the universe. The ancient Hindus believed that each Brahma day and each Brahma night lasted a kalpa, 4.32 billion years, with 72,000 kalpas equaling a Brahma century, 311,040 billion years in all. That the Hindus could conceive of the universe in terms of billions.

The similarities between Indian and modern cosmology do not seem accidental. Perhaps ideas of creation from nothing, or alternating cycles of creation and destruction are hardwired in the human psyche. Certainly **Shiva's percussive drumbeat** suggests the sudden energetic impulse that could have propelled the big bang. And if, as some theorists have proposed, the big bang is merely the prelude to the big crunch and the universe is caught in an infinite cycle of expansion and contraction, then ancient Indian cosmology is clearly cutting edge compared to the one-directional vision of the big bang. **The infinite number of Hindu universes is currently called the many world hypothesis,** which is no less undocumentable nor unthinkable.

The Indians came closest to modern ideas of atomism, quantum physics, and other current theories. India developed very early, enduring atomist theories of matter. Possibly Greek atomistic thought was influenced by India, via the Persian civilization. **The Rig-Veda, is the first Indian literature to set down ideas resembling universal natural laws. Cosmic law is connected with cosmic light, with gods, and, later, specifically with Brahman.** It was the Vedic Aryans... who gave the world some of the earliest philosophical texts on the makeup of matter and the theoretical underpinnings for the chemical makeup of minerals. Sanskrit Vedas from thousands of years before Christ implied that matter could not be created, and that the universe had created itself. Reflecting this, in his **Vaiseshika** philosophy, **Kanada** (600 B. C) claimed that elements could not be destroyed. Kanada's life is somewhat a mysterious, but his name is said to mean "one who eats particle or grain" likely referring to his theory that basic particles mix together as the building blocks for all matter. Two, three, four, or more of these elements would combine, just as we conceive of atoms doing. The Greeks would not stumble on this

concept for another century."

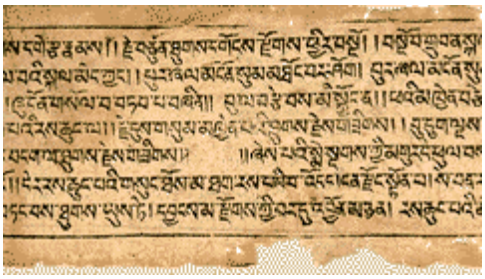
"In India, we see the beginning of theoretical speculation of the size and nature of the earth. Some one thousand years before Aristotle, the **Vedic Aryans** asserted that the earth was round and circled the sun. A translation of the **Rig Veda** goes: " In the prescribed daily prayers to the Sun we find..the Sun is at the center of the solar system. ..The student ask, "What is the nature of the entity that holds the Earth? The teacher answers, "**Rishi Vatsa holds the view that the Earth is held in space by the Sun."**

"Two thousand years before Pythagoras, **philosophers** in northern India had understood that gravitation held the solar system together, and that therefore the sun, the most massive object, had to be at its center." "Twenty-four centuries before Isaac Newton, the Hindu **Rig-Veda** asserted that gravitation held the universe together. The Sanskrit speaking Aryans subscribed to the idea of a spherical earth in an era when the Greeks believed in a flat one. The Indians of the fifth century A.D. calculated the age of the earth as 4.3 billion years; scientists in 19th century England were convinced it was 100 million years."

(source: **Lost Discoveries: The Ancient Roots of Modern Science - By Dick Teresi** p. 159 and 174 -212). For more refer to chapter **Hindu Cosmology**).

India had a thriving civilization capable of sophisticated astronomy long before Greece, Egypt, or any other world culture. For more than a century scholars have debated the antiquity of the Vedas and their related literature, the Brahmanas and Puranas. Incontrovertible evidence that such "advanced" astronomical concepts as precession, heliocentrism, and the eclipse cycle are encoded in these ancient texts, passages of which make perfect sense only if these astronomical keys are known. Based on internal evidence in the Mahabharata and Ramayana, it is likely to establish dates--and even places--for the events described in these famous epics and thus place India, or the roots of civilization.

A Rg Vedic hymn to the Asvins (Mercury and Venus), quoted in the **Mahabharata**, also refers to the twelve zodiacal signs. **Zodiacal signs are mentioned in the Rig Veda, thus, they precede Greco-Babylonian astronomy.** The earliest reference to the zodiacal signs is, therefore, in the **Rig Veda**, not in Babylonian literature. This completely upsets the rather smug history of astronomy as conceived by the western scholars of the past couple of centuries. It is obvious that the Rig Vedic seers were not mere observers in the sense the Babylonian were. They had theorized about their observations, beating the Greeks by over a thousand years in this process.



By deciphering the astronomical events and alignments contained in symbolic form in these ancient texts, question many if not all of the assumptions governing Indo-European prehistory. The astronomical significance of many Hindu deities, the system of lunar asterisms used to mark time, the identity of the Asvins, and the sophisticated calendar of the ancients that harmonized solar and lunar cycles.

With the rise of modern science it should have been feasible to crack the Vedic code at least three decades earlier, but here lies the greatest tragedy of India. Under the Marxist grip Indian intellectuals have been made ashamed of their heritage, and most educated Hindus are ready to parade with the banner " We are ashamed of being Hindus" at the drop of a hat. Most educated Indians - including scientists have no clue as to what is in the Vedas. The Vedas are written in Sanskrit and most educated Indians can not understand it as there is a conspiracy to finish Sanskrit and everything else that Hindus should be proud of. There are very few Vedic scholars left in India.

Top of Page

Advanced Scientific Concepts in Hindu Literature

The Rig Veda is the oldest Indian text and one of the oldest surviving in the world. This collection of hymns of sages like Vasistha, Visvamitra, Agastya, Dirghatmas, and others was compiled over a span of a few hundred years. The verses of the Rig Veda form a code that, properly interpreted, reveals an amazing amount of astronomical knowledge, which is unbelievable when we consider their antiquity - 1500 B. C. being a conservative estimate. In fact, the Rig Veda shorn of its allegory and metaphorical camouflage, is the oldest textbook of modern astronomy.

From this approach it follows that the Rig Veda seers were scientists in the modern sense. Pre-Rig Veda astronomers, had, in fact measured the sphericity of the Earth, established the heliocentric theory in its modern form, and explained the seasons astronomically. Advanced concepts like the causes of auroral displays were also understood. *The Rig Veda is according to astronomical grounds, more than five thousand years old.* The Rig Veda repeatedly refers to Earth and the heavens as "bowls" thus suggesting that the sphericity of Earth was recognized. This can be confirmed by several hymns as well. Several hymns are attributed to the Aswins, which are the planets Mercury and Venus. A Rig Veda hymn to the Asvins, quoted in the Mahabharata, also refers to

the twelve zodiacal signs. Undoubtedly, the twelve zodiacal signs were known. Thus, the earliest reference to the zodiacal signs is, therefore, in the Rig Veda, not in the Babylonian literature.

Sphericity of Earth:

The existence of rather advanced concepts like the sphericity of Earth and the cause of seasons is quite clear in Vedic literature. For example, the **Aitareya Brahmana** (3.44) declares:

"The Sun does never set nor rise. When people think the Sun is setting (it is not so). For after having arrived at the end of the day it makes itself produce two opposite effects, making night to what is below and day to what is on the other side…Having reached the end of the night, it makes itself produce two opposite effects, making day to what is below and night to what is on the other side. In fact, the Sun never sets…."

Earth as Flat at Poles:

"Twenty-four centuries before Isaac Newton, the Hindu Rig-Veda asserted that gravitation held the universe together. The Sanskrit speaking Aryans subscribed to the idea of a spherical earth in an era when the Greeks believed in a flat one. The Indians of the fifth century A.D. calculated the age of the earth as 4.3 billion years; scientists in 19th century England were convinced it was 100 million years."

(source: **Lost Discoveries: The Ancient Roots of Modern Science - By Dick Teresi** p. 7 - 8).

It is quite remarkable that the **Markandeya Purana** (54.12) speaks of Earth as being flattened at the poles and bulging at the equator, that is, not perfectly spherical.

The **Vishnu Purana,** in an obvious elaboration of the above quotation from the Aitareya Brahmana, also speaks of antipodes of Earth and indeed implies the existence of Earth's rotation. In addition, even more elementary concepts like the phases of Moon and the cause of twilight were well understood, as was the fact that the blue sky is nothing but scattered sunlight. (cf. **Markandeya Purana,** 78.8, or 103.9)

Sun the center of the Solar System:

Dick Teresi has observed that:

"The Vedas recognized the sun as the source of light and warmth, the source of life, and center of creation, and the center of the spheres. This perception may have planted a seed, leading Indian thinkers to entertain the idea of heliocentricity long before some Greeks thought of it. An **ancient Sanskrit** couplet also contemplates the idea of multiple suns:

"Sarva Dishanaam, Suryaham Suryaha, Surya."

Roughly translated this means, "There are suns in all directions, the night sky being full of them," suggesting that early sky watchers may have realized that the visible stars are similar in kind to the sun. A hymn of the **Rig Veda**, the **Taittriya Brahmana**, extols, nakshatravidya (nakshatra means stars; vidya, knowledge)."

"Two thousand years before Pythagoras, philosophers in northern India had understood that gravitation held the solar system together, and that therefore the sun, the most massive object, had to be at its center. "

(source: **Lost Discoveries: The Ancient Roots of Modern Science - By Dick Teresi** p. 1 and 130).

One frequently encounters the concepts of the Sun being at the center of the solar system (cf **Markandeya Purana,** 106. 41). All this pales, however, before the concept, startlingly similar to the twentieth-century model, of an oscillating universe, or more accurately, a universe being cyclically created and destroyed, with just about the right time period of about 10,000 million years.

(cf. **Mahabharata Santi Parva, or Markandeya Purana,** 81, 57-58).

The **Rig Veda** repeatedly asks, **"How is it that though the Sun is not bound and is directed downwards, it does not fall?"** A question asked by Isaac Newton more than three thousand years later, and no one else, because the Greeks had furnished the crystal spheres to which these objects were attached!

When we talk of gravity, Newton comes to our mind, but in the text **Surya Sidhantha** dated around 400 AD, **Bhaskaracharya** described it stated. "objects fall on the earth due to one force. The Earth, planets, constellations, moon and sun are held in orbit because of that one force".

"Seven horses draw the chariot of Surya". Rg Veda 5. 45. 9

These seven horses are the seven colors compromising light. These seven colors become visible in a rainbow or when light passes through a prism.

Vedic literature used large numbers and employed modern decimal enumeration, compared with the primitive Greek and Roman arithmetic. The first recorded evidence of "Hindu" numerals is at least as old as the Ashoka's edicts, circa 250 B. C.

Not just astronomy, but other physical concepts appear in quite a developed form in ancient Indian literature. These include atomism, superposition of various sound notes, the division of time into very small units of the order of a 100,000th of a second, and so on.

The **Laya Yoga Samhita** stated that just as the beams of sunlight entering a room reveal the presence of innumberable motes, so infinite space is filled with countless brahmandas (solar systems). The atomic structure of matter was discussed in the ancient Vaisesika treatises. And in the Yoga Vashista it was stated, in a passage very similar to the foregoing: "There are vast worlds all placed way within the hollows of each atom, multifarious as the motes in a sunbeam."

(source: **Crises in Modern Thought: The Crises of Reason - By Swami Kriyananda (J. Donald Walters)** vol. 1 p - 95).

Modern physics confirmed that the sun's rays travel in a curved way, but not in a straight line. Our ancestors told that the sun's chariot was drawn by seven horses tied by snakes. As the movements of the snakes are crooked and curved, so also the sun's ray. The phenomenon is described in a metaphysical poetic line bhujagana mita sapta turaga. The chapter on light says that there are seven colors in the white ray of the sun. Artharveda says that there are seven types of sun's rays, sapta surayasya rasmayah.

The law of gravitation discovered by Brahmagupta anticipated Newton by declaring **"all things fall to the earth by law of nature; for it is the nature of the earth to attract and keep things."**

(source: **Hinduism and Scientific Quest - By T R. R. Iyengar** p. 153-154 South Asia Books ASIN 8124600775).

Marquis Pierre Laplace (1749-1827) French mathematician, philosopher, and astronomer, a contemporary of Napoleon. **Laplace** is best known for his nebular hypothesis of the origin of the solar system. wrote:

"Nevertheless the ancient reputation of the Indians does not permit us to doubt that they have always cultivated astronomy, and the remarkable exactness of the mean motions which they assign to the Sun and the Moon necessarily required very ancient observation."

Yaqubi, Shiite historian, wrote in the ninth century: **"Hindu are more exact in astronomy and astrology than any other people.**

Atoms:

In the realm of physics, remarkable contributions have been made by Indian scientists. **Kanada,** the founder of the **Vaisesika system of philosophy**, expounded that the entire matter in this world consists of atoms as many in kind as the various elements. Kanada's atom would then correspond to the modern atom. Some Jain thinkers went a step further. They thought that all atoms are the same kind and variety emerged because they entered into different combinations. Kanada taught that light and heat are variations of the same reality. **Vacaspati** interpreted light as composed of minute particles emitted by substances and striking the eyes. This is a clear anticipation of the corpuscular theory of light, which was proposed by Newton but rejected till the discovery of the proton.

(source: **Hinduism and Scientific Quest - By T R. R. Iyengar** p. 153-154 South Asia Books ASIN 8124600775).

Other discoveries of modern technology is that of atomic energy and its by-products. Most people agree that no civilization before us had knowledge of such things. **But time and time again we find in the Vedic literature descriptions of weapons that had a similar amount of energy as the atomic bombs we use today. And to what else would these next few verses from the Artha-veda be referring if they are not a description of the basic principles of atomic energy?**

"The Atomic energy fissions the ninety-nine elements, covering its path by the bombardments of neutrons without let or hindrance. Desirous of stalking the head, i.e. the chief part of the swift power, hidden in the mass of molecular adjustments of the elements, this atomic energy approaches it in the very act of fissioning it by the above-noted bombardment. Herein verily the scientist know the similar hidden striking force of the rays of the sun working in the orbit of the moon. " (**Artha-Veda,** 20.41.1-3)

J. Robert Oppenheimer, (1904-1967) Scientist, philosopher, bohemian, and radical. A theoretical physicist and the Supervising Scientist Manhattan Project, the developer of the atomic bomb said: He is most remembered for his work with Albert Einstein on the first atomic bomb.

Only seven years after the first successful atom bomb blast in New Mexico, Dr. Oppenheimer, of **The Manhattan Project,** who was familiar with ancient Sanskrit literature, was giving a lecture at Rochester University. During the question and answer period a student asked a question to which Oppenheimer gave a strangely qualified answer:

Student: Was the bomb exploded at Alamogordo during the Manhattan Project the first one to be detonated?

Dr. Oppenheimer: **"Well -- yes. In modern times, of course.**

"Berlitz goes on to quote a number of passages from the **Mahabharata** that describe the impact of a weapon that I suspect must be the **brahmaastra,** although he neither names the weapon nor cites those sections of the text from which his quotations are drawn (he lists Protap Chandra Roy's translation of 1889 in his bibliography):...a single projectile Charged with all the power of the Universe.

An incandescent column of smoke and flame As bright as ten thousand Suns Rose in all its splendor.....it was an unknown weapon, An iron thunderbolt, A gigantic messenger of death, Which reduced to ashes. The Entire race of the Vrishnis and the Andhakas....the corpses were so burned As to be unrecognizable. Their hair and nails fell out; Pottery broke without apparent cause, And the birds turned white. After a few hours all foodstuffs were infected.....To escape from this fire. The soldiers threw themselves in streams to wash themselves and their equipment...

One is reminded of the yet unknown final effect of a super-bomb when we read in the Ramayana of a projectile:

...So powerful that it could destroy
The earth in an instant -
A great soaring sound in smoke and flames...
And on it sits Death...

(source: **Doomsday 1999 A.D. - By Charles Berlitz** Doubleday; March 1981 ASIN 038515982X p. 118-122).

Oppenheimer described the thoughts that passed through his mind when he witnessed the first atomic test explosion.

"Of a thousand suns in the sky if suddenly should burst forth the light, it would be like unto the light of that Exalted One. (**Bhagvad Gita** XI,12)
" Death am I, cause of destruction of the worlds, matured and set out to gather in the worlds there" (**Bhagvad Gita** XI 32)

For example, the **Vishnu Purana** in an insightful passage declares,

"How can reality be predicated of what is subject to change, and reassumes no more of its original character? Earth is fabricated into a jar; the jar is divided into two halves; the halves are broken to pieces, the pieces become dust; the dust becomes atoms…."

Universal Time Scale:

The late scientist, **Carl Sagan**, in his book, **Cosmos** asserts that the **Dance of Nataraja (Tandava)** signifies the cycle of evolution and destruction of the cosmic universe (Big Bang Theory). "It is the clearest image of the activity of God which any art or religion can boast of." Modern physics has shown that the rhythm of creation and destruction is not only manifest in the turn of the seasons and in the birth and death of all living creatures, but also the very essence of inorganic matter.

For modern physicists, then, Shiva's dance is the dance of subatomic matter. Hundreds of years ago, Indian artist created visual images of dancing Shiva's in a beautiful series of bronzes. Today, physicist have used the most advanced technology to portray the pattern of the cosmic dance. Thus, the metaphor of the cosmic dance unifies, ancient religious art and modern physics. The Hindus, according to Monier-Williams, were Spinozists more than 2,000 years before the advent of Spinoza, and Darwinians many centuries before Darwin and Evolutionists many centuries before the doctrine of Evolution was accepted by scientists of the present age.

"The Hindu religion is the only one of the world's great faiths dedicated to the idea that the Cosmos itself undergoes an immense, indeed an infinite, number of deaths and rebirths. **It is the only religion in which the time scales correspond, to those of modern scientific cosmology.** Its cycles run from our ordinary day and night to a day and night of Brahma, 8.64 billion years long. Longer than the age of the Earth or the Sun and about half the time since the Big Bang. And there are much longer time scales still."

" The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation **Nataraja, the Dance King.** In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."

(source: **Cosmos - By Carl Sagan** Random House ISBN 0375508325 p. 213-214).

Fritjof Capra (1939 -) Austrian-born famous theoretical high-energy physicist and ecologist wrote:

"Modern physics has thus revealed that every subatomic particle not only performs an energy dance, but also **is** an energy dance; a pulsating process of creation and destruction. The **dance of Shiva is the dancing universe**, the ceaseless flow of energy going through an infinite variety of patterns that melt into one another''.For the modern physicists, then Shiva's dance is the dance of subatomic matter. As in Hindu mythology, it is a continual dance of creation and destruction involving the whole cosmos; the basis of all existence and of all natural phenomenon. Hundreds of years ago, Indian artists created visual images of dancing Shivas in a beautiful series of bronzes. In our times, physicists have used the most advanced technology to portray the patterns of the cosmic dance."

(source: **The Tao of Physics: An Exploration of the Parallels Between Modern Physics and Eastern Mysticism - By Fritjof Capra** p. 241-245).

Princeton University's **Paul Steinhardt** and Cambridge University's **Neil Turok**, have recently developed The Cyclical Model.

They have just fired their latest volley at that belief, **saying there could be a timeless cycle of expansion and contraction. It's an idea as old as Hinduism, updated for the 21st century. The theorists acknowledge that their cyclic concept draws upon religious and scientific ideas going back for millennia — echoing the "oscillating universe" model that was in vogue in the 1930s, as well as the Hindu belief that the universe has no beginning or end, but follows a cosmic cycle of creation and dissolution.**

(source: **Questioning the Big Bang - msnbcnews.com**). (For more on yugas, refer to **One Cosmic Day of Creator Brahma**).

Hinduism is the only religion that propounds the idea of life-cycles of the universe. It suggests that the universe undergoes an infinite number of deaths and rebirths. Hinduism, according to **Carl Sagan**, "... is the only religion in which the time scales correspond... to those of modern scientific cosmology. Its cycles run from our ordinary day and night to a day and night of the Brahma, 8.64 billion years long, longer than the age of the Earth or the Sun and about half the time since the Big Bang"

Long before **Aryabhata** (6th century) came up with this awesome achievement, apparently there was a mythological angle to this as well -- it becomes clear when one looks at the following translation of **Bhagavad Gita** (part VIII, lines 16 and 17),

"All the planets of the universe, from the most evolved to the most base, are places of suffering, where birth and death takes place. But for the soul that reaches my Kingdom, O son of Kunti, there is no more reincarnation. One day of Brahma is worth a thousand of the ages [yuga] known to humankind; as is each night."

Thus each *kalpa* is worth one day in the life of Brahma, the God of creation. In other words, the four ages of the *mahayuga* must be repeated a thousand times to make a "day ot Brahma", a unit of time that is the equivalent of 4.32 billion human years, doubling which one gets 8.64 billion years for a Brahma day and night. This was later theorized (possibly independently) by Aryabhata in the 6th century. The cyclic nature of this analysis suggests a universe that is expanding to be followed by contraction... a cosmos without end. This, according to modern physicists is not an impossibility.

(source: **Astronomy and Mathematics in Ancient India**).

Professor Arthur Holmes (1895-1965) geologist, professor at the University of Durham. He writes regarding the age of the earth in his great book, **The Age of Earth** (1913) as follows:

"Long before it became a scientific aspiration to estimate the age of the earth, many elaborate systems of the world chronology had been devised by the sages of antiquity. **The most remarkable of these occult time-scales is that of the ancient Hindus, whose astonishing concept of the Earth's duration has been traced back to Manusmriti, a sacred book."**

When the Hindu calculation of the present age of the arth and the expanding universe could make Professor Holmes so astonished, the precision with which the Hindu calculation regarding the age of the entire Universe was made would make any man spellbound.

(source: **Hinduism and Scientific Quest - By T. R. R. Iyengar** p. 20-21).

Swami Kriyananada (**J. Donald Walters**) World renowned as a singer, composer, and lecturer, founder of the Ananda Village is perhaps the most successful intentional community in the world writes:

"Hindu cosmography, for example born in hoary antiquity, strikes one in certain ways as surprisingly modern. India has never limited its conception of time to a few crowded millennia. Thousands of years ago India's sages computed the earth's age at a little over two billion years, our present era being what is called the seventh Manuvantra. This is a staggering claim. Consider how much scientific evidence has been needed in the West before men could even imagine so enormous a time scale."

(source: **Crises in Modern Thought: The Crises of Reason - By Swami Kriyananda** (**J. Donald Walters)** vol. 1 p - 94)

" Another point illustrating the advanced nature of the Vedic Aryan civilization is their conception of the universal time scale. The time factor is calculated as affecting various levels of the universe differently. For example, a day for the demigods is equal to six months for humans on planet earth. And a year is calculated as 360 human years, while 12,000 years of the gods is said to be but one blink of the eye of Maha Vishnu. For Lord Brahma, the highest of all the demigods, his day equals one thousand cycles of the combined four ages of Satya, Treta, Dvapara, and Kali-yugas. This amounts to *4.3 billion years,* at the end of which is his night when there is a partial annihilation of the universe, which includes the earth. After an equal number of years, Brahma's day begins again, and that which is destroyed is again created or revived.

For example in the **Bhagavad Gita, Lord Krishna** tells Arjuna:

" All the worlds from Brahma's world (the universe) are periodic. Arjuna.
They, those who know the day and night, know that the day of Brahma is a thousand yugas long and a night is a thousand yugas long.
From the unmanifested, all the manifest things spring forth on the arrival of the day (of Brahma). On the onset of night all these sink into what is called the unmanifested.
Partha, (Arjuna), this multitude of created things having existed over and over again and helplessly destroyed at the onset of night, spring forth on the onset of day."

All this sounds a little like the modern theory of an oscillating universe that begins with a big bang that all matter flying out until the outrushing matter comes to a halt and collapses back into a tiny speck, leading to another big bang, and so on. An entire cycle according to present-day cosmological ideas could take 10,000million to 20,000 million years. **It seems incredible that the ancient Hindus could hit upon this idea thousands of years ago.** Some biased scholars have tended to dismiss this agreement of the order of length of the cycle as a mere coincidence.

"Interestingly, modern science has estimated that the age of the earth is about 4 billion years. Scholars feel it is uncanny that the Vedic Aryans could have conceived of such a vast span of time over 3,500 years ago that would be similar to the same figure estimated by science today."

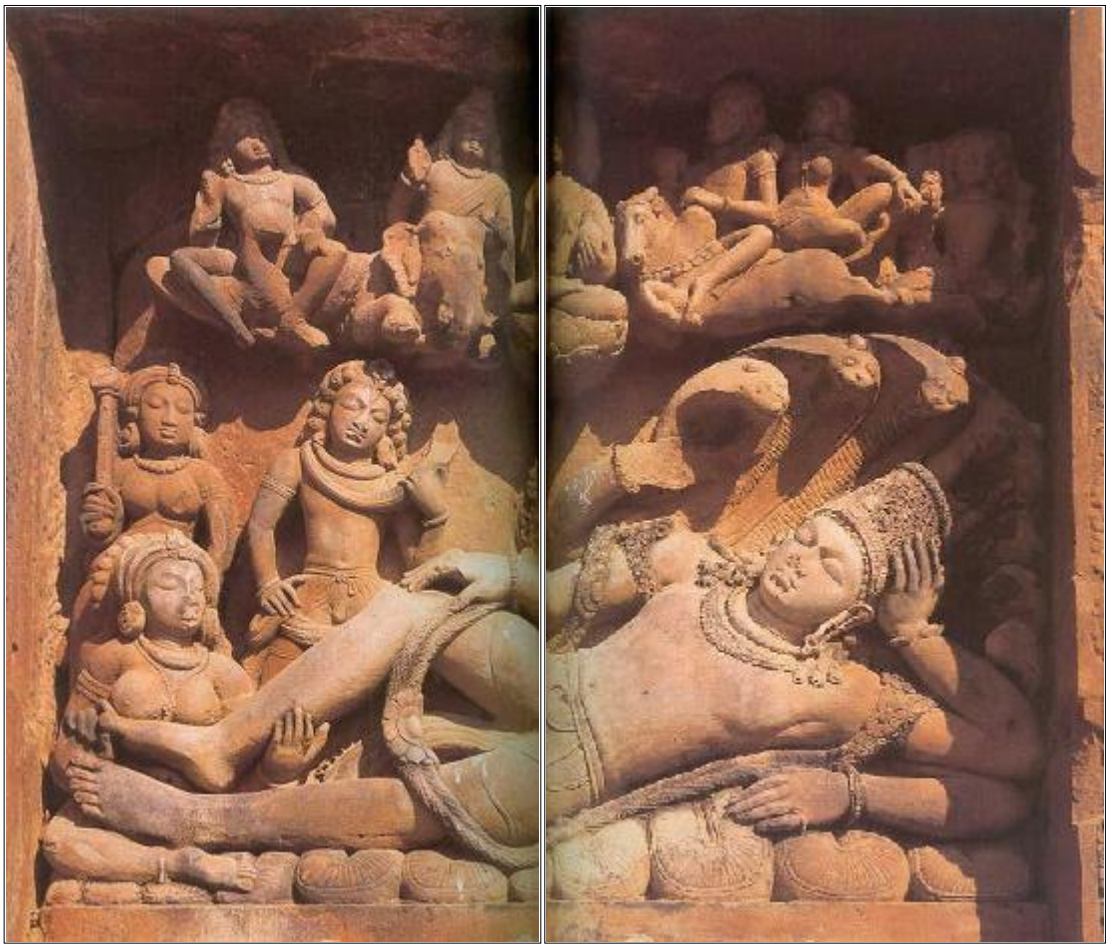
Zero to Infinity in Indian Mysticism



Ananta is Sanskrit for infinity.

It is equated with the Supreme Brahman — infinitely powerful and so infinitely free. It is bigger than any quantity that can be imagined; it is bigger than any finite number. Infinity is one of the fundamental axioms upon which contemporary mathematics is based.

Sanskrit grammar and interpretation in ancient India were closely linked to the handling of high value numbers. Studies relating to poetry and metrics initiated sastragnaas or scientists to both arithmetic and grammar. Grammarians were just as competent at calculations as professional mathematicians. Indian sastragnaas or scientists, philosophers, astronomers and cosmographers — in order to develop their arithmetical, metaphysical and cosmological speculations concerning ever higher numbers — became at once mathematicians, grammarians and poets. They gave their spoken counting system a truly mathematical structure which had the potential to lead directly to the discovery of the decimal place-value system.

Negative numbers had been rejected as solutions of problems in early times. They were eventually admitted in Hindu practical mathematics through problems involving money transactions, since the idea of receiving and owing money was a simple and obvious one — a negative number could be interpreted as a debt. Objection to negative numbers continued up to the early 19th century. Negative numbers are the mirror image of positive numbers. The invention of Cartesian geometry brought the X, Y co-ordinates and numbers came to be represented on a graph. Today, the series of negative natural numbers go up to infinity.

In Indian mysticism, the concept of infinity and zero are very closely linked. In the Isavasya Upanishad, there's a line: "Poornasya poornam aadaya poornameva visish-yate". To mathematically explain this, we have to assume that the first poornam represents infinity and the second, zero. In Sanskrit, poornam means both full and zero. Indian mathematicians knew perfectly well how to distinguish between these two notions which are mutually contradictory and which are the inverse of each other. They knew that division by zero gave them infinity.

The symbol is that of Ananta, the great Adisesha of infinity and eternity, which is always represented, coiled up in a horizontal figure of 8 just like the leminiscate.

***

The symbol for infinity is called the leminiscate. English mathematician John Wallis introduced this symbol for the first time in 1655. Hindu mythological iconography contains a similar symbol representing the same idea. **The symbol is that of Ananta, the great Adisesha of infinity and eternity, which is always represented, coiled up in a horizontal figure of 8 just like the leminiscate.**

Wallis was not aware that this symbol, in Indian mythology, referred to infi-nity and eternity. How did two diverse civilisations use the same symbol to denote infinity, without either of them realising its use by the other? In many cosmogenics the interlace symbolises the very nature of creation, energy and all existence. It evokes samsara or the eternal cycle of birth and rebirth. Eternal and infinite (ananta) are symbols of non-thought. Their value is entirely emotional. They act on our sensitivity. They invoke the peculiar sensation of the inability to imagine.

The concept of infinity has always remained an enigma. The Taittiriya Upanishad says: yatho vacho nivartante, apraapya manasa saha — where mind and speech return (being) unable to comprehend. In Indian cosmology, Ananta refers to the Adisesha or the great serpent on which Lord Vishnu reclines, taking His yoga nidra or anantasayanam. A Tamil azhwar paasuram (verse) says that Ananta acts as an umbrella when Vishnu walks, as a simhasana (throne) when He sits, as sandals when He stands, and as a bed when He reclines.

***

" **I am the nucleus of every creature, Arjuna; for without me nothing can exist, neither animate nor inanimate."**

- Bhagavad Gita 10.39

"Vishnu is the highest and most immediate of all the energies of Brahman, the embodied Brahman, formed of the whole of Brahman. On him this entire universe is woven and interwoven: from him is the world, and the world is in him; and he is the whole universe.

Vishnu, the Lord, consisting of what is perishable as well as what is imperishable, sustains everything, both spirit and matter, in the form of his ornaments and weapons. "

- Vishnu Purana 1.22

(source: **Zero to Infinity in Indian Mysticism - by T R Rajagopalan - timesofindia.com**).

The concept of time used by modern historical scientists, including archeologists, strikingly resembles the traditional Judeo-Christian concept. And it strikingly differs from that of the ancient Indians and Greeks It can nevertheless be safely said that the cosmological concepts of several of the most prominent Greek thinkers involved a cyclic or episodic time similar to that found in the **Puranic literature of India.**

For example, we find in **Hesiod's** (lived 8th century BC - Greek poet), Works and Days a series of ages (gold, silver, bronze, heroic, and iron) similar to the Indian yugas. He traces the history of the world through five stages, from the Golden Age to his own age of iron, which according to Hesiod was characterized by suffering and lawlessness. In both systems the quality of human life gets progressively worse with each passing age.

In **On Nature Empedocles** speaks of cosmic time cycles. In Plato's dialogues there are descriptions of revolving time and recurring catastrophes that destroy or nearly destroy human civilization. **Aristotle** said in many places in his works that the arts and sciences had been discovered many times in the past. In the teachings of Plato, Pythagoras, and Empedocles on transmigration of souls, the cyclical pattern is extended to individual psychophysical existence. According to **Voltaire**, " The Greeks, before the time of Pythagoras, traveled into India for instruction." (**The Philosophy of History**, p. 527).

Ancient literature like the Puranas and Vedas do contain allegory. In some passages, it is transparent. For instance, in Mahabharata, refers to an old lady who spins a fabric with 360 black threads and 360 white threads while a white horse stands by. The old lady is of course time. The black and white threads are night and day, and the white horse is the Sun. Incidentally, the origin of this symbolism is in the Vedic hymns of the Rig Veda. (1.64).

Unless we recognize the fact that the Vedic hymns and the Puranic story of Vedic origin are deliberate camouflage and allegory - a code, in fact - we cannot interpret them or understand their true meaning. To do otherwise would lead us to the same kind of *ridiculous conclusion* reached by British astronomer, Patrick Moore, who wrote, "The Vedic priest in India believed that the world to be supported upon twelve massive pillars, during the hours of darkness, the Sun passed underneath, somehow managing to thread its way between the pillars without hitting them. According to the Hindus, Earth stood on the back of four elephants, the elephants in turn rested upon the back of a huge tortoise, while the tortoise itself was supported by a serpent floating in a limitless ocean. One cannot help feeling sorry for the serpent.!"

In fact, after the chaff is removed, the Puranas have a kernel and exhibits what may be termed a reverse symbolism. The twelve pillars that support the world are evidently the twelve months of the year, and they are specifically mentioned in the Vedic hymns. The four elephants on which Earth rests are the Dikarin, the sentinels of the four directions. These in turn rest, in turn, on a tortoise and a serpent. The tortoise is Vishnu's Kurma or tortoise avatar and symbolizes the fact that the Earth is supported in space in its annual orbit around the Sun. Finally, the coiled serpent represents Earth's rotation. Vishnu, or the Sun, himself rests upon a coiled snake - the Ananta, or Adisesha, which represents the rotation of the Sun on its own axis.

The Expanding Egg

Sanskrit is a beautiful language. Each word in Sanskrit tells its meaning itself. Each word has been thought carefully. Sanskrit is not a product of evolution from an earlier language. It has been designed to be what it is. When Vedic sages coded the knowledge of particle physics and cosmology, they were well aware of the possibility that one day the code may be lost due to the decline of their civilization. Therefore they chose the words carefully to provide vital clues about the code. (Note: To learn more about Sanskrit refer to the chapter on Sanskrit)

Take the example, the expanding universe. The word for universe in Sanskrit is "Brahmanda", which is made by joining of words "Brahma" and "Anda". Brahma is derived from root "Brha" meaning to expand and "Anda" means egg. Thus " Brahmanda" means expanding egg.

A 9th century Hindu scripture, The **Mahapurana by Jinasena** claims the something as modern as the following: (translation from [5])

"Some foolish men declare that a Creator made the world. The doctrine that the world was created is ill-advised, and should be rejected. If God created the world, where was he before creation?... How could God have made the world without any raw material? If you say He made this first, and then the world, you are faced with an endless regression... Know that the world is uncreated, as time itself is, without beginning and end. And it is based on principles."

(source: **Astronomy and Mathematics in Ancient India**).

Concept of Trinity

In Hinduism, Brahma, Vishnu, and Mahesa form a trinity. Brahma is the creator of the universe, Vishnu the protector and Mahesa (Shiva) the destroyer. Brahma means expansion, and expansion of the universe takes place with the creation of matter and energy, thus Brahma is creator. Vishnu is the life-principle of the universe, who is not different from the universe, thus he is the protector. Mahesha or Mahadeva or Shiva is Vedic god Rudra representing radiation. As radiation is the result of annihilation of particles, he is related to destruction. But what is annihilated is born again as another set of particles, and this dance of creation and annihilation continues. This is the cosmic dance of Shiva, and therefore he is called Nataraja, Lord of the dancers.

Hundred thousandths of a second:

So also, the **Brihadaranyaka Upanishad** (2.4.7ff.) dwells at length on the following theme,

" As when a drum is beaten, one cannot distinguish its various particular notes, but they are included in the general note of the drum or in the general sound produced by different kinds of strokes…" Similarly,

the **Puranas** define the paramanu, which is on the order of a few hundred thousandths of a second.

Airplanes:

Among all the different sciences mentioned, it may be surprising to find a reference to airplanes. But actually, the mention of airplanes is found many times throughout Vedic literature, including the following verse from the **Yajur-Veda** describing the movement of such machines:

" O royal skilled engineer, construct sea-boats, propelled on water by our experts, and airplanes, moving and flying upward, after the clouds that reside in the mid-region, that fly as the boats move on the sea, that fly high over and below the watery clouds. Be thou, thereby, prosperous in this world created by the Omnipresent God, and flier in both air and lightening." **Yajur Veda**, 10.19). For more on airplanes refer to chapter on **Vimanas**).

Description of Tides:

The **Vishnu Purana** gives a quite an accurate description of tides:

"In all the oceans the water remains at all times the same in quantity and never increases or diminishes; but like the water in a cauldron, which in consequence of its combination with heat, expands, so the waters of the ocean swell with the increase of the Moon. The waters, although really neither more nor less, dilate or contract as the Moon increases or wanes in the light and dark fortnights….."

India has left a universal legacy determining for instance the dates of solstices, as noted by 18th century French astronomer **Jean-Sylvain Baily**, (1736–93) 18th century French astronomer and politician. His works on astronomy and on the history of science (notably the *Essai sur la théorie des satellites de Jupiter*) were distinguished both for scientific interest and literary elegance and earned him membership in the French Academy, the Academy of Sciences, and the Academy of Inscriptions. **Bailly** said:

"The movement of stars which was calculated by Hindus 4,500 years ago, does not differ even by a minute from the tables which we are using today." And he concludes: "The Hindu systems of astronomy are much more ancient than those of the Egyptians - even the Jews derived from the Hindus their knowledge."

Botany and Biology:

In addition to the physical sciences, very interesting and modern concepts of botany and biology, including the concepts of micro-organisms, are also encountered in these ancient texts, for example, in the **Mahabharata:**

“They (trees) drink water by their roots. They catch diseases of diverse kinds. Those diseases again are cured by different operations… as one can suck up water through a bent lotus stalk, trees also, with the aid of the wind, drink thorough their roots. They are susceptible to pleasure and pain, and grow when cut or chopped… they are not inanimate…

Vrihi and other so-called seeds of rice are all living organisms…again (men) …while walking about hither and thither kill innumerable creatures hidden in the ground by trampling on them; and even men of wisdom and enlightenment destroy animal life, even while sleeping or in repose themselves… the Earth and the air all swarm with living organisms.”

Electricity

The ancient text of **Agastya Samhita** describes the method of making electric battery, and that water can be split into oxygen and hydrogen.

Rediscovering Vedic Science:

According to **Romain Rolland,** (1866-1944) French Nobel laureate, professor of the history of music at the Sorbonne and thinker. He authored a book on the " **Life of Ramakrishna**".

" Religious faith in the case of the Hindus has never been allowed to run counter to scientific laws, moreover the former is never made a condition for the knowledge they teach, but there are always scrupulously careful to take into consideration the possibility that by reason both the agnostic and atheist may attain truth in their own way. Such tolerance may be surprising to religious believers in the West, but it is an integral part of Vedantic belief."

Not only do the Vedas contain a high level of philosophical and spiritual knowledge, but they also hold information on material science. The Vedic literature includes such works as the Ayur-Veda, the original science of wholistic medicine as taught by Lord Dhanvantari; Dhanur-veda, the military science as taught by Bhrigu; Gandharva-veda, which is on the arts of music, dance, drama, etc.. by Bharata Muni, Artha-sastram, the science of government, and the Manu-samhita, the Vedic lawbook.

There is also the **Sulbha sutras,** which contains the Vedic system of mathematics. These sutras are a supplement of the Kalpasustras, which shows the earliest forms of algebra. The Vedic form of mathematics is much more advanced than that found in early Greek, Babylonian, Egyptian, or Chinese civilizations. In fact, the geometrical formula known as the Pythagorean theorem can be traced to the Baudhayana, the earliest form of the Shulba Sustras prior to the 8th century B. C. It was this Indian system that originated the decimal system of tens, hundreds, etc., and the procedure of carrying the remainder of one column over to the next. It also provided a means of dividing fractions and the use of equations and letters to signify unknown factors. These Indian numbers were used in Arabia after 700 AD. and then spread to Europe where they were called the Arabic numerals. It is only because Europe changed from Roman numerals to these Arabic numerals that originated in India that many of the developments in Europe in the fields of science and math were able to take place. (source: **The Secret Teachings of the Vedas - By Stephen Knapp** p. 25) Stephen Knapp a Vedic scholar, has also been to India several times and traveled extensively throughout the country.

Ancient Inscriptions:

A German linguist **Kurt Schildmann,** a native of Heiderhof, says his study of ancient inscriptions discovered in the caves of Peru and the United States shows that they are similar to ancient Indus Valley Sanskrit, suggesting that seafarers from India may have reached the Americas thousands of years ago. He describes the Indus civilization as a forerunner of other world civilizations. While doing "epigraphic research" on the Crespi collection of Cuenca, Peru, Schildmann discovered Sanskrit in inscriptions found in Peru and in the Burrows cave in southern Illinois. Russel Burrows accidentally discovered the cave, a retired colonel of the U.S. armed forces, on April 2, 1982.

Schildmann had noticed the similarity between the language of the inscriptions in Peru and the Burrows' cave after having deciphered the inscriptions in the Indus Valley. He also deciphered an icon found in the Burrows' cave, on which he said many details depicted the "wisdom of the Indus culture". Schildmann was struck by the drawing of an elephant on top of a "Pyramid", with three lines of a legend. He deciphered the legend as "PIL", that was 6000 years old ancient Sanskrit word for an elephant. He concluded, the ancient Indian engraved texts on gold plates and hid them to honor the gods and address the succeeding generations.
(source: **http://members.aol.com/coorg777/india9.html**)

Conclusion:

Ella Wheeler Wilcox, (1850-1919), famous American poet and journalist. **Wilcox** poems have been collected in volumes such as **Poems of Pleasure** (1897) and **Maurine and Other Poems** (1888) states:

" India - the land of Vedas, the remarkable works contains not only religious ideas for a perfect life, but also facts which science has proved true. Electricity, radium, electronics, airship, all are known to the seers who founded the Vedas."

Legend of Vikramaditya:

Ujjain is a city in the state of Madhya Pradhesh. City of Ujjain (one who conquers with pride) was once ruled by the legendary king Vikramaditya.

King Vikramaditya was known for his valor and impeccable justice. His court was adorned by nine famous courtiers called Navaratna (nine gems), who were great scholars in different fields of knowledge. (Kalidasa became the most brilliant of the `nine gems' at the court of Vikramaditya of Ujjain.) Despite extensive effort, Vikramaditya can not be identified with any known historical king. Ujjain is famous for the temple of *Mahakala.* There is no temple in India, where Mahakala is worshipped.

Is there a meaning behind the legend of Vikramaditya and the worship of Mahakala? The real meaning is revealed by considering the meaning of these words. Vikramaditya is made by joining prefix "Vi" to words "Krama" and "Aditya". "Krama" means order, "Aditya" means sun and prefix "Vi" means deviation. Therefore, etymologically Vikramaditya means the change in the course of the sun. What is significant is Ujjain is located on the tropic of cancer. Thus, sun comes to Ujjain during its northward journey, changes its course, and starts its southward journey. Vikramaditya is sun itself changing its journey at Ujjain. Nine gems in the court of Vikramaditya are nine planets of Solar system.

Mahakala is made by joining words, Maha, great, and Kala, time. *Thus, Mahakala means Time the great.* Ujjain was known as Ujjayini in ancient times and was the capital of ancient empire Avanti. Ujjayini was the center of Indian civilization for several centuries and famous for its astronomical observatory. Ujjayini was equivalent of Greenwich, from where time was synchronized all over India and even abroad. New day commenced when it was six a.m. in Ujjayini. When it is six in the morning in Ujjain, it is midnight in Britain. It is from this ancient system of changing date in the morning in Ujjain that changing date at midnight has been arrived at.

As time was synchronized in a large part of the world according to Ujjayini standard time, it was only natural to designate the god of Ujjain as god time himself, and therefore the name **Mahakala, Time the great.**

The rise and fall of Hinduism is connected to the rise and fall of science. The spirit of Hinduism is logic and skepticism. Hinduism was raised on the foundation of science and freedom of inquiry. There is not a single incident of a scientist being persecuted by religious authorities in India as was the case in the West. Hinduism has never indulged in suffocation of scientific thoughts, instead it has incorporated science in religion.

Articles

Indian Idealist Metaphysics - By Paul Brunton

The ancient Hindus took their philosophic statements in the nature of a revelation from on high, as issuing forth from their seers as a result of a personal self-experience in the spiritual domain. Our Western scientists have no such experience, and if they are approaching similar conclusions, it is because they are working their way from the profoundest depths of this material world up to its farthest frontier where the ions elude them and vanish into mystery……the wisest men of the ancient East and the modern West…are beginning to arrive at precisely the same conclusions.

This **Indian doctrine declares human cognition of the entire manifold universe to be illusionary in character.** The vast multitude of tangible objects and tangible creatures which we so plainly witness around us were said to be the product of the constructive imagination of the One Hidden Self. Man and

his material environments were but finite dreams passing through the mind of the Infinite Dreamer. Consequently all that we know of the world is nothing more or less than a series of idea held in our consciousness. Thus we arrive at a completely idealistic metaphysics which, because of its very nature, must apparently remain for ever purely speculative and beyond the scope of the finest instruments which can be devised to prove or disprove. **Nevertheless the strangeness and unfamiliarity of the doctrine fascinated the Indian mind to an amazing extent.** That this early foreshadowing of modern idealistic philosophy was not merely a worthless superstition is evidenced by the fact that some brilliant minds of the West have been equally fascinated and perplexed.

This doctrine, curiously enough, hardly rears its head in The Vedas but appears with strong bold outlines in the post-Vedic books such as The **Yoga Vasishta**, in the Buddhist philosophical scriptures, and in the numerous writings of **Shankara, the father of the grandest Hindu philosophical revival of ancient times.**

The earliest Vedic mention is in the **Svetasvarara Upanishad**, where the following lines occur:

“Now one should know that Nature is illusion,
And that the Mighty Lord is the illusion-maker.”

The **Aitareya Upanishad** says:

“Creatures, plants, horses, cows, men, elephants, whatsoever breathes, whether moving or flying and, in addition, whatsoever is immovable – all this is led by mind and is supported on mind. Mind is the final reality.”

The basis of this doctrine is that things cannot exist independently of the perceiver's mind, that the entire phenomenal world of experience is a creation within the perceiving mind, as is a dream, and hence, from the highest metaphysical standpoint, an idea or mental appearance. The author of The **Yoga Vasishta** presents the teaching in another way, asserting that the world is relative to the mind and must therefore be mental in character if the possibility of its being known is to be achieved.

"The subject cannot be aware of the object unless they are related. And there cannot exist any relation between two heterogeneous things. Relation implies identity, for it cannot be possible between two utterly different objects. The cognition of the object by the subject therefore establishes their substantial identity. If they were utterly different from each other, knowledge would not have been possible; the subject would ever remain unaware of the object as a stone of the taste of sugar." "The whole world is merely ideal. It does not exist except in thought. It arises and exists in the mind. The whole universe is the expansion of the mind. It is a huge dream arisen within the mind. It is imagination alone that has assumed the forms of time, space and movement."

"The reality of things consists in their being thought. The objective world is potentially inherent in the subject, as seeds of a lotus exist in the flower, as oil in sesamum seeds. All objects are related to the subject from which they proceed. They appear to be different from it, but are not so in reality. The world experience is nothing in reality but a dream."

The author of Yoga Vasishta realizes that such a solipsism is difficult to maintain and so lends his support to the Upanishadic assertion that "the Mighty Lord", God, is the true illusion-maker, and that the idea of the created world is put into our minds by the Divine One.

Ralph Waldo Emerson, who wrote the following verse:

“Illusion works impenetrable,
Weaving webs innumerable,
Her gay pictures never fail,
Crowds each other, veil on veil,
Charmer who will be believed
By man who thirsts to be deceived.”

Bishop George Berkeley (1865-1753) Famous Irishman and bishop of the Church of England and a prominent empiricist philosopher, in **The Principle of Human Knowledge**, proceeds to claim that the universal creation being mental, must have been brought into being within the mind of a Cosmic Thinker, thus strangely **echoing a passage already quoted from the Indian Yoga Vasishta.**

Arthur Schopenhauer, who in his turn developed the same theme in the vigorous volumes of **The World as Will and Idea**. He says:

“He to whom men and all things have not at times appeared as mere phantoms of illusions has no capacity for philosophy…”

“The world is my idea – this is a truth which holds good for everything that lives and knows, though man alone can bring it into reflective and abstract consciousness…”

Coming to more recent times, we find echoes of the familiar **Hindu comparisons of the dream and waking worlds** in the writings of **F. H. Bradley, E. Douglas Fawcett, Dr. F.C. Schiller**, and **Lord Bertrand Russell**.

One of the greatest 19th century scientists was **Thomas Henry Huxley** (1825-1895) physiologist,

anatomist, anthropologist, agnostic, educator, distinguished zoologist and advocate of Darwinism, the following quotations from his work, **Collected Essays** vol. VI, serve to show **how much ancient Indian philosophy anticipated modern Western thought.**

"To sum up. If the materialist affirms that the universe and all its phenomena are resolvable into matter and motion, Berkeley replied, 'True; but what you call matter and motion are known to us only as forms of consciousness; their being is to be conceived or known; and the existence of a state of consciousness, apart from a thinking mind, is a contradiction in terms. I conceive that this reasoning is irrefragable.

"…the simple ideas we receive from sensation and reflection are the boundaries of our thoughts, beyond which the mind, whatever efforts it would make, is not able to advance one jot."

Sir Arthur Eddington (1882-1944) important astrophysicists of his time, wrote in **Time, Space and Gravitation**:

"All through the physical world runs that unknown content, which must surely be the stuff our consciousness. Here is a hint of aspects deep within the world of physics, and yet unattainable by the methods of physics. And, moreover, we have found that where science has progressed the furthest, the mind has but regained from Nature, that which the mind has put into Nature.

Sir James Berkeley writes:

"The Universe can be best pictured as consisting of pure thought, the thought of what, for want of a wider world, we must describe as a mathematical thinker."

Hyman Levy (1889-1975) Mathematician, philosopher and humanist, in **The Universe of Science**, declares that "the underlying reality of the universe is never perceived. A mere appearance is experienced so that what the mind pictures is not reality but its superficial structure."

While Western psychologists carry out most of their experiments upon other persons, the **proponents and exponents of Indian system are expected, and do, carry out their experiments upon themselves first and foremost.** And because man is a key to the universe, because the mind of man is somehow linked with the Mind behind creation, the way to understanding of the universe must finally embrace the thorough understanding of the mystery behind man.

Back to the Vedas: Gateway to Peace
By Narayani Ganesh
http://www.timesofindia.com/today/15edit5.htm

' WHY do birds prefer to stay on treetops during the night? Why aren't they seen on the ground after nightfall? According to ancient Hindu scriptures, birds possess special and sensitive powers of perception. At night, they `see' the surface of the earth in flames. These flames reflect the intense energy trapped by the planet as a result of absorbing heat from the sun's rays all day long.

The Vedas are replete with such tidbits, encapsulating a heady mix of science, logic, deduction and belief, claim Vedic scholars. Here's another piece of information that is expressed in beautiful verse: What can one do when faced with a dry season, when rains are eagerly awaited; when farmers look skywards, pleading with an unseen Power, praying for a good harvest? Get to the bottom of a dried up water body. Plough your fields with the rich natural fertiliser that can be easily accessed from these water beds. The soil from here is saturated with the dung and dirt from animals which frequented the place; with compost from leaves, twigs and natural wastes that have sunk and have been assimilated into this soil.

Therefore, Vedic tips on how to deal with real-life situations may not all be outdated. Modern environmentalists and ecologists sometimes advocate what has already been talked about in Vedic scriptures. though couched in sophisticated technical and scientific terms. The Vedas are peppered with numerous tips on how to achieve welfare for all by working in conjunction with nature. `Vedathil illadhadhu logathil illai' -- You can discover nothing on this earth that is not already present in the Vedas -- so goes a popular *Tamil* saying which is seconded by Vedic scholars who have studied these scriptures in great depth and detail.

Vedic pundits aver that slokas or verses are composed and structured in a manner that their correct rendition can evoke rains in times of drought. Conversely, there are special slokas which when chanted with precision and in the right spirit can actually make the rains cease when there is too much of it. There's more. Slokas like the aprathiratha sooktam mantra chanted repeatedly right at the battle front, can actually will the enemy to retreat, never to return, claim Vedic pundits.

Waxing eloquent on the power of Vedic chanting for universal welfare, a group of 12 eminent Vedic pundits have congregated at the Sri Krishna temple in the Capital from different parts of the country. They are participating in a Sampoorna Yajurveda Ghana Parayanam, an event that has been organised for the first time in Delhi. The Parayanam is a 29-day, eight-hours-a-day rendition of the verses of the Yajur Veda in the Ghana style, which is the most difficult of the five traditional methods of recitation.

Handed down from generation to generation since the Vedic age through the guru-shishya parampara, committing to memory and reciting these verses comes from years of arduous practice. The five methods of recitation are Mula or Samhita, Pada, Krama, Jata and Ghana. Ghana, the last one, requires rendition in a complicated combination set to a rhythmic tone and is believed to possess high potency when chanted by Ghanapatins. The tempo goes like this: For Ghana, it is 1-2, 2-1, 1-2-3, 3-2-1. The five methods are progressive in scale of difficulty. For example, the tempo for Jata is: 1-2, 2-1, 1-2 following the pattern of a braid, as the name suggests. Also important is the timbre and tone. The number of students opting for the study of the Vedas up to the Ghana stage is dwindling. Hence this form of Vedic recitation is rare.

Sri S Krishnamurthy Ghanapatigal from Sathanur, Tamilnadu, says: ``The Vedas inform humankind about what is needed and what is not. They convey what is not observable with the eyes or the mind. They address not just brahmins and kings; they are equally applicable to the army, to students, to agriculturists -- in short, entire humankind. It is structured for the well-being of entire humanity, of all life. If they spell out ideas to improve agriculture, they also talk about behavioural psychology".

``At the UN Millennium Summit, we are happy that religious leaders from different faiths and regions converged to talk about peaceful conflict resolution. In fact, the Vedas have a formula for conflict resolution, too. The aikamathya sooktam is a mantra in verse which when recited wherever there is conflict, can actually create an atmosphere conducive for peaceful and lasting resolution".

(The scholars can be contacted at the Alakananda Dharmik Samaj, Sri Balavenugopalakrishna Temple till 17 September, R-2, Institutional Area, Alaknanda, New Delhi 110 019, Phone 6282730).

The Different Routes of Modern Science and Indian Ancient Science (excerpts)
Indian Ancient Science – BARC Newsletter
http://www.barc.ernet.in/webpages/letter/newsletter_year_2000/

Mathematics

The science of mathematics starts from counting of numbers. The present versatile system of decimal numbers needed two fundamental discoveries: the *concept of zero* and the *principle of place value in powers of the radix*. And both of these were discovered in India. The place value system made the sexagesimal numbers of Babylonians obsolete (its only remains are 1 hour=60 minutes, and 1 minute=60 seconds). And now the Roman numbers are also getting gradually replaced by Arabic numerals on the place value pattern. The present numerals are called Arabic not because they were invented in Arab but because Indian things had to go via Arabian countries to Europe.

Similar to these two concepts, there is a very fundamental concept of infinity. In modern mathematics, infinity has been taken as an infinite extension of large numbers. In India, the concept of infinity was given deep attention in ancient times. It was found that infinity is not just a number but it is as tangible as any reality of general experience, and many of its properties were enumerated. In mathematical language, it can be defined as a universal set which is a proper subset of its every proper subset. Modern mathematics may enrich itself by working out the implications of such a definition of infinity.

Phonetics

Very extensive work was done in the science of phonetics in ancient India, and finer shades of sounds produced in the pronunciation were standardized. The entire Panini's *Shiksha* and most of his grammar is phonetics only. However, in the West, the science of phonetics came up only recently. The application of sound recording systems and techniques of observing vocal organs in action through X-rays, have given a good deal of clarity to its concepts. The Indian ancient phonetics can benefit significantly if it employs some modern concepts and terminology. For example, many ancient Acharyas struggle with words to define what is *Udatta* vowel, and *Un-Udatta* vowel. Their round- about definitions do not accurately communicate what they intend. Following modern terminology, we can define simply that *Udatta* is high frequency vowel sound and *Un-Udatta* is low frequency vowel sound.

Similarly in *Shastriya Sangeet*, the relations of *Saptak* and the change of sound from *sa* to *ni* can be more clearly explained as ascending frequency in geometric progression; and the various *Tals* can be described as chrono-patterns of sound pulses with partial symmetry. Such applications of modern scientific terminology, instead of the vague and round-about old descriptions, can simplify the comprehension of this valuable Indian ancient art which also has scientific foundations.

The unification of Indian ancient science of Phonetics with modern information theory and the binary computer logic has led this author to evolve the *Phonetic Number System* of radix 128 with mono-sound numerals and word-like numbers. Based on this system, a merely six digit self-checking Phonetic Code, pronounced though six soft sound characters, can identify about 6000 crore population, uniquely and perpetually.

Metaphysics and Philosophy

In modern times, the subject of philosophy is considered to be speculation into the unseen and mostly unknown or unknowable. It has very little concern with tangible things of relevance. But in ancient India,

philosophy (*Darshan*) was treated at par with science. Its study was supposed to give clear vision of life and nature as a whole, leading to a more coherent theoretical knowledge and harmonious practical living. The culmination of Indian philosophy is said to be Vedanta. Its sources are *Brahma Sutras*, *Bhagavad Gita*, *Upanishads*, and the voluminous book *Yoga Vasishtha*. Vedanta claims to have reached such a high state of unification of nature beyond which no further unification is possible.

In physics, unified theories, with tremendous efforts, have got only partial success in unifying some forces of nature. In this background, it may be asked if the ideal of Vedanta, the highest state of unification, is ever achievable. Such an objection can be circumvented by redefining Vedanta, that it is *Asymptote to Knowledge*. It describes that most fundamental concept towards which all the basic concepts of various branches of knowledge approach and meet at infinity. But that state of unification can be intuitively grasped in a finite life-span. It is like the asymptote to an open curve which is tangent to the curve at infinity but remains at a finite distance from the origin.

Much of the confusion in Vedanta, employing mostly contradictory statements, can be removed by developing it as an axiomatic theory starting from a single postulate. In respect of its relation with the empirical world, Vedanta is supported by *Sankhya*. It represents the practical limit of unification in terms of two basic elements: *Consciousness* (*Chetan*) and *Inertness* (*Jada*). These two concepts make it possible to design binary computerizable models of basic physical or metaphysical entities.

The interrelationship of these concepts has a good deal of analogy with the modern field theory. There is one basic abstract field of the ultimate entity which has two states, consciousness and inertness. These different states behave as two distinguishable entities. Their interplay has dispersed as well as localized aspect. Its dispersed aspect is mind, and the localized aspect is body-consciousness. The system is incessantly dynamic and is represented by repetitions of many processes. Analogous to this is the electromagnetic field which has two kinds of forces: electrical and magnetic. Its dispersed aspect is undulations of wave and localized aspect is photon which is always dynamic. Now arises a question, whether photons have consciousness? However, experiments done in the University of Denver, Colorado, to test this have remained inconclusive.

Life Sciences

According to the Indian ancient science, in the field of consciousness, there are many levels. Every material system, whether apparently living or non-living, is at some level of consciousness. The so- called inanimate matter occupies the lowest level at which there is a very small zero-point consciousness. The direction of evolution is towards higher and higher freedom. Its manifestation starts from freedom of movement, and culminates in the freedom of selection of one's own destiny.

Medical Sciences

Modern traditional medical science studies the physical and chemical patterns in a large number of people and makes a broad standard for healthy people. For example, after the measurement of the blood pressure of large number of people, a broad standard can be made. Ailments are associated with departure from these standards, and they can be corrected by appropriate physical and/or chemical means.

According to Indian medical science, called Ayurveda, life is a dynamical system in which in the healthy state, there is a harmony of many chemical and physical processes. The number of these processes have been broadly classified into three called *Dosh*: *Kaph*, *Pitta*, and *Vata*. Every food and eatable can be classified into many categories depending upon which Dosh or combination of Doshas, it decreases or increases or maintains in balance. The symptoms of disease indicate which of the Doshas have increased or decreased. The administration of the compensating remedy gives the cure. Ayurveda claims to have discovered the basic principles of many other systems of treatment like allopathy, homeopathy, acupuncture, etc. But these systems were not developed to higher levels in ancient India.

The surgery described by Dhanvantari and Sushrut has become obsolete with the advent of sophisticated tools and equipment in modern surgery. But the basic principles of Ayurveda hold. They are like phenomenological theory of matter. For example, the mechanical and thermal properties like elasticity, density, specific heat, etc of gold are determined by the atomic structure of gold atoms. But a goldsmith need not go into all these details. For him the bulk properties are sufficient to make a beautiful ornament. In the same way, simplifying all the chemical process of the body in terms of increase, decrease, or balance of three Doshas suffices to restore health in a large number of cases. That is why the medical formulations of *Charak Samhita* still have relevance. But, in the light of changed environment, many of the ancient formulations need verification and standardization. However, Ayurvedic thumb rules for longevity and good health have withstood the test of time.

Cosmology

Modern theoretical cosmology begins with the application of general relativity to the universe as a whole by Einstein in 1917. The experimental cosmology begins with observation of red shift, proportional to distance, in the light of galaxies by Hubble in 1929. The red shift has been explained in terms of Doppler's shift of receding galaxies. This explanation means that the universe is expanding isotropically. It implies that if we go backwards in time, then the universe was smaller, and at a certain time, the entire mass energy was concentrated at a point. G. Gamow in 1946 postulated that the universe was not only smaller but also hotter in the past. In the point like state, the temperature was infinite. With a sudden big bang, the energy was thrown out which subsequently led to the formation of stars and galaxies. What was prior to big bang, cannot be answered by physics.

To eliminate the big bang singularity, a steady state cosmology was put forward by Bondi and Gold in 1948, in which it was postulated that the universe has been like this all the time. But to maintain a constant density of matter in spite of the expansion, creation of matter as hydrogen atom into free space was postulated. A comprehensive C-field cosmology and a new theory of gravitation was developed by Fred Hoyle and J. V. Narlikar.

However, the steady state cosmology, though intellectually satisfying, did not satisfactorily explain the cosmic background radiation, predicted earlier by G. Gamow, and experimentally detected by Penzias and Wilson in 1965. Since then the steady state cosmology has gone into oblivion. The present standard cosmology is that of the hot big bang. It explains three main cosmological observations: receding galaxies, thermal background radiation, and nucleosynthesis of light elements. But suffers from the problem of singularity and many other inconsistencies.

Turning to the Indian ancient view on this subject*, Mahabharat* says (Adi-Parva, 1st Chapter, 40-41): "This beginningless and endless time cycle *(Kal-Chakra*) moves externally like a perpetual flow in which beings take birth and die but there is never birth or death for this. The creation of gods is briefly indicated as thirty-three thousand, thirty-three hundred, and thirty- three."

Again in *Mahabharat* itself, Bhagwad Gita describes a cyclic universe as (VIII-18): "All embodied beings emanate from the Unmanifest at the commencement of Brahma's day; at the commencement of his night, they merge in the same subtle body of Brahma, known as the Unmanifest."

These and many other statements imply that the Indian ancient view is that the universe is eternal as well as of finite age. The inference depends upon the point of view of the observer. If one observes the universe as a contemporary observer, then on the whole the universe is found to be like this only. But, if it is explored archaeologically, then it will be found to have a beginning at a point of time. Hence a unified cosmology, integrating the essential elements of steady state and big bang cosmologies, conforms better with the Indian view.

In ancient India, this integration was achieved by the concept two extra time-like dimensions. Thus the universe is a six dimensional continuum of three space, one time, and two time-like dimensions. This concept gives a logical symbol for the universe: that is two interpenetrating triangles. This figure has been verbally indicated in the above statement of *Mahabharat* that the creation is briefly indicated as thirty-three thousand, thirty-three hundred, thirty-three. Six times repetitions of three is the indirect technique of communication of Ved Vyas. The 5th and 6th dimensions have been called *Chittakash* and *Chidakash* in *Yogavasishtha*. The six dimensional universe represents higher symmetry in the two basic extensions of nature, space and time.

Physics

The Indian ancient view classifies the visible world into five elements: space, light or fire, and three states of matter (solid, liquid, and gas) represented by earth, water, and air. They are related to five senses and their five subtle forms called *Tanmatra* through a process called *Panchikaran*. Everything, irrespective of size and shape, has besides its physical body, a subtle body which is a bundle of abstract qualities and exists conceptually in the non-physical space called *Chittakash*. The subtle body in the *Chittakash* behaves like mind, and is free from many limitations of the physical space.

It is obvious to see many conceptual analogies in the two views of matter at the fundamental level. In quantum mechanics, the dynamics of a system is conceived in the abstract Hilbert space; in ancient India, it was conceived in the abstract *Chittakash.* Near the limit of fineness, inferences of the horizontal route (space-light-matter) and the vertical route (time-sound-mind) come very close to each other. Some experimental investigation into the interrelation of consciousness, mind, matter and light have been reported from Princeton University, Standford University (California), and University of Denver (Colorado).

Chemistry

The science of chemistry in India has been a great sufferer due to the destruction of the Indian ancient literature. The long heavy iron pillar near the Kutub Minar at Delhi, standing in the sunshine and rain for more than about 2000 years without getting rusted, is ample proof that chemistry and metallurgy were sufficiently advanced in ancient India. Similarly, the long and heavy statue of Buddha in the lying pose at Kushinagar near Gorakhpur, which still shines like gold in spite of remaining buried for many centuries, is a challenge to metallurgy. Similarly, many other monuments also hide great chemical secrets.

Much of the chemical knowledge is empirical rather then deductive. This is true of modern chemistry as well. Hence simply knowing a few basic principles is not enough to arrive at the process of producing the desired material. The actual method has to be either rediscovered, or may possibly be found in some hidden literature after extensive and minute survey.

Military Science

The biggest loss of ancient skills have been in the field of military science. The main reason for this loss was perhaps the *Mahabharat* war. There was so much loss of life in that war that people became allergic to things related to war. A large number of warriors were killed. Those who survived were demoralized. Almost the entire war skills, which needed regular practice and refinement, died out. Now we can get only very superficial descriptions of those weapons from *Ramayan* and *Mahabharat* which are basically literary works, and not scientific.

The weapons of ancient India can be put up into three broad categories. First is that of conventional weapons like swords, spears, bows and arrows, etc. Being simple, they survive to this age. The second were explosive based, delivered either through some projective system, or other means. They were called *Agniban.* The third were super weapons called *Brahmastra*, etc. *Brahmastra* was a sure hit weapon from which there was no escape. It had to be used in the rarest of the rare circumstances.

Brahma means creator of the universe. In the context of the war, it indicates a weapon designed through the knowledge of the creation of matter. According to *Yogashashtra* and some other writings, every particle of a block of matter is being incessantly created and dissolved. In between two occasions of creation, it remains momentarily in Chittakash in its subtle form. There its properties are more mind-like. Hence it can be acted upon by the mind of an aspirant provided it can go to that subtle state at which the matter particle has reached.

In any lump of inorganic matter, the creation and annihilation of particles is random. By mental command, they can be brought into coherence. The coherent lump can behave as a single quantum particle. With the coherence, all the constituent particles of the lump are created or annihilated simultaneously. They go to the Chittakash, and appear in the physical space, collectively. When they are in the mental form in Chittakash, they can be induced to have their next appearance in the physical space at the desired location, may be the body of an enemy. This travelling of the lump of matter is through non-physical space, so physical obstructions of walls and bunkers or long distances are no protection against this weapon.

Quantum teleportation recently reported by some physicists, is the nearest analogue to the working of *Brahmastra*. It is speculated by physicists that perhaps quantum teleportation may be the ultimate process in the control of dynamics of matter. However, so far the technique of quantum teleportation has reached the level of transmitting only states of photon. But even that has generated much excitement among physicists and has become a hot topic of research. It is anticipated to have applications in developing extremely fast computers, and communication of secured information making eaves dropping almost impossible.

In ancient India, some similar process seems to have been realised to the level of transmitting bigger masses through the phenomena of matter coherence. Just as coherence of electromagnetic waves produces very powerful laser light with unusual properties, in the same way coherence of matter can produce objects with unusual properties.

Did you Know?

How the Grand Canyon became Indian?

Clarence Edward Dutton, a captain of ordinance in the U.S. army, geologist-poet and a Yale man, Dutton was deeply influenced by the philosophies of India. It was Dutton who likened the snow-covered peaks of the canyon walls to the Hindu gods, Brahma, Vishnu and Shiva. There is even a Hindu amphitheatre which Dutton likened to the "profusion and richness which suggests an Oriental character." Dutton found the Shiva Temple the grandest of all, and most majestic in aspect....All round it are side gorges sunk to a depth nearly as profound as that of the main channel...In such a stupendous scene of wreck, it seemed as if the fabled 'destroyer' might find an abode not wholly uncongenial."

For Geologist Clarence Dutton, the harsh landscape of the Grand Canyon would come to be regarded as "the coliseums, temples, and statuary of an inspired nature," a place of divine presence. It's thanks largely to Dutton that so many of the Canyon's features are named after figures in world religion)

According to Professor Stephen J. Payne, professor of history at the Arizona State University and author of the book - **How the Canyon Became Grand** - there is " no explicit explanation for naming the peaks after Hindu gods, only implicit." He likens the naming the peaks to the historical fact of the time. "When there was a growing awareness and respect in the West, particularly Europe, towards Indian philosophies, not economies of the past."

India's Big Old Dam?

THE GRAND ANICUT, KALLANAI, is the Oldest Dam in the World that is still in use today. It is located on the Cauvery River, 24 km from Tiruchirapalli, Tamil Nadu.

This masonry dam was built in the 2nd Century by Chola King Karikalan and is 1,082 feet long with a maximum height of 18 feet and is 40-60 feet wide. It was remodeled and fitted with sluice gates in 1899-1902. For nearly two millennia it has irrigated a million acres of land. India had more land under irrigation in ancient times than it does today.

Sound (nada) is believed to be the heart of the process of creation. In Hinduism, the sacred syllable Om embodies the essence of the universe - it is the "hum" of the atoms and the music of the spheres - and sound in general represents the primal energy that holds the material world together. Nada Brahma is a primal word in Indian spirituality, a primal word that also refers to India's great classical music. Since the most ancient times, music in India has been practiced as a spiritual science and art, a means to enlightenment. Sangita, which originally meant drama, music and dance, was closely associated with religion and philosophy. At first it was inextricably interwoven with the ritualistic and devotional side of religious life. The recital and chant of mantras has been an essential element of vedic ritual throughout the centuries. According to Indian philosophy, the ultimate goal of human existence is moksha, liberation of the atman from the life-cycle, or spiritual enlightenment; and nadopasana (literally, the worship of sound) is taught as an important means for teaching this goal. The highest musical experience is ananda, the “divine bliss.” This devotional approach to music is a significant feature of Indian culture.

The origin of Indian music is enshrined in beautiful tales and legends. It is common Hindu practice to attribute the beginning of a branch of learning to a divine origin through the agency of a rishi. Shiva, also called Nataraja, is supposed to be the creator of Sangita, and his mystic dance symbolizes the rhythmic motion of the universe. Curt Sachs (1881-1959) who played the leading role among early modern scholars in the field organology -- the study of musical instruments and their musical and cultural contexts, has said, that the South Indian drum tambattam that was known in Babylonia under the name of timbutu, and the South Indian kinnari shared its name with King David's kinnor. Arrian, the biographer of Alexander, also mentions that the Indian were great lovers of music and dance from earliest times.

Sir Yehudi Menuhin (1916-1999), American-born violinist, one of the foremost virtuosos of his generation, has written: "We would find all, or most, strands beginning in India; for only in India have all possible modes been investigated, tabulated, and each assigned a particular place and purpose. Of these many hundreds, some found their way to Greece; others were adopted by nomadic tribes such as the Gypsies; others became the mainstay of Arabic music. Indian classical music, compared with our Western music, is like a pure crystal. It forms a complete perfected world of its own, which any admixture could only debase. It has, quite logically and rightly, rejected those innovations which have led the development of Western music into the multiple channels which have enabled our art to absorb every influence under the sun. Freedom of development in Indian music is accorded the performer, the individual, who, within fixed limits, is free to improvise without any restraint imposed externally by other voices, whether concordance or discordant - but not to the basic style, which exclude polyphony and modulation."

Author Claude Alvares has said, that the Indian system of talas, the rhythmical time-scale of Indian classical music, has been shown (by contemporary analytical methods) to possess an extreme **mathematical complexity.** The basis of the system is not conventional arithmetic, however, but more akin to what is known today as pattern recognition.

Indian music is art nearest to life. That is why Irish poet William Butler Yeats (1856-1939) a 1923 Nobel Laureate in Literature, has aptly described Indian music "not an art but life itself."

Introduction

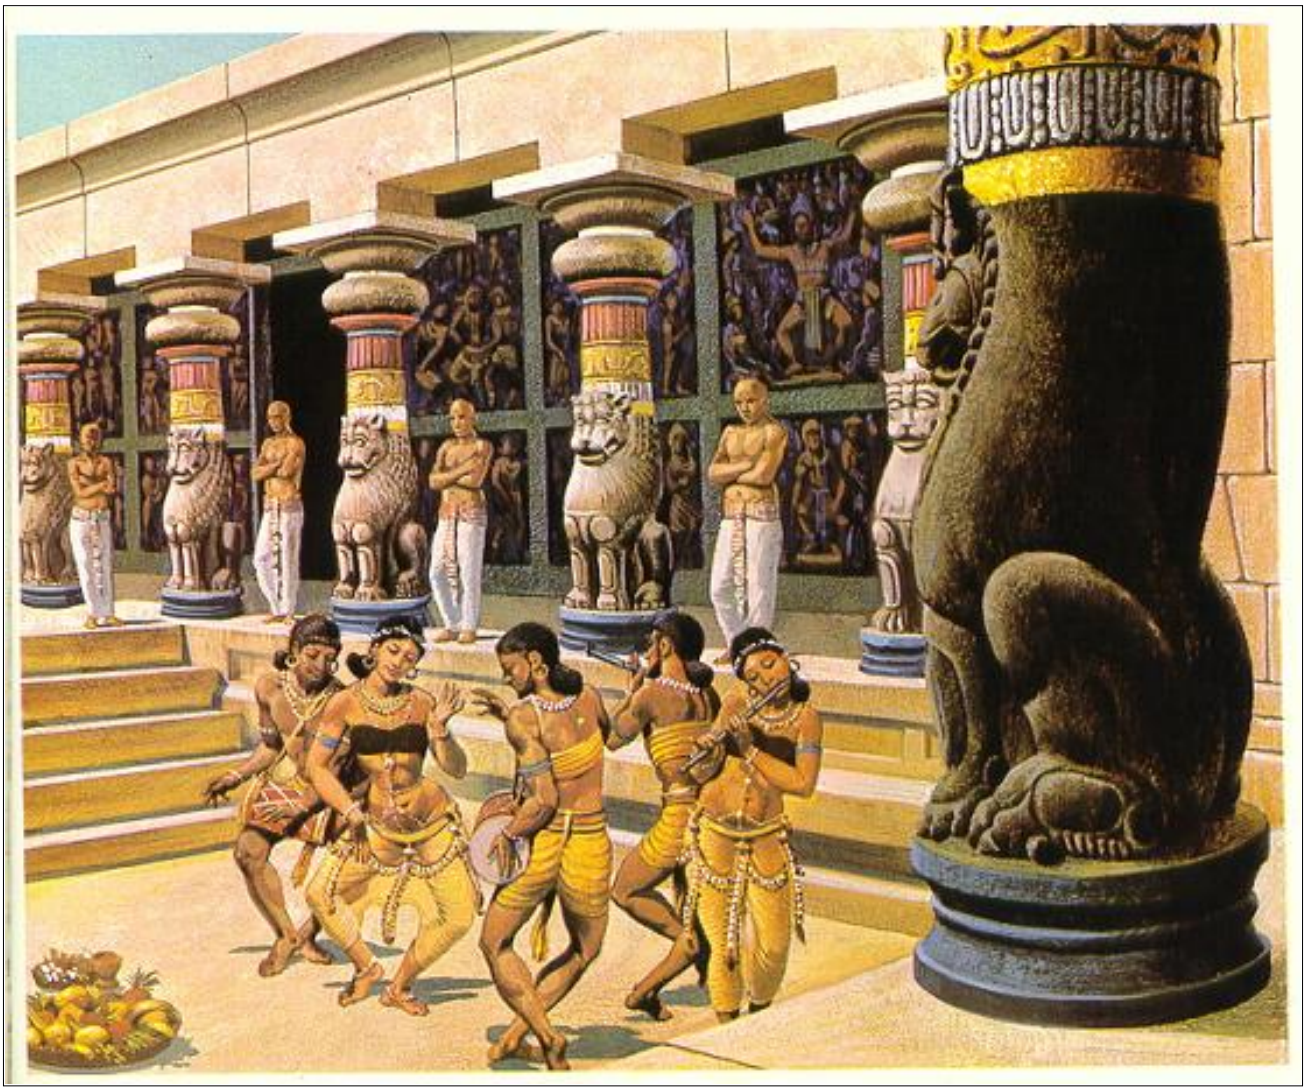
"Even if he be an expert in the Revealed and the traditional scriptures, in literature and all sacred books, the man ignorant of music is but an animal on two feet."

"He who knows the inner meaning of the sound of the lute, who is expert in intervals and in modal scales and knows the rhythms, travels without effort upon the way of liberation.
- (**Yajnavalkya Smriti** III, 115).

***

Sound (nada) is believed to be the heart of the process of creation. In Hinduism, the sacred syllable **Om** embodies the essence of the universe - it is the "hum" of the atoms and the music of the spheres - and sound in general represents the primal energy that holds the material world together. **Sangita**, the Indian tradition of music, is an old as Indian contacts with the Western world, and it has graduated through various strata of evolution: primitive, prehistoric, Vedic, classical, mediaeval, and modern. It has traveled from temples and courts to modern festivals and concert halls, imbibing the spirit of Indian culture, and retaining a clearly recognizable continuity of tradition. Whilst the words of songs have varied and altered from time to time, many of the musical themes are essentially ancient.

The music of India is one of the oldest unbroken musical traditions in the world. It is said that the origins of this system go back to the Vedas (ancient scripts of the Hindus). Sangita, which originally meant drama, music and dance, was closely associated with religion and philosophy. At first it was inextricably interwoven with the ritualistic and devotional side of religious life. The recital and chant of mantras has been an essential element of Vedic ritual throughout the centuries. According to Indian philosophy, the ultimate goal of human existence is moksha, liberation of the atman from the life-cycle, or spiritual enlightenment; and **nadopasana (literally, the worship of sound)** is taught as an important means for teaching this goal. The highest musical experience is ananda, the “divine bliss.” This devotional approach to music is a significant feature of Indian culture. The Indian music tradition can be traced to the Indus (Saraswati) Valley civilization. The goddess of music, **Saraswati,** who is also the goddess of learning, is portrayed as seated on a white lotus playing the **vina.**



Bow-harps and Flutes - Amaravati A.D. 200. - Vina in the hands of Goddess Saraswati
(source: The Legacy of India - edited by G. T. Garrett).

Alain Daneliou has written: "Under the name of **Gandharva Vedas**, a general theory of sound with its metaphysics and physics appears to have been known to the ancient Hindus. From such summaries

The ancient Hindus were familiar with the theory of sound (Gandharva Veda), and its metaphysics and physics. The hymns of the Rig Veda contain the earliest examples of words set to music, and by the time of the Sama Veda a complicated system of chanting had been developed. By the time of the **Yajur Veda**, a variety of professional musicians had appeared, such as lute players, drummers, flute players, and conch blowers.

The origin of Indian music is enshrined in beautiful tales and legends. It is common Hindu practice to attribute the beginning of a branch of learning to a divine origin through the agency of a rishi. Shiva, also called Nataraja, is supposed to be the creator of Sangita, and his mystic dance symbolizes the rhythmic motion of the universe. He transmitted the knowledge of cosmic dance to the rishi Bharata, through one of his ganas. Tandu. The dance is called tandava and Bharata thus became the first teacher of music to men, and even to apsaras, the heavenly dancers. Similarly, the rishi Narada, who is depicted as endlessly moving about the universe playing on his vina (lute) and singing, is believed to be another primeval teacher of music.

Buddhist texts also testify to the prevalence of Sangita, both religious and secular, in early India. Music in India, however, reached its zenith during the **Gupta period**, the classical age of the Indian art and literature.

Music in India, however, reached its zenith during the Gupta Empire, the classical age of the Indian art and literature.

Indian music is based upon a system of *ragas* and is improvised or composed at the moment of performance. The notes which are to convey certain definite emotions or ideas are selected with extreme care from the twenty-five intervals of the *sruti* scale and then grouped to form a raga, a mode or a melodic structure of a time. It is upon this basic structure that a musician or singer improvises according to his feeling at the time. Structural melody is the most fundamental characteristic of Indian music. The term *raga* is derived from Sanskrit root, ranj or raj, literally meaning to color but figuratively meaning to tinge with emotion. The essential of a raga is its power to evolve emotion. **The term has no equivalent in Western music, although the Arabic maqam iqa corresponds to it**. Oversimplified, the concept of raga is to connect musical ideas in such a way as to form a continuous whole based on emotional impact. There are, however, mixed ragas combined in a continuous whole of contrasting moods. Technically, raga is defined as "essentially a scale with a tonic and two axial notes," although it has additional characters.

Musical notes and intervals were carefully and mathematically calculated and the Pythagorean Law was known many centuries before Pythagoras propounded it. They were aware of the mathematical law of music.

(source: **India: A synthesis of cultures – by Kewal Motwani** p. 78-95).

The word raga appears in **Bharata's Natyasastra**, and a similar concept did exist at the time, but it was **Matanga** (5th century) who first defined raga in a technical sense as "that kind of sound composition, consisting of melodic movements, which has the effect of coloring the hearts of men." This definition remains valid today. Before the evolution of the raga concept in Bharata's time, jati tunes with their fixed, narrow musical outlines constituted the mainstay of Indian music. These were only simple melodic patterns without any scope for further elaboration. It was out of these jati tunes that a more comprehensive and imaginative form was evolved by separating their musical contents and freeing them from words and metres.

Music lessons

Indeed a raga is basically a feeling, the expression of which has come to be associated with certain notes and twists of melody. A musician may compose in the same raga an indefinite number of times, and the music can be recognized in the first few notes, because the feelings produced by the musician's execution of these notes are intensely strong. The effect of Indian music is cumulative rather than dramatic. As the musician develops his discourse in his raga, it eventually colors all the thoughts and feelings of the listeners. Clearly, the longer a musician can dwell on and extend the theme with artistic intensity the greater the impact on the audience.

Alain Danielou (1907-1994) head of the UNESCO Institute for Comparative Musicology wrote:

""Unlike Western music, which constantly changes and contrasts its moods, Indian music, like Arabic and Persian, always centers in one particular emotion which it develops, explain and cultivates, upon which it insists, and which it exalts until it creates in the hearer a suggestion almost impossible to resist. The musician, if he is sufficiently skilled, can "lead his audiences through the magic of sound to a depth and intensity of feeling undreamt of in other musical systems."

(source: **Northern Indian Music - By Alain Danielou** Praeger, 1969 p. 115).

Dr. Ananda Coomaraswamy has written: "Indian music is essentially impersonal, reflecting "an emotion and an experience which are deeper and wider and older than the emotion or wisdom of any single individual. Its sorrow is without tears, its joy without exultation and it is passionate without any loss of serenity. It is in the deepest sense of the word all human."

(source: **The Dance of Shiva - By Ananda Coomaraswamy** p. 94).

It is an art nearest to life; in fact, **W. B. Yeats** called Indian music, **"not an art, but life itself," although its theory is elaborate and technique difficult.**

The possible number of ragas is very large, but the majority of musical systems recognize 72 (thirty-six janaka or fundamental, thirty six janya or secondary). New ragas, however, are being invented constantly, as they have always been, and a few of them will live to join the classical series. Many of the established ragas change slowly, since they embody the modes of feeling meaningful at a particular time. It is for this reason that it is impossible to say in advance what an Indian musician will play, because the selection of raga is contingent upon his feelings at the precise moment of performance.

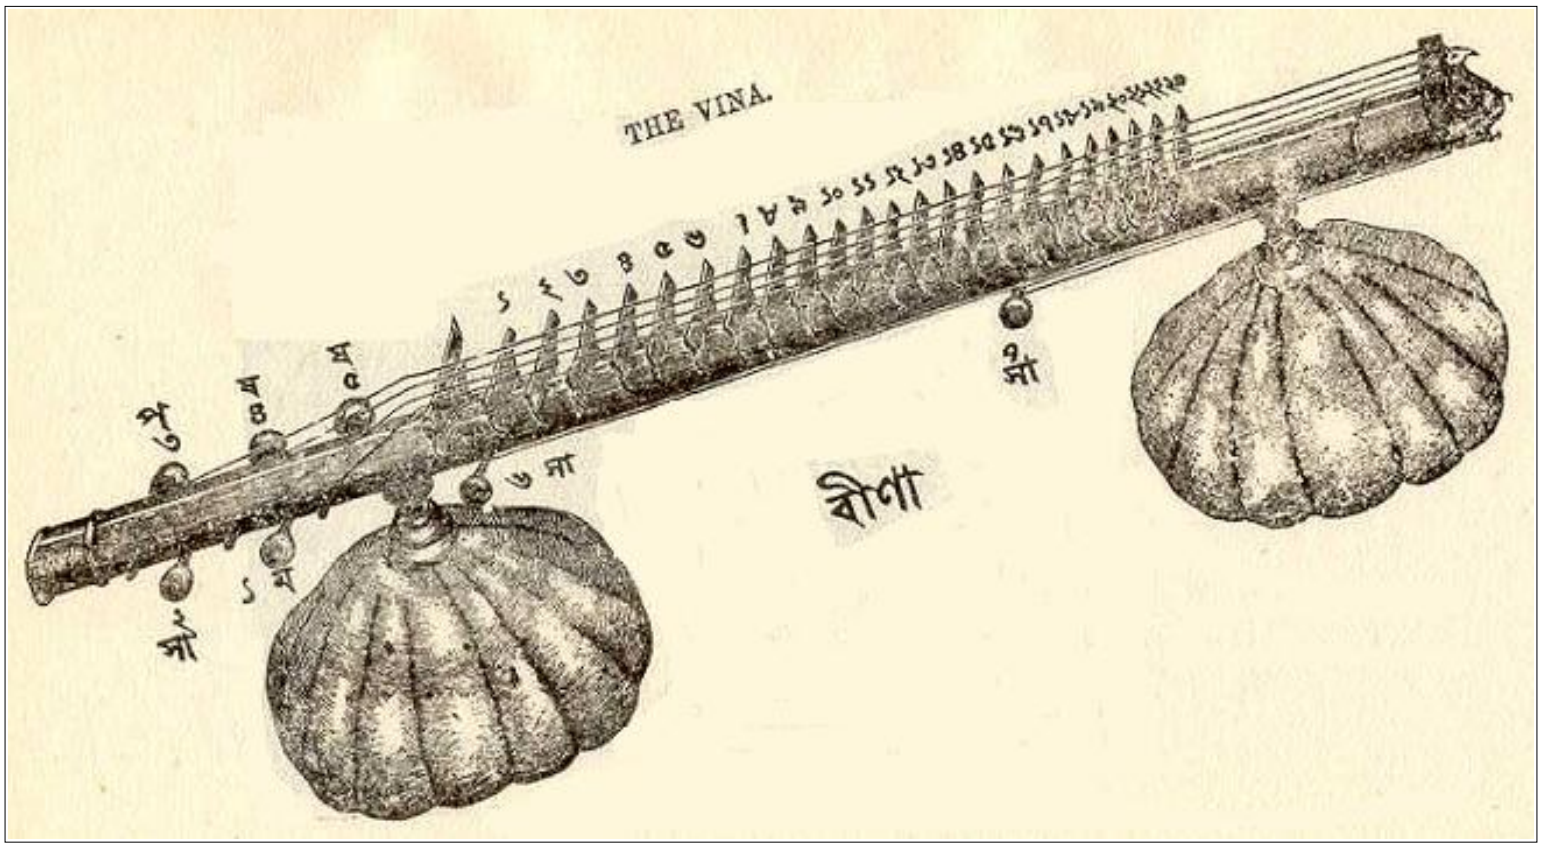
Indian music recognizes seven main and two secondary notes or svaras. Representing definite intervals, they form the basic or suddha scale. They can be raised or lowered to form the basic of suddha scale. They can be raised or lowered to form other scales, known in their altered forms as vikrita. The chanting of the Sama Veda employed three to four musical intervals, the earliest example of the Indian tetrachord, which eventually developed into a full musical scale. From vaguely defined musical intervals to a definite

tetrachord and then to a full octave of seven suddha and five vikrita was a long, continuous, and scientific process. For instance, **Bharata's Natyasastra**, the earliest surviving work on Indian aesthetics variously dated between the second century B.C. and the fourth century A.D., in its detailed exposition of Indian musical theory, refers to only two vikrita notes, antara and kakali. But in the **Sangita Ratnakara**, an encyclopedia of Indian music attributed to **Sarngadeva** (1210-1247), the number of vikritas is no less than nineteen; shadja and panchama also have acquired vikritas. It was during the medieval period that **Ramamatya** in the south, and **Lochana-kavi** in the north in his **Ragatarangini** refered to shadja and panchama as constant notes. Indian music thus came to acquire a full fledged gamut of mandra, madhya, and tar saptak.

The scale as it exists today has great possibilities for musical formations, and it has a very extensive range included in the microtonal variations. The microtones, the twenty-two **srutis**, are useful for determining the correct intonation of the notes, their bases, and therefore their scales (**gramas**). The Indian scale allows the musician to embellish his notes, which he always endeavors to do, because grace plays the part in Indian music that harmony does in European music.

Whilst Indian music represents the most highly evolved and the most complete form of modal music, the musical system adopted by ore than one-third of mankind is Western music based on a highly developed system of harmony, implying a combination of simultaneously produced tones. Western music is music without microtones and Indian music is music without harmony. The strongly developed harmonic system of Western music is diametrically opposed in conception and pattern to the melodic Indian system. Harmony is so indispensable a part of Western music today that Europeans find it difficult to conceive of a music based on melody alone. Indians, on the other hand, have been for centuries so steeped in purely melodic traditions that whilst listening to Western music they cannot help looking for a melodic thread underlying the harmonic structures.

Indian musical instruments are remarkable for the beauty and variety of their forms, which the ancient sculptures and paintings in caves of India have remained unchanged for the last two thousand years.



The fundamental and most important difference between the European and Indian systems of rhythm is respectively one of multiplication and addition of the numbers two and three. The highly developed tala, or rhythmic system with its avoidance of strict metre and its development by the use of an accumulating combination of beat subdivisions, has no parallel in Western music. On the other hand, the Indian system has no exact counterpart to the tone of the tempered system, except for the keynote, of Western music. Consequently, just and tempered intonations are variously conceived which eliminate the possibility of combining the melodic interval theory of the sruti system with the Western modulating, harmonic, arbitrarily tempered theory of intervals. With its tempered basis, larger intervals, and metred rhythms, Western music, is more easily comprehended than Indian music, which seems to require a certain musical aptitude and ability to understand its use of

microtones, the diversification of the unmetred tala, and the subtle and minutely graded inflection.

Western music, as it appears today, is a relatively modern development. The ancient Western world was aware of the existence of a highly developed system of Indian music. According to **Curt Sachs** (1881-1959) author of **The History of Musical Instruments** (W W Norton & Co ASIN 0393020681) it was the **South Indian drum tambattam that was known in Babylonia under the name of timbutu, and the South Indian kinnari shared its name with King David's kinnor, Strabo referred to it, pointing out that the Greeks believed that their music, from the triple point of view of melody, rhythm, and instruments, came to them originally from Thrace and Asia.**

Arrian, the biographer of Alexander, also mentions that the Indians were great lovers of music and dance from earliest times. The Greek writers, who made the whole of Asia, including India, the sacred territory of Dionysos, claimed, that the greater part of music was derived from Asia. Thus, one of them, speaking of the lyre, would say that he caused the strings of the Asian cithara to vibrate. Aristotle describes a type of lyre in which strings were fastened to the top and bottom, which is reminiscent of the Indian type of single-stringed ektantri vina.

Curt Sachs considers India the possible source of eastern rhythms, having the oldest history and one of the most sophisticated rhythmic development. It is probably no accident that Sanskrit, the language of India, is one in which there is no pre-determined accent upon the long and short syllables; the accents are determined by the way in which it falls in the sentence. Sanskrit developed in the first thousand years B.C. Each section of the ancient holy book, the Rigveda, has a distinct rhythm associated with each section so that the two aspects are learned as one.

The ancient Vina: This one instrument alone is sufficient evidence of the development to which the art had attained even in those early days.

The vina is really neither a lute nor a harp, although it is commonly translated in English as lute. Generally known in its construction as bow-harp, the vina must have originally been developed from the hunting bow, a type of musical bow, pinaka, on which a tightly drawn string was twanged by the finger or struck with a short stick. To increase the resonance a boat-shaped sound box was attached, consisting of a small half-gourd of coconut with a skin table or cover, through which a bamboo stick was passed longitudinally, bearing a string of twisted hair resting on a little wooden bridge placed on the skin table. This was the ekatari, or one-stringed lute of India, which soon produced its close relative, the dvitari or two-stringed lute. Later, additional strings were inevitably added. Whilst it is possible to trace the passage of the slender form of the fingerboard instrument, pandoura, from Egypt to Greece, it was not until they came into contact with the Persians that the Greeks became acquainted with the bow, a fact which may reinforce the view of the Indian origin of the Greek lute.

Although many varieties of the vina have been evolved, it existed in its original form, now extinct, in the vedic and pre-vedic

times. This is known from the excavations at Mohenjodaro and Harappa. There is sufficient evidence that some of these musical instruments were constructed according to the heptatonic, sampurna, scale with seven notes. However, in the other contemporary civilizations of Egypt and Mesopotamia, similar instruments have been found. The vina is often shown in the hands of the musicians on the early Buddhist sculptures at Bhaja, Bharhut, and Sanchi and is still in use in Burma and Assam. In Africa, it is used by many Nilotic tribes. A bow-barp, known as an angle-harp, closely resembling the Indian vina can be seen in the mural paintings at Pompeii.

The two earliest Greek scales, the Mixolydic and the Doric, have an affinity to early Indian scales. Some recent British writers, for example the editors of The New Oxford History of Music, have attempted to exclude Indian influence by making the somewhat strange suggestion that the term "India" meant countries much nearer. Whilst the evidence pointing to the direct influence of India on Greek interest in Indian art. In addition, there are parallels between the two systems, which may or may not be connected. **It is certainly true that the seven note scale with three octaves was known in India long before the Greeks were familiar with it. Pythagoras scheme of cycle of the fifth and cycle of the fourth in his system of music is exactly the same as the sadjapancama and saja-madhyama bhavas of Bharata.** Since Bharata lived several centuries after Pythagoras, it has been suggested that he borrowed the scheme from Pythagoras. At the same time it has been pointed out that Indian music, dating as it does from the early Vedic period, is much anterior to Greek music, and that it is not unlikely that Pythagoras may have been indebted to Indian ideas. In almost all other fields of scholarship in which he was interested, a close identity between his and the older Indian theories has already been noted.

Whilst no title of any Sanskrit work on music translated at Baghdad is available, **there is not doubt that Indian music influenced Arab music.** The well-known Arab writer **Jahiz**, recording the popularity of Indian music at the Abbasid Court, mentions an Indian instrument known as kankalah, which was played with a string stretched on a pumpkin. This instrument would appear to be the kingar, which is made with two gourds. Knowledge of Indian music in the Arab world is evidenced by an Arab author from Spain, who refers to a book on Indian tunes and melodies. Many technical terms for Arab music were borrowed from Persia and India. Indian music, too, was influenced in return, incorporating Persio-Arab airs, such as Yeman and Hiji from Hijaz. At the beginning of their rise to power, the Arabs themselves had hardly any musical system worth noting and mainly practiced the existing system in the light of Greek theory. Since Indian contact with western Asia had been close and constant, it would appear likely that the Arabic maqam iqa is the Persian version of the Indian melodic rhythmic system, **traga tala, which had existed for more than a thousand years before maqam iqa was known.**

Yehudi Menuhin (1916-1999) had one of the longest and most distinguished careers of any violinist of the twentieth century. He was convinced that:

""We would find all, or most, strands beginning in India; for only in India have all possible modes been investigated, tabulated, and each assigned a particular place and purpose. Of these many hundreds, some found their way to Greece; others were adopted by nomadic tribes such as the Gypsies; others became the mainstay of Arabic music. However, none of these styles has developed counterpoint and harmony, except the Western-most offshoot (and this is truly our title to greatness and originality), with its incredible emotional impact corresponding so perfectly with the infinite and unpredictable nuances, from the fleeting shadow to the limits of exaltation or despair, or subjective experience. Again, its ability to paint the phenomena of existence, from terror to jubilation, from the waves of the sea to the steel and concrete canyons of modern metropolis, has never been equalled."

(source: **Indian and Western Music - Yehudi Menuhin** / **Hemisphere**, April 1962, p. 6.).

"Indian music has continued unperturbed through thirty centuries or more, with the even pulse of a river and with the unbroken evolution of a sequoitry."

(source: **The Music of India - By Peggy Holroyde** p. 119).

Peter Yates (1909 -1976) music critic, author, teacher, and poet, was born in Toronto, had reason when he said that **"Indian music, though its theory is elaborate and its technique so difficult, is not an art, but life itself."**

(source: **The Dance of Shiva – by A K Coomaraswamy** p. 79-60).

"Despite predisposition in India's favor, I have to acknowledge that Indian music took me by surprise. I knew neither its nature nor its richness, but here, if anywhere, **I found vindication of my conviction that India was the original source."**

"Its purpose is to unite one's soul and discipline one's body, to make one sensitive to the infinite within one, to unite one's breath of space, one's vibrations with the vibrations of the cosmos."

(source: **Unfinished Journey - By Yehudi Menuhin** p. 250 - 268).

History of Music

The beginnings of Indian music are lost in the beautiful legends of gods and goddesses who are supposed to be its authors and patrons. The goddess **Saraswati** is always represented as the goddess of art and learning, and she is usually pictured as seated on a white lotus with a vina, lute, in one hand, playing it with another, a book in the third hand and a necklace of pearls in the fourth.

The technical word for music throughout India is the word sangita, which originally included dancing and the drama as well as vocal and instrumental music. Lord Shiva is supposed to have been the creator of this three fold art and his mystic dance symbolizes the rhythmic motion of the universe.

In Hindu mythology the various departments of life and learning are usually associated with different rishis and so to one of these is traced the first instruction that men received the art of music. **Bharata** rishi is said to have taught the art to the heavenly dancers - the Apsaras - who afterwards performed before Lord Shiva. The **Rishi Narada**, **who wanders about in earth and heaven, singing and playing on his vina,** taught music to men. Among the inhabitants of Indra's heaven we find bands of musicians. The Gandharvas are the singers, the Apsaras, the dancers, and the Kinnaras performers on musical instruments. From the name Gandharva has come the title Gandharva Veda for the art of music.

Among the **early legends of India** there are many concerning music. The following is an interesting one from the Adbuta Ramayana about **Narada rishi** which combines criticism with appreciation.

"Once upon a time the great rishi Narada thought himself that he had mastered the whole art and science of music. To curb his pride the all-knowing Vishnu took him to visit the abode of the gods. They entered a spacious building, in which were numerous men and women weeping over their broken limbs. Vishnu stopped and enquired of them the reason for their lamentation. They answered that they were the ragas and the raginis, created by Mahadeva; but that as a rishi of the name of Narada, ignorant of the true knowledge of music and unskilled in performance, had sung them recklessly, their features were distorted and their limbs broken; and that, unless Mahadeva or some other skillful person would sing them properly, there was no hope of their ever being restored to their former state of body. Narada, ashamed , kneeled down before Vishnu and asked to be forgiven."

Vedic Music

It is a matter of common knowledge to all music lovers that Indian classical music has its origin in the Sama Veda. Yet the singing of the Sama Veda has practically disappeared from India. What is heard nowadays is sasvara-patha and not sasvara-gana, that is to say, only musical recitation of the Sama Veda, not its actual singing.

Top of Page

The Origins of Hindu Music

“animals tamed or wild, even children, are charmed by sound. Who can describe its marvels?” (Sang. Darp. I-31).

Under the name of **Gandharava Veda**, a general theory of sound with its metaphysics and physics appears to have been known to the ancient Hindus. From such summaries as have survived till modern times, it seems that the properties of sound, not only in different musical forms and systems but also in physics, medicine, and magic. The rise of Buddhism with its hostility towards tradition brought about a sharp deviation in the ancient approach to the arts and sciences, and their theory had often to go underground in order to avoid destruction. It was at this time that the Gandharva Veda, with all the other sacred sciences, disappeared; though the full tradition is said to survive among the mysterious sages (rishis) who dwell in Himalayan caves.

When the representatives of the old order, who had been able to maintain their tradition under ground through the centuries of persecution, arose again, their intellectual and cultural superiority was in many fields so great that Buddhism was defeated. In hardly more than a few decades, Buddhism, by the mere strength of intellectual argument, was wiped out from the whole Indian continent over which it had ruled for a thousand years. It was then (during 6th and 7th century) that an attempt was made, under the leadership of Shankaracharya, to restore Hindu culture to its

ancient basis.

Megh raga

A number of eminent Brahmins were entrusted with the task of recovering or re-writing the fundamental treatises on the traditional sciences. For this they followed the ancient system which starts from a metaphysical theory whose principles are common to all aspects of the universe, and works out their application in a particular domain. In this way the theory of music was reconstructed. In this way the theory of music was reconstructed.

Musical theory and theory of language had been considered from the earliest times as two parallel branches of one general science of sound. Both had often been codified by the same writers. The names of **Vashishtha, Yajnavalkya, Narada, Kashyapa, Panini** are mentioned among these early musicologist-grammarians. **Nandikeshvara** was celebrated at the same time as the author of a work on the philosophy of language and of a parallel work on music. His work on language is believed to be far anterior to the Mahabhashya of Patanjali (attributed to the 2nd century B.C.) into which it is usually incorporated, though it is thought to be probably posterior to Panini, who lived no later than 6th century B.C. The chronology of works on music would seem, however, to place both Panini and Nandikeshvara at a much earlier date. The work of Nandikeshvara on the philosophy of music is now believed to be lost but fragments of it are undoubtedly incorporated in later works. At the time of the Buddhist ascendancy, when so much of the ancient lore had to be abandoned, grammatical works were considered more important than musical ones.

A part of Nandikeshvara's work on dancing, the **Abhinaya Darpana**, has been printed (Calcutta 1934) with English translation by M. Ghosh). An earlier translation by Ananda Coomaraswamy appeared under the title The Mirror of Gesture (Harvard Univ. Press. 1917).

The Antiquity of Indian Music

The period extending from the Mahabharata war to the beginnings of Buddhism may well have been one of the greatest the culture of India has known, and its influence extended then (as indeed it still did much later) from the Mediterranean to China. Traces of its Mediterranean aspect have been found in the Cretan and Mycenean remains as well as in Egypt and the Middle East.

The Vedas, which until the beginning of this period had been transmitted orally, were then written down, and later on, the Epics and Puranas. Most of the treatises on the ancient sciences also belong to the age, though many may have been to a certain extent re-shaped later on. Ananada K. Coomaraswamy, in his book, Arts and Crafts of India and Ceylon, speaks of this "early Asiatic culture and as far south as Ceylon….in the second millennium B.C.."

The ancient **Kinnari Vina** or Kin, for example, became known in China as the Khin, a stringed instrument said to have been played by the first Emperor, Fu-Hi (circa 3000 BC), The Kin is further mentioned in ancient Chinese chronicles such as the Chi Ki (2nd century B.C) in reference to events of the 6th or 7th century. According to the Li Ki, Confucius (551-478) always had his Khin with him at home, and carried it when he went for a walk or on a journey.

In Genesis, (iv, 21 and xxxi, 27) a stringed instrument of the same kind is called Kinnor. David used to play the Kinnor as well as the nebel (flute).

Shiva, Yoga-Dakshinamurti with Rishis, Snake dancers, and Musicians - The Art Institute of Chicago.

The antiquity of Indian theatrical art and musical theory was well known to the ancient world. According to **Strabo** (Geography X, II 17) the Greeks considered that music, "from the triple point of view of melody, rhythm and instruments" came to them originally from Thrace and Asia. "Besides, the poets, who make of the whole of Asia, including India, the land or sacred territory of Dionysos, claim that the origin of music is almost entirely Asiatic. Thus, one of them, speaking of the lyre, will say, that he causes the strings of the Asiatic cithara to vibrate." Many ancient historians spoke of Dionysos (or Bacchos) as having lived in India.

The many stories that tell how the various styles of North Indian music were invented by musicians of the Muhammadan period have probably **no basis in reality**. Under Muslim rule, age-old stories were retold as if they had happened at the court of Akbar, simply to make them more vivid, and in conformity with the fashion of the day. Such transferences of legend are frequent everywhere. In Western countries, many a pagan god in this way became a Christian saint and many ancient legends were rearranged to fit into Christian world. Some episodes in the life of the Buddha, for example, found their way into the Lives of the Saints where the Buddha appears under the name of St. Josaphat.

The impartial ear of sound-measuring instruments makes one marvel at the wonderful accuracy of the scales used by the great "Ustads" of Northern India – **scales which in everyway confirm with the requirements of ancient Hindu theory.**

To say that they pertain to, or have been influenced by, the Arab or the Persian system shows a very superficial knowledge of the subject. These systems, originally mostly derived from Indian music, have become so reduced and impoverished in comparison with it that no one can seriously speak of their having had any influence on its development. In fact the whole of the theory and most of the practice of Arab as well as Persian music is the direct descendant of the ancient Turkish music. At the beginning of the Muslim era, the Arabs themselves had hardly any musical system worth the mentioning, and all the Arabic theoreticians – Avicenna, (born about 980 A. D) Al Farabi, Safi ud'din, and others – are claimed by the Turks as Turkish in culture if not always in race. In fact, they merely expounded in Arabic the old Turkish system was well known to medieval Hindu scholars who often mention it (under the name of Turushka) as a system closely allied to Hindu music. The seventeen intervals of the octave, as used by the Arabs, are identical with seventeen of the twenty-two Indian shrutis, and there is no modal form in Arabic music which is not known to the Hindus.

(source: **Northern Indian Music - By Alain Danielou** Praeger, 1969 volume I p. 1-35).

The Development of Scale

All music is based upon relations between sounds. These relations can, however, be worked out in different ways, giving rise to different groups of musical systems. The modal group of musical systems, to which practically the whole of Indian muisc belongs, is based on the establishment of relations between diverse successive sounds or notes on the one hand and, on the other, upon a permanent sound fixed and invariable, the "tonic".

Indian music like all modal music, thus exists only by the relations of each note with the tonic. Contrary to common belief, modal music is not merely melody without accompaniment, nor has a song or melody, in itself, anything to do with mode. The modes used in the music of the Christian Church are modes only in name, though they may have been real modes originally. But much of Scottish and Irish music, for example, is truly modal; it belongs to the same musical family as Indian music and is independent of the Western harmonic system.

Music must have been cultivated in very early ages by the Hindus; as the abridged names of the seven notes, via, **sa, ri, ga, ma, pa, dha, ni**, are said to occur in the Sama Veda; and in their present order. Their names at length are as follows:

Shadja, Rishabha, Gandhara, Madhyama, Panchama, Dhaivata, Nishada.

The seven notes are placed under the protection of seven Ah'hisht'hatri Devatas, or superintenting divinities as follows:

Shadja, under the protection of **Agni**
Rishabha, of **Brahma**
Gandhara, of **Saraswati**
Madhyama, of **Mahadeva**
Panchama, of **Sri or Lakshmi**
Dhaivata, of **Ganesa**
Nishada, of **Surya**

"The note Sa is said to be the soul, Ri is called the head, Ga is the arms, Ma the chest, Pa the throat, Dha the hips, Ni the feet. Such are the seven limbs of the modal scale." (**Narada Samhita** 2, 53-54).

"Shadja is the first of all the notes and so it is the main or chief note." Datilla explains that the Shadja (the tonic) may be established at will at any pitch (on any shruti) and that, by relation with it, the other notes should be established at the proper intervals.

The Hindus divide the octave into twenty two intervals, which are called Sruti, by allocating four Sruti to represent the interval. The sruti or microtonal interval is a division of the semitone, but not necessarily an equal division. This division of the semitone is found also in ancient Greek music. It is an interesting fact that we find in Greek music the counterpart of many things in Indian music. Ancient India divided the octave into twenty two and the Greek into twenty-four. The two earliest Greek scales, the Mixolydic and the Doric show affinity with early Indian scales. The Indian scale divides the octave into twenty-two srutis.

Gramas

Indian music is traditionally based on the three gramas. First reference to Grammas or ancient scales is found in the Mahabharata and teh Harivamsa. The former speaks of the 'sweet note Gandhara', probably referring to the scale of that name. The Harivamsa speaks enthusiastically of music 'in the gramaraga which goes down to Gandhara', and ot 'the women of Bhima's race who performed, in the Gandhara gramaraga, the descent of the Ganges, so as to delight mind and ear.'

The Nature of Sound

"Sound (Nada) is the treasure of happiness for the happy, the distraction of those who suffer, the winner of the hearts of hearers, distraction of those who suffer, the winner of the hearts of hearers, the first messenger of the God of Love. It is the clever and easily obtained beloved of passionate women. May it ever, ever, be honored. It is the fifth approach to Eternal Wisdom, the Veda."

- **Sangita Bhashya**.

Sound is said to be of two kinds, one a vibration of ether, the other a vibration of air. The vibration of ether, which remains unperceived by the physical sense, is considered the principle of all manifestation, the basis of all substance. It corresponds with what Pythagoras called the "music of the spheres" and forms permanent numerical patterns which lie at the very root of the world's existence. This kind of vibration is not due to any physical shock, as are all audible sounds. It is therefore called **anahata, "unstruck"**. The other kind of sound is an impermanent vibration of the air, an image of the ether vibration of the same frequency. It is audible, and is always produced by a shock. It is therefore called **ahata or "struck"**.

Thus, the **Sangita Makaranda** (I 4-6) says: "Sound is considered to be of two kinds, unstruck and and struck; of these two,

the unstruck will be first described. "Sound produced from ether is known as 'unstruck'. In this unstruck sound the Gods delight. The Yogis, the Great Spirits, projecting their minds by an effort of the mind into this unstruck sound, depart, attaining Liberation."

"Struck sound is said to give pleasure, 'unstruck' sound gives Liberation." (**Narada Purana**).

But "this (unstruck sound) having no relation with human enjoyment does not interest ordinary men." (**Sang. Ratn** 6.7.12).

Top of Page

Raga - The Basis of Melody

"I don not dwell in heaven, nor in the heart of yogis. there only I abide, O Narada, where my lovers sing." **(Narada Samhita I.7).**

"That which charms is a raga." (**Sang. Darpan** 2-1).

Each raga or mode of Indian music is a set of given sounds called notes (svara-s) forming with a permanent tonic certain ratios. To each of these ratios is said to correspond a definite idea or emotion. The complex mood created by the mixture and contrast of these different ideas or emotions is the mood or expression of the raga. The harmonious relations which exist between the notes and which can be represented by numerical ratios do not exclusively belong to music. The very same relations can be found in the harmony which binds together all the aspects of manifestation. These ratios can express the change of the seasons and that of the hours, the symphony of colors as well as that of forms. Hence the mood of a raga can be accurately represented by a picture or a poem which only creates an equivalent harmony through another medium. The expression of a raga is thus determined by its scale. It results from the expressions of each of the intervals (shrutis) which the different notes form with the tonic.

The Raga poems: Poems describing the mood of the raga are found in a number of **Sanskrit works of music.** References to them in other works seem to show that many of them were originally part of a treatise (now believed lost) by Kohala, one of the earliest writers on music.

Raga is the basis of melody in Indian music and a substitute for the western scale. **"It is the attempt of an artistic nation to reduce the law and order the melodies that come and go on the lips of the people."** In Raga Vibodha, it is defined as 'an arrangement of sounds which possesses varna, (color) funishes gratification to the senses and is constituted by musical notes." says Matanga.

Indian ragas are also supposed to be able to reproduce the conditions and emotions associated with them. The **Dipak raga** is supposed to produce flames in actuality; and a story is told of the famous musician named **Gopal Naik (Baiju Bawara)** who, when ordered to sing this by the Emperor Akbar went and stood in the Jamuna up to his neck and then started the song. The water became gradually hotter until flames burst out of his body and he was consumed to ashes. The **Megh mallar raga** is supposed to be able to produce rain. It is said that a dancing girl in Bengal, in a time of drought, once drew from the clouds with this raga a timely refreshing shower which saved the rice crop. **Sir W. Ousley,** who relates many of these anecdotes, says that he was told by Bengal people that this power of reproducing the actual conditions of the raga is now only possessed by some musicians in western India.

In connection with the sciences of raga, Indian music has developed the art of raga pictures. **Mr. Percy Brown**, formerly of the School of Art, Calcutta, defines a raga as **"a work of art in which the tune, the song, the picture, the colors, the season, the hour and the virtues are so blended together as to produce a composite production to which the West can furnish no parallel."**

Vina player from Mysore

It may be described as a musical movement, which is not only represented by sound, but also by a picture. **Rajah S M Tagore**, thus describes the pictorial representations of his six principal ragas. **Sriraga** is represented as a divine being wandering through a beautiful grove with his love, gathering fragrant flowers as they pass along. Near by doves sport on the grassy sward. **Vasanta raga**, or the raga of spring, is represented as a young man of golden hue, and having his ears ornamented with mango blossoms, some of which he also holds in his hands. His lotus-like eyes are rolling round and are of the color of the rising sun. He is loved by the females. **Bhairava** is shown as the great Mahadeva (Shiva) seated as a sage on a mountain top. River Ganga falls upon his matted locks. His head is adorned with the crescent moon. In the center of his forehead is the third eye from which issued the flames which reduced Kama, the Indian Cupid, to ashes. Serpents twine around his neck. He holds a trident in one hand and a drum in the other. Before him stands his sacred bull - Nandi. **Panchama raga** is pictured as a very young couple in love in a forest. **Megh raga** is the raga of the clouds, and the rainy season. It is the raga of hope and new life. The clouds hang overhead, and already some drops of rain have fallen. The animals in the fields rejoice. This raga is said to be helpful for patients suffering from tuberculosis. **Nattanarayana** is the raga of battle. A warrior king rides on a galloping steed over the field of battle, with lance and bow and shield. **Lakshmana Pillay** has said: "Thus, each raga comes and goes with its store of smiles or tears, of passion or pathos, its noble and lofty impulses, and leaves its mark on the mind of the hearer."

Sir Percy Brown read a paper on the raga which he called **Visualized Music**. He described it as a combination of two arts, music and painting. He mentioned a miniature painting which was called 'the fifth delineation of the melody **Megh Mallar Saranga**, played in four-time at the time of the spring rains. He wrote: "Todi ragini is one of the brides of Vasanta raga. The melody of this raga is so fascinating that every living creature within hearing is attracted to it. as the raga has to be performed at midday."

This art seems to have come originally from northwest India. The Indian tendency is to visualize abstract things.

The six principal ragas are the following:

1. Hindaul - It is played to produce on the mind of the bearer all the sweetness and freshness of spring; sweet as the honey of the bee and fragrant as the perfume of a thousand blossoms.

2. **Sri Raga** - The quality of this rag is to affect the mind with the calmness and silence of declining day, to tinge the thoughts with a roseate hue, as clouds are glided by the setting sun before the approach of darkness and night.

3. **Megh Mallar** - This is descriptive of the effects of an approaching thunder-storm and rain, having the power of influencing clouds in time of drought.

4. **Deepak** - This raga is extinct. No one could sing it and live; it has consequently fallen into disuse. Its effect is to light the lamps and to cause the body of the singer to produce flames by which he dies.

5. **Bhairava** - The effect of this rag is to inspire the mind with a feeling of approaching dawn, the caroling of birds, the sweetness of the perfume and the air, the sparkling freshness of dew-dropping morn.

6. **Malkos** - The effect of this rag are to produce on the mind a feeling of gentle stimulation.

Tala or Time Measure

Claude Alvares has written: "The Indian system of talas, the rhythmical time-scale of Indian classical music, has been shown (by contemporary analytical methods) to **possess an extreme mathematical complexity.** The basis of the system is not conventional arithmetic, however, but more akin to what is known today as pattern recognition."

To quote **Richard Lannoy** author of **The Speaking Tree: A Study of Indian Culture and Society**:

"In the hands of a virtuoso the talas are played at a speed so fast that the audience cannot possibly have time to count the intervals; due to the speed at which they are played, the talas are registered in the brain as a cluster configuration, a complex Gestalt involving all the senses at once. While the structure of the talas can be laboriously reduced to a mathematical sequence, the effect is subjective and emotional.....The audience at a recital of Indian classical music becomes physically engrossed by the agile patterns and counter-patterns, responding with unfailing and instinctive kinesthetic accuracy to the terminal beat in each tala."

Their ability with instruments is repeated with the voice. The extraordinary degree of control of the human voice has been described by the musicologist, Alain Danielou, who has stated that Indian musicians can produce and differentiate between minute intervals (exact to a hundreth of a comma, according to identical measurements recorded by Danielou at monthly recording sessions). This sensitivity to microtones is, from the purely musicological point of view, of little importance, like the mathematical complexity of the talas. Nevertheless, as Lannoy puts it:

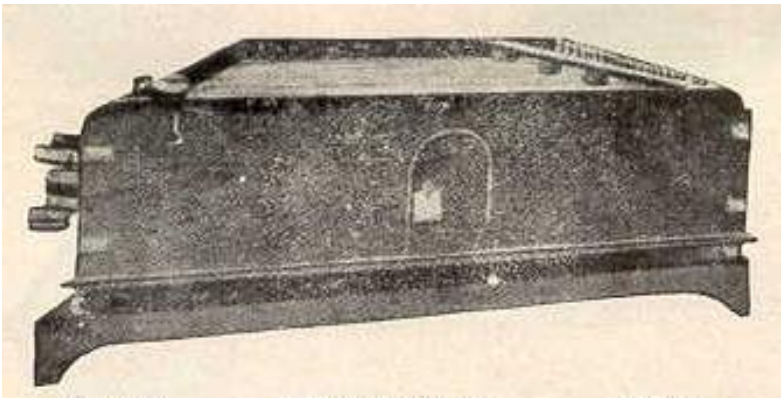
"It is an indication of the care with which the "culture of sound" is developed, for Hindus still believe that such precision in the repetition of exact intervals, over and over again, permits sounds to act upon the internal personality, transform sensibility, way of thinking, state of soul, and even moral character."

(source: **Decolonizing History: Technology and Culture in India, China and the West 1492 to the Present Day - By Claude Alvares** p. 73-74).

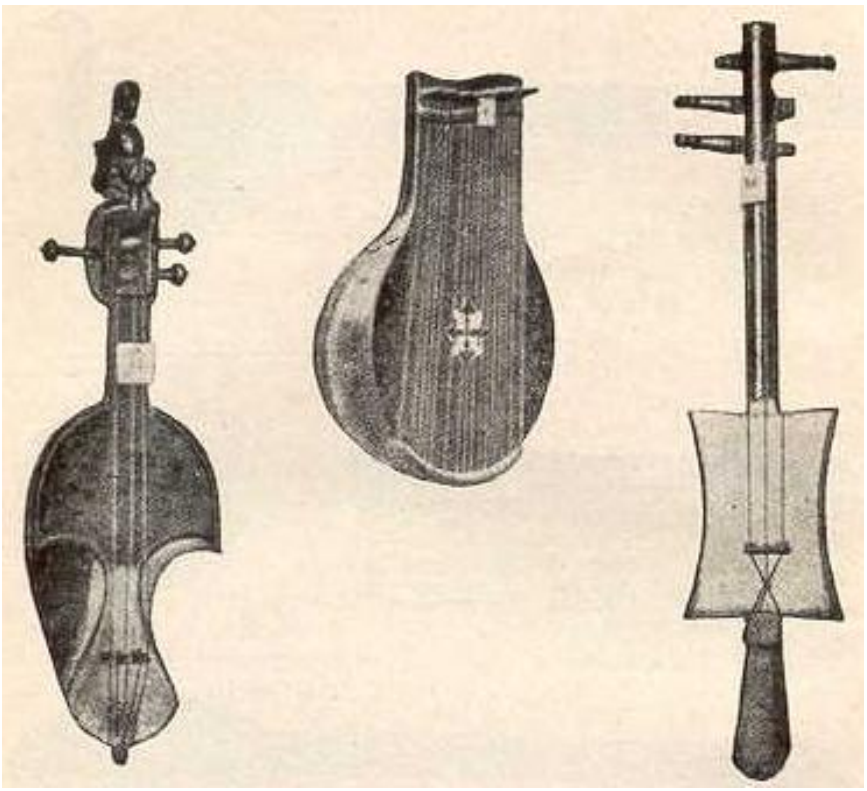
"In other words, **the Hindu has never divorced the physical from the spiritual**; these 'ancient physiologists' ascribed an ethical significance to physiological sensitivity. The aristocratic cult of kalokagathia, 'beautiful goodness', has never been abandoned in India, even if its metaphysic bears little resemblance to the kalokagathia of the ancient Greeks.

(source: **The Speaking Tree: A Study of Indian Culture and Society - By Richard Lannoy** p. 275).

Musical time in India, more obviously then elsewhere, is a development from the prosody and metres of poetry. The insistent demands of language and the idiosyncrasies of highly characteristic verse haunt the music, like a 'presence which is not to be put by.' 'The time-relations of music are affected both by the structure of the language and by the method of versification which ultimately derives from it.' says one student of Indian music from the west. Until late, there was practically no prose in India and everything had to be learnt through the medium of verse chanted to regular rules. Both in Sanskrit and in the vernacular all syllables are classified



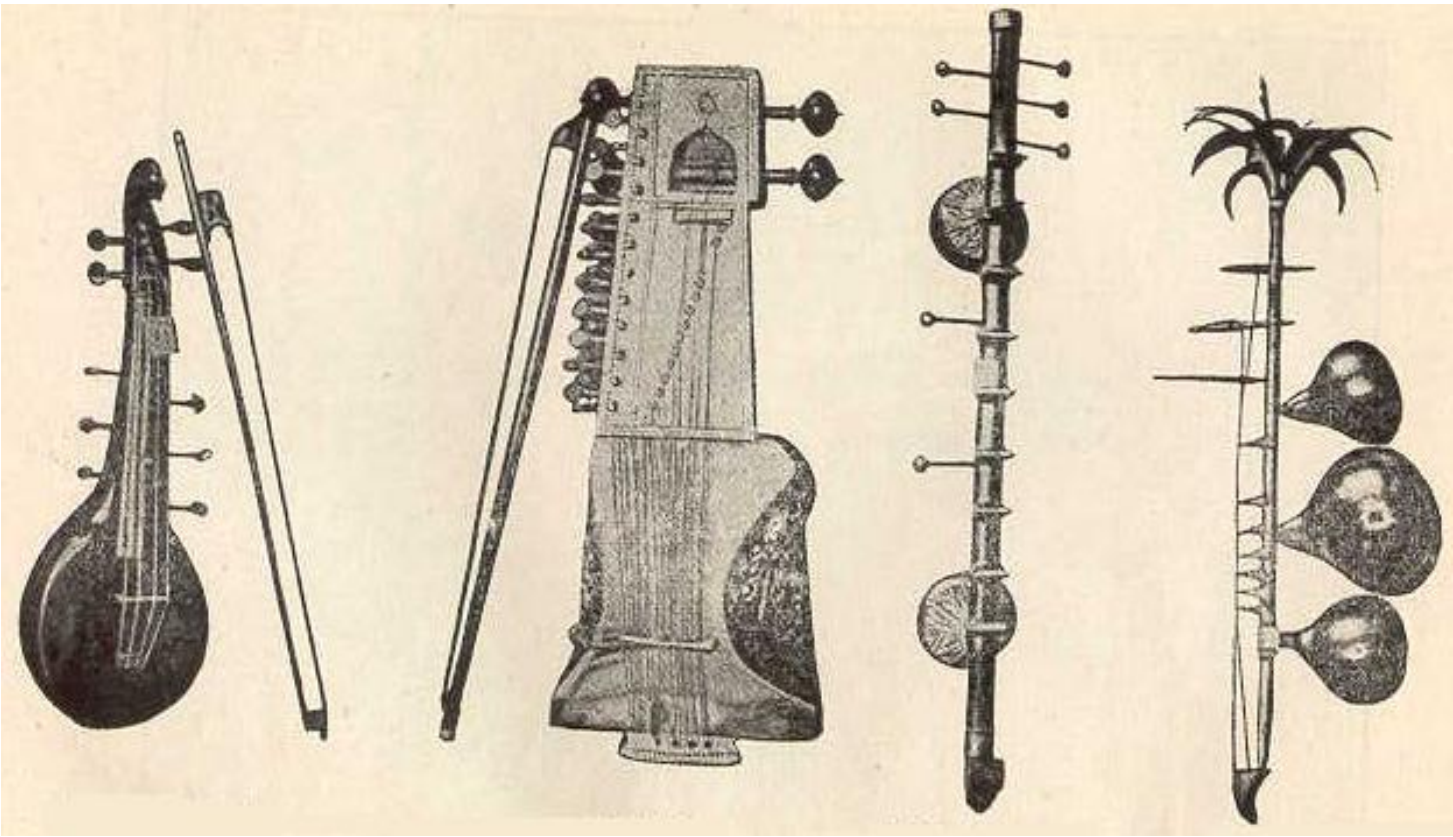
according to their time-lengths, the unit of time being a matra. Very short syllables of less than a matra also occur.



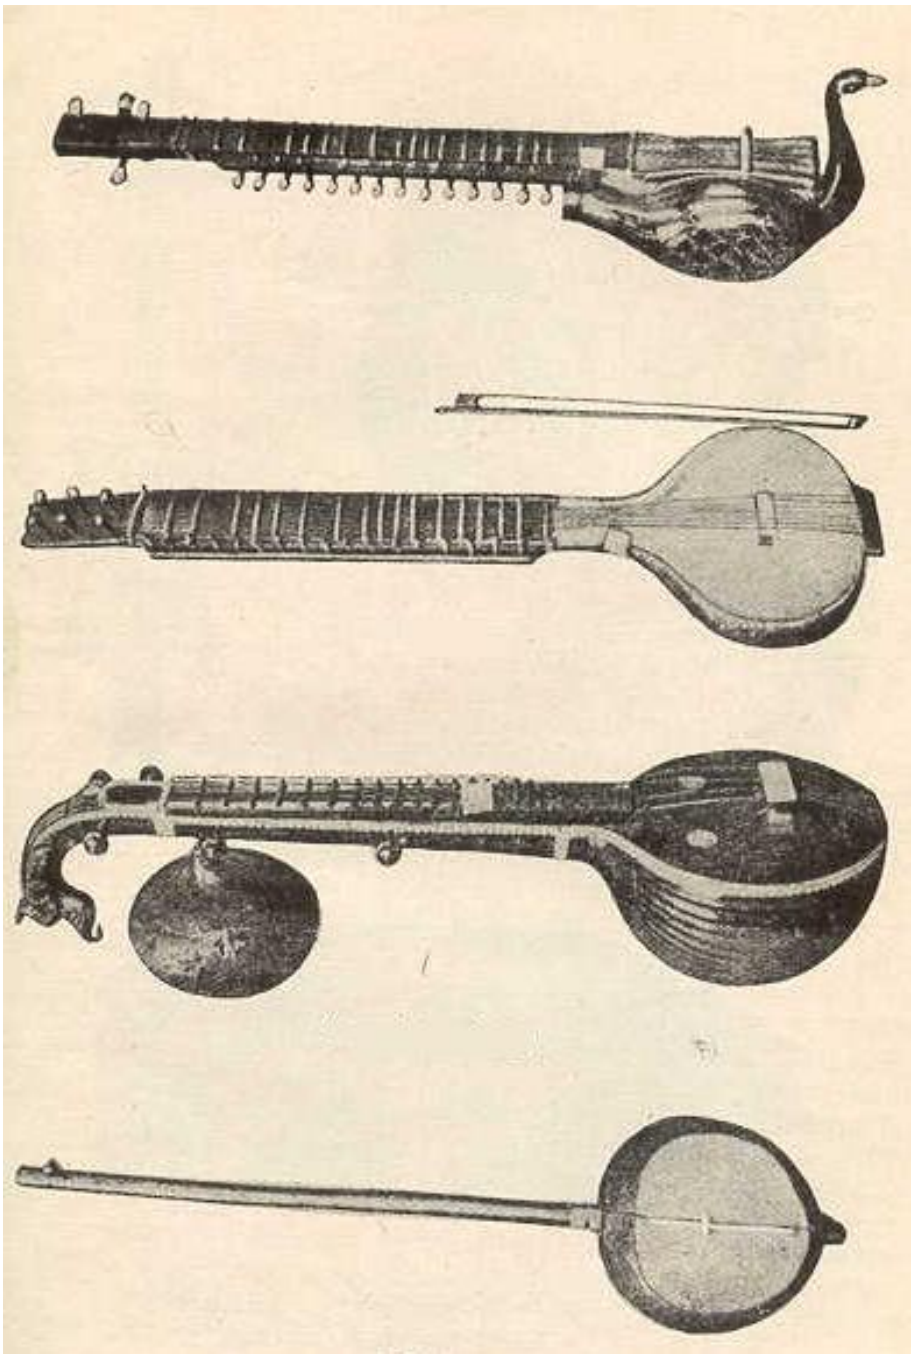
Great stress has always been laid by Indian grammarians upon giving 'the exact value' to syllables inverse; and as there is no accent at all in Indian verse the time-length is all important. **This may account for the great development of time-measures in Indian music.** **Rajah S M Tagore** says that the word tala refers to the beating of time by the clapping of hands. Sometimes it is also done by means of small hand-cymbals, which are called tala or kaitala or kartal (hand-cymbals).

Top of Page

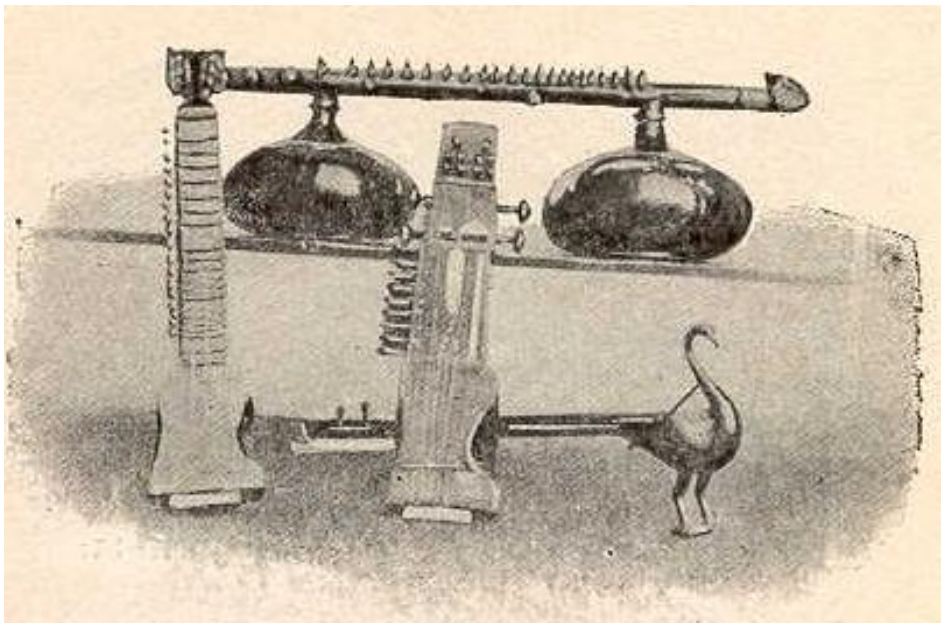
Musical Instruments and Sanskrit Writers on Music



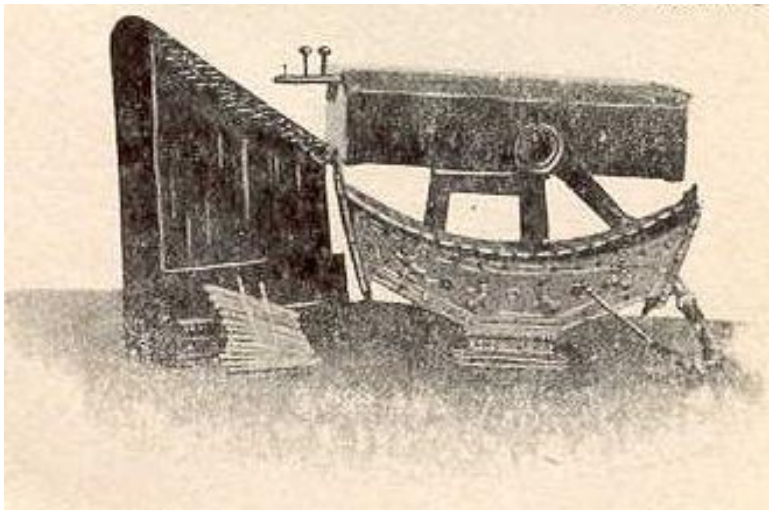
The **Vedic Index** shows a very wide variety of musical instruments in use in Vedic times. Instruments of percussion are represented by the **dundubhi**, an ordinary drum; the **adambara**, another kind of drum, **bhumidundubhi**, an earthdrum made by digging a hole in the ground covering it with hide; **vanaspati,** a wooden drum; **aghati,** a cymbal used to accompany dancing. Stringed instruments are represented by the **kanda-vina**, akind of lute; **karkari**, another lute; **vana**, a lute of 100 strings; and the **vina,** the present instrument of that name in India. **This one instrument alone is sufficient evidence of the development to which the art had attained even in those early days.** There are also a number of wind instruments of the flute variety, such as the tunava, a wooden flute; the nadi, a reed flute, bakura, whose exact shape is unknown. 'By the time of the Yajur Veda several kinds of professional musicians appear to have arisen; for lute-players, drummers, flute-players, and conch-blowers are mentioned in the list of callings.'



Kalyayana-vina *Sarinda* *Katyayana-vina* *Chikara*



That vocal music had already got beyond the primitive stage may be concluded from the somewhat complicated method of chanting the **Sama Veda**, which goes back to the Aryan age. These hymns of the Rig Veda and Sama Veda are the earliest examples we have of words set to music. The Sama Veda, was sung according to very strict rules, and present day Samagah - temple singers of the Saman - claim that the oral tradition which they have received goes back to those ancient times. The Chandogya and the Brihadaranyaka Upanishads both mention the singing of the Sama Veda and the latter also refers to a number of musical instruments.



Sarangi (Bengal) *Sarangi* *Mahati Vina* *Kinnari*

Mayuri Esraj Vina (Southern) Ektar

Group of stringed instruments: Dilruba, Bin Sarangi and Peacock sitar *Some ancient instruments: Svaramandala. Brahma cina, Kural and Bastram*

Drumming

The drum is one of the most important of Indian musical instruments. It provides the tonic to which all the other instruments must be tuned. It is a royal instrument having the right of royal honors. The drums used in India are innumerable. **Mrs. Mann** says: "The Indian drummer is a great artist. He will play a rhythm concerto all alone and play us into an ecstasy with it." "The drummer will play it in bars of 10, 13, 16, or 20 beats, with divisions within each bar flung out with a marvelous hypnotizing swing. Suggestions of such rhythm beaten out by a ragged urchin on the end of an empty kerosene oil-can first aroused me to the beauty and power of Indian music."

The Indian drummer can obtain the most fascinating rhythm from a mud pot, and some of them are great experts at this pot-drumming. The **mridanga** and **tabla** are both played in the same way, the only difference being that, in the case of the table, the two heads are on two small drums, and not on the same drum. The **Mridanga** or **Mardala** is the most common and probably the most ancient of Indian drums. It is said to be invented by Brahma to serve as an accompaniment to the dance of Shiva, in the honor of his victory over Tripurasura; and Ganesha, his son, is said to have been the first one play upon it. The word Mridanga or Mardala means 'made of clay' and probably therefore its body was originally of mud. Other drums include Pakhawaj, Nagara or Bheri or Nakkara, Dundubhi Mahanagar or Nahabet, Karadsamila, Dhol, Dhoki, Dholak and Dak. Damaru, Nidukku, or Budhudaka, Udukku, Edaka and many others.

***

In the **Ramayana** mention is frequently made of the **singing of ballads**, which argues very considerable development of the art of music. The poem composed by the sage Valmiki is said to have been sung before King Dasratha. The Ramayana often makes use of musical similes. The humming of the bees reminded him of the music of stringed instruments, and the thunder of the clouds of the beating of the mridanga. He talks of the music of the battlefield, in which the twanging and

creaking of the bows takes the place of stringed instruments and vocal music is supplied by the low moaning of the elephants. Ravana is made to say that "he will play upon the lute of his terrific bow with the sticks of his arrows." Ravana was a great master of music and was said to have appeased Shiva by his sublime chanting of Vedic hymns.

The **Mahabharata** speaks of seven Svaras and also of the Gandhara Grama, the ancient third mode. The theory of consonance is also alluded to.

The **Mahajanaka Jataka** (c. 200 B. C) mentions the four great sound (parama maha sabda) which are conferred as an honor by the Hindu kings on great personages. In these drums is associated with various kinds of horn, gong and cymbals. These were sounded in front of a chariot which was occupied, but behind one which was empty. The car used to go slowly round the palace and up what was called 'the kettle-drum road'. At such a time they sounded hundreds of instruments so that 'it was like the noise of the sea.' The Jataka also records how Brahmadatta presented a mountain hermit with a drum, telling him that if he beat on one side his enemies would run away and if upon the other they would become his firm friends.

In the Tamil books **Purananuru** and **Pattupattu** (c. A.D 100-200) the drum is referred to as occupying a position of very great honor. It had a special seat called murasukattil, and a special elephant, and was treated almost as a deity. It is described as 'adorned with a garland like the rainbow.' One of the poets tells us, marveling at the mercy of the king, 'how he sat unwittingly upon the drum couch and yet was not punished.' Three kinds of drums are mentioned in these books: the battle drum, the judgment drum and the sacrificial drum. The battle drum was regarded with same the veneration that regiments used to bestow upon the regimental flag. One poem likens the beating of the drum to the sound of a mountain torrent. Another thus celebrates the virtues of the drummer.

"For my grandsire's grandsire, his grandsire's grandsire.
Beat the drum. For my father, his father did the same.
So he for me. From duties of his clan be has not swerved.
Pour forth for him one other cup of palm tree's purest wine.."

The early Tamil literature makes much mention of music. The **Paripadal** (c. A.D 100-200) gives the names of some of the svaras and mentions the fact of there being seven Palai (ancient modes). The yal is the peculiar instrument of the ancient Tamil land. No specimen of it still exists today. It was evidently something like the vina but not the same instrument, as the poet **Manikkavachakar** (c. A. D 500-700) mentions both in such a way as to indicate two different instruments. Some of its varieties are said to have had over 1,000 strings. The The **Silappadigaram** (A. D. 300), a Buddhist drama, mentions the drummer, the flute player, and the vina as well as the yal, and also has specimens of early Tamil songs. This book contains some of the earliest expositions of the Indian musical scale, giving the seven notes of the gamut and also a number of the modes and ragas in use at that time. The latter centuries of the Buddhist period were more fertile in architecture, sculpture and painting than in music. The dramas of **Kalidasa** make frequent references to music and evidently the rajahs of the time had regular musicians attached to their courts. In the **Malavikagnimitra** a song in four-time is mentioned as a great feat performed at a contest between two musicians. The development of the drama after Kalidasa meant the development of music as well, as all Indian drama is operatic. 'The temple and the stage were the great schools of Indian music.'

The oldest detailed exposition of Indian musical theory which has survived the ravages of ants and the fury of men is found in a treatise called **Natya Sastra** or the science of dancing, said to have been composed by the **sage Bharata**. There are nine chapters of the Natya Sashtra that deal with music proper. These contain a detailed exposition of the svaras, srutis, gramas, murohhansas, jatis. A translation of a portion of this chapter appeared in Mr. Clement's Introduction to Indian Music, and there is a complete French translation by Jean Grosset.

The seventh and eighth centuries of our era in South India witnessed a religious revival associated with the **bhakti movement** and connected with the theistic and popular sects of Vishnu and Shiva. This revival was spread far and wide by means of songs composed by the leaders of the movement and so resulted in a great development of musical activity among the people generally and in the spread of musical education. **Sangita Makaranda**, said to be by Narada, but not Narada Rishi as his name is mentioned in the book, was probably composed between the eighth and eleventh centuries. He gives a similar account of the Gandhara Grama to that of Sangita Ratnakara. Musical sounds are divided into five classes according to the agency of productions, as nails, wind etc. The 18 Jatis of Bharata are given and he enumerates 93 ragas.

Some Ancient Musical Authorities

Among important landmarks of the literature on music must also be counted portions of certain Puranas, particularly the Vishnu **Dharmottara, Markandeya Purana** and **Vayu Purana**. The Hindus claim a great antiquity for these Puranas and

this seems to be corroborated by the technical terms used in reference to music. The Sanskrit authors on music can be divided into four main periods. The first period is those whose names are mentioned in the Puranans and in the Epics (Mahabharata and Ramayana), the second that of the authors mentioned in the early medieval works (Buddhistic period), the third period is that of the authors who wrote between the early medieval Hindu revival and the Muslim invasion, and the last or modern period that of Sanskrit writers under Muslim and European rule.

(Note: The Different Narada -s: There were probably three authors known by the name of Narada. One, the author of the Naradiya Shiksha. The Panchama Samhita and Narada Samhita are probably the work of the later Narada (Narada II), the author of the Sangita Makarnada.

Sanskrit authors on music can be divided into four main periods, according to Alain Danielou

First Period - ((The Vedic/Puranic/Epic Period)

Narada, Bharata, Nandikeshvara, Arjuna, Matanga, Kohala, Dattila, Matrigupta, and Rudrata and others.

Second Period

Abhinava Gupta, Sharadatanaya, Nanya Bhupala, Parshvadeva and Sharngadeva, and others.

Third Period

Udbhata, Lollata, Shankuka, Utpala Deva, Nrisimha Gupta, Bhoja King, Simhana, Abhaya Deva, Mammata, Rudrasena, Someshvara II, Lochana Kavi (Raga Tarangini), Sharngadeva (Sangita Ratnakara), Jayasimha, Ganapati, Jayasena, Hammira, Gopala Nayak and others.

Fourth Period

Harinayaka, Meshakarna, Madanapala Deva, Ramamatya (Svara-mela Kalanidhi), Somanatha (Raga Vibodha), Damodhara Mishra (Sangita Darpana), Pundarika Vitthala (Shadraga Chandrodya, Raga Mala, Raga Manjari), Somanatha, Govinda Dikshita, Basava Raja, and others.

***

The first North Indian musician whom we can definitely locate both in time and place is **Jayadeva**, who lived at the end of the 12th century. He was born at Kendula near Bolpur, where lived Rabindranath Tagore, the poet, laureate of Bengal and modern India. Jayadeve wrote and sang the **Gita Govinda**, a series of songs descriptive of the love of Krishna, and the bhakti movement. The Gita Govinda was translated by Sir Edwin Arnold under the name of The Indian Song of Songs. In

these songs Radha pours forth her yearning, her sorrow and her joy and Krishna assures her of his love.

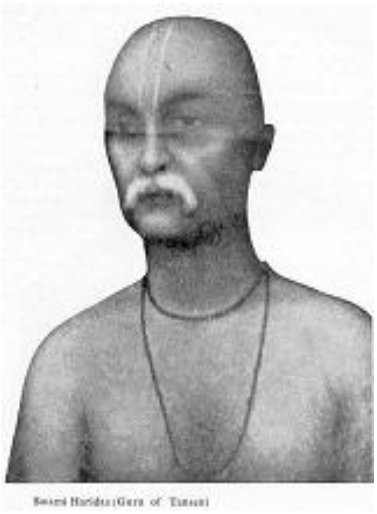
Sarangadeva - (1210- 1247 A D) one of the greatest of ancient Indian musical authorities and one who still inspires reverence in the minds of India's musicians. He lived at the court of the Yadava dynasty of Devagiri in the Deccan. at that time the Maratha Empire extended to the river Kaveri in the south, and it is probable that Sarngadeva had come into contact with the music of the south as well as the north. His work, the Sangita Ratnakara shows many signs of this contact. It is possible that he was endeavoring to give the common theory which underlies both systems.

Nayak Baiju, popularly known as Baijubawra

Gopala Nayaka or Bijubawara (1295-1315) a musician from the court of Vijayanagar.

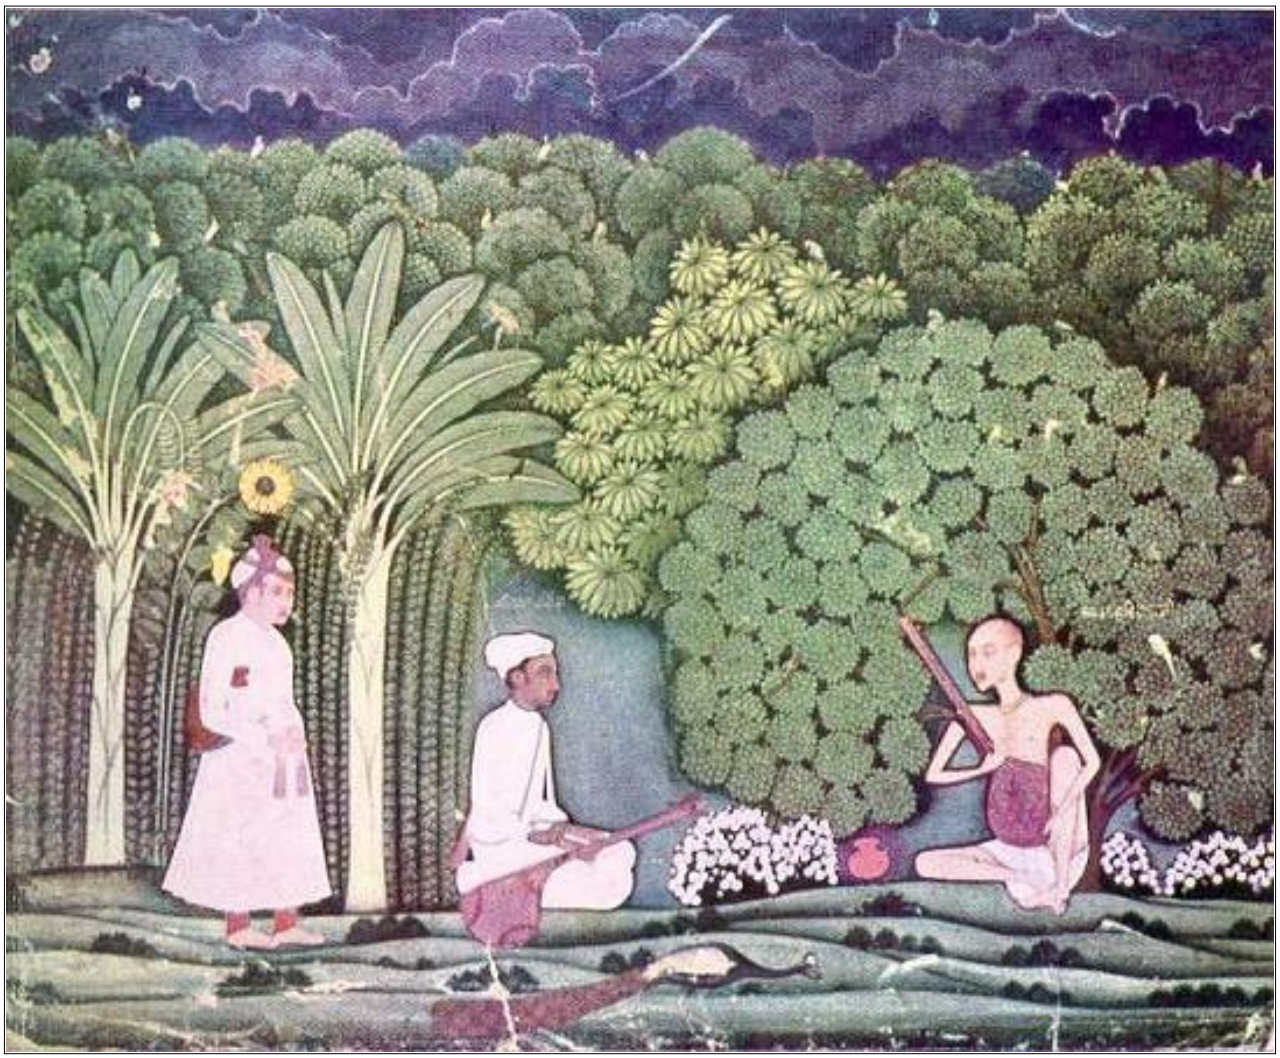
The 14th and 15th centuries are the most important in the development of the northern school. It was the time of the Muhammed conquest. Many of the emperors did a great deal to extend the practice of music of the earlier Hindu rajahs, and most of them had musicians attached their courts. Amir Khusru was a famous singer at the court of Sultan Alla-ud-din (A D 1295-1316). He was not only a poet and musician, but also a soldier and statesman. There is a story told of a contest between Amir Khusru and Gopal Naik, a musician from the court of Vijayanagar. While Gopal was singing a beautiful composition, Khusru hid under the throne of the king and afterwards imitated all the beauties of Gopal's melodies. Muhammadan historians relate that, when the Moghuls, completed the conquest of the Deccan, they took back with them to the north many of the most famous southern musicians, in the same way that they took toll of the Indian architects and sculptors for their new buildings.

Bharata, Iswara, Parana and Narada were among the great Hindu musicians of ancient India. In more recent times, however, Naik Gopal and Tansen have been the most celebrated ones. About Naik Gopal, **Arthur Whitten** says: "Of the magical effect produced by the singing of Gopal Naik and of the romantic termination to the career of the sage, it is said that he was commanded by Akbar to sing the raga deepak, and he, obliged to obey, repaired to the river Jumna, in which he plunged up to his neck. As he warbled the wild and magincal notes, flames burst from his body and consumed him to ashes." He adds: "It is recorded of Tansen that he was also commanded by the Emperor Akbar to sing the sri, or night raga, at midday, and the power of the music was such that it instantly became night, and the darkness extended in a circle around the palace as far as his voice could be heard." India, it seems, produced Orpheuses even so late as the 17th century A.D.



(source: **Hindu Superiority - By Har Bilas Sarda** p. 373-374).

Dr. Tennet says: "If we are to judge merely from the number of instruments and the frequency with which they apply them, the Hindus might be regarded as considerable proficients in music."



(source: **Music of the Ancients - By Arthur Whitten** p. 21).

Lochana Kavi - The Ragatarangini, was composed by Lochana Kavi and probably belongs to this period. The major portion of this work is devoted to the discussion of a number of songs by a poet named Vidyapati, who flourished in the 15th century at the court of the Raja Siva Singh of Tirhut. The author also describes the current musical theories of the day, and groups the ragas under twelve thats or fundamental modes.

Chaitanya (A.D. 1485-1533) - The development of the bhakti revival in Northern India and Bengal under Chaitanya was accompanied by a great deal of musical activity, and it was at this time that the popular musical performances, known as Sankirtan and Nagarkirtan were first started.

Swami Haridas - was a great Hindu saint and musician who lived on the banks of Brindaban, the center of the Lord Krishna on the banks of the Jamuna in the reign of Akbar. He was considered the greatest musician of his time. **Tan Sen**, a Gaudhiya brahmin and the celebrated singer of Akbar's court, was one of his pupils. Many tales are told about Tan Sen and Haridas. One of these tells how the Emperor after one of his performances asked him if there was anyone in the world who could sing like him. Tan Sen replied that there was one who far surpassed him. At once the Emperor was all anxious to hear this other singer and when told that he would not even obey the command of the Emperor to come to court, he asked to be taken to him. It was necessary for the Emperor to go in disguise as the humble instrument carrier to his singer. They came to the hermitage of Haridas Swami on the banks of the Jamuna, and Tan Sen asked him to sing but he refused. Then Tan Sen practized a little trick and himself sang a piece before his old master, making a slight mistake in doing so. The master at once called his attention to it and showed him how to sing it properly, and then went on in a wonderful burst of song, while the Emperor listened enraptured. Afterwards, as they were going back to the palace, the Emperor said to Tan Sen, "Why cannot you sing like that?" "I have to sing whenever my Emperor commands." said Tan Sen, "but he only sings in obedience to the inner voice."

Akbar and Tansen visiting Swami Haridas, Kishangarh, second half of the 18th century (courtesy: National Museum, New Delhi).

Raja Man Singh of Gwalior, one of the greatest of Akbar's ministers, was also a great patron of music and is have said to have introduced the Dhrupad style of singing. The Gwalior court has maintained its high musical traditions to the present day.

Mirabai - The heroic Mirabai (c. 1500) wife of a prince of the Udaipur clan and famous poetess and musician, and **Tulsi Das**

(1584), the singer and composer of the Hindi Ramayana, are representatives of musical culture in North India.

Pundarika Vitthal - another musician during Akbar's reign. He lived at Burhanpur in Khandhesh and may have been asked to go to Delhi when Akbar took over Khandhesh in 1599. Pundarika wrote four works: Shadragachandrodaya, Ragamala, Ragamanjari, and Nartananirnaya: these have been recently discovered in the State Library of Bikanir.

During the reign of Aurangzeb music went out of favor in the royal court. A story is told of how the court musicians, desiring to draw the Emperor's attention to their distressful condition, came past his balcony carrying a gaily dressed corpse upon a bier and chanting mournful funeral songs. Upon the Emperor enquiring what the matter was, they told him that **music had died from neglect** and that they were taking its corpse to the burial ground. He replied at once, "Very well, make the grave deep, so that neither voice nor echo may issue from it."

Raga and Jazz

The **raga** is the core of the Indian classical music system. **The Raga Guide** begins by attempting to explain what has always been elusive. As to the question, "What is a raga?," it says, "Virtually every writer on Indian music has struggled with this fundamental question." The guide ventures, "A raga can be regarded as a tonal framework for composition and improvisation; a dynamic musical entity with a unique form, embodying a unique musical idea." A raga is not merely a scale (as in Western music), or a tune or song. A raga is built upon a scale and contains a tune, but it encompasses and implies much more.

Indian music has always placed emphasis on vocal expression over instrumental. The best instrumental is thought to be that which renders most faithfully the subtleties of the human voice. Jazz is often also conceived of vocally, even purely instrumental jazz. **Indian classical music is melodical, whereas Western music is harmonical.** Music of the world began as a melodic stream, which later branched out into harmonics. Although Indian musicians knew the principles of harmony, they chose to develop their systems along the lines of melody: one-line, or one dimensional, "horizontal" music, which lends itself to meditative individual expression. Here we find a similarity to jazz which gives a license for long solo improvisation.

Because Indian music is modal, it knows no change of keys but sticks to one steady ground note. Very important to Indian music are embellishments, tone colors, and intervals that do not exist in well-tempered Western music which allows expression only through improvisation. Jazz is also modal and it does not limit itself to the tones of Western tuning. In theory Indian octaves consist of 66 microtones, but in practice there are 22 tones per octave, which is nearly twice the number found in the Western octave. In many freestyle jazz improvisations, one can also find the use of this many tones.

The French ethnomusicologist **Alain Danielou**, one of the West's top experts in the field of Indian music, once said: "Two basic traits are characteristic of music in India. For one thing, in all its various forms its basic concept is vocal; for another thing, Indian music is modal music in the true sense; it knows no change of keys, that is, it sticks to one steady, unvarying ground tone...A crucial role is played by embellishments, tone colors, and above all, by intervals that do not exist in Western well-tempered music. A music created from this vantage point...can find its musical expression only in improvisation."

Danielou's statements show immediately how **many similarities exist between jazz and Indian music**. Jazz, too is vocally conceived, even in its instrumental forms. Nor does jazz limit itself to the tone reservoir of Western tempered tuning. Jazz musicians - singers and instrumentalists alike have never limited themselves to the well-tempered scales. Theoretically, the Indian octave consists of 66 shrutis (microtones); in musical praxis there are 22 tones per octave, almost twice the number in the Western octave! Jazz and fusion guitarist Larry Coryell was completely right when he said, "I hear a lot of blues in Indian music."

The rhythmic possibilities of India's music have been attractive to jazz musicians. **Trumpeter Don Ellis** (1934-1978) was one of the first to emphasize the similarities between jazz and Indian music. In Jazz he wrote," Jazz musicians like to think of themselves as masters of rhythm (and in comparison to European music they are in the forefront) but.....how crude and primitive the conventional jazz musician's grasp of rhythm is **in comparison with Indian music...And jazz musicians who desires to really acquire a grasp of rhythm should, if at all possible, study Indian music."**

It was also Don Ellis who pointed out that Indian music is played with a different - non-Western - concept of time. The mysteries of Indian music - its talas, its rhythmic sequences - incomprehensible for Western listeners - can be as long as 108 beats. Tala: the word combines the two syllables ta (from tandava, Shiva's cosmic dance) and la (from Lasya, the name of Shiva's dance partner), implying cosmic musical union. Ragas are not keys in the Western sense, although ragas combine all those things that in Western music break down into theme, key, tuning, phrasing, form, and even composition. **The ancient Sanskrit sages gave the following definition: Ranjayati iti ragah ("that which colors the spirit is a raga").** According to Ravi Shankar, a raga is "discovered as a zoologist may discover a new animal species or as a geographer may discover a new island. " In other words, a raga - each raga exists from the beginning; it is a musical archetype. In theory the number of raga is unlimited. In South India alone, there are 5,831 ragas known by their individual titles. Even an average musician is expected to have mastered at least seventy to eighty ragas.

A composition or melody in classical Indian music is called a raga or in the feminine, ragini. Raga means that which gives pleasure. Ragas and ragini are formed by the combination of the seven basic notes on the scale: SA, RE, GA, MA, PA, Dha, and NI. Each raga and ragini is considered to be a person. **The rishis perceived that behind everything is personality; consciousness has personality.** The ragas are also associated with a particular time of day and often to a particular season. Within the guidelines of the raga system, musicians uniquely express themselves. In India over the centuries, there evolved almost 6,000 different ragas. The system is an extremely flexible one, as is jazz among the rest of Western music.

Ragas combine everything that Western music breaks down into them, key tuning, phrasing, form, and even composition. But they are not thought of as compositions by their would-be musical composers. According to **Pandit Ravi Shankar**, a raga is "discovered as a zoologist may discover a new animal species, or a geographer may discover a new island. They are better understood as musical archetypes. Raga is accompanied by rhythmic time cycles. These time cycles are known as matra and can be as long as 108 beats. Although the Western ear is lost, the trained ear is following with a subtle excitement the longer consequences, waiting for the rhythmist to complete the cycle and meet with the other

Indian music is played with a much different conception of time than Western music. Sometimes one piece an last an entire night.

Joachim-Ernst Berendt (1922-2000) author of **Nada Brahma: The World is Sound** (Inner Traditions Intl Ltd ISBN 0892813180) and **The Jazz Book**. In the later book, he has demonstrated that "a non-Western concept of time plays a decisive role in jazz." According to Berendt, "Jazz is played with two different concepts of time, one Western and one non-Western."

There were many musicians who became caught up in the mystery of Indian music, and of course the beat '50s poets as well, but of all of them, John Coltrane played the highest note. Coltrane is perhaps the best example of how India's spiritual vibration affected jazz musicians spirituality. Coltrane's life was deeply moved by Indian spiritual thought, as were those with whom he played. His albums, beginning as early as 1961 with **India**, followed by **Meditation: A Love Supreme**, and **Om**, are examples of his influence on his music.

John Coltrane (1926-1967) Pioneering American jazz artist.

Non-European religion especially Hinduism long recognized in music a potential for the ecstatic spiritual experience. During the seven year period from 1957 to 1964, Coltrane began to become interested in nonwestern music and philosophy. He explored West African music as well as the music of India and began to read books about Hinduism. "Resolution" begins with Coltrane's introduction of the theme, followed by a series of variations that develop in a manner that has more in common with the Indian raga than with the traditional jazz solo development.

As he explored world religions, Coltrane so also explored world music. In 1961 he began listening closely to Indian music, especially the sitarist Ravi Shankar. Coltrane's interest in scales and modes from India and elsewhere was part of his broader mission to discover the universalities in music. Coltrane recorded a track titled "India". "India" is characterized by a musical chant that never moves from the G pedal point, much like the North Indian music he was listening to at the time. Jazz scholars have found that the probable source of the tune is a recorded Vedic chant that seems to have been issued around that time. The melody of the singer on the recording is nearly identical to that of Coltrane.

Well-known practitioners and dabblers in aspects of Hinduism have included **Alice Coltrane, Mahavishnu John McLaughlin, Narada Michel Walden, Carlos "Devadip" Santana, Charles Mingus, The Beatles, Boy George, Madonna** and **Sting.**

The popular Hare Krishna mantra was heard for months over the radio within ex-Beatle **George Harrison's** number one single, "**My Sweet Lord.**"

(source: **Ancient Wisdom For Modern Ignorance - By Swami B. V. Tripurari** p.).

In reference to music, spirituality is Nada Brahma. Tenor saxophonist Nathan Davis said: "What we really mean by saying spirituality is religiousness." **James Baldwin** wrote that anyone who really wants to become a moral humane being must first of all "free himself from the taboos, the misdeeds and the hypocrisy of the Christian Church..The concept of God is valid and useful only if it can make us greater, freer and more capable of love."

John Coltrane's musical development was driven forward, motivated, supplemented, enlarged, and enriched by its interaction with his spirituality. He said: "My goal in meditating through music remains the same."

John McLaughlin, when asked for the beginning of his musical interest in India, first speaks of spiritual things and then of musical matters: **"I opened myself to Indian music, because I felt a tie with Indian culture."**

For many jazz musicians and for the new species of "world musician" in general, Indian music is a memory of what music should actually be and what it was in the beginning.

Colonialist thinking of Indian music

A brief look at the position of the musical cultures of Asia in the history of music - primarily the cultures of India. Indian music is classical, and it is a sign of "colonialist" thinking when they are referred to as "folklore." One often hears such nonsense when Indian music is performed; someone will say that Hariprasad Chaurasia, for instance, the master of the "divine flute," plays "Indian folklore," In a way, that is the same as calling a Mozart divertimento "Salzburg folklore," or a Verdi opera "Milanese folklore," or a Gershwin song "American folklore."

To call classical Indian music "folklore" is a sign of arrogance, making it sound as if classical music existed only in the European tradition, while all other traditions have folk music.

Many of the great musical cultures outside of Europe and North America not only are of equal rank with Western music, but surpass it in certain fields. In terms of rhythm, for example, the music of Africa and that of India are far richer than almost anything brought forth in the West. Consider the talas, the rhythmic series of Indian music. Even long talas of fifteen or nineteen beats, structured in the most complex way, can be followed beat for beat not only by the musicians but also by many listeners in India. Western audiences, however, become unsure as soon as they are faced with rhythms more complex than simple three-quarter or four-four time, and Western musicians become uncertain about meters of more than five or seven beats.

The music of India is richer in tonality than the music of the West, because it uses microtones. Its tone repertoire is almost twice as large as that of our music. The ears of music lovers in India have not yet been spoiled by our "well-tempered"

scale.

Views about Hindu Music

Music has been a cultivated art in India for at least three thousand years. The chant is an essential element of Vedic ritual; and the references in later Vedic literature, the scriptures of Buddhism, and the Hindu epics show that it was already highly developed as a secular art in centuries preceding the beginning of the Christian era. Its zenith may perhaps be assigned to the Imperial Age of the Guptas - from the fourth to the sixth century A.D. This was the classical period of Sanskrit literature culminating in the drama of Kalidasa; and to the same time is assigned the monumental treatise of Bharata on the theory of music and drama. The cosmological aspect in Indian music, unlike that in Western counterpart, is of great importance. Indian ragas are to be played at specified times, such as in the morning or evening, or during spring or autumn etc.

There is much that is common to both the Hindu and European systems. Arthur Witten writes: "Their (Hindus) scale undoubtedly resembles our diatonic mode, and consists of seven sounds, which are extended to three octaves, that being the compass of the human voice. Their voices and music, like ours, are divided into three distinct classes. The bass, called odarah, or lowest notes; the tenor, called madurrah, or middle notes; the soprano, called the tarrah, or upper notes. The similarity of the formation of the ancient Hindu scale to our modern system is noteworthy. We name the sounds of our scales: Doh, Ray, Me, Fah, Sol, La, Te. That common in India is: Sa, Ray, Ga, Ma, Pa, Dha, Ne. The reason of this similarity is evident.

Amir Khusrow (1234-1325) poet, historian, and musician, who called himself a "Hindu Turk" was passionately involved with Indian music. He wrote:

"Indian music, the fire that burns heart and soul, is superior to the music of any other country."

(source: **Hinduism and Secularism: After Ayodhya - edited by Arvind Sharma** p. 185).

Sir William Wilson Hunter (1840 -1900) says:

"A regular system of notation was worked out before the age of Panini, and seven notes were designated by their initial letters. This notation passed from the Brahmins through the Persians to Arabia, and was thence introduced into European music by Guido d'Arezzo at the beginning of the eleventh century."

According to **Albrecht Weber** (1825 -1901) "According to **Von Bohlen** and **Benfrey**, this notation passed from the Hindus to the Persians," and from these again to the Arabs, and was introduced into European music by **Guido D'Arezzo** at the beginning of the 11th century."

Strabo, the Greek historian wrote: "Some of the Greeks attribute to that country (India) the invention of nearly all the science of music. We perceive them sometimes describing the cittiara of the Asiatics and sometime applying to flutes the epithet Phrygian. the names of certain instruments, such as nabla and others, likewise are taken from barbarous tongues."

Colonel James Tod says: "This nabla of Starbo is possible the tabla, the small tabor of India. If Strabo took his orthography from the Persian or Arabic, a single point would constitute the difference between the N (nun) and the T (te).

(source: **Hindu Superiority - By Har Bilas Sarda** p. 371- 373).

Sir William Jones foremost Oriental scholar, who went to India in 1794, wrote **On the Musical Modes of the Hindus**, say:

"The Hindu system of music has, I believe, been **formed on truer principles than our own**; and all the skill of the native composers is directed to the great object of their art, the natural expression of strong passions, to which melody, indeed, is often sacrificed, though some of their tunes are pleasing even to an European ear."

"As to the notation, since every Indian consonant includes, by its nature, the short vowel a, five of the sounds are denoted by single consonants, and the two others have different short vowels, taken from their full names; by substituting long vowels, the time of each note is doubled, and other marks are used for a further elongation of them. The octaves above and below the mean scale, the connexion and accerration of notes, the graces of execution, or manner of finger in the instrument, expressed very clearly by small circles and eclipses, by little chains, by curves,

Ragini Todi, Malwa, late 17th century A.D. Legend has it that wild deer would come from the forest enchanted by the sound of the vina.

H T Coleman writes, "An account of the state of musical science amongst the Hindus of early ages and a comparison between it and that of Europe is yet a desideratum in Oriental literature. From what we already know of the science, it appears to have attained a theoretical precision yet unknown to Europe, and that too in a period when even Greece was little removed from barbarism."

Coleman has written in his book, Hindu Mythology: "Of the Hindu system of music the excellent writer whom I have before mentioned (Sir William Jones), has expressed his belief that it has been formed on better principles than our own."

(source: **Hindu Mythology - By H. T. Coleman** preface. p. ix).

Lady Anne Campbell Wilson author of **After five years in India, or, Life and work in a Punjaub district**, says: "An eminently poetical people," as the ancient Hindus were, could not but have been eminently musical also. "The people of India are essentially a musical race.....To such an extent is music an accompaniment of existence in India, that every hour of the day and season of the year has its own melody."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 366).

Dr. Ananda Coomaraswamy (1877-1947) the late curator of Indian art at the Boston Museum of Fine Arts, and author of **The Dance of Shiva: Essays on Indian Art and Culture,** has written:

"Music has been a cultivated art in India for at least three thousand years. The chant is an essential element of Vedic ritual; and the references in later Vedic literature, the epics, the scriptures of Buddhism, show that it was already highly developed as a secular art in centuries before the beginning of the Christian era. Its zenith may perhaps be assigned to the Imperial age of the Guptas - from the 4th to the 6th century A.D. This was the classic period of Sanskrit literature, culminating in the drama of Kalidasa; and to the same time is assigned the monumental treatise on the theory of music and drama."

"..it reflects emotions and experiences which are deeper, wider and older than the emotion or wisdom of any single individual. Its sorrow is without tears, its joy without exultation and it is passionate without any loss of serenity. It is in the deepest sense of the words all-human."

(source: **The Wisdom of Ananda Coomaraswamy - presented by S. Durai Raja Singam** 1979 p. 84 and **The Dance of Shiva - By Ananda Coomaraswamy** p. 94).

J. T. Coker

"Music has been a cultivated art in India for at least three thousand years. It flows from the essential element of chant in ancient Vedic religious expression. More than any other musical form, the Indian *raga* tradition structurally and acoustically corresponds to and embodies the spiritual/religious experience. It offers a direct experience of the consciousness of the ancient world, with a range of expression rarely accessible today. All Indian instruments are played as extensions of the ultimate, because most natural, instrument -- the human voice -- that chants the sacred poems, mantras, and invocations of the gods. "

"The European musical scale has been reduced to twelve fixed notes by merging close intervals such as D sharp and E flat -- a compromise of necessity in the development of the mathematical harmony that made possible the triumphs of Western orchestration, causing the Western keyboard, unlike instruments from other musical cultures, to be inherently "out of tune. **"We can hear in Indian music the richest correlation of sound with the origins and manifestations of spiritual consciousness.** The idea of nonmanifest sound -- the essence in the interval between notes -- is akin to the New Testament conception of the Word, and underlies and pervades the music. It lies beneath all that is manifest in nature, cosmic and microcosmic, and realizes itself as the multiplicities and differentiations of existence."

(source: **A Handful of Beauty: Music as a Vehicle of Spirit - by J. T. Coker Sunrise magazine, February/March 1991 Theosophical University Press**).

Music in India has a history of at least three thousand years. The Vedic hymns, like all Hindu poetry, were written to be snug; poetry and song, music and dance, were made one art in the ancient ritual. Sangita, the Indian tradition of music, is as old as Indian contacts with the Western world, and it has graduated through various strata of evolution: primitive, prehistoric, Vedic, classical, mediaeval, and modern. It has traveled from temples and courts to modern festivals and retaining a clearly recognizable continuity of tradition.

German author **Albrecht Weber** writes in his book **The history of Indian literature** (p. 27):

"The Hindus scale - Sa, Re, Ga, Ma, Pa, Dha, Nee has been borrowed by the Persians, where we find it in the form of do, re, ma, fa, so, le, ci. It came to the West and was introduced by **Guido d' Arezzo** in Europe in the form of do, re, mi, fa, sol, la, ti....even the 'gamma' of of Guido (French gramma, English gamut) goes back to the Sanskrit grammar and Prakrit gamma and is thus a direct testimony of the Indian origin of our European scale of seven notes."

More information on how the Indian system of music traveled to Europe is provided by **Ethel Rosenthal's** research in her book, **The Story of Indian Music** and its Instruments, on page 3, in which she observes, "In **The Indian Empire, Sir William Wilson Hunter** (1840-1900) remarked that:

"A regular system of notation had been worked out before the age of Panini and the seven notes were designated by their initial letters. **This notation passed from the Brahmins through the Persians to Arabia, and was then introduced into European music by Guido d' Arezzo at the beginning of the 11th century...**...Hindu music after a period of excessive elaboration, sank under the Muhammadans into a state of arrested developments....."

Relief from Sharahat (2nd century B. C) arched harps and drums *Relief from Gandhara (c.100 A.D. with lute).*

Sir William Wilson Hunter (1840-1900) further observes, "Not content with the tones and semi-tones, the Indian musicians employed a more minute sub-division, together with a number of sonal modifications which the Western ear neither recognizes or enjoys. Thus, they divide the octave into 22 sub-tones instead of 12 semi-tones of the European scales. The Indian musician declines altogether to be judged by the new simple Hindu airs which the English ear can appreciate."

The two phenomena, which have already been stated as the foundation of musical modes, could not long have escaped the attention of the Hindus, and their flexible language readily supplied them with names for the seven Swaras, or sounds, which they dispose in the following order: Shadja, pronounced Sharja, Rishabha, Gandhara, Madhyama, Pachama, Dhaivata, Nishada, but the first of them is emphatically named Swara, or the sound, from the important office, which it bears in the scale; and hence, by taking the seven initial letters or syllables of those words, they contrived a notation for their airs and at the same time exhibited a gamut, at least as convenient as that of Guido: they call it Swaragrama or Septaca, and express it in this form:

Sa, ri, ga, ma, pa, dha, ni,

three of which syllables are, by a singular concurrence exactly the same, though not all in the same places, with three of those invented by David Mostare, as a substitute for the troublesome gamut used in his time, which he arranges thus: Bo, ce, di, ga, lo, ma, ni.

(source: **The Story of Indian Music - By Ethel Rosenthal** p. 3 and 177-178).

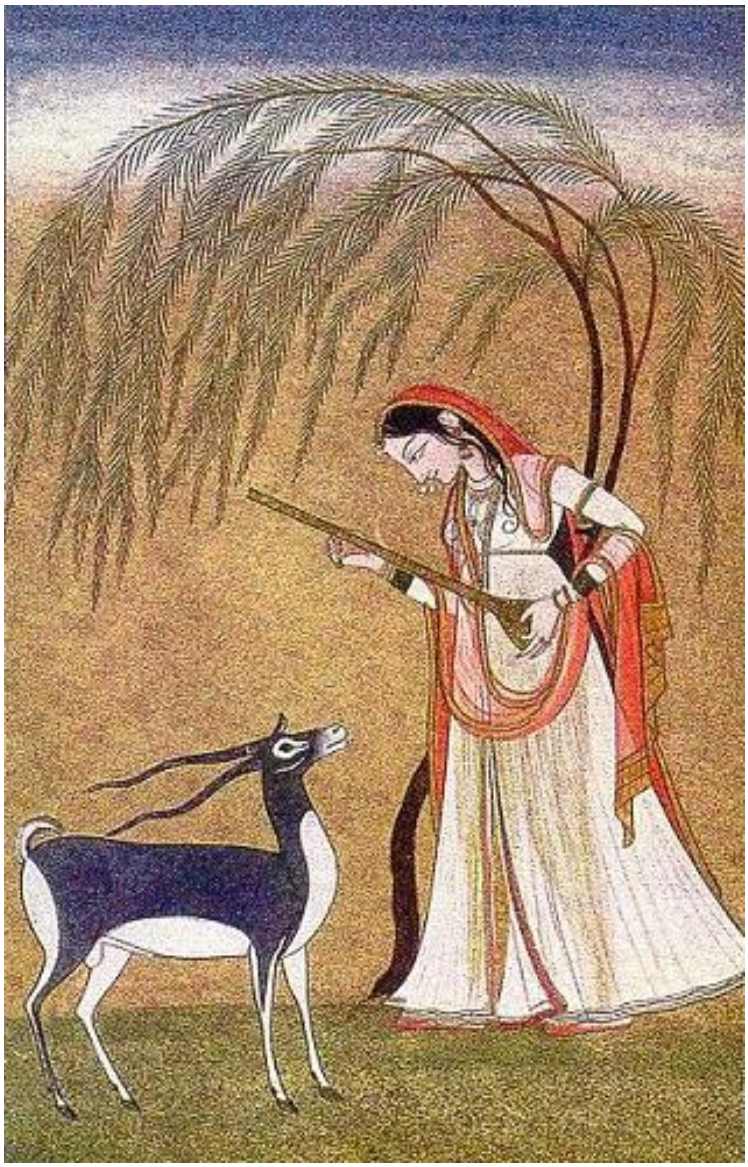
Regarding the growth and development of music in India, **Yehudi Menuhin** (1916 -1999) the well known violinist who visited India (1952) writes in an American literary magazine The Saturday Review of Literature that he found:

"there was so much new and satisfying to him that in India the equilibrium of life is better balanced than elsewhere, a greater unity of thought and feeling prevail than in the West." In his view Indian music, culture and philosophy "are quite sufficient, soundly conceived and adequate for the needs not only of Indian but capable of being beneficial if adopted in a wider sphere of humanity. Indian music is a traditional crystallized form of expression in which the performers and auditors partake of the resignation of environment and fact. It invites to attain a sense of meditation, of oneness with God."

(source: **Ancient Indian Culture At A Glance - By Swami Tattwananda** p. 147-148).

The **Sakuntala** furor has lasted till almost today. One of the noblest "overtures" in European music is the **Sakuntala overture** of the Hungarian composer **Carl Goldmark** (1830-1915).

(source: **Creative India - By Benoy Kumar Shenoy** p. 110).



The Hindus first developed the science of music from the chanting of the Vedic hymns. The Sama Veda was especially meant for music. And the scale with seven notes and three octaves was known in India centuries before the Greeks had it. Probably the Greeks learnt it from the Hindus. It is interesting to know that German composer, **Richard Wagner** was indebted to the Hindu science of music, especially for his principal idea of the "leading motive"; and this is perhaps the reason why it is so difficult for many Western people to understand Wagner's music. He became familiar with Eastern music through Latin translations, and his conversation on this subject with **Arthur Schopenhauer**. (please refer to **Quotes1-20** page for more on Schopenhauer).

(source: **India And Her People - By Swami Abhedananda** - p.221).

William Smythe Babcock Mathews (1837-1912) author of **Popular History of the Art of Music**

"**Hindoos carried the theory of music to an extremely fine point,** having many curious scales, some of them with 24 divisions in an octave. However 22 was the usual number. **The pitch of each note in every mode was accurately calculated mathematically** and the frets of the VeeNaa located thereby, according to very old theoretical work by one with name Soma, written in Sanskrit as early as 1500 BC."

(source: **Popular History of the Art of Music - By W. S .B. Mathews** Publisher: Clayton F. Summy Date of Publication: 1906).

As **M. Bourgault Ducondray** (1840-1910) writes: "The Hindu music will provide Western musicians with fresh resources of expression and with colors hitherto unknown to the palate of the musicians." It seems **Richard Wagner** got the idea of leading motive from India through Latin translations. The Gregorain mode in Western music introduced by Pope Gregory, the Great, are of Indian inspiration, which he got when he was ambassador at Constantinople. Indian music has ardent admirers in the West. Romain Rolland told Dilip Kumar Roy that by his capacity for continuous improvisation, the executants in Indian music was always a creator, while in European music he was only an interpreter. **George Duhamel**, (1844-1966) the eminent French author and critic, told Roy that Indian music was "indeed a novel but delightful experience with me. **The music of India is without doubt one of the greatest proofs of the superiority of her civilization."**

Leopold Stotowski, Yehudi Meuhudin and others have spoken in glowing words of the subtle intricacies of Indian rhythm from which the West has much to learn. Ravi Shanker has held spell-bound many a Western audience, by playing on his Sitar.

(source: **The Soul of India - By Satyavarta R. Patel** p. 45-48).

Count Hermann Keyserling (1880-1946) philosopher, author, public speaker, pointed out about Indian music that: "Indian music encompasses an immensely wide world. when listening to it, one experiences nothing in particular, nothing one can put one's hand on, and yet one feels alive in a most intense way. By following its different tones, one actually listens to oneself."

(source: **Nada Brahma: The World is Sound - By Joachim-Ernst Berendt** Inner Traditions Intl Ltd ISBN 0892813180 p. 153).

Anne C. Wilson adds: "It must, therefore, be a secret source of pride to them to know that their system of music, as a written science, is the oldest in the world. Its principles were accepted by the Mahommedan portion of the population in the days of their pre-eminence, and are still in use in their original construction at the present day."

(source: **A Short Account of the Hindu System of Music - By Anne C. Wilson** p. 9).

"While Western music speaks of the wonders of God's creation, Eastern music hints at the inner beauty of the Divine in man and in the world. Indian music requires of its hearers something of that mood of divine discontent, of yearning for the infinite and impossible." Mrs. Mann,

(source: **The Music of India - By H. A. Popley** South Asia Books ASIN 8185418063 p. 136).

Arthur Whitten observes: "Their (Hindus) scale undoubtedly resembles our diatonic mode, and consists of seven sounds, which are extended to three octaves, that being the compass of the human voice. Their voices and music, like ours, are divided into three distinct classes: the bass, called odarah, or lowest notes: the tenor, called madurrah, or middle notes; the soprano, called the tarrah, or upper notes. The similarity of the formation of the ancient Hindu scale to our modern system is noteworthy. We name the sounds of our scales: Doh, Ray, Me, Fah, Sol, La Te. Those common in India are: Sa, Ray, Gam, Ma, Pa, Dha, Ni,"

(source: **The Music of the Ancients - By Arthur Whitten**).

Dr. Arnold Adrian Bake (Editions of Damodara's **Sangita-darpana**) has said:

"It is impossible to divorce Indian music from the whole structure of Indian culture and philosophy." "A show of instrumental

agility in which words have no importance or hardly any, but which for perfection of speed, neatness and precision of intonation, has perhaps no equal anywhere in the world."

(source: **The Music of India - By Peggy Holroyde** p. 218).

Gustav Holst (1874 - 1934) composer of **S¯avitri ; The dream-city**, **Choral hymns from the Rig Veda** and **S¯avitri; an episode from the Mah¯abharata, Op. 25** He was Vaughan Williams' greatest friends. Despite his German name, Holst was born in Cheltenham in 1874. This English composer composed operas about **Sita** and **Savitri** and other works based on Hindu themes. **It was in 1895 that Holst first became interested in Hindu philosophy and Sanskrit literature.** His immediate impulse was to set some hymns from the **Rig Veda,** the most important of the Hindu scriptures, to music. The most notable of many works springing from Holst's preoccupation with Hinduism was the chamber opera **Savitri** dating from 1908, based on an episode from the epic poem **Mahabharata**: its economy and intensity are exemplified in the arresting and dramatic opening, where Death sings, offstage and unaccompanied. From 1908 to 1912, he wrote four sets of hymns from the Rig Veda, the Vedic Hymns for voice and piano, and the large scale choral work called The Cloud Messenger.

Joachim-Ernst Berendt (1922-2000) author of **Nada Brahma: The World is Sound** has written: " Nada Brahma is a primal word in Indian spirituality, a primal word that also refers to India's great classical music. Nada is a Sanskrit word meaning "sound." The term nadi is also used to mean "stream of consciousness," a meaning that goes back 4,000 years to the oldest of India's four sacred Vedic scriptures, the Rig Veda. Thus the relationship between sound and consciousness has long been documented in language.

Mantras

Many people mediate on a mantra. A mantra is a sacred sound that may be an entire phrase, a single world, or even a syllable. What does the word mantra mean? The syllable mantra means "intelligence," also "thinking" or "feeling" – everything that distinguishes a human being.

Mantras emerge from the mantric sound, in Sanskrit bija, or "seed." Mantras are germinating seeds that sprout oneness. They are tools of becoming one. The greatest of all mantras is "**OM**" Indra's pearl, although no larger than all other pearls contain all pearls of the world – and just as, according to recent ideas in particular physics, the events in a single electron "contain" all the nuclear events in the world. In the Upanishads: "Whoever speaks this mantra thirty-five million times, the mantra of the sacred word, shall be released from his karma and from all his sins. He shall be freed of all his bonds and shall reach absolute liberty."

Nada Brahma, the world is sound. The sages of India and Tibet as well as the monks of Sri Lanka fee that if there is a sound audible to us mortals that comes close to the primal sound that is the world, then it is the sound of the sacred word OM.

A quote from the **Upanishads**:

The essence of all beings is earth,
the essence of earth is water,
the essence of water are plants,
the essence of plants is man,
the essence of man is speech,
the essence of speech is sacred knowledge,
the essence of sacred knowledge is word and sound,

The essence of word and sound is Om.

(source: **Nada Brahma: The World is Sound - By Joachim-Ernst Berendt** Inner Traditions Intl Ltd ISBN 0892813180 p. 26-29).

Chant and music were conceived of as mediums for expressing the inward yearning of a man's very breadth and therefore his soul. This was symbolized in the Sanskrit word 'prana.'

Michael Pym has observed: "Sound - shabda - is the manifestation of what might be called the principle of pure intelligence working upon and through matter. In another sense it is the creator of form and the animating principle of form. The idea resembles that of the Greek Logos - the word of creation. Sound is also the quality of inherent property - in Sanskrit the guna - of akasha or ethereal space. There are two forms of sound, unlettered and lettered, the latter proceeding from the former.

Sound is mantra, force or energy; name is form the grosser aspect of the principle. Indian music of the classical type represents something near the essence of existence at a particular moment. The immediate effect of Indian music is not as striking as Western music, but it is in the end, far more insidiously intoxicating. Between the two types of music, the difference is almost like that which exists between getting drunk on spirits and being drugged. The parallel even continues to this point, that once you have really become attuned to Indian music, Western music, beautiful as it may be, becomes too obvious and too tiring for you...And then you begin to understand how **the subtle, pattern weaving music of India conveys India; how the philosophic, imagist music of the raga,** with its one theme varied in a thousand ways, never beginning, and never finishing, but just becoming audible and going again into inaudibility, is the **real expression of India's sense of eternity - beginning in the unknown and going beyond our ken."**

(source: **The Power of India - By Michael Pym** p. 170 - 182).

An integral aspect of this Vedic 'culture of sound' is the so called science of mantrashastra. The Word is Brahman; the Word is Revelation, an icon of the Absolute, murti - a 'momentary deity'. Words, magical formulae, sacred verses - mantra - exist in relation to the divine as the yantra to the god; words are machines. Words are the Vedic yoga: they unite mind and matter. The Word is God, Number is God - both concepts result in a kind of intoxication. Only the Pythagorean Master can hear the music of the spheres: only the perfected Hindu sage can hear the primordial sound - Nada."

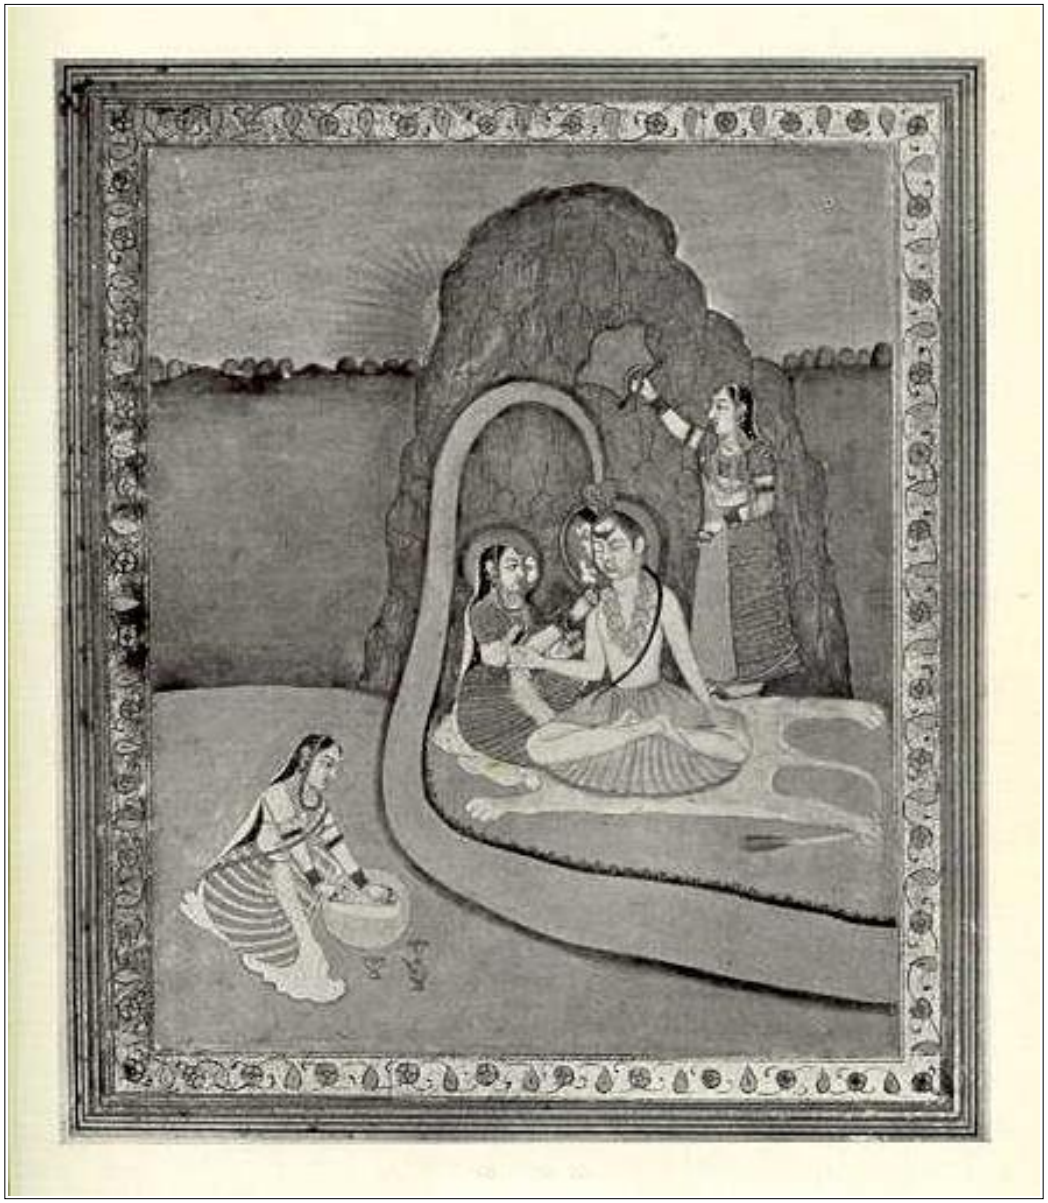
Conclusion

'Self-realization' mans God-realization. In ancient times, **Yajnavalkya,** the famous law-giver, wrote:

"One who knows the principles of playing the veena; one who is in expert in jati, and has the mastery of sruti and tala attains to moksha without any effort.'

Thyagaraja, the famous 18th century saint/musician of South India, declared in his Sripapriya that music is yoga: "Music which is composed of the seven svaras is a treasure for the great tapasvins (ascetics) who have cooled the tapatraya (the world of nvolvment). Moksha is impossible for one who has no music in him."



"Those who sing here," says **Sankaracharya**, "sing God"; and the **Vishnu Purana** adds, "All songs are a part of Him, who wears a form of sound."

Many historians, both in the East and the West consider the Gupta Empire between the 4th and 6th centuries A.D. to have been the "renaissance of Indian music." At that time Sanskrit as a classical literature took form, and music, stimulated by the lively ideas of the period, achieved new proportions.

Explaining it for the Westerner the great poet and Indian Nobel prize winner, **Rabindranath Tagore** wrote: "For us Hindus,

music always always has **a transcendent meaning**, even when its intentions are by no means mystical or religious, but epic and amorous. Above all, music tries to touch the great hidden reasons for happiness in this world."

"It is precisely because of this that Indian musicians aspire above all things, to realize the complete identification between the imperfect soul of man and the perfect soul of the divine nature. **Hindu music** aims at creating a point where the beautiful and ugly, good and bad can meet, not on the dangerous level of compromise, but on a level of the absolute. For this reason, our music is paradoxically a combination of chords and discords, equals and opposites. It willingly runs the risk of seeming to be, in fact being, fragmentary and inconclusive."

Ragmala - Rajput school, 18th century A.D.

"Our everyday life often, our music always, appears contradictory to the sophisticated eyes of the West. We do not hesitate to recognize in the sublime paradox, the ultimate, perhaps the eternal meaning of the serene, ordered, and happy world of sounds generated by gods and governed by men."

Thus, music is considered to be of divine origins; legend has it that the three divinities who preside over the Hindu pantheon, Brahma, Vishnu and Shiva, are themselves accomplished musicians, and that it was they who taught the great laws of musical expression to the first codifiers of Indian music. Ravi Shankar's description of his life as a disciple of spiritual music underscores this point. His practice would begin at 4:00 am. After two hours he would bathe and do his morning spiritual practice. Shankar stated that "total humility and surrender to the guru" were expected; "a complete shedding of the ego" was the goal. About the musical culture of India's ancients, Shankar says:

"There is no dearth of beautiful stories relating how great musicians and saint-musicians such as **Baiju Bavare, Swami Haridas** or **Tan Sen** performed miracles by singing certain ragas. It is said that some could light fires or the oil lamps by singing one raga, or bring rain, melt stones, causing flowers to blossom, and attract ferocious wild animals - even snakes

and tigers - to a peaceful, quiet circle in a forest around a singing musician. To us in this modern, mechanical, materialistic age, all this seems like a collection of fables, but I sincerely believe that these stories are all true and that they were all feasible, especially when one considers that these great musicians were not just singers or performers, but also great yogis whose minds had complete control of their bodies. They knew all the secrets of tantra, hatha yoga, and different forms of occult power, and they were pure, ascetic, and saintly persons. That has been the wonderful tradition of our music."

Legends abound in the annals of India's music, attesting to the **extraordinary prowess of India's devotional musicians.** Indian music has always placed emphasis on vocal expression over instrumental. The best instrumental is thought to be that which renders most faithfully the subtleties of the human voice.

Ravi Shankar has written in his autobiography:

"Our tradition teaches us that sound is God - Nada Brahma. That is, music of sound and the musical experience are steps to the realization of the self. We view music as a kind of spiritual discipline that raises one's inner being to divine peacefulness and bliss. We are taught that one of the fundamental goals a Hindu works toward in his lifetime is a knowledge of the true meaning of the universe - its unchanging, eternal essence - and this is realized first by a complete knowledge of one's self and one's own nature. The highest aim of our music is to reveal the essence of the universe it reflects, and the ragas are among the means by which this essence can be apprehended. Thus, through music, one can reach God."

The sparkling energy of India lies in Hinduism. Without the framework of Hindu belief India would fall apart even today. Without Hinduism India is not herself. "It is impossible," **Dr Arnold Bake** (1899-1963) the late Dutch scholar of Indian music, has written in The New Oxford History of Music, "to divorce Indian music from the whole structure of **Indian culture and philosophy** with which it is interwoven in a number of ways from the earliest times of which we have records."

Did You Know?

Gypsies - Lords of the Open Country

Romanies or Gypsies as they are popularly known, had their origin in India. They are the descendents of tribes who left the banks of the Indus, traversed a number of intervening countries over a period of centuries, and arrived in Europe more than five hundred years ago, where they have been severely persecuted. **Gypsies, the long-lost children of India,** number about 12 million worldwide. In Europe, the 8 million Gypsies constitute its largest minority. During World War II, the Nazis exterminated 1.5 million Gypsies.

Despite their significant contributions to European cultural life over a period of centuries, Europe on the whole has not accepted them with kindness. They have been frequently persecuted throughout the period of their known history. European countries have a sordid record of Gypsy-persecution. Half a million Romany gypsies from across occupied Europe were killed in the Holocaust - yet that fact is now largely forgotten. Soon after their arrival in Europe they were characterized as a people who spoke a strange language and practiced sorcery. In 1427 the Bishop of Paris excommunicated them and they were driven out of the city. Even today, gypsy women are often seen begging with infants in Paris.

A gypsy on the road knows the taste of real liberty and he regards modern man as little more than a mere cog in a gigantic machine tied to money, convention, and a timetable. Throughout the centuries Gypsies have fought and suffered numerous humiliation and penalties to retain their own individuality, freedom, language and cultural identity.

Considering that there are many Greek words in the Gypsy language, and that all Gypsies still count in Greek, Verovici is of the opinion that the first exodus of the Gypsies from India happened at the time of Alexander's invasion. On the other hand, Grellmann believed that the Gypsies had been driven out of India by Timur and his savage hordes at the end of the 14th century. Charles Leland, who identifies the Gypsies with Northern India, suggests that they were taken away in large numbers as slaves by Mahmud of Ghazni during his Indian invasion.

The Gypsies speak a language called Romany which has many common words with Indian languages. **The religion of the Gypsies is a modified form of early Hinduism.** Romani is related to Sanskrit in the same way as the Romance language are to Latin. The following list of cardinal numbers illustrates the point. The sentence is generally constructed in the same way in Romani and Hindi. For example:

Romani: Ja, kik kon chalavelo o vurdo.
Hindi: Ja, dekh kaun chalaaya dvar ko.
English: Go and see who has come to the door.

Romani: Mero sero dukkers.
Hindi: Mero sir dukhe.
English: My head hurts.

Gypsy heritage of laws and customs can be identified with ancient Indian practices. The wise and learned men are called **rashey**, **reminiscent of the Indian rishi, occupy in India**, a highly esteemed place in Gypsy society. Amongst the authentic signs on the sceptre of a Gypsy tribal chief is the trishul (trident), the insignia of Shiva. Gypsy chiefs are still called **Thakur**. The elders of the tribe are addressed respectfully as kako, meaning uncle, a Hindi word of the same meaning. The feminine version of the tribal chief is called **phuri dai**, which in Hindi is **burhi dai**, the old lady. The Gypsy council of elders is clearly a replica of the Indian panchayat, and the Gypsy chief corresponds to the head of the panchayat. The Gypsy family system is a joint one, as is the Hindu embracing parents, children, aunts, uncles, and all kinds of cousins. Likewise, property belongs to the family and not to the individual.

In Indian and Spanish Gypsy music there is, unlike in Western music a luxuriance of cross rhythms, elaborate

ornamentation, and quarter tones, unknown to Western music, are common to both Hungarian Gypsy and Indian music. The Gypsies mentioned by **Firdusi** and the Arab historian, **Hamza**, were expert lute players, and it has been suggested that it was probably they who introduced the lute to Europe.

Gypsy dance has influenced western dance styles like the Waltz and the foxtrot. Even the American Break dance and other dances associated with jazz music have borrowed elements from the gypsy folk dance. The Gypsy folk dance, is itself a free flowing and care free dance, a modified version of which is found in the folk dances of many Adivasi and nomadic tribal communities in India. Gypsies have displayed an adaptability towards the religious beliefs of the countries in their path. Many practice their faith with deep devotion. They call the Bible **the Sastra, the Sanskrit name for scriptures.** Gypsies believe in **Karma** and some kind of continuation of life after death.

(source: **India and World Civilization - By D. P. Singhal** Michigan State Univ Pr ASIN 0870131435 p.234 - 266).

Saip Jusuf is the author of one of the first Romani grammars and a principal leader in Skopje, Macedonia, which has the largest Gypsy settlement anywhere. Jusuf helped organize the first world Romany Congress in 1971 in London. The conference was financed in part by the Government of India, and at its urging the U.N. agreed first to recognize the Rom as a distinct ethnic group and several years later accorded voting rights to the International Romani Union.

In an interview with the author, Jusuf, having converted from Islam to **Hinduism, joyously displayed his new icon collection of Ganesha, Parvati, and Durga** . Ramche Mustupha, a poet, showed his passport. Under "citizenship" it recorded Yugoslav; under "nationality," Hindu. **The lost children of India, having found their ancestral land, are very proud of its ancient civilization -- the oldest continuous civilization in the world -- "Amaro Baro Thanh" (Romani for "our big land").**

Isable Fonseca author of **Bury Me Standing: The Gypsies and their Journey** has observed: "Many of the young women, fed up with the baggy-bottomed Turkish trousers they were supposed to wear, have begun to wear saris."

(source: **India Star.com**)

In the Vedic literature of India, there are many descriptions of flying machines that are generally called Vimanas. India's national epic, The Mahabharata, is a poem of vast length and complexity. There are no physical remains of ancient Indian aircraft technology but references to ancient flying machines are commonplace in the ancient Indian texts. Several popular ancient epics describe their use in warfare. Depending on one's point of view, either it contains some of the earliest known science fiction, or it records conflict between beings with weapons as powerful and advanced as anything used today.

"European scholarship regards human civilization as a recent progression starting yesterday with the Fiji islander, and ending today with Rockefeller, conceiving ancient culture as necessarily half savage culture." It is a superstition of modern thought that the march of knowledge has always been linear." "Our vision of "prehistory" is terribly inadequate. We have not yet rid our minds from the hold of a one-and-only God or one-and-only Book, and now a one-and-only Science."

- wrote **Shri Aurobindo Ghosh,** (1872-1950) most original philosopher of modern India.

"Facts do not cease to exist because they are ignored." - **Aldous Huxley**
"Dont' let your minds be cluttered up with the prevailing doctrine." **- Alexander Fleming (1881-1955)**

Introduction:

The mention of **airplanes** is found many times throughout Vedic literature, including the following verse from the **Yujur-Veda** describing the movement of such machines:

"O royal skilled engineer, construct sea-boats, propelled on water by our experts, and airplanes, moving and flying upward, after the clouds that reside in the mid-region, that fly as the boats move on the sea, that fly high over and below the watery clouds. Be thou, thereby, prosperous in this world

created by the Omnipresent God, and flier in both air and lightening." **Yajur Veda**, 10.19) (Please refer to the Chapter ' **Advanced Concept in Hinduism**)

The Rg Veda, the oldest document of the human race includes references to the following modes of transportation:

Jalayan - a vehicle designed to operate in air and water. (Rig Veda 6.58.3)
Kaara- Kaara- Kaara- a vehicle that operates on ground and in water. (Rig Veda 9.14.1)
Tritala- Tritala- Tritala- a vehicle consisting of three stories. (Rig Veda 3.14.1)
Trichakra Ratha - Trichakra Ratha - Trichakra Ratha - a three-wheeled vehicle designed to operate in the air. (Rig Veda 4.36.1)
Vaayu Ratha- Vaayu Ratha- Vaayu Ratha- a gas or wind-powered chariot. (Rig Veda 5.41.6)
Vidyut Ratha- Vidyut Ratha- Vidyut Ratha- a vehicle that operates on power. (Rig Veda 3.14.1).

Kathasaritsagara refers to highly talented woodworkers called Rajyadhara and Pranadhara. The former was so skilled in mechanical contrivances that he could make ocean crossing chariots. And the latter manufactured a flying chariot to carry a thousand passengers in the air. **These chariots were stated to be as fast as thought itself.**

(source: **India Through The Ages: History, Art Culture and Religion - By G. Kuppuram** p. 532-533).

According to **Dr. Vyacheslav Zaitsev**: "the holy Indian Sages, the Ramayana for one, tell of "Two storied celestial chariots with many windows" "They roar like off into the sky until they appear like comets." The Mahabharata and various Sanskrit books describe at length these chariots, "powered by winged lighting...it was a ship that soared into the air, flying to both the solar and stellar regions."

(source: **Temples and Spaceships - By V. Zaitsev - Sputnik**, Jan. 1967 and **Hinduism in the Space Age - By E. Vedavyas** p. 31-32).

Some Puranic accounts of Air-Chariots

The **Arthasastra of Kautilya** (c. 3rd century B.C.) mentions amongst various tradesmen and technocrats the Saubhikas as ' pilots conducting vehicles in the sky'. Saubha was the name of the aerial flying city of King Harishchandra and the form 'Saubika' means 'one who flies or knows the art of flying an aerial city.' Kautilya uses another significant word 'Akasa Yodhinah', which has been translated as 'persons who are trained to fight from the sky.' The existence of aerial chariots, in whatever form it might be, was so well-known that it found a place among the royal edicts of the Emperor Asoka which were executed during his reign from 256 B.C. - 237 B. C. **The Vaimanika Shastra** (Hindi edn) refers to about 97 works and authorities of yore of which at least 20 works deal with the mechanism of aerial Flying Machine, but none of these works is now traceable. The **Yuktikalpataru of Bhoja** includes a reference to aerial cars in verses 48-50 and a manuscript of the work belonging to the Calcutta Sanskrit College dated at 1870 A.D. We are thus in possession of some manuscript material and from the above it appears that there were Vimanas or aircrafts in ancient India and they followed the route over the western sea i.e. Arabian Sea - Africa - Atlantic ocean - Latin America/Mexico, this being the shortest route. Some ships also might have followed this route, but most of the cargo ships, however, had to follow the longer route over the Pacific ovean via Indonesia - Polynesia - Latin America/Mexico because of the favorable trade winds and the equatorial currents which made the navigation easier.

And if the ancient Indians could perhaps boast of some form of air travel the **Nazca lines of Peru** acquire an added significance. Not only the scriptural references of aircrafts and the routes of navigation, even some base landing sites might have possibly been found in the tangled outlines and figures in the Pampas of Nazca. Maria Reiche, a German scientist, through her life-long dedication studied these seriously, preserved them from destruction and publicised them before the world. The huge figures which are visible from the sky might have helped the ancient pilots (Sauvikas) of India to land in Peru.

(For more information please refer to Chapters on **Pacific**, **Suvarnabhumi**, **War in Ancient India**, **Hindu Scriptures** and **Seafaring in Ancient India**).

The Nazca lines of Peru seem to be landing signal for the air chariots of pre-Colobian times. There are several references in Sanskrit texts about the Indian Vimanas carrying kings and dignitaries to pataldesa. Ramayana describes Ravana's flight from Varunalaya (Borneo) to Rasatala (Peru).

Prof. D. K. Kanjilal analyses the legend of the Matsya Purana (chapters 129) in his **Vimana in Ancient India** in the following words:

"Behind the veil of legend and scientific truth comes out that three flying-cities were made for and were used by the demons. Of these three, one was in a stationary orbit in the sky, another moving in the sky and one was permanently stationed in the ground. These were docked like modern spaceships in the sky at particular time and at fixed latitude/longitudes. Siva's arrow obviously referred to a blazing missile fired from a flying satellite specially built for the purpose and the brunt spaceship fell in the Indian ocean. Vestiges of onetime prosperous civilization destroyed in battles only flicker through these legends.

These references sharply point to the use of some kind of aerial flying vehicles known as Vimana apart from mechanical contrivances, armoured cars, various types of missiles etc. These references sounding queer and unscientific even in recent past have been approximated to the present-day technology through the innovation of highly sophisticated weapons and of the space-satellites like Mariner, Vostok, Soyuz, Aryabhatta etc. These facts require more than a passing notice.

The flying vehicles were firstly designated Ratha (vehicle or carriage) in the Rig Veda.

Vimanas possessed a very high speed. This aerial vehicle was triangular, large, 3-tier uneven and was piloted by at least three persons (tribandhura). It has three wheels which were probably withdrawn during aerial flight. In one verse the chariot is said to have three columns. It was generally made of anyone of the three kinds of metals, gold, silver or iron but the metal which usually went into its make up according to the Vedic text was gold. It looked beautiful. Long nails or rivets were attached to it. The chariot had three types of fuel. Possessing very fast speed, it moved like a bird in the sky soaring towards the Sun and the Moon and used to come down to the earth with great sound.

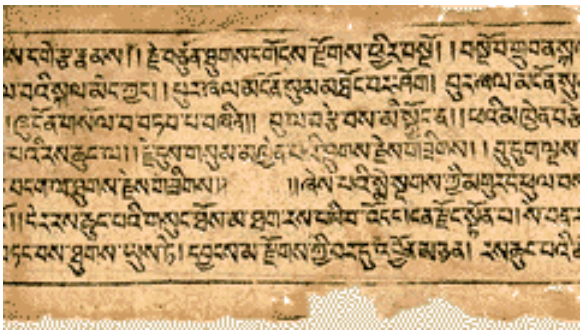
References from Ancient Literature



According to Professor **Dileep Kumar Kanjilal** in his book, **Vimana in Ancient India**:

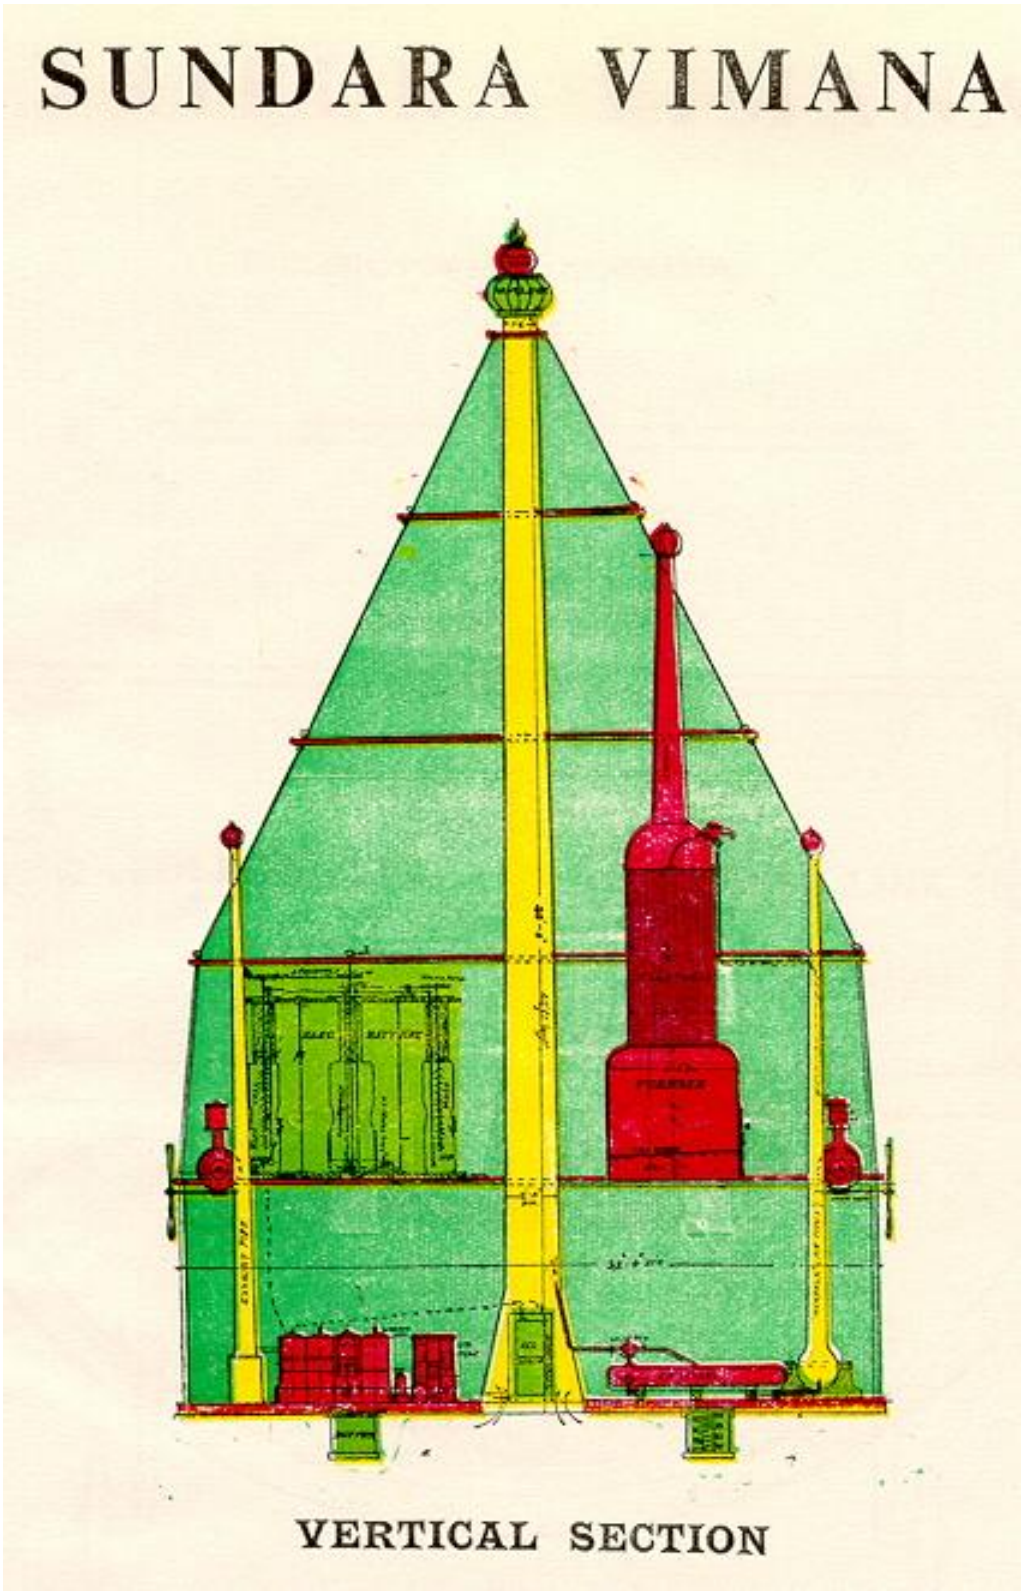
In addition to the Vaimanika Shashtra, the Samarangana Sutradhara and the Yuktikalpataru of Bhoja, there are about 150 verses of the Rig Veda, Yajurveda and the Atharvaveda, a lot of literary passages belonging to the Ramayana, the Mahabharata, the Puranas, the Bhagavata and the Raghuvamsa and some references of the darma Abhijnanasakuntalam of Kalidasa, the Abimaraka of Bhasa, the Jatalas. the Avadhana Literature and of the Kathasaritsagara and a number of literary works **contained either references to graphic aerial flight or to the mechanism of the aerial vehicles used in old ages in**

India.

In the Ramayana both the words "Vimana" and "Ratha" have been used:

- Kamagam ratham asthaya...nadanadipatim (3. 35. 6-7). He boarded the aerial vehicle with Khara which was decorated with jewels and the faces of demons and it moved with noise resembling the sonorous clouds.
- You may go to your desired place after enticing Sita and I shall bring her to Lanka by air.. So Ravana and Maricha boarded the aerial vehicle resembling a palace (Vimana) from that hermitage.
- Then the demoness brought the Puspaka aerial vehicle and placed Sita on it by bringing her from the Ashoka forest and she was made to see the battle field with Trijata.
- This aerial vehicle marked with Swan soared into the sky with loud noise.

Reference to Flying vehicles as Vimana occur in the Mahabharata in about 41 places of which the air attack of Salva on Krisna's capital **Dwaraka** deserve special notice. The Asura king Salva had an aerial flying machine known as Saubha-pura in which he came to attack Dwaraka. He began to shower hails, and missiles from the sky. As Krishna chased him he went near the sea and landed in the high seas. Then he came back again with his flying machine and gave a tough fight to Krishna staying about one Krosa (about 4,000 ft) above the ground level. Krishna at last threw a powerful ground-to-air weapon which hit the plane in the middle and broke it into pieces. The damaged flying machine fell into the seas. This vivid description of the air attack occurs in the Bhagavata also. We also come across the following references to missiles, armaments, sophisticated war-machines and mechanical contrivances as well as to Vimanas in Mahabharata.



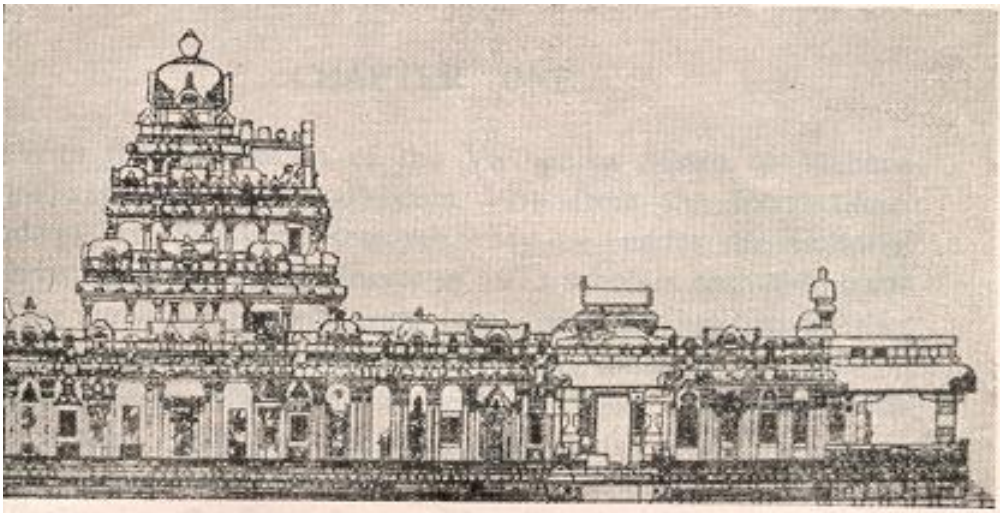
(For more refer to chapter on **Dwaraka**).

The inscriptions of emperor Asoka are by far the most authentic records in support of the existence of aerial flying vehicles which are mentioned as Vimana. The existence of aerial chariots in whatever form it might be was so well-known that it found a place among the royal edicts of the Emperor Asoka which were executed during his reign from 256 B.C.- 237 B.C.

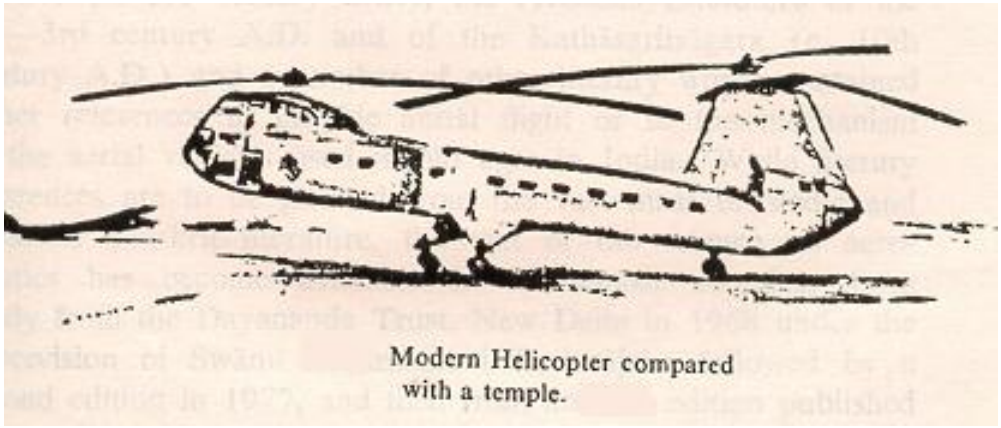
Vatsyana in his Kama Sutra referred to mechanical contrivances in their origin among 64 ancilliary Sciences.

The **Arthasastra of Kautilya** (3rd century B.C), a treatise mainly dealing with political economy but containing information on kindred scientific topics refers to a class of mechanic known as Saubhika..."

***



A discussion regarding the existence of and the use of flying vehicles in ancient India naturally waits for an advanced state of knowledge in cosmogony. A close and careful study of the Vedic literature shows that it was not just a collection of primeval poetry but a varied literature of a powerful and dynamic society where the people had the knowledge of cloud and vapor, of the season and of the monsoon, of the different types of wind, of the expanse of the sky, of the strength of the wind blowing at high speed and so on. Three types of cloud have been referred to in the Rig Veda (1.101.4). which also states that smoke and vapor surcharged with water turn into cloud. Formation of vapor through heat and the subsequent formation of cloud has been referred to in the Vedas. Indian meteorological concepts thus date back to the age of the Rig Veda.



Dileep Kumar Kanjilal concludes that: "With the passage of time and due to various changes of catastrophes the machines went out of use so that the secrets of its make-up and flying were equally lost. That the discontinuity of technical knowledge of a particular science within the known period of history is not an impossible factor has been shown by the inability to explore the nature of the **rustless iron of the pillar of Chandraketu** now fixed in Delhi. Hiuentzang, the Chinese pilgrim in the 7th century A.D. referred to 7 story palaces of which no evidence now remains. **Sir P. C. Roy** had shown that during the period from 1509 B.C. up to the end of the 3rd century B.C.E. methods for the large scale production of metals like gold, silver, copper, iron, tin, lead and mercury and of alloys like brass,

bronze, and those of gold and silver with baser materials were known. Large varieties of mineral ores, gems, and precious stones have been described in detail by Kautilya. Knowledge of the fermentation process also reached a fairly advanced state. With a highly developed state of civilization flourishing in art, culture, literature, history, medicine, alchemy, chemistry, physics, mathematics, astronomy, and astrology, geology, trade, commerce, shipbuilding, and agriculture it is natural to think that some sort of flying vehicles as attested by literary references was in all probability known. From the time of Panini upto the time of Bhoja we come across references to the great universities of Taxila, Valabhi, Dhar, Ujjain and Visala etc. The annals of history inform us that the depredations of the foreign tribes began as early as the 2nd century A.D. From two centuries later came succeeding waves of attacks of other foreign hordes like the Arabs, Turks and Afghans. All the well known universities and other centers of learning like the temples, the Viharas and the Bhandaras containing books and other priceless treasures of the Indian heritage had to stand the fire and fury of the marauders. In the dark firmament of devastation and uncertainty a silver lining was, however, **seen in the efforts of King Bhoja in the 12th century, when he tried to compile the Sanskrit texts.** Glimpses of old heritage survived only in the memory of the people and in stray literary evidences. State patronization for Indian Hindu cultural enterprises in the Turk-Afghan/Islamic period was a misnomer."

The original designation of the flying machine was "Ratha" which gave way for the term "Vimana". The Samarangana Sutradhara unequivocally suggested that the design of the plane was imitated to construct palaces. It was built by the Rbhus for the Gods. Gods as pointed out by Sayana came from remote space in the sky above and the obvious conclusion is that Gods as newcomers on the earth from outer space brought in this technology. The texts of the Rig Veda ranging from the 1st-10th Manadal refers to aerial flying machines as Ratha. In the Yajurveda which is considered chronologically later than the Rg Veda followed by other Brahmanas, the name "Vimanas" occurs. These vehicles were multi-shaped. But the triangular or quadrangular pattern survived owing to their practical utility. Puspaka the aerial vehicel survived in use because of its practical usefulness. In the Vedic texts the configuration of the machines has been broadly shown as triangular. The inside area as it can be gathered from the text was about 9 ft X 9 ft. = 81 sq. ft capable of accommodating 7/8 persons. In a triangular delta wing type this can be easily be made conical to give it greater feasibility and maneuverability.

Virupāksa temple of Pattakadal

Modern Helicopter compared with a temple.

The descriptions of the flying aerial cities in the Mahabharata seem to indicate a higher degree of scientific achievement and technical skill as the flying cities moved high up above the region of the clouds and very probably in the exosphere region. We have **earliest temple design** in a seal of the Harmika-sira temple built by King Hubiska at Buddha Gaya of the 1st century B.C.E. which is a rectangular based conical construction. The Virupaksa Temple of Pattakada, of 740 A.D. has a long rectangular base developed into a tapering square or hectagonal construction upwards imitate the Trivistapa type. The overall structural similarity of the temples with a modern helicopter gives overt cognizance to the Samarangana Sutradhara that temples were designed after the models of the flying machines. Even the giant Konaraka temple which resembles the chariot of Surya (Sun God) was of octagonal pattern on large rectangular base measuring 100 ft X 100 ft. X 100 ft. "

Here is a survey of some fascinating articles and quotes:

"One time while King Citaketu was traveling in outer space on a brilliantly effulgent airplane given to him by Lord Vishnu, he saw Lord Siva..." "The arrows released by Lord Siva appeared like fiery beams emanating from the sun globe and covered the three residential airplanes, which could then no longer be seen."

Srimad Bhagavatam, Sixth Canto, Part 3

Drawings done in 1923 from the vimana texts.

"The so-called 'Rama Empire' of Northern India and Pakistan developed at least fifteen thousand years ago on the Indian sub-continent and was a nation of many large, sophisticated cities, many of which are still to be found in the deserts of Pakistan, northern, and western India. Rama...was ruled by 'enlightened Priest-Kings' who governed the cities. The seven greatest capital cities of Rama were known in classical Hindu texts as 'The Seven Rishi Cities'. According to ancient Indian texts, the people had flying machines which were called 'vimanas'. The ancient Indian epic describes a vimana as a double- deck, circular aircraft with portholes and a dome, much as we would imagine a flying saucer. It flew with the "speed of the wind" and gave forth a 'melodious sound'. There were at least four different types of vimanas; some saucer shaped, others like long cylinders ('cigar shaped airships')."

(source: **D. Hatcher Childress, "Ancient Indian Aircraft Technology" In The Anti-Gravity Handbook**)

" An aerial chariot, the Pushpaka, conveys many people to the capital of Ayodhya. The sky is full of stupendous flying-machines, dark as night,but picked out by lights with a yellowish glare."

- **Mahavira of Bhavabhuti** (A Jain text of the eighth century culled from older texts and traditions)

"The Vedas, ancient Hindu poems, thought to be the oldest of all the Indian texts, describe vimanas of various shapes and sizes: the 'ahnihotra-vimana' with two engines, the 'elephant-vimana' with more engines, and other types named after the kingfisher, ibis and other animals."

(source: **D. Hatcher Childress, "Ancient Indian Aircraft Technology" In The Anti-Gravity Handbook)**

"Now Vata's chariot's greatness! Breaking goes it, And Thunderous is its noise, To heaven it touches, Makes light lurid [a red fiery glare], and whirls dust upon the earth."

Rig-Veda (Vata is the Aryan god of wind.)
In the Vedic literature of India, there are many descriptions of flying machines that are generally called vimanas. These fall into two categories: (1) manmade craft that resemble airplanes and fly with the aid of birdlike wings, and (2) unstreamlined structures that fly in a mysterious manner and are generally not made by human beings. The machines in category (1) are described mainly in medieval, secular Sanskrit works dealing with architecture, automata, military siege engines, and other mechanical contrivances. Those in category (2) are described in ancient works such as the Rg Veda, the Mahabharata, the Ramayana, and the Puranas, and they have many features reminiscent of UFOs."
"There are ancient Indian accounts of manmade wooden vehicles that flew with wings in the manner of modern airplanes. Although these wooden vehicles were also called vimanas, most vimanas were not at all like airplanes. The more typical vimanas had flight characteristics resembling those reported for

UFOs, and the being associated with them were said to possess powers similar to those presently ascribed to UFO entities. An interesting example of a vimana is the flying machine which Salva, an ancient Indian king, acquired from Maya Danava, an inhabitant of a planetary system called Taltala."

Richard L. Thompson, Alien Identities

"The cruel Salva had come mounted on the Saubha chariot that can go anywhere, and from it he killed many valiant Vrishni youths and evilly devastated all the city parks."

The Mahabharata

There is this account by the hero Krishna that is suggestive of more modern weapons. As he takes to the skies in pursuit of Salva: "His Saubha clung to the sky at a league's length...He threw at me rockets, missiles, spears, spikes, battle-axes, three-bladed javelins, flame-throwers, without pausing....The sky...seemed to hold a hundred suns, a hundred moons...and a hundred myriad stars. Neither day nor night could be made out, or the points of compass."

"The airplane occupied by Salva was very mysterious. It was so extraordinary that sometimes many airplanes would appear to be in the sky, and sometimes there were apparently none. Sometimes the plane was visible and sometimes not visible, and the warriors of the Yadu dynasty were puzzled about the whereabouts of the peculiar airplane. Sometimes they would see the airplane on the ground, sometimes flying in the sky, sometimes resting on the peak of a hill and sometimes floating on the water. The wonderful airplane flew in the sky like a whirling firebrand - it was not steady even for a moment."

Bhaktivedanta, Swami Prabhupada, Krsna

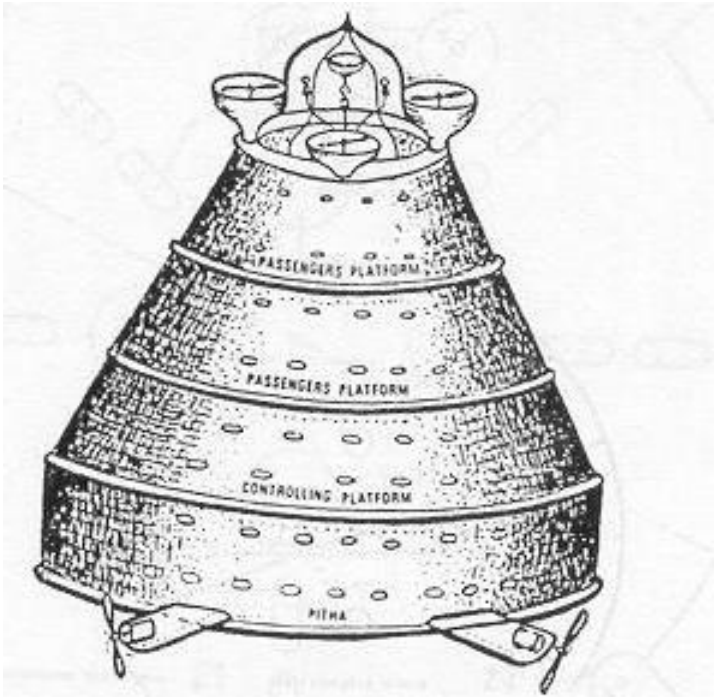
India had a Superior Civilization
BANGALORE, OCTOBER 11
http://www.ufobbs.com/txt3/2644.ufo

India may have had a superior civilization with possible contacts with extraterrestrial visitors, and the flying devices called 'Vimanas' described in ancient Indian texts may underline their possible connections with today's aerospace technology, an Italian scientist told the World Space Conference here today. Dr. Roberto Pinotti asked the delegates to examine in detail the Hindu texts instead of dismissing 'all the Vimana descriptions and traditions as mere myth.' "The importance of such studies and investigations could prove to be shocking for today's man because the existence of flying devices beyond mythology can only be explained with a forgotten superior civilization on earth," he said. Pointing out that Indian Gods and heroes fought in the skies using piloted vehicles with terrible weapons.

Dr. Pinotti said they were similar to modern jet propelled flying machines. 32 secrets: He said certain descriptions of the Vimanas seemed 'too detailed and technical in nature to be labeled as myth.' He cited various texts to show there were 32 secrets relating to the operation of Vimanas, some of which could be compared to modern day use of radar, solar energy and photography. Quoting from 'Vymanika Shastra' he said the ancient flying devices of India were made from special heat absorbing metals named 'Somaka, Soundalike and Mourthwika.' He said the text also discussed the seven kinds of mirror and lenses installed aboard for defensive and offensive uses. The so-called 'Pinjula Mirror' offered a sort of 'visual shield' preventing the pilots from being blinded by 'evil rays' and the weapon 'Marika' used to shoot enemy aircraft 'does not seem too different from what we today called laser technology,' he said.



Drawings done in 1923 from the vimana texts.

According to the Italian expert, the 'principles of Page 1 propulsion as far as the descriptions were concerned, might be defined as electrical and chemical but solar energy was also involved. For instance, the 'Tripura Vimana' mentioned in 'Vymanika Shastra' was a large craft operated by 'motive power generated by solar rays,' Dr. Pinotti said, adding 'its elongated form was surely much closer to that of a modern blimp.' Sophisticated design: According to Dr. Pinotti, the huge 'Shakuna Vimana' described in the text 'might be defined as a cross between a plane and a rocket of our times and its design might remind one of today's space shuttle.' 'Surely, it expresses the most complex and sophisticated aeronautical design among all the other descriptions of Vimanas mentioned in the 'Vymanika Shastra,' he said.

He described the author of the treatise **'Vymanika Shastra'** as a man 'attempting to explain an advanced technology.' Dr. Pinotti, who has made an exhaustive study of the history of Indian astronautics, said another text, **Samaraanganasutraadhaara** had 230 stanzas devoted to the principles of building Vimanas and their use in peace and war. He said ancient Aryans knew the use of the element 'fire' as could be seen from their 'Astra' weapons that included Soposamhara (flame belching missile), Prasvapna (which caused sleep) and four kinds of Agni Astras that traveled in sheets of flame and produced thunder. He said the car that was supposed to go up to Suryamandal (solar system) and the Naksatramandala (stellar system) cannot be dismissed as a myth because of the 'technical nature' of its description. Dr. Pinotti said depictions of space travel, total destruction by incredible weapons and the fact that Vimanas resembled modern unidentified flying objects would suggest that India had a 'superior but forgotten civilization.' 'In the light of this, we think it will be better to examine the Hindu texts' and subject the descriptive models of Vimanas to more scientific scrutiny,' he said.- Jerry W. Decker.....Ron Barker.....Chuck Henderson - Vangard Sciences/KeelyNet

Ancient Writings tell of UFO visit in 4,000 B.C.
Contributed by John Burrows
http://www.ufobbs.com/txt3/2124.ufo

India, according to Dr.V. Raghavan, retired head of the Sanskrit department of India`s pretigious University of Madras, was alone in playing host to extraterrestrials in prehistory. Dr. Raghavan contends that centuries-old documents in Sanskrit (the classical language of India and Hinduism) prove that aliens from outer space visited his nation. "Fifty years of researching this ancient works convinces me that there are livings beings on other planets, and that they visited earth as far back as4,000 B.C., " The scholar says. "There is a just a mass of fascinating information about flying machines, even fantastic science fiction weapons, that can be found in translations of the Vedas (scriptures), Indian epics, and other ancient Sanskrit text. "In the Mahabharata (writings), there is notion of divine lighting and ray weapons, even a kind of hypnotic weapon. And in the Ramayana (writings), there is a description of Vimanas, or flying machines, that navigated at great heights with the aid of quicksilver and a great propulsive wind. "These were space vehicles similar to the so-called flying saucers reported throughout the world today.

The Ramayana even describes a beautiful chariot which 'arrived shining, a wonderful divine car that sped through the air'. In another passage, there is mention of a chariot being seen 'sailing overhead like a moon.' "The references in the Mahabharata are no less astounding: `

At Rama`s behest, the magnificent chariot rose up to a mountain of cloud with a tremendous din.` Another passage reads: `Bhima flew with his Vimana on an enormous ray which was as brilliant as the sun and made a noise like the thunder of a storm." In the ancient Vymanka-Shastra (science of aeronautics), there is a description of a Vimana: "An apparatus which can go by its own force, from one place to place or globe to globe." Dr. Raghavan points out, "The text`s revelations become even more astounding. Thirty-one parts-of which the machine consists-are described, including a photographing mirror underneath. The text also enumerates 16 kinds of metal that are needed to construct the flying vehicle: `Metals suitable, lighare 16 kinds. `But only three of them are known to us today. The rest remain untranslatable." Another authority who agrees with Dr. Raghavan`s interpretations is Dr. A.V. Krishna Murty, professor of aeronautics at the Indian Institute of Science in Bangalore. "It is true," Dr. Krishna Murty says, "that the ancient Indian Vedas and other text refer to aeronautics, spaceships, flying machines, ancient astronauts. "A study of the Sanskrit texts has convinced me that ancient India did know the secret of building flying machines-and that those machines were patterned after spaceships coming from other planets."

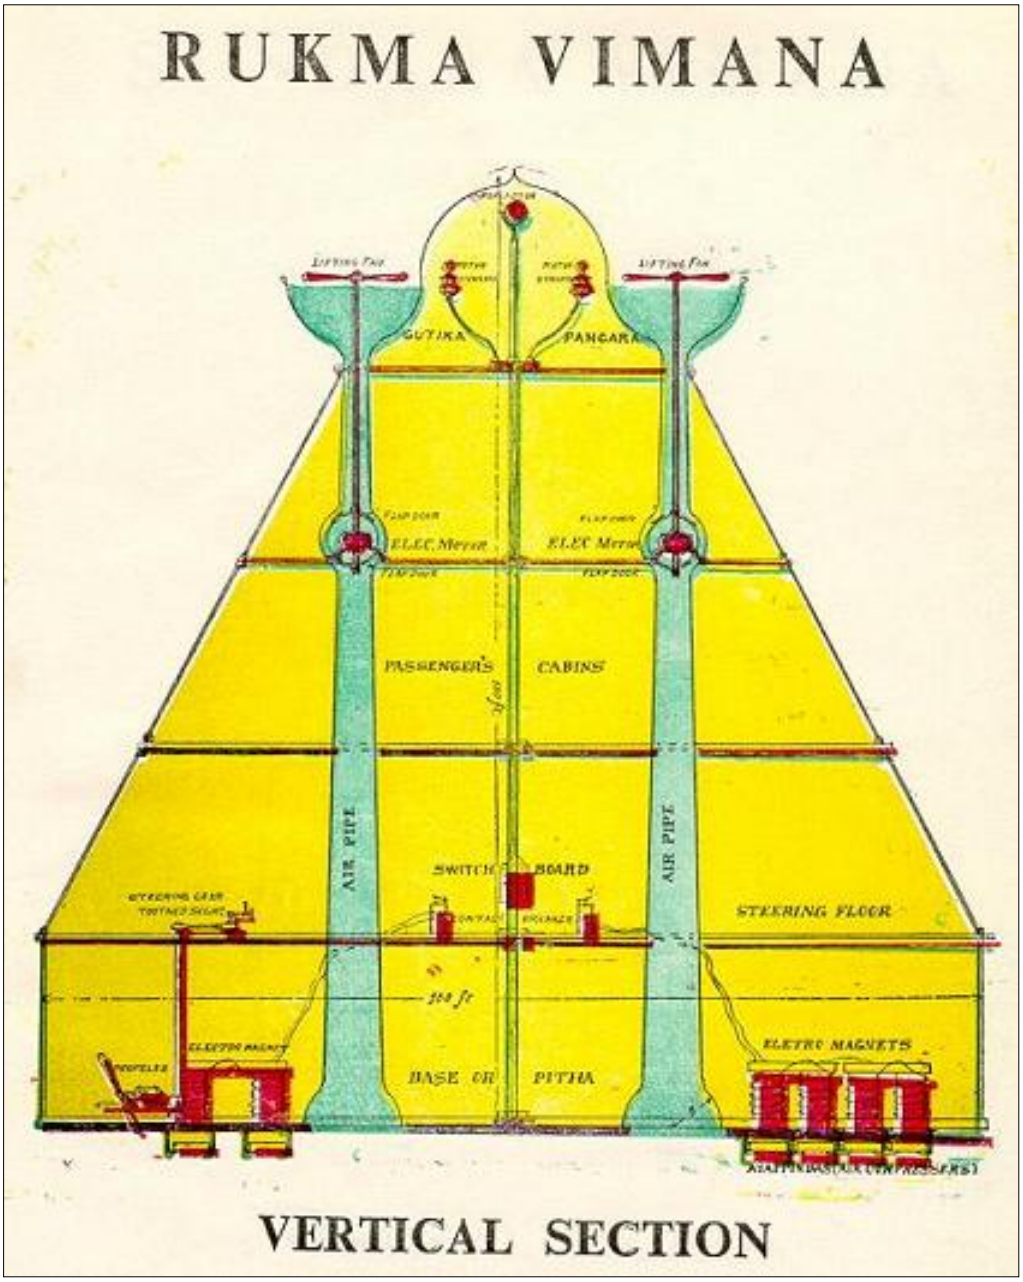
The Vedic traditions of India tell us that we are now in the Fourth Age of mankind. The Vedas call them the "The Golden Age", "The Silver Age", and "The Bronze Age" and we are now, according to their scriptures in the "The Iron Age". As we approach the end of the 20th century both Native Americans, Mayans, and Incans, prophecies claim that we are coming to the end of an age. Sanskrit texts are filled with references to Gods who fought battles in the sky using Vihmanas equipped with weapons as deadly as any we can deploy in these more enlightened times.

For example, there is a passage in the Ramayana which reads:

The Puspaka car that resembles the Sun and belongs to my brother was brought by the powerful Ravan; that aerial and excellent car going everywhere at will.... that car resembling a bright cloud in the sky.".. and the King [Rama] got in, and the excellent car at the command of the Raghira, rose up into the higher atmosphere."

In the Mahabharata, an ancient Indian poem of enormous length, we learn that an individual named Asura Maya had a Vimana measuring twelve cubits in circumference, with four strong wheels. The poem is a veritable gold mine of information relating to conflicts between gods who settled their differences apparently using weapons as lethal as the ones we are capable of deploying.

Apart from 'blazing missiles', the poem records the use of other deadly weapons. 'Indra's Dart' operated via a circular 'reflector'. When switched on, it produced a 'shaft of light' which, when focused on any target, immediately 'consumed it with its power'. In one particular exchange, the hero, Krishna, is pursuing his enemy, Salva, in the sky, when Salva's Vimana, the Saubha is made invisiblein some way. Undeterred, Krishna immediately fires off a special weapon: 'I quickly laid on an arrow, which killed by seeking out sound'.



Many other terrible weapons are described, quite matter of factly, in the Mahabharata, but the most fearsome of all is the one used against the Vrishis. The narrative records:

Gurkha flying in his swift and powerful Vimana hurled against the three cities of the Vrishis and Andhakas a single projectile charged with all the power of the Universe. An incandescent column of smoke and fire, as brilliant as ten thousands suns, rose in all its splendor. It was the unknown weapon, the Iron Thunderbolt, a gigantic messenger of death which reduced to ashesthe entire race of the Vrishnis and Andhakas.

It is important to note, that these kinds of records are not isolated. They can be cross-correlated with similar reports in other ancient civilizations.

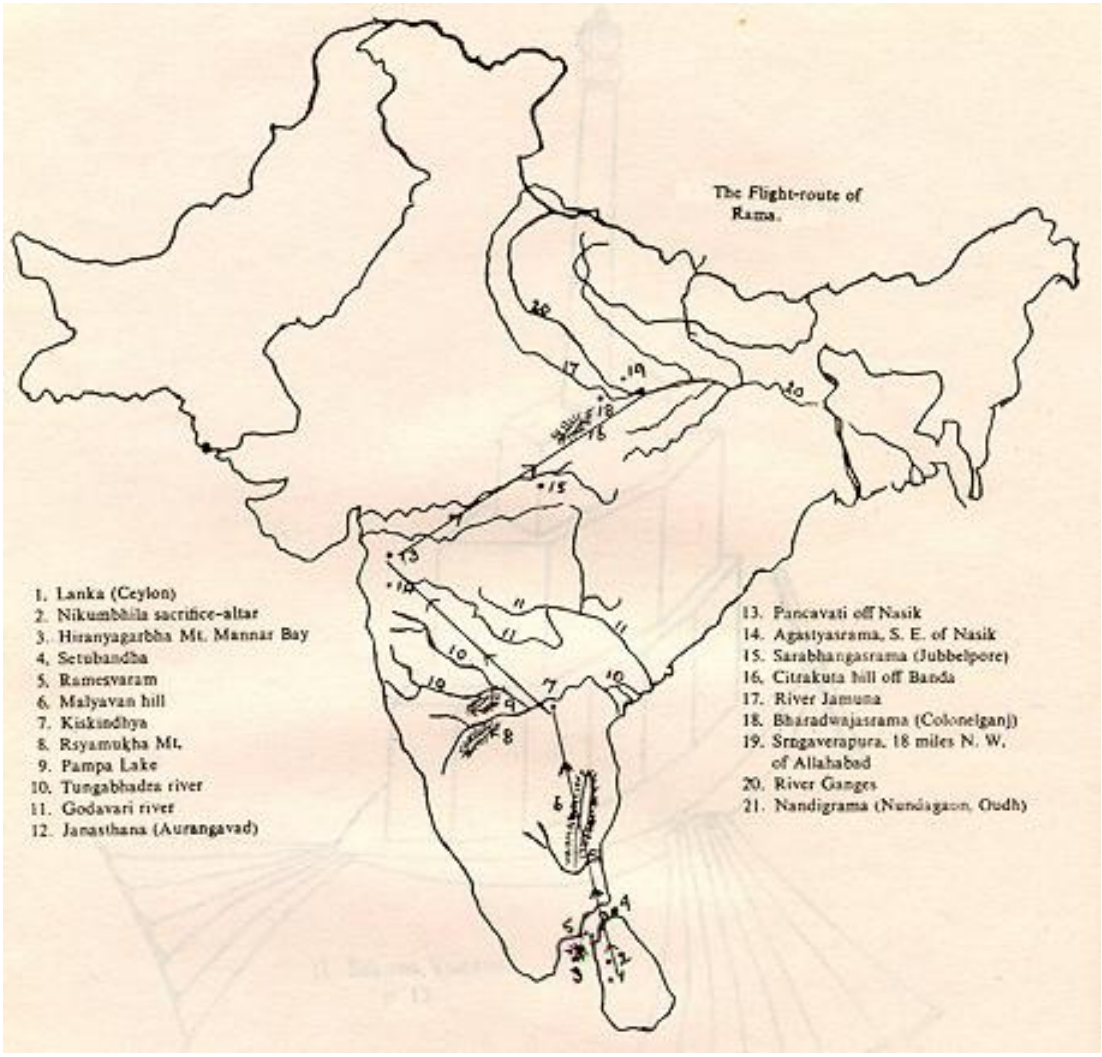
The after-affects of this Iron Thunderbolt have anonymously recognizable ring. Apparently, those killed by it were so burnt that their corpses were unidentifiable. The survivors fared little ether, as it caused their hair and nails to fall out. Perhaps the most disturbing and challenging, information about these allegedly mythical Vimanas in the ancient records is that there are some matter-of-fact records, describing how to build one. In their way, the instructions are quite precise. In the Sanskrit **Samaraanganasutraadhaara** it is written:

Strong and durable must the body of the Vimana be made, like a great flying bird of light material. Inside one must put the mercury engine with its iron heating apparatus underneath. By means of the power latent in the mercury which sets the driving whirlwind in motion, a man sitting inside may travel a great distance in the sky. The movements of the Vimana are such that it can vertically ascend, vertically descend, move slanting forwards and backwards. With the help of the machines human beings can fly in the air and heavenly beings can come down to earth.

The Hakatha (Laws of the Babylonians) states quite unambiguously: The privilege of operating a flying machine is great. The knowledge of flight is among the most ancient of our inheritances. A gift from 'those from upon high'. We received it from them as a means of saving many lives.

More fantastic still is the information given in the ancient Chaldean work, The Sifrala, which contains over one hundred pages of technical details on building a flying machine. It contains words which translate as graphite rod, copper coils, crystal indicator, vibrating spheres, stable angles, etc. **'Ancient Indian Aircraft Technology'** From **The Anti-Gravity Handbook** by D. Hatcher Childress.

Many researchers into the UFO enigma tend to overlook a very important fact. While it assumed that most flying saucers are of alien, or perhaps Governmental Military origin, another possible origin of UFOs is ancient India and Atlantis. What we know about ancient Indian flying vehicles comes from ancient Indian sources; written texts that have come down to us through the centuries. There is no



doubt that most of these texts are authentic; many arethe well known ancient Indian Epics themselves, and there are literally hundreds of them. Most of them have not even been translated into English yet from the old sanskrit.

The Indian Emperor Ashoka started a "Secret Society of the Nine Unknown Men": great Indian scientists who were supposed to catalogue the many sciences. Ashoka kept their work secret because he was afraid that the advanced science catalogued by these men, culled from ancient Indian sources, would be used for the evil purpose of war, which Ashoka was strongly against, having beenconverted to Buddhism after defeating a rival army in a bloody battle. The"Nine Unknown Men" wrote a total of nine books, presumably one each. Book number was "The Secrets of Gravitation!" This book, known to historians, but not actually seen by them dealt chiefly with "gravity control." It is presumably still around somewhere, kept in a secret library in India, Tibet or else where (perhaps even in North America somewhere). One can certainly understand Ashoka's reasoning for wanting to keep such knowledge a secret, assuming it exists. Ashoka was also aware of devastating wars using such advanced vehicles and other "futuristic weapons" that had destroyed the ancient Indian "Rama Empire" several thousand years before.

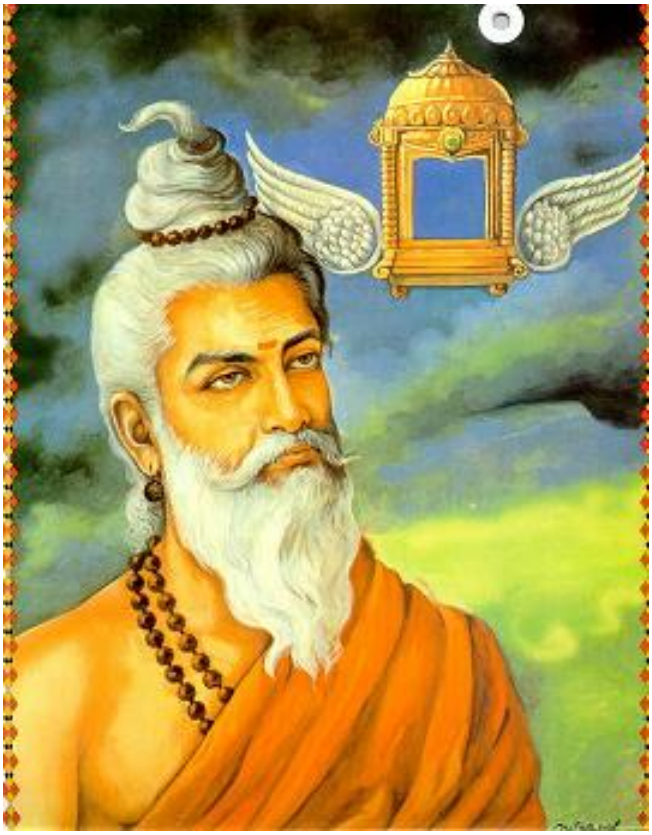
Only a few years ago, the Chinese discovered some Sanskrit documents in Lhasa, Tibet and sent them to the University of Chandrigarh to be translated. Dr. Ruth Reyna of the University said recently that the documents contain directions for building interstellar spaceships! Their method of propulsion, she said, was "anti- gravitational" and was based upon a system analogous to that of "laghima," the unknown power of the ego existing in man's physiological makeup, "a centrifugal force strong enough tocounteract all gravitational pull." According to Hindu Yogis, it is this "laghima" which enables a person to levitate. Dr. Reyna said that on board these machines, which were called "Astras" by the text, the ancient Indians could have sent a detachment of men onto any planet,according to the document, which is thought to be thousands of years old. Themanuscripts were also said to reveal the secret of "antima"; "the cap ofinvisibility" and "garima"; "how to become as heavy as a mountain of lead."Naturally, Indian scientists did not take the texts very seriously, but thenbecame more positive about the value of them when the Chinese announced that they were including certain parts of the data for study in their spaceprogram! This was one of the first instances of a government admitting to be researching anti-gravity. The manuscripts did not say definitely that interplanetary travel was evermade but did mention, of all things, a planned trip to the Moon, though it is not clear whether this trip was actually carried out.

However, one of the great Indian epics,the Ramayana, does have a highly detailed story in it of atrip to the moon in a Vihmana (or "Astra"), and in fact details a battle on themoon with an "Asvin" (or Atlantean") airship. This is but a small bit ofrecent evidence of anti-gravity and aerospace technology used by Indians. To really understand the technology, we must go much further back in time. The so-called "Rama Empire" of Northern India and Pakistan developed at leastfifteen thousand years ago on the Indian subcontinent and was a nation of manylarge, sophisticated cities, many of which are still to be found in the deserts of Pakistan, northern, and western India. Rama existed, apparently, parallel to the Atlantean civilization in the mid- Atlantic Ocean, and wasruled by "enlightened Priest-Kings" who governed the cities.

Flight Route of Rama
(source: Vimana in Ancient India - By Dileep Kumar Kanjilal).

The seven greatest capital cities of Rama were known in classical Hindu texts as *The Seven Rishi Cities* According to ancient Indian texts, the people had flying machines which were called "Vimanas." The ancient Indian epic describes a Vimana as a double deck, circular aircraft with portholes and a dome, much as we would imagine a flying saucer. It flew with the "speed of the wind" and gave forth a "melodious sound." There were at least four different types of Vimanas; some saucer shaped, others like long cylinders ("cigar shaped airships").

The ancient Indian texts on Vimanas are so numerous, it would take volumes to relate what they had to say. The ancient Indians, who manufactured these ships themselves, wrote entire flight manuals on the control of the various types of Vimanas, many of which are still in existence, and some have even been translated into English. The **Samaraanganasutraadhaara** is a scientific treatise dealing with every possible angle of air travel in a Vimana.



There are 230 stanzas dealing with the construction, take-off, cruising for thousand of miles, normal and forced landings, and even possible collisions with birds. In 1875, the Vaimanika Sastra, a fourth century B.C. text written by **Bharadwaj the Wise**, using even older texts as his source, was rediscovered in a temple in India. It dealt with the operation of Vimanas and included information on the steering, precautions for long flights, protection of the airships from storms and lightning and how to switch the drive to "solar energy" from a free energy source which sounds like "anti-gravity."

The Vaimanika Sastra (or Vymaanika-Shaastra) has eight chapters with diagrams, describing three types of aircraft, including apparatuses that could neither catch on fire nor break. It also mentions 31 essential parts of these vehicles and 16 materials from which they are constructed, which absorb light and heat; for which reason they were considered suitable for the construction of Vimanas. This document has been translated into English and is available by writing the publisher:

****

VYMAANIDASHAASTRA AERONAUTICS by Maharishi Bharadwaaja, translated into English and edited, printed and published by Mr. G. R.Josyer, Mysore, India, 1979.

G. R. Josyer is the director of the International Academy of Sanskrit Investigation, located in Mysore. There seems to be no doubt that Vimanas were powered by some sort of "anti-gravity." Vimanas took off vertically, and were capable of hovering in the sky, like a modern helicopter or dirigible.

Bharadwaj the Wise refers to no less than seventy authorities and 10 experts of air travel in antiquity. These sources are now lost. Vimanas were kept in a Vimana Griha, a kind of hanger, and were sometimes said to be propelled by a yellowish-white liquid, and sometimes by some sort of mercury compound, though writers seem confused in this matter. It is most likely that the later writers on Vimanas, wrote as observers and from earlier texts, and were understandably confused on the principle of their propulsion. The "yellowish- white liquid" sounds suspiciously like gasoline, and perhaps Vimanas had a number of different propulsion sources, including combustion engines and even "pulse-jet" engines. It is interesting to note, that the Nazis developed the first practical pulse-jet engines for their V-8 rocket "buzz bombs."

Hitler and the Nazi staff were exceptionally interested in ancient India and Tibet and sent expeditions to both these places yearly, starting in the 30's, in order to gather esoteric evidence that they did so, and perhaps it was from these people that the Nazis gained some of their scientific information! According to the Dronaparva, part of the **Mahabharat**a, and the **Ramayana**, one Vimana described was shaped like a sphere and born along at great speed on a mighty wind generated by mercury. It moved like a UFO, going up, down, backwards and forwards as the pilot desired. In another Indian source, the Samar, Vimanas were "iron machines, well-knit and smooth, with a charge of mercury that shot out of the back in the form of a roaring flame."

Another work called the **Samaranganasutradhara** describes how the vehicles were constructed. It is possible that mercury did have something to do with the propulsion, or more possibly, with the guidance system. Curiously, Soviet scientists have discovered what they call "age old instruments used in navigating cosmic vehicles" in caves in Turkestan and the Gobi Desert. The "devices" are hemispherical objects of glass or porcelain, ending in a cone with a drop of mercury inside. It is evident that ancient Indians flew around in these vehicles, all over Asia, to Atlantis presumably; and even, apparently, to South America.

Harappan Seal

Writing found at Mohenjodaro in Pakistan (presumed to be one of the **"Seven Rishi Cities of the Rama Empire"** and still un deciphered, has also been found in one other place in the world: Easter Island! Writing on Easter Island, called Rongo-Rongo writing, is also un deciphered, and is uncannily similar to the Mohenjodaro script. Was Easter Island an air base for the Rama Empire's Vimana route? (At the Mohenjo- Daro Vimana-drome, as the passenger walks down the concourse, he hears the sweet, melodic sound of the announcer over the loud speaker," Rama Airways flight number seven for Bali, Easter Island, Nazca, and Atlantis is now ready for boarding. Passengers please proceed to gate number..") in Tibet, no small distance, and speaks of the "fiery chariot" thus: "Bhima flew along in his car, resplendent as the sun and loud as thunder... The flying chariot shone like a flame in the night sky of summer... it swept by like a comet... It was as if two suns were shining. Then the chariot rose up and all the heaven brightened." In the Mahavira of Bhavabhuti, a Jain text of the eighth century culled from older texts and traditions, we read: "An aerial chariot, the Pushpaka, conveysmany people to the capital of Ayodhya.

The sky is full of stupendousflying-machines, dark as night,but picked out by lights with a yellowishglare." The Vedas, ancient Hindu poems, thought to be the oldest of all theIndian texts, describe Vimanas of various shapes and sizes: the "ahnihotravimana" with two engines, the"elephant-vimana" with more engines, and other types named after the kingfisher, ibis and other animals. Unfortunately, Vimanas, like most scientific discoveries, were ultimately used for war. Atlanteans used their flying machines, "Vailixi," a similar type of aircraft, to literally try and subjugate the world, it would seem, if Indiantexts are to be believed.

The Atlanteans, known as "Asvins" in the Indian writings, were apparently even more advanced technologically than the Indians, and certainly of a more war-like temperament. Although no ancient texts on Atlantean Vailixi are known to exist, some information has come down through esoteric, "occult" sources which describe their flying machines. Similar, if not identical to Vimanas, Vailixi were generally "cigar shaped" and had the capability of manoeuvering underwater as well as in the atmosphere or even outer space. Other vehicles, like Vimanas, were saucer shaped, and could apparently also be submerged.

According to **Eklal Kueshana,** author of **"The Ultimate Frontier,"** in an article he wrote in 1966:

Vailixi were first developed in Atlantis 20,000 years ago, and the most common ones are "saucer shaped of generally trapezoidal cross- section with three hemispherical engine pods on the underside. They use a mechanical antigravity device driven by engines developing approximately 80,000 horse power. The Ramayana, Mahabharata and other texts speak of the hideous war that took place, some ten or twelve thousand years ago between Atlantis and Rama using weapons of destruction that could not be imagined by readers until the second half of this century.

The ancient Mahabharata, one of the sources on Vimanas, goes on to tell the awesome destructiveness of the war: "...(the weapon was) a single projectile charged with all the power of the Universe. An incandescent column of smoke and flame as bright as the thousand suns rose in all its splendor. An iron thunderbolt, a gigantic messenger of death, which reduced to ashes the entire race of the Vrishnis and the Andhakas. The corpses were so burned as to be unrecognizable. The hair and nails fell out; pottery broke without apparent cause, and the birds turned white.... after a few hours all foodstuffs were infected.... to escape from this fire, the soldiers threw themselves in streams to wash themselves and their equipment..."

It would seem that the Mahabharata is describing an atomic war! References like this one are not isolated; but battles, using a fantastic array of weapons and aerial vehicles are common in all the epic Indian books.

One even describes a Vimana-Vailixbattle on the Moon! The above section very accurately describes what an atomic explosion would look like and the effects of the radioactivity on the population. Jumping into water is the only respite. When the Rishi City of Mohenjodaro was excavated by archaeologists in the last century, they found skeletons just lying in the streets, some of them holding hands, as if some great doom had suddenly overtaken them. These skeletons are among the most radioactive ever found, on a par with those found at Hiroshima and Nagasaki. Ancient cities whose brick and stonewalls have literally been vitrified, that is-fused together, can be found in India, Ireland, Scotland, France, Turkey and other places. There is no logical explanation for the vitrification of stone forts and cities, except from an atomic blast.

Further more, at Mohenjo-Daro, a well planned city laid on a grid, with a plumbing system superior to those used in Pakistan and India today, the streets were littered with "black lumps of glass." These globs of glass were discovered to be clay pots that had melted under intense heat! With the cataclysmic sinking of Atlantis and the wiping out of Rama with atomic weapons, the world collapsed into a "stone age" of sorts, and modern history picks up a few thousand years later Yet, it would seem that not all the Vimanas and Vailixi of Rama and Atlantis were gone. Built to last for thousands of years, many of them would still be in use, as evidenced by Ashoka's "Nine Unknown Men" and the Lhasa manuscript.

That secret societies or "Brotherhoods" of exceptional, "enlightened" human beings would have preserved these inventions and the knowledge of science, history, etc., does not seem surprising. Many well known historical personages including Jesus, Buddah, Lao Tzu, Confucious, Krishna, Zoroaster, Mahavira, Quetzalcoatl, Akhenaton, Moses, and more recent inventors and of course many other people who will probably remain anonymous, were probably members of such a secret organization. It is interesting to note that when Alexander the Great invaded India more than two thousand years ago, his historians chronicled that at one point they were attacked by "flying, fiery shields" that dove at his army and frightened the cavalry. These "flying saucers" did not use any atomic bombs or beam weapons on Alexander's army however, perhaps out of benevolence, and Alexander went on to conquer India. It has been suggested by many writers that these "Brotherhoods" keep some of their Vimanas and Vailixi in secret caverns in Tibet or some other place is Central Asia, and the Lop Nor Desert in western China is known to be the center of a great UFO mystery. Perhaps it is here that many of the airships are still kept, in underground bases much as the Americans, British and Soviets have built around the world in the past few decades. Still, not all UFO activity can be accounted for by old Vimanas making trips to the Moon for some reason. Unknown alloys have been revealed in the ancient palm leaf manuscripts.

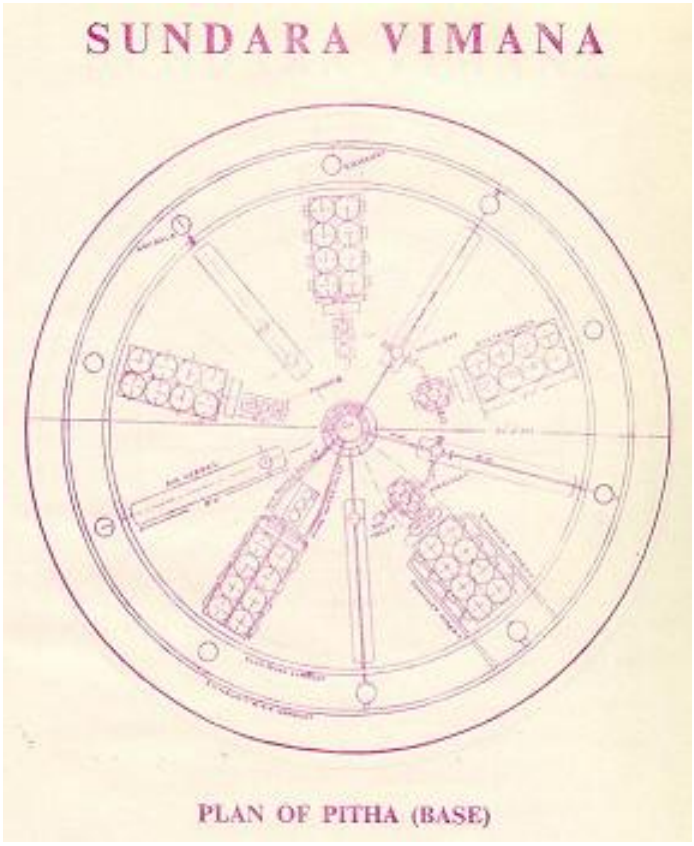
The writer and Sanskrit scholar Subramanyam Iyer has spent many years of his life deciphering old collections of palm leaves found in the villages of his native Karnataka in southern India. One of the palm leaf manuscripts they intend to decipher is the Amsu Bodhini, which, according to an anonymous text of 1931, contains information about the planets; the different kinds of light, heat, color, and electromagnetic fields; the methods used to construct machines capable of attracting solar rays and, in turn, of analysing and separating their energy components; the possibility of conversing with people in remote places and sending messages by cable; and the manufacture of machines to transport people to other planets!

Contributed by John Burrows

Top of Page

In one episode, for example, the Vrishnis, a tribe whose warriors include the hero Krishna, are beset by the forces of a leader named Salva.

"The cruel Salva had come mounted on the Saubha chariot that can go anywhere, and from it he killed many valiant Vrishni youths and evilly devastated all city parks."



The Saubha is at once Salva's city, flagship, and battle headquarters. In it, he can fly wherever he chooses. Fortunately, the Vrishni heroes are similarly well equipped, and at one point have Salva at their mercy. The hero Pradyumna is about to finish him off with a special weapon, when the highest gods stop him "Not a man in battle is safe from this arrow," they say, and declare that Salva will fall to Krishna.

Krishna took to the sky in pursuit of Salva, but his Saubha clung to the sky at a leagues length... He threw at me rockets, missiles, spears, spikes, battleaxes, three-bladed javelins, flame-throwers, without pausing... The sky... seemed to hold a hundred suns, a hundred moons... and a hundred myriad stars. Neither day nor night could be made out, or the points of a compass.

Krishna, however, wards off Salva's attack with what sounds like antiballistic missiles; I warded them off as they loomed towards me
With my swift-striking shafts, as they flashed through the sky,
And I cut them into two or three pieces with mine --
There was a great din in the sky above.

However, the Saubha becomes invisible. Krishna then loads a special weapon, perhaps an ancient version of a smart bomb? I quickly laid on an arrow, which killed by seeking out sound, to kill them... All the Danavas [Salva's troops] who had been screeching lay dead, killed by the blazing sun like arrows that were triggered by sound.

However, the Sauba itself escaped the attack. Krishna fires his "favorite fire weapon" at it, a discus shaped like the "haloed sun". The discus breaks the Saubha in two, and the city falls from the sky, killing Salva. This is the end of the Mahabharata.

One of the most intriguing thing about it is that the use of Pradyumna's special arrow, from which "not a man in battle is safe", was outlawed by the gods. What sort of weapon could this be? Another chapter, describing the use of the Agneya weapon by the hero Adwattan. When the weapon, a "blazing missile of smokeless fire" is unleashed;

Dense arrows of flame, like a great shower, issued forth upon creation, encompassing the enemy... A thick gloom swiftly settled upon the Pandava hosts. All points of the compass were lost in darkness.
Fierce winds began to blow. Clouds roared upward, showering dust and gravel.
Birds coaked madly... the very elements seemed disturbed. The sun seemed to waver in the heavens. The earth shook, scorched by the terrible violent heat of this weapon.
Elephants burst into flame and ran to and fro in a frenzy... over a vast area, other animals crumpled to the ground and died. From all points of the compass the arrows of flame rained continuously and fiercely.

And if that sounded like a firestorm, then a similar weapon fired by Gurkha sounds like nothing less than a nuclear blast complete with radioactive fallout;

Gurkha, flying in his swift and powerful Vimana, hurled against the three cities of the Vrishnis and Andhakas a single projectile charged with all the power of the universe. An incandescent column of smoke and fire, as brilliant as ten thousand suns, rose in all its splendor. It was the unknown weapon, the iron thunderbolt, a gigantic messenger of death which reduced to ashes the entire race of Vrishnis and Andhakas.

The corpses were so burnt they were no longer recognizable. Hair and nails fell out. Pottery broke without cause... Foodstuffs were poisoned. To escape, the warriors threw themselves in streams to wash themselves and their equipment.

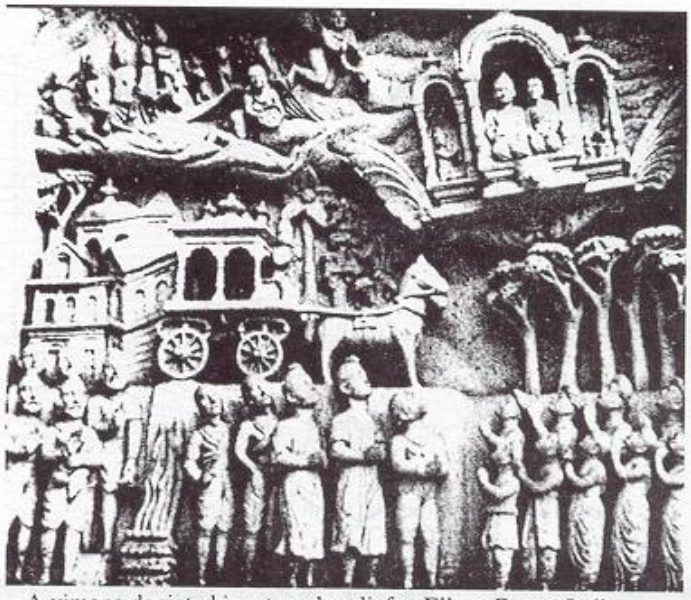
Fly the Friendly skies in Air India Vimanas (excerpts)
By David Hatcher Childress
(source: **Technology of the Gods: The Incredible Sciences of the Ancients** p 147-209)



Nearly every Hindu and Buddhist in the world - hundreds of millions of people has heard of the ancient flying machines referred to in the Ramayana and other texts as vimanas. Vimanas are mentioned even today in standard Indian literature and media reports. An article called “Flight Path” by the Indian journalist Mukul Sharma appeared in the major newspaper **The Times of India** on April 8, 1999 which talked about vimanas and ancient warfare:

According to some interpretations of surviving texts, India’s future it seems happened way back in the past. Take the case of the Yantra Sarvasva, said to have been written by the sage **Maharshi Bhardwaj.**

This consists of as many as 40 sections of which one, the Vaimanika Prakarana dealing with aeronautics, has 8 chapters, a hundred topics and 500 sutras.

In it Bhardwaj describes vimana, or aerial aircrafts, as being of three classes:

1. those that travel from place to place;
2. those that travel from one country to another;
3. those that travel between planets.

A vimana depicted in a temple relief at Ellora Caves, India.

Of special concern among these were the military planes whose functions were delineated in some very considerable detail and which read today like something clean out of science fiction. For instance, they had to be:

Impregnable, unbreakable, non-combustible and indestructible capable of coming to a dead stop in the twinkling of an eye; invisible to enemies; capable of listening to the conversations and sounds in hostile planes; technically proficient to see and record things, persons, incidents and situations going on inside enemy planes; know at every stage the direction of the movement of other aircraft in the vicinity; capable of rendering the enemy crew into a state of suspended animation, intellectual torpor or complete loss of consciousness; capable of destruction; manned by pilots and co-travelers who could adapt in accordance with the climate in which they moved; temperature regulated inside; constructed of very light and heat absorbing metals; provided with mechanisms that could enlarge or reduce images and enhance or diminish sounds.

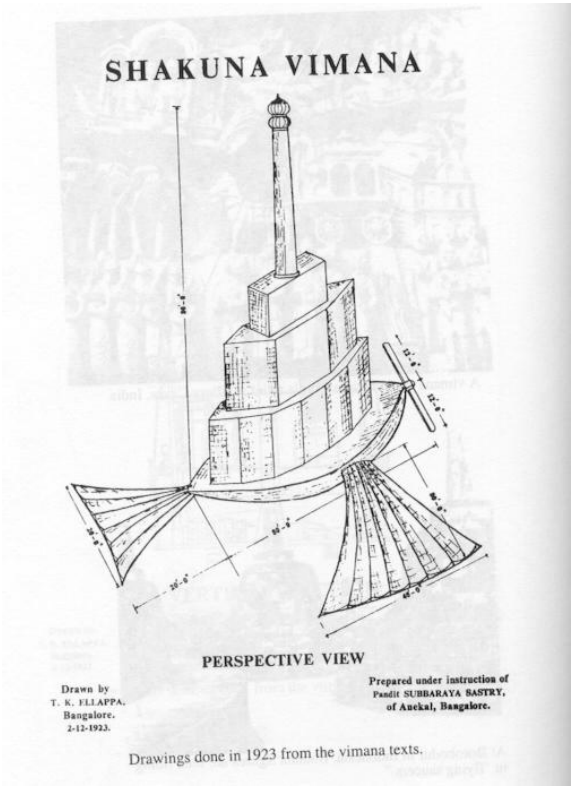
Notwithstanding the fact that such contraption would resemble a cross between an American state-of-the-art Stealth Fighter and a flying saucer, does it mean that air and space travel was well known to ancient Indians and aeroplanes flourished in India when the rest of the world was just learning the rudiments of agriculture? Aerial battles and chases are common in ancient Hindu literature.

What did these airships look like? The ancient Mahabharata speaks of a vimana as “an aerial chariot with the sides of iron and clad with wings.” The Ramayana describes a vimana as a double-deck, circular (cylindrical) aircraft with portholes and a dome. It flew with the “ speed of the wind”, and gave forth a “melodious sound”

The ancient Indians themselves wrote entire flight manuals on the care and control of various types of vimanas. The Samara Sutradhara is a scientific treatises dealing with every possible facet of air travel in a vimana. There are 230 stanzas dealing with construction, take-off, cruising for thousands of miles, normal and forced landings, and even possible collusions with birds!

Would these texts exist (they do) without there being something to actually write about? Traditional historians and archaeologists simply ignore such writings as the imaginative ramblings of a bunch of stoned, ancient writers.

Says Andrew Tomas, " **The Samara Sutradhara, which is a factual type of record, treats air travel from every angle…If this is the science fiction of antiquity, then it is the best that has ever been written.”**



In 1875, the **Vaimanika Shastra**, a fourth century BC text written by Maharshi Bhardwaj, was discovered in a temple in India. The book dealt with the operation of ancient vimanas and included information on steering, precautions for long flights, protection of the airships from storms and lightning, and how to switch the drive to solar energy, or some other “free energy” source, possibly some sort of “gravity drive.” Vimanas were said to take off vertically or dirigible. Bharadwaj the Wise refers to no less than 70 authorities and 10 experts of air travel in antiquity. These sources are now lost.

Vimanas were kept in Vimana Griha, or hanger, were said to be propelled by a yellowish-white-liquid, and were used for various purposes. Airships were present all over the world. The plain of Nazca in Peru is very famous for appearing from the high altitude to be a rather elaborate, if confusing airfield. Some researchers have theorized that this was some sort of Atlantean outpost. It is worth nothing that Rama Empire had its outposts: Easter Island, almost diametrically opposite to Mohenjo-daro on the globe, astonishingly developed its own written language, an obscure script lost to the present

inhabitants, but found on tablets and other carvings. This odd script is found in only one other place in the world: Mohenjo-Daro and Harappa.

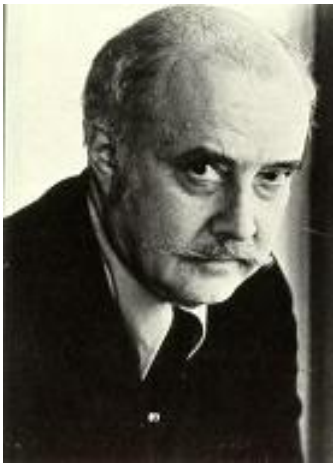
Aerial Warfare in Ancient India

The ancient Indian epics go into considerable detail about aerial warfare over 10,000 years ago. So much detail that a famous Oxford professor included a chapter on the subject in a book on ancient warfare!

Drawings done in 1923 from the vimana texts.

According to the Sanskrit scholar **V.R.Ramachandran Dikshitar**, the Oxford Professor who wrote "**War in Ancient India** in 1944, " No question can be more interesting in the present circumstances of the world than India's contribution to the science of aeronautics. There are numerous illustrations in our vast Puranic and epic literature to show how well and wonderfully the ancient Indians conquered the air. To glibly characterized everything found in this literature as imaginary and summarily dismiss it as unreal has been the practice of both Western and Eastern scholars until very recently. The very idea indeed was ridiculed and people went so far as to assert that it was physically impossible for man to use flying machines. But today what with balloons, aeroplanes and other flying machines, a great change has come over our ideas on the subject."

Says Dr. Dikshitar, " …the flying vimana of Rama or Ravana was set down as but a dream of the mythographer till aeroplanes and zeppelins of the present century saw the light of day. The mohanastra or the "arrow of unconsciousness" of old was until very recently a creature of legend till we heard the other day of bombs discharging Poisonous gases. We owe much to the energetic scientists and researchers who plod persistently and carry their torches deep down into the caves and excavations of old and dig out valid testimonials pointing to the misty antiquity of the wonderful creations of humanity."



Dikshitar mentions that in Vedic literature, in one of the Brahmanas, occurs the concept of a ship that sails heavenwards. "The ship is the Agniliotra of which the Ahavaniya and Garhapatya fires represent the two sides bound heavenward, and the steersman is the Agnihotrin who offers milk to the three Agnis. Again, in the still earlier Rg Veda Samhita we read that the Asvins conveyed the rescued Bhujya safely by means of winged ships. The latter may refer to the aerial navigation in the earliest times."

Commenting on the famous vimana text the Vimanika Shastra, he says:

" In the recently published Samarangana Sutradhara of Bhoja, a whole chapter of about 230 stanzas is devoted to the principles of construction underlying the various flying machines and other engines used for military and other purposes. The various advantages of using machines, especially flying ones, are given elaborately. Special mention is made for their attacking visible as well as invisible objects, of their use at one's will and pleasure, of their uninterrupted movements, of their strength and durability, in short of their capability to do in the air all that is done on earth. After enumerating and explaining a number of other advantages, the author concludes that even impossible things could be effected through them. Three movements are usually ascribed to these machines, ascending, cruising, thousands of miles in the atmosphere and lastly descending. It is said that in an aerial car one can mount to the Surya-mandala, travel throughout the regions of air above the sea and the earth. These cars are said to move so fast as to make a noise that could be heard faintly from the ground. Still some writers have expressed a doubt and asked "Was that true?" But the evidence in its favor is overwhelming.

***

Has the World Ended Before?

Charles Berlitz, author of several books, including The Bermuda Triangle, was the grandson of the founder of the world-famous Berlitz schools, wrote:

"If atomic warfare were actually used in the distant past and not just imagined, there must still exist some indications of a civilization advanced enough to develop or even to know about atomic power. One does find in some of the ancient writings of India some descriptions of advanced scientific thinking which seemed anachronistic to the age from which they come.

The **Jyotish** (400 B. C) echoes the modern concept of the earth's place in the universe, the law of gravity, the kinetic nature of energy, and the theory of cosmic rays and also deals, in specialized but unmistakable vocabulary, with the theory of atomic rays. And what was thousands of years before the medieval theologians of Europe argued about the number of angels that could fit on the head of a pin. **Indian philosophers of the Vaisesika school were discussing atomic theory, speculating about heat being the cause of molecular change, and calculating the period of time taken by an atom to traverse its own space.** Readers of the Buddhist pali sutra and commentaries, who studied them before modern times, were frequently mystified by reference to the "tying together" of minute component parts of matter; although nowadays it is easy for a model reader to recognize an understandable description of molecular composition."

Flying machines in old Indian Sanskrit texts

By Professor Dr. Dileep Kumar Kanjilal gave a brilliant lecture with this title to the Sixth Congress of the Ancient Astronaut Society in Munich in 1979. Kanjilal is a professor at the Calcutta Sanskrit College and therefore a leading scholar in Sanskrit.

(source: **Pathways To The Gods: The Stones of Kiribati - By Erich Von Daniken** p. 179-187).

But if we follow the history of idolatry in India we come across two important works, the **Kausitaki** and the **Satapatha Brahmana**, dating from before 500 B.C. and telling us about images of the gods. Text and illustration show forcefully that the gods were originally corporeal beings. But how, and this question must be faced, did these gods reach the earth through the atmosphere?

The **Yujurveda** quite clearly tells of a flying machine, which was used by the Asvins (two heavenly twins). The Vimana is simply a synonym for flying machine. It occurs in the Yajurveda, the Ramayana, the Mahabharata, the Bhagavata Purana, as well as in classical Indian literature.

At least 20 passages in the **Rigveda** (1028 hymns to the gods) refer exclusively to the flying vehicle of the Asvins. This flying machine is represented as three-storeyed, triangular and three –wheeled. It could carry at least three passengers. According to tradition the machine was made of gold, silver and iron, and had two wings. With this flying machine the Asvins saved King Bhujyu who was in distress at sea.

Every scholar knows the **Vaimanika Shastra**, a collection of sketches the core of which is attributed to **Bharatvaj the Wise** around the 4th century B.C. The writings in the Vaimanika Shastra were rediscovered in 1875. The text deals with the size and the most important parts of the various flying machines. We learn how they steered, what special precautions had to be taken on long flights, how the machines could be protected against violent storms and lightning, how to make a forced landing and even how to switch the drive to solar energy to make the fuel go further. Bharatvaj refers to no fewer than 70 authorities and ten experts of Indian air travel in antiquity!

The description of these machines in old Indian texts are amazingly precise. The difficulty we are faced with today is basically that the texts mention various metals and alloys which we cannot translate. We do not know what our ancestors understood by them. In the **Amarangasutradhara** five flying machines were originally built for the gods Brahma, Vishnu, Yama, Kuvera and Indra. Later there were some additions. Four main types of flying Vimanas are described: Rukma, Sundara, Tripura and Sakuna. The Rukma were conical in shape and dyed gold, whereas the Sundata were like rockets and had a silver sheen. The Tripura were three-storeyed and the Sakuna looked like birds. There were 113 subdivisions of these four main types that differed only in minor details. The position and functioning of the solar energy collectors are described in the Vaimanika Shastra. It says that eight tubes had to be made of special glass absorbing the sun's ray. A whole series of details are listed, some of which we do not understand. The **Amaranganasutradhara** even explains the drive, the controls and the fuel for the flying machine. It says that quicksilver and 'Rasa' were used. Unfortunately we do not yet know what "Rasa' was. Ten sections deal with uncannily topical themes such as pilot training, flight paths, the individual parts of flying machines, as well as clothing for pilots and passengers, and the food recommended for long flights. There was much technical detail: the metals used, heat-absorbing metals and their melting point, the propulsion units and various types of flying machines. The information about metals used in construction name three sorts, somala, soundaalika and mourthwika. If they were mixed in the right proportions, the result was 16 kinds of heat-absorbing metals with names like ushnambhara, ushnapaa, raajaamlatrit, etc. which cannot be translated into English. The texts also explained how to clean metals, the acids such as lemon or apple to be used and the correct mixture, the right oils to work with and the correct temperature for them. Seven types of engine are described with the special functions for which they are suited and the altitudes at which they work best. The catalogue is not short of data about the size of the machines, which had storeys, nor of their suitability for various purposes.

This text is recommended to all who doubt the existence of flying machines in antiquity. The mindless cry that there were no such things would have to fall silent in shame.

The ruined sites of Parhaspur have been the scene of 'divine' air battles? Pyramids reminiscent of the Mayan pyramids in the Central American jungles in the center of Parhaspur.

In 1979 a book by David W. Davenport, an Englishman born in India, was published in Italy. Its title was **2000 AC Diztruzione Atomica, Atomic Destruction 2000. BC**. Davenport claimed to have proof that Mohenjo Daro, one of the oldest cities in the history of human civilization, had been destroyed by an atomic bomb. Davenport shows that the ruined site known as the place of death by archaeologists was not formed by gradual decay.

Originally Mohenjo Daro, which is more than 5000 years old, lay on two islands in the Indus. Within a radius of 1.5 km Davenport demonstrates three different degrees of devastation which spread from the center outwards. Enormous heat unleashed total destruction at the center. Thousands of lumps, christened 'black stones' by archaeologists, turned out to be fragments of clay vessels which had melted into each other in the extreme heat. The possibility of a volcanic eruption is excluded because there is no hardened lava or volcanic ash in or near Mohenjo Daro. Davenport assumed that the brief intensive heat reached 2000 degree C. It made the ceramic vessels melt.

He further says that in the suburbs of Mohenjo Daro skeletons of people lying flat on the ground, often hand in hand were found, as if the living had been suddenly overcome by an unexpected catastrophe.

In spite of the interdisciplinary possibilities, archaeology works solely by traditional methods in Mohenjo Daro. They ought to use the former, for it would produce results. If flying machines and a nuclear explosion as the cause of the ruins are excluded out of hand, there can be no research by enlarged teams with physicists, chemists, metallurgists, etc. **As the iron curtain so often falls on sites that are important in the history of mankind, I cannot help feeling that surprising facts endangering existing ways of thinking might and should be discovered. A nuclear explosion 5000 years ago does not fit into the scenario?**

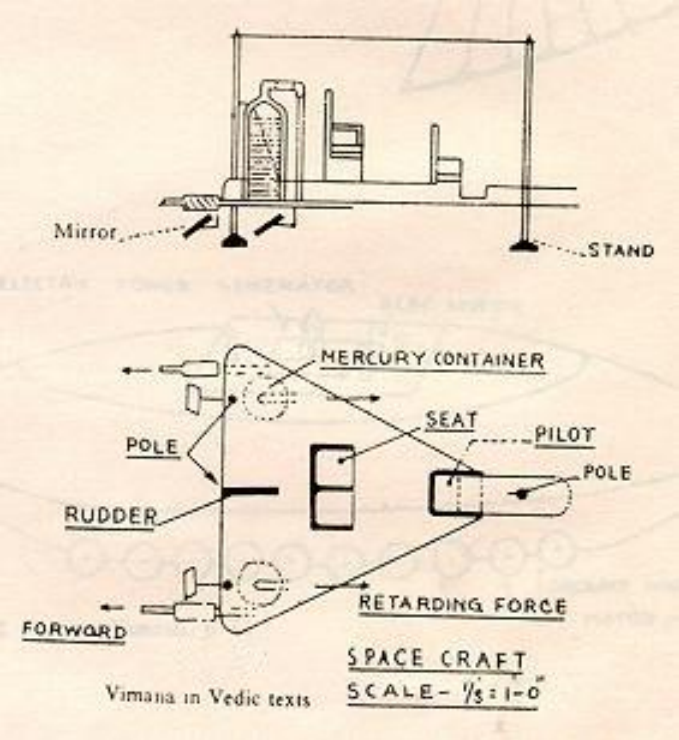
Chariots of The Gods

Erich Von Daniken author of the International Bestseller book, **Chariots of The Gods**, writes:

" For example, how did the chronicler of the Mahabharata know that a weapon capable of punishing a country with a twelve years' drought could exist? And powerful enough to kill the unborn in their mothers womb? This ancient Indian epic, the Mahabharata, is more

comprehensive than the Bible, and even at a conservative estimate its original core is at least 5,000 years old. It is well worth reading this epic in the light of the present day knowledge.

We shall not be surprised when we learn in the **Ramayana** that Vimanas, i.e. flying machines, navigated at great heights with the aid of quicksilver and a great propulsive wind. the Vimanas could cover vast, distances and could travel forward, upward and downward. Enviably maneuverable space vehicles!.



This quotation comes from the translation by **N. Dutt** in 1891: "At Rama's behest the magnificent chariot rose up to a mountain of cloud with a tremendous din.." We cannot help noticing that not only is a flying object mentioned again but also that the chronicler talks of a tremendous din.

Here is another passage from the Mahabharata: "Bhisma flew with his Vimana on an enormous ray which was as brilliant as the sun and made a noise like the thunder of a storm." (C.Roy 1899).

Even imagination needs something to start off. How can the chronicler give descriptions that presuppose at least some idea of rockets and the knowledge that such a vehicle can ride on a ray and cause a terrifying thunder?

Certain numerical data in the Mahabharata are so precise that one gets the impression that the author was writing from first-hand knowledge. Full of repulsion, he describes a weapon that could kill all warriors who wore metal on their bodies. If the warriors learned about the effect of this weapon in time, they tore off all the metal equipment they were wearing, jumped into a river, and washed everything they were wearing, and everything they had come in contact with very thoroughly. Not without reason, as the author explains, **for the weapons made the hair and nails fall out.** Everything living, he bemoaned, became pale and weak.

The Mahabharata says: "Time is the seed of the Universe."

In the **Samarangana Sutradhara** whole chapters are devoted to describing airships whose tails spout fire and quicksilver.

A passage from the **Mahabharata** is bound to make us think:

"It was as if the elements had been unleashed. The sun spun round. Scorched by the incandescent heat of the weapon, the world reeled in fever. Elephants were set on fire by the heat and ran to and fro in a frenzy to seek protection from the terrible violence. The water boiled, the animals died, the enemy was mown down and the raging of the blaze made the trees collapse in rows as in a forest fire. The elephants made a fearful trumpeting and sank dead to the ground over a vast area. Horses and war chariots were burnt up and the scene looked like the aftermath of a conflagration. Thousands of chariots were destroyed, then deep silence descended on the sea. The winds, began to blow and the earth grew bright. It was a terrible sight to see. The corpses of the fallen were mutilated by the terrible heat so that they no longer looked like human beings. Never before have we seen such a ghastly weapon and never before have we heard of such a weapon. (C. Roy 1889).

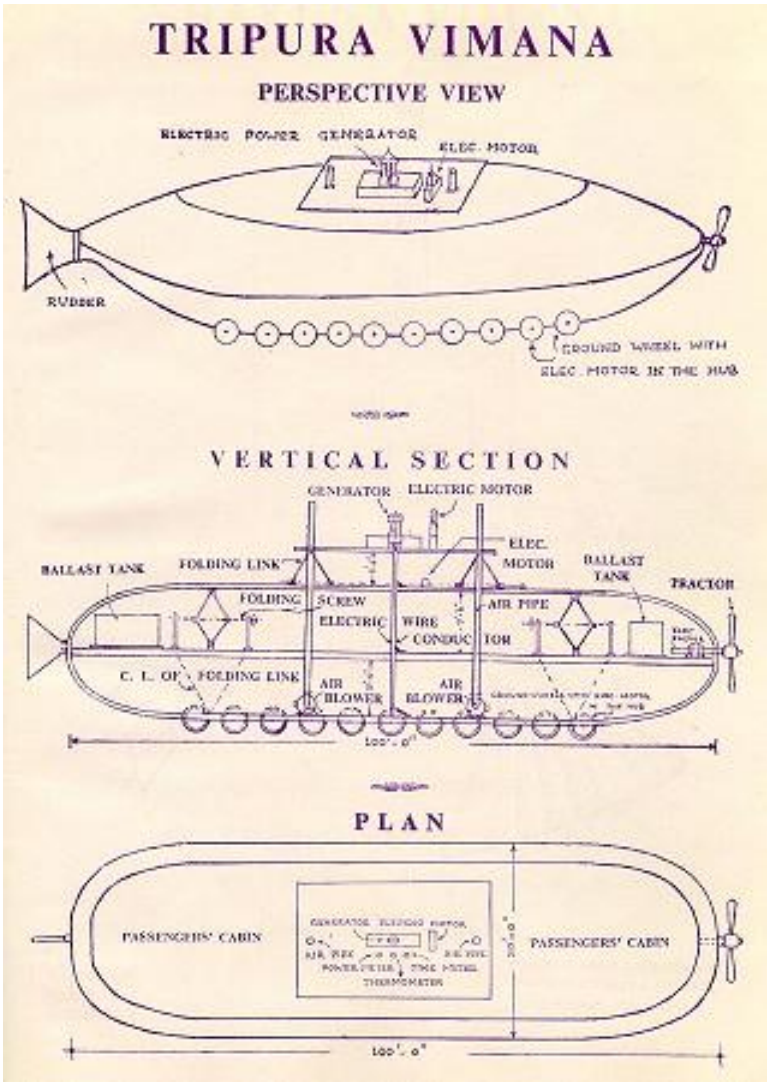
Vymaanika Shaastra Aeronautics of Maharshi Bharadwaaja - By G. R. Josyer (excerpts)



Rahasyagnyodhikaaree - Sutra 2.

"The pilot is one who knows the secrets"

Bodhaanada: Scientists say that there are 32 secrets of the working of the Vimaana. A pilot should acquaint himself thoroughly with them before he can be deemed competent to handle the aeroplane. He must know the structure of the aeroplane, know the means of its take off and ascent to the sky, know how to drive it and how to halt it when necessary, how to maneuver it and make it perform spectacular feats in the sky without crashing. Those secrets are given in **"Rahashya Lahari"** and other works by Lalla and other masters, are are described thus:

"The pilot should have had training in maantrica and taantrica, kritaka and antaraalaka, goodha or hidden, drishya and adrishya or seen and unseen, paroksha and aparoksha, contraction and expansion, changing shape, look frightening, look pleasing, become luminous or enveloped in darkness, deluge or pralaya, vimukha, taara, stun by thunderstorm din, jump, move zig-zag like serpent, chaapala, face all sides, hear distant sounds, take pictures, know enemy maneuver, know direction of enemy approach, stabdhaka or paralyse, and karshana or exercise magnetic pull.

These 32 secrets the pilot should learn from competent preceptors and only such a person is fit to be entrusted with an aeroplane, and not others.

Some of these secrets are:

1. Goodha: As explained in 'Vaayutatva-Prakarana', by harnessing the powers, Yaasaa, Viyaasaa, Prayaasaa in the 8th atmospheric layer covering the earth, to attract the dark content of the solar ray, and use it to hide the Vimana from the enemy.

2. Drishya: By collision of the electric power and wind power in the atmosphere, a glow is created, whose reflection is to be caught in the Vishwa-Kriya-drapana or mirror at the front of the Vimana, and by its manipulation produce a Maaya-Vimana or camouflaged Vimana.

3. Vimukha: As mentioned in "Rig-hridaya", by projecting the force of Kubera, Vimukha and Vyshawaanara poison powder through the third tube of the roudree mirror and turning the switch of the air mechanism, produce wholesale insensibility and coma.

4. Roopaakarshana: By means of the photographic yantra in the Vimana to obtain a television view of things inside an enemy's plane.

5. Stabdhak: By projecting apasmaara poison fume smoke through the tube on the north side on the Vimana, and discharging it with stambhana yantra, people in enemy planes will be made unconscious.

6. Chaapla: On sighting an enemy plane, by turning the switch in the force center in the middle section of the Vimana, a 4087 revolutions an hour atmospheric wave speed will be generated, and shake up the enemy plane.

7. Parashabda Graahaka: As explained in the "Sowdaaminee Kalaa: or science of electronics, by means of the sound capturing yantra in the Vimana, to hear the talks and sound in enemy planes flying in the sky.

****

According to Shownaka, the regions of the sky are 5, named, Rekhaapathaha, Mandala, Kakshaya, shakti and Kendra. In these 5 atmospheric regions, ther are 5,19,800 air ways traversed by Vimanas of the Seven Lokas or worlds, known as Bhooloka, Bhuvarloka, Suvarloka, Maholoka, Janoloka, Tapoloka and Satyaloka. Dhundinaatha and "Valalmeeki Ganita" state that Rekha has 7,03,00,800 air routes. Mandala has 20,08,00200 air routes, Kakshya has 2,09,00,300 air routes, Shakti has 10,01,300 air routes, and Kendra has 30,08,200 air routes.

It discusses what kind of food to eat, clothing to wear, metals for vimanas, purification of metals, deals with mirrors and lenses which are required to be installed in the vimaanas, mechanical contrivances or yantras and protecting and different types of vimaanas.

Stealth bomber from shastra

A glass-like material based on technology found in an ancient Sanskrit text that could ultimately be used in a stealth bomber (the material cannot be detected by radar) has been developed by a research scholar of Benaras Hindu University.

Prof M A Lakshmithathachar, Director of the **Academy of Sanskrit Research** in Melkote, near Mandya, told Deccan Herald that tests conducted with the material showed radars could not detect it. “The unique material cannot be traced by radar and so a plane coated with it cannot be detected using radar,” he said.

The academy had been commissioned by the Aeronautical Research Development Board, New Delhi, to take up a one-year study, ‘Non-conventional approach to Aeronautics,’ on the basis of an old text, **Vaimanika Shastra, authored by Bharadwaj.**

Though the period to which Bharadwaj belonged to is not very clear, Prof Lakshmithathachar noted, the manuscripts might be more 1,000 years old.

The project aims at deciphering the Bharadwaj’s concepts in aviation.

However, Prof Lakshmithathachar was quick to add that a collaborative effort from scholars of Sanskrit, physics, mathematics and aeronautics is needed to understand Bharadwaj’s shastra.

The country’s interest in aviation can be traced back over 2,000 years to the mythological era and the epic Ramayana tells of a supersonic-type plane, **the Pushpak Vimana, which could fly at the speed of thought.**

“The shastra has interesting information on vimanas (airplanes), different types of metals and alloys, a spectrometer and even flying gear,” the professor said. The shastra also outlines the metallurgical method to prepare an alloy very light and strong which could withstand high pressure.

He said Prof Dongre of BHU had brought out a research paper Amshubondhini after studying Vaimanika Shastra and developed the material. “There have been sporadic efforts to develop aeronautics in the country’s history. There has never been a holistic approach to it. Vaimanika Shastra throws up many interesting details that can benefit Indian aviation programme,” the director added.

Prof Lakshmithathachar rubbished the tendency among certain scholars to discount such ancient Sanskrit texts and said, “Why would our scholars want to cheat future generations? Unless it was important, nothing was written in the old days. The fact that there exists manuscripts indicates the significance.”

The academy has also embarked on other projects including ‘Indian concept of Cosmology’ with Indian Space Research Organisation, ‘Iron & Steel in Ancient India — A Historical Perspective’ with the Steel Authority of India Limited, and ‘Tools & Technology of Ancient India.’

Did You know?

Oppenheimer and Atom bomb in modern times

Only seven years after the first successful atom bomb blast in New Mexico, Dr. Robert Oppenheimer (1904-1967) Scientist, philosopher, bohemian, and radical. A theoretical physicist and the Supervising Scientist of **the Manhattan Project, who was familiar with ancient Sanskrit literature**, was giving a lecture at Rochester University. During the question and answer period a student asked a question to which Oppenheimer gave a strangely qualified answer:

Student: Was the bomb exploded at Alamogordo during the Manhattan Project the first one to be detonated?

Dr. Oppenheimer: "Well -- yes. In modern times, of course.

Charles Berlitz goes on to quote a number of passages from the Mahabharata that describe the impact of a weapon that I suspect must be the brahmaastra, although he neither names the weapon nor cites those sections of the text from which his quotations are drawn (he lists Protap Chandra Roy's translation of 1889 in his bibliography):...a single projectile Charged with all the power of the Universe.

An incandescent column of smoke and flame As bright as ten thousand Suns Rose in all its splendor.....it was an unknown weapon, An iron thunderbolt, A gigantic messenger of death, Which reduced to ashes. The Entire race of the Vrishnis and the Andhakas....the corpses were so burned As to be unrecognizable. Their hair and nails fell out; Pottery broke without apparent cause, And the birds turned white. After a few hours all foodstuffs were infected.....To escape from this fire. The soldiers threw themselves in streams to wash themselves and their equipment...

One is reminded of the yet unknown final effect of a super-bomb when we read in the **Ramayana** of a projectile:

...So powerful that it could destroy
The earth in an instant -
A great soaring sound in smoke and flames...
And on it sits Death...

(source: **Doomsday 1999 - By Charles Berlitz** p. 118-122). For more on **Oppenheimer**, refer to **Quotes 21-40**).

The Discovery of Dwaraka

Discovered in 1981, the well-fortified township of Dwaraka extended more than half a mile from the shore and was built in six sectors along the banks of a river before it became submerged.

The findings are of immense cultural and religious importance to India. Among the objects unearthed that proved Dwarka's connection with the Mahabharata epic was a sea engraved with the image of a three-headed animal. The epic mentions such a seal given to the citizens of Dwarka as a proof of identity when the city was threatened by King Jarasandha of the powerful Magadh kingdom (now Bihar). The foundation of boulders on which the city's walls were erected proves that the land was reclaimed from the sea about 3,600 years ago. The epic has references to such reclamation activity at Dwarka. Seven islands mentioned in it were also discovered submerged in the Arabian Sea.
Why is that the rediscovery of Dwaraka has not attracted the same degree of attention in the West, as that of ancient Troy by Heinrich Schliemann?

(Note: Please refer to Chapter on **Dwaraka**. For information on **Lost city found off Indian coast**, refer to chapter on **Glimpses III**).

The history of ancient India is largely a history of Hindu culture and progress. Hindu culture has a distinct claim to a higher antiquity than Assyrian schools would claim for Sargon I and as much or even higher antiquity than Egyptian scholars would claim for the commencement of the first dynasty of Kings. One aspect of this culture consists in India's political institutions which were almost modern. Modern warfare has developed on mechanical lines, giving less scope for the qualities of courage and individual leadership. The value and importance of the army were realized very early in the history of India, and this led to the maintenance of a permanent militia to put down dissent within and arrest aggression from without. This gave rise to the Ksatriya warrior caste, and the ksatram dharmam came to mean the primary duty of war. To serve the country by participating in war became the svadharma of this warrior community.

Hindu military science recognizes two kinds of warfare - the **dharmayuddha** and the **kutayuddha.** Dharmayuddha is war carried on the principles of dharma, meaning here the Ksatradharma or the law of Kings and Warriors. In other words, it was a just and righteous war which had the approval of society. On the other hand, kuttayuddha was unrighteous war. It was a crafty fight carried on in secret. The Hindu science of warfare values both niti and saurya i.e. ethical principles and valor. It was therefore realized that the waging of war without regard to moral standards degraded the institution into mere animal ferocity. A monarch desirous of dharma vijaya should conform to the code of ethics enjoined upon warriors. The principles regulating the two kinds of warfare are elaborately described in the Dharmasutras and Dharmasastras, the epics (Ramayana and Mahabharata), the Arthasastra treatises of Kautalya, Kamandaka, and Sukra. Hindu India possessed the classical fourfold force of chariots, elephants, horsemen, and infantry, collectively known as the Caturangabala. Students also know that the old game of chess also goes by the name of Caturanga. From the references to this game in the Rg Veda and the Atharva Veda and in the Buddhists and Jaina books, it must have been very popular in ancient India. The Persian term Chatrang and the Arabic Shatrang are forms of the Sanskrit Caturanga.

According to **Sir A. M. Eliot** and **Heinrich Brunnhofer** (a German Indologist) and **Gustav Oppert**, all of whom have stated that ancient Hindus knew the use of gunpowder. Eliot tells us that the Arabs learnt the manufacture of gunpowder from India, and that before their Indian connection they had used arrows of naptha. It is also argued that though Persia possessed saltpetre in abundance, the original home of gunpowder was India. In the light of the above remarks we can trace the evolution of fire-arms in the ancient India. (source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen**. p.92). Terence Duke, author of The Boddhisattva Warriors: The Origin, Inner Philosophy, History and Symbolism of the Buddhist Martial Art Within India and China, martial arts went from India to China. Fighting without weapons was a specialty of the ancient Ksatreya warriors of India.

Introduction

The value and importance of the army were realized very early in the history of India, and this led in course of time to the maintenance of a permanent militia to put down dissensions. War or no war, the army was to be maintained, to meet any unexpected contingency. **This gave rise to the Ksatriya or warrior caste, and the ksatram dharman came to mean the primary duty of war.** To serve the country by participating in war became the **svadharma** or this warrior community.

The necessary education, drill, and discipline to cultivate militarism were confined to the members of one community, the Ksatriyas. This prevented the militant attitude from spreading to other communities and kept the whole social structure unaffected by actual wars and war institutions. Says the **Arthva Veda**: "May we revel, living a hundred winters, rich in heroes." The whole country looked upon the members of the ksatriya community as defenders of their country and consequently did not grudge the high influence and power wielded by the Ksatriyas, who were assigned a social rank next in importance to the intellectual and spiritual needs of the society. The ancient Hindus were a sensitive people, and their heroes were instructed that they were defending the noble cause of God, Crown and Country. Viewed in this light, war departments were 'defense' departments and military expenditure were included in the cost of defense. In this, as in many cases, ancient India was ahead of modern ideas.

Chivalry, individual heroism, qualities of mercy and nobility of outlook even in the grimmest of struggles were not unknown to the soldiers of ancient India. Thus among the laws of war, we find that (1) a warrior (**Khsatriya**) in armor must not fight with one not so clad (2) one should fight only one enemy and cease fighting if the opponent is disabled, (3) aged men, women and children, the retreating, or one who held a straw in his lips as a sign of unconditional surrender should not be killed. It is of topical interest to note that one of the laws enjoins the army to leave the fruit and flower gardens, temples and other places of public worship unmolested. Terence Duke, author of The Boddhisattva Warriors: The Origin, Inner Philosophy, History and Symbolism of the Buddhist Martial Art Within India and China, martial arts went from India to China. Fighting without weapons was a specialty of the ancient Ksatreya warriors of India.

Territorial ideal of a one-State India

Imperial sway in ancient India meant the active rule of an individual monarch who by his ability and prowess brought to subjection the neighboring chieftains and other rulers, and proclaimed himself the sole ruler of the earth. This goes by the name of **digvi-jaya**. It is not necessary that he should conquer all States by the sword. A small state might feel the weight of a conquering king and render obeisance of its own accord.

According to the **Sangam** classics, each of the respective rulers of the chief Tamil kingdoms, the Cera, Cola and Pandya, carried his sword as far north as the Himalayas, and implanted on its lofty heights his respective crest the bow, the tiger and the fish. In these adventures which the Tamil Kings underwent for their glorification, they did not lag behind their northern brethren. The very epithet **Imayavaramban** shows that the limits of the empire under that Emperor extended to the Himalayas in the north. This title was also earned by Ceran **Senguttuvan** by his meritorious exploits in the north. Names like the Cola Pass in the Himalayan slopes, which in very early times connected Nepal and Bhutan with ancient Tibet, give a certain clue to the fact that once Tamil kings went so far north as the Himalayas and left their indelible marks in those regions.

Kshatriya Warrior (Now in Indian Museum, Calcutta).

If in the epic age a Rama and an Arjuna could come to the extremity of our peninsula, and in the historical period of a Chandragupta or a Samudragupta could undertake an expedition to this part of our country, nothing could prevent a king of prowess and vast resources like the Cera king Senguttuvan from carrying his armies to the north. The route lay through the Dakhan plateau, the Kalinga, Malva, and the Ganga. Perhaps it was the ancient **Daksinapatha** route known to history from the epoch of the **Rg Veda Samhita**.

The king who became conqueror of all India was entitled to the distinction of being called a Samrat. In the Puranic period the great Kartavirya Arjuna of the Haihaya clan spread his arms throughout the ancient Indian continent and earned the title of Samrat. The same principle of glory and distinction underlay the performance of the sacrifice, Asvamedha and Rajasuya, which were intended only for the members of the Ksatriya community.

A Cakravartin

This bears testimony to ' the existence of the territorial ideal of a one-State India' (Cakravartiksetram of Kautalya). These kings were called **Sarvabhaumas** and **Ekarats.**

Vedic kings aimed at it, and epic rulers realized it. The idea of ekarat, continued down to Buddhist times and even later. The Jatakas which are said to belong to the fifth and sixth century B.C., make pointed reference to an all-Indian empire. This concept of an all-India empire stretching from Kanyakumari to the Himalayas, according to Kautalya receives further support from another important political term: **ekacchatra**, or one-umbrella sovereignty.

Hindus have given shelter to the persecuted people from many lands and in all ages. **But what is most important, they have always regarded their own homeland as the only playfield for their chakravartins, and never waged wars of conquest beyond the borders of Bharata-varsha.**

Top of Page

The Laws of War

When society became organized and a warrior caste (Kshatriya) came into being, it was felt that the members of this caste should be governed by certain humane laws, the observance of which, it was believed, would take them to heaven, while their non-observance would lead them into hell. In the post Vedic epoch, and especially before the epics were reduced to writing, lawless war had been supplanted, and a code had begun to govern the waging of wars. The ancient law-givers, the reputed authors of the **Dharmasutras** and the **Dharmasastras,** codified the then existing customs and usages for the betterment of mankind. Thus the law books and the epics contain special sections on royal duties and the duties of common warriors.

It is a general rule that kings were chosen from among the Kshatriya caste. In other words, a non-Ksatriya was not qualified to be a king. And this is probably due to the fact that the kshatriya caste was considered superior to others in virtue of its material prowess. Though the warrior's code enjoins that all the Ksatriyas should die on the field of battle, still in practice many died a peaceful death. There is a definite ordinance of the ancient law books prohibiting the warrior caste from taking to asceticism. Action and renunciation is the watch-word of the Ksatriya. The warrior was not generally allowed to don the robes of an ascetic. **But Mahavira and Gautama protested against these injunctions and inaugurated an order of monks or sannyasins. When these dissenting sects gathered in strength and numbers, the decline of Ksatriya valor set in. Once they were initiated into a life of peace and prayer, they preferred it to the horrors of war. this was a disservice that dissenting sects did to the cause of ancient India.**

When a conqueror felt that he was in a position to invade the foreigner's country, he sent an ambassador with the message: 'Fight or submit.' More than 5000 years ago India recognized that the person of the ambassador was inviolable. **This was a great service that ancient Hinduism rendered to the cause of international law.** It was the religious force that invested the person of the herald or ambassador with an inviolable sanctity in the ancient world. The **Mahabharata** rules that the king who killed an envoy would sink into hell with all his ministers.

As early as as the 4th century B.C. **Megasthenes** noticed a peculiar trait of Indian warfare.

"Whereas among other nations it is usual, in the contests of war, to ravage the soil and thus to reduce it to an uncultivated waste, among the Indians, on the contrary, by whom husbandmen are regarded as a class that is sacred and inviolable, the tillers of the soil, even when battle is raging in their neighborhood, are undisturbed by any sense of danger, for the combatants on either side in waging the conflict make carnage of each other, but allow those engaged in husbandry to remain quite unmolested. Besides, **they never ravage an enemy's land with fire, nor cut down its trees."**

(source: **A Brief History of India - By Alain Danielou** p. 106). The modern "scorched earth" policy was then unknown. "

Professor **H. H. Wilson** says: **"The Hindu laws of war are very chivalrous and humane, and prohibit the slaying of the unarmed, of women, of the old, and of the conquered."**

At the very time when a battle was going on, be says, the neighboring cultivators might be seen quietly pursuing their work, - " perhaps ploughing, gathering for crops, pruning the trees, or reaping the harvest." **Chinese pilgrim to Nalanda University, Hiuen Tsiang affirms that although the there were enough of rivalries and wars in the 7th century A.D. the country at large was little injured by them.**

Weapons of War as Gathered from Literature

Dhanur Veda classifies the weapons of offence and defense into four - the mukta, the amukta, the mukta-mukta and the yantramukta. The **Nitiprakasika,** on the other hand, divides them into three broad classes, the mukta (thrown), the amukta (not thrown), and the mantramukta (discharged by mantras). The bows and arrows are the chief weapons of the

mukta group. The very fact that our military science named Dhanur Veda provides sufficiently clearly that the bow and arrow were the principle weapons of war in those times. It was known by different terms as sarnga, kodanda, and karmuka. Whether these are synonyms of the same thing or were different is difficult to say. The Rg vedaic smith was not only a steel worker but also an arrow maker.

Painting of Battle Scene, Ellora

Fire-Arms:

It would be interesting to examine the true nature of the agneya-astras. **Kautalya** describes agni-bana, and mentions three recipes - agni-dharana, ksepyo-agni-yoga, and visvasaghati. **Visvasaghati** was composed of 'the powder of all the metals as red as fire or the mixture of the powder of kumbhi, lead, zinc, mixed with the charcoal and with oil wax and turpentine.' From the nature of the ingredients of the different compositions it would appear that they were highly inflammable and could not be easily extinguished.

A recent writer remarks: **'The Visvasaghati-agni-yoga** was virtually a bomb which burst and the fragments of metals were scattered in all directions. The agni-bana was the fore-runner of a gun-shot.....

Sir A. M. Eliot tells us that the Arabs learnt the manufacture of gunpowder from India, and that before their Indian connection they had used arrows of naptha. It is also argued that though Persia possessed saltpetre in abundance, the original home of gunpowder was India. It is said that the Turkish word top and the Persian tupang or tufang are derived from the Sanskrit word dhupa. The **dhupa** of the **Agni Purana** **means a rocket, perhaps a corruption of the Kautaliyan term natadipika.**

(source: **Fire-Arms in Ancient India - By Jogesh Chandra Ray** I.H.Q. viii. p. 586-88).

Heinrich Brunnhofer (1841-1917), German Indologist, **also believed that the ancient Aryans of India knew about gunpowder.**

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen**. p.92).

Gustav Oppert (1836-1908) born in Hamburg, Germany, he taught Sanskrit and comparative linguistics at the Presidency College, Madras for 21 years. He was the Telugu translator to the Government and Curator, Government Oriental Manuscript Library. Translated **Sukraniti, statecraft by an unknown author.**

He attempted to prove that ancient Indians knew firearms.

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German - By Valentine Stache-Rosen.** p.81).

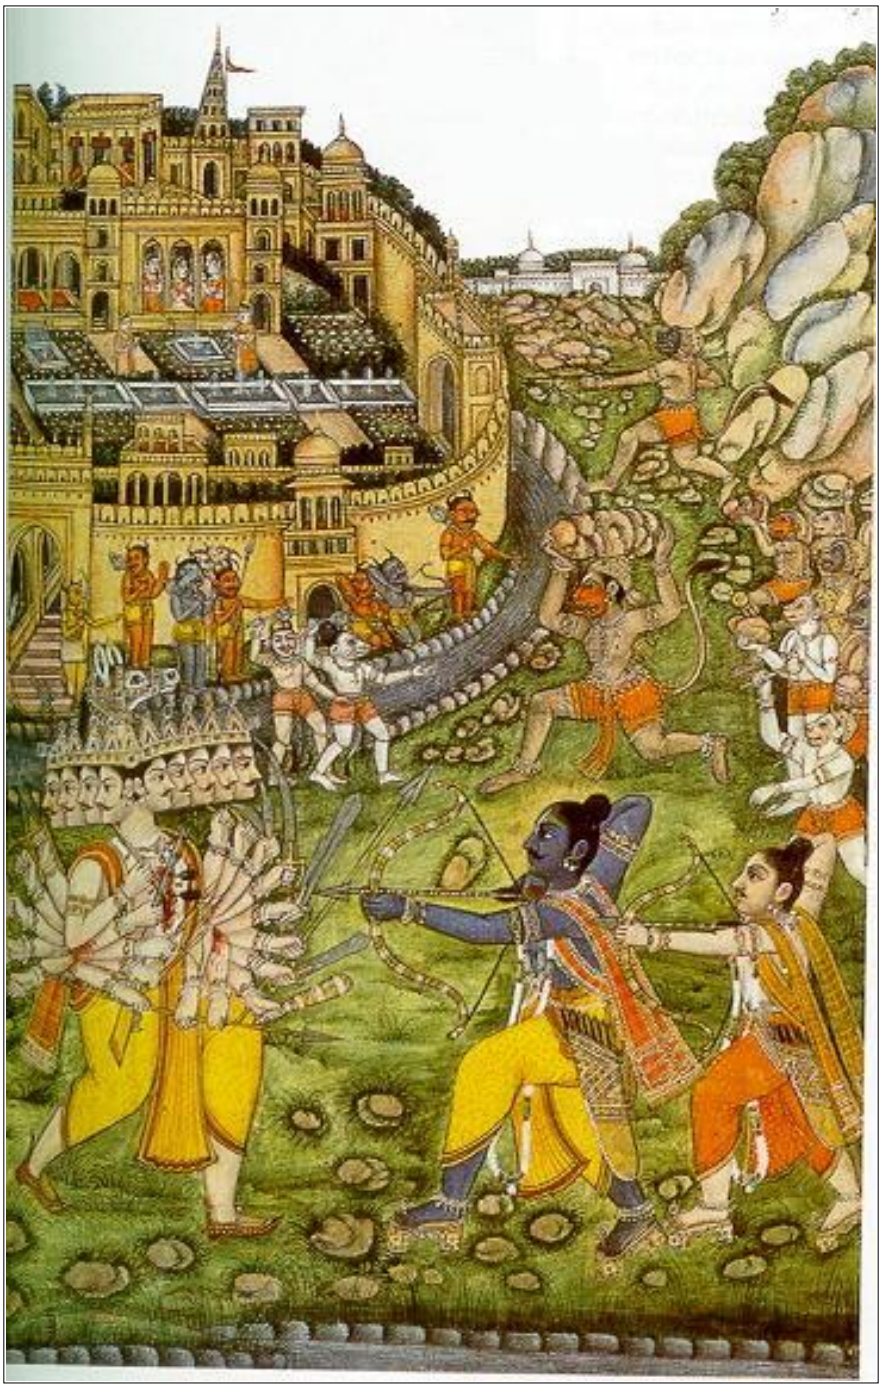
(For more refer to article by G R Josyer - **India: The Home of Gunpowder and Firearms**).

In his work, **Political Maxims of the Ancient Hindus**, he says, that ancient India was the original home of gunpowder and fire-arms. It is probable that the word Sataghni referred to in the Sundara Kanda of the Ramayana refers to cannon.

(source: **Hindu Culture and The Modern Age - By Dewan Bahadur K.S. Ramaswami Shastri** - Annamalai University 1956 p. 127).

The word astra in the Sukraniti is interpreted by Dr. Gustav Oppert as a bow. The term astra means a missile, anything which is discharged. Agneya astra means a fiery arm as distinguished from a firearm.

Dr. Oppert refers to half a dozen temples in South India to prove the use of fire-arms in ancient India. The Palni temple in the Madura District contains on the outer portion in an ancient stone mantapa scenes of carved figures of soldiers carrying in their hands small fire-arms, apparently the small-sized guns mentioned in the Sukranitisara. Again in the Sarnagapani temple at **Kumbakonam** in the front gate of the fifth story from the top is the **figure of a king sitting in a chariot drawn by horses and surrounded by a number of soldiers. Before this chariot march two sepoys with pistols in their hands**. In the **Nurrukkal mantapam** of the **Conjeevaram temple** is a pillar on the north side of the mandapa. Here is a relief vividly representing a flight between two bodies of soldiers. Mounted horsemen are also seen. The foot-soldier is shown aiming his fire-arm against the enemy. Such things are also noted in the Tanjore temple and the temple at Perur, in the Coimbatore District. In the latter there is an actual representation of a soldier loading a musket.



The Borobudar in Java where Indian tradition is copied wholesale. They are ascribed roughly to the period 750-850 A.D. There is a striking relief series PL. I, fig. 5, (1605) representing a battle in which two others are seen on each side, one wearing a curved sword in the right hand and a long shield, and the other a mace and a round shield resembling a wheel, all apparently made of iron. The story of the Ramayana is also given as in the **Tadpatri temple** from Rama's going to the forest down to the killing of Ravana. There is also a wonderful sculpture of an ancient Hindu ship.

(source: **Suvarnadvipa - By R.C. Majumdar.** pp 194-5).

Medhatithi remarks thus "while fighting his enemies in battle, he shall not strike with concealed weapons nor with arrows that are poisoned or barbed on with flaming shafts."

Sukraniti while referring to fire-arms, (agneyastras) says that before any war, the duty of the minister of war is to check up the total stock of gunpowder in the arsenal. Small guns is referred as tupak by Canda Baradayi. The installation of yantras (engines of war) inside the walls of the forts referred to by Manasollasa and the reference of Sataghni (killer of hundreds of men) pressed into service for the protection of the forts by Samaranganasutradhara clearly reveals the frequent use of fire arms in the battle-field.

(source: **India Through The Ages: History, Art Culture and Religion - By G. Kuppuram** p. 512-513).

Lord Rama with his bow defeats Ravana in the gold city of Lanka

In the light of the above remarks **we can trace the evolution of fire-arms in the ancient India.** There is evidence to show that agni (fire) was praised for vanquishing an enemy. The **Arthava Veda** shows the employment of fire-arms with lead shots. The Aitareya Brahmana describes an arrow with fire at its tip. In the Mahabharata and Ramayana, the employment of agnyastras is frequently mentioned, and this deserves careful examination in the light of other important terms like ayah, kanapa and tula-guda.

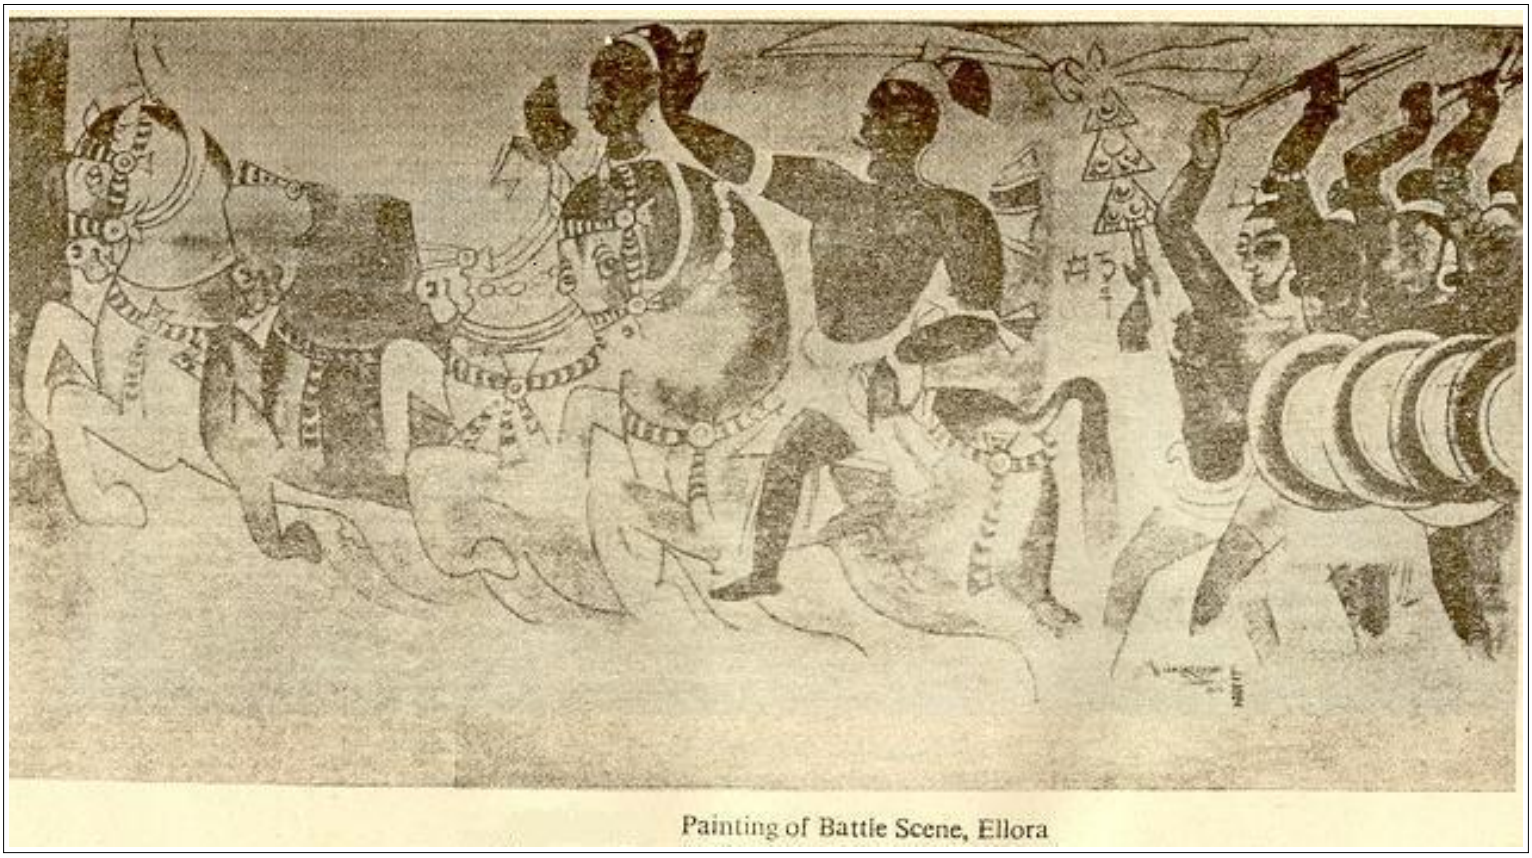
The agnicurna or gunpowder was composed of 4 to 6 parts of saltpetre, one part of sulphur, and one part of charcoal of arka, sruhi and other trees burnt in a pit and reduced to powder. Here is certain evidence of the ancient rockets giving place to actual guns in warfare. From the description of the composition of gunpowder, the composition of the Sukraniti can be dated at the pre-Gupta age.

(source: **War in Ancient India - By V. R. Ramachandra Dikshitar** 1944. p. 103 -105).

Bow and Arrow:

In the words of **H. H. Wilson**: "the Hindus cultivated archery most assiduously and were very Parthians in the use of the bow on horse-back." One feature of this weapon was that it could be handled by all the four classes of warriors.

Other Weapons:



The **Bindipala** and the nine following are minor weapons of this class. Probably this was a heavy club which had a broad and bent tail end, measuring one cubit in length. It was to be used with the left foot of the warrior placed in front. The various uses of this weapon were cutting, hitting, striking and breaking. It was like a kunta but with a big blade. It was used by the Asuras in their fight with Kartavirya Arjuna.

The Nalika is a hand gun or musket rightly piercing the mark. It was straight in form and hollow inside. It discharged darts if ignited. As has been already said, Sukracarya speaks of two kinds of nalika, one big and the other small. The small one, with a little hole at the end, measured sixty angulas (ie. distance between the thumb and the little finger) dotted with several spots at the muzzle end. Through the touch hole or at its breach which contained wood, fire was conveyed to the charge. It was generally used by foot-soldiers. But the big gun had no wood at the breach and was so heavy that it had to be conveyed in carts. The balls were made of iron, lead or other material. Kamandaka uses the word nalika in the sense of firing gun as a signal for the unwary king. Again in the **Naisadha**, a work of the medieval period, Damayanti is compared to the two bows of the god of love and goddess of love, and her two nostrils to the two guns capable of throwing balls.

Thus there is clear evidence of the existence and use of firing guns in India in very early times.

The **Cakra,** the next weapon in the category, is a circular disc with a small opening in the middle. It was of three kinds of eight, six and four spokes. It was used in five or six ways. It resembled the quoid of the Sikhs today. Lord Vishnu is popularly addressed as Sankha-cakra-gada-pani, that is having Sankha or conch, Cakra or disc, and Gada or mace in three of his four hands.The various uses of a disc were felling, whirling, rending, breaking, severing, and cutting. It is one of the instruments peculiar to Lord Vishnu. Kautalya speaks of it as a movable machine. **The Cakra belongs to the category of a missile. According to the Vamanapurana, the Cakra has lustrous and sharp edges.**

The Tomara is another weapon of war frequently mentioned in all kinds of warfare. It was of two kinds, an iron club (sarvayasam) and a javelin. . According to the Agni Purana it was to be with the help of an arrow of straight feathers, and was powerful in dealing blows to the eyes and hands of an enemy.

Painting of Battle Scene, Ellora

The **Dantakanta**, is another weapon of war, perhaps the shape of a tooth, made of metal, of strong handle and a straight blade. It had two movements.

The **Pasa,** which is a noose killing the enemy at one stroke, of two or tree ropes used as a weapon attributed to the god Varuna. It was triangular in shape and **embellished with balls of lead.** It was associated with three kinds of movements. In the Agni Purana are described eleven ways of turning it to one's own advantage by dexterity of hand.

The **Masundi,** was probably an eight sided cudgel. It was furnished with a broad and strong handle. It apparently comes from the root-meaning to cleave or break into pieces, and perhaps akin to the Musala.

All these and more found used in one battle or another both in the Mahabharata and the Ramayana.

Amukta Weapons

The first of the Amukta weapons was the **Vajra or the thunderbolt.** The origin of this weapon is given in the Rirthayatra portion of the Mahabharata. It was made out of the backbone of the **Rishi Dadhici** which was freely given by him to Indra. Originally perhaps it had six sides and **made a terrible noise when hurled.**

The **Parasu** is the battle-axe attributed to Parasu-rama, of great fame. Its blade was made of steel and it had a wooden handle. There were six ways of manipulating it to one's own advantage.

The **Gada** is a heavy rod of iron with one hundred spikes on the top. One of the four cubits was able to destroy elephants

and rocks. It could be handled in twenty different ways. **By means of gun powder it could be used as a projectile weapon of war.** Its principal use was to strike the enemy either from a raised place or from both sides and strike terror into the enemy especially of the Gomutra array.

The **Mudgara** was a staff in the shape of a hammer. It was used to break heavy stones and rocks. This is again a movable machine according to Kautalya.

The **Sira** was a bucket-like instrument curved on both sides and with a wide opening made of iron. It was as long as a man's height. The **Pattisa** is a razor like weapon.

The **Sataghni, literally means that which had the power of killing a hundred at a time.** It looked like a Gada and is said to be four cubits in length. It is generally identified with modern cannon and hence was a projectile weapon of war.

"sataghni tu catustala lohakantaka samcita yastih! iti Kesavah."

It was generally placed on the walls of a fort and is included among the movable machines by Kautalya.

Asi or the Swords - The best sword measured fifty inches. They were usually made of Pindara iron found in the Jangala country, black iron in the Anupa, white iron in the Sataharana, gold colored in the Kalinga, oily iron in the Kambhoja, blue-colored in Gujarat, grey-colored in the Maharashtra and reddish white in Karnataka. The aSi si also known as Nistrimsa, Visamana, Khadga, Tiksnadhara, Durasada, Srigarbha, Vijaya and Dharmamula, meaning respectively cruel, fearful, powerful, fiery, unassailable, affording wealth, giving victory, and the source of maintaining dharma. And these are generally the characteristics of a sword.

It was commonly worn on the left side and was associated with thirty-two different movements. It measured 50 thumbs in length and four inches in width. In the **Santi-parva** (166,3 ff; 82 ff). **Bhisma** being asked as to which weapon in his opinion was the best for all kinds of fighting, replies that the sword is the foremost among arms (agryah praharananam), but the bow is first (adyam).

B, K, Sarkar says that the secret of manufacturing the so-called Damascus blade was learnt by the Saracens from the Persians, who, in their turn, had learnt it from the Hindus. Early Arabic literature provides us with a curious illustration of the esteem with which Indian swords were looked upon in Western Asia. An early Arabic poet, Hellal, describing the flight of the Hemyarites, says: "But they fled under its (ie. the clouds) small hail of arrows quickly, whilst hard Indian swords were penetrating them." and again: "He died and we inherited him; one old wide (cuirass) and a bright Indian (sword) with a long shoulder-belt." (Hindu Achievements in Exact Science - By B. K. Sarkar p. 45).

(**Note**: Hindus made the best swords in the ancient world, they discovered the process of making Ukku steel, called Damascus steel by the rest of the world (**Damas meaning water to the Arabs, because of the watery designs on the blade**). These were the best swords in the ancient world, the strongest and the sharpest, sharper even than Japanese katanas. Romans, Greeks, Arabs, Persians, Turks, and Chinese imported it. **The original Damascus steel-the world's first high-carbon steel-was a product of India known as wootz. Wootz is the English for ukku in Kannada and Telugu, meaning steel.** Indian steel was used for making swords and armor in Persia and Arabia in ancient times. Ktesias at the court of Persia (5th c BC) mentions two swords made of Indian steel which the Persian king presented him. **The pre-Islamic Arab word for sword is 'muhannad' meaning from Hind. So famous were they that the Arabic word for sword was Hindvi - from Hind.**

Wootz was produced by carburising chips of wrought iron in a closed crucible process. "Wrought iron, wood and carbonaceous matter was placed in a crucible and heated in a current of hot air till the iron became red hot and plastic. It was then allowed to cool very slowly (about 24 hours) until it absorbed a fixed amount of carbon, generally 1.2 to 1.8 per cent," said eminent metallurgist Prof. T.R. Anantharaman, who taught at Banares Hindu University, Varanasi. "When forged into a blade, the carbides in the steel formed a visible pattern on the surface." To the sixth century Arab poet Aus b. Hajr the pattern appeared described 'as if it were the trail of small black ants that had trekked over the steel while it was still soft'. In the early 1800s, Europeans tried their hand at reproducing wootz on an industrial scale. Michael Faraday, the great experimenter and son of a blacksmith, tried to duplicate the steel by alloying iron with a variety of metals but failed. Some scientists were successful in forging wootz but they still were not able to reproduce its characteristics, like the watery mark. "Scientists believe that some other micro-addition went into it," said Anantharaman. "That is why the separation of carbide takes place so beautifully

and geometrically."

The crucible process could have originated in south India and the finest steel was from the land of Cheras, said K. Rajan, associate professor of archaeology at Tamil University, Thanjavur, who explored a 1st century AD trade centre at Kodumanal near Coimbatore. Rajan's excavations revealed an industrial economy at Kodumanal. **Pillar of strength The rustless wonder called the Iron Pillar near the Qutb Minar at Mehrauli in Delhi did not attract the attention of scientists till the second quarter of the 19th century. The inscription refers to a ruler named Chandra, who had conquered the Vangas and Vahlikas, and the breeze of whose valour still perfumed the southern ocean. "The king who answers the description is none but Samudragupta, the real founder of the Gupta empire," said Prof. T.R. Anantharaman, who has authored The Rustless Wonder. Zinc metallurgy travelled from India to China and from there to Europe.** As late as 1735, professional chemists in Europe believed that zinc could not be reduced to metal except in the presence of copper. The alchemical texts of the mediaeval period show that the tradition was live in India. In 1738, William Champion established the Bristol process to produce metallic zinc in commercial quantities and got a patent for it. Interestingly, the mediaeval alchemical text Rasaratnasamucchaya describes the same process, down to adding 1.5 per cent common salt to the ore.

Artillery - India Taught Europe

Artillery was introduced into Europe by the Roma (Gyspsies), who were none else than the Jats and Rajputs of India.

This has been revealed in a study by a reputed linguist, **Weer Rajendra Rishi**, after an extensive tour of Roma camps in Europe.

He explains that the Romas, who are the Gypsies of Europe, also taught the use of artillery to Europeans. These Roma belonged to the Jat and Rajput clans who left India during the invasions by Mohamud Ghaznavi and Mohammad Ghori between the 10th and 12th centuries of the Christian era.

He says the use of artillery was known in Asia, notably in India, from time immemorial, while it was introduced to the Europeans much later.

Mr. Rishi reveals that the Roma had helped different countries of Europe in making artillery. “Evidence of this is given as early as 1496 by a mandate of that date granted by Wadislas, King of Hungary, wherein it is said that Thomas Polgar, chief of 25 tents of wandering Gypsies had, with his people, made at Funfkirchen musket-balls and other ammunition for Bishop Sigismond. “In 1546 when the English were holding Boulogne against the French the latter took the help of two experienced Romas of Hungary to make great number of cannons of greater caliber than earlier guns. The Hungarian Roma of the 16th century possessed fuller knowledge of fabricating artillery than the races of Western Europe.

There were also records that the Roma were employed as soldiers by some countries of Europe. Dr. W. R. Rishi, is the author of the book, Roma - The Panjabi Emigrants in Europe, Central and Middle Asia, the USSR, and the Americas - published 1976. Mr. Rishi is a well-known linguist of India and was awarded the honour of 'Padmashri' by the President of India in 1970 for his contributions in the field of linguistics. He is also the Founder Director of the Indian Institute of Romani Studies.

(source: **Diamonds, Mechanism, Weapons of War, Yoga Sutras - By G. R. Josyer.** p. 179-182).

***

To conclude with the words of **Sir George Birdwood:**

" For a variety, extent, and gorgeousness, and ethnological and artistic value, no such collection of Indian arms exists in this country (England) as that belonging to the Prince of Wales. It represents the armorer's art in every province of India, from the rude spear of the savage Nicobar islanders to the costly damascened, sculptured, and jewelled swords, and shields, spears, daggers, and match-locks of Kashmir, Kutch and Vizianagaram. The most striking object in the collection is a suit of armor made entirely of the horny scales of the Indian armadillo, or pangolin, encrusted with gold, and turquoise, and garnets."

(source: **The Industrial Arts of India** pp. 171-2).

Martial Arts - Fighting without weapons

"Fighting without weapons was a specialty of the Ksatreya (caste of Ancient India)and foot soldier alike. For the Ksatreya it was simply part and parcel of their all around training, but for the lowly peasant it was essential. We read in the Vedas of men unable to afford armor who bound their heads with turbans called Usnisa to protect themselves from sword and axe blows.

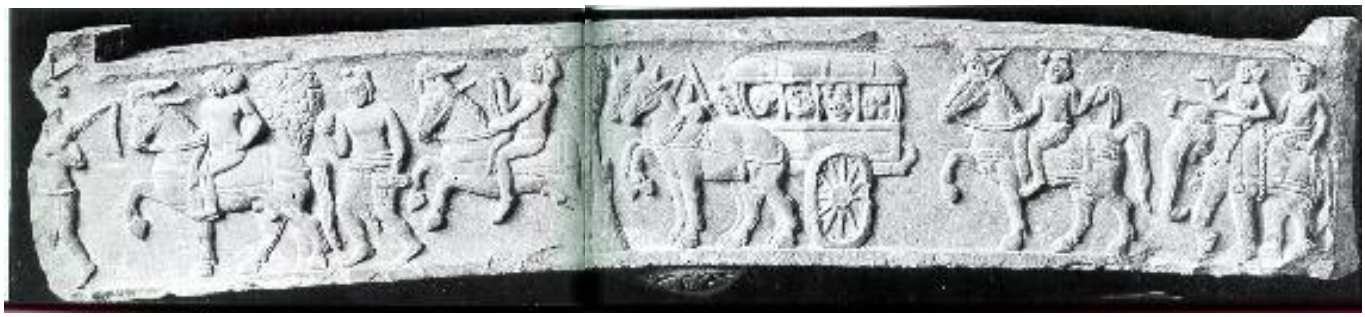
" Fighting on foot for a Ksatreya was necessary in case he was unseated from his chariot or horse and found himself without weapons. Although the high ethical code of the Ksatreya forbid anyone but another Ksatreya from attacking him, doubtless such morals were not always observed, and when faced with an unscrupulous opponent, the Ksatreya needed to be able to defend himself, and developed, therefore, a very effective form of hand-to-hand combat that combined techniques of wrestling, throws, and hand strikes. Tactics and evasion were formulated that were later passed on to successive generations. This skill was called Vajramukhti, a name meaning "thunderbolt closed - or clasped - hands." The tile Vajramukti referred to the usage of the hands in a manner as powerful as the vajra maces of traditional warfare. Vajramukti was practiced in peacetime by means of regular physical training sessions and these utilized sequences of attack and defense technically termed in Sanskrit nata."

Kalaripayattu, literally "the way of the battlefield," still survives in Kerala, where it is often dedicated to Mahakali. The Kalari grounds are usually situated near a temple, and the pupils, after having touched the feet of the master, salute the ancestors and bow down to the Goddess, begin the lesson. Kalari trainings have been codified for over 3000 years and nothing much has changed.

The warming up is essential and demands great suppleness. Each movement is repeated several times, facing north, east, south and west, till perfect loosening is achieved. The young pupils pass on to the handling of weapons, starting with the "Silambam", a short stick made of extremely hard wood, which in the olden times could effectively deal with swords. The blows are hard and the parade must be fast and precise, to avoid being hit on the fingers! They continue with the swords, heavy, and dangerous, even though they are not sharpened any more, as they are used. Without guard or any kind of body protection; they whirl, jump and parry, in an impressive ballet. Young, fearless girls fight with enormous knives, bigger than their arms and the clash of irons is echoed in the ground. The session ends with the big canes, favorite weapons of the Buddhist traveler monks, which they used during their long journey towards China to scare away attackers.

The "Urimi" is the most extraordinary weapon of Kalari, unique in the world. This double-edged flexible sword which the old-time masters used to wrap around the waist to keep coiled in one hand, to suddenly whip at the opponent and inflict mortal blows, is hardly used today in trainings, for it is much too dangerous.

This indigenous martial arts, under the name of **Kalari or Kalaripayit** exists only in South India today. **Kalarippayat is said to be the world's original martial art.** Originating at least 1,300 years ago, India's Kalaripayit is the oldest martial art taught today. It is also the most potentially violent, because students advance from unarmed combat to the use of swords, sharpened flexible metal lashes, and peculiar three-bladed daggers. More than 2,000 years old, it was developed by warriors of the Cheras kingdom in Kerala. Training followed strict rituals and guidelines. The entrance to the 14 m-by-7 m arena, or kalari, faced east and had a bare earth floor. Fighters took Shiva and Shakti, the god and goddess of power, as their deities. From unarmed kicks and punches, kalarippayat warriors would graduate to sticks, swords, spears and daggers and study the marmas—the 107 vital spots on the human body where a blow can kill. Training was conducted in secret, the lethal warriors unleashed as a surprise weapon against the enemies of Cheras.



Father and founder of Zen Buddhism (called C'han in China), Boddidharma, a Brahmin born in Kacheepuram in Tamil Nadu, in 522 A.D. arrived at the courts of the Chinese Emperor Liang Nuti, of the 6th dynasty. He taught the Chinese monks Kalaripayattu, a very ancient Indian martial art, so that they could defend themselves against the frequent attacks of bandits. In time, the monks became famous all over China as experts in bare-handed fighting, later known as the Shaolin boxing art. The Shaolin temple which has been handed back a few years ago by the communist Government to the C'han Buddhist monks, inheritors of Boddhidharma's spiritual and martial teachings, by the present Chinese Government, is now open to visitors. On one of the walls, a fresco can be seen, showing Indian dark-skinned monks, teaching their lighter-skinned Chinese brothers the art of bare-handed fighting. On this painting are inscribed: "Tenjiku Naranokaku" which means: **"the fighting techniques to train the body (which come) from India…"**

(for more information on martial arts refer to chapter **India and China**).

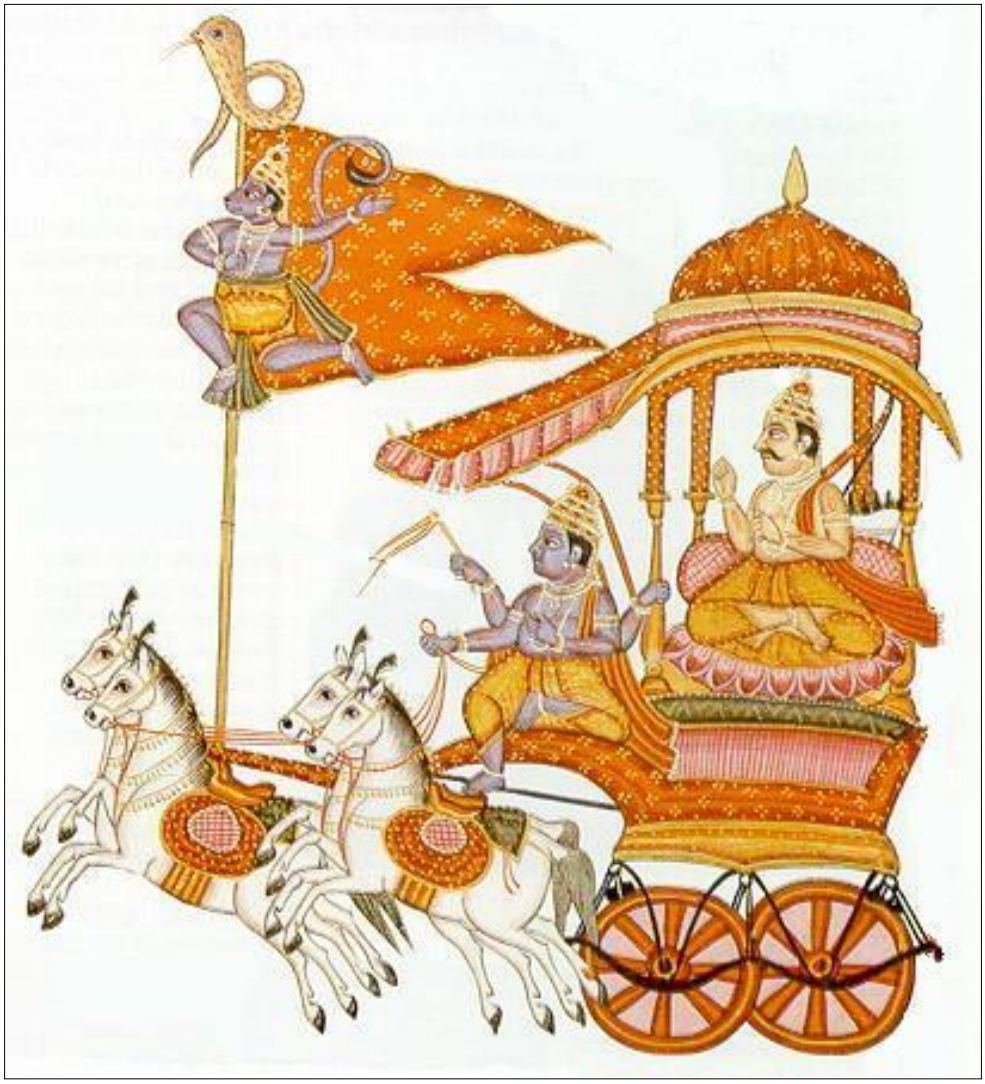
Army and Army Divisions



The Game of Chess and the Four-Fold Force

Owing to peculiar geographical features, with her vast plains interspersed with forests, the ancient Indian States had to make extensive use of mounted forces which comprised cavalry, chariots, and elephants. This does not mean that infantry was neglected. **Hindu India possessed the classical fourfold force of chariots, elephants, horsemen, and infantry, collectively known as the Caturangabala. Students also know that the old game of chess also goes by the name of Caturanga. Chess is a game of war, and in each game there are a king, a councilor, two elephants, two horses, two chariots, and eight foot-soldiers. From the references to this game in the Rg Veda and the Atharva Veda and in the Buddhists and Jaina books, it must have been very popular in ancient India. The Persian term Chatrang and the Arabic Shatrang are forms of the Sanskrit Chaturanga.**

On the whole the board is 8 X 8 squares. According to Taylor, the game of chess was the invention of some Hindu who devised a game of war with the astapada board as his field of battle. From the reference to the game in the Rig Veda and the Arthava Veda and in the Buddhist and Jaina books, it must have been very popular in ancient India. It is to be noted that the relative values of the chess pieces were analogous to or identical with the relative values of different arms as laid down by **Kautalya, Sukra, and Vaisampayana.** The organization of the Indian army which came to be known as **Caturanga**, both in epic Sanskrit and Pali literature, was based on the ancient game.

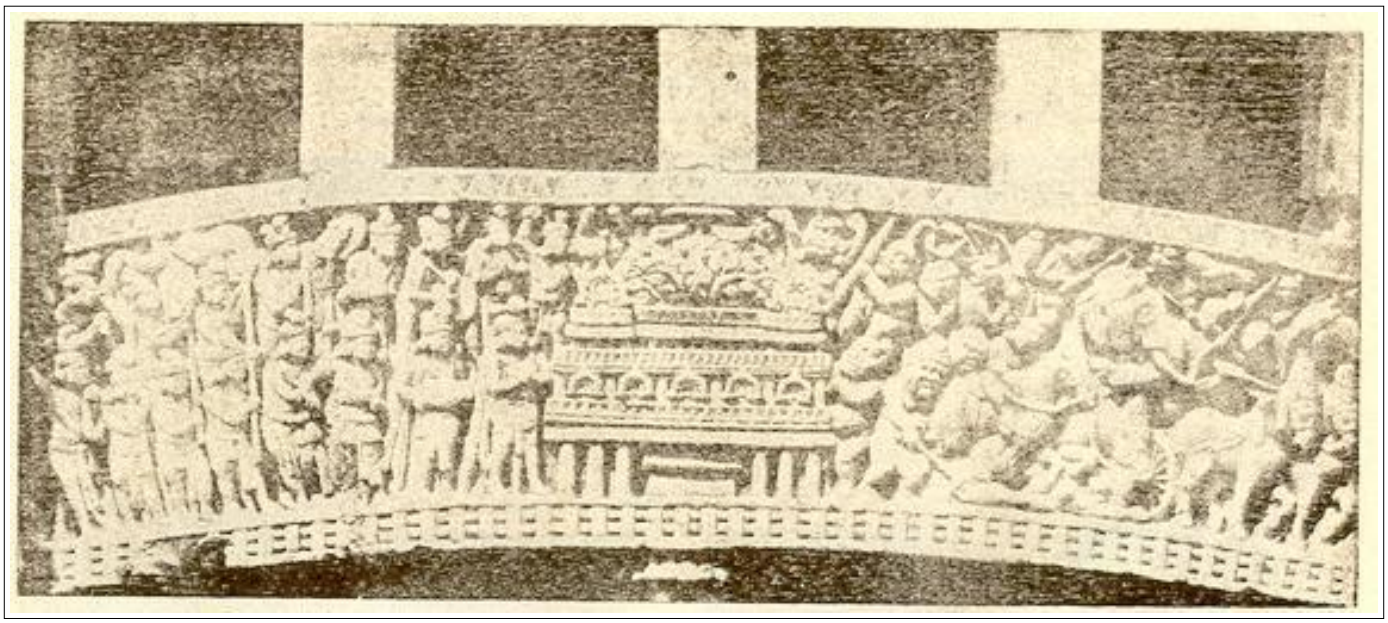
The Chariots: Chariots were used in warfare from very remote times. There are many references to chariots in the Samhitas and in the Brahmanas. The chariot was an indispensable instrument of war in the days of the Vedas, and on its possession depended victory. In the Rg Veda there is a hymn addressed to the war chariot: ' Lord of the wood, be firm and strong in body: be bearing as a brave victorious hero. Show forth thy strength, compact with straps of leather and let thy rider win all spoils of battle.' Chariots were of different types and materials. In the Ramayana and the Mahabharata their use is largely in evidence. Each chariot was marked off by its ensign and banner. Besides flags, umbrellas (chattra, atapatra), and fans were a part of the paraphernalia of the war chariot. **Sukra mentions an awe-inspiring chariot of iron with swift-moving wheels, provided with good seats for the warriors and a seat in the middle for the charioteer; the chariot was also equipped with all kinds of offensive and defensive weapons.**

Warrior Arjuna with Krishna - driving the chariot in the epic The Mahabharata

The conception of the sun-god in Indian tales is of value to the student of ancient Indian military history. The idea is that the sun-god wants to destroy darkness. Therefore he dons a lustrous armor and marching in his swift flying chariot drawn by seven powerful steads, Aruna (dawn) being his charioteer. The whole image presents a life-like portrait of the military dress as well as the march against an enemy.

Elephants: The next important force of war consisted of elephants. The numerous representations of the animal on coins and in architectural sculptural works from Gandhara to Ramesvaram as well as bronze figures in Indonesia are an indication of the esteem in which it was held by the ancient Indians, clearly on account of its usefulness.

There is a reference in the Rg Veda to two elephants bending their heads and rushing together against the enemy, which is a fairly early reference to the animal being used in war. By the time of the Yajur Veda Samhita the art of training elephants had become common. The **Arthasastra** mentions a special officer of the State for the care of elephants and lays down his duties. Megasthenes explains how the elephants were hunted, and how their distempers were cured by simple remedies such as cow's milk for eye-disease and pig's fat for sores. **A Jataka story throws some light on how fire-weapons were used in ancient India.** "Once a king mounted on an elephant and led an attack on the city of Benares. The soldiers who offered defences from within the city gates discharged a shower of missiles against the enemy



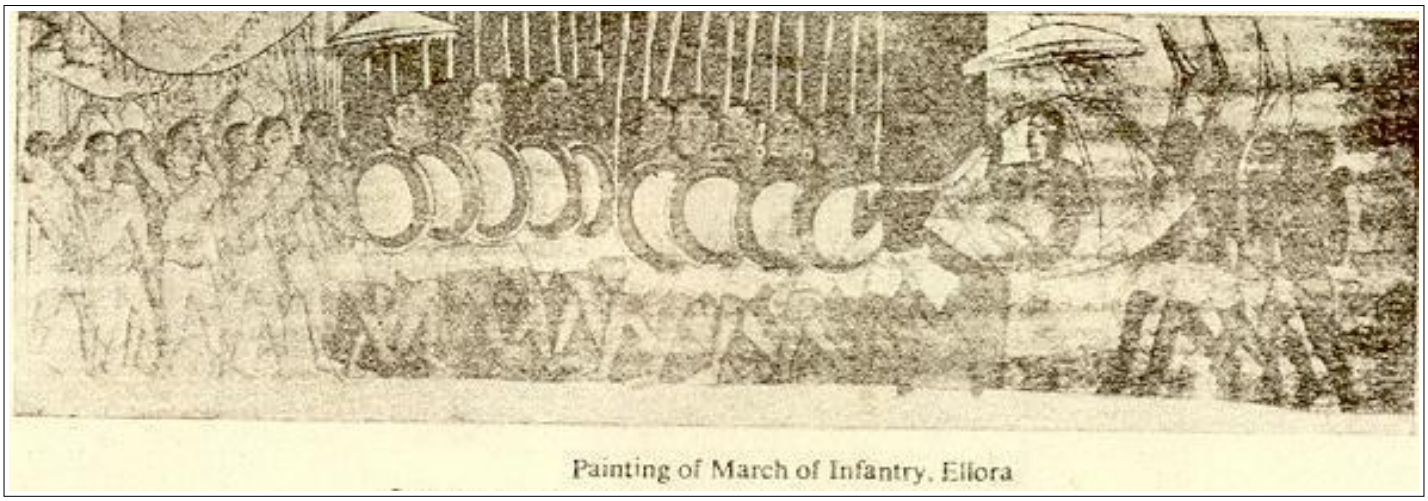
at which the elephant was frightened a little." The use of burning naphtha balls thrown against on rushing elephants to frighten them and make them turn back on their own side, is mentioned by early Mohammadan historians as a feature of the warfare between the Rajputs and the Turkish invaders from the North-West. (Elliot and Dowson, vol. I).

Cavalry:

We hear from the Kautaliya and Megasthenes that there was a well-organized and efficient cavalry force in the army of Chandragupta. In the ArthaVeda we hear of dust-raising horsemen. In this connection it is interesting to consider the oft-repeated statement that horses are non-Indian. It is not the whole truth. They were known to the Asuras of Vedic literature. There is a legend narrated in the third book of the **Hariharacaturanga** (though this is work of the late 12th century A.D., the tradition recorded is very ancient). In the epoch of the epics and the Arthasastra, we find that the cavalry occupied as important a place in the army as any other division.

Megasthenes corroborates the evidence of the Arthasastra. There was a special department in the State for the cavalry. The horses of the State were provided with stables and placed under the care of good grooms and syces. There were several trained horsemen who could jump forward and arrest the speed of galloping horses. But the majority of them rode their horses with bit and bridle. When horses became ungovernable they were placed in the hands of professional trainers who made the animals gallop round in small circles. In selecting horses of war, their age, strength, and size were taken into account. We may remark in passing that Abhimanyu's horses were only three years old.

How important the science of horses was to the ancient Indians is best seen from the **Laksanaprakasa** which quotes from several important old authorities some of which are probably lost to us. Among them are the Asvayurveda and Asvasastra, the former attributed to Jayadeva and the latter to Nakula. **Both the Puranas and the epics agree that the horses of the Sindhu and Kamboja regions were the finest breed and that the services of the Kambojas as cavalry troopers were requisitioned in ancient wars. In the Mahabharata war the Kambojans (Cambodians) were enlisted.** The steeds of Bahalika were also highly esteemed. Horses had names and so did elephants. Unlike the chariot horse, the cavalryman drove his animal with a whip which was generally fixed to the wrist. This allowed his hand free play. The cavalryman was armed with arrow or spear or sword. He wore breastplate and turban (unsnisa). Worth noting is the fact that horses were made to drink wine before actually marching to battle.



The tactical use of the cavalry was to break through the obstacles on the way, to pursue the retreating enemy, to cover the flanks of the army, to effect speedy communication with the various parts of the army unobserved (bahutsara) and to pierce the enemy ranks from the front to the rear. The cavalry was responsible, in a large measure, for the safety and

security of the army in entrenched positions, forests or camps. It obstructed movements of supplies and reinforcements to the enemy. In short, the cavalry was indispensable in situations requiring quickness of movement.

Infantry:

The next important division of the army was the infantry, or foot-soldier. The Arthasastra speaks of the infantry as a separate army department under the charge of a special officer of the State. This receives confirmation from Megasthenes statement. Besides the maula or hereditary troops which formed a considerable portion of the army, there were the bhrta or mercenaries, the sreni or soldiers supplied by the different group and guild organizations, the mitra or soldiers supplied by allies, the amitra or deserters from the enemy ranks, and the atavi recruited from forest tribes. According to the **Sukraniti and the Kamandakanitsara**, the army was to be made as imposing as possible to frighten the enemy by its size. The **Agni-purana** says that victory ever attends the army where foot-soldiers are numerically strong.

The Sukraniti also mentions that foot-soldiers possessed fire-arms when they fought.

Painting of March of Infantry, Ellora

When these foot-soldiers equipped themselves for war **Arrian** says that **'they carry a bow made of equal length with the man who bears it. This they rest upon the ground and pressing against it and their left foot, thus discharge the arrow having drawn the string backwards: the shaft they use is little short of being three yards long, and there is nothing which can resist an Indian Archer's shot - neither shield nor breast-plate, nor any stronger defense if such there be.'** In their left hand they carry bucklers made of undressed ox-hide which are not so broad as those who carry them but are about as long. If we turn to the ancient nations and especially the ancient Egyptians we meet with almost a similar description.

The Commissariat:

The **Caturanaga** was a classical division of the army accepted by tradition. But in the epoch of the epic we hear of a Sadanga or the six-fold army, including commissariat and admiralty. The use of commissariat can be traced to the epic age. This belonged to the category of administrative division of troops as against the combatant. We are told that this division of the army into two categories was first seen in the battle of Mansikert (1071 A.D.)
But, centuries before, the Indian army leaders had realized the value of such a division. It is said that when the Pandava army marched to Kurukshetra it was followed by 'carts and transport cars, and all descriptions of vehicles, the treasury, weapons and machines and physicians and surgeons, along with the few invalids that were in the army and all those that were weak and powerless. This was purely a civil department attached to the army. Care was also given to wounded animals.

The numerous references in our authorities to the Commissariat demonstrate beyond doubt that wars were planned methodically and conducted systematically.

The Admiralty:

The Admiralty as a department of the State may have been a creation of Chandragupta **but there is evidence to show that the use of ships and boats was known to the people of the Rig Veda**. In the following passage we have reference to a vessel with a hundred oars. 'this exploit you achieved, Asvins in the ocean, where there is nothing to give support, nothing to rest upon, nothing to cling to, that you brought Bhujya, sailing in a hundred-cared ship, to his father's house." (refer to Naval warfare section).

Cartography

There is no special word in Sanskrit for a 'a map.' There is, however, reason to believe that in ancient India a map or chart was regarded as a citra or **alekhya**, i.e., 'a painting, a picture, a delineation'. **That maps were made in ancient India seems to be quite clear from the evidence of the New History of the T'ang Dynasty which gives an account of the Chinese general Wang Hiuen-tse's exploits in India in the year 648 A.D.**

With reference to the knowledge of map-making among the people of India, especially the Dravidians of the South:

"The charts in use by the medieval navigators of the Indian Ocean - Dravidas, Arabs, Persians, were equal in value, if not superior, to the charts of the Mediterranean. Marco Polo (1498) found them in the hands of his Indian pilot, and their nature is fully explained in the Mohit or 'the Encyclopaedia of the Sea',

**

Hindu Valor

The Hindus were declared the by the Greeks to be the bravest nation they ever came in contact with. (source: **History of India - by Mountstuart Elphinstone** p. 197). **It was the Hindu King of Magadha that struck terror in the ever-victorious armies of Alexander.**

Abul Fazal, the minister of Akbar, after admiring their noble virtues, speaks of the valor of the Hindus in these terms: “Their character shines brightest in adversity. Their soldiers (Rajputs) know to what it is to flee from the fields of battle, but when the success of the combat becomes doubtful, they dismount from their horses and throw away their lives in payment of the debt of valor.”

Francois Bernier, A 17th century traveler says that: “The Rajputs embrace each other when on the battlefields as if resolved to die.” The Spartans, as is well known, dressed their hair on such occasions. It is well known that when a Rajput becomes desperate, he puts on garments of **saffron color**, which act, in technical language, is called **kesrian kasumal karna (donning saffron robes).**

(source: **Hindu Superiority - By Har Bilas Sarda** p. 79 - 91).

Aerial Warfare

No question can be more interesting in the present circumstances of the world than India's contribution to the science of aeronautics. There are numerous illustration in our vast Puranic and epic literature to show how well and wonderfully the ancient Indians conquered the air. **To glibly characterize everything found in this literature as imaginary and summarily dismiss it as unreal has been the practice of both Western and Eastern scholars until very recently.** The very idea indeed was ridiculed and people went so far to assert that it was physically impossible for man to use flying machines. But today what with balloons, airplanes….."

Turning to Vedic literature, in one of the Brahmanas occurs the concept of a ship that sails heavenwards. The ship is the Agnihotra of which the Ahavaniya and Garhapatya fires represent the two sides bound heavenward, and the steersman is the Agnihotrin who offers milk to the three Agnis. Again in the still earlier Rg Veda Samhita we read that the Asvins conveyed the rescued Bhujya safely by means of winged ships. The latter may refer to the aerial navigation in the earliest times.

In the recently published Samarangana Sutradhara of Bhoja, a whole chapter of about 230 stanzas is devoted to the principles of construction underlying the various flying machines and other engines used for military and other purposes.

Drawings done in 1923 from the vimana texts.

The various advantages of using machines, especially flying ones, are given elaborately. Special mention is made of their use at one's will and pleasure, of their uninterrupted movements, of their strength and durability, in short of their capability to do in the air all that is done on earth. Three movements are usually ascribed to these machines, - ascending, cruising thousands of miles in different directions in the atmosphere and lastly descending. It is said that in an aerial car one can mount up to Suryamandala, 'solar region' and the Naksatra mandala (stellar region) and also travel throughout the regions of air above the sea and the earth. These cars are said to move so fast as to make a noise that could be heard faintly from the ground. The evidence in its favor is overwhelming.

An aerial car is made of light, wood looking like a great bird with a durable and well-formed body having mercury inside and fire at the bottom. It had two resplendent wings, and is propelled by air. It flies in the atmospheric regions for a great distance and carries several persons along with it. The inside construction resembles heaven created by Brahma himself. Iron, copper, lead and other metals are also used for these machines. All these show how far art and science was developed in ancient India in this direction. Such elaborate description ought to meet

the criticism that the vimanas and similar aerial vehicles mentioned in ancient Indian literature should be relegated to the region of myth.

The ancient writers could certainly make a distinction between the mythical which they designated as daiva and the actual aerial wars designated as manusa.

After the great victory of Rama over Lanka, Vibhisana presented him with the Puspaka vimana which was furnished with windows, apartments, and excellent seats. It was capable of accommodating all the vanaras besides Rama, Sita and Lakshman. Again in the Vikramaurvaisya, we are told that king Puraravas rode in an aerial car to rescue Urvasi in pursuit of the Danava who was carrying her away. Similarly in the Uttararamacarita in the flight between Lava and Candraketu (Act VI) a number of aerial cars are mentioned as bearing celestial spectators. There is a statement in the Harsacarita of Yavanas being acquainted with aerial machines. The Tamil work Jivakacintamani refers to Jivaka flying through the air.

Kathasaritsagara refers to highly talented woodworkers called Rajyadhara and Pranadhara. The former was so skilled in mechanical contrivances that he could make ocean crossing chariots. And the latter manufactured a flying chariot to carry a thousand passengers in the air. **These chariots were stated to be as fast as thought itself.**

(source: **India Through The Ages: History, Art Culture and Religion - By G. Kuppuram** p. 532-533).

(for more information on vimanas please refer to chapter on **Vimanas**).

Naval Warfare

The old notion that the Hindus were essentially a landlocked people, lacking in a spirit of adventure and the heart to brave the seas, is now dispelled. **The researches of a generation of scholars have proved that from very early times the people of India were distinguished by nautical skill and enterprise, that they went on trading voyages to distant shores across the seas, and even established settlements and colonies in numerous lands and islands.** (please refer to chapter on **Suvarnabhumi**).

In ancient India, owing to the geographical influence, nautical shill and enterprise seems to have been best developed in three widely separated region of the country. These were Bengal, the valley and delta of the Indus, and the extreme south of the Deccan peninsula, called **Tamilagam**.

Boat-making and ship-building industries were found in India since ancient times. In the Vedic period, sea was frequently used for trade purposes. The *Rig Veda* mentions "merchants who crowd the great waters with ships". The *Ramayana* speaks of merchants who crossed the sea and bought gifts for the king of Ayodhya. Manu legislates for safe carriage and freights by river and sea. In some of the earliest Buddhist literature we read of voyages ‘out of sight’ of land, some lasting six months or so.

In **Kautalya Arthasastra** the admiralty figures as a separate department of the War Office; and this is a striking testimony to the importance attached to it from very early times. In the Rg Veda Samhita boats and ships are frequently mentioned. The classical example often quoted by every writer on the subject is the naval expedition of Bhujya who was sent by his father with the ship which had a hundred oars (aritra). Being ship-wrecked he was rescued by the twin Asvins in their boat.

"There was also extensive intercourse of India with foreign countries, including the Mediterranean lands and the African continent, naturally led to piracy on the waters. There then arose the need for the protection of sea-borne trade, and we are told that "at the outset the merchant vessels of India carried a small body of trained archers armed with bows and arrows to repulse the attacks of the pirates, but later they employed guns, cannon and other more deadly weapons of warfare with a few wonderful and delusive contrivances."

(source: **The Commerce and Navigation of the Ancients In the Indian Ocean** - **William Vincent** pp. 457). These are probably the beginnings of the ancient Indian navy.

In the **Shanti Parvan** (59, 41) of the **Mahabharata** it is said that the navy is one of the angas (part)of the complete army. Examples of ships being used for military purposes are not lacking. When Vidura scented danger to Kunti's five sons, he made them escape to the forest with their mother, crossing the Ganges in a boat equipped with weapons having the power of withstanding wind and wave. In the Dig Vijaya portion of the Sabha parva, it is said that Sahadeva crossed the sea and brought many islands under his sway after defeating the Mlecchas and other mixed tribes inhabiting them. If this be an historical fact the inference is irresistible that he could not have effected his conquest without the use of boats and vessels. We read in the Ramayana that Durmukha, a Raksasa, who had been fired bu the impulse of anger at the deeds of Hanuman, offered his services to Ravana even to fight on the sea. This is testimony enough of the use of a fleet for war purposes. There are other references here and there to ships in the Ramayana. When Hanuman was crossing the ocean to Lanka, he is compared to a ship tossed by winds on the high seas. Sugriva speaks of Sumatra, Java and even the Red Sea, when sending forth his monkey hosts in quest of Sita.

The **Amarakosa**, mentions a number of nautical terms which stand for ship, anchorage (naubandhana), the helm of the ship (naukarana), the helmsman (naukaranadhara). That there were ships-building yards in different parts could be inferred from a significant term navatakseni occurring in a copper plate grant of Dharmaditya dated 531. A.D.

About 517 B.C. according to Herodotus, Darius launched a maritime expedition under Skylax of Caryanda to the Indus Delta, and during Alexander's time, again, we read of the people of the Punjab fitting out a fleet. We have the testimony of **Arrian to show that the Xathroi (Kshatri), one of the Punjab tribes, supplied Alexander during his return voyage with thirty oared galleys and transport vessels which were built by them.**

(source: **India and Its Invasion by Alexander** p. 156)

In the Manusamhita (Vii. 192), it is laid down that boats should be employed for military purposes when the theatre of hostilities abounded in water. **Kamandaka** (XVI, 50) alludes to naval warfare when he says: "By regular practice one becomes an adept in fighting from chariot, horses, elephants and boats, and a past-master in archery." **Manavadharmasastra** refers to sea fights and attests to the use of boats for naval warfare. **The sailor is called naukakarmajiva. Thus in Vedic, Epic and the Dharmasastra literature we find that naval warfare is mentioned as a distinct entity, attesting a continuous naval tradition from the earliest times.**
Yukti-kalpataru specifies one class of ships called agramandira (because they had their cabins towards the prows), as eminently adapted for naval warfare (rane kale ghanatyaye).

Passing on to other literary evidence, we find in the **Raghuvamsa** frequent reference to boats and ships. Raghu in the course of his digvijaya conquered Bengal which was protected by a fleet (nausadhanotyatan). In anther place it is mentioned that Raghu marched on Persia through the land route, and not by the sea route, thereby showing that the latter was the more common route.

Historian **Dr. Vincent A. Smith** says that 'the creation of the Admiralty department was an innovation due to the genius of Chandragupta.

"**The Admiralty as a department of the State may have been a creation of Chandragupta but there is evidence to show that the use of ships and boats was known to the people of the Rg Veda. "**

(source: **Early History of India - By Vincent Smith** p 133).

In the following passage we have reference to a vessel with a hundred oats. 'This exploit you achieved, Asvins in the ocean, where there is nothing to give support, nothing to rest upon, nothing to cling to, that you brought Bhujya, sailing in a hundred oared ship, to his father's house.'

Further on in the Veda, this same vessel is described as a **plava** which was storm-proof and which presented a pleasing appearance and had wings on its sides. Another reference informs us that Tugra dispatched a fleet of four vessels (**Catasro navah**) among which was the one referred to above. We may infer from these passages that the Asvins were a great commercial people having their home in a far-off island, and that their ruler Tugra maintained a fleet in the interests of his State. There are also other references in the Rg Veda to show that the ancient Indians were acquainted with the art of navigation. For instance, Varuna is credited with a knowledge of the ocean routes along which vessels sailed.

The **Baudhayana Dharmasastra** speaks of Samudrasamyanam and interprets it as **nava dvipantaragamanam, i. e. Sailing to other lands by ships. This very term occurs in the navadhyaksa section of the Kautaliya Arthasastra.**

The Puranas have several references to the use of ships and boats. The **Markandeya Purana** speaks of vessels tossing about on the sea. The Varahapurana refers to the people who sailed far into the ocean in search of pearls and oysters. The ships floated daily on the shoreless, deep and fearful waters of the ocean. We are on firmer ground when we see in the Andhra period their coins marked with ships. The ship building activities were great on the east coast, and the Coromandel coast in particular. **From this period to about 15th century A.D. there was a regular intercourse with the islands of the Archipelago most of which were colonized and also with ancient America right across the Pacific as testified to us by the archaeological finds and inscriptions in those parts.**

(please refer to chapters on **Pacific**, **Suvarnabhumi** and **Seafaring in Ancient India**).

The **Pali books of Sri Lanka** like the **Mahavamsa** refers to ocean going vessels carrying 700 passengers. Such frequent intercourse and colonization through the ages could not have been effected without a powerful fleet.

But it is in a later work, the **Yuktikalpataru of Bhoja**, that we have three classes of ships - the Sarvamandira, the Madhyamandira, and Agramandira. The first was called Sarvamandira because it had apartments all around. In the Sarvamandira were carried treasures, animals, and ladies of the court. This was the vessel ordinarily used by kings in times of peace. The Madhyamandira was so called because the living quarters were situated in the middle. It was a sporting vessel and generally used in the rainy season. The vessel of the third kind, the Agramandira, took its name from the circumstance that the living room was located in front or at the top of the vessel. The Agramandira was used for distant and perilous voyages and also sea-fights.

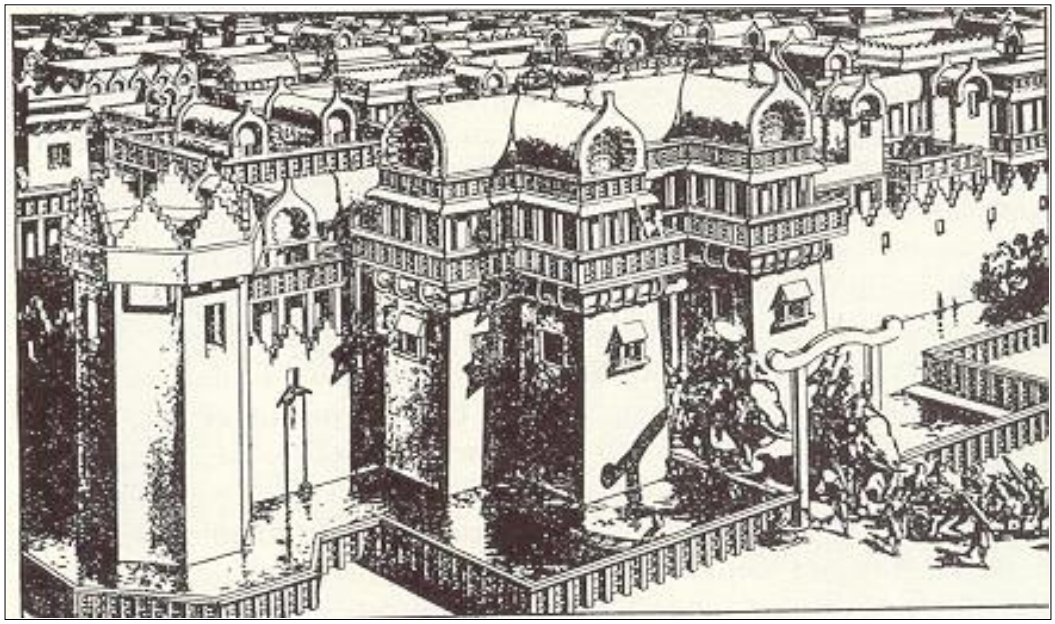
There are also in the **Yuktikalpataru** other references to vessels. There are 27 types of ships mentioned here, the largest having the measurement 276 ft X 36 ft X 27 ft weighing roughly 2,300 tons. The following passage points to the use of ships in warfare. The line: naukadyam vipadam jneyam makes it clear that naval expeditions were common. Under the heading of yanam or march mention is made of expeditions by land, water and air.

Kautilya remarks: "Pirate ships (himsrika), boats from an enemy's country when they cross its territorial limits, as well as vessels violating the customs and rules enforced in port towns, should be pursued and destroyed." It is obvious that the task set forth above could only be performed by armed vessels belonging to the state.

From this we may conclude that in ancient India ships were employed in warfare at least as early as the Rig Vedic times. It is an incontrovertible fact that there was a naval department in Mauryan times. We have the testimony of Megasthenes that the navy was under a special officer called the Superintendent of Navigation. This official was in turn controlled by the Admiralty department. The officer whom **Megasthenes** refers to as Superintendent of Navigation is called **Navadhyaksa** as already seen, in the **Arthasastra.** The Greek accounts bear testimony to the fact that navigation had attained a very high development at the times of Alexander's

invasion, for we are told that the invader was able to secure a fleet from the Punjab at short notice. The **Arthasastra** lays down some healthy regulations relating to navigation. Vessels which gave trouble or were bound for the enemy's country, or transgressed the regulations of port towns were to be destroyed.

A considerable ship building activity is evident on the west coast of India also as noted in the Sangam works of the Tamils. South India carried on political and commercial activities as far as the Mediterranean in the early centuries of the Christian era and before. The great Ceran Senguttavan had a fleet under him.



Turning to the history of **South India**, we have evidence to show that the country had trade and culture contacts with foreign countries like Rome in the west and Malay Archipelago and South east Asia in the east. Yavana ships laden with articles of merchandise visited the west coast frequently. There was active foreign trade between Tamil Indian and the outer world **at least** from the time of Soloman, ie. about 1000 B.C. Roman historians refer to the commercial intercourse that existed between Rome and South India. In the first century before Christ we hear of a **Pandyan embassy to Augustus Caesar.** (refer to **Periplus translated by Schoff** p. 46).

The Sangam classics point to the profession of pearl-diving and sea-fisheries on a large scale. We hear of shipwrecks of the early Tamils saved now and then by Manimekhalai, the goddess of the sea.

(Note: ancient Tamil tradition traces its origins to a submerged island or continent, **Kumari Kandam,** situated to the south of India. The Tamil epics **Shilappadikaram** and **Manimekhalai** provide glorious descriptions of the legendary city and port of **Puhar**, which the second text says was swallowed by the sea. As in the case of Dwaraka, (please refer to chapter on **Dwaraka** and **Aryan Invasion Theory**), initial findings at and off **Poompuhar,** at the mouth of the Cauvery, show that there may well be a historical basis to this legend: apart from several structures excavated near the shore, such as brick walls, water reservoirs, even a wharf (all dated 200-300 B.C.), a few years ago a structure tantalizingly described as a "U-shaped stone structure" was found five kilometers offshore, at a depth of twenty-three meters; it is about forty meters long and twenty wide, and fishermen traditionally believed that a submerged temple existed at that exact spot. If the structure is confirmed to be man-made (and not a natural formation), its great depth would certainly push back the antiquity of Puhar. Only more systematic explorations along Tamil Nadu's coast, especially at Poompuhar, Mahabalipuram, and around Kanyakumari (where fishermen have long reported submerged structures too) can throw

more light on the lost cities, and on the traditions of **Kumari Kandam**, which some have sought to identify with the mythical Lemuria).

ancient city in India

We have the account of a Cera King conquering the Kadamba in the midst of sea waters. The Cera King **Senguttuvan** had a fleet with which he defeated the Yavanas who were punished with their hands being tied behind their backs and the pouring of oil on their heads. The Cholas also maintained a strong fleet with which they not only invaded and subjugated Lanka but also undertook overseas expeditions. Among the conquests of Rajaraja, Lanka was one, and his invasion of that island finds expression in the **Tiruvalangadu plates**, where it is described as follows:

"Rama built, with the aid of the monkeys, a causeway over the sea and then slew with great difficulty the king of Lanka by means of sharp-edged arrows. But Rama was excelled by this (king) whose powerful army crossed the ocean in ships and burnt the king of Lanka."

Rajaraja also sent an expedition against the Twelve Thousand Islands, obviously a reference to the Laccadives and Maldives. Friendly embassies were also sent by the Chola king to China.

From the evidence of the Mahvamsa as well as from a few inscriptions we are able to gather some information regarding the diplomatic relations that existed between India and Sri Lanka. We have the story of Vijaya and his followers occupying the island about 543 B.C. Vijaya was a prince of North India who was banished from the kingdom by his father. Passing through the southern Magadha country he sailed to Sri Lanka, according to the **Rajavali,** in a fleet carrying more than 700 soliders, defeated the Yaksas inhabiting it, and settled there permanently. This story is illustrated in the Ajanta frescoes.

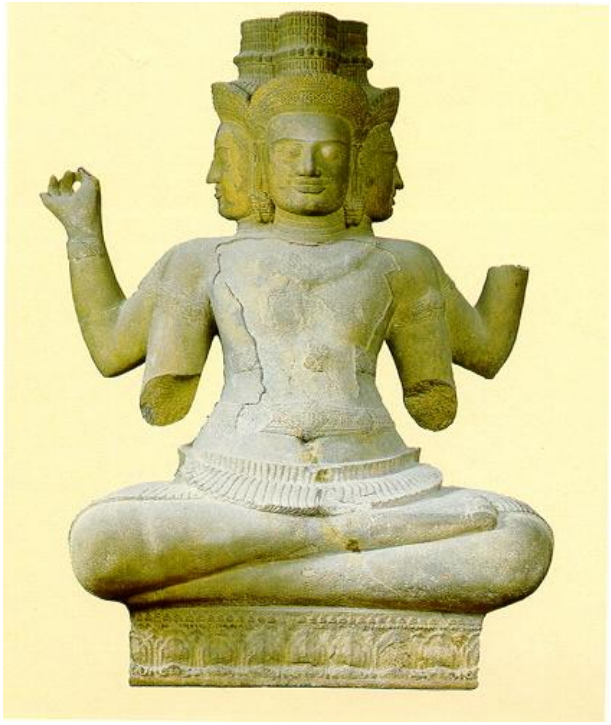
Numerous ships carried the troops of Rajendra to Sri Vijaya and its dependencies which he conquered. Among the places conquered were Pannai (Pani or Panei on the east coast of Sumatra), Malaiyur (at the southern end of the Malay Peninsula), Mappappalam (a place in the Talaing country of Lower Burma), Mudammalingam (a place facing the gulf of Siam), Nakkavaram (the Nicobar islands. Besides, active trade was carried on between South India and China during this period.

At the end of the 10th century the Chinese emperor sent a mission to the Chola king with credentials under the imperial seal and provisions of gold and piece-goods to induce the foreign traders of the South Sea and those who went to foreign lands beyond the sea for trade to come to China.

The facts clearly show that the Cholas maintained supremacy over the sea and kept a strong and powerful navy which was useful not only for carrying on extensive commerce with foreign countries but also for conducting military expeditions. During the days of the Kakatiyas of Warangal, Motupalle (Guntur District) was the chief port, on the east coast. Ganapatideva, the Kakatiya ruler, **extirpated piracy on the sea and made the sea safe for commerce with foreign countries like China and Zanzibar.** This policy was pursued by Rudramba, his daughter.

Vijayanagar kingdom also claimed supremacy over the sea. Since the days of **Harihara I the rulers of Vijayanagar** took the **title of the Lord of the Eastern, Western and Southern oceans**; and there were 300 ports in the empire. The activities of the Vijayanagar fleet on the west coast are also referred to by the Portuguese in 1506.

The Vijayanagar kings sent friendly embassies to foreign courts. 'Bukka I sent an embassy through his chief explainer to the court of Taitsu, the King Emperor of China, with tributes and large presents, among which was a stone which was valuable in neutralizing poison.



Accounts of Foreign Travelers to India

Coming to later times we have the account of **Hiuen Tsang** who notices a fleet of 3,000 sail belonging to the King os Assam. There is inscriptional evidence of the possession of a fleet under the Kakatiyas and the Cholas in South india. **Marco Polo** testifies to the huge size and efficient construction of Indian vessels while **Yule** in his **Cathey** refers to Rajput ships en route to China. Marco Polo, a famous Venetian traveler who visited India in 13th Century also visited Thane Port. The first chapter of his book which deals with India is almost devoted to shipbuilding industry in India. **Friar Odoric** of Pordenone, an Italian Monk who visited India in 14th Century, in his account of his voyage across the Indian Ocean, a mention is made of ships which can carry 700 people.

"Ships of size that carried Fahien from India to China (through stormy China water) were certainly capable of proceeding all the way to Mexico and Peru by crossing the Pacific. One thousand years before the birth of Columbus Indian ships were far superior to any made in Europe upto the 18th century."

(source: **The Civilizations of Ancient America: The Selected Papers of the XXIXth International Congress of Americanists - edited Sol Tax** 1951).

Ludovico di Varthema (1503 A. D) saw vessels of 1,000 tons burden built at **Masulipatnam**. According to Dr. Vincent, India built great sized vessels from the time of Agathareids (171 B.C.) to the 16th century. And no wonder the Portuguese, when they first landed at the west coast, were carried away by the excellent Indian vessels. Later still, the Vijayanagar Empire, which had as many as 300 ports, had a powerful fleet. The naval commander was styled Naviyadaprabhu.

India has a coastline of about 6300 kms. Extensive new archaeological, epigraphical, sculptural and literary material has been added to our knowledge since the early decades of this century. **Dr. Radha Kumud Mookerji's** Book **Indian Shipping - A History of the Sea-Borne Trade and Marine Activity of The Indians From The Earliest Times** published in 1912 Orient Longmans ISBN 8121509165) is the most comprehensive study of Indian Navigation up to that period. We now know that many ports on both Eastern and Western Coast had navigational and trade links with almost all Continents of the world. There are many natural and technological reasons for this. Apart from Mathematics and Astronomy, India had excellent manufacturing skills in textile, metal works and paints. India had abundant supply of Timber. Indian - built ships were superior as they were built of Teak which resists the effect of salt water and weather for a very long time.

"The art of Navigation was born in river Sindhu 6000 years ago. The very word navigation is derived from Sanskrit word Nav (or Nav-ship) Gatih."

Lieut. Col. A Walker's paper: "Considerations of the affairs of India" written in 1811 had excellent remarks on Bombay-built ships. He notes, "situated as she is between the forests of Malabar and Gujarat, she receives supplies of timber with every wind that blows." Further he says, "it is calculated that every ship in the Navy of Great Britain is renewed every twelve years. It is well known that teakwood built ships last fifty years and upwards. Many ships Bombay-built after running fourteen or fifteen years have been brought into the Navy and were considered as stronger as ever. The Sir Edward Hughes performed, I believe, eight voyages as an Indiaman before she was purchased for the Navy. No Europe-built Indiaman is capable of going more than six voyages with safety."

He has also further noted that Bombay-built ships are at least one-fourth cheaper than those built in the docks of England. **Francois Balazar Solvyns**, a Belgian/Flemish maritime painter, wrote a book titled **Les Hindous** in 1811.

His remarks are, **"In ancient times, the Indians excelled in the art of constructing vessels, and the present Hindus can in this respect still offer models to Europe-so much so that the English, attentive to everything which relates to naval architecture, have borrowed from the Hindus many improvement which they have adopted with success to their own shipping.... The Indian vessels unite elegance and utility and are models of patience and fine workmanship."**

(source: **http://www.orientalthane.com/speeches/speech_2.htm**).

Surprisingly, many earlier western traders and travelers have expressed the same views. Madapollum was a flourishing shipping centre. **Thomas Bowrey**, an English traveler who visited India during 1669-79, observes, " many English merchants and others have their ships and vessels yearly built (at Madapollum). Here is the best and well grown timber in sufficient plenty, the best iron upon the coast, any sort of ironwork is ingeniously performed by the natives, as spikes, bolts, anchors, and the like. Very expert master-builders there are several here, they build very well, and launch with as much discretion as I have seen in any part of the world. They have an excellent way of making shrouds, stays, or any other rigging for ships".

A Venetian traveler of 16th Century **Cesare de Fedrici**, while commenting on the East Coast of India has noted that there is an abundance of material for ship building in this area and many Sultans of Constantinople found it cheaper to have their vessels built in India than at Alexandria.

Nicol Conti who visited India in 15th century was impressed by the quality Indians had achieved in ship building. He observes:

"The nations of India build some ships larger than ours, capable of containing 2,000 butts, and with five sails and as many masts. The lower part is constructed with triple planks, in order to withstand the force of the tempests to which they are much exposed. But some ships are so built in compartments that should one part be shattered, the other portion remaining entire may accomplish the voyage."

J. Ovington, Chaplain to the British King, the seventeenth-century English traveler, who visited Surat, wrote a book **A Voyage to Surat in the Year 1689**. He was impressed by the skill of the Indians in ship-building and found that they even outshone Europeans. **The timber used by the Indians was so strong that it would not 'crack' even by the force of a bullet so he urged the English to use that timber 'to help them in war'. Indian Teak stood firmer than the English Oak, remarked Ovington.**

Thomas Herbert, a traveler who visited Surat in 1627, has given an interesting account of the arrival, loading and unloading of ships through small boats at Swally marine (Sohaly), a few kilometres away from Surat. He remarked that between September and March every year, the port of Sohaly presented a very busy and noisy scene for there came many ships from foreign lands. The merchants (*baniyas)* erected their straw huts in large numbers all along the sea coast, making the whole place thus look like a country fair. The merchants sold various commodities like calicoes, ivory, agates, etc. Many small boys engaged by the merchants were seen running about doing odd jobs. The English found that

the small boats used and constructed by the natives could be of immense use. This was a definite gain for both nations. Boats and rafts were used as a means of conveyance for loading and unloading ships. There were about 4200 big and 4400 small boats. There were large-sized boats that could carry even elephants. The boats used by kings and nobles were designed to look artistic. **Abul Fazl** writes about the "wonderfully fashioned boats with delightful quarters and decks and gardens"

Among the primitive Indian boats, the **cattarmaran** comes first. It consisted of three logs and three spreaders and cross lashings. The centre log was the largest, and pointed towards one end. Mainly fishermen used the cattarmaran for fishing. A little more skillfully made is the **musoola** boat, which has no iron fastening. It was mostly used in the Coromandel coast. Dr John Fryer says, "It is possible that the name musoola may be connected with Masulipatarn where boats seem to have been in use".

Another boat made in an indigenous manner was known as **dingy**. It was hollowed out from a single trunk. Lower down the Ganga, the name was applied to boats half-decked, half wagon-roofed and built of planks.

Purqoo was another type of boat described by **Thomas Bowery**. It plied between the Hooghly and Balasore. These boats were made very strong to carry 'sufficient load'. They were also used for loading ships. they could remain in water for a long time without getting damaged. As compared to the purqoo, boora was a 'lighter boat' which rowed with 29 or 30 oars. These boats were also used for carrying saltpeter and other commodities.

(source: **Coastal trade flourished with Europeans - By Pramod Sangar**).

Sir John Malcolm writes"

"Indian vessels are so admirably adapted to the purpose for which they are required that, notwithstanding their superior science, Europeans were unable, during an intercourse with India for two centuries, to suggest or to bring into successful practice one improvement."

(source: **Journal of Royal Asiatic Society, Vol. I**).

In the middle of the 18th century, **John Grose** noted that at Surat the Indian ship-building industry was very well established, indeed, "They built incomparably the best ships in the world for duration", and of all sizes with a capacity of over a thousand tons. Their design appeared to him to be a "a bit clumsy" but their durability soundly impressed him. **They lasted "for a century".**

Lord Grenville mentions, in this connection, a ship built in Surat which continued to navigate up the Red Sea from 1702 when it was first mentioned in Dutch letters as "the old ships" up to the year 1700." Grenville also noted that ships of war and merchandise "not exceeding 500 tons" were being built" with facility, convenience and cheapness" at the ports of Coringa and Narsapore.

Dr. H. Scott sent samples of **dammer** to London, as this vegetable substance was used by the Indians to line the bottom of their ships; he thought it would be a good substitute "in this country for the materials which are brought from the northern nations for our navy…There can be no doubt that you would find dammer in this way an excellent substitute for pitch and tar and for many purposes much superior to them."

source: **Decolonizing History: Technology and Culture in India, China and the West 1492 to the Present Day - By Claude Alvares** p. 68-69).

Alain Danielou (1907- 1994) son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India has written:

"India's naval dockyards, which belonged to the state, were famous throughout history. The sailors were paid by the state, and the admiral of the fleet hired the ships and crew to tradesmen for transporting goods and passengers. When the British annexed the country much later on, they utilized the Indian dockyards - which were much better organized then those in the West - to build most of the ships for the British navy, for as long as ships were made of wood."

Diplomacy and War

Not withstanding the elaborate rule of war laid down in the epics and the law-books, insisting in the main that to wage war was the duty and privilege of every true Ksatriya, in several cases the horrors of war made the belligerent think of the consequences and avoid outbreak of hostilities by a well calculated policy which we now term diplomacy.

King seeking counsel

Negotiation, persuasion and conciliation were cardinal points of the ancient Indian diplomatic system, and were effective instruments in averting many a war, which would otherwise have realized in much bloodshed and economic distress.

The political term for diplomacy is **naya,** and the opinion of **Kautalya**, the eminent politician of the 4th century B.C., a king who understands the true implications of diplomacy conquers the whole earth.

The history of diplomacy in ancient India commences with the Rig Veda Samhita, and the date of its composition may be taken as far back as the Chalcolithic period. In the battles the help of Agni is invoked to overcome enemies. He is to be the deceiver of foes. In pursuing his mission to a successful end, the use of spies is mentioned. This bears eloquent testimony to the system of espionage prevalent so early as the time of the Rig Veda Samhita. In the battle of the Ten Kings described in the seventh mandala, we find diplomacy of rulers getting supplemented by its association with priestly diplomacy, which exercised a healthy influence on the constitutional evolution.

International Relations - The picture presented in the **epics** and the **Arthasastra** literature seems to be confined to the four corners of **Bharatkhanda. The intercourse as envisaged in the literature, shows relations to be more commerical than political in character.**

Strabo quotes Megasthenes and says that Indians were not engaged in wars with foreigners outside India nor was their country invaded by foreign power except by Hercules and Dionsysius and lately by the Macedonians. **There were friendly relations of Chandragupta with Seleukos Nikator, of Bindusara with Antiochus, of Asoka and Samadragupta with Lanka, of Pulaskesi with Persians, of Harsha with Nepal and China, of the Cholas with Sri Vijaya.**

"It was always regarded as a legitimate object of the ambition of every king to aim at the position of **Cakravartin or Sarvabhuuma** (paramount sovereign or of supreme monarch)." This ambition was legitimate and had no narrow outlook about it. It was a fruit to be sought after by every one of the monarchs comprising the mandala. If the king is not actuated by this idea, he falls short of an ideal king according to the Hindu Rajadharma.

Diplomatic agents - ambassadors

Bhisma mentions seven qualifications as essential in an ambassador: he should come from a noble line, belong to a high family, be skilful, eloquent of speech, true in delivering the mission, and of excellent memory.

Espionage in War - Spies filled an important role in both the civil and military affairs of ancient India. The institution of spies had a greater utility, as the king could take action on the report of the spies. Spies were engaged to look after the home officials, including those of the royal household as well as to report on the doings in the enemy kingdoms. The Rig Veda Samhita, often speaks of spies (spasah) of Varuna. Only men of wisdom and purity were sent on this errand, thus suggesting that they should be persons above corruption and temptation of any sort. In the epics and post-epic literature in general, spies have been described as the 'eyes of the king'. In the **Udyoga-parva** (33, 34) of **Mahabharata**, it is stated that "cows see by smell, priests by knowledge, kings by spies, and others through eyes." Spies roamed about in foreign states under various disguises to collect reliable information. In the **Ramayana**, a king mentions the wise adage that "the enemy, whose secrets have been known through espionage, can be conquered without much effort." The **Arthashastra**, which predates Christ by centuries, dwells at length on the importance of espionage and the creation of an effective spy network.

Such details may indicate the high development of the science of diplomacy in ancient India. It was the famous Indian strategist of the fourth-century B.C, **Kautilya** in the **Arthasastra**, who gave the world the dictum:

"The enemy of my enemy is my friend."

"The same style of Indian thought" says **Heinrich Zimmer** in his book, **Philosophies of India**, p. 139, admiringly of Kautilya, **"that invented the game of chess grasped with profound insight the rules of this larger game of power."**

Attitude to war - **The Sangam age of the Tamils was the heroic age of the Tamil Indians.** If the men of the Tamil land were heroes, then their women were heroines. A certain mother was asked where her son was, and she replied, that she was sure that the tiger that had lain in her womb would be found in the field of battle. War was the pabulum on which our ancient warriors were great in name and fame. A certain lady who gave birth to only one son and who sent hime to the field of battle when there was the country's call for it. **Okkurmasattiyar**, a poetess, praises a certain lady dresses the hair of her only son and gives him the armor to get ready for action in the field of battle. This may be contrasted with another where a heroic mother heard the disquieting news that her son lost his courage in action and had fled in fear. If it were true, she expressed that she would cut off her breasts that had fed him with milk. With this determination she entered the battle-field with sword in her hand and went on searching for her fallen son. When she saw her son's body cut in twain, she felt much more happy than when she gave birth to him. (source: **Puram** 277 and 279 - in Tamil).

Flags - The origin and use of flags can be traced to the earliest Indian literature, the Rig Veda Samhita. The term deaja

occurs twice in the Veda. Besides, dhvaja, we meet with a good number of expressions for a banner in Vedic literature. These are Akra, Krtadhvaja, Ketu, Brhatketu, Sahasraketu. It appears that the Vedic host aimed their arrows at the banners of the enemy. The idea was that once the banner was captured, or struck, a claim was made for success in the battle over the enemy. Ketu was a small flag as contrasted with Brhatketu or the big flag. Sahasraketu may be a thousand flag, or as the knight who brought under control a thousand flags of enemies. We are told that banners and drums were counted among the insignia of ancient Vedic kings. In the Mahabharata war, every leader had his own insignia to distinguish one division from the other. **Arjuna** had the **Kapidhvaja** or the flag with the figure of Hanuman, **Bhisma**, Taladhvaja, cognizance of a palmyra tree etc..

Conclusion

The foregoing survey may convince an impartial student of history that the ancient Hindus had evolved precepts on fair fighting which formed a chivalrous code of military honor.

On the whole, however, it would seem that wars in ancient India were characterized by less violence and savagery than wars elsewhere. There is no recorded instance of such wanton and cold-blooded atrocity as Athens perpetrated against Melos, Corcyra and Mytilene, or the wearers of the Cross against the defenders of the Crescent in 1099 A.D. Such incidents of war as the indiscriminate slaughter of all men of military age or the enslavement of women and children of the conquered state were hardly known. On the whole, the chiefs were considerate of each other's rights.

This was also the **Kautilyan ideal of dharmavijayan**, and the typical Hindu method of creating unity out of diversity in the political sphere. It was a well-established maxim of statecraft that a victor should acquiesce in the continuance of the laws, beliefs and customs of the vanquished peoples, and that instead of seeking to extermination of the defeated dynasties, he should be content with submission and tribute. It is also the reason why some of the princely families in India can boast of an ancestry unequalled by any royal house in Europe.

It is of paramount importance to remember that in India the social, economic and religious life of the people pursued their course irrespective of the activities of the state. As early as as the 4th century B.C. **Megasthenes** noticed a peculiar trait of Indian warfare.

"Whereas among other nations it is usual in the contests of war to ravage the soil, and thus to reduce it to an uncultivated waste, among the Indians, on the contrary, by whom husbandmen, the tillers of the soil, even if battle is raging in the neighborhood, are undisturbed by any sense of danger, for the combatants on either side, in waging the conflict, make carnage of each other but allow those engaged in husbandry to remain quite unmolested. Besides they never ravage an enemy's land with fire nor cut down its trees." The modern "scorched earth" policy was then unknown.

Professor **H. H. Wilson** says: **"The Hindu laws of war are very chivalrous and humane, and prohibit the slaying of the unarmed, of women, of the old, and of the conquered."**

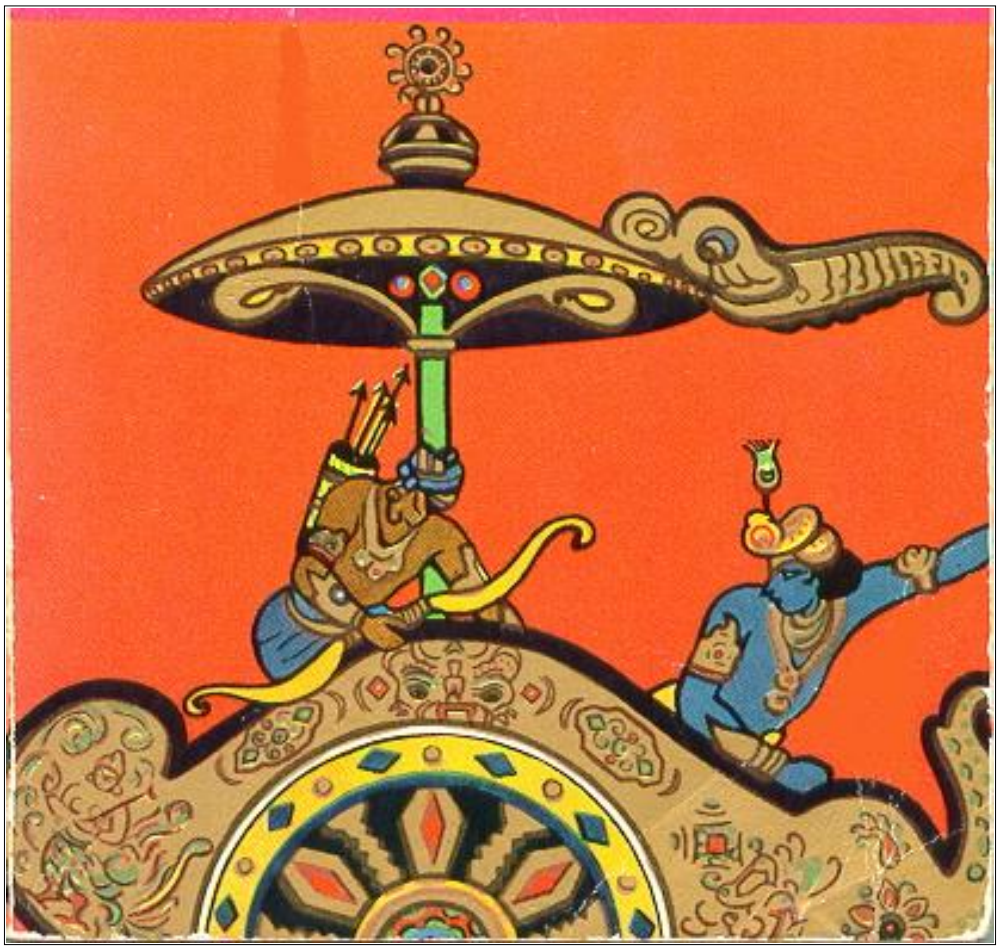
At the very time when a battle was going on, be says, the neighboring cultivators might be seen quietly pursuing their work, - " perhaps ploughing, gathering for crops, pruning the trees, or reaping the harvest." **Chinese pilgrim to Nalanda University, Hiuen Tsiang affirms that although there were enough of rivalries and wars in the 7th century A.D. the country at large was little injured by them.**

Colonel James Tod, author of **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India** South Asia Books; ; 2 edition (April 1998) ISBN 8120803809 wrote: "To spare a prostrate foe is the creed of the Hindu cavalier, and he carried all such maxims to excess."

What were the causes which led to the downfall of the Hindus? Why did the Indian states fall prey to the Muhammadan Turks in the 11th and 12th century?

King Asoka wanted to convert his empire into an open-air Buddhist monastery, at the expense of Hindu taxpayers whose interests in turn were marginalized. Buddhist principles derided martial prowess and criminally neglected the intrepidity and valor which fought for national independence. The excessive propaganda for unrestricted ahimsa which King Asoka carried on by his use of political authority throughout his empire, cut at the very root of the Indian empire.

For a few generations following Ashoka's demise, 'non-violent' Buddhists ate into the vitals of India's external defence, leaving the country vulnerable to a second wave of Greek attacks.



According to **Priyadarshi Dutta**:

"The Greeks, who had concluded a treaty with Chandra-gupta Maurya, moved in to Ayodha before the Kalinga King **Kharvela** repulsed them. Later Pushyamita Sunga assassinated the last Maurya King and salvaged India. Buddhism vanished from India as a result of Muslim onslaught because none of them had the liver of the likes of say, Guru Govind Singh. **While Hindus and Sikhs resisted Muslim onslaught, Buddhist submitted en mass to Islam."**

The Hindu defenders of the country although fully equal to their assailants in courage and contempt of death were nevertheless, divided among themselves. This division and disunion also enabled the crafty Turk invaders from the north to exploit the differences within the country. Hindus were more civilized and prosperous than the Turks. Moreover, the Turks had rude rigor of a semi-civilized barbarians who combined the fierce religious zeal of neo-converts. To spread their faith by conquest doubled their natural zest for battle and endowed them with the devoted valor of martyrs. In addition, the concept of ahimsa tended to create in certain sections of Hindus a deep abhorrence to all forms of violence.

The **Bhagavad Gita's** great message: **that violence is sometimes necessary, if it flows from Dharma.**

Non-violence in thought, word and deed is the ideal of the yogi, as the Gita points out. Violence is never an ideal in a civilized society, but it cannot be avoided. Rulers of society have to employ it for their preservation. Even this terrible action can be performed as selfless service when lawless societies (eg. Muhammadan Turks or Europeans who came to India as invaders) prey upon others out of greed.

The Bhagavad Gita's great message: that violence is sometimes necessary, if it flows from Dharma

For a warrior, nothing is higher than a war
against evil.
The warrior confronted with such a war should be pleased, Arjuna, for it comes as an open gate to heaven.
But if you do not participate in this battle against evil, you will incur sin, violating your dharma and your honor....

- Bhagavad Gita 2.31-33

Articles

Sailors of Sixty Centuries

Yukikalpataru, a Sanskrit manuscript compilation by **Bhoja Narapati,** which manuscript is now in the Calcutta Sanskrit College Library, is something like a treatise, on the art of shipbuilding in Ancient India.

It gives, according to Vriksha-Ayurveda ("Botany"), an account of four different kinds of wood. The first class comprises wood, that is light and soft, and can be joined to any other wood. The second class is light and hard, but cannot be joined to any other class of wood. The third class of wood is soft and heavy. Lastly the fourth kind is hard and heavy. According to Bhoja, a ship made out of the second class of wood, brings wealth and happiness. Ships of this type can be safely used for crossing the oceans. Ships made out of timbers containing different properties are not good, as they rot in water, and split and sink at the slightest shock.

Bhoja says that care should be taken that no iron be used, in joining planks, but they be subjected to the influence of magnetism, but they are to be fitted together with substances other than iron. Bhoja also gives names of the different classes of ships:

1. River-going ships –Samanya;
2. Ocean-going ships – Visesa.

The measurements in cubits of the "Ordinary class" of ships are the following:

		Length	Breadth	Height
1.	Kshudra	16	4	4
2	Madhyama	24	12	8
3	Bhima	40	20	20
4	Chapala	48	24	24
5	Patala	64	32	32
6	Bhaya	72	36	36
7	Dirgha	88	44	44
8	Patraputa	96	48	48
9	Garbhara	112	56	56
10	Manthra	120	60	60

Bhima, Bhaya, Garbhara are liable to bring ill-luck because their dimensions are such as not to balance themselves in water.

Among the "Special" are two classes.

1. Dirgha

		Length	Breadth	Height
1.	Dirghika	32	4	31/5
2	Tarani	48	6	44/5
3	Lota	64	8	62/5
4	Gatvara	80	10	8
5	Gamini	96	12	92/5
6	Tari	112	14	111/5
7	Jangala	128	16	124/5
8	Plavini	144	18	142/5

9	Dharnini	160	20	16
10	Begini	176	22	173/5

2. Unnanta

a	Urddhva	22	16	16
b	Anurddva	48	24	24
c	Svanamukhi	64	32	32
d	Gharbhini	80	40	40
e	Manthara	96	48	48

Lota, Gamini, Plavini, Anurddhava, Gharbhini, Manthara bring misfortune, because of their dimensions, and Urddhva much gain.

The “Yaktikalpataru” also suggests the metals to be used in decorations, eg. Gold, silver, copper, and compounds of all three as well as the colors. A vessel with four masts is to be painted white, the one with three masts is to be given a red paint, a two masted vessel is to be colored yellow, and a one masted vessel is to have a blue color. The prows are to be shaped into the form of heads of lions, buffalos, serpents, elephants, tigers, ducks, pea-hens, parrots and human beings, thus arguing an advanced progress in carpentry. Pearl and gold garlands are to decorate the prows.

Three classes of Ships:

According to cabins, ships are to be grouped into three classes:

Sarvamandira ships, having the largest cabin, from one end of the ship to the other. These are to be used for the transportation of the royal treasury, of women and horses. Madhyamandira ships, with cabins in the rainy season. Ships with cabins near the prows, are called Agramandira, and are for sailings in the dry seasons as well as for long voyages, and naval warfare.It was in these ships, that the first naval battle recorded in Indian literature, was fought, when Tugra, the Rishi King, sent his son Bhujyu against his enemies inhabiting some Island, and Bhujya on being wrecked, was rescued by two Asvins, in their hundred oared gallery. Of the same description are the five hundred vessels, mentioned in the Ramayana.

Carried 1000 Passengers: In Rajavalliya, the ship in which Prince Vijaya and his followers were sent away by King Sinhala of Bengal, was large enough to accommodate seven hundred passengers. The ship in which Prince Vijaya’s bride was conveyed to Sri Lanka, was big enough to accommodate eight hundred people of the bride’s party. The ship which took Prince Sinhala to Sri Lanka contained five hundred merchants besides the Prince himself. The Janaka Jataka mentions a ship-wreck of seven hundred passengers. The ship by which was effected the rescue of the Brahmin mentioned in Sankha Jataka was 800 cubits in length, 600 cubits in width, 20 fathoms deep, and had three masts. The ship mentioned in the Samuddha Vanija Jataka was big enough to transport a village full of absconding carpenters, numbering a thousand, who had failed to deliver goods paid for in advance.

Early History: An ancient couplet betrays the spirit with which the Indians were imbued and which accounts for their wonderful achievements on land, beyond seas and across mountain barriers. There is indeed evidence to show that the sons of the soil were adept at navigation both riverine and oceanic. Right from the dawn of history, therefore, Indians have been engaged in plying boats and ships, carrying cargoes and passengers, manufacturing vessels of all types and dimensions, studying the stars and winds, erecting light-houses and building ports, wharfs, dockyards and warehouses. From rustic beginnings they developed a precise science of navigation and composed regular manuals as well as elaborate treatises on the subject, some of which survive to this day. It is noteworthy that the very term navigation is derived from nau, which in Sanskrit word for ‘ship’ or ‘boat’. Thus navi gatih ‘going in a boat’ amounts to ‘navigation’.

Literary Evidence: Sanskrit literature is full of references to river transport and sea voyages. Sometimes we have graphic descriptions of fleets, even of ship-wrecks. The Rig-Veda is taken as the earliest extant work of the Aryans, though there is no general agreement as to its exact age. At one place, Rishi Kutsa Angirasa prays to

Agni: “Remove our foes as if by ship to the yonder shore. Carry us as if in a ship across the sea for our welfare.”

In Ramayana: In Valmiki’s Ramayana, we come across beautiful descriptions of large boats plying on the Ganga near Sringiberapura. King Guha of that place arranges a magnificent boat for Rama accompanied by Lakshman and Sita, in exile, to enable the party to cross the river.When Bharat comes later to the same place, with the whole royal household, citizens of Ayodhya and a large army, with the intention of bringing Rama back to Ayodhya from exile, the same King Guha, suspecting Bharata’s intentions, take precautionary measures by ordering five hundred ships, each manned by one hundred youthful mariners to keep in readiness, should resistance be necessary.

The descriptions of the ships is noteworthy: “Some (of the ships) reared aloft the swastika sign, had tremendous gongs hung, flew gay flags, displayed full sails and were exceedingly well built” The ships chosen for Bharata and the royal ladies of the royal household had special fittings and furniture as well as yellow rugs.

In Mahabharata: In the Mahabharata too there are many references. The ship contrived by Vidura for the escape of Pandavas had some kind of mechanism fitted in it: “the ship strong enough to withstand hurricanes, fitted with machinery and displaying flags.” Panini, who lived about the 7th century B.C. in his Ashtadhyayi, the most commented upon work on Sanskrit grammar, has incidentally recorded certain usages which reflect in a way the maritime activity before and during his days in India. According to one sutra various types of small river craft were in use, and their names were utsagna, udupa, udyata, utputa, pitaka etc. A large boat was called Udavahana or udakavahana. Of special interest is the distinction made between the cargoes coming from an island near the coast and those coming from mid-ocean islands: the former were called dvaipya, and the latter dvaipa or dvaipaka. Certain other sutras speak of ferry chages, cargoes, marine trade and the like of those days.

Chandragupta Maurya’s minister, Vishnugupta Chanakya alias Kautilya, the celebrated author of the treatise on statecraft, Kautilya Arthasastra, of about 320 B.C. devotes a full chapter to waterways under a Navadhyaksha ‘Superintendent of ships’. His duties included the examination of accounts relating to navigation, not only on oceans and mouths of rivers, but also on lakes, natural or artificial, and rivers. Fisheries, pearl fisheries, customs on ports, passengers and mercantile shipping, control and safety of ships and similar other affairs all came under his charge. Jaina scriptures, Buddhist Jatakas and Avadanas, as well as classical Sanskrit literature, abound in references to sea-voyages. They acquaint us with many interesting details as to the sizes and shapes of ships, their furniture, and decorations, articles of import and export, names of seaports and islands, in short, everything connected with navigation.

Temples Give Proof: In the temple of Jagannath at Puri, a stately barge is sculptured in relief. The oarsmen paddle with all their strength, the water is thrown into waves, and the whole scene is one of desperate hurry. The boat is of the Madhyamandira type, as defined by Bhoja in the “Yuktikalpataru”. The Ajanta paintings are rightly interpreted by **Griffiths** as a "**vivid testimony to the ancient foreign trade of India.**" Of the many paintings one is of “a sea-going vessel with high stem and stern with three oblong sails attached to as many upright masts. Each masts is surrounded by a truck and there is carried a big sail. The jib is well filled with wind. A sort of bowspirit, projecting from a kind of gallows on deck is indicated with the outflying jib, square in form,” like that of Columbus ships. The ship is of the Agramandira type, as described in the “Yuktikalpataru”. Another painting is of a royal pleasure boat which is “like the heraldic lymphad, with painted eyes at stem and stern, a pillard canopy amid ships, and an umbrella forward the steersman being accommodated on a sort of ladder, which remotely suggest the steerman’s chair, in the modern Burmese row boats, while a rower is in the bows.” The barge is of the Madhyamandira type.

Sculpture at Borobudur: The temple of Borobudur in Java contains sculptures recalling the colonization of Java by Indians. One of the ships “tells more plainly than words, the perils, which the Prince of Gujarat and his companions encountered on the long and difficult voyages from the west coast of India.” There are other ships tempest-tossed on the Ocean, fully trying to pluck and dexterity of the oarsmen, sailors, and pilots, who, however, in their movements and looks impress one with the idea, that they were quite equal to the occasion.

What Historian say: **Nicolo Conti** says:

"The natives of India build some ships larger than ours, capable of containing 2,000 butts, and with five sails and as many masts. The lower part is constructed with triple planks, in order to withstand the force of the tempests, to which they are much exposed. But some ships are so built in compartments, that should one part be shattered, the other portion remaining whole may accomplish the journey."

Mr. J. L. Reid, member of the Institute of Naval Architects and Shipbuilders, England and the Superintendent of the Hongli Docks, has stated:

"The early Hindu astrologers are said to have used the magnet as they still use the modern compass, in fixing the north and east, in laying foundations, and other religious ceremonies. The Hindu compass was an iron fish, that floated in a vessel of oil, and pointed, to the north. Fact of this older Hindu compass seems placed beyond doubt by the Sanskrit word "maccha-yantra."

India's extensive Sea-borne Trade: The historian **Strabo** says that in the time of Alexander, the River Oxus was so easily navigable that Indian wares were conducted down it, to the Caspian and the Euxine sea, hence to the Mediteranean Sea, and finally to Rome. Greeks and Indians began to meet at the newly established sea ports, and finally all these activities culminated in Indian embassies, being sent to Rome, from several Indian States, for Augustus himself says that Indian embassies came "frequently." Abundant Roman coins from Augustus right down to Nero, have been found in India.

Archaeologist's Testimony: Archaeology amply supports literary record. Excavations at Mohenjodaro on the Indus have yielded, among other things, a potsherd and couple of steatite, seals each bearing a representation of a boat or a ship incised on it. By far the most substantial proof is afforded by the discovery of a dockyard at Lothal in Gujarat.

The eminent Indian archaeologist **Dr. Bahadur Chand Chhabra** concludes:

"It may be a surprise even to an Indian today to be told that in the ancient world India was in the forefront in the field of shipping and ship-building. **Her ships, flying Indian flags, sailed up and down the Arabian Sea, the Indian Ocean and far beyond to Southeast Asia. Her master-mariners led the way in navigation. Riverine traffic within the country, shipping along the entire length of India's coastline, and on high seas were brisk until as recently as the days of the East India Company.** Owing however, to historical competition by the British, ancient Indian shipping was wiped out without a trace. No wonder then the common man in India today readily believes that Indians are not only now learning the ABC of navigation. It would have been odd indeed if, bounded on three sides by great oceans, and gifted with a remarkable spirit of enterprise and invention, India had registered no advancement in the sphere of navigation while she had gone far in other arts and sciences.

U.S. adopts catamaran technology

Washington May 28. The United States adopted **ancient Indian catamaran-making technology to construct fast ships** which were used with dramatic effect in the Iraq war, says a media report.

Among the equipment the Americans used to win the Iraq war were 100-feet catamaran ships to ferry tanks and ammunition from Qatar to Kuwait.

The ships, built with technology adapted from ancient Tamil methods to make catamarans, can travel over 2,500 kms in less than 48 hours, twice the speed of the regular cargo ships, and carry enough equipment to support

about 5,000 soldiers, the Wall Street Journal reported yesterday.

Having a shallow draft, the boats can unload in rudimentary ports, allowing troops to land closer to the fight. — PTI

Sailing down the seas of history

Charting the coastline from Mumbai to the very end of Gujarat, where India ends and Pakistan begins, the 1,000 nautical mile voyage that will end on February 11 is in preparation for another, more ambitious voyage. The sailors, calling themselves the Maritime Exploration and Research Group, is getting ready to follow the path of ancient Indian mariners from south India all the way to Indonesia.

Inspired by the Chola kings of the 11th century, who discovered the present-day Indonesian islands of Sumatra and Bali, the group is preparing to replicate the feat using traditional instruments and a boat resembling the vessels of yore.

Called the Simulation of Chola Navigation Techniques, the forthcoming expedition will attempt to cover the distance between Nagapatnam in southern India and the Indonesian islands. "The expedition will aim to show that our ancient seafarers were in no way inferior to their Western counterparts," said B. Arunachalam, a researcher who is the moving spirit behind the expedition. The expedition has cost the team members nearly Rs.100,000 but they have received substantial assistance from the Indian Navy.

India defence looks to ancient text

Indian scientists are turning to an ancient Hindu text in their search for the secrets of effective stealth warfare.

They believe the book, the **Arthashastra**, written more than 2,300 years ago, will give Indian troops the edge on their enemies.

India's Defence Minister George Fernandes has approved funding for the project, and told parliament recently that experiments had begun.

The research is being carried out by experts from the Defence Research and Development Organisation and scientists from the University of Pune and National Institute of Virology in western India.

The book includes the recipe for a single meal that will keep a soldier fighting for a month, methods of inducing madness in the enemy as well as advice on chemical and biological warfare.

Powders and remedies

The book was written by military strategist Kautilya, also known as Chanakya and Vishnugupta, a prime minister in the court of India's first emperor Chandragupta Maurya, in the fourth century BC.

"All of us are excited about the possibilities and do not for a moment think that the idea is crazy," said Professor SV Bhavasar, a space scientist who has spent many years researching the Arthashastra.

"Decoding ancient texts is not an easy task but we are very hopeful of success," he added.

According to a Pune University report, the book says that soldiers fed with a single meal of special herbs, milk and clarified butter can stay without food for an entire month.

Shoes made of camel skin smeared with a serum made from the flesh of owls and vultures can help soldiers walk hundreds of miles during a war without feeling tired.

A powder made from fireflies and the eyes of wild boar can endow soldiers with night vision.

Chemical warfare

Kautilya wrote in the Arthashastra that a ruler could use any means to attain his goal, and Book XIV touches on aspects of chemical and biological warfare.

The book says that smoke from burning a powder made from the skin and excreta of certain reptiles, animals and birds can cause madness and blindness in the enemy.

The book also provides the formula to create a lethal smoke by burning certain species of snakes, insects and plant seeds in makeshift laboratories.

"Our focus at present is on how humans can control hunger for longer durations and walk for longer period without experiencing fatigue,

Project leader Dr V S Ghole, head of the environmental engineering department of Pune university, said the team was now focusing on the methods of controlling hunger and increasing stamina.

"Once we have made some headway we will go into researching Kautilya's notes on night vision and other fields," he said.

Professor S V Bhavasar said the team also had plans to research other ancient Hindu texts.

These include manuscripts which "claim to provide secrets of manufacturing planes which can not be destroyed by any external force, could be motionless in the sky and even invisible to enemy planes."

Did You Know?

Gun powder (Agnicurna) and Ancient Hindus

Sir A. M. Eliot tells us that the Arabs learnt the manufacture of gunpowder from India, and that before their Indian connection they had used arrows of naptha. It is also argued that though Persia possessed saltpetre in abundance, the original home of gunpowder was India. It is said that the Turkish word top and the Persian tupang or tufang are derived from the Sanskrit word dhupa. The dhupa of the **Agni Purana** means a rocket, perhaps a corruption of the Kautaliyan term natadipika.

(source: **Fire-Arms in Ancient India - By Jogesh Chandra Ray** I.H.Q. viii. p. 586-88).

(For more refer to article by G R Josyer - **India: The Home of Gunpowder and Firearms**).

Heinrich Brunnhofer (1841-1917) German Indologist, also believed that the ancient Aryans of India knew about gunpowder.

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen**. p.92).

Gustav Oppert (1836-1908) in his work, **Political Maxims of the Ancient Hindus**, says, that ancient India was the original home of gunpowder and fire-arms. It is probable that the word Sataghni referred to in the Sundara Kanda of the Ramayana refers to cannon.

(source: **Hindu Culture and The Modern Age - By Dewan Bahadur K.S. Ramaswami Shastri** - Annamalai University 1956 p. 127).

Professor Horace Hayman Wilson says: “Amongst ordinary weapons one is named vajra, the thunderbolt, and the specification seems to denote the employment of some explosive projectile, which could not have been in use except by the agency of something like gunpowder in its properties.”

Copyright © 2001 - All Rights Reserved.

that draws from positive proofs, that the use of fire as weapon of combat was a familiar idea, as it is constantly described in the heroic poems."

(source: **Essays and lectures on the religions of the Hindus - H H Wilson** vol. II p. 302)

It is very unlikely that they should not have discovered their inflammability, either singly or in combination. To this inference a priori may be added that drawn from positive proof, that the use of fire as a weapon of combat was a familiar idea, as it is constantly described in the heroic poems."

The testimony of ancient Greek writers, who, being themselves ignorant of fire-arms used by Indians, give peculiar descriptions of the mode of Hindu warfare is significant. "Themistius mentions the Brahmin fighting at a distance with lightning and thunder."

Alexander, in a letter to Aristotle, mentions, "the terrific flashes of flame which he beheld showered on his army in India." (See Dante's Inferno, XIV, 31-7).

Speaking of the Hindus who opposed Alexander, **Lord Elphinstone** says: "Their arms, with the exception of fire-arms, were the same as at present."

(source: **History of India - by Mountstuart Elphinstone** p. 241).

Philostratus thus speaks of Alexander's invasion of the Punjab: "Had Alexander passed the Hyphasis he never could have made himself the master of the fortified habitations of these sages. Should an enemy make war upon the, they drive him of by means of tempests and thunders as if sent down from Heaven. The Egyptian Hercules and Bacchus made a joint attack on them, and by means of various military engines attempted to take the place. The sages remained unconcerned spectators until the assault was made, when it was repulsed by fiery whirlwinds and thunders which, being hurled from above, dealt destruction on the invaders."

(source: Philostrati Vit: Apollo, Lib II. C. 35).

Commenting on the stratagem adopted by King Hal in the battle against the king of Kashmir, in making a clay elephant which exploded, **H M. Elliot** says: "Here we have not only the simple act of explosion but something very much like a fuse to enable the explosion to occur at a particular period."

(source: **The History of India, as told by its own Historians - By H. M Elliot** volume I. p. 365).

Though the Hindu masterpieces on the science of war are all but lost, yet there is sufficient material available in the great epics and the Puranas to prove that fire-arms were not only known and used on all occasions by the Hindus, but that this branch of their armory had received extraordinary development. In medieval India, of course, guns and cannons were commonly used. In the 12th century we find pieces of ordnance being taken to battle fields in the armies of Prithviraj. In the 25th stanza of Pritviraja Rasa it is said that "The calivers and cannons made a loud report when they were fired off, and the noise which issued from the ball was heard at a distance of ten cos. An Indian historian, Raj Kundan Lall, who lived in the court of the King of Oudh, says that there was a big gun named lichhma in the possession of His Majesty the King (of Oudh) which had been originally in the artillery of Maharaja of Ajmer. The author speaks of a regular science of war, of the postal department, and of public roads. "Maffei says that the Indians far excelled the Portuguese in their skill in the use of fire-arms."

Another author quoted by **Peter Von Bohlen** (1796-1840) German Indologist, speaks of a certain Indian king being in the habit of placing several pieces of brass ordnance in front of his army. "Faria-e-Souza speaks of a Guzerat vessel in A.D. 1500 firing several guns at the Portuguese, and of the Indians at Calicut using fire vessels in 1502, and of the Zamorin's fleet carrying in the next year 380 guns."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 355-360).

In the light of the above remarks **we can trace the evolution of fire-arms in the ancient India.** There is evidence to show that agni (fire) was praised for vanquishing an enemy. The Arthava Veda shows the employment of fire-arms with lead shots. The Aitareya Brahmana describes an arrow with fire at its tip. In the **Mahabharata and Ramayana**, the

employment of agnyastras is frequently mentioned, and this deserves careful examination in the light of other important terms like ayah, kanapa and tula-guda.

The **agnicurna or gunpowder** was composed of 4 to 6 parts of saltpetre, one part of sulphur, and one part of charcoal of arka, sruhi and other trees burnt in a pit and reduced to powder. Here is certain evidence of the ancient rockets giving place to actual guns in warfare. From the description of the composition of gunpowder, the composition of the **Sukraniti** can be dated at the pre-Gupta age.

(source: **War in Ancient India - By V. R. Ramachandra Dikshitar** 1944. p. 103 -105).

Medhatithi remarks thus "while fighting his enemies in battle, he shall not strike with concealed weapons nor with arrows that are poisoned or barbed on with flaming shafts."

Sukraniti while referring to fire-arms, (agneyastras) says that before any war, the duty of the minister of war is to check up the total stock of gunpowder in the arsenal. Small guns is referred as tupak by Canda Baradayi. The installation of yantras (engines of war) inside the walls of the forts referred to by Manasollasa and the reference of Sataghni (killer of hundreds of men) pressed into service for the protection of the forts by Samaranganasutradhara clearly reveals the frequent use of fire arms in the battle-field.

(source: **India Through The Ages: History, Art Culture and Religion - By G. Kuppuram** p. 512-513).

The use of gunpowder, first invented and used in India as an explosive mixture of saltpetre, sulfur and charcoal to power guns, cannons and artillery.

(source: **How to Read the Timeline Hinduism Today**).

H. H. Eliot, Foreign Secretary to the Government of India (1845), after discussing the question of the use of fire-arms in ancient India, says: "On the whole, then, we may conclude that fire-arms of some kind was used in early stages of Indian history, that the missiles were explosives....that projectiles were used which were made to adhere to gates and buildings, and machines setting fire to them from a considerable distance; that it is probable that saltpetre, the principal ingredient of gunpowder, and the cause of its detonation, entered into the composition, because the earth of Gangetic India is richly impregnated with it in a natural state of preparation, and it may be extracted from it by lixiviation and crystallization without the aid of fire; and that sulphur may have been mixed with it, as it is abundant in the north-west of India."

(source: **Historians of M India** - Bibliographical Index. Vol. I p. 373).

Horace Hayman Wilson wrote: "Rockets appear to be of Indian invention, and had long been used in native armies when Europeans came first in contact with them." "It is strange that they (rockets) should now be regarded in Europe as the most recent invention of artillery."

"He who is possessed of supreme knowledge by concentration of mind, must have his senses under control, like spirited steeds controlled by a charioteer." says the Katha Upanishad (iii, 6). From the Vedic age downwards the central conception of education of the Indians has been that it is a source of illumination giving us a correct lead in the various spheres of life. Knowledge, says one thinker, is the third eye of man, which gives him insight into all affairs and teaches him how to act. (Subhishitaratnasandhoha p. 194).

A single feature of ancient Indian or Hindu civilization is that it has been molded and shaped in the course of its history more by religious than by political, or economic, influences. The fundamental principles of social, political, and economic life were welded into a comprehensive theory which is called Religion in Hindu thought. The total configuration of ideals, practices, and conduct is called Dharma (Religion, Virtue or Duty) in this ancient tradition. From the very start, they came, under the influence of their religious ideas, to conceive of their country as less a geographical and material than a cultural or a spiritual possession, and to identify, broadly speaking, the country with their culture. The Country was their Culture and the Culture their Country, the true Country of the Spirit, the 'invisible church of culture' not confined within physical bounds. India thus was the first country to rise to the conception of an extra-territorial nationality and naturally became the happy home of different races, each with its own ethno-psychic endowment, and each carrying its social reality for Hindus is not geographical, not ethnic, but a culture-pattern. Country and patriotism expand, as ideals and ways of life receive acquiescence. Thus, from the very dawn of its history has this Country of the Spirit ever expanded in extending circles, Brahmarshidesa, Brahmavarta, Aryavarta, Bharatvarsha, or Jambudvipa, Suvarnabhumi and even a Greater India beyond its geographical boundaries.

Learning in India through the ages had been prized and pursued not for its own sake, if we may so put it, but for the sake, and as a part, of religion. (It was sought as the means of self-realization, as the means to the highest end of life. viz. Mukti or Emancipation. Ancient Indian education is also to be understood as being ultimately the outcome of the Indian theory of knowledge as part of the corresponding scheme of life and values. The scheme takes full account of the fact that Life includes Death and the two form the whole truth. This gives a particular angle of vision, a sense of perspective and proportion in which the material and the moral, the physical and spiritual, the perishable and permanent interests and values of life are clearly defined and strictly differentiated. Of all the people of the world the Hindu is the most impressed and affected by the fact of death as the central fact of life. The individual's supreme duty is thus to achieve his expansion into the Absolute, his self-fulfillment, for he is a potential God, a spark of the Divine. Education must aid in this self-fulfillment, and not in the acquisition of mere objective knowledge.

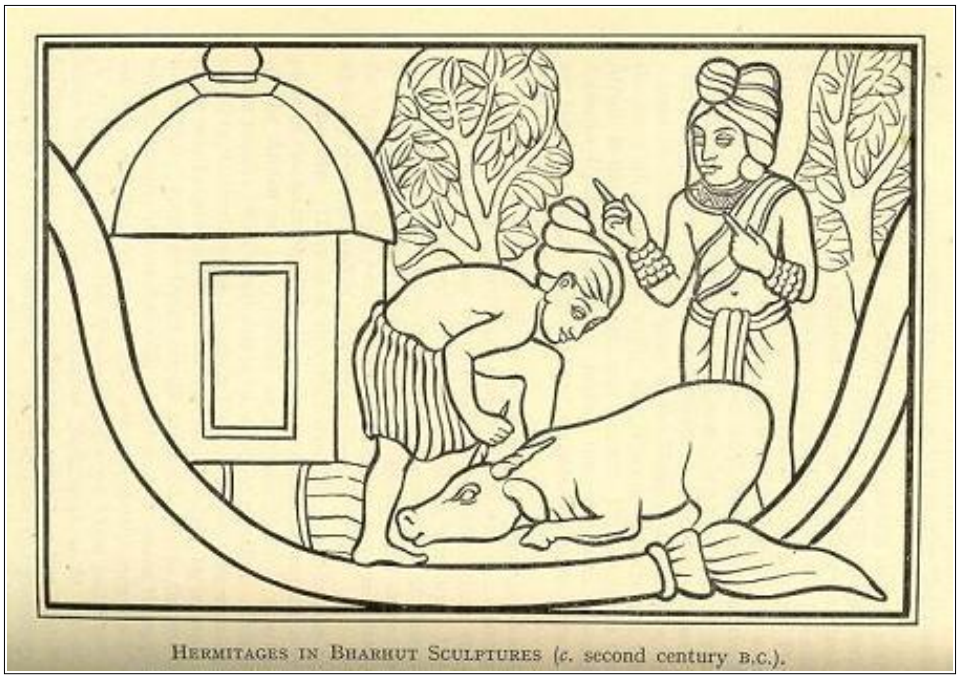
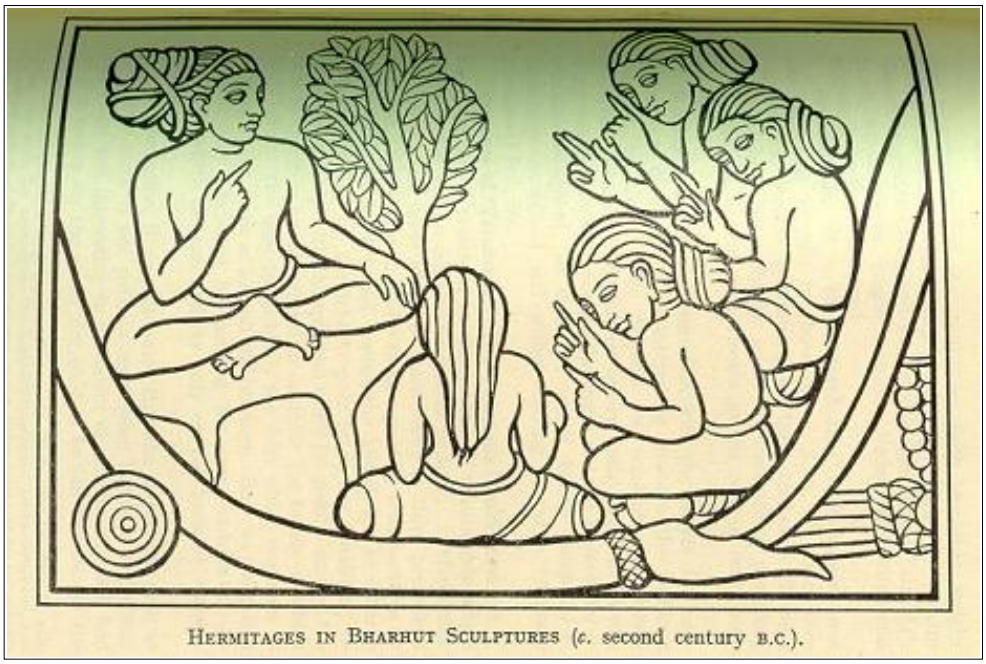
Conclusion



Introduction

It may be said with quite a good degree of precision that India was the only country where knowledge was systematized and where provision was made for its imparting at the highest level in remote times. Whatever the discipline of learning, whether it was chemistry, medicine, surgery, the art of painting or sculpture, or dramatics or principles of literary criticism or mechanics or even dancing, everything was reduced to a systematic whole for passing it on to the future generations in a brief and yet detailed manner. University education on almost modern lines existed in India as early as 800 B.C. or even earlier. The learning or culture of ancient India was chiefly the product of her hermitages in the solitude of the forests. It was not of the cities. The learning of the forests was embodied in the books specially designated as Aranyakas "belonging to the forests." Indian civilization in its early stages had been mainly a rural, sylvan, and not an urban, civilization.

The ideal of education has been very grand, noble and high in ancient India. Its aim, according to Herbert Spencer is the 'training for completeness of life' and the molding of character of men and women for the battle of life. The history of the educational institutions in ancient India shows how old is her cultural history. It points to a long history. In the early stage it is rural, not urban. British Sanskrit scholar **Arthur Anthony Macdonell** (1854-1930) author of **A History of Sanskrit Literature** (Motilal Banarsidass Pub. ISBN: 8120800354) says "Some hundreds of years must have been needed for all that is found" in her culture. The aim of education was at the manifestation of the divinity in men, it touches the highest point of knowledge. In order to attain the goal the whole educational method is based on plain living and high thinking pursued through eternity.



As the individual is the chief concern and center of this Education, education also is necessarily individual. It is an intimate relationship between the teacher and the pupil. The relationship is inaugurated by a religious ceremony called **Upanayana**. It is not like the admission of a pupil to the register of a school on his payment of the prescribed fee. The spiritual meaning of Upanayana, and its details inpsired by that meaning, are elaborated in many texts and explained below in the proper place. By Upanayana, the teacher, "holding the pupil within him as in a womb, impregnates him with his spirit, and delivers him in a new birth." The pupil is then known as **Dvija,** "born afresh" in a new existence, **"twice born" (Satapatha Brahmana)**. The education that is thus begun is called by the significant term Brahmacharya, indicating that it is a mode of life, a system of practices.

This conception of education molds its external form. The pupil must find the teacher. He must live with him as in member of his family and is treated by him in every way as his son. The school is a natural formation, not artificial constituted. **It is the home of the teacher. It is a hermitage, amid sylvan surrounding, beyond the distractions of urban life, functioning in solitude and silence.** The constant and intimate association between teacher and taught is vital to education as conceived in this system. The pupil is imbibe the inward method of the teacher, the secrets of his efficiency, the spirit of his life and work, and these things are too subtle to be taught. It seems in the early Vedic or Upanishadic times education was esoteric. The word Upanishad itself suggests that it is learning got by sitting at the feet of the master. The knowledge was to be got, as the Bhagavad Gita says, by obeisance, by questioning and serving the teacher.

HERMITAGES IN BHARHUT SCULPTURES (*c.* second century B.C.).

The ascetic, clad in birch bark, with matted hair bound up into a knot, leaning and grieving over his dead pet antelope.

HERMITAGES IN BHARHUT SCULPTURES (*c.* second century B.C.).

The inscription: Dighatapasi sise anusasati, "the ascetic of long penance instructs the pupils." Some of the pupils are female rishis. The position of the pupils' fingers show counting called for in Sama Veda chanting.
(source: Ancient Indian Education - By Radha Kumud Mookerji).

India has believed in the domestic system in both Industry and Education, and not in the mechanical methods of large production in institutions and factories turning out standardized articles.

It is these sylvan schools and hermitages that have built up the thought and civilization of India. As has been pointed out in the graphic words of the poet and Nobel prize laureate, **Rabindranath Tagore** (1861-1941):

"A most wonderful thing was notice in India is that here the forest, not the town, is the fountain head of all its civilization. Wherever in India its earliest and most wonderful manifestations are noticed, we find that men have not come into such close contact as to be rolled or fused into a compact mass. There, trees and plants, rivers and lakes, had ample opportunity to live in close relationship with men. In these forests, though there was human society, there was enough of open space, of aloofness; there was no jostling. Still it rendered it all the brighter. It is the forest that nurtured the two great ancient ages of India, the Vaidic and the Buddhist. As did the Vaidic Rishis, Buddha also showered his teaching in the many woods of India. The current of civilization that flowed from its forests inundated the whole of India."

"The very word 'aranyaka' affixed to some of the ancient treatises, indicates that they either originated in, or were intended to be studied in, forests."

(source: **India: Bond Or Free? - By Annie Besant** p. 94-95).

"In order to preserve the continuity of this national heritage and add to its richness, India built large institutions of higher learning from time to time. They served as the repositories of her spiritual, philosophical, scientific, artistic and literary achievements and as the media of transmission of this heritage to the future generations. But it was realized by the early Vedic seers that the educational institutions could only discharge their functions properly if they were isolated from the conflicting demands of the rough and tumble of the world. They, therefore, built their universities in forests, or in places of natural beauty. Nature softens the instincts of body and mind, which otherwise become harsh and aggressive when man lives in houses of brick and mortar. When man lives in the lap of nature, his emotional and mental life becomes pure and harmonious; he grows as a part of life that surrounds him. His inner strains and stresses are reduced to minimum, his mind is alert, his intuition awake. **Ancient India, therefore, selected spots of natural beauty for locating its educational institutions."**

(source: **India: A synthesis of cultures – by Kewal Motwani** p. 131).

It is here, in these forest universities, as **Sir Sarvepalli Radhakrishnan** (1888-1975) has said, ' evolved the beginning of the sublime idealism of India.'

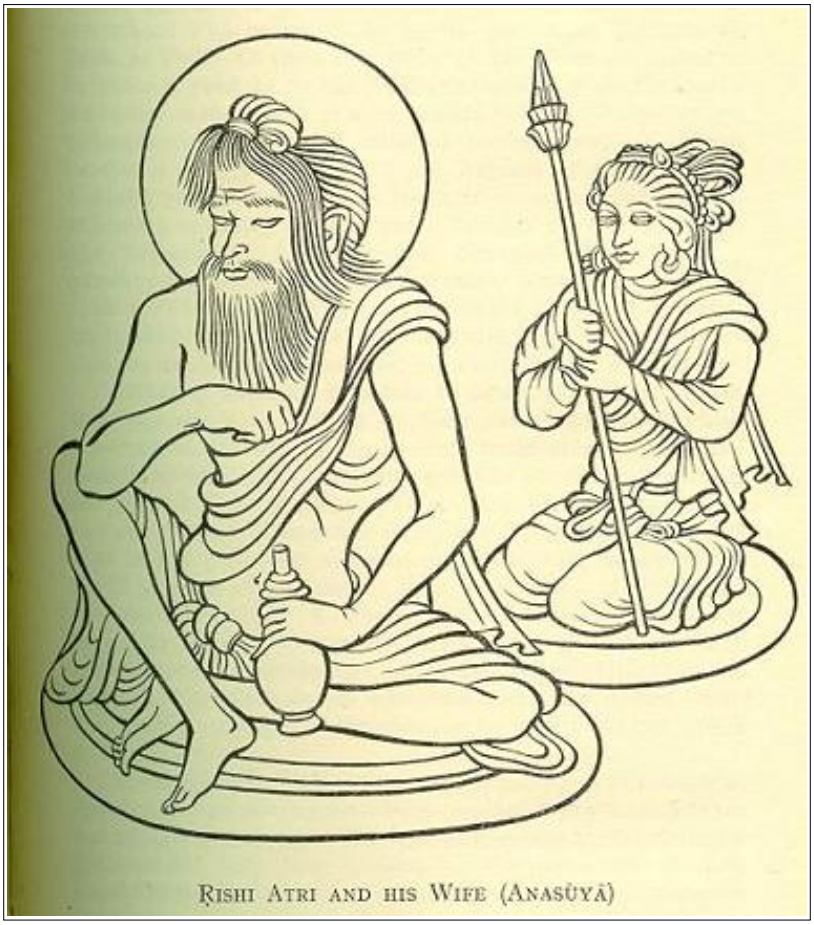
Rigvedic Education

The Rig Veda as the source of Hindu Civilization

The Rig Veda is established as the earliest work not merely of the Hindus, but of all Indo-European languages and humanity. It lays the

foundation upon which Hindu Civilization has been building up through the ages. Broadly speaking, it is on a foundation of plain living and high thinking. Life was simple but though high and of farthest reach, wandering through eternity. Some of the prayers of the Rig Veda, like the widely known Gayatri mantram also found in Samaveda and Yajur veda touch the highest point of knowledge and sustain human souls to this day.

The Rig Veda itself exhibits an evolution and the history of the Rigveda is a history of the culture of the age. The Rig veda, in the form in which we have it now, is a compilation out of old material, a collection and selection of 1,017 hymns out of the vast literature of hymns which have been accumulating for a long period. When the Rigvedic texts was thus fixed and appropriated for purposes of the Samhita, its editors had to think out the principles on which the hymns could be best arranged. These show considerable literary skill, originality of design, and insight into religious needs. First, it represents **Rishis** were chosen and their works were utilized to constitute six different Mandalas. **These Rishis are Gritsamada, Visvamitra, Vamadeva, Atril, Kanva, Bharadvaja, and Vasistha.**



1. Vasishtha 2. Visvamitra 3. Vamadeva 4. Bharadvaja 5. Atri 6. Kanva 7. Gritsamada

When the highest knowledge was thus built up by these Seers and revealed and stored up in the hymns, there were necessarily evolved the methods by which such knowledge could be acquired, conserved, and transmitted to posterity. Thus every Rishi was a teacher who would start by imparting to his son the texts of the knowledge he had personally acquired and such texts would be the special property of his family. Each such family of Rishis was thus functioning like a Vedic school admitting pupils for instruction in the literature or texts in its possession. The relations between teacher and taught was well established in the Rig Veda. The methods of education naturally varied with the capacity of pupils. Self-realization by means of tapas would be for the few.

The Rig Veda shows a lively sense of the immutable laws governing Creation. Its best expression is iii. 56, I, a hymn of Visvamitra. It means that the Vratas or Cosmic Laws which are at the root of creation, operate for all time and regularly, which can never be violated by anyone however clever or wise. There is no one in earth or heaven who by his power or supreme knowledge can set them at naught. "They cannot bend like mountains."

"Then at the beginning, before creation, there was neither Being nor non-Being. There was neither the atmosphere nor the heavens beyond. What did it contain? Where? And under whose direction? Were there waters, and the bottomless deep?"

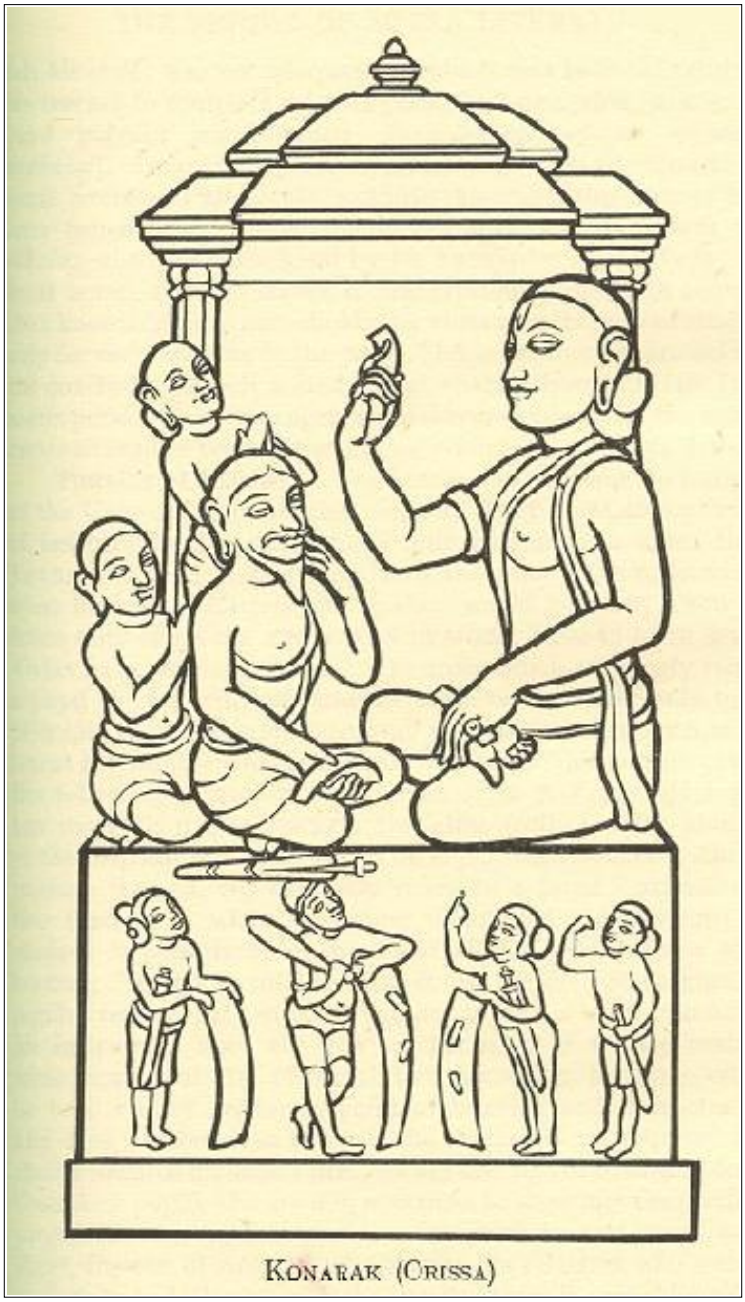
RISHI ATRI AND HIS WIFE (ANASÛYÂ)

Commenting on these **Vedic hymns** **Count Maurice Maseterlinck** in is book **The Great Secret** (Citadel Pub ASIN: 0806511559) says:

"Is it possible to find, in our human annals, words more majestic, more full of solemn anguish, more august in tone, more devout, more terrible? Where, from the depths of an agnosticism, which thousands of years have augmented, can we point to a wider horizon? At the very outset, it surpasses all that has been said, and goes farther than we shall even dare to go. No spectacle could be more absorbing than this struggle of our forefathers of five to ten thousand years ago with the Unknowable, the unknowable nature of the causeless Cause of all Causes. But of this cause, or this God, we should never have known anything, had He remained self-absorbed, had He never manifested Himself." Thus it is, say the Laws of Manu, "that, by an alternation of awakening and repose, the immutable Being causes all this assemblage of creatures, mobile and immobile, eternally to return to life and to die." He exhales Himself, or expels His breath, throughout the Universe, innumerable worlds are born, multiply and evolve. He Himself inhales, drawing His breath, and Matter enters into Spirit, which is but an invisible form of Matter: and the worlds disappear, without perishing, to reintegrate the Eternal cause, and emerge once more upon the awakening of Brahma - that is, thousands of millions of years later; to enter into Him so it has been and ever shall be, through all eternity, without beginning, without cessation, without end."

"When the world had emerged from the darkness," says the **Bhagavata Puranam**, "the subtle elementary principle produced the vegetable seed which first of all gave life to the plants. From the plants, life passed into the fantastic creatures which were born of the slime in the waters; then, through a series of different shapes and animals, it came to Man." They passed in succession by way of the plants, the worms, the insects, the serpents, the tortoises, cattle, and the wild animals - such is the lower stage," says Manu again, who adds, "Creatures acquired the qualities of those that preceded them, so that the farther down its position in the series, the greater its qualities.

"Have we not here the whole of Darwinian evolution confirmed by geology and foreseen at least 6,000 years ago? On the other hand, is this not the theory of Akasa which we more clumsily call the ether, the sole source of all substances, to which our science is returning? Is it true that the recent theories of Einstein deny ether, supposing that radiant energy - visible light, for example - is propagated independently through a space that is an absolute void. But the scientific ether is not precisely the Hindu Akasa which is much more subtle and immaterial being a sort of spiritual element or divine energy, space uncreated, imperishable, and infinite."



(source: **Ancient Indian Education - By Radha Kumud Mookerji** p. 17 and 49).

Women as Rishis

The history of the most of the known civilizations show that the further back we go into antiquity, the more unsatisfactory is found to be the general position of women. Hindu civilization is unique in this respect, for here we find a surprising exception to the general rule. The further back we go, the more satisfactory is found to be the position of women in more spheres than one; and the field of education is most noteworthy among them. There is ample and convincing evidence to show that women were regarded as perfectly eligible for the privilege of studying the Vedic literature and performing the sacrifices enjoined in it down to about 200 B.C. This need not surprise us, for some of

the hymns of the Rig Veda are the composition of twenty sage-poetesses.

Women were then admitted to fulfill religious rites and consequently to complete educational facilities. **Women-sages were callee Rishikas and Brahmavadinis.** The **Rig Veda** knows of the following Rishikas 1.Romasa 2.Lopamudra 3.Apala 4. Kadru 5.Visvavara 6. Ghosha 7. Juhu 8. Vagambhrini 9. Paulomi 10 Jarita 11. Sraddha-Kamayani 12. Urvasi 12. Sarnga 14. Yami 15. Indrani 18. Savitri 19. Devajami 20. Nodha 21 Akrishtabhasha 22. Sikatanivavari 23. Gaupayana.

Sculpture showing Vaishanava Guru and his royal discipline at Konark, holding in his right hand a MS, with his attending guards shown below. Now on display at the Victoria Albert Museum in London, England.

The Brahmavadinis were the products of the educational discipline of brahmacharaya for which women also were eligible. Rig Veda refers to young maidens completing their education as brahmacharinis and then gaining husbands in whom they are merged like rivers in oceans. Yajurveda similarly states that a daughter, who has completed her brahmacharya, should be married to one who is learned like her. A most catholic passage occurs in YajurVeda (xxvi, 2) which enjoins the imparting of Vedic knowledge to all classes, Brahmins and Rajanyas, Sudras, Anaryas, and charanas (Vaisyas) and women. No one can recite Vedic prayers or offer Vedic sacrifices without having undergone the Vedic initiation (**Upanayana**). It is, therefore, but natural that in the early period the Upanayana of girls should have been as common as that of boys. The Arthava Veda (xi. 5.8) expressly refers to maidens undergoing the Brahmacharya discipline and the Sutra works of the 5th century B.C. supply interesting details in its connection. Even Manu includes Upanayana among the sanskaras (rituals) obligatory for girls (II.66). Music and dancing was also taught to them. Brahmavadins used to marry after their education was over, some of them like Vedavati, a daughter of sage Kusadhvaja, would not marry at all.

Women in Education

Radha Kumud Mookerji (1884 -1964) Indian historian, has noted: "An important feature of this educational system should not be missed. The part taken in intellectual life by women like Gargi who could address a Congress of philosophers on learned topics, or like Maitreyi, who had achieved the highest knowledge, that of Brahma. The Rigveda shows us some women as authors of hymns, such as Visvavara, Ghosha, and Apala."

(source: **Hindu Civilization - By Radha Kumud Mookerji** p. 111 Longmans, Green and Co. London 1936).

The Vedic women received a fair share of masculine attention in physical culture and military training. The Rigveda tells us that many women joined the army in those days. A form of chariot race was one of the games most popular during the Vedic period. People were fond of swinging. Ball games were in vogue in those days by both men and women. Apart from this, a number of courtyard games like" Hide and seek" and "Run and catch" were also played by the girls. Playing with dice became a popular activity. The dices were apparently made of Vibhidaka nuts. From the Rigveda, it appears that the Vedic Aryans knew the art of boxing.

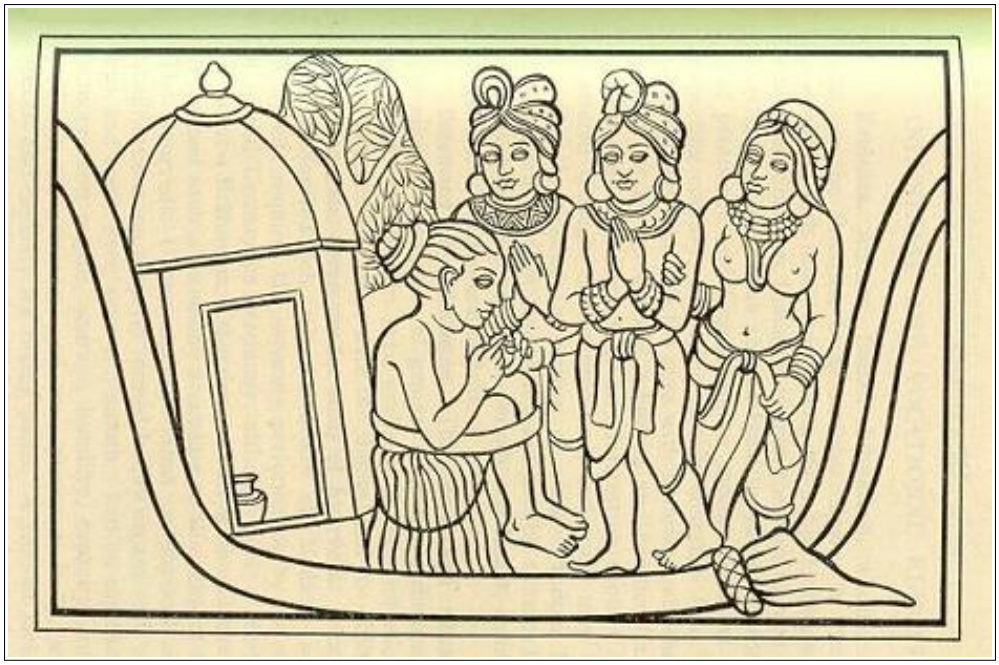
Education in the Epics

Takshashila was a noted center of learning. The story is told of one of its teachers named Dhaumya who, had three disciples named Upamanyu, Aruni, and Veda.



Hermitages

The **Mahabharata** tells of numerous hermitages where pupils from distant parts gathered for instruction round some far-famed teachers. A full-fledged Asrama is described as consisting of several Departments which are enumerated as following:

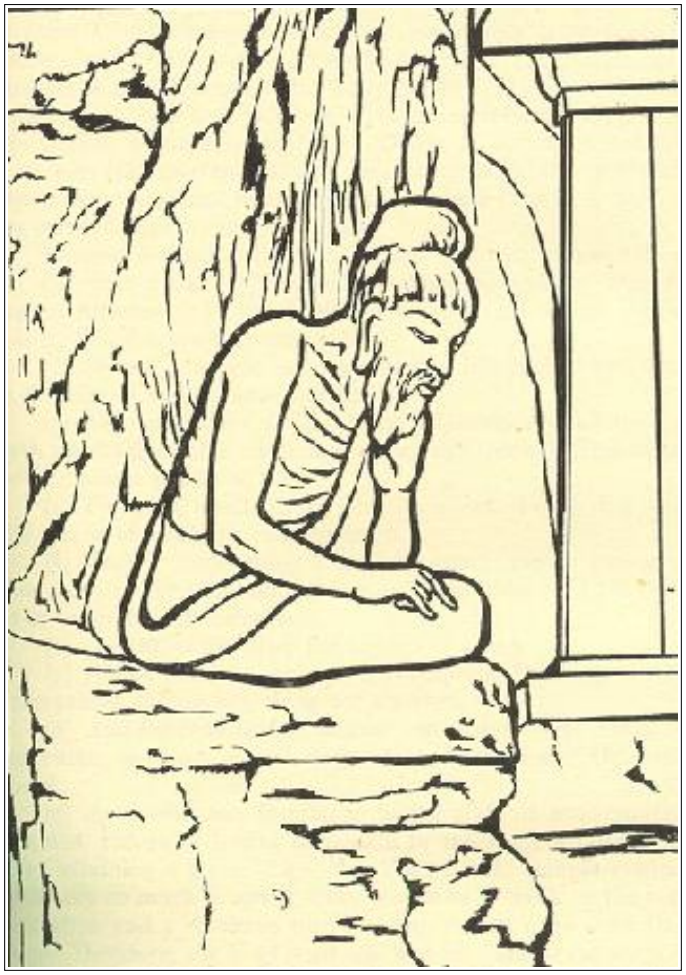
1. Agnisthana, the place for fire-worship and prayers
2. Brahma-sthana, the Department of Veda
3. Vishnusthana, the Department for teaching Raja-Niti, Arthaniti, and Vartta
4. Mahendrasthana, Military Section
5. Vivasvata-sthana, Department of Astronomy
6. Somasthana, Department of Botany
7. Garuda-sthana, Section dealing with Transport and Conveyances
8. Kartikeya-sthana, Section teaching military organization, how to form patrols, battalions, and army.

The most important of such hermitage was that of the **Naimisha**, a forest which was like a university. the presiding personality of the place was **Saunaka**, to whom was applied the designation of **Kulapati,** sometimes defined as the preceptor of 10,000 disciples.

The hermitage of **Kanva** was another famous center of learning, of which a full description is given. It is situated on the banks of the Malini, a tributary of the Sarayu River. It was not a solitary hermitage, but an assemblage of numerous hermitages round the central hermitage of Rishi Kanva, the presiding spirit of the settlement. There were specialists in every branch of learning cultivated in that age; specialists in each of the four Vedas; in sacrificial literature and art; Kalpa-Sutras; in the Chhanda (Metrics), Sabda (Vyakarana), and Nirukta. There were also Logicians, knowing the principles of Nyaya, and of Dialectics (the art of establishing propositions, solving doubts, and ascertaining conclusions). There were also specialists in the physical sciences and art. There were, for example, experts in the art of constructing sacrificial altars of various dimensions and shapes (on the basis of a knowledge of Solid Geometry); those who had knowledge of the properties of matter (dravyaguna); of physical processes and their results of causes and their effect; and zoologists having a special knowledge of monkeys and birds. It was thus a forest University where the study of every available branch of learning was cultivated.

Hermitage of Rishi Bharadvaja at Prayaga, or at Atri at Chitrakuta; showing Rama, Lakshmana and Sita standing before the Rishi.

The hermitage of Vyasa was another seat of learning. There Vyasa taught the Vedas to his disciples. Those disciples were highly blessed Sumantra, vaisampayana, Jamini of great wisdom, and Paila of great ascetic merit." They were afterwards joined by Suka, the famous son of Vyasa.



Among the other hermitages noticed by the Mahabharata may be mentioned those of Vasishtha and Visvamitra and that in the forest of Kamyaka on the banks of the Saraswati. But a hermitage near Kurkshetra deserves special notice for the interesting fact recorded that it produced two noted women hermits. There "leading from youth the vow of brahmacharya, a Brahmin maiden was crowned with ascetic success and ultimately acquiring yogic powers, she became a tapassiddha", while another lady, the daughter not of a Brahmin but a Kshatriya, a child not of poverty but affluence, the daughter of a king, Sandilya by name, came to live there the life of celibacy and attained spiritual pre-eminence.

Period of Panini

When we study how these institutions grew we find that students approached the learned souls for the acquisition of knowledge. Parents, too encouraged it and sent their boys to the institutions. When their number began to increase the institutions formed with these students began to grow gradually. With the lapse of time these institutions turned into Universities and were maintained with the munificent gift of the public and the state. In this way many institutions were formed of which Taxila, Ujjain, Nalanda, Benares, Ballavi, Ajanta, Madura and Vikramsila were very famous. Taxila was famous for medicine and Ujjain for Astronomy. Both were pre-Buddhist. Jibaka the well known medical expert and the state physician of the King of Magadha of the 6th century B.C. and Panini the famous grammarian of the 7th century B.C. and Kautilya, the authority on Arthasastra, of the 4th century B.C. were students of Taxila.

Education as revealed in the grammatical Sutras of Panini, together with the works of Katyayana and Patanjali. The account of education in the Sutra period will not be complete without the consideration of the evidence of the grammatical literature as represented in the works of Panini and his two famous commentators, Katyayana and Patanjali. Panini throws light on the literature of his times. Four classes of literature are distinguished.

Bhagiratha in Meditation - Pallava relief of 7-8th century A.D. at Mamallapuram. The Yogi (who was a king) appears to be petrified by his prolonged penance and has become a part of the rocks round him. His penance moves Goddess Ganga who melts and descends from Heaven to Earth, pouring out Her bounty in streams of plenty.

There is evidence that girls have been admitted in Vedic schools or Charanas. **Panini refers to this specially. A Kathi is a female student of Katha school. There are hostels for female students and they are known as Chhatrisala.** Each Charana or school has an inner circle of teachers known as Parisad. Their decisions on doubts about the reading and the meaning of Vedic culture are binding. Pratisakyas are said to be the product of such Parisad.

The academic year has several terms. Each term is inaugurated by a ceremony called Upakarnmana and ends by the Utsarga ceremony. Holidays (Anadhyayas) are regularly observed on two Astamis (eight day of the moon) two Chaturdasis (fourteenth day of the moon), Amavasya, Purnima and on the last day of each of the four seasons, called Chaturmasi. Besides these Nitya (regular) holidays there are Naimittika (occasional) holidays due to accidental circumstances, eg. storms, thunder, rain, fog, fire, eclipses etc.

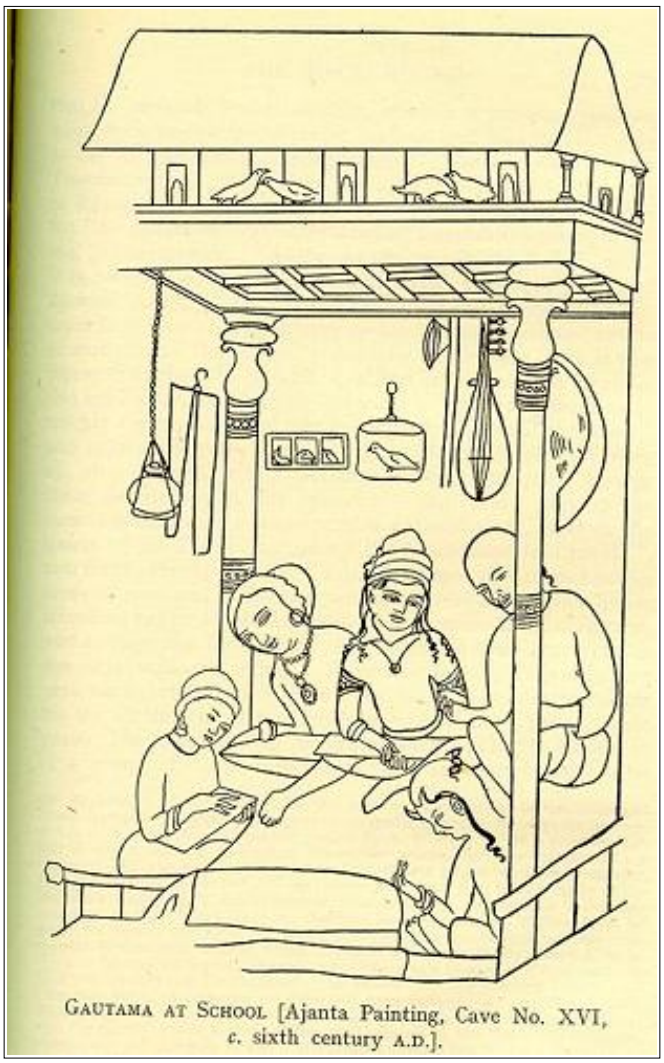
Buddhist Education

Buddhism as a phase of Hinduism

Buddhist education can be rightly regarded as a phase of the ancient Hindu system of education. Buddhism, itself, especially in its original and ancient form, is, as has been admitted on all hands, rooted deeply in the pre-existing Hindu systems of thought and life.

Max Muller in **Chips from a German Workshop** i 434), "To my mind, having approached Buddhism after a study of the ancient religion of India, the religion of the Veda, Buddhism has always seemed to be, to a new religion, but a natural development of the Indian mind in its various manifestations, religious, philosophical, social, and political."

Auguste Barth (1834-1916) in **The Religions of India**, p. 101 calls Buddhism: "a Hindu phenomenon, a natural product, so to speak, of the age and social circle that witnessed its birth", and "when we attempt to reconstruct its primitive doctrine and early history we come upon something so akin to what we meet in the most ancient Upanishads and in the legends of Hinduism that it is not always easy to determine what features belong peculiarly to it."



T. W. Rhys Davids (1843-1922) in **Buddhism** p. 34 calls Gautama Buddha "the creature of his times", of whose philosophy it must not be supposed that "it was entirely of his own creation." He wrote: "The fact we should never forget is that Gautama was born and brought up and lived and died a Hindu. On the whole, he was regarded by the Hindus of that time a Hindu. Without the intellectual work of his

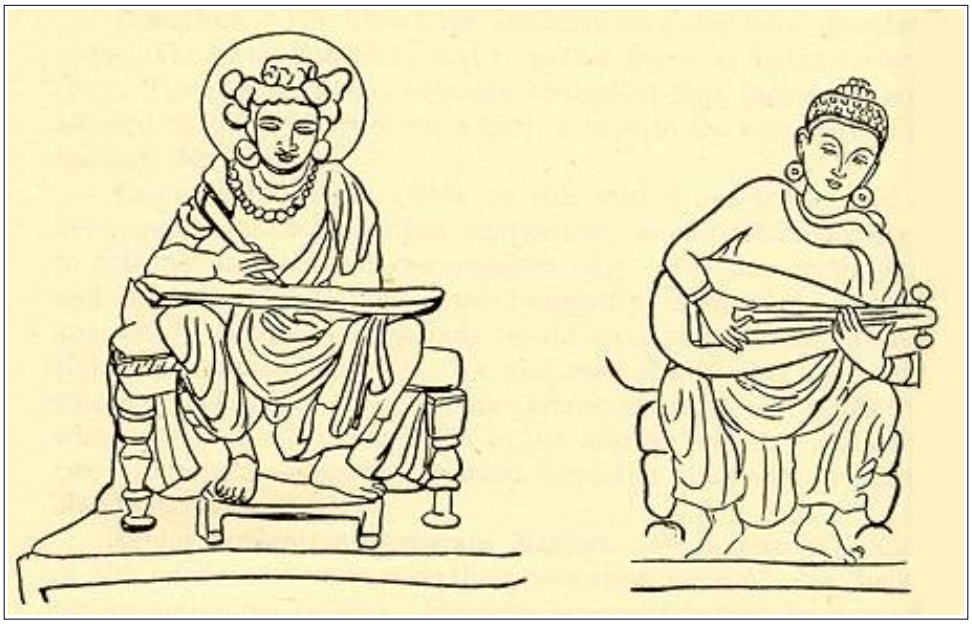
predecessors, his work, however, original, would have been impossible. He was the greatest and wisest and best of the Hindus and, throughout his career, a characteristic India."

Edward Washburn Hopkins (1857-1932) goes so far as to assert (**The Religions of India** p. 298) that "the founder of Buddhism did not strike out a new system of morals; he was not a democrat; he did not originate a plot to overthrow the Brahminic priesthood; he did not invent the order of monks."

Hermann Oldenberg (1854-1920): "For hundreds of years before Buddha's time, movements were in progress in Indian thought which prepared the way for Buddhism."

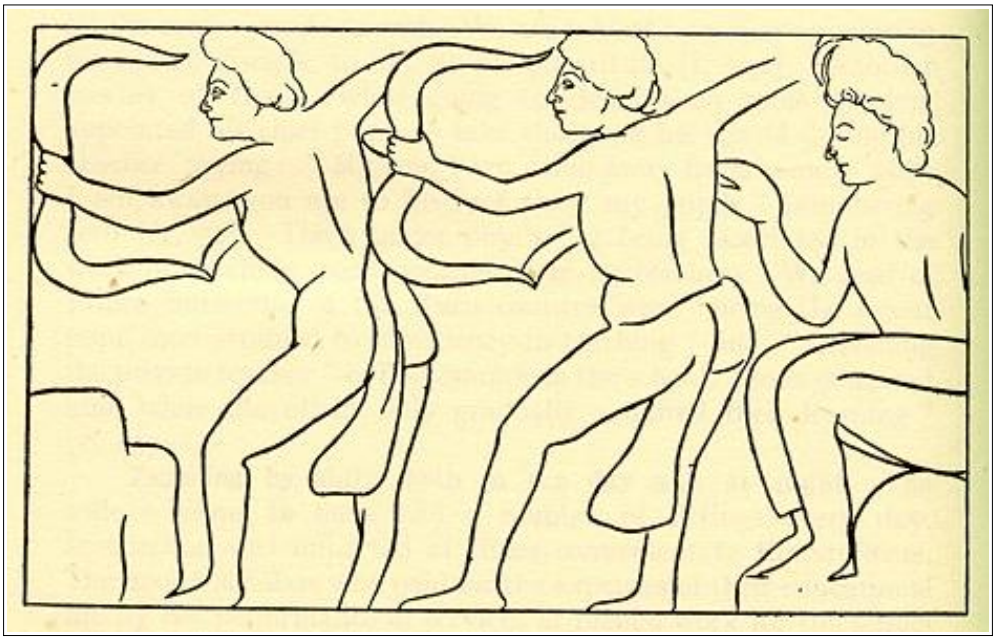
(source: **Ancient India - By V. D. Mahajan** p. 197).

GAUTAMA AT SCHOOL [Ajanta Painting, Cave No. XVI, *c.* sixth century A.D.].



The school is "in a verandah in his father's palace; Gautama Buddha being instructed, with three other boys, by a Brahmin teacher. On their laps are tablets...caged birds, musical instruments, a battle-axe, bows. Gautama, a prince, was given, along with literary education, education in music and military arts like archery.

****



The Buddha was a product of the Hindu System

The thesis also receives a most conclusive confirmation from the details of the Buddha's own career as preserved in the traditional texts. The details show how largely **Buddha was himself the product of the then prevailing Hindu educational systems.** We see how in the very first step that he takes towards the Buddhahood, the renunciation of the home and the world, the world of riches to which he is born, he was not at all singular but following the path trodden by all seekers after truth in all ages and ranks of society. Our ancient literature is full of examples of the spirit of acute, **utkata, vairagya** under which the rich, the fortunate, and the noble not less than the poor, the destitute and the lowly, the young with a distaste for life before tasting it as much as the old who have had enough of it, even women and maidens, as eagerly leave their homes and adopt the ascetic life as a positive good as their dear ones entreat them to desist such a step. The Buddha's next step was to place himself under the guidance of **two successive gurus.** The first was the Brahmin, Alara Kalama, at Vesali, having a following of 300 disciples who taught him the successive stages of meditation and the doctrine of the Atman, from which the Buddha turns back dissatisfied on the ground that it "does not lead to aversion, absence of passion, cessation, quiescence, knowledge, supreme wisdom and Nirvana, but only as far as the realm of nothingness". Next he attaches himself to the sage of Rajagaha with 700 pupils, Uddaka, the disciple of Rama but "he gained no clear understanding from his treatment of the soul." As **Rhys David** points out "Gotama, either during this period or before must have gone through a very systematic and continued course of study in all the deepest

philosophy of the time."

Gautama at School: practicing writing. Gautama at School: learning music

Gautama at school: being instructed in Archery - Gandhara Sculptures - 2nd century A.D.

In the **Lalitavistara Sastra**, the education of Buddha as a child, aged eight by the **Sage Vishvamitra**, who says:

Let us turn to Numbers. Count after me
Until you reach lakh (= one hundred thousand):
One, two, three, four, up to ten
Then in tens, up to hundreds and thousands,
After which, the child named the numbers,
Then the decades and the centuries, without stopping.
And once he reached lakh, which he whispered in silence,
Then came koti, nahut, ninnahut, khamba,
viskhamba, abab, attata,
Up to kumud, gundhika, and utpala
Ending with pundarika (leading)
Towards paduma, making it possible to count

Up to the last grain of the finest sand
Heaped up in mountainous heights.

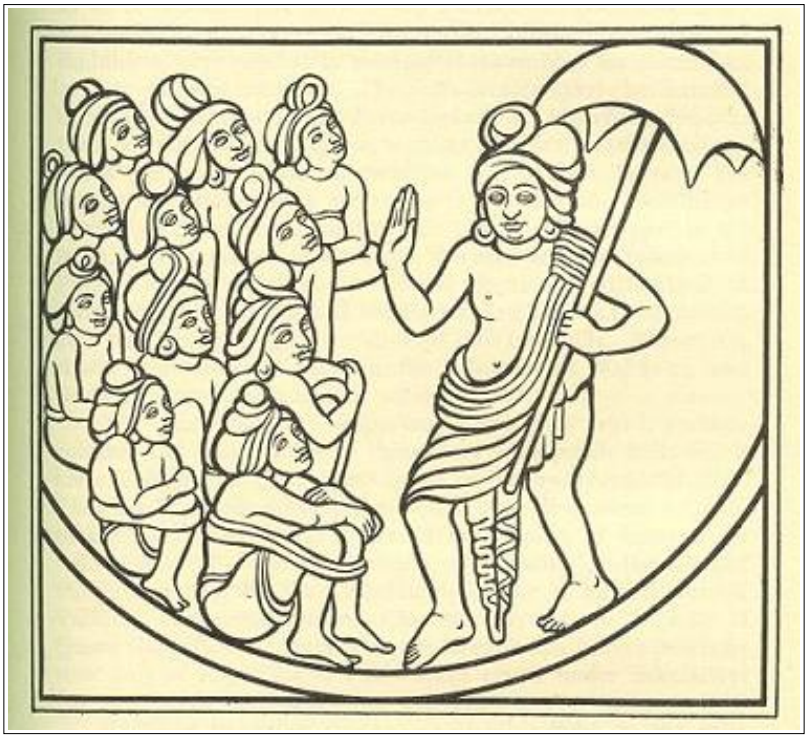
(source: **The Universal History of Numbers - By Georges Ifrah** p. 421 - 423).

Takshasila/Taxila - The Most Ancient University

Takkasila was the most famous seat of learning of ancient India. Takkasila was also the capital of Gandhara and its history goes back into hoary antiquity. **It was founded by Bharata and named after his son Taksha, who was established there as its ruler.** Janamejaya's serpent sacrifice was performed at this very place. As a center for learning the fame of the city was unrivalled in the 6th century B.C. Its site carries out the idea held by the ancient Hindus of the value of natural beauty in the surroundings of a University. The valley is "a singularly pleasant one, well-watered by a girdle of hills." The Jatakas tell us of how teachers and students lived in the university and the discipline imposed on the latter, sons of Kings and themselves future rulers though they might be! The Jatakas (No. 252) thinks that this discipline was likely "to quell their pride and haughtiness". It attracted scholars from different and distant parts of India. Numerous references in the Jatakas show how thither flocked students from far off Benares, Rajagaha, Mithila, Ujjain, from the Central region, Kosala, and Kuru kingdoms in the North country. The fame of Takkasila as a seat of learning was of course due to that of its teachers. They are always spoken of as being " world renowned" being "authorities", specialists, and experts in the subject they professed. Of one such teacher we read: "Youths of the warrior and brahmin castes came from all India to be taught the art by him" Sending their sons a thousand miles away from home bespeaks the great concern felt by their parents in their proper education. **As shown in the case of the medical student, Jivaka, the course of study at Takila extended to as many as seven years.** Jataka No. 252 records how parents felt if they could see their sons return home after graduation at Taxila. One of the archery schools at Taxila had on its roll call, 103 princes from different parts of the country. King Prasenajit of Kosala, a contemporary of the Buddha, was educated in the Gandhara capital. Prince Jivaka, an illegitimate son of Bimbusara, spent seven years at Taxila in learning medicine and surgery.

Takshasila a Center for Higher Education: The students are always spoken of as going to Takshasila to "complete their education and not to begin it." They are invariably sent at the age of sixteen or when they "come of age".

Different Courses of Study



"The Jatakas contain 105 references to Takshasila. "The fame of Takshasila as a seat of learning was, of course, due to that of its teachers. They are always spoken of as being 'world-renowned,' being authorities, specialists and experts in the subjects they professed. It was the presence of scholars of such acknowledged excellence and widespread reputation that caused a steady movement of qualified students from all classes and ranks of society towards Takshasila from different and distant parts of the Indian continent, making it the intellectual capital of India of those days. Thus various centers of learning in the different parts of the country became affiliated, as it were, to the educational center or to the central University of Takshasila, which exercised a kind of intellectual suzerainty over the world of letters in India." Takshashila was destroyed by the Huns in 455 A.D."

(source: **India: A synthesis of cultures – by Kewal Motwani** p. 133).

The Jatakas constantly refer to students coming to Takkasila to complete their education in the three Vedas and the eighteen Sippas or Arts. Sometimes the students are referred to as selecting the study of the Vedas alone or the Arts alone. **The Boddisatta (Buddha) is frequently referred to as having learned the three Vedas by heart.** Takshila was famous for military training, wrestling, archery and mountain- climbing.

Science, Arts and Crafts: The Jatakas mention of subjects under scientific and technical education. Medicine included a first hand study of the plants to find out the medicinal ones. Takkasila was also famous for some of its special schools. One of such schools was the Medical Schools which must have been the best of its kind in India. It was also noted for its School of Law which attracted student from distant Ujjeni. Its Military School were not less famous, which offered training in Archery. Thus the teachers of Takkasila were as famous for their knowledge of the arts of peace as for that of war. Much attention was paid to the development of social and cultural activities in all possible ways. Dancing and dramatic groups, singers and musicians and other artists were given encouragement and offered employment. During the Sangam epoch in South India, the three principal arts, Music, Dance and Drama were practiced intensively and extensively throughout the country, and the epic of Silappadikaram contains many references to the practice of these arts.

Next, to Takkasila ranks **Benares** as a seat of learning. It was, however, largely the creation of the ex-students of Takkasila who set up as teachers at Benares, and carried thither the culture of that cosmopolitan educational center which was **molding the intellectual life of the whole of India.** There were again certain subjects in the teaching of which Benares seems to have specialized. There is an expert who was "the chief of his kind in all India."

Assembly of monks seated in three rows and addressed by their leader standing, with a parasol, in his left hand indicating his rank. pre - Gandhara period.

Hermitages as Centers of Highest Learning

Lastly, it is to be noted that the educational system of the times produced men of affairs as well as men who renounced the world in the pursuit of Truth. The life of renunciation indeed claimed many an ex-student of both Takksila and Benares. In the sylvan and solitary retreats away from the haunts of men, the hermitages served as schools of higher philosophical speculation and religious training where the culture previously acquired would attain its fruitage.

There are accounts of education written by eye witness who were foreigners, like the pilgrims from China who regarded India, as its Holy Land. **The very fact of the pilgrimage of Chinese scholars like Fa-Hien or Hiuen Tsang to India testifies to the tribute paid by China to the sovereignty of Indian thought and culture which made its influence felt beyond the bounds of India itself in distant countries which might well be regarded as then constituting a sort of a Greater India.** The duration of Fa-Hien's travel in India was for fifteen years. "After Fa-Hien set out from Ch'ang-gan it took him six years to reach Central India; and on his return took him three years to reach Ts'ing-chow. A profound and abiding regard for the learning and culture of India was needed to feed and sustain such a long continued movement. Indeed, the enthusiasm for Indian wisdom was so intense, the passion for a direct contact with its seats was so strong, that it defied the physical dangers and difficulties which lay so amply in the way of its realization. Besides, Chinese scholars, I-tsing refers to "the Mongolians of the North" sending students to India.

The teachers themselves were most exemplary. Hiuen Tsang says of the Brahmins: "The teachers (of the Vedas) must themselves have closely studied the deep and secret principles they contain, and penetrated to their remotest meaning. They then explain their general sense, and guide their pupils in understanding the words which are difficult. They urge them on and skillfully conduct them. They add luster to their poor knowledge and stimulate the desponding." Studies were pursued unremittingly, and Hiuen Tsang says: "The day is not sufficient for asking and answering profound questions. From morning till night they engage in discussion; the old and the young mutually help one another."

(source: **Life of Hiuen-Tsiang - by Samuel Beal**, vol. I p. 79 and vol II p. 170).

Attached to the university was a kind of post-graduate department, a group of learned Brahmins known collectively as a parishad. A parishad seems usually to have consisted of ten men; four 'walking encyclopedias' each of whom had learnt all the four Vedas by heart, three who had specialized in one of the Sutras, and representative of the three orders of brahmachari grihastha and vanaprastha - student, householder and hermit. The parishad gave decisions on disputed points of religion of learning. I-Tsing reports that at the end of their course of studies, 'to try the sharpness of their wit' some men 'proceed to the king's court to lay down before it the sharp weapon of their abilities: there they present their schemes and show their talent, seeking to be appointed in the practical government..."

(source: **Everyday Life in Ancient India - By Padmini Sengupta** p. 162-169).

It is interesting to note that the study of Sanskrit was continued in Buddhist monasteries. At the Pataliputra monastery Fa-Hien stayed for three years "learning Sanskrit books and the Sanskrit speech and writing out the Vinaya rules." Archery is found mentioned in the Jataka stories. The Bhimsena Jataka tells that Boddhisatva learnt archery at Takshila. Wrestling was popular and descriptions of such breath-holding bouts in wrestling are available in the Jataka stories. Two kinds of games called Udyana Krida or garden games and Salila Krida or water sports are also mentioned. Archery was also popular among the women during this period, as can be seen from the Ahicchatra images. Hunting, elephant fighting, Ram fighting, and Partridge fighting were the other important games of this period.

Takshashila, the most ancient Hindu University, was destroyed by the barbarian White Huns in 455 A.D. Sir John Marshall, Director General of Archaeology in India, has given a most interesting account, but he says regretfully,

"The monuments of Taxila were wantonly and ruthlessly devastated in the course of the same (fifth) century. This work of destruction is almost certainly to be attributed to the hordes of barbarian white Huns, who after the year 455 A.D. swept down into India in ever increasing numbers carrying sword and fire wherever they went, and not only possessed themselves of the kingdom of the Kinshans, but eventually overthrew the great empire of the Guptas. From this calamity Taxila never again recovered."

Top of Page

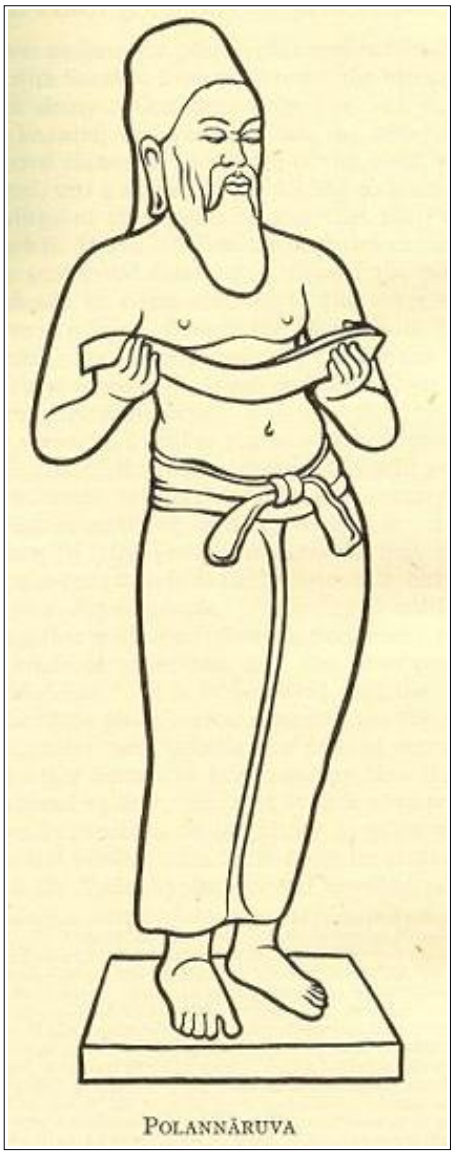
Universities of Ancient India

1. Takkasila - also known as Taxila - for information on this university, please refer to the above passages.

2. Mithila - Mithila, was a stronghold of Brahminical culture at its best in the time of the Upanishads, under its famous **Philosopher-king Janaka** who used to send our periodical invitations to learned Brahmins of the Kuru-Panchala country to gather to his court for purpose of philosophical discussions. Under him Eastern India was vying with North-Western India in holding the palm of learning. In those days, the name of the country was not Mithila but Videha. **In the time of the Ramayana, the Mahabharata, and Buddhist literature, Mithila retained the renown of its Vedic days.**

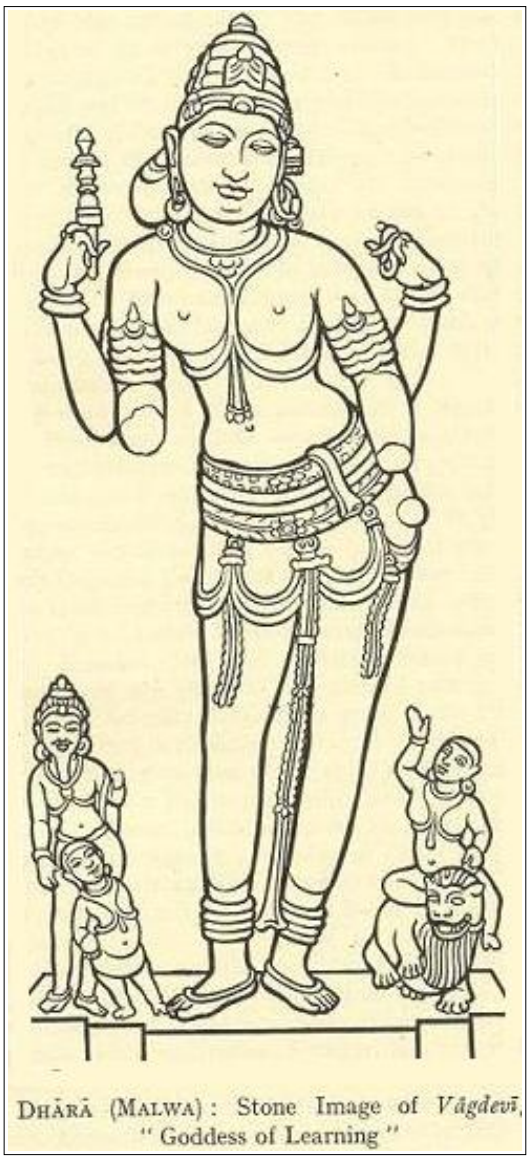
Its subsequent political history is somewhat chequered. When Vijaya Sen was King of Bengal, Nanyadeva of the Karnataka dynasty was King of Mithila in A.D. 1097. King Vijaya defeated him but was defeated by his son Gangadeva who recovered Mithila from him. This Karnataka Dynasty ruled Mithila for the period c. A.D. 115-1395, followed by the Kamesvara Dynasty which ruled between c. A.D. 1350-1515. It was again followed by another dynasty of rulers founded by Mahesvara Thakkura in the time of Akbar, and this dynasty has continued up to the present time.

Mithila as a seat of learning flourished remarkably under these later kings. The Kamesvara period was made famous in the literary world by the erudite and versatile scholar, **Jagaddhara**, who wrote commentaries on a variety of texts, the Gita, Devi-mahatmya, Meghaduta, Gita-Govinda, Malati-Madhava, and the like, and original treatises on Erotics, such as Rasika-Sarvasva-Sangita-Sarvasva.



The next scholar who shed luster on Mithila was the poet Vidyapati, the author of Maithili songs or Padavali generally. He has inspired for generations the later Vaishava writers of Bengal.

Mithila made conspicious contributions in the realm of severe and scientific subjects. It developed a famous **School of Nyaya** which flourished from the twelfth to the fifteenth century A.D. under the great masters of Logic, Gangesa, Vardhamana, Pakshadhara, and others. This School of New Logic (Navya Nyaya) was founded by **Gangesa Upadhyaya** and his epoch-making work named "**Tattva Chinatmani"**, a work of about 300 pages whose commentaries make up over 1,000,000 pages in three centuries of its study. Gangesa is supposed to have lived after A.D. 1093-1150, the time of Ananada Suri and Amarachandra Suri, whose opinions he has quoted.



By its scholastic activities Mithila in those days, like Nalanda, used to draw students from different parts of India for advanced and specialized studies in Nyaya or Logic, of which it was then the chief center.

3. Nalanda

Nalanda was the name of the ancient village identified with modern Baragaon, 7 miles north of Rajgir in Bihar. The earliest mention of the place is that in the Buddhist scriptures which refer to a Nalanda village near Rajagriha with a Pavarika Mango Park in Buddha's time. The Jain texts carry the history earlier than the Buddhist. IT was the place where Mahavira had met Gosala and was counted as a bahira or suburb of Rajagriha where Mahavira had spent as many as fourteen rainy seasons. Nalanda, when Fa-hien visited it, was called Nala and was known as the place "where Sariputta was born, and to which also he returned, and attained here his pari-nirvana. Nalanda was not a sectarian or a religious university in the narrow sense of the term, imparting only Buddhist thought. Subjects other than Buddhism were taught as fervently. Almost all sciences, including the science of medicine were taught. So were the **Upanishads and the Vedas. Panini's grammar,** the science of pronunciation (Phonetics), etymology, Indology and Yoga were all included in the curricula. Surprisingly, even archery was taught at Nalanda. Hiuen Tsang himself learnt Yogasastra from Jayasena.

POLANNĀRUVA

DHĀRĀ (MALWA): Stone Image of *Vāgdevī*, "Goddess of Learning"

Knowledge of Sanskrit was essential for all entrants in spite of the fact that Sakyamuni delivered his sermons in Pali. Knowledge of Sanskrit meant complete mastery of Sanskrit grammar, literature and correct pronunciation, and was compulsory to enter the portals of the university. On the authority of Hiuen Tsang, we can safely say that the entrants to Nalanda were supposed to be well-versed in "Beda" i.e. Veda, Vedanta, Samakhya, Nyaya and Vaisesika. I-Tsing also confirms this in his accounts. Nalanda was an example of the **Guru-Shishya parampara, a great Indian tradition**. The authority of the Guru (teacher) over the shishya (student) was absolute, and yet, dissent was permitted in academic matters.Free education: Out of the income of the estate. In Nalanda, swimming, breathing exercises and yoga formed an integral part of the curriculum. Harshavardhana, of the Gupta dynasty was a great sportsman and he encouraged his subjects as well. Another great contemporary of Harsha, Narasimhan or Mamallah was also a great wrestler. He belonged to the Pallava dynasty.

Yuan Chawang, a Chinese student at Nalanda, wrote: "In the establishment were some thousand brethren, all men of great learning and ability, several hundreds being highly esteemed and famous; the brethren were very strict in observing the precepts and regulations of their order; learning and discussing, they found the day too short. Day and night they admonished each other, juniors and seniors mutually helping to perfection....Hence foreign students came to the institution to put an end to their rounds and then become celebrated and those who shared the name of Nalanda, were all treated with respect, wherever they went."

(source: **On Yuang-Chwang's Travels in India - By Thomas Watters** (1840-1901) volume 2 p. 165).

Though Buddhism and Hinduism became arrayed in opposite philosophical camps, they were both given their places in the university curriculum. There was **no intellectual isolationism** of the type that characterizes modern sectarian institutions of the Christian world. According to eminent Indian historian, **R C Dutt**, "Buddhism never assumed a hostile attitude towards the parent religion of India; and the fact that the two religions existed side by side for long centuries increased their tolerance of each other. Hindus went to Buddhist monasteries and universities, and Buddhist learnt from Brahmin sages."

(source: **Civilization in Ancient India - By R C Dutt** p. 127).

According to **Alain Danielou** (1907-1994) son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India: "Hiuen Tsang, the Chinese traveler, stayed five years at Nalanda University, where more than seven thousand monks lived. He mentions a very considerable literature in Sanskrit and other works on history, statistics and geography, none of which have survived. He also writes of officials whose job it was to write records of all important events. At Nalanda, studies included the **Vedas, the Upanishads, cosmology (Sankhya), realist or scientific philosophy (Vaisheshika), logic (Nyaya), to which great importance was attached,** and Jain and Buddhist philosophy. Studies also included grammar, mechanics, medicine, and physics. Medicine was highly effective, and surgery was quite developed. The pharmacopoeia was enormous, and astronomy was very advanced. **The earth's diameter had been calculated very precisely. In physics, Brahmagupta had discovered the law of gravity."**

(source: **A Brief History of India - By Alain Danielou** p. 165-166).

4. Vallabi

Valabhi in Kathiawad was also a great seat of Hindu and Buddhist learning. It was the capital of an important kingdom and a port of international trade with numerous warehouses full of rarest merchandise. During the 7th century, however, it was more famous as a seat of learning. I-tsing informs us that its fame rivaled with that of Nalanda in eastern India.

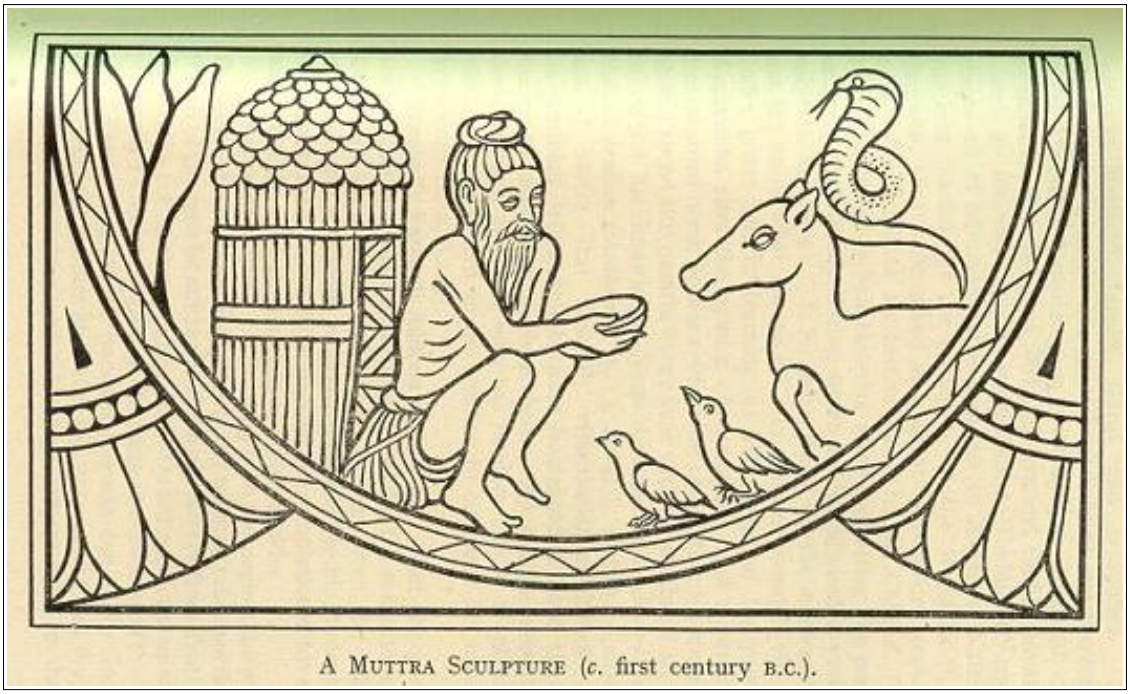
5. Vikramasila

Like Nalanda and Vallabhi, the University of Vikramsila was also the result of royal benefactions. Vikramasila, found by king Dharmapala in the 8th century, was a famous center of international learning for more than four centuries. King Dharmapala (c. 775-800 A. D) was its founder, he built temples and monasteries at the place and liberally endowed them. He had the Vihara constructed after a good design. He also erected several halls for the lecturing work. His successors continued to patronize the University down to the 13th century. The teaching was controlled by a Board of eminent teachers and it is stated that this Board of Vikramsila also administered the affairs at Nalanda. The University had six colleges, each with a staff of the standard strength of 108 teachers, and a Central Hall called the House of Science with its six gates opening on to the six Colleges. It is also stated that the outer walls surrounding the whole University was decorated with artistic works, a portrait in painting of Nagarjuna adorning the right of the principal entrance and that of Atisa on the left. On the walls of the University were also the painted portraits of Pandits eminent for their learning and character.

Grammar, logic, metaphysics, ritualism were the main subjects specialized at the institution.

Destruction of Vikramsila by Moslems: **In 1203, the University of Vikramasila was destroyed by the Mahomadens under Bakhtyar Khilji.** As related by the author of **Tabakat-i-Nasari**:

"the greater number of the inhabitants of that place were Brahmins and the whole of these Brahmins had their heads shaven; and they were all slain. There were a great number of books on religion of the Hindus (Buddhists) there; and when all these books came under the observation of the Musalmans, they summoned a number of Hindus that they might give them information respecting the import of these books; but the whole of the Hindus had been killed. On becoming acquainted (with the contents of those books), it was found that the whole of that fortress and city was a college, and, in the Hindu tongue, they call a college a Bihar (Vihara)."



After the destruction of the Vikramsila University, Sri Bhadra repaired to the University of Jagadala whence he proceeded to Tibet, accompanied by many other monks who settled down there as preachers of Buddhism.

6. Jagaddala

Its foundation by King Rama Pala. According to the historical Epic Ramacharita, King Ram Pala, of Bengal and Magadha, who reigned between A.D. 108-1130, founded a new city which he called Ramavati on the banks of the rivers Ganga and Karatoya in Varendra and equipped the city with a Vihara called Jagadala. The University could barely work for a hundred years, till the time of Moslem invasion sweeping it away in A.D. 1203. But in its short life it has made substantial contributions to learning through its scholars who made it famous by their writings.

7. Odantapuri

Very little is known of this University, although at the time of Abhayakaragupta there were 1,000 monks in residence here. Odanatapuri is now known for the famous scholar named Prabhakara who hailed from Chatarpur in Bengal. It appears that this University had existed long before the Pala kings came into power in Magadha. These kings expanded the University by endowing it with a good Library of Brahmanical and Buddhist works. This Monastery was taken as the model on which the first Tibetan Buddhist Monastery was built in 749 A.D. under King Khri-sron-deu-tsan on the advice of his guru, Santarakshita.

A MUTTRA SCULPTURE (*c.* first century B.C.).

A typical Brahmin with a high chignon, beard, short garments, seat of mat, round leafy hut; four fellow denizens of his hermitage, a dow, a crow, a kneeling doe, and a coiled snake, all living at peace as friends in the atmosphere of non-violence.

8. Nadia

Nadia is the popular name of Navadvipa on the Bhagirathi at its confluence with Jalangi. Once it was a center of trade borne by the Bhagirathi between Saptframa)on the river Sarasvati near Hoogly) and the United Provinces, and in the other direction by the Jalangi between Saptagrama and Eastern Bengal.

9. Madura Sangham - was another seat of learning. The Sangham was known for its learning and academic prestige. Writing about the Tamil institutions, **Dr. Krishnaswami Aiyangar** (1871-1947) remarks: "There are two features with regard to these assemblies that call for special remark. The first, the academics were standing bodies of the most eminent men among the learned men of the time in all branches of knowledge. The next, it was the approval of this learned body that set the seal of authority on the works preserved to it." Scholars were honored irrespective of sex. Aiyangar continues: "A Ruler of Tanjore, poet, musician, warrior, and administrator, did extraordinary honor to a lady of Court, by name **Ramachandramha**, who composed an epic on the achievements of her patron, Raghunatha Nayaka of Tanjore. It appears that she was accorded honor of **Kanaka-Ratna Abhisheka** (bath in gold and gems). She was, by assent of the Court, made to occupy the position of "Emperor of Learning."

(source: **India: A synthesis of Culture - By Kewal Motwani** p. 138).

10. Benares - Benares has always been a culture center of all India fame and even in the Buddha's day it was already old. Though not a formal university, it is a place unique in India, which has throughout the ages provided the most suitable atmosphere for the pursuit of higher studies. The method of instruction as also the curriculum followed there in early times was adopted from Taxila. Benares University was famous for Hindu culture. Sankaracharya as a student was acquainted with this university. Benares is the only city in India which has its schools representing every branch of Hindu thought. And there is no spiritual path which has not its center in Benares with resident adherents. Every religious sect of the Hindus has its pilgrimage there. In ancient days, Sarnath figured as a recognized seat of Buddhist learning. Rightly, therefore, it is this holy city the very heart of spiritual India. **Alberuni,** the noted Arabian historian, mentioned Benares as a **great seat of learning** and **Bernier**, who visited India, described it "as a kind of university, but it resembled rather the school of ancients, the masters being spread over different parts of the town in private houses."

11. Kachipuram was another such institution of learning in South India. It came to be known as Dakshina Kasi, Southern Kashi. Huien Tsang visited it about 642. A.D. and found Vaishnavite and Shaivite Hindus, Digambara Jain and Mahayan Buddhists studying together.

12. Navadvip belonged to comparatively recent times and was founded by Sena Kings of Bengal in about 1063 A.D. and soon rose to be a great center of learning. It imparted instruction in Vedas, Vedangas, Six Systems especially Nyaya. Chaitanya was a product of Navadvipa. It had 500-600 students, when A. H Wilson visited it in 1821, drawn from Bengal, Assam, Nepal and South India.

In 1867, **Edward B Cowell** (1826-1903) professor of Sanskrit in Cambridge and author of **The aphorisms of Sandilya or The Hindu doctrine of faith**, recorded his opinion in these words: "I could not help looking at these unpretending lecture-halls with a deep interest, as I thought of the pundits lecturing there to generation after generation of eager, inquisitive minds. Seated on the floor with his 'corona' of listening pupils round him, **the teacher expiates on those refinements of infinitesmal logic which makes a European's brain dizzy to think of, but whose labyrinth a trained Nadia student will thread with unfaltering precision."**

(source: **India: A synthesis of Culture - By Kewal Motwani** p. 134-145 and **Indian Education in Ancient and Later Times - By Key** p.145).

Libraries in Ancient India

The great seats of learning in ancient India like Nalanda, Vikramasila, Pataliputra, and Tamralipti are said to have contained libraries of their own and striven hard for the promotion of education and learning in the country, the evidence for which comes from the writings of Hieun-Tsang and It-Sing who spent some time in some of the centers and studied the Buddhist philosophy. They were given all facilities to copy down the manuscripts which they wanted from the libraries. Each of these institutions must have maintained a well equipped library for the use of teachers and students. The library in ancient times was called either Saraswati-bhandara or Pustaka bhandara. Many libraries were located in temples. In South India, records contain references to Nagai, Srirangam, Sermadevi and Cidambaram, Kacipuram and Sringeri. In this connection it may be mentioned that libraries in ancient Cambodia were all located in temples and the inscriptions from some temples in the area bear evidence to that. Library is mentioned for the first time in the inscriptions of the king Indravarman at Preah Ko and Bakong (Cambodia). They were rectangular with gabled ends and at first with a single vaulted hall. **The temples of Prasat Bantay Pir Chan, and Angkor Wat contained libraries in which the main deity of the temples were oriented. It is also interesting to note that the walls of the library were sculptured with panels depicting scenes from the epics, the Ramayana and Mahabharata.**

"India has lost much of its great treasures of ancient texts during the successive invasions by foreign rulers. Our great libraries at Nalanda and other places were burnt to ashes. Sachan who collected and edited **Al Beruni's** works said: "It was like a magic island of quiet and impartial research, in the midst of a world of clashing swords, burning towns, and plundered temples. The work of many eminent scholars contained thousands of volumes of translations of Indian texts, whose original were lost in India owing to the depredations of Mohammedan iconoclasts who destroyed hundreds of Hindu and Buddhist seats of learning, in India including the world famous Nalanda University." "The Christian missionaries in the West coast took away and burnt many valuable manuscripts. Many great scholars died without passing down their knowledge to the descendents. In their quest for livelihood during the nine hundred years of foreign rule, the descendents did not care to preserve their knowledge."

(source: **Hindu Superiority - Har Bilas Sarda** p. 150 and **Vision of India - By Sisir Kumar Mitra** p. 186 and **The Temple Empire - By Vidyavisarada Garimella Veeraraghuvulu**. Printed in Sri Gayathri press. Kakinada. India 1982 p. 136-137)..

****

(**Note:** The fall of Nalanda at the hands of the Turks is a story too deep for tears. Like Nero, Bakhtiar Khilji, its destroyer in 1205 A.D., laughed while Nalanda burnt. The City of Knowledge, which took several centuries to build, took only a few hours to be destroyed. Legend has it that when some monks fell at the feet of the invader to spare at least its world-famed library, *Ratnabodhi*, he kicked them and had them thrown in the fire along with the books. The monks fled to foreign lands, citizens became denizens and Nalanda was relegated to a memory. (source: **Nalanda - The City of Knowledge**).

Many of these universities were sacked, plundered, looted by the Islamic onslaught. They destroyed temples and **libraries** and indulged in most heinous type of vandalism. These were particularly heinous crimes. The burning of the Library of Nalanda ranks with the destruction of the Library of Alexandria as the two most notorious acts of vandalism in the course of Islamic expansion. Nalanda, Vikramshila, Odantapura, and Jagddala as the universities destroyed by Mohammed Bakhtiar Khilji around 1200 A.D. For more refer to **The Sack of Nalanda**).

Gertrude Emerson Sen (-1982) historian and journalist and Asia specialist, wrote on the plight of the universities: "Night was to descend on all the great centers of traditional Indian learning, however, when the untutored Muslims of Central Asia poured into India with fire and sword at the beginning of the 11th century."

(source **The Pageant of India's History - By Gertrude Emerson Sen** p. 275 - 276).

Later when the **British** came there was, throughout India, a system of communal schools, managed by the village communities. **The agents of the East India Company and the Christian missionaries destroyed** these village community schools, and took steps to replace education by introducing English and western system of education. In October 1931 **Mahatma Gandhi** made a statement at Chatham House, London, that created a furor in the English press.

He said, **"Today India is more illiterate than it was fifty or a hundred years ago, and so is Burma, because the British administrators, when they came to India, instead of taking hold of things as they were, began to root them out. They scratched the soil and left the root exposed and the beautiful tree perished"**.

Mr. Ermest Havell (formerly Principal of the Calcutta school of Art) has rightly said, the fault of the Anglo-Indian Educational System is that, instead of harmonizing with, and supplementing, national culture, it is antagonist to, and destructive, of it.

Sir George Birdwood says of the system that it "has destroyed in Indians the love of their own literature, the quickening soul of a people, and their delight in their own arts, and worst of all their repose in their own traditional and national religion, has disgusted them with their own homes, their parents, and their sisters, their very wives, and brought discontent into every family so far as its baneful influences have reached."

(source: **Bharata Shakti: Collection of Addresses on Indian Culture - By Sir John Woodroffe** p 75-77).

As **Max Mueller**, the propagator of the Aryan invasion theory, wrote to his wife, **"It took only 200 years for us to Christianise the whole**

of Africa, but even after 400 years India eludes us, I have come to realize that it is Sanskrit which has enabled India to do so. And to break it I have decided to learn Sanskrit." The soul of India lies in Sanskrit. And Lord Macaulay saw to it that the later generations are successfully cut off from their roots.

(source: **Assaulting India's pluralist ethos - by D. Harikumar** The Hindu).

The present education system is, in effect, a legacy of the colonial rule. For more on this tragic destruction of ancient education, please refer to the chapters **Islamic Onslaught**, **FirstIndologists** and **European Imperialism**. Also refer to **Education: A Beautiful Tree** - Indiatogether.com and **The Beautiful Tree - Shri Dharampal** - an associate of Mahatma Gandhi (Biblia Impex, Delhi, 1983).

***

In India, our goddess of learning is **Saraswati**. She who is seated on a white lotus, wearing a beautiful white garment; she who holds a lute in her hand and has a garland of fresh white jasmine buds around her neck; she who is worshipped even by Brahma, Shiva and all gods – **may that Saraswati, Goddess of Learning, remove my ignorance. It is significant that these ideas of beauty and grace, purity, simplicity, and holiness are associated with the goddess of learning.** In the traditional Indian scheme of values, scholarship is not regarded as an end in itself, and education is looked upon as the molding of the complete man. **The educational system established by the British in India was one-sided, and came in for sharp criticism from Rabindranath Tagore and Sri Aurobindo.**

Rabindranath Tagore wrote: "The Western system of education is impersonal...It dwells in the cold-storage compartments of lessons and the ice-packed minds of the schoolmasters...**It represented an artificial method of training specially calculated to produce the carriers of the white man's burden."** Man's intellect has a natural pride in its own aristocracy, which is the pride of its culture. When this pride succumbs to some compulsion of necessity or lure of material advantage, it brings humiliation on to the intellectual man. **Modern India, through her education, has been made to suffer this humiliation.** There was a time when India provided her children with a culture which was the product of her own thought and creation. But this culture was brushed aside by the educationists under the British rule." "Our educated community is not a cultured community but a community of qualified candidates."

Professional and Useful Education

Medical science

Medical science is no doubt of hoary antiquity in India. The Vedic literature refers to the healing feats of Asvins, who though originally human beings, were later deified by a grateful posterity. This science was fairly well developed by the 4th century B.C., for the Greeks, who had accompanied Alexander, were very well impressed by the skill of Indian doctors in curing the cases of serpent bites. The Jatakas refer to the medical students at Taxila treating for cranial abscesses and intestinal displacement. Medical education was usually imparted by private teachers. The student had to be well versed in Sanskrit, for most of the books on medicine were written in that language. Practical training in surgery and pharmacy and constant discussion were some of the important features of the training.

Training in Surgery: The beginners were taught how to hold and use the surgical instruments by practicing upon pumpkins, water melons etc. under the teacher's direction. Puncturing was demonstrated on the veins of dead animals, the manner of holding the probe on dry Alabu fruits, application of bandages on stuffed human figures and the use of caustics on soft pieces of flesh. **Susruta** emphasizes on the importance of dissection for perfecting the student's knowledge; and points out that mere book learning cannot give a clear idea of the actual internal constituents of the human body. Corpses used to be decomposed in water and students were then required to dissect them and visualize the nature of skin, muscles, arteries, bones, internal organs, etc. Anatomical knowledge that was imparted was fairly high when compared with the contemporary standards elsewhere.

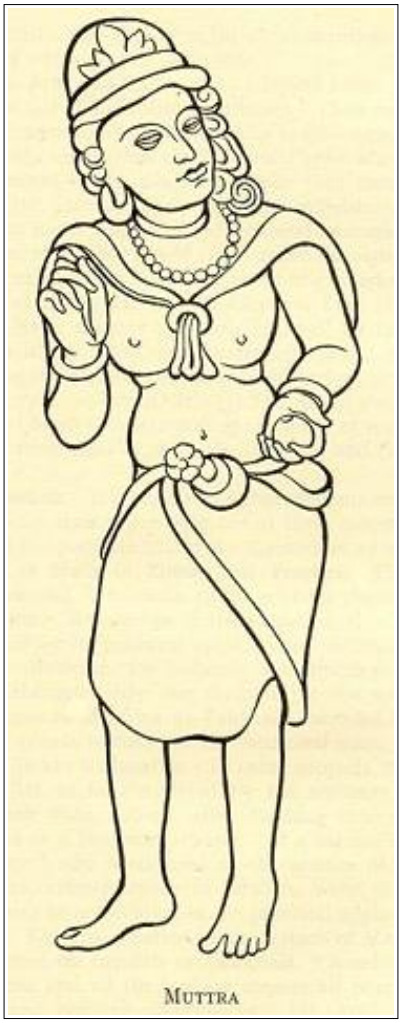

Image in stone of Pingala, attendant of Surya, holding pen in his right hand and an Ink-pt in his left. Gupta period.

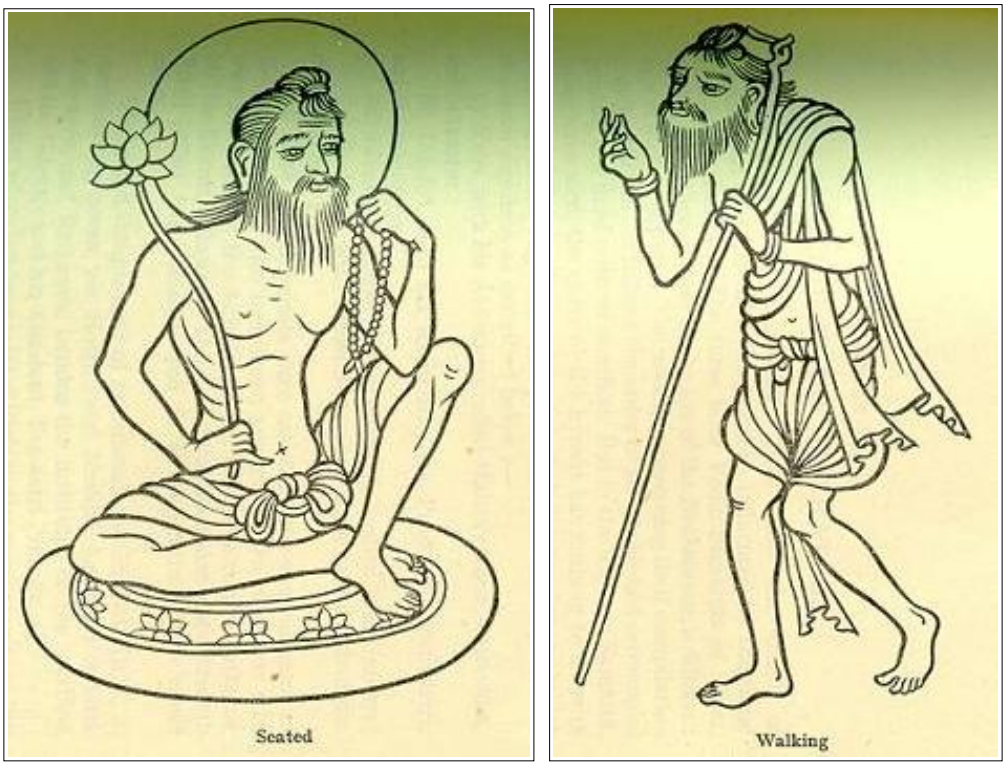


Smallpox inoculation is an ancient Indian tradition and was practiced in India before the West.

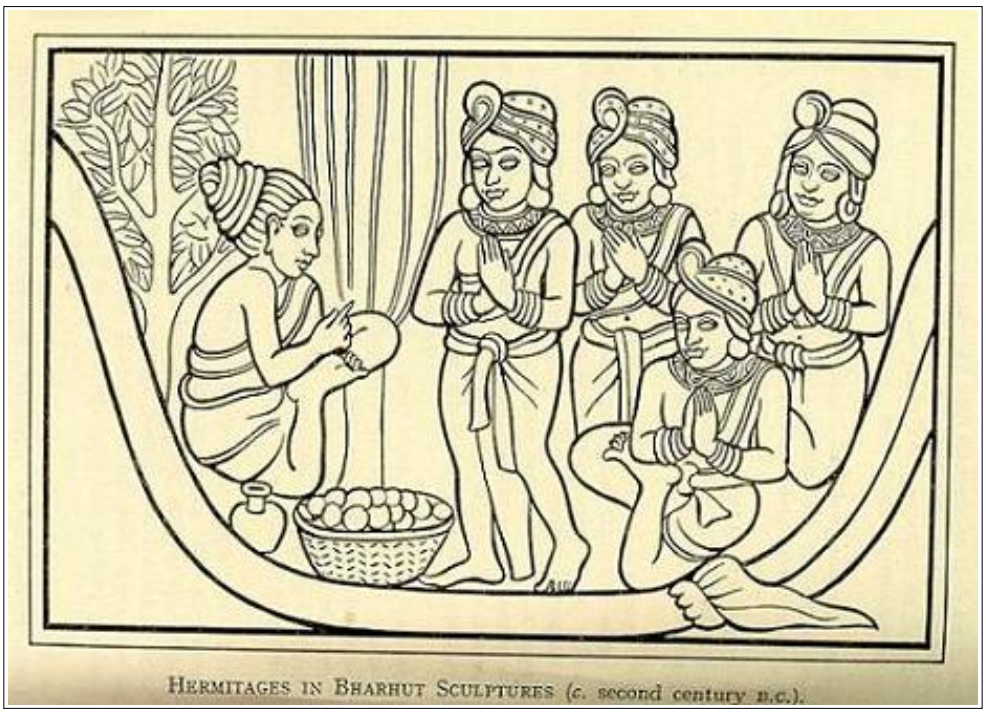
In ancient times in India smallpox was prevented through the tikah (inoculation). **Kurt Pollak** (1968) writes, "preventive inoculation against the smallpox, which was practiced in China from the 11th century, apparently came from India". This inoculation process was generally practiced in large part of Northern and Southern India, but around 1803-04 the British government banned this process. It's banning, undoubtedly, was done in the name of 'humanity', and justified by the Superintendent General of Vaccine (manufactured by Dr. E. Jenner from the cow for use in the inoculation against smallpox).

Dharmapal has quoted British sources to prove that inoculation in India was practiced before the British did. In the seventeenth century, smallpox inoculation (*tikah*) was practiced in India. A particular sect of Brahmins employed a sharp iron needle to carry out these practices. In 1731, Coult was in Bengal and he observed it and wrote (Operation of inoculation of the smallpox as performed in Bengall from Re. Coult to **Dr. Oliver Coult** in 'An account of the diseases of Bengall' Calcutta, dated February 10, 1731):

" The operation of inoculation called by the natives tikah has been known in the kingdom of Bengall as near as I can learn, about 150 years and according to the Bhamanian records was first performed by one Dununtary, a physician of Champanagar, a small town by the side of the Ganges about half way to Cossimbazar whose memory in now holden in great esteem as being through the another of this operation, which secret, say they, he had immediately of God in a dream.'

(source: **Indian Science And Technology in the Eighteenth Century**; some contemporary European accounts - **By Dharampal** 1971. An Account of the manner of inoculating for the Smallpox in the East Indies. Mapusa, Goa: Other India Press. Chapter VIII p. 142 -164. **The Healers, the Doctor, then and now - By Pollack, Kurt** 1968.English Edition. p. 37-8.).

Sage Vasistha



The Hindus were the first nation to establish hospitals, and for centuries they were the only people in the world who maintained them. The Chinese traveler, **Fa-hien**, speaking of a hospital he visited in Pataliputra says: "Hither come all poor and helpless patients suffering from all kinds of infirmities. They are well taken care of, and a doctor attends them; food and medicine being supplied according to their wants. Thus they are made quite comfortable, and when they are well, they may go away."

Excavations at Kumrahar near Patna have revealed in 1953 the existence of one university-cum hospital named Arogyavihara. Indian hospitals were well organized, for Hindu doctors were invited by the Abbaside Khalifas to supervise their own hospitals in the 8th century A.D. The medical course at Taxila was fairly long, for his physician Jivaka was permitted to go home very reluctantly by his teacher, though he had spent seven years at that University. The completion of the course was followed by an examination. This is implied by the observation of Charaka and Susruta that it is the king's fault, if incompetent doctors practice as a doctor without possessing king's license.

India continued to be famous for its medical skills throughout the ancient period. Her doctors could perform surgical operations for cataract, hydrocele, abscesses, extraction of dead embryos etc. They were in demand in Mesopotamia and Arabia for guiding and training the physicians there. **Khalifa Harun** sent several scholars to India to study Hindu medicine and pharmacology and induced about 20 doctors to come to Baghdad to become chief medical officers of state hospitals and to translate Sanskrit medical works into Arabic. Most celebrated among them was Manaka (Manikya) who was originally invited to cure an ailment of Sultan Harun, which defied the sill of Arabian physicians. He succeeded in his treatment and was later induced to become the director of state hospitals and translate the work of Susruta into Arabic. Arabic system of medicine owes a great deal to the Ayurvedic system. (refer to S. K. Nadvi - Arab aur Bharat ke sambandha. p. 103-123).

Veterinary Education had been developed in India fairly early. Since animals were regarded as a part of the same cosmos as humans, it is not surprising that animal life was keenly protected and veterinary medicine was a distinct branch of science with its own hospitals and scholars. Salihotra is its traditional founder and two of the Pandava heroes, Nakula and Sahadeva are said to have been experts in it. Numerous texts, especially of the postclassical period, **Visnudharmottara Mahapurana** for example, mention veterinary medicine. Megasthenes refers to the kind of treatment which was later to be incorporated in Palakapyamuni's Hastya yur Veda and similar treatises. **Salihotra** was the most eminent authority on horse breeding and hippiatry. **Juadudatta** gives a detailed account of the medical treatment of cows in his Asva-Vaidyaka.

(source: **Indian and World Civilization - By D. P. Singhal** p.187-188).

Hermitage of Kapila, who gives it away to four exiled Ikshvaku princes.

According to **Stanley Wolpert**, " Veterinary science had developed into an Indian medical specialty by that early era, and India's monarchs seem to have supported special hospitals for their horses as well as their elephants. Hindu faith in the sacrosanctity of animals as well as human souls, and belief in the partial divinity of cows and elephants helps explain perhaps what seems to be far better care lavished on such animals... A uniquely specialized branch of Indian medicine was called **Hastyaurveda** ("The Science of Prolonging Elephant Life").

(source: **An Introduction to India - By Stanley Wolpert** p. 193-194).

Military Education

In modern times military training is usually given only by the state authorities when recruits join the army. Such was not the case in ancient India. The average citizen and villager was expected to be able to defend his own hearth and home: The Arthasastra expressly lays down that every village ought to be able to defend itself. That such was actually the case in several parts of India would become quite clear from the accounts of Alexander's invasion, as given by the Greek historians. In several places the Macedonian was opposed not so much by state forces as by the whole population in arms. There can be no doubt that in many of the republican states of the Punjab, the Kathas, the Malavas, the Sibis, etc. every adult used to receive military training of a fairly high order.

Military Training: There were also some cities in the country, famous as centers of military training. Taxila, situated in the north-west, had naturally become a center of military training. Kshatriyas and Brahmins from all over the country used to go to this frontier city for getting mastery in the military profession. In one military college of the city there were 103 princes receiving training in the different branches of the military art, which included elephant-lore, horsemanship, and cavalry training, and the instructions in the use of the different weapons then in use.

Commercial Education

There was considerable inter provincial and foreign trade going on in the ancient times. The maritime activity of ancient India were considerable, and the trade with South East Asia, Egypt, Greek and Rome was very profitable to India during the early centuries.

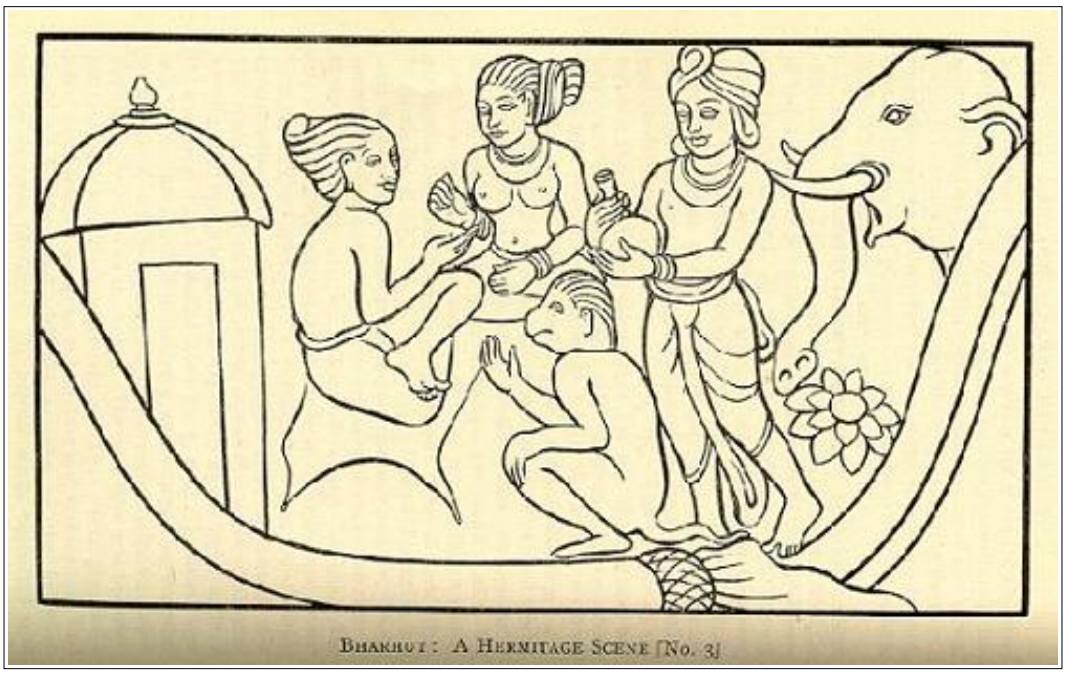
Conclusion

The Hindu Synthesis of the Transcendental and Education:

Author **Benoy Kumar Sarkar** writes: "The ideal of realizing the infinite in the finite, the transcendental in the positive, manifested itself also in the educational system of Hindu India. The graduates trained under the 'domestic system' of the Gurukulas or preceptors' homes were competent enough to found and administer states, undertake industrial and commercial enterprises; they were builders of empires and organizers of business concerns. It was because of this all-round and manly culture that the people of India could organize vast schemes of colonization and conquest, and not content with being simply confined within the limits of mother India, could build up a Greater India beyond the seas, and spread culture, religion and humanity among the subject and hospitable races. It it is not for education, how else can we account for the remarkable progress of the nation in architecture, sculpture, medicine, dyeing, weaving, mathematics, ship building, chess, navigation, military tactics, and implements and all such aspects of socio-economic and economico-political life as have to depend on the help of physical and natural sciences?"

(source: **Creative India - By Benoy Kumar Sarkar** p. 60-63).

The majestic Saraswati River ran through northwestern India till it dried up 4,000 years ago. **The goddess of learning is Saraswati.**



Only a nation who had highly educated people would call a river - a goddess of learning.

Louis Revel (?) French author of **The Fragrance of India : landmarks for the world of tomorrow** has observed:

"India, in her glorious past, has understood that the greatness of a nation, its virility, its moral value, depend entirely on the system of education that is given to it. Ancient India furnished us examples of schools, universities, Brahmanic or Buddhist, which brought to this nation most glorious harvests – harvests fallen, alas! today into oblivion. Let us take such centers of culture as Taxila, Ujjain, and Nalanda. These universities where thousands of students came from all parts of Asia to drink at the source of learning – based their system of education on individual contacts between master and pupil, but the masters themselves were pupils in the great University of Life. What they gave to their students was the honey of their moral and intellectual experiences received through masters still more experienced in spiritual science, in the true knowledge of the laws of life. Do we not see the famous Chinese pilgrim, Hiuen-Tsang, coming to perfect himself at Nalanda in the study of Yoga-sastra, the knowledge of the laws of being? Did he not have, at Nalanda, the celebrated vision of the vicissitudes through which India would have to go? Thus, there passed through these universities great winds of free Spirit and free Intelligence which swept away the miasms of false conceptions, which formed real men, noble men, in whom joy sparkled."

(source: **The Fragrance of India : landmarks for the world of tomorrow - By Louis Revel** p. 99 - 114).

The percentage of literary people in India was more than that at present. At least up to the 7th century A.D. this system worked most satisfactorily. People showed brilliancy in all departments. eg. Mathematics, Astronomy, Medicine, Chemistry, Poetry, Drama, Grammar and Philosophy. No nation could excel these people at that time. From the 4th century B.C. to the 11th century A.D. all foreigners who came in contact with India and studied her civilization critically were very much impressed by it. They spoke highly of Indian character specially their truthfulness, honesty, and sense of justice. The influence of the system of education was very great among the people in general. **Megasthenes**, the Greek ambassador who came to India in the 4th century B.C. remarked " for whereas among other nations it is usual in the contests of war, to ravage the soil, among the Indians it is on the contrary. They never use the conquered as slaves." **Idrisi**, the Arabian traveler and scholar in his Geography written in the 11th century A.D. says, "The Indians are naturally inclined to justice and never depart from it in action. Their good faith, honesty and fidelity to their engagement were well known and they were so famous for their qualities that people came to their country from every side." **Abul Fazl,** the author of Aini Akbar, in the 16th century notes, "The Hindus are admirers of truth and showed unbounded fidelity in all dealings."

Hermitage scene

The Hindus were conscious about their ideal. Though spirituality is their goal they never neglected the material affairs. They were in the words of Wordsworth, "true to the kindred points of heaven and home' and knew fully that matter and spirit are interrelated, one cannot be conceived without the other. **This ideal is maintained by the system of education which is based on a sound method.'**

Dwelling on this wonderful effect of this system of education unparalleled in history **Sir Monier Williams** says, "And here I may observe circumstances in the history of India is more worthy of investigation than the antiquity and perseverance of her institutions. It has existed almost unaltered since the description of its organization in Manu's code two or three centuries before Christian era. It has survived all religious, political and physical convulsions from which India suffered from time immemorial. **Invader after invader has ravaged the country with fire and sword** but the simple self-contained township has preserved its constitution intact, its customs, precedents, and peculiar institutions unchanged and unchangeable amid all other changes." (source: Brahmanism and Hinduism p. 455).

The realization of the ultimate Reality was the ideal of India. Material progress was never the end in itself but was considered as a means

to the realization of the end. Apara Vidya dealing with material progress could never bring peace. From all these it appears that the aim of education was not only material progress but also spiritual growth. Regarding the system of education in ancient India it is known from the account of Ewan Chowang, the Chinese traveler, that boys at the age of seven began studying grammar, arts, painting, logic and scriptures and Brahmin and Buddhist teachers were highly efficient and persevering. The doors of education was open to all whether they belonged to the order of monks or of householders.

Ramesh Chandra Dutt, in his **Civilization in Ancient India**, p. 127, writes: "Buddhism had never assumed a hostile attitude towards the parent religion of India; and the fact that the two religions existed side by side for long centuries increased their toleration of each other. In every country Buddhists and orthodox Hindus lived side by side. **Hindus went to Buddhist monasteries and Universities, and Buddhists learned from Brahmins sages.** The same Kings favored the followers of both religions. The Gupta Emperors were often worshippers of Shiva and Vishnu, but loaded Buddhists and Buddhist monasteries with gifts, presents and favors. One king was often a Buddhist and his son an orthodox Hindu; and often two brothers followed or favored the two religions without fighting. Every Court had learned men belonging to both the religions, and Vikramaditya 's Court was no exception to the rule."

Mr. Ernest Binfield Havell says that the system of education during the seventh century was very much improved and better than was under the British. Even up to the fifteenth century, the educational institutions in every Hindu village were maintained either from the income of some temple or from the produce of land set aside for the purpose in villages.

From this, a picture of the educational system of ancient India can be derived and also come idea of the high standard of civilization then prevailing in the society.

England's debt to India in Pedagogics - The So-called Bell-Lancasterian Pedagogics

During the formative period of the modern educational systems in Europe and America, the pedagogy of the Hindus, especially on its elementary side, has played an important part.

HERMITAGES IN BHARHUT SCULPTURES (c. second century B.C.).

It is well-known that primary education was grossly neglected in America during the first half-century of her independence. In England even so late as 1845, 3.2 percent of men and 49 per cent of women had to sign their names on the marriage register with a cross. In the age of paucity of "public schools" private educational efforts naturally elicited the people's admiration. And none drew more sympathy and support than **Andrew Bell's** (1775-1823) "mutual-tuition" or "pupil teacher" or "monitorial" system of school management.

What, now, is the origin of this much-applauded mutual instruction or monitorial system, the so-called Bell-Lancasterain "discovery" in pedagogy. **Historians of education are familiar with the fact that the plan of making one boy teach others has been indigenous to India for centuries.** Bell, himself, in his **Mutual Tuition** (pt. I. ch. I, V). describes how in Madras he came into contact with a school conducted by a single master or superintendent through the medium of the scholars themselves. And, in fact, in England the monitorial system or the method of making every boy at once a master and a scholar is known as the "Madras system."

Bell, a Christian missionary in Madras took the Indian system of education back to England, and introduced it there. Until then, only the children of the nobles were given education there and he started education for the masses in England. So, we gather that it is from India that the British adopted the system for educating the masses.

England's debt to India in pedagogies has been fitly acknowledged in the tablet in Warminister Abbey, which describes Andrew Bell as

"the eminent founder of the **Madras System of Education**, which has been adopted within the British empire, as the national system of education for the children of the poor."

Did You Know?

Link between Myths of the Scandinavians and the Hindus:

The Scandinavians are the descendants of the Hindu Kshatriyas. The term Scandinavian and the Hindu "Kshatriya" or the Warrior caste are identical, "the former being a Sanskrit equivalent for the latter: "Scanda Nabhi" (Scanda Navi) signifies Scanda Chiefs (Warrior Chiefs).

Colonel James Tod says: "The Aswas were chiefly of the Indu race, yet a branch of the Suryas also bore this designation." In the Edda we are informed that the Getes or Jits who entered Scandinavia were termed Asi, and their first settlement was Asigard (Asi garh, fortress of the Asi)."

John Pinkerton says: "Odin came into Scandinavia in the time of Darius Hystaspes, 500 years before Christ, and that his successor was Gotama. This is the period of the last Buddha or Mahavira, whose era is 477 before Vikrama, or 533 before Christ. Gotama was the successor of Mahavira."

"In the martial mythology and warlike poetry of the Scandinavians a wide field exists for assimilation."

"We can scarcely question," says **Count Bjornstjerna**, "the derivation of the **Edda** (the religious books of ancient Scandinavia) from the **Vedas.**"

The principle on which the seven days of the week are named in India is the same on which it has been done in Scandinavia:

1. Sunday is called by the Hindus Aditwaram, after Addit, the sun, after which also the Scandinavians call the day – Sondag.
2. Monday is called by the Hindus Somawaram, from Soma, the moon. Among the Scandinavians it is called Mondag.
3. Tueday is called Mangalwaram in India after the Hindu hero, Mangla. It bears the name Tisdag amongst the Scandinavians, after their hero, This.
4. Wednesday is termed Boudhawaram by the Hindus, after Boudha; by the Scandinavians, it is denominated after Odin (Wodan, Bodham, Budha), Onsdag.
5. Thursday is called Brahaspativaram by the Hindus, after Brahspati, or Brahma, their practical god; it bears the name Thorsdag amongst the Scandinavians, after the principal god, Thor.
6. Friday is called by the Hindus Sucrawaram, after Sucra, the goddess of beauty; it is named by the Scandinavians after Freja, the goddess of beauty, Frejdag.

7. Saturday is called Sanivaram by the Hindus after Sanischar, the god who cleanses spiritually; it is named Lordag by the Scandinavians from loger, bathing.

"We have here," says Count Bjornstjerna (author of **The Theogony of the Hindoos with their systems of Philosophy and Cosmogony** p. 169), himself a Scandinavian gentleman, "another proof that the Myths of the Scandinavians are derived from those of the Hindus.

Copyright © 2001 - All Rights Reserved.

From the beginning of her history, India has adored and idealized, not soldiers and statesmen, not men of science and leaders of industry, not even poets and philosophers, who influence the world by their deeds or by their words, but those rarer and more chastened spirits, whose greatness lies in what they are and not in what they do; men who have stamped infinity on the thought and life of the country. To a world given over to the pursuit of power and pleasure, wealth and glory, they declared the reality of the unseen world and the call of the spiritual life. This ideal had dominated the Indian religious landscape for over forty centuries. Hinduism has thus had a long and continuous evolution and in the process has influenced all other major world religions.

India, which is, in a sense, representation of the Asiatic consciousness, has never been isolated from the Western continent in spite of geographical, linguistic, and racial barriers. A large part of the world received its religious education from India. In spite of continuous struggle with superstition and theological baggage, India has held fast for centuries to the ideals of the spirit. Its influence or, at any rate, connection with Western thought, though not constant and continuous, has been quite significant. Commenting on the teachings of Christian missionaries as Plotinus, Clement, Gregory, Augustine and the like, Dean Inge observes: "They are the ancient religion of the Brahmins masquerading in the clothes borrowed from the Jewish, Gnostic, Manichaen and Neo-Platonic allegories. That is why Mahatma Gandhi told Romain Rolland in Switzerland on his way back to India from the Round Table Conference (1911) that Christianity is an echo of the Indian religion and Islam is the re-echo of that echo."

Jules Michelet (1789-1874) French writer, the greatest historian of the romantic school, affirms this: " Follow the migration of mankind from East to West along the sun's course and along the track of the world's magnetic currents; observe its long voyage from Asia to Europe, from India to France.....At its starting point in India, the birthplace of races and religions, the womb of the world...."

Introduction

Dr. Arnold Joseph Toynbee (1889-1975) the great British historian. His massive research was published in 12 volumes between 1934 and 1961 as `A Study of History'. Toynbee was a major interpreter of human civilization in the 20th century. He has said:

" India is not only the heir of her own religious traditions; she is also the residuary legatee of the Ancient Mediterranean World's religious traditions." "Religion cuts far deeper, and, at the religious level, India has not been a recipient; **she has been a giver.** About half the total number of the living higher religions are of Indian origin." he said.

(source: **One World and India - By Arnold Toynbee** p. 42- 59).

Volney, Constantin Francois de Chasseboeuf, comte de 1757-1820) historian and philosopher and French scholar. His principal work, **Les Ruines; ou, Méditation sur les révolutions des empires** (1791), which popularized religious skepticism, was influential not only in France but also in England and the United States; it went through many translations and editions and stimulated much controversy.

Volney of France was perhaps the first to propound in the 18th century that **"Jesus was a solar myth derived from Krishna' of Hindu mythology."** Buddhism existed at least four hundred years before Christianity. Another French theologian, **Ernest Havet**, did the same in his study of primitive Christianity published in 1884. A

He was followed by **Ernest Renan**, the famous Catholic theologian from France, who pointed out **Buddhist parallels in the parables of Jesus** in his **Life of Jesus** published in 1863.

Max Muller noted "startling coincidences between Buddhism and Christianity in his **India - What It Can Teach Us** published from England.

A stronger case along the same lines was made by **Rudolf Seydel**, Professor in the University of Leipzig (Germany), whose first book, **The Gospel of Jesus in relation to the Buddha Legend**, published in 1882, was followed by a more elaborate one, **The Buddha Legend and the Life of Jesus**, published in 1897. Finally, **J. M. Robertson**, a British scholar and a Member of Parliament, revived the Volney thesis in 1900 by stating in his **Christianity and Mythology** that **"the Christ-Myth is merely a form of the Krishna-Myth.**

(source: **Jesus Christ: An Artifice for Aggression - By Sita Ram Goel** p. 53).

In the past, the West and India were immediate neighbors. Before the Islamic civilization came between the two, the empire, which was first Persian, then Greek and later Roman,

stretched from the Mediterranean to the Indus. The commercial ties between India and Europe were more direct than they have ever been over the last ten centuries. Indian monks and their disciples lived and taught for several hundred years in the Middle East and founded large monasteries, the traces of which can be seen mainly in Antioch and Alexandria. In the 4th A.D. Saint Jeremy fulminated against the fake prophets from India. **But his protest came to late, for the men from India had already left their mark on the Mediterranean mind in search of holiness.**

The Bhagavad Gita, Buddhism and Christianity

The Bhagavad Gita doctrine of l*okasmgraha* (good of humanity) and of Divine Incarnation influenced the Mahayana or the Northern school of Buddhism. The Buddhist scholar Taranath who wrote the history of Buddhism mentions that the teacher of Nagarjuna, who is regarded as the chief originator of the Mahayana school of Buddhism, was Rahulabhadra who **"was much indebted to sage Krishna and still more to Ganesha…..This quasi-historical notice, reduced to its less allegorical expression means that Mahayanism is much indebted to the Bhagavadgita and more even to Shaivism."**

(source: **Dr. Kern's Manual of Buddhism**).

Dr. S. Radhakrishnan has said: " Buddhism which arose in India was an attempt to achieve a purer Hinduism. It may be called a reform within Hinduism. The formative years of Buddhism were spent in the Hindu religious environment. It shares in a large measure the basic pre suppositons of Hinduism. **It is a product of the Hindu religious ethos**."

(source: **Religion and Culture - By S. Radhakrishnan** p. 29).

The origin of Christianity is due also to Buddhist influence. The teachings of the Buddha got woven into Greek, Egyptian and Hebraic theology, giving rise to the new Christian religion. Renan sensed this when he wrote in his Life of Christ that 'there was something Buddhist' in the Word of Christ. **Flavius Joseph observed that the Pharisees of Alexandria had taken from the Indians the belief in resurrection of the dead.** Though this idea was alien to the Hebrew dogma, it gradually got absorbed into it, which probably explains the resurrection of Jesus Christ. At a more mundane level, Christians who venerate relics, ring bells and burn incense are unwittingly imitating Indian rituals that were established many centuries before Christianity. Ironically in the 19th century, some Christian missionaries expressed their indignation at Indian pagans ringing Christian bells and burning Christian incense when in point of fact it was the Christians who were imitating the Indians.

These influences from India may come as a surprise to many Christians. Yet they were often discussed in the early 19th century when Europe discovered the Vedas and the Upanishads in translation. European philosophers, especially **Soren Kierkegaard,** were amazed by the evangelical tone of these holy books from India. More recently, with the discovery of the Dead Sea Biblical manuscripts, some archaeologists who specialize in

religion have spoken once again of an Indian connection between Buddhist monks and the Essenian community which lived next to Jerusalem.

(source: **The Genius of India - By Guy Sorman** ('Le Genie de l'Inde') p.189-195).

The Hindus venerate Christ as an Incarnation, and they see that his essential message is that of the Sanatana Dharma (the Eternal Religion). The special ethical and religious ideas contained in the teachings of Christ have no antecedents in the religious traditions in which he was born. Non-resistance to evil, love of enemies, monasticism, love of death, the assertion of man's innate perfection (kingdom of heaven is within you), universalism are principles not to be found in the religion into which he was born.

John the Baptist, who belonged to the monastic sect of the Essenes, was a Buddhist. **Dr. Moffatt**, in his book, **Encyclopedia of Religion and Ethics,** vol. v, p.410, remarks, "Buddhist tendencies helped to shape some of the Essenic characteristics." King Ashoka of India (third century B.C.) sent Buddhist missionaries to different parts of the world, from Siberia to Ceylon, from China to Egypt, and for two centuries before the advent of Christ, the Buddhist missionaries preached the ethics of Buddha is Syria, Palestine and Alexandria. The Christian historian, **Mahaffi,** declared that the Buddhist missionaries were forerunners of Christ. " Philosophers like **Schelling** and **Schopenhauer**, and Christian thinkers like **Dean Mansel and D. Millman** admit that the sect of the Essenes arose through the influence of the Buddhist missionaries who came from India.

(source: **Complete works of Swami Abhedananda**, vol.2, p.120).

Professor Friedrich Heiler (1892-1967) German scholar of religion, writing during and after the First World War, in an important article on 'Christian and Non-Christian Religions' writes: " The doctrines of the Trinity and Incarnation as well as the Virgin Birth, belief in the Divine Sacrifice of love, the conception of irresistible Grace and justification by faith alone, prayer prompted by the grace of God, petition for forgiveness of sins, all-embracing love towards every creature, heroic love of enemies, belief in everlasting life, in the judgment and the restoration of the world - there is not a single central doctrine of Christianity which does not have an array of striking parallels in the various non-Christian faiths." (Hibbert Journal, January 1954)

(source: **Religion and Culture - By S. Radhakrishnan** p. 67).

A European version of the Buddha story; Barlaam and Josaphat

(Josaphat sees a blind man, a cripple and a dying man. from Barlaam and Josaphat - Augsburg, 1477
source: East-West Passage: the travel of ideas, arts and inventions between Asia and the Western world
- By Michael Edwardes).

Many incidents in Christ's life as well as the organization of the Catholic Church and its rituals suggest their Buddhistic and Hindu origin. The Gospel stories of the immaculate conception of a virgin mother, the miraculous birth, the story of slaughter of the infants by Herod, and the chief events of Christ's life seem like repetitions of what happened in the lives of Krishna and of Buddha. The idea of Incarnation is purely and Indian idea. It was not known among the Jews. The star over Buddha's birthplace and the prophecy of the old monk Asita are repeated in the Gospel story of Simeon. The temptation of Buddha by Mara, the evil spirit, the twelve disciples, with the beloved disciple Ananda, and the many miracles recall the stories in Christ's life.

Under cover of the legend of **Barlaam and Josaphet,** Buddha has found a place among Catholic saints and has his saint-day in the calendar of the Greek and Roman churches. The story is a Christianized version of one of the legends of Buddha, as even the name Josaphat would seem to show. This is said to be a corruption of the original Joasaph, which is again corrupted from the middle Persian **Budasif (Budsaif=Bodhisattva).**

The rosary, the veneration of relics, asceticism, baptism, confession, etc. are also of Indian origin. The name Josaphet is **Bodhisattva** in the corrupt form. The story of the Buddha's life underwent an extraordinary transmutation as it moved west and became what is one of the most widespread legends ever told -- the story of Barlaam and Josaphat. More than sixty translations, versions, or paraphrases have been identified. It

was altered to fit the religious climate of each language and culture. As it moved westward, the story was adopted and adapted by Manicheans in central Asia, and then it became Christianized. In its new version, Barlaam was a Christian monk who had converted Josaphat (the name was a linguistic development from the word Bodhisattva -- one capable of Buddhahood). It may be that Georgian Christians in the Caucasus were the first to give the story a Christian cast, in the sixth or seventh century.

There are innumerable similarities between Hindu-Buddhist practices and doctrines and those of Christianity.

The Russian author, **Nicholas Notovitch** translated in 1894 a biography of Christ found in Nepal in a Buddhist monastery which said that Christ went there during the thirteen years of his life of which there is no record in the Gospel. Notovitch author of a book, **The Unknown Life of Christ,** asserting that during his long period of obscurity Jesus had stayed with Brahman and Buddhist monks, who had initiated him into Indian religions. The book was first published in French and edited, abridged, and translated into English by Violet Crispe in 1895. This study was based on the materials Notovitch had collected during his travels in India and Tibet, particularly on the records of Saint Issa discovered by him at the monastery Himis. Inevitably the book excited fierce controversy and reproach from some theologians. Max Muller disputed Notovitch's assertions and questioned the authenticity of the latter's evidence. Despite this, Notovitch reaffirmed his views when the English version was published. The German scholar **Faber-Kaiser's** more recent book entitled **Jesus died in Kashmir'** also supports Ahmadiya sect in Islam that Jesus did not die on the Cross, but came to India and died near Rozabal not far from Srinagar in Kashmir.
(**http://www.tombofjesus.com/AcharaS.htm#Yuz**)

French historian **Alain Danielou** had noticed as early as 1950 that "a great number of events which surround the birth of Christ - as it is related in the Gospels - strangely remind us of Buddhists and Krishnaites legends".

Danielou quotes as examples the structure of the Christian Church, which resembles that of the Buddhist Chaitya; the rigorous asceticism of certain early Christian sects, which reminds one of the asceticism of Jain and Buddhist saints; the veneration of relics, the usage of holy water, which is an Indian practice, or the word 'Amen', which comes from the Hindu 'OM'.

There are some indication that Christ came to India for spiritual initiation and borrowed from Buddhism for his teachings. According to **Alain Danielou**, who wrote the **Histoire de l'Inde,**

"Many sects which developed in the first century before Christ in Palestine, had a strong

Hindu and Buddhist influence and a great number of legends surrounding the birth of Jesus Christ, are strangely similar to Buddhist and Krishnaites stories. He adds that the structures of the church resembles those of Chaitya Buddhism and that the early Christian asceticism seems to have been inspired by Jainism."

(source: **Rewriting Indian History** - **By Francois Gautier** pg 9-10)

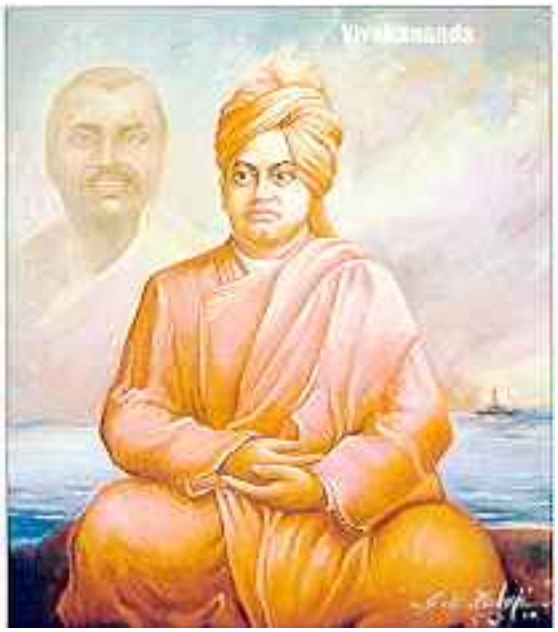
Belgium's historian Konraad Elst also remarks "that many early Christian saints, such as **Hippolytus** of Rome, possessed an intimate knowledge of Brahmanism." Elst even quotes the famous **Saint Augustin** who wrote:

"We never cease to look towards India, where many things are proposed to our admiration".

Unfortunately, remarks American **David Frawley**, "from the second century onwards, Christian leaders decided to break away from the Hindu influence and show that Christianity only started with the birth of Christ". Hence, many later saints began branding Brahmins as "heretics" and **Saint Gregory** set a future trend by publicly destroying the "pagan" idols of the Hindus.

It is unknown as to how Christianity arrived in India during the first century. If Christianity could reach India during the first century and find a sanctuary why could not Indian religions, especially Buddhism which was equally proselytizing reach western Asia and the Greco-Roman world and find a footing there? The road surely must have been open both ways.

Lamas at a prayer meeting



In 1842, two French missionary travelers to Tibet, **Hue and Gibet,** were shocked at the close resemblances between Catholic and Lamaistic rituals. They wrote, "The crozier, the exorcism, the censer with the five chains, the blessings which the lamas impart by extending the right head over the heads of the faithful, the rosary, the celibacy of the clergy, their separation from the world, the worship of saints, the fasts, processions, litanies, holy water – these are the points of contact the Buddhists have with us."

(source: **The Legacy of India - edited By G T Garratt** Oxford At The Clarendon Press).

Indeed, **Lamaistic Buddhism,** which did not follow the serene metaphysical teaching of the Buddha closely, represented demons and torments of hell as lurid as those of mediaeval Christianity. Even in the most Judaic of the epistles in the New Testament the phrase **"the wheel of birth"** occurs, which **Schopenhauer** ascribed to Indian influence.

In an interview in Detroit in 1894, **Vivekananda** said, "Our religion is older than most religions and the Christian creeds came directly from the Hindoo religion. It is one of the great offshoots. The Catholic religion also takes all its forms from us, the confessional, the belief in saints and so on, and a Catholic priest who saw this absolute similarity and recognized the truth of the origin of the Catholic religion was dethroned from his position because he dared to publish a volume explaining all that he observed and was convinced of" (Swami's reference was no doubt to **Bishop Brigandet's Life of Buddha**) (From **Vivekananda, New Discoveries by Marie Louise Burke,** 2nd ed, p 208). For more refer

to **Resurrection of the Dead In the Nag Hammadi Codices & Its Relationship to the Buddhist Doctrine of 'Rebirth**).

Great Indian sages, such as Sri Aurobindo or Sri Sri Ravi Shankar, the founder of the Art of Living, which is practiced in more than 80 countries, have often remarked that the stories recounting how Jesus came to India to be initiated, are probably true. Sri Sri Ravi Shankar notes, for instance, that Jesus sometimes wore an orange robe, the Hindu symbol of renunciation in the world, which was not a usual practice in Judaism. "In the same way", he continues, "the worshipping of the Virgin Mary in Catholicism is probably borrowed from the Hindu cult of Devi." **Bells too, which cannot be found today in synagogues, the surviving form of Judaism, are used in church and we all know their importance in Buddhism and Hinduism for thousands of years.** There are many other similarities between Hinduism and Christianity: incense, sacred bread (prasadam), the different altars around churches (which recall the manifold deities in their niches inside Hindu temples); reciting the rosary (japamala), the Christian Trinity (the ancient Santana Dharma: Brahma, Vishnu and Mahesh), Christian processions, the sign of the cross (Anganyasa), and so on.

The Catholic Church, however, developed with dualistic principles of God in heaven and creation below which have created an insoluble conflict between faith and reason. The conflict has reached its ultimate acuity in our day of scientific development. Hindus believe that the non-dualistic teachings of Christ have not been generally understood in the West.

Christianity's Hindu Heritage

Commenting on the teachings of Christian missionaries as Plotinus, Clement, Gregory, Augustine and the like, **Dean Inge** observes: "They are the ancient religion of the Brahmins masquerading in the clothes borrowed from the Jewish, Gnostic,Manichaen and Neo-Platonic allegories. That is why **Mahatma Gandhi told Romain Rolland** in Switzerland on his way back to India from the Round Table Conference (1911) that **Christianity is an echo of the Indian religion and Islam is the re-echo of that echo."**

(source: **India in Primitive Christianity - Arthur Lillie**).

Objective and open-minded scholars long ago conceded that Christianity is at heart a revamped form of Judaism. In the process of its development as something distinct from its mother religion, it became hybridized with so much pagan influence that it ultimately alienated its original Jewish base and became predominantly Gentile. The source of this pagan influence is varied and vague in the minds of most advanced Bible critics, but it may owe more to Hinduism than most people suspect.

The average person does not connect India with the ancient Middle East, *but the existence of some trade between these two regions is documented, even in the Bible.* Note the reference to spikenard in the Song of Solomon (1:12; 4:13-14) and in the Gospels (Mark 14:3; John 12:3). This is an aromatic oil-producing plant (*Nardostachys jatamansi*) that the Arabs call *sunbul hindi* and obtained in trade with India. It is axiomatic that influence follows trade, and the vibrant culture of India could not help but impact on anyone exposed to it. The influence on Judaism came for the most part indirectly, however, via the Persians and the Chaldeans, who dealt with India on a more direct basis. (Indeed, the Aryans, who invaded and trans- formed India over 1500 years before Christ, were of the same people who brought ancient Persia to its greatest glory. Persia's name today--Iran--is a corruption of *Aryan*.) The ancient Judeans absorbed much of this secondhand influence during the Babylonian captivity of the sixth century B. C., and during the inter testamental period, when Alexandria became the crossroads of the world, intellectuals both Jew and Gentile were exposed to a variety of ideas, some of which originated on the Indian Subcontinent.

From Pythagoras, who believed in the transmigration of souls, apparently because of his contacts with religious teachers from the east. Pindar, who believed in metempsychosis, Plato, who could not have been ignorant of Karma, through Klaxons, the Indian sage, who accompanied Alexander, Apollonius of Tyana, who came to Taxila to study under the Brahmins, Clement of Alexandria, the early Christian teachers of the second century A.D., who refers to Buddhists and Brahmins in his work and Plotimus, who went to Persia to meet the Brahmins, the Contacts between India and Greek thinkers seem to have been continuous.

According to **Klaus K. Klaustmaier,** in his book **A Survey of Hinduism** pg 18-19

"The kings of Magadha and Malwa exchanged ambassadors with Greece. A Maurya ruler invited one of the Greek Sophists to join his court, and one of the greatest of the Indo-Greek kings became famous as the dialogue partner of the great Buddhist sage Nagasena, while in the opposite direction, Buddhist missionaries are known to have settled in Alexandria, and other cities in the Ancient West. It is evident then, that Indian thought was present in the fashionable intellectual circuit of ancient Athens, and there is every reason to suppose that Indian religious and philosophical ideas exercised some influence on early and classical Greek philosophy. Both Greeks and Romans habitually tried to understand the religions of India by trying to fit them as far as possible into Greco-Roman categories. Deities in particular were spoken of, not in Indian but in Greek terms and called by Greek names. Thus Shiva, was identified as "Dionysos," Krsna (or perhaps Indra) as "Heracles." The great Indian epics were compared to those of Homer. Doctrinally, the Indian concept of transmigration had its counterpart in the metempsychosis taught by

Pythagoras and Plato; nor was Indian asceticism altogether foreign to a people who remembered Diogenes and his followers."

Parallels have also been found between the Biblical account of the creation of man by God in his own image and the creation of woman out of man (Genesis I :27) and the statements in the Hindu scriptures in the Hindu scriptures that God became man and created woman (Brihadaranyaka Upanishad(1:3 and 1:4) and Brahma as God divided himself into svayambhu Manu (man) and Satarupi (Woman the Bhagavata purana). There is a further parallel between the temptation of Adam and Eve, Who ate of the apple (Genesis III) and the references to two birds "beautiful of wing, inseparable friends, dwelling together in the same tree (the universe) of whom one (the individual being) eats the fruit of action, while the other (universal being) looks on and Svetesvatara Upanishad(4:6). The Indian scriptures, far from being in conflict with Western thought, seem very often to contain the same or parallel ideas as in Biblical literature. The ascent of man in the Books of Enoch is said to match a similar account in the Kausitaki Upanishad and even the concepts of the kingdom of God and the son of man have been discovered in the Rig Veda.

The precise pattern of influence was neither observed nor documented, but it can be inferred from the numerous uncanny similarities in concept and expression, not all of which can be coincidental. Let us examine the telltale evidence (none of which, it may be added, depends upon any apocryphal account of the alleged "lost years" of Jesus in India).

The Brahmin caste of the Hindus are said to be "twice-born" and have a ritual in which they are "born in the spirit." Could this be the ultimate source of the Christian "born again" concept (John 3:3)?

The deification of Christ is a phenomenon often attributed to the apotheosis of emperors and heroes in the Greco-Roman world. These, however, were cases of men becoming gods. In the Jesus story, the Divinity takes human form, god becoming man. This is a familiar occurrence in Hinduism and in other theologies of the region. Indeed, one obstacle to the spread of Christianity in India, which was attempted as early as the first century, was the frustrating tendency of the Hindus to understand Jesus as the latest avatar (incarnation) of Vishnu.

It is in the doctrine of the **Trinity** that the Hindu influence may be most clearly felt. Unknown to most Christians, Hinduism has a Trinity (or Trimurti) too: Brahma, Vishnu, and Shiva, who have the appellations the Creator, the Preserver, and the Destroyer (and Regenerator). This corresponds to the Christian Trinity in which God created the heavens and the earth, Jesus saves, and the Holy Spirit is referred to as a regenerator (Titus 3:5). It is interesting to note, furthermore, that the Holy Spirit is sometimes depicted as a dove, while the Hebrew language uses the same term for both "dove" and "destroyer"!

In the **Bhagavad Gita**, a story of the second person of the Hindu Trinity, (Vishnu) who took human form as Krishna. Some have considered him a model for the Christ, and it's hard to argue against that when he says things like, **"I am the beginning, the middle, and the end" (BG 10:20 vs. Rev 1:8).**

With the historical reality of Indian influence on the Middle East being an established fact, how can the Christians account for these similarities with anything less feeble than coincidence, or less bizarre than the notion of "Satanic foreknowledge and duplication," which is sometimes invoked to explain the similarities of Judeo-Christian precursors?

Christ spend his youth in India?

The celebration of the birthday of Christ might lose a little sheen if we seriously pursue the question, where did Jesus spend 18 years of his life, between the ages of 12 and 30? Both history and gospels, are completely silent about the life of Jesus before his 30th year.

A Chilean diplomat **Miguel Serrano** in his book, "**The Serpent of Paradise: The Story of an Indian Pilgrimage** (1963) has written of his rich and varied experiences among yogis and sadhus of India. He was looking for great mystics who he believed were living in the Himalayas guarding a magical science. **During his sojourn in Kashmir, Serrano came across evidence to suggest that Jesus Christ had come to India and that the tomb of Yousa-Asaf in Srinagar was in fact the tomb of Jesus.** He quotes a legend, according to which he was in Kashmir, the original name for Kashmir, Ka means "the same as" or "equal to" and shir means Syria. Manuscripts in the Sharda language, which is derived from Sanskrit, seem to bear close relationship to the biblical story. According to this Kashmir legend, Jesus came to Kashmir and studied under holy men, who taught him mysterious practices. Later the legend says, Jesus returned to the Middle East and he then began to preach among the ignorant masses of Israel the mystical truths he had learned in Kashmir. To impress and to convert them he often used the powers he had acquired through the practices of Yoga, and these were then referred to as miracles. Then in due course Jesus was crucified, but he did not die on the cross. Instead, he was removed by some Essenes brothers, restored to good health and sent back to Kashmir, where he lived with his masters until his death. There is yet another theory, which holds that the Jewish

race originated in India centuries ago and some of them came back almost by instinct in search of their roots. This theory ties in with the legend of Jesus Christ also came to live in India at the age of about 13. This legend asserts Jesus spent 17 years in India, finally returning to the country of his birth to preach the doctrine of salvation and to assert that he was the Son of God.

(source: **India Post - By Vinod Dhawan**. vol. 6 December 29, 2000. p. 44). For more refer to **Did Jesus die in Kashmir - by Abu Abraham**).

Divine Incarnations

We find mention of prophets, messengers and messiahs in the different religions of the world. In Hinduism, Buddhism, and Christianity we have the doctrine of Divine Incarnation. The Christian religion as organized is dualistic. The Christian have a doctrine of incarnation fitting into their theology and their partial view of history and creation. They have only one incarnation.

According to the Eternal Religion (Sanatana Dharma) taught in the Gita, there are many divine incarnations. An incarnation is a special manifestation of the Divine in history. Such manifestations take place in response to special needs of the time, in the altered circumstances of life and history. They come in times of decline of civilizations due to materialism which causes disintegration of man and society.

Krishna in the Gita makes the classic declaration about incarnation.

"O Descendant of Bharata! Whenever religion becomes tarnished and irreligion prevails, I create myself. I incarnate myself in every age for saving the good, for the destruction of the wicked and for the establishment of religion. "

The birth of an incarnation, like the birth of the universe, is a mystery. In Sanatana Dharma incarnation is periodic manifestation in time of the power of the Divine. It is a mystery, but the power play of the Divine in history is a fact of experience. Krishna says in the Gita that incarnations start rolling anew the wheels of religion. Buddha also spoke of his movement as starting the wheel of religion.

Interesting Parallels between the Hindu/Buddhist temple and the Catholic Church.

Buddha and Jesus

Alexander's invasion of India in 327. B.C. starts a closer interchange of thought between India and the West. Buddhism must have been prevalent in India for over a century before Alexander's time, and he made an effort to acquaint himself with Hindu and Buddhist thought. He succeeded in encouraging an ascetic called Kalanos to join his entourage. He himself married a princess from Bactria, and a hundred of his superior officers followed his example and took Asiatic brides.

Pyrrho is said to have taken part in Alexander's expedition to India and acquired a knowledge of Indian thought.

Pliny tells us of a certain Dionysius who was sent to India from Alexandria by Ptolemy Philadelphus (285-247). Asoka, who ascended the throne of Magadha in 270.B.C., held a Council at Pataliputra, when it was resloved to send missionaries to proclaim the new teaching throughout the world. In accordance with this decision Asoka sent Buddhistic missions to the sovereigns of the West, Antiochus Theos of Syria, Ptolemy Philadelphius of Egypt, Antigonos Gonatas of Macedonia, Magas of Cyrene, and Alexandria of Epirus. From Asoka's statements it may be inferred that his missions were favorably received in these five countries. Between 190 and 180 B.C. Demetrius extended the Bactrian Kingdom into India and conquered Sind and Kathiawar.

The Greeks who settled in India gradually became Indianized. Of the monuments which survive of the Indo-Greek dynasties is a pillar discovered at Besnagar in the extreme south of Gwalior State (140B.C.) The inscription on it in Brahmi characters says:

" This garuda column of Vasudeva (Vishnu) was erected here by Heliodorus, son of Dion, a worshipper of Vishnu, and an inhabitant of Taxila, who came as a Greek ambassador from the great King Antialcidas to Kind Kasiputra Bhagabhadra, the saviour, then reigning prosperously in the fourteenth year of his kingship."

The greatest of the Indo-Greek kings was **Menander**, who was converted to Buddhism by the Buddhist teacher Nagasena (180-160 B.C.) His conversion is recorded in the famous work **Milindapanha** (questions asked by King Milinda)

During all this period India and the West had extensive trade relations. When Alexander chose in Egypt the site for a city which was destined to perpetuate his name, the preparation for the blending of Eastern and Western cultures started. For a thousand years Alexandria continued to be a center of intellectual and commercial activity because it was the meeting-place of Jews, Syrians, and Greeks. **Milindapanha** mentions it as one of the places to which the Indians regularly resorted.

Two centuries before the Christian era, Buddhism closed in on Palestine. The Essenes, the Mandeans, and the Nazarene sects are filled with its spirits. (The Mandeans flourished in Maisan, which was the gate of entry for Indian trade and commerce with Mesopotamia. Indian tribes colonized Maisan, whose port had an Indian temple. Mandean gnosis is full of Indian ideas.)

Nearly five hundred years before Jesus, Buddha went round the Ganges valley proclaiming a way of life which would deliver men from bondage of ignorance and sin. In a hundred and fifty years after his death, tradition of his life and passing away became systematized. He was miraculously conceived and wondrously born. His father was informed by angels about it, and, according to **Lalitavistara,** the queen (Maya) was permitted to lead the life of a virgin for thirty-two months. On the day of his birth a Brahmin priest predicts his future greatness. Asita is the Buddhist Simeon. He comes through air to visit the infant Gautama. Simeon came by the apirit into the Temple. Buddha grew steadily in wisdom and stature. Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. His enlightenment was marked by thirty-two great miracles. The blind receive their sight, the deaf hear, and the lame walk freely. He set out to establish the kingdom of righteousness. He has twelve disciples. Buddha has his troubles with his disciples. Devadatta, Buddha's cousin, was the **Judas** among his followers. On the last day before his death, Buddha's body was again transfigured, and when he died a tremendous earthquake was felt throughout thee world.

Many of the parables between Buddha and Jesus are common. Buddha is a sower of the word. He feeds his five hundred brethren at once with a small cake which has been put into his begging bowl, and a good deal is left over, which is thrown away. In **Jataka** 190 we read of an eager disciple who finds no boat to take him across and so walks on the water.

Max Muller remarks that mere walking on water is not an uncommon story, and we must remember that the date of the Buddhist parable is chronologically anterior to the date of the Gospel of St. Luke. Between the language of Buddha and his disciples, and the language between Christ and his apostles, there are strange coincidences. When some of the Buddhist legends and parables sound as if taken from the New Testament, though we know that many of them existed before the beginning of the Christian era.

Richard Garbe assumes direct borrowing from Buddhism in the matter of Simeon, temptations, and the miracles of walking on the water, and loaves and fishes. **We have many parallels between Krishna and Christ.**

- A marvellous light envelops Mary when Christ is born. a similar light envelops Devaki before Krsna is born.
- There is universal gladness of nature at their birth.
- Herod inquires of the wise men, " Where is he that is born King of the Jews? "(Matthew ii 40
- Narada warns Kamsa the King that Krsna will kill him (Harivamsa ii 56)
- Herod is mocked by the wise men (Matthew, ii 16) and Kamsa is mocked by the demon that takes the place of Yasoda's infant (ibid ii 59).
- The massacre of the infants in found in both.
- Joseph came with Mary to Bethlehem to be taxed: Nanda came with Yasoda to Mathura to pay tribute.
- The flight into Egypt is similar to that into Braj.

Dr. S. Radhakrishnan says:

"The curious may find matter for reflection in these coincidences in the lives of Buddha and Christ. But those trained in European culture find it somewhat irksome, if not distasteful, to admit the debt of Christian religion to non-Christian sources, especially Hindu and Buddhist."

" In these cases, **Max Muller** writes, "our natural inclination would be to suppose that the Buddhist stories borrowed from our Christian sources and not vice versa. But here the conscience of the scholar comes in. Some of these stories are found in the Hinayana Budddhist Canon and date, therefore, before the Christian era." It is not unnatural to suspect that some of the prominent ideas traveled from the older to the younger system. As Christianity arose in a period of eclecticism, it is not impossible for it to have adopted the outlook and legends of the older religion, especially as the latter were accessible at the time when intercourse between India and the Roman Empire was quite common. Let us realize that Christianity was in a formative stage and Budhhism was both settled and enterprising.

Speaking of the Apocryphal gospels, such a cautious critic, as the late **Dr. Maurice Winternitz** says: " We can point to a series of borrowings from Buddhistic literature which are absolutely beyond all doubt"

(source: **Visvabharati Quarterly** Feb. 1937, p.14).

Sir Charles Eliot, a famous scholar and linguist of Oxford observed, " A number of Buddhist legends make their appearance in the Apocryphal gospels and are so obviously Indian in character that it can hardly be maintained that they were invented in Palestine or Egypt and spread thence Eastwards."

(source: **Hinduism and Buddhism - By Sir Charles Eliot** vol. iii (1921), p. 441).

" The similarity of Roman Catholic services and ceremonial to the Buddhist is difficult to explain. "When all allowance is made for similar causes and coincidences, it is hard to believe that a collection of practices such as clerical celibacy, the veneration of relics, the use of the rosary and the prominent ideas traveled from the older to the younger system.

T. W. Rhys Davids, the famous Pali scholar and author of " **Buddhist India**," wrote,

"It is not too much to say, that almost the whole of the moral teaching of the Gospels as distinct from the dogmatic teaching, will be found in Buddhist writings, several centuries older than the Gospels; that for instance, of all the moral doctrines collected together in the so-called Sermon on the Mount, all those which can be separated from the theistic dogmas there maintained are found again in the Pitakas."

"There is every reason to believe that the Pitakas [sacred books containing the legends of

Buddha] now extant in Ceylon are substantially identical with the books of the southern canon, as settled at the Council of Patna about the year 250 B.C. As no work would have been received into the Canon which were not then believer to be very old, the Pitakas may be approximately placed in the forth century B.C. and parts of them possibly reach back very nearly, if not quite to the time of Gautama (Buddha) himself.

Albert Schweitzer, who is regarded almost as a modern Christian saint, declined to accept the historicity of the traditional view of Jesus. Both A.. J. Edmonds, and Richard Garbe, have insisted on the Christian indebtedness to Buddhism.

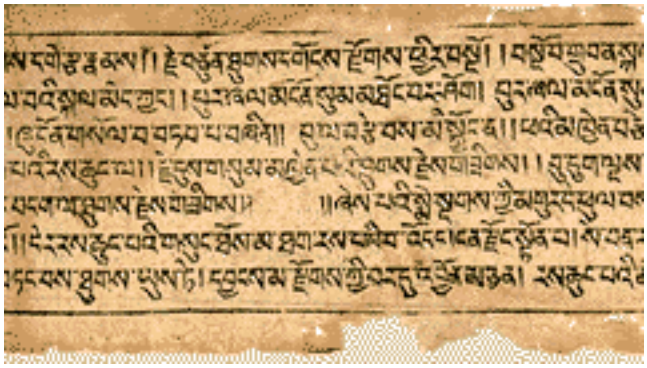
Count Keyserling noticed a great affinity of spirit between Mahayana Buddhism and Christianity; and although he considered Mahayana Buddhism to be far superior to Christianity.

Otto Pfleiderer in his **Chrisitan Origin,** E. T. (1906), p.226, says: " These Buddhist parallels to the childhood stories of Luke are too striking to be classed as mere chance; some kind of historical connection must be postulated." **M. Labbe Huc**, Nineteenth century: " The miraculous birth of Buddha, his life and instructions, contain a great number of the moral and dogmatic truths professes in Christianity."

T. W. Doane, Nineteenth century, ...nothing now remains for the honest man to do but acknowledge the truth, which is that the history of Jesus of Nazareth, as related in the books of the New Testament is simply a copy of that of Buddha, with a mixture of mythology borrowed from other nations.

Scholars have been profoundly struck and at times perplexed by the remarkable similarities between the Gospel story and the life and teachings of the Budhha, as told in the Latitavistara, and between the Budhhist and Christian parables and miracles. Both the Buddha and Christ are miraculously conceived and wondrously born and angels rejoiced at both births. He was miraculously conceived and wondrously born. His father was informed by angels about it and the queen - mother Maya (Mary in case of Christ) was permitted to lead the life of a virgin for thirty-two months. Christ was born in the royal tribe of Judah, Buddha was born in a royal household. On the day of his birth a Brahmin (Asita) priest predicts his future greatness. **Asita is the Buddhist Simeon.** Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. Both reveal their unusual wisdom at about the same age, twelve. **Asita is the Buddhist Simeon.** Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. Both reveal their unusual wisdom at about the same age, twelve. **Asita is the Buddhist Simeon.** Early in his career, he was tempted by Mara to give up his quest for truth with promises of world dominion. Both reveal their unusual wisdom at about the same age, twelve.

Nothing is known of Jesus' life during the next seventeen years and there have



developed a variety of legends suggesting that he traveled to India, lived with the Essenes at Qumran. The Gospels, however, refute these suggestion by implication. Whether Jesus traveled abroad or not, that he chose to remain unknown after having revealed himself and his wisdom causes some surprise. As Jesus claimed to be God, it could not have been a period of preparation. In contrast, more is known of Buddha's life his childhood, youth, marriage, increasing discontent with the world, renunciation, quest of Enlightenment, and finally his attainment of the Buddhahood, followed by a long period of missionary activity until he died.

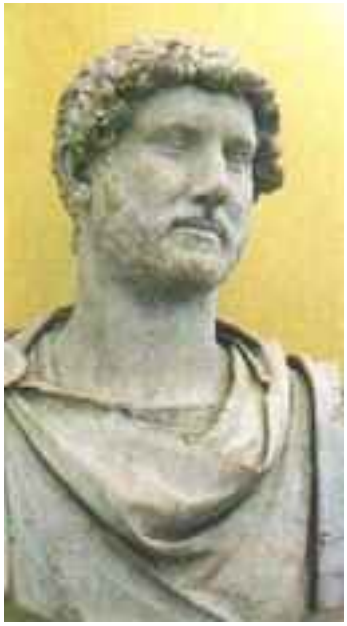
The Vedas, Mithraism and Christianity

"These two are the Almighty of the Gods, they are noble.
They will make our people full of vigor.
May we attain you, Mitra and Varuna, wherever Heaven and the days overflow."

- Rig Veda vii.65 (Mitra and Varuna are in all hymns to the Sun as the Divine Lord and Friend)



The contact between India and the West were more frequent in the period of the Roman Empire especially in the reign of Augustus, Trajan and Marcus Aurelius. The Jatakas contain many references to Buddhist merchants and their adventures in distant lands. India had a reputation for high philosophy and religion in the middle of the second century A.D., for Lucian makes Demetrius, the Greek philosopher give up his property and depart for India, there to end his life among the Brahmins. **Clement of Alexandria,** who died about A.D. 220, knew the distinction between Hinduism and Buddhism. " There are, he says, some Indians who follow the precepts of Boutta,(Buddha) whom, by an excessive reverence, they have exalted into a god." Clement mentions that Pythagoras learnt from Brahmins among others.

The vast development of material prosperity in the Roman Empire had no spiritual purpose behind it. Its ultimate end seemed to be the satisfaction of selfishness, individual and corporate. The ancestral cults had ceased to hold the large part of the population in the Roman Empire. The religious-minded, for whom the Roman gods had lost their meaning and served only as occasions for civic ceremonial, sought to find spiritual solace outside the life of the society in an esoteric ideal of individual salvation. The people were attracted by the Eastern cults, which were streaming into the Empire, the cults of Isis or Mithras. Mithraism was a religion with roots in India and Iran spread into the Roman world. **Mithraism** was the first officially recognized monotheistic cult of the Roman world. By the third century Mithra had evolved in the Roman world into the sun-god, Sol Invinctus -- So far as is now known, Mithra appears as the bull-slayer only in his Roman manifestation. Mithraism was a formidable competitor of early Christianity. Renan's observation has often been quoted that if Christianity had failed, the whole of Europe would have been Mithraist.

First appears as an Aryan sun-god in **Sanskrit** (**Rig Veda**) and Persian literature circa 1400 BCE. The cult was introduced into the Roman empire in the 1st century BCE. The Mithra traditions and doctrines are collected in the Persian **Avesta** and a yasht, a special hymn of praise, is dedicated to Mithra. Mithra is the Persian name of the **Vedic Mitra**, the deity of light and truth, warring against the powers of darkness in association with **Varuna.** In India he was, in fact, regarded as the sun. In Vedic texts, the connection between Mithra and the bull, which later became the focal point of Mithraism, is perhaps more clearly found than in the **Avesta.** The cult of Mithraism appears to have come to the Roman Empire from Persia (Iran), having introduced to Rome by Cilician seamen in about 68 B.C. Mithras is a Greek form of the name of an Indo-European god, Mithra or Mitra. Mithra was conceived as the intermediary between man and the Supreme God and the redeemer of the human race. Mithraism was carried to the remotest corners of the empire. But despite these opportunites, circumstances conspired against Mithraism, and " the ultimate success, permanent and undoubted, fell to the combination of Jewish and Greek worship called Christianity."

There are however, many similarities between Christianity and Mithraism. Besides sharing faith in a divine mediator and the hope of resurrection, both taught the efficacy of prayer, sacramental union with God, and his providential presence in all the events of daily life. Baptism, Confirmation, and the Eucharist of the Christians are analogous to certain rites of Mithraism. It was when Christianity spread into the pagan world that the idea of Jesus as a savior God emerged, emulating already existing concepts. It was only in 324, several centuries later, that the Church at the council of Nicaea, called by Emperor Constantine, formally accepted by a majority vote Jesus Christ as the Savior God. The coming of Christianity under state control was to preserve it as a religion, and was the death knell of all other sects and cults within the Roman Empire.

Had Constantine decided to retain Mithraism as the official state religion, instead of putting Christianity in its place, it would have been the latter that would have been obliterated.

"If Christianity was somehow stopped at its birth, whole world would be following Mithraism today." - Ernest Renan (1823-1892) was an important French theorist who wrote about a variety of topics. His famous essay **"What is a Nation?"** (Qu'est-ce qu'une nation?) was first delivered as a lecture at the Sorbonne in 1882.

To Constantine however, Christianity had one great advantage, it preached that repentant sinners would be forgiven their sins, provided that they were converted Christians at the time of their Passing, and Constantine had much to be forgiven for, He personally did not convert to the new religion until he was on his death bed, the reason being that only sins committed following conversion were accountable, so all sins committed by a convert, prior to conversion, didn't matter, and he could hardly have sinned too much whilst he was lying on his death bed. Mithraism could not offer the same comfort to a man like Constantine, who was regarded as being one of the worst mass-murderers of his time.

It was the birthday of Mithra, 25 December (winter solstice), that was taken by the early Christians as the birthday of Jesus. The need and urgency by the early Christians to compromise with existing traditions were further illustrated by the fact that even the Sabbath, the Jewish seventh day, Saturday, appointed a day of rest by God in the Mosaic Law and hallowed by his own resting day after the work of Creation, was abandoned in favor of the Mithraic first day, the Day of the Conquering Sun, Sunday. The worshippers of Mithra were called "Soldiers of Mithra" which is probably the origin of the term "Soldiers of Christ."

The most frequent theme of Christ as the Good Shepherd is reminiscent of a similar identification of Mithra, who was often called the Good Shepherd. And it is interesting to note that since Mithra was addressed as Dominus, Sunday must have been " the Lord's Day" long before Christian times. Concepts such as " the blood of the Lamb" or "Taurus the Bull" were similarly borrowed from Mithraism. The Last Supper (the Eucharist) was taken from Mithraism to combine with the sacred meal of Palestinian Christianity. The ceremony of eating an incarnate god's body and drinking his blood is of remote antiquity, with its origin in cannibalistic practices, and there could have been several sources for the Christian rite, but its connection with the Mithraic Eucharist is most apparent. The Mithraic Eucharist is the commemoration of Mithra's Last Supper in a cave with Sol Helios before ascending to Heaven. Some scholars believe that the Resurrection of Christ derived from the Vigil of Mithra, who after his death reappeared to watch continuously over the faithful. The Mithraic high priest's title, Pater Patrum soon became the title for the bishop of Rome, Papa or Pope.

Thus, the extent of the indebtedness of Christianity to pagan religions (Hinduism, Buddhism, Mithraism) is very great indeed.

Christianity and Roman Decline

Whether the rise of Christianity with its train of bitter religious conflicts and persecutions was a contributing cause of the Roman decline or not, the two certainly coincided. During the following hundred years, Roman authority gradually weakened, Roman armies suffered defeats, and Rome was sacked. By the end of the fifth century there was nothing left of the Roman Empire in the West.

Europe lapsed into the Dark Ages for centuries. Total and devoted acceptance of the authority of the new faith, as interpreted by its priests or guardians on earth, inculcated amongst the people an attitude of surrender and they handed over the right and responsibility of thinking to others. Passive submissions suppressed scientific inquiry and academic integrity, the main characteristics of the preceding age of Alexandrian syncretism. Intellectual stagnation, religious intolerance, and racial and regional exclusiveness characterized Europe for the next thousand years.

Buddhism and its relation to Hinduism - Some information

Buddha is recognized as the ninth avatar (incarnation) of Lord Vishnu. It was several hundred years before the time of Lord Buddha that his birth was predicted in Srimad-Bhagavatam. **Buddhism is an offshoot of Hinduism and is considered one of the heterodox schools of Hindu philosophy.** The teachings of Buddhism are not significantly different from those of Hinduism, but are essentially the same as the teachings of the Jnana Yoga (path of knowledge) school of Hinduism.

Following are the major views:

Buddhism and Hinduism both aim at transcending the phenomenal existence. Buddha rejected the ritualistic aspects of the Vedas, but DID NOT deny the higher teachings of the Upanishads. The Vedic rituals in Hinduism are recommended for a beginner for attaining concentration and meditation on the spiritual path. This position is very clearly conveyed in the Bhagavad Gita in the following words:

" To the knower of Truth (God), all the Vedas are of as little use as a small water-tank is during the time of a flood, when water is everywhere." (BG. 2.46)

For both Hinduism and Buddhism religion is salvation. Bodhi or enlightenment, which Buddha attained is an experience. Perfect insight (sambodhi) is the end and aim of the Buddhist eightfold path.

Both believe in theory of KARMA and REBIRTH with one major difference. Hinduism believes that the atman (individual self or spirit) transmigrates from one birth to another, Buddhism holds that nothing transmigrates from
one birth to another. In Buddhist view, karmas of one individual give birth to another, but no identity is retained between the two individuals.

Buddha declared the Self and the World are both unreal. To a Hindu, the Self is immortal

and the world is an illusive appearance. However, behind the illusive appearance of the universe lies the Ultimate Reality which is the
seed of all things and beings in the world.

Buddha advocated a monastic life for attaining nirvana, Hinduism teaches that truth can be realized by all people from all walks of life, including householders.

Buddha refused to discuss topics, such as the science of the soul, the creation of the universe and the existence of God. These are questions which occupy the center of interest in the Upanishadic literature.

Christmas' Hindu Roots
D. Parsuram Maharaj (Trinidan & Tobago, West Indies)
http://www.swordoftruth.com/swordoftruth/articles/readersvoice/readersvoice3.html

Last year Christmas Trinidad & Tobago's Archbishop Pantin in his weekly column repeated what scholars have been asserting for years on the origins of Christmas. Archbishop Pantin essentially officially confirmed the celebration of Christmas was 'borrowed' from pre-Christian religions. This type of 'borrowing' was not new to Christianity that aggressively practised a process of inculturalisation in order increase its mass appeal and thereby win as many converts as possible. The practice is still employed by missionaries in Asia and even in Trinidad. What Archbishop Pantin did not develop was the celebration of the birth of the divine being was borrowed from a Hindu Deity. It is time that Hindus re-claim this celebration and its Hindu roots rather then to let continue to be hijacked by Christian mythology.

The festival that is now known as Christmas was actually a celebration for the Vedic Deity Mitra. According to "A Classical Dictionary of Hindu Mythology and Religion" by John Dowson [1998] the Hindu Mitra was connected to the Persian Mithra which later was adopted by Rome. Mitra was a form of the sun, and in the Vedas he is generally associated with Varuna. Will Durant's "The Story of Civilisation, Volume III. Caesar and Christ" [1944] wrote "as far back as the second century the Eastern Christians celebrated the nativity on January 06th. In 354 some Western churches, including those of Rome, commemorated the birth of Christ on December 25th; it was ALREADY the central festival of Mitraism, the natalis invivti solis, or birthday of the unconquered sun".

The Christmas date of December 25 was originally the celebrated birthdate of the Roman version of Mitras. The 4th-5th century Church decided to 'borrow' that date for the sake of establishing a national holiday. The Iranian version of Mit(h)ra was called the "Light of the World" is another interesting fact to note. Mithraism explained the world in terms of two ultimate and opposing principles, one good (depicted as light) and the other evil (darkness). Human beings must choose which side they will fight for; they are trapped in the conflict between light and darkness. Mithra came to be regarded as the most powerful mediator who could help humans ward off attacks from demonic forces.

In the religions of antiquity the vast majority of the pre-modern world was syncretistic, meaning that one religion would often incorporate the myth and ritual of other cults with which it came in contact. Often the deities would simply change names. This suggests that we may be comparing Jesus (one individual) to the combined characteristics of multiple agents that are all called by the SAME NAME. Mitra--he is a mixture of Hindu Iranian, Greek, and Roman religious beliefs. Both Hindu and Iranian Mithraism predates Jesus .

Hindu thought was filtered to the West via Greek colonies which are known to have existed in India prior the time of the Buddha in the 6th century B.C.E. The Buddha actually refers to the Greeks in a discourse in the Middle Length Sayings. Alexander the Great's invasion brought Hellenism to India during the rise of the brilliant Mauryan empire (322-185 B.C.E.) in Northern India, and had significant impact on the upper class and urban segments.

After Alexander died, his empire divided into several pieces--one of which was called the Seleucid dynasty. In spite of the fact that the Seleucid and Mauryan dynasties were border-competitors, they still had a great deal of friendly interchange between them, and the first two kings of the Mauryan dynasty are referred to in Greek sources.

The peace treaty between them in 303 BCE included a marriage alliance, and Seleucus' ambassador Megasthenes lived for 10 years and travelled extensively in the Mauryan empire during the reign of the founding king Chandragupta (Sandrocottos in the Greek). Megasthenes gathered huge amounts of information about India and wrote a book (which is lost), many parts/information of which are preserved in the writings of Strabo, Arrian, and Diodorus.

One of the most famous of the kings of this dynasty was Ashoka. Although he is not mentioned in any Greek sources, he "records having sent missions from India bearing his message of the victory of the Dharma to the Greek kings Antiochus II of Syria, Ptolemy II (Philadelphus) of Egypt, Antigonus Gonatas of Macedonia, Magas of Cyrene and Alexander of Epirius."

Until his death in 232 BCE, he maintained frequent communications with the south and the west, even sending missionaries to Ceylon and to the West. Historical data and quotes shows, there was information about the religious content of proto-Hinduism transmitted to the West, and even about Buddhism. The last two centuries B.C.E saw the rise of the Parthian empire, which quickly became a barrier to cultural exchange.

There are material, significant, and pervasive similarities between Jesus Christ and other Savior-figures, and that these similarities are best explained by the hypothesis that the figure of Jesus is materially derived from or heavily influenced by these other Dying God/Savior-figures. The similarities between Jesus and the other relevant Savior-gods are material, significant, and pervasive enough to suspect a liberal borrowing. Scholars have proposed several theories to account for the obvious similarities between Christianity and the mystery religions. The birth and celebration of Christmas as a Christian festival is merely an example of one such borrowing.

Buddhism in Christianity
http://www.hindunet.org/alt_hindu/1995_May_2/msg00015.html

A few months ago, I heard Jesus quoted "even to have an angry thought" was as punishable as actually murdering someone. This idea seemed to have a direct correlation with the Buddhist idea of "mental volition", that even our thoughts create karma. This seemingly obvious connection poses the question: what other teachings of Jesus Christ could be found mirrored in the teaching of Gautama Buddha?

There are three main types of literature on the subject: First, books that date from the end of the nineteenth century which attempt to show that there was Buddhist influence in the fertile crescent and in Greece during the years before the birth of Jesus. This speculation arose as a result of the translations of Buddhist texts into European languages that occurred during the British colonialism of India. Scholars recognized the similarity in the stories of the births and life styles of Jesus and Buddha. It was also noted that many of their teachings were parallel. In these seminal works there is much speculation about Buddhist influence in early Christianity. These books are often scholarly works that use sources such as the records of historians who were roughly contemporary with Jesus, and other texts: Biblical (Christian, Jewish), Greek and Arabic, in an attempt show an historical connection between the two religious traditions.

The second type of literature is the New Age genre books that attempt to tie the two masters together as emanations from the same cosmic divine source. In this group there is even a fairly extensive body of literature that claims that Jesus went to India and there studied from Hindu and Buddhist masters between the age of thirteen and thirty. These are referred to as the "lost years of Jesus".

The third type of literature, which could be called, "Creating a Christian-Buddhist Dialogue", seeks to compare and contrast the teachings of the two masters in an effort to

bridge the gap between cultures and make to the world a better place. This type of literature usually denies any borrowing or Buddhist influence in Christianity but does admit that certain elements within the two doctrines are similar..

Much of the early academic research that was done tended to center around the possibility of Buddhist influence in Palestine and in Greece during the two centuries prior to the birth of Christ. In India, around 270 B.C., the great king Ashoka ascended the throne, and after his conversation to Buddhism, he sent missionaries around the world to preach the word of the Lord Buddha. There are records, left by Ashoka, that indicate that "his missions were favorably received" in countries to the West. There are also records from Alexandria that indicate a steady stream of Buddhist monks and philosophers who, living in that area, which was at the crossroads of commerce and ideas, influenced the philosophical currents of the time.

There are strong similarities between Buddhist monastic teachings and Jewish ascetic sects, such as the Essenes, that were part of the spiritual environment of Palestine at the time of Christ's birth. The Essenes were a monastic order that did not marry. They lived in the desert and were very simple in their life styles. They did not believe in animal sacrifice and were vegetarians. They believed in the pre-existence of the soul and in angels as divine intermediaries or messengers from God. They were famous for their powers of endurance, simple piety and brotherly love. They were interested in magical arts and the occult sciences. John the Baptist was an Essene. His time of preparation was spent in the wilderness near the Dead Sea. Jesus was greatly influenced by his stay with John the Baptist. Many of the basic tenets found in the teachings of Jesus can be traced back to the ideas flourishing among groups such as the Essenes. Were these groups indeed influenced through several centuries of dialogue with Buddhist monks who traveled through Palestine?

Before, during, and after the death of Christ, there were Buddhist missionaries who visited Greece, Egypt and other countries in the Mediterranean area. One such visit is documented in 20 B.C. in Athens. In this account an ambassador from India was accompanied by a Buddhist philosopher who burned himself (to prove some point of impermanence?). His tomb became a famous tourist attraction and is mentioned by several historians. It has been argued that in St. Paul's first letter to the Corinthians, he alludes to this well known event when he writes that "though I give my body to be burned, and have not love, it profits me nothing."

The fact that there was commercial trade between the Indian Subcontinent and Mesopotamia, Syria, Egypt and the countries of the Fertile Crescent, for almost 2500 years before the birth of Christ is well documented. Cuneiform records dating from 2400 B.C. describe shipments of cotton cloth, spices, oil, grains, and such exotic items as peacocks from the Indus Valley region. Ideas as well as merchandise had been exchanged between the Middle East and India for centuries. Pythagoris is said to have been influenced by Oriental ideas and a Greek prince, Seleucus Nikator, shortly after the time of Alexander the Great, gave his daughter in marriage to the Indian sovereign and sent an ambassador, Megasthenes, to the court of Chandragupta, who was the grandfather of Ashoka. There were practitioners of Buddhism, living in the western parts of Askoka's empire who were from Greece and also from Palestine. This is known because one of the famous edicts of Ashoka, carved on a pillar in what is now the country of Afghanistan, is written in both in Greek and Aramaic, the languages spoken in Palestine at the time.

Stories of Buddhist origin, and some of the basic concepts of Buddhism, were known in the West prior to, during, and after the time of Jesus. The most famous Buddhist story that made its way into Christendom, is the tale of "Barlaam and Josephat," which enjoyed considerable notoriety during the Middle Ages and ultimately resulted in the canonization, in the sixteenth century, of Buddha, as a Catholic saint. In the story of Barlaam and Josephat, Josephat, which is a corrupted version of the word "Boddhisattva", was an Indian prince who was heir apparent to a throne occupied by his father, a tyrannical idolater who persecuted Christians. At Josephat's birth prophets predicted his future greatness as successor to the king, but one wise man said that the prince would achieve greatness not as a worldly king, but because he would convert to Christianity. To shelter his son, and prevent his conversion, the king kept him locked in the palace. Eventually, the young prince was allowed to leave the palace and saw a crippled man, a blind man and a senile man, and so learned of life's darker side (that life is suffering?). Josephat soon met a monk named Barlaam, who converted him to Christianity. The story continues that when Josephat went to search for Barlaam he had to suffer austerities and was tempted by the devil to give up his faith. He eventually found Barlaam and the two

lived as hermits until their deaths. Relics of these saints were worshipped in Europe and there were several churches built to Josephat in Russia, one in Vienna and in Portugal. As I said, they were canonized by the Catholic Church in the 16th century... Saint Josephat, the Boddhisattva.

Anyone who knows the story of the life of the Buddha will see the exact repetition of the tale in the story of Barlaam and Josephat: The fact that he was an Indian prince even provides the correct setting, the predictions at his birth of spiritual greatness, his early life spent locked in the castle and finally his exposure to people in pain and old age which led, in the case of the Boddhisattva, to enlightenment and in the case of Josephat to conversion. Even the austerities and temptations that they had to endure are parallel. There is no doubt that this is a Buddhist story transplanted and retold within a Christian context. The Buddhist origins of the story were obscured when the tale was retold in Europe, but earlier versions of the story exist in Arabic, which do not refer to Josephat's conversion, but which testify to the story's Buddhist roots. The fact that Saint Josephat was very popular in Europe, where his relics were worshipped, is an ironic aspect of this borrowing theory of Buddhist influence on Christianity since some scholars theorize that relic worship is a Buddhist implant into early Christianity. There are other Christian stories that have their origins in the Buddhist Jatakas Tales such as the conversion of the Roman general Placides, who was converted while hunting a beautiful deer.

There are numerous elements in Christian practices that could have originated from the many Buddhist missionaries who traveled from India spreading the teachings of the Buddha. Philosophically, Alexandria in Egypt was the center of early Christian thought. There is mention of a teacher called Ammonius Sakka, who had a great influence on the thinkers of the first century of the common era. Some scholars speculate that Ammonius Sakka could be a reversed form of "Sakya - Muni", one of the names of the Buddha, which means "the sage of the Sakya clan". (Sakya was Buddha's family name.) This philosopher-teacher who believed in reincarnation, has been called a Neo-Platonist. He was the teacher of Plotinus and Origen. Origen who was one of the early philosophers of the Christian church whose writings were later expunged at the Council of Nicea.

What are some other points of convergence between the practices of Christianity and Buddhism? There are a wealth of similarities: shaving or cutting of the hair of monastic initiates, ringing of bells, domed basilicas, shared legends, the practice of confession, relic veneration, celibacy, rosaries, monasticism, and the burning of incense. A comparison of the Sermon on the Mount with verses from the Dhammapada, yields a rich collection of interconnections and similarities. Even if some of these similarities are synchronistic in nature and are not borrowed, nonetheless, there are still many elements that have distinctive Buddhist overtones and which are not found within the predominant Jewish practices of the time. There are many stories about the life of Jesus and Buddha that are so similar that it is hard to believe that there was not some borrowing or merging of myths that occurred.

The story of the conception and birth of Christ in the Gospel of Luke has an uncanny resemblance to the birth stories of Buddha. In both cases the mother was a pure woman who had a vision and from this vision became pregnant with a extraordinary child, without the help of sexual intercourse. At their birth, each baby was surrounded by persons and events that marked them for greatness. Each was delivered outside while the mother was on a journey. Their births were both announced by angels in the heavens. It may be hard for us creatures of the twentieth century to appreciate the role of angels, but previously, they played an important part in the scheme of things: bringing messages, making great spiritual announcement with pomp and splendor. After the birth of Buddha a hermit sage, who had heard the celebrations of the angels, was told by them with great rejoicing that "In the city of Kaplilavastu, to king Suddhodana, a son is born. This boy will sit on the throne of enlightenment and become a Buddha." In the Christian story, the angels appeared in great awe-inspiring beauty and told the shepherds that a child was born that day who is Christ the Lord. The story of the conception and birth of Christ in the Gospel of Luke has an uncanny resemblance to the birth stories of Buddha. In both cases the mother was a pure woman who had a vision and from this vision became pregnant with a extraordinary child, without the help of sexual intercourse. At their birth, each baby was surrounded by persons and events that marked them for greatness. Each was delivered outside while the mother was on a journey. Their births were both announced by angels in the heavens. It may be hard for us creatures of the twentieth century to appreciate the role of angels, but previously, they played an important part in the scheme of things: bringing messages, making great spiritual announcement with pomp and splendor.

After the birth of Buddha a hermit sage, who had heard the celebrations of the angels, was told by them with great rejoicing that "In the city of Kaplilavastu, to king Suddhodana, a son is born. This boy will sit on the throne of enlightenment and become a Buddha." In the Christian story, the angels appeared in great awe-inspiring beauty and told the shepherds that a child was born that day who is Christ the Lord. Both narratives stress the fact that at the birth of the infant, along with the angels, holy people came to pay homage to the savior who had descended into the world of humans. In the Bible there is a story about the righteous man Simeon, who was informed by the Holy Spirit that he "should not see death before he had seen the Lord's Christ." Inspired by the Spirit, he came to the temple on the day that Jesus was brought in for his naming ceremony, where he took the child into his arms and said that he was destined for greatness. Mary and Joseph marveled at the words of this old sage. In the Buddhist story the hermit Asita performed the same role in announcing to the amazed parents that this child was destined for spiritual greatness. In both stories an elderly wise man was the first to inform the parents that their sons were no ordinary boys.

The Biblical accounts of the birth of Christ are somewhat different in Luke and in Matthew. In Matthew the account of the visitation by the Magi is dealt with in great detail. These Magi were astrologers from the East, where astrology had been a developed science for centuries. They represented the pinnacle of foreign scholarly achievement; and it was they, rather than the Hebrew, who were able to discern that the baby who lay in the

manger in Bethlehem was a very special child. The word "Magi," is a Persian word that named a class of learned men who sought to master the occult sciences. This is the root of our word, Magic. Only later were they referred to as kings, initially they were called Holy Men. References to Magi in the Palestine of Jesus's day usually had negative connotations, but in Matthew's account, the reference is quite positive. Similarly, the infant Gautama was first adored by four divine archangels who presided over his birth in the wooded grove near Lumbini. Later, sages came to pay homage to the child and amazed his father. In both stories there is a reference to a star that announces the birth of the great child.

There are other similarities in the lives of these two great beings. Some may say that this type of comparison is inevitable when great spiritual leaders come into the world. However, some of the events in their lives have quite a resemblance. Both Buddha and Christ were precocious youths who confounded their teachers with their gifted knowledge. Both began their spiritual quest at about the age of thirty. Both fasted and prayed in the wilderness and both were tempted by the devil while practicing these austerities. The setting of these two accounts is almost identical as are the events. Both men were fasting when tempted by the devil who tried to entice them into worldly pleasures and trick them into using the magical powers that they possessed. Both men overcame the temptation and soon left their seclusion and took up the mission of a life of teaching and traveling. Jesus's life at this time seems very much like the age-old life of an Indian mystic or holy man. He traveled from village to village and lived off the hospitality of the people of the village. There are some differences, but, nonetheless, both Buddha and Christ got into trouble with the ruling aristocracies by their deliberate blindness to social status and by taking food and refuge from courtesans and prostitutes.

Both masters told their disciples to leave behind their homes and families and to follow him. Both sent his followers out to preach their message. Both were social revolutionaries who reacted against the conservative elements of their time. Both put an end to animal sacrifice which was popular in both Hinduism and Judaism. As you can see there are great similarities in the lives of these two great beings. Both forgave evil doers, both conquered death in a metaphysical sense. The earth shook when each of them died. Their messages are also similar: they told their followers to overcome anger, to practice non-violence, to "turn the other cheek" to be pure of mind and body.

There is, as well, the school of thought that says that Jesus traveled to India during the lost years of his youth. There is a temple in the state of Kashmir that is dedicated to Saint Issa. The priests say that Jesus traveled there two thousand years ago. Many of the miracles performed by Jesus are similar to miraculous powers possessed by holy men in India. Jesus even taught his disciples to perform these miracles such as Peter walking on the water. There is a work by a Russian who lived at the end of the 19th century, Nicolas Notovitch, who claims to have seen an ancient document that told the story of Saint Issa and his return to his home in the West and his subsequent violent death. These tales are unsubstantiated and somewhat fanciful, however the priests at the Kashmiri Temple to Saint Issa are devout and completely believe in the story. There are also visionaries such as Edgar Casey who had similar visions of Jesus. Jesus did adopt a remarkably Indian-like approach to wandering, begging and preaching immediately upon beginning his public career. There is, however, documented evidence that Buddhists traveled to the region where early Christianity was developing. It must be remembered that Christianity did not become the established religion for several hundred years and actually it was not the accepted religion of the European masses for almost a thousand years. During this period, when church theology was being formulated, there was much discussion about the true nature of the savior and many of the early ideas of the church were discarded in favor of ideas that would support the establishment of a centralized Church. These factors are a discussion for another time, but suffice it to say that many scholars have tried to prove that the Councils at Nicea expunged all references to reincarnation from the words of Jesus. He was after all, influenced by the Essenes, who did believed in transmigration of souls.

I realize that these ideas are heretical to some people. However to me, they are fascinating. That Jesus was divine, that He was God made man, I do not deny. I call Him an AVATAR, a Boddhisattva... but, I do not say that He is exclusive in this role.

Christianity: a naive beginning to a Buddhistic peace movement...(excerpts) The Will To Power
1888 By Nietzsche (1844-1900) the great German Philosopher, poet, classical philologist, who became one of the most provocative and influential thinkers of the 19th century. He was deeply influenced by Schopenhauer in his youth. One of the great European philosophers, **Friedrich Nietzsche's** beliefs were best expressed in his **Thus Spake Zarathustra,** in which his teachings are put into the mouth of the wandering prophet Zarathustra.

" Christianity: a naive beginning to a Buddhistic peace movement at the very seat of resentment - but reversed by Paul into a pagan mystery doctrine, which finally learns to treat with the entire state organization -wages war, condemns, tortures, swears, hates.

Paul starts from the need for a mystery felt by the broad, religiously excited masses: he seeks a sacrifice, a bloody phantasmogoria which will stand up in competition with the images of the mystery cults: God on the cross, blood-drinking, and unio mystica with the "sacrifice."

He seeks to bring the afterlife (the blissful, atoned afterlife of the individual soul) as resurrection into a casual relationship with that sacrifice (after the type of **Dionysus, Mithras, Osiris)**.

He needs to bring the concept of guilt and atonement into the foreground, not a new way of life (as Jesus himself had demonstrated and lived) but a new cult, a new faith, a faith in a miraculous transformation ("redemption" through faith).

He understood what the pagan world had the greatest need of, and from the facts of Christ's life and death made a quite arbitrary selection, giving everything a new accentuation, shifting the emphasis everywhere – he annulled primitive Christianity as a matter of principle.

The attempt to destroy priests and theologians culminated, thanks to Paul, in a new priesthood and theology - in a new ruling order and a church. The attempt to destroy the

exaggerated inflation of the "person" culminated in faith in the "eternal person" (in concern for "eternal salvation"), in the most paradoxical excess of personal egoism.

This is the humor of the situation, a tragic humor: Paul re-erected on a grand scale precisely that which Christ had annulled through his way of living. At last, when the church was complete, it sanctioned even the existence of the state."

Vedic Links to Judaism
Brahma/Saraswati - Abraham/Sarah?

According to **Dr. Venu Gopalacharya** " Abraham and Sarah (Sarai) refer to the Indian version of Brahma and Saraswati. This indicates that this is an abridgement of some of the versions in the Indian Puranas .

Dr. S. Radhakrishnan has informed in his book, **Pracya Mattu Paschatya Sanskriti,** that the Greeks asserted that the Jews were Indians whom the Syrians called Judea, the Sanskrit synonym of which is **Yadava** or Yaudheya, and the Indians called them Kalanis, meaning orthodox followers of the scriptures.

**

" The Jewish bible says that Abraham and Sarai went to the Middle East to escape a terrible flood that had taken place in their original homeland, at approximately the time that **Dwaraka** sank under the sea. I think it significant that Sarai was the half sister of Abraham and that Saraswati was the half sister of Brahma. Sarai had a handmaiden named Hagar. Ghaggar was a tributary of the river Saraswati. It would not surprise me if the tombs of Abraham and Sarai at Hebron, Israel are also those of Brahma and Saraswati. *There are even those who think that Jerusalem's Temple mount could be the resting place of Krishna.* There is no doubt. The **Yadavas** founded ancient Israel. The real name of the Jews, Yahuda, seems to suggest this." (refer to **www.viewpoint.com**.)

The Jews spell the name of the city of 'Yerushalayim,' of which the Sanskrit synonym is Yadu Ishalayam, which means the temple of the Lord of the Yadus (the descendents of Lord Krishna's clan.)
Star of David - the Jewish emblem consists of two interlocking triangles, one pointing up, the other down, which is a Trantic Vedic symbol or **Shri Yantra.**

Did You Know

Got the Time?

According to Astrophysicist **Carl Sagan**, the age of the universe is somewhere around 12 billion-years-old. The Hindu tradition has a day and night of Brahma in his range, somewhere in the region of 8.4 billion years.

Dr. Sagan said, "As far as I know, India is the only ancient religious tradition on the Earth which talks about the right time scale. In the West, people have the sense that what is natural is for the universe to be a few thousand years old, and that it is billions of years is mind-reeling, and no one can understand it. The Hindu concept is very clear. Here is a great world culture which has always talked about billions of years."

"The Hindu religion is the only one of the world's great faiths dedicated to the idea that the Cosmos itself undergoes an immense, indeed an infinite, number of deaths and rebirths. **It is the only religion in which the time scales correspond, to those of modern scientific cosmology.** Its cycles run from our ordinary day and night to a day and night of Brahma, 8.64 billion years long. Longer than the age of the Earth or the Sun and about half the time since the Big Bang. And there are much longer time scales still."

There is the deep and appealing notion that the universe is but the dream of the god who, after a Brahma years, dissolves himself into a dreamless sleep. The universe dissolves with him - until, after another Brahma century, he stirs, recomposes himself and begins again to dream the great cosmic dream.

Carl Sagan further says: " The most elegant and sublime of these is a representation of the creation of the universe at the beginning of each cosmic cycle, a motif known as the cosmic dance of Lord Shiva. The god, called in this manifestation **Nataraja, the Dance King.** In the upper right hand is a drum whose sound is the sound of creation. In the upper left hand is a tongue of flame, a reminder that the universe, now newly created, with billions of years from now will be utterly destroyed."

These profound and lovely images are, I like to imagine, a kind of premonition of modern astronomical ideas."

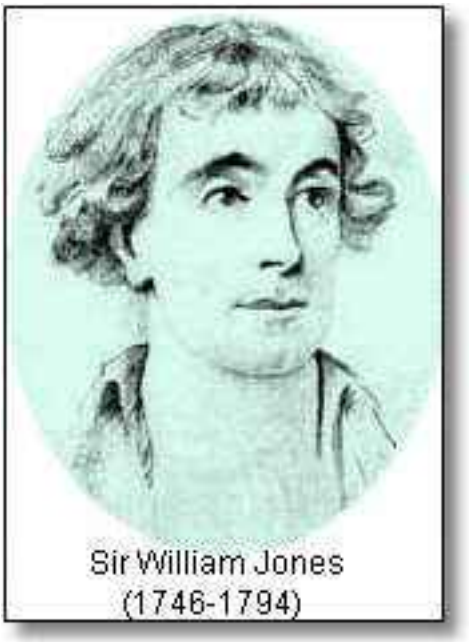
Guest Book

Updated - December 19, 2003

Sanskrit was considered as "Dev Bhasha", " Devavani "or the language of the Gods by ancient Indians. The word sanskrita, meaning "refined" or "purified," is the antonym of prakrita, meaning "natural," or "vulgar." It is made up of the primordial sounds, and is developed systematically to include the natural progressions of sounds as created in the human mouth. Jawaharlal Nehru has said that Sanskrit is a language amazingly rich, efflorescent, full of luxuriant growth of all kinds, and yet precise and strictly keeping within the framework of grammar which Panini laid down two thousand years ago. It spread out, added to its richness, became fuller and more ornate, but always it stuck to its original roots. The ancient Indians attached a great deal of importance to sound, and hence their writing, poetry or prose, had a rhythmic and musical quality. Our modern languages of India are children of Sanskrit, and to it owe most of their vocabulary and their forms of expressions.

The Sanskrit grammarians wished to construct a perfect language, which would belong to no one and thus belong to all, which would not develop but remain an ideal instrument of communication and culture for all peoples and all time.



SANSKRIT - The Language of Ancient India.

Sanskrit (meaning "cultured or refined"), the classical language of Hinduism, is the oldest and the most systematic language in the world. The vastness and the versatility, and power of expression can be appreciated by the fact that this language has 65 words to describe various forms of earth, 67 words for water, and over 250 words to describe rainfall.

Sanskrit was a complete success and became the language of all cultured people in India and in countries under Indian influence. All scientific, philosophical, historical works were henceforth written in Sanskrit, and important texts existing in other languages were translated and adapted into Sanskrit. For this reason, very few ancient literary, religious, or philosophical documents exits in India in other languages. The sheer volume of Sanskrit literature is immense, and it remains largely unexplored.

(source: **Virtue, Success, Pleasure, Liberation** - **By Alain Danielou** p.17).(For more about Indian influence in Southeast Asia, please refer to chapter on **Suvarnabhumi**)

Sir William Jones (1746-1794) came to India as a judge of the Supreme Court at Calcutta. He pioneered Sanskrit studies. His admiration for Indian thought and culture was almost limitless. He observed as long ago as 1784:

" The Sanskrit language, whatever be its antiquity, is of a wonderful structure; more perfect than the Greek, more copious than the Latin and more exquisitely refined than either: yet bearing to both of them a stronger affinity, both in the roots of verbs, and in the forms of grammar, than could possibly have been produced by accident; so strong indeed, that no philologer could examine them all without believing them to have sprung from some common source which perhaps no longer exists..."

(source: **Discovery of India - By Jawaharlal Nehru** pg 165).

Hindu literature is so vast, that he said: "human life would not be sufficient to make oneself acquainted with any considerable part of Hindu literature."

(source: **Hindu Superiority - By Har Bilas Sarda** p.205).

Alain Danielou (1907-1994) son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India and perhaps the first European to boldly proclaim his Hinduness. He settled in India for fifteen years in the study of Sanskrit. He had a wide effect upon Europe's understanding of Hinduism. He has observed:

"The creation of Sanskrit, the "refined" language, was a prodigious work on a grand scale. Grammarians and semanticists of genius undertook to create a perfect language, artificial and permanent, belonging to no one, that was to become the language of the entire culture. Sanskrit is built on a basis of Vedic and the Prakrits, but has a much more complex grammar, established according to a rigorous logic. **It has an immense vocabulary and a very adaptable grammar,** so that words can be grouped together to express any nuance of an idea, and verb forms can be found to cover any possibility of tense, such as future intentional in the past, present continuing into the future, and so on. Furthermore, Sanskrit possesses a wealth of abstract nouns, technical and philosophical terms unknown in any other language. Modern Indian scholars of Sanskrit culture have often remarked that many of the new concepts of nuclear physics or modern psychology are easy for them to grasp, since they correspond exactly to familiar notions of Sanskrit terminology."

(source: **A Brief History of India - By Alain Danielou** p. 57-58).

The renowned British Sanskrit scholar **Arthur Anthony Macdonell** (1854-1930) ummarized :

"Since the Renaissance there has been no event of such worldwide significance in the history of culture as the discovery of Sanskrit literature in the latter part of the eighteenth century."

(source: **In Search of The Cradle of Civilization: : New Light on Ancient India - By**

Georg Feuerstein, Subhash Kak & David Frawley p. 257).

In the opinion of **Friedrich Max Muller** (1823-1900) "Sanskrit is to the science of language what mathematics is to astronomy."

Schlegel in his book, **History of Literature**, says, "It has also the Divine afflatus of the Hebrew tongue."

(source: **The Soul of India - By Satyavrata R. Patel** p. 76-77).

Sir Monier-Williams (1819-1899) Orientalist, professor of Sanskrit at Oxford in 1860. He made a lengthy and learned introduction to his monumental work: Sanskrit-English Dictionary. In his book Hinduism, on page 13, he says:

"India though it has more than five hundred spoken dialects, has only one sacred language and only one sacred literature, accepted and revered by all adherence of Hinduism alike, however diverse in race, dialect, rank and creed. That language is Sanskrit and Sanskrit literature, the only repository of the Veda or knowledge in its widest sense, the only vehicle of Hindu mythology, philosophy, law, the mirror in which all the creeds, opinions, and customs and usages of the Hindus are faithfully reflected and the only quarry whence the requisite materials may be obtained for improving the vernaculars or for expressing important religious and scientific ideas."

Dr. T. W. Rhys Davids, famous Pali scholar has said: "The introduction of the use of Sanskrit as the lingu-franca is a turning point in the mental history of the Indian people. The causes that preceded it, the changes in the intellectual standpoint that went with it, the results that followed on both, are each of them of vital importance."

(source: **Cultural Heritage of Ancient India - By Sachindra Kumar Maity** p.48).

According to **Forbes** magazine, (July, 1987), "Sanskrit is the most convenient language for computer software programming."

(Source: **The Hindu Mind -Fundamentals of Hindu Religion and Philosophy for all Ages - By Bansi Pandit** pg - 307).

NASA and others have been looking at Sanskrit as a possible computer language since its syntax is perfect and leaves little room for error.

(source: American Sanskrit Institute **http://www.americansanskrit.com**)

NASA researcher, **Rick Briggs** has written:

"In ancient India the intention to discover truth was so consuming, that in the process, they discovered perhaps the most perfect tool for fulfilling such a search that the world has ever known -- the Sanskrit language. There is at least one language, Sanskrit, which for the duration of almost 1000 years was a living spoken language with a considerable literature of its own. Besides works of literary value, there was a long philosophical and grammatical tradition that has continued to exist with undiminished vigor until the present century. Among the accomplishments of the grammarians can be reckoned a method for paraphrasing

Sanskrit in a manner that is identical not only in essence but in form with current work in Artificial Intelligence. This article demonstrates that a natural language can serve as an artificial language also, and that much work in AI has been reinventing a wheel millennia old.

The discovery is of monumental significance. It is mind-boggling to consider that we have available to us a language which has been spoken for 4-7000 years that appears to be in every respect a perfect language designed for enlightened communication. But the most stunning aspect of the discovery is this: NASA the most advanced research center in the world for cutting edge technology has discovered that Sanskrit, the world's oldest spiritual language is the only unambiguous spoken language on the planet. Considering Sanskrit's status as a spiritual language, a further implication of this discovery is that the age old dichotomy between religion and science is an entirely unjustified one.

It is also relevant to note that in the last decade physicists have begun to comment on the striking similarities between their own discoveries and the discoveries made thousands of years ago in India which went on to form the basis of most Eastern religions.

Why has Sanskrit endured? Fundamentally it generates clarity and inspiration. And that clarity and inspiration is directly responsible for a brilliance of creative expression such as the world has rarely seen.

Another hope for the return of Sanskrit lies in computers. Sanskrit and computers are a perfect fit. The precision play of Sanskrit with computer tools will awaken the capacity in human beings to utilize their innate higher mental faculty with a momentum that would inevitably transform the world. In fact the mere learning of Sanskrit by large numbers of people in itself represents a quantum leap in consciousness, not to mention the rich endowment it will provide in the arena of future communication."

(source: **Knowledge Representation in Sanskrit and Artificial Intelligence - By Rick Briggs Artificial Intelligence Magazine** 6(1) 32-39 1985).

W. C. Taylor wrote in T**he Journal of Royal Asiatic Society**: "It was an astounding discovery that Hindustan possessed, in spite of the changes of realms and variety; a language, the parent of all those dialects that Europe has fondly called classical - the source alike of Greek flexibility and Roman strength. **A philosophy, compared with which, in point of age, the lessons of Pythagoras are but of yesterday,** and in point of daring speculation Plato's boldest efforts were tame and commonplace. A poetry more purely intellectual than any of those of which we had before any conception; and systems of science whose antiquity baffled all power of astronomical calculation. This literature, with all its colossal proportions, which can scarcely be described without the semblance of bombast and exaggeration claimed of course a place for itself - it stood alone, and it was able to stand alone.

"To acquire the mastery of this language is almost a labor of a life; **its literature seems exhaustless**. The utmost stretch of imagination can scarcely comprehend its boundless mythology. Its philosophy has touched upon every metaphysical difficulty; its legislation is as varied as the castes for which it was designed.'

Count Magnus Fredrik Ferdinand Bjornstjerna (1779-1847) says: "The literature of India makes us acquainted with a great nation of past ages, which grasped every branch of knowledge, and which will always occupy a distinguished place in the history of the civilization of mankind."

Rev. William Ward wrote: "No reasonable person will deny to the Hindus of former times the praise of very extensive learning. The variety of subjects upon which they wrote prove that almost every science was cultivated among them. The manner also in which they treated these subjects proves that the Hindus learned men yielded the palm of learning to scarcely any other of the ancients. The more their philosophical works and lawbooks are studied, the more will the enquirer be convinced of the depth of wisdom possessed by the authors.

Mrs. Charlotte Manning says: "The Hindus had the widest range of mind of which man was capable."

(source: **Hindu Superiority - By Har Bilas Sarda** p.201 - 203).

Jean Le Mee born in France in 1931 and studied Sanskrit at Columbia University, has observed:

"**Sanskrit is the artificial language par excellence, patiently refined sound by sound...embracing all the levels of being physical, emotional, intellectual and spiritual.** It is ideally suited to describe and govern the nature of phenomena from the spiritual level to the physical. This range of applicability in the realm of nature paradoxically makes this most artificial language the most natural language, the language of nature."

(source: **Hymns from the Rig Veda - By Jean LeMee** ISBN: 0394493540 1975. p. xii).

Friedrich Max Muller (1823-1900) in Science of Languages p. 203, calls Sanskrit the "language of languages", and remarks that "it has been truly said that Sanskrit is to the Science of language what Mathematics is to Astronomy."

(source: **Hindu Superiority - By Har Bilas Sarda** p.205).

S N Dasgupta and S. K. De have written:

"The majesty and grandeur of the Sanskrit language, the sonorousness of the word music, the rise and fall of the rhythm rolling in waves, the elasticity of meaning and the conventional atmosphere that appears in it have always made it charming to those for whom it was written. ...The wealth of imagery, the vividness of description of natural scenes, the underlying suggestiveness of higher ideals and the introduction of imposing personalities often lead great charm to Sanskrit poetry."

(source: **History of Sanskrit Literature - By Dasgupta, S. N. and S. K. De**).

"There is at least one language, Sanskrit, which for the duration of almost 1000 years was a living spoken language with a considerable literature of its own. Besides works of literary value, there was a long philosophical and grammatical tradition that has continued to exist with undiminished vigor until the present century. Among the accomplishments of the grammarians can be reckoned a method for paraphrasing Sanskrit in a manner that is identical not only in essence but in form with current work in Artificial Intelligence."

This paragraph demonstrates that a natural language can serve as an artificial language also, and that much work in AI has been reinventing a wheel millennia old. The discovery is of monumental significance. It is mind-boggling to consider that we have available to us a language which has been spoken for 4000-7000 years that appears to be in every respect a perfect language designed for enlightened communication. But the most stunning aspect of the discovery is this: NASA the most advanced research center in the world for cutting edge technology has discovered that Sanskrit, the world's oldest spiritual language is the only unambiguous spoken language on the planet."

The discussion until now has been about Sanskrit, the language of mathematical precision, the world's only unambiguous spoken language. But the linguistic perfection of Sanskrit offers only a partial explanation for its sustained presence in the world for at least 3000 years. High precision in and of itself is of limited scope. Generally it excites the brain but not the heart.

Sanskrit is indeed a perfect language in the same sense as mathematics, but Sanskrit is also a perfect language in the sense that, like music, it has the power to uplift the heart. Why has Sanskrit endured? Fundamentally it generates clarity and inspiration. And that clarity and inspiration is directly responsible for a brilliance of creative expression such as the world has rarely seen.

"The richness of Sanskrit language is almost beyond belief. Many centuries ago that language contained words to describe states of the conscious and the subconscious and the unconscious mind and a variety of other concepts which have been evolved by modern psychoanalysis and psyche-therapy. Further, it has many a word, of which there is no exact synonym even in the richest modern languages. **That is why some modern writers have been driven occasionally to use Sanskrit words when writing in English.**

Consider, for example, the following passage in **Dr. Raynor C. Johnson's The Imprisoned Splendour**.

"To facilitate discussion I propose to call this higher level **buddhi** (coming from a Sanskrit word meaning 'wisdom'). Buddhi apprehends Truth directly - fragments of truth only, of course...It offers no reason for its perceptions, but it makes no mistakes, and this wisdom is passed through the level of Mind, to be there clothed in intelligible form."

And the following words by **J. Robert Oppenheimer** in **Einstein: A Centenary Volume**:

" Einstein is also, and I think rightly, known as a man of very great goodwill and humanity. Indeed if I had to think of a single word for his attitude towards human problems, I would pick the **Sanskrit word Ahimsa**, not to hurt, harmlessness. "

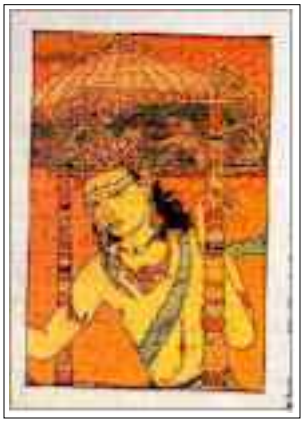
(source: **India's Priceless Heritage - By Nani Palkhivala** published by Bharati Vidya Bhavan 1980 p. 24-25).

Georges Ifrah (?) French historian of Mathematics and author of the book, **The Universal History of Numbers**

"Sanskrit means “complete”, “perfect” and “definitive”. In fact, this language is **extremely elaborate**, almost artificial, and is capable of describing multiple levels of meditation, states of consciousness and psychic, spiritual and even intellectual processes. As for vocabulary, its richness is considerable and highly diversified. Sanskrit has for centuries lent itself admirably to the diverse rules of prosody and versification. Thus we can see why poetry has played such a preponderant role in all of Indian culture and Sanskrit literature. "

(source: **The Universal History of Numbers - By Georges Ifrah** p. 431).

****



Joseph Campbell (1904-1987), was one of the foremost interpreters of myth in our time. **Campbell** was a prolific writer, dedicated editor, beloved teacher, inspiring lecturer, and an avid scholar of spiritual and cultural development. He referred to Sanskrit as:

"The great spiritual language of the world."

Alain Danielou (1907-1994) founded the Institute for Comparative Music Studies in Berlin and Venice, author of several books on the religion, history, and art of India. He said:

"Sanskrit is constructed like geometry and follows a rigorous logic. It is theoretically possible to explain the meaning of the words according to the combined sense of the relative letters, syllables and roots. Sanskrit has no meanings by connotations and consequently does not age. Panini's language is in no way different from that of Hindu scholars conferring in Sanskrit today."

(source: **Virtue, Success, Pleasure, Liberation - By Alain Danielou** p. 17).

No one has expressed this more eloquently than **Sri Aurobindo**, the great Indian sage and 20th century poet philosopher:

"The Ancient and classical creations of the Sanskrit tongue both in quality and in body and abundance of excellence, in their potent originality and force and beauty, in their substance and art and structure, in grandeur and justice and charm of speech and in the height and width of the reach of their spirit stand very evidently in the front rank among the world's great literatures.

The language itself, as has been universally recognized by those competent to form a judgment, is one of the most magnificent, the most perfect and wonderfully sufficient literary instruments developed by the human mind, at once majestic and sweet and flexible, strong and clearly-formed and full and vibrant and subtle, and its quality and character would be of itself a sufficient evidence of the character and quality of the race whose mind it expressed and the culture of which it was the reflecting medium.'

Professor A. L. Basham, taught at the School of Oriental and African Studies of the University of London. He has noted in his book **The Wonder That Was India**:

" Though its fame is much restricted by its specialized nature, there is no doubt that Panini's grammar is one of the greatest intellectual achievements of any ancient civilization, and the most detailed and scientific grammar composed before the 19th century in any part of the world."

(source: **The Wonder That Was India - By A. L. Basham** p. 390).

Cyril Edwin Mitchinson Joad (1891-1953) English philosopher and author of **The Story of Indian Civilization** has said:

"Sanskrit, a language which belongs to the Indo-European group and has been the chief literary vehicle of Indian thought, is an instrument admirably adapted to give expression to every subtlety of human thought, every nuance of human feeling...The writings of Indian poets and dramatists, historians and biographers, contain evidence not only of richness of imagination and variety of feeling, but of a remarkable talent for expressing precisely those adventures of the spirit, which chiefly give to human life its meaning and significance.

(source: **Indian Culture and the Modern Age - By Dewan Bahadur K. S. Ramaswami Sastri** Annamalai University. 1956 p.179-180).

Arnold Hermann Ludwig Heeran (1760-1842) in his Historical Researches Vol II p. 201, says: "The literature of the Sanskrit language incontestably belongs to a highly cultivated people, whom we may with great reason consider to have been the most informed of all the Epics. It is, at the same time, a scientific and a poetic literature." He also says: "Hindu literature is one of the richest in prose and poetry."

(source: **Hindu Superiority - By Har Bilas Sarda** p.203).

Judith H. Morrison has observed:

"Sanskrit is a beautiful, powerful, resonating language, with a structure and richness not found within most modern languages. The logic and beauty within Sanskrit reflect the two levels needed to appreciate Ayurveda fully..."

(source: **The Book of Ayurveda: A Holistic Approach to Health and Longevity - by**

Judith H. Morrison p. 17).

Grammar

The Sanskrit term for grammar is **vyakarana**, which etymologically means "differentiated analysis."

Panini's Sanskrit grammar, produced in about 1300 B. C. E. is the shortest and the fullest grammar in the world. Panini composed a Sanskrit grammar called the Ashtadhyayi. In 4,000 short verses, it revealed the inner mechanics of Sanskrit - how the language worked and how new words evolved.

Sir Monier-Williams (1819-1899) Orientalist, professor of Sanskrit at Oxford in 1860. He made a lengthy and learned introduction to his monumental work: Sanskrit-English Dictionary. He wrote:

"The Panini grammar reflects the wondrous capacity of the human brain, which till today no other country has been able to produce except India."

Panchavati

“By Sanskrit is meant the learned language of India - the language of its cultured

inhabitants, the language of its religion, its literature and science - not by any means a dead language, but one still spoken and written by educated men by all parts of the country, from Kashmir to Cape Comorin, from Bombay to Calcutta and Madras.

For example, the great linguist Panini gave the concept for meta-language-and constructed one-thousands of years before computer scientists began exploring the same idea. No one has been able to match him to this day.

The Sanskrit language is of wonderful structure, more perfect than the Greek, more copious than the Latin and more exquisitely refined than either. An example of the resemblance: the word for ten is dasha in Sanskrit, deka in Greek, and decem in Latin. Thousands of Sanskrit words such as pitah, brahta, raja have cognates in nearly all European languages. Based on the undeniable resemblance of these languages, philologists termed them Indo-European language.

"The grammar of Panini is one of the most remarkable literary works that the world has ever seen, and no other country can produce any grammatical system at all comparable to it, either for originality of plan or analytical subtlety."

His Sastras are a perfect miracle of condensation."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 229).

Albrecht Weber (1825-1901) author of **History of Indian Literature**, wrote:

"Panini's grammar is distinguished above all similar works of other countries partly by its thoroughly exhaustive investigation of the roots of the language, and the formation of words; partly by its sharp precision of expression, which indicates with an enigmatical succinctness whether forms come under the same or different rules. This is rendered possible by the employment of an algebraic terminology of arbitrary contrivance, the several parts of which stand to each other in the closest harmony, and which, by the very fact of its sufficing for all the phenomena which the language presents, bespeaks at once the marvelous ingenuity of its inventor, and his profound penetration of the entire material of the language."

(source: **Civilization Through the Ages - By P. N. Bose** p. 136).

Arthur A. Macdonell (1854-1930) author of **History of Sanskrit Literature** has remarked:

"The Sanskrit grammarians of India were the first to analyze word forms, to recognize the difference between root and suffix, to determine the functions of suffixes and on the whole to elaborate a grammatical system so accurate and complete as to be unparalleled in any other country."

(source: **Main Currents in Indian Culture - By S. Natarajan** p. 100 and **India's Past - By A A Macdonell** p. 123).

Horace Hyman Wilson (1786-1860) says: "The Hindus had a copious and a cultivated language."

"The Sanskrit," says **Arnold Hermann Ludwig Heeran** (1760-1842) writes in **Historical Researches** vol. II p. 109-110, "we can safely assert to be one of the richest and most refined of any. It has, moreover, reached a high degree of cultivation, and the richness of its philosophy is no way inferior to its poetic beauties, as it presents us with an **abundance of technical terms to express the most abstract ideas."**

The distinguished German critic, **Schlegal**, in **History of Literature** p. 117, says:

"Justly it is called Sanskrit, ie. perfected, finished. In its structure and grammar, it closely resembles the Greek, but is infinitely more regular and therefore more simple, though not less rich. It combines fullness, indicative of Greek development, the brevity and nice accuracy of Latin; whilst having a near affinity to the Persian and German roots, it is distinguished by expression as enthusiastic and forcible as theirs."

He again says: "The Sanskrit combines these various qualities, possessed separately by other tongues: Grecian copiousness, deep-toned Roman force, the divine afflatus characterizing the Hebrew tongue." He also says: Judged by an organic standard of the principal elements of language, the Sanskrit excels in grammatical structure, and is, indeed, the most perfectly developed of all idioms, not excepting Greek and Latin."

The importance of this "language of languages" is clearly recognized when we consider, with **Sir William Wilson Hunter**, the fact that "the modern philology dates from the study of Sanskrit by the Europeans."

"I am not a little surprised to find that out of ten words in Du Perron's Zind Dictionary six or seven were pure Sanskrit." wrote **Sir William Jones.**

Mons. Dubois says that Sanskrit is the original source of all the European languages of the present day.

(source: **Hindu Superiority - By Har Bilas Sarda** p.205 - 207).

William Ward (1769-1823) notes: "These grammars are very numerous, and reflect the highest credit on the ingenuity of their authors. Indeed, in philology the Hindoos have perhaps excelled both the ancients and the moderns."

(source: **A View of the History, Literature, and Mythology of the Hindoos - By William Ward** volume II p 469 London 1822).

***

"Probably in no other single sphere have Western scholars been so indebted to traditional India as in that of grammar. "

Sir William Wilson Hunter (1840-1900) has observed:

"The grammar of **Panini** stands supreme among the grammars of the world, alike for its precision of statement, and for its thorough analysis of the roots of the language and of the formative principles of words. By employing an algebraic terminology it attains a sharp succinctness unrivalled in brevity, but at times enigmatical. **It arranges, in logical harmony, the whole phenomena which the Sanskrit language presents, and stands forth as one of the most splendid achievements of human invention and industry.** So elaborate is the structure, that doubts have arisen whether its complex rules of

formation and phonetic change, its polysyllabic derivatives, its ten conjugations with their multiform aorists and long array of tenses, could ever have been the spoken language of a people."

(source: **The Indian Empire - By Sir William Wilson Hunter** p. 142).

Sir John Woodroffe aka **Arthur Avalon** (1865-1936) the well known scholar, Advocate-General of Bengal and sometime Legal Member of the Government of India. He served with competence for eighteen years and in 1915 officiated as Chief Justice.

He wondered why Sanskrit was not taught in British India:

"As regard the first point I am told that in an Indian University even Sanskrit is taught in English which means that only those who know the latter tongue can learn the classic language of event their own country. To me this seems an absurdity…In the same institution a European Sanskrit grammar is prescribed, the production of which was paid for at a larger price than would be offered to any Indian. Who offered it? Not the English. The Indian cannot I suppose write a grammar. **Yet India has Panini, Patanjali, Patanjali's Mahabhasya, Supadma, Kalapa, the Vakyapadiya, Bhopadeva, Sangkshiptasara, Siddantakaumudi, Laghukaumudi, amongst the ancient,** while the Vyakarana Kaumudi, Upakramanika of Ishvara Chandra Vidyasagara, and the Ashubodha of Taranatha Vachaspati head the moderns. How is it that all these have been displaced? A distinguished European Sanskritist once aksed me where I had learned Sanskrit, but that I had been and was still learning Sanskrit in this country. "Oh what a pity," he said, "Why" I asked? "They cannot teach Sanskrit in this country: they have no system." He replied. I laughed**. "They cannot teach Sanskrit in this country." – the country of Panini the founder of the science of language, the greatest grammarian the world had known,** and of innumerable pandits, men of real learning, few though men of the highest attainment now be. How has Sanskrit learning come down to us today if no one has been able to teach it?

(source: **Bharata Shakti – Collection of Addresses on Indian Culture - By Sir John Woodroffe** - Ganesh & co. Madras1921 p. xix xx). For more on Sir John Woodroffe refer to **Quotes 251-270**).

Albrecht Weber (1825-1901) is laudatory in his appraisal of the achievement of Panini. He wrote:

"We pass at once into the magnificent edifice which bears the name of Panini as its architect and which justly commands the wonder and admiration of everyone who enters, and which, by the very fact of its sufficing for all the phenomenon which language presents, bespeaks at once the marvelous ingenuity of its inventor and his profound penetration of the entire material of the language."

(source: **Yoga: A Vision of its Future - By Gopi Krishna** p. 123).

Mrs. Charlotte Manning says: "The celebrated Panini bequeathed to posterity one of the oldest and most renowned books ever written in any language."

"The scientific completeness of Sanskrit grammar appeared to Sir William Jones so unaccountable that he wrote it with amazement and admiration."

Mrs. Manning further wrote: "Sanskrit grammar is evidently far superior to the kind of grammar which for the most part has contented grammarians in Europe." "Vyakrana," says the same authoress, "was not merely grammar in the lower acceptance of being an explanationo f declension, conjugation and other grammatical forms, but was from its commencement a scientific grammar or grammatical science in the highest sense which can be attributed to this term."

Lord Mountstuart Elphinstone observed: "His work (Panini's) and those of his successors have established a system of grammar, the most complete that ever was employed in arranging elements of human speech."

Friedrich Max Muller (1823-1900) wrote: "Their (Hindus) achievements in grammatical analysis are still unsurpassed in the grammatical literature of any nation."

"Panini, Katyayana, and Patanjali, are the canonical triad of grammarians of India," and, to quote Mrs. Manning once more, "such (grammatical) works are originated as are unrivalled in the literary history of other nations."

William Ward (1769-1823) author of **A view of the history, literature, and mythology of the Hindoos**, says: "Their grammars are very numerous and reflect the highest credit on the ingenuity of their authors."

As regards lexicons, Ward says: "Their dictionaries also do the highest credit to the Hindu learned men, and prove how highly the Sanskrit was cultivated in former periods."

Alexander Thomson, the late Principal of the Agra College, and one of the best philologist in India, used to say that **the consonantal division of the alphabet of the Sanskrit language was a more wonderful feat of human genius than any the world has yet seen."**

(source: **Hindu Superiority - By Har Bilas Sarda** p. 225-230).

Walter Eugene Clark writes in **The Legacy of India**, p. 339-340:

"Panini's grammar is the earliest scientific grammar in the world, the earliest extant grammar of any language, and one of the greatest ever written. It was the discovery of Sanskrit by the West, at the end of the 18th century, and the study of Indian methods of analyzing language that revolutionized our study of language and grammar, and gave rise to our science of comparative philology. The most striking feature of Sanskrit grammar is its objective resolution of speech and language into their component elements, and definition of the functions of these elements. Long before Panini (who names over sixty predecessors) the sounds represented by the letters of the alphabet had been arranged in an overly systematic form, vowels and diphthongs separated from mutes, semi-vowels, and sibilants, and the sounds in each group arranged according to places in the mouth where produced (gutturals, palatals, cerebrals, dentals, and labials). Words were analyzed into roots of which complex words grew by the addition of prefixes and suffixes. General

rules were worked out, defining the conditions according to which consonants and vowels influence each other, undergo change, or drop out. The study of language in India was much more objective and scientific than in Greece or Rome. The interest was in empirical investigation of language, rather than philosophical and syntactical. Indian study of language was as objective as the dissection of a body by an anatomist."

(source: **Our Heritage and Its Significance - By Shripad Rama Sharma** p. 152-153).

Leonard Bloomfield's (1887-1949) American linguist and author of **Language**, published in 1933) characterization of **Panini's Astadhyayi ("The Eight Books")**

"**as one of the greatest monuments of human intelligence is by no means an exaggeration; no one who has had even a small acquaintance with that most remarkable book could fail to agree.** In some four thousand sutras or aphorisms - some of them no more than a single syllable in length - Panini sums up the grammar not only of his own spoken language, but of that of the Vedic period as well. The work is the more remarkable when we consider that the author did not write it down but rather worked it all out of his head, as it were. Panini's disciples committed the work to memory and in turn passed it on in the same manner to their disciples; and though the Astadhayayi has long since been committed to writing, rote memorization of the work, with several of the more important commentaries, is still the approved method of studying grammar in India today, as indeed is true of most learning of the traditional culture."

While in the classical world scholars were dealing with language in a somewhat metaphysical way, the Indians were telling us what their language actually was, how it worked, and how it was put together. The methods and techniques for describing the structure of Sanskrit which we find in Panini have not been substantially bettered to this day in modern linguistic theory and practice. We today employ many devices in describing languages that were already known to Panini's first two commentators. The concept of "zero" which in mathematics is attributed to India, finds its place also in linguistics.

"It was in India, however, that there rose a body of knowledge which was destined to revolutionize European ideas about language. The Hindu grammar taught Europeans to analyze speech forms; when one compared the constituent parts, the resemblances, which hitherto had been vaguely recognized, could be set forth with certainty and precision."

(source: **Traditional India -** edited by **O. L. Chavarria-Aguilar** refer to chapter on **Grammar - By Leonard Bloomfield Hall -** Place of Publication: Englewood Cliffs, NJ Date of Publication: 1964 p. 109-113).

Cybernetics: NEW

It has even been suggested (by **Rick Briggs** NASA researcher - refer to **Quotes221_250**) that the 'structures' constructed by **Paanini** (followed by shaabdabodhas written later) could be useful in the development of efficient, high-level computing languages [we may presume here that these would eventually be based the systematics of deriving words from "roots" (dhaatus), avoiding the use of alphanumeric operator symbols, so characteristic of 'computer languages']. As of now, I understand that computer-based tests of the internal consistency of the

"Ashtaadhyaayee" are being developed by Dr. P. Ramanujan at the **Centre for Development of Advanced Computing. Software based on Paaninean rules for the retrieval of word forms has been developed at the Siddhaganga Mutt, Karnataka Research of an advanced nature is also being carried out at the Academy of Sanskrit Research, Melukote, also in Karnataka.** While these could be regarded as very active areas of fruitful investigation, the practicality of some suggestions on the possibility of using the structure of Sanskrt for machine translation (See, for example, a method of numerical representation of inflections put forward by the present writer in an article contributed to "Samskrti-94" (the 1994 issue of the organ of the Samskrta Sangha of the Indian Institute of Science), remains to be tested. Paanini's ideas may also contain the germ of an understanding, based on linguistics, that could lead to the unraveling of the connections between brain activity and how the apparatus of human speech works. The pertinence here is in trying to answer, for example, the question, "Why is it easier to say jagat + naatha as jagannaatha or abd-ul + rahman as abd-ur-rahman (both of which exactly follow the relevant Paninean rule, the second, from a Semitic language, showing the universal applicability of Paninean phonetics)? Such investigations can be expected to yield results only in the far future, however, after much greater progress has been achieved in understanding how the speech centres of the brain function.

Frederich von Schlegel, (1772-1829), German philosopher, critic, and writer, the most prominent founder of German Romanticism. Educated in law, he turned to writing. His brother, August Wilhelm von Schlegel, was a scholar and poet. With his brother, August Wilhelm, he published the Athenaeum, the principal organ of the romantic school. **Schlegel** study of Sanskrit and of Indian civilization, **On the Language and Wisdom of India** (1808), was outstanding. He said that:

"There is no language in the world, even Greek, which has the clarity and the philosophical precision of Sanskrit," adding that " India is not only at the origin of everything she is superior in everything, intellectually, religiously or politically and even the Greek heritage seems pale in comparison."

(source: **Arise O Arjuna - By Francois Gautier** ISBN 81-241-0518-9 Har-Anand Publications 2000 p. 25).

According to **Friedrich Max Muller** (1823-1900) even a modern language like English does not have sufficient means to express :

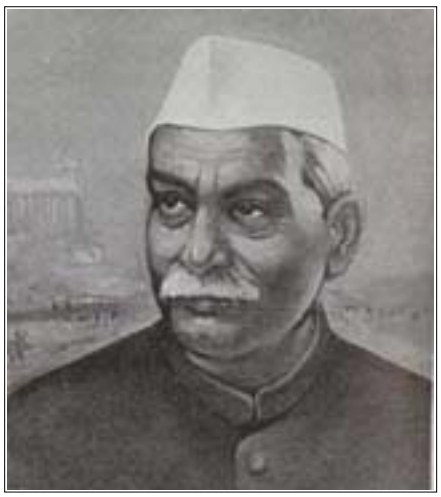
"high state of mental excitement" as done by Sanskrit. This shows the cultural development of the ancient Indians."

Max Muller continues his thoughts on the importance and primordiality of Vedic literature:

"Sanskrit no doubt has an immense advantage over all other ancient languages of the East. It is so attractive and has been so widely admired, that it almost seems at times to excite a certain amount of feminine jealously. We are ourselves Indo-Europeans. In a certain sense we are still speaking and thinking Sanskrit; or more correctly Sanskrit is like a dear aunt to us and she takes the place of a mother who is no more."

(source: **Chips From A German Workshop - By Max Muller** Volume I p 163).

Franz Bopp (1791-1867), German philologist, born in Mainz. He became professor of philology and Oriental literature at the University of Berlin. He became known as the founder of the science of comparative philology. Among his works is **A Comparative Grammar of the Sanskrit, Zend, Greek, Latin, Lithuanian, Gothic, German, and Slavonic Languages** (1816). 36 years later, in 1852, Worterbuch (dictionary) appeared in Sanskrit.



Arthur A. Macdonell (1854-1930) author of **History of Sanskrit Literature** Motilal Banarsidass Pub. ISBN: 8120800354 p. 717 has written:

"We Europeans, 2,500 years later, and in a scientific age, still employ an alphabet which is not only inadequate to represent all the sounds of our language, but even preserve the random order which vowels and consonants are jumbled up as they were in the Greek adaptation of the primitive Semitic arrangement of 3,000 years ago."

It is a Western deception of the Christian world to deny the Ancient Sanskrit language its due compliments.

Sardar K.M. Panikkar (1896-1963) pointed out:

"It is one common inheritance of Bharat. The unity of Bharat will collapse if it breaks away from Sanskrit and the Sanskritic traditions."

Dr. Rajendra Prasad (1884-1963) first President of India, said, "Sanskrit provided perhaps the most important focal point from which emanated cultural and political unity."

K. M. Munshi (1887-1971) aptly pointed out that "without Sanskrit Bharat would be nothing but a bundle of linguistic groups."

Shrimat Upendramohan, founder of Shastra Dharma Prachar Sabha, in his book **"Hindu Glory"** had written:

" The Sanskrit language is a marvel of marvels, an epitome of the people's genius, a picture of people's character, absolutely unique as a reflection of the perfect uniquity of the people of this land, of its social structure and of its Dharma. The vastness of the language, the copiousness of its lexicons, its fluidity or the capacity to embrace the existent and the non- existent equally

marks out the Sanskrit language as the language of languages, the language of the Gods (Deva Bhasa), the language of mere mortals, with their restricted notions, limited wants and closed outlook."

(source: **Reviving Sanskrit Teaching - By Mohan Gupta** **http://www.newsindia-times.com/20010622/viewpoint01.htm**)

Jawaharlal Nehru said: **"If I was asked what is the greatest treasure which India possesses and what is her greatest heritage, I would answer unhesitatingly that it is the Sanskrit language and literature and all that it contains. This is a magnificent inheritance, and so long as this endures and influences the life of our people, so long will the basic genius of India continue."**

(source: **Know your values - K R Malkani** **http://www.hindustantimes.com/nonfram/291101/detide01.asp**).

B S V Prasad has written: "Sanskrit literature is a perfect form of a perfect pleasure. It becomes a lifelong obsession for most connoisseurs; I know of no other body of literature that is so wholesome, so cultivating and uplifting, and so timeless in its appeal to readers. Sanskrit literature easily spans a period of some 5000 years; even though the language was no longer being spoken in the streets as far back as 1000 BC, literature continues to be created in Sanskrit to this day."

(source: **Kalidasa and Ancient India - B S V Prasad** - sulekha.com).

The sheer volume of Sanskrit literature is immense, and it remains largely unexplored. History, philosophy, music, astronomy, geography, medicine and other disciplines. It is an immense reservoir that needs to be tapped so that we understand our own history over the past five millennia.

Sanskrit is a very scientific language. Linguists hold that it shows no trace of a growing language. Its entire grammatical mechanism is perfected, every tense, mood, every number and person of the verb is fixed and all terminations of the casts are firmly established. The antiquity and affinity in forms of grammar and roots of verbs induces the linguists to believe that the Persian, Greek, Teutonic, Slavonic and Celtic races are probably descendents of a common ancestor. Professor **Leonard Bloomfield** (1887-1949) of Chicago University holds that Sanskrit language specially the scientific basis of its grammar is "one of the greatest monuments of human intelligence." William Humboldt of Germany is of opinion that language cannot be created artificially, it is the manifestation of power and divinity in man.

The first drama and musical notes are also supposed to have originated from the Vedas. The beautiful literature of the Hindus took thousands of years to develop. It raised the status of Indian civilization and culture. Without knowing this one cannot know the inner soul and glory of India. Speaking only of the vast Vedic literature, the wonderful manifestation of human genius developed through hearing alone. **Moriz Winternitz** (1863-1937) wrote, "As the Veda, because of its antiquity, stands at the head of Indian literature no one who has not gained an insight into the Vedic literature can understand the spiritual life and culture of the Indians."

(source: **Ancient Indian Culture at a Glance - By Swami Tattwananda** p. 93-94).

The Indian Theatre

The Indian Theatre - had its earliest beginnings in the Rig Veda which have a certain dramatic character. There are references to Nataka or the drama in the Ramayana and the Mahabharata. It began to take shape in the song and music and dances of the Krishna legends. Panini, the great grammarian of the 6th century B.C.E. mentions some dramatic forms. A **Natya Shastra - is a treatise on the Art of Theatre.**

The dramatic writings of the Hindus are equally remarkable. External nature, as might be expected in a country which is "the epitome of the world," is the special forte of the Hindu poets, and, in no country, ancient or modern, has Nature (in contradistinction to man) been treated so poetically or so extensively introduced in poetry. Creation in perfect harmony with nature is a feature of the Hindu drama. The characters are all creations, perfect in themselves and in their fidelity to nature.

With regard to the extent to which the dramatic literature has been cultivated in India, **Sir William Jones** says that the Hindu theatre would fill as many volumes as that of any nation of modern Europe. The Mohammedan conquest of India resulted in the effectual repression of Hindu dramatic writings. Instead of receiving further development, the Hindu drama rapidly declined, and a considerable part of this fascinating literature was forever lost.

Horace Hyman Wilson (1786-1860) says: "It may also be observed that the dramatic pieces which have come down to us are those of the highest order, defended by their intrinsic purity from the corrosion of time." Rupaka is the Hindu term for "Play," and "Dasa Rupaka" or description of the ten kinds of theatrical compositions, is one of the best treatises on dramatic literature and shows the extent to which dramatic literature was cultivated by the Hindus.

The best known dramatists of the Hindus are Kalidasa and Bhavbhuti. **Kalidasa, "one of the greatest dramatists the world has ever produced,"** flourished in the reign of Vikramaditya in the first century B.C. while Bhavbhuti lived many centuries later. The masterpieces of Kalidasa is the play of Shakuntala. The plot of this "astonishing literary performance," as a great German critic calls it, is taken from the Mahabharata.

Arnold Hermann Ludwig Heeran (1760-1842) speaks in rapturous terms of this **"far-famed drama," which is incomparable for its beauty, charm, tenderness and fidelity to nature, and which, in fact, stands at the head of the dramatic literature of the world.** He says: "And we must, in truth, allow Kalidasa to be one of those poets who have done honor not merely to their nation but to all civilized mankind."

Alexander Von Humboldt also notes the masterly mode in which Kalidasa describes "the influence of nature upon the minds of lovers, his tenderness in the expression of feelings, and above all the richness of his creative fancy" Her (Shakuntala's) love and sorrow," says **Sir William Wilson Hunter** (1840-1900) "have furnished a theme for the great, European poet of our age."

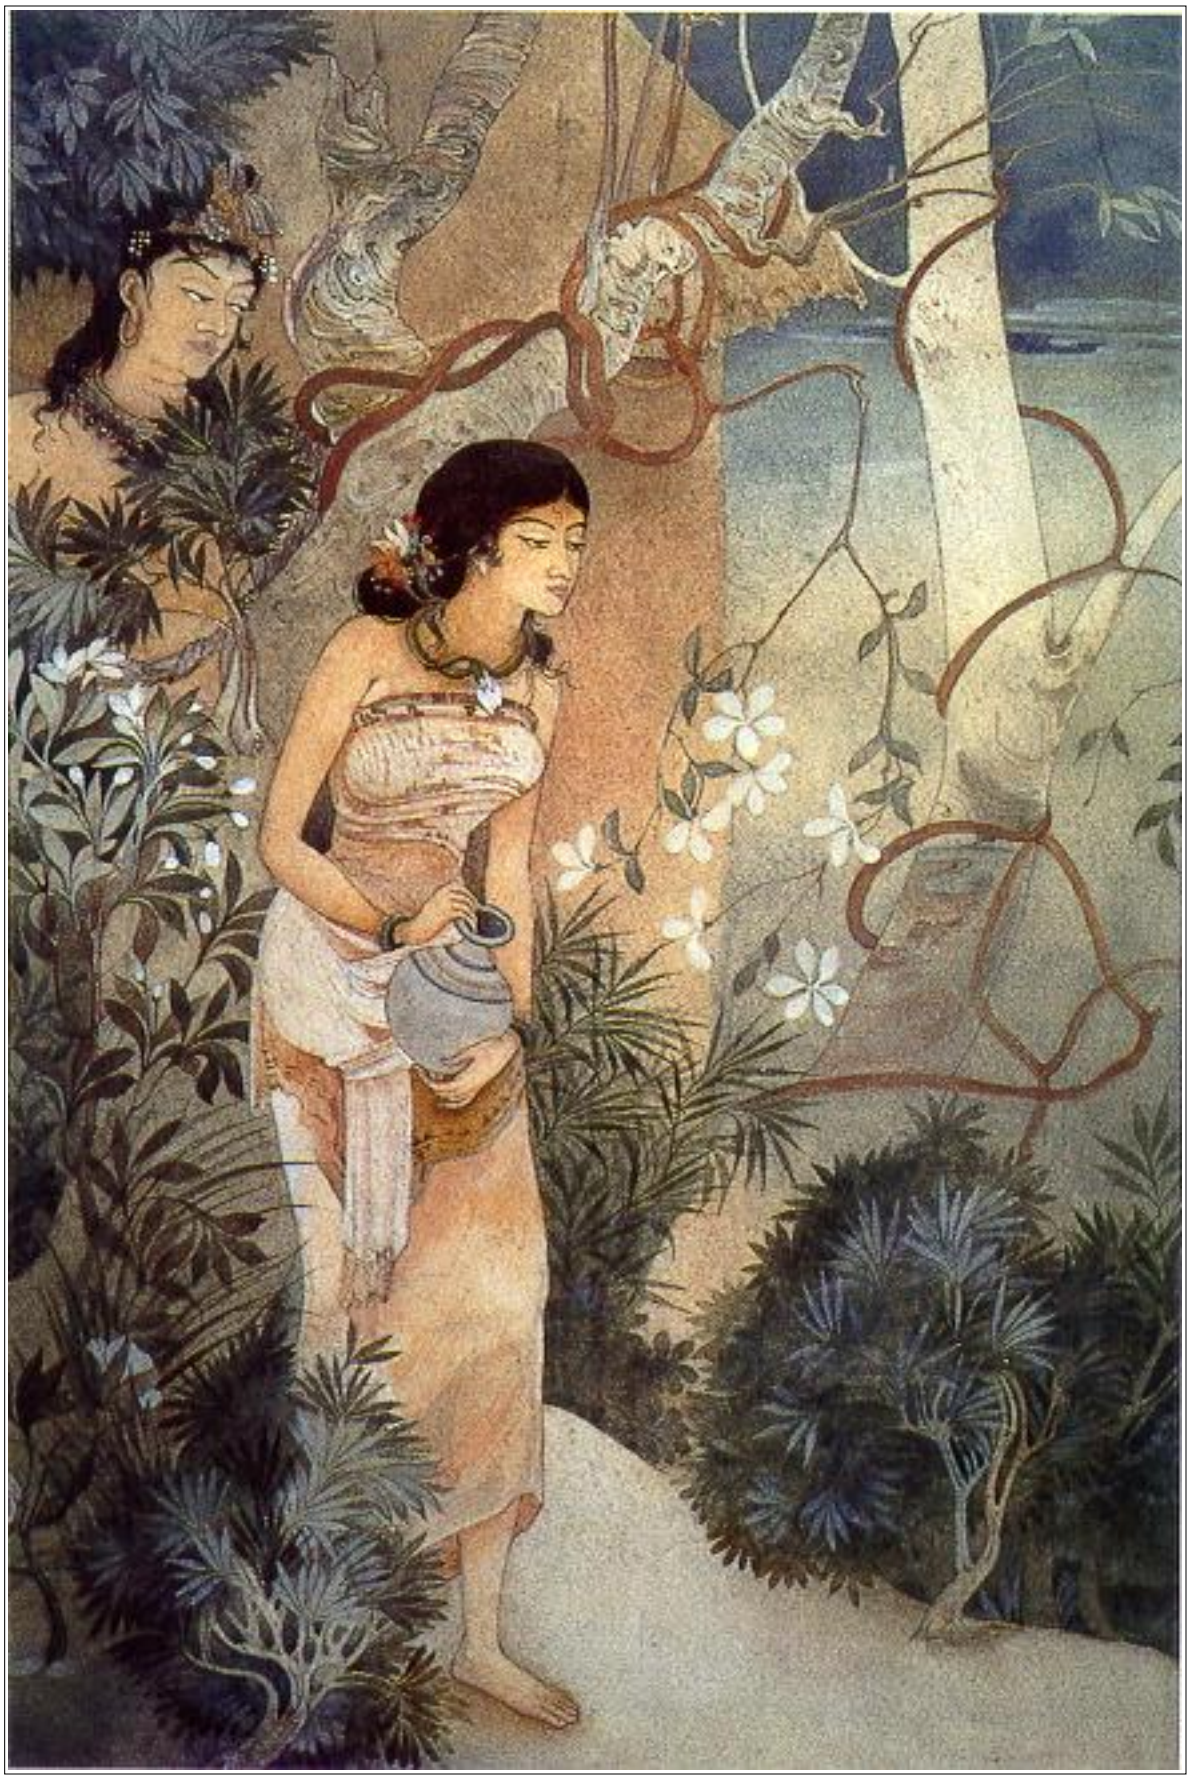
Europe first learned of the old Indian drama from **Sir William Jones's** translation of **Kalidasa's - 'Shakuntala,'** published in 1789. Something in the nature of commotion was created among European intellectuals by this discovery and several editions of the book followed. Translation also appeared in German, French, Danish, and Italian. Goethe was powerfully impressed and he paid a magnificent tribute to 'Shakuntala'. The idea of giving a prologue to Faust is said to have originated from Kalidasa's prologue, which was in accordance with the usual tradition of the Sanskrit drama. Kalidasa is acknowledged to be the greatest poet and dramatist of Sanskrit literature.

Professor Sylvain Levi, French scholar (1863-1935) Orientalist who wrote on Eastern religion, literature, and history. Levi was appointed a lecturer at the school of higher studies in Paris (1886), he taught Sanskrit at the Sorbonne (1889-94) and wrote his doctoral dissertation, **Le Théâtre indien** ("The Indian Theatre"). In **L'Inde et le monde** ("India and the World"), he discussed India's role among nations. **The Nataka, the Indian drama, says Levi, still remains the happiest invention of the Indian genius.** He said:

' Le nom de Kalidasa domine la poesie indienne et la resume brillamment. Le drama, l'epopee savante.'

(source: **The Discovery of India - by Jawaharlal Nehru** pg 159).

One of Kalidasa's long poems is the **Meghduta**, or **the Cloud Messenger.** A lover, made captive and separated from his beloved, asks a cloud, during the rainy season, to carry his message of desperate longing to her. To this poem and to Kalidasa, the American scholar, **Ryder**, has paid a splendid tribute. He refers to the two parts of the poem and says:



" The former half is a description of external nature, yet interwoven with human feelings; the latter half is a picture of human heart, yet the picture is framed in natural beauty. So exquisitely is the thing done that none can say which half is superior. Of those who read this perfect poem in the original text, some are moved by the one, some by the other."

(source: **The Discovery of India - by Jawaharlal Nehru** pg 159).

One of the lyrics, **Meghaduta** (The Cloud Messenger), influenced the German dramatist **Friedrich von Schiller's** drama *Maria Stuart* (1800), and **Shakuntala** provided the idea for the prologue to the German poet **Johann Wolfgang von Goethe's Faust** (first part, 1808; second, 1832).

"**Kalidasa understood in the fifth century what Europe did not learn until the 19th century, and even now comprehends only imperfectly, that the world was not made for man, that man reaches his full stature only as he realizes the dignity and worth of life that is not human. That Kalidasa seized this truth is a magnificent tribute to his intellectual power, a quality quite as necessary to great poetry as perfection of form. Poetical fluency is not rare; intellectual grasp is not very uncommon; but the combination of the two has not been found perhaps more than a dozen times since the world began. Because he possessed this harmonious combination, Kalidasa ranks not with Horace or Shelley, but with Sophocles, Virgil and Milton."**

(source: **The Discovery of India - By Jawaharlal Nehru** pg 159-160).

Shakuntala watercolor - By Kshitin Majumdar
(source: Art and Nationalism in Colonial India, 1850-1922 - By Partha Mitter fig. XXIX).

The ancient Indians attached a great deal of importance to sound, and hence their writing, poetry or prose, had a rhythmic and musical quality.

Vicomte de Francois Rene de Chateaubriand (1768-1848), who deeply influenced the Romantic movement in France, was an enthusiastic admirer of Shakuntala. He had lived in England as a refugee from Napoleonic France between 1793 and 1800, when Sir William Jones' translations of Sanskrit works were published.

(source: **India and World Civilization - By D. P. Singhal** Pan Macmillan Limited. 1993. Pg 241).

E. H. Johnstone, has written about this: " The classical poets of India have a sensitiveness to variations of sound, to which the literature of other countries afford few parallels, and their delicate combination are a source of never-failing joy. Some of them, however, are inclined to attempt to match the sense with the sound in a way that is decidedly lacking in subtlety, and they have perpetrated real atrocities in the manufacture of verses with a limited number of consonants or even only one."

(source: **E. H. Johnstone's translation of 'Asvaghosa's Buddhacarita'** Lahore 1936).

Sir Monier-Williams (1819-1899) Orientalist, professor of Sanskrit at Oxford in 1860. He says about the great drama of **Mrichakatika**:

"The dexterity with which the plot is arranged, the ingenuity with which the incidents are connected, the skill with which the characters are delineated and contrasted, the boldness and felicity of the diction are scarcely unworthy of our own great dramatists. Nor does the parallel fail in the management of the stage business, in minute directions to the actors and various scenic artifices. The asides an aparts, the exits and the entrances, the manner, attitude, and gait of the speakers, their tones of voice, tears, smiles, and laughter are as regularly indicated as in a modern drama."

His views of **Kalidasa** and the great play - **Shakuntala**:

"No one can read this act (4th Act), nor indeed any act of play without being struck with the raciness and elevation of its author's genius, the exuberance and glow of his fancy, his ardent love of the beautiful, his deep sympathy with nature and nature's loveliest scenes, his profound knowledge of the human heart, his delicate appreciation of its most refined feelings, his familiarity with its conflicting sentiments and emotions."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p. 155-157).

Christian Lassen (1800-1876) in his **Indische Alterthumskunde** says, “Kalidasa may be considered as the brightest star in the firmament of Hindu artificial poetry. He deserves this praise on account of the mastery with which he wields the language, and on account of the consummate tact with which he imparts to it a more simple or more artificial form, according to the requirements of the subjects treated by him, without falling into the artificial diction of later poets or over-stepping the limits of good taste; on account of the variety of his creations, his ingenious conceptions, and his happy choice of subjects; and not less on account of the complete manner in which he attains his poetical ends, the beauty of his narrative, the delicacy of his sentiment, and the fertility of his imagination.”

H. Fauche, author of **Le Mahâbhârata,** 10 volumes, Paris 1863-1870, says, "The Meghaduta is without a rival in the elegial literature of Europe."

Sir Monier-Williams (1819-1899) in his book, **Indian Wisdom** says, "It combines the majesty of Homer with the tenderness of Virgil, the luxuriance of Ovid and the depth of Shakespeare. And yet it is simple enough to suggest the old Athenian boast of beauty without extravagance."

(source: **The Soul of India - By Satyavrata R Patel** p. 90).

Professor Arthur Berriedale Keith says that "The Sanskrit drama may legitimately be regarded as the highest products of Indian poetry, and as summing up in itself the final conception of literary art achieved by the very self-consious creators of Indian literature...**The Brahmin, in fact, much abused as he has been in this as in other matters, was the source of the intellectual distinction of India. As he produced Indian philosophy, so by another effort of his intellect he evolved the subtle and effective form of the drama."**

(source: **Sanskrit Drama - By A. Berriedale Keith** Oxford 1924 and **The Discovery of India by Jawaharlal Nehru** p 163-164).

Horace Hayman Wilson (1786-1860) who used to be professor of Sanskrit at Oxford University, has said:

"It is impossible to conceive language so beautifully musical or so magnificently grand, as that of the verses of Kalidasa.'"

(source: **The Discovery of India - By Jawaharlal Nehru** pg 160).

Soviet historians, **K. Antonova, G. Bongard-Levin, and G. Kotovsky**, authors of **A History of India**, Moscow, Volume I and II 1973, refer to work of **Kalidasa**:

"one of the pearls of ancient Indian literature." and as **"an illustrious page of history of world's culture."**

(source: **A History of India - By K. Antonova, G. Bongard-Levin, and G. Kotovsky** Moscow, Volume I and II 1973 p. 169).

Commenting on Kalidasa's work **Arthur Berriedale Keith** has observed: "Indian criticism has ranked Meghadutta highest among Kalidasa's poems for brevity of expression,

richness of content, and power to elicit sentiment, and the praise is not undeserved."

In the opinion of **Arthur A. Macdonell** (1854-1930), "perhaps no other Sanskrit poem manifests such strikingly deep sympathy with the physical world, keen powers of observation, and skill in depicting an Indian landscape in vivid colors."

(source: **Main Currents in Indian Culture - By S. Natarajan** p. 91).

In both Sanskrit and Greek plays there is a sensitive awareness of nature and a feeling of being part of that nature.

***

Shudraka's " Mrichhkatika" play

Long before Kalidasa, another famous play was produced - **Shudraka's "Mrichhkatika" or Clay Cart,** a tender rather artificial play, and yet with a reality which moves us and gives us a glimpse into the mind and civilization of the day.

An English translation of **Shdraka's "Mrichhkatika"** was staged in New York in 1924.

Mr. Joseph Wood Krutch, (1893-1970) the dramatic critic for **The Nation**, and author of **The Measure of Man on Freedom Human Values, Survival and the Modern Temper**. He wrote of the play as follows:

"Here, if anywhere, the spectator will be able to see a genuine example of that pure art theatre of which theorists talk, and here, too, he will be led to meditate upon that **real wisdom of the East which lied not in esoteric doctrine but in a tenderness far deeper and truer than that of the traditional Christianity which has been so thoroughly corrupted by the hard righteousness of Hebraism** …..A play wholly artificial yet profoundly moving because it is not realistic but real….Whoever the author may have been, and whether he lived in the fourth century or the eighth, he was a good man and wise with the goodness and wisdom which comes not from the lips or the smoothly flowing pen of the moralist but from the heart. An exquisite sympathy with the fresh beauty of youth and love tempered his serenity, and he was old enough to understand that a light-hearted story of ingenious complication could be made the vehicle of tender humanity and confident goodness….Such a play can be produced only by a civilization which has reached stability; when a civilization has thought its way through all the problems it faces, it must come to rest upon something calm and naïve like this. Macbeth and Othello, however great and stirring they might be, are barbarous heroes because the passionate tumult of Shakespeare is the tumult

produced by the conflict between a newly awakened sensibility and a series of ethical concepts inherited from the savage age. The realistic drama of our own time is a product of a like confusion; but when problems are settled, and when passions are reconciled with the decisions of an intellect, then form alone remains….**Nowhere in our European past do we find, this side the classics, a work more completely civilized."**

(source: **The Discovery of India - By Jawaharlal Nehru** p. 164).

In the following words **Juan Mascaro** pays tribute to the glory of the Sanskrit literature:

"Sanskrit literature is a great literature. We have the great songs of the Vedas, the splendor of the Upanishads, the glory of the Upanishads, the glory of the Bhagavad Gita, the vastness (100,000 verses) of the Mahabharata, the tenderness and the heroism found in the Ramayana, the wisdom of the fables and stories of India, the scientific philosophy of Sankhya, the psychological philosophy of yoga, the poetical philosophy of Vedanta, the Laws of Manu, the grammar of Panini and other scientific writings, the lyrical poetry, and dramas of Kalidasa. Sanskrit literature, on the whole, is a romantic literature interwoven with idealism and practical wisdom, and with a passionate longing for spiritual vision."

(source for quote: **The Bhagvad Gita - translated By Juan Mascaro.** Penguin Classics, 1962.).

Sri Aurobindo Ghosh wrote: " The ancient and classical literature of the Sanskrit tongue show both in quality and in body an abundance of excellence, in their potent originality and force and beauty, in their substance and art and structure, in grandeur and justice and charm of speech, and in the heightened width of the reach of their spirit which stands very evidently in the front rank among the world's great literature."

(source: **Foundations of Indian Culture - By Shri Aurobindo Ghosh** p. 255).

Arthur Anthony Mcdonnell (1854-1930) has observed : **"The Sanskrit Literature in quantity exceeds that of Greece and Rome put together."**

Sir William Wilson Hunter (1840-1900) author of **The Indian Empire: Its People, History and Products** has observed:

"The grammar of Panini stands supreme among the grammars of the world, alike for its precision of statement and for its thorough analysis of the roots of the language and of the formative principles of words. By applying and algebraical terminology, it attains a sharp succinctness unrivaled in variety, but at times enigmatical."

(source: http://www.geocities.com/Athens/Ithaca/3440/revelation.html).

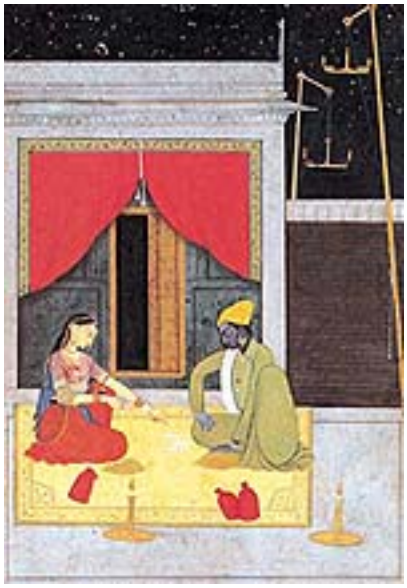
Lyric Poetry

The Lyric poetry of the Hindus is the finest of its kind in the world, for the reason that the language in which it is written is the most melodious and musical on earth.

As **Horace Hyman Wilson** (1786-1860) remarks, the poetry of the Hindus can never be properly appreciated by those who are ignorant of Sanskrit. To judge of the merits of Hindu poetry from translations is to judge it at its worst.



Gita Govinda is the finest extant specimen of Hindu lyric poetry, and it is difficult to find in any language lyrics that can vie with it in melody and grace. **Ralph Griffith** says: "The exquisite melody of the verse can only be appreciated by those who can enjoy the original."

Frederich von Schlegel (1772-1829) says in **History of Literature** p. 117:

"Tender delicacy of feeling and elegiac love cast a halo over Indian poetry," and "the whole is recast in the mould of harmonious softness, and is redolent of elegiac sweetness."

Arnold Hermann Ludwig Heeran (1760-1842) wrote: "The Hindu lyric surpassed that of the Greeks in admitting both the rhyme and blank verse."

"Gita Govinda exhibits," says **Lord Mountstuart Elphinstone** (1779-1859) "in perfection of the luxuriant imagery and the voluptuous softness of the Hindu school."

Another Hindu lyric is the **Ritu Sangrah**, something like "Thompson's Seasons" in the English language. **Mrs. Manning** says about it: "Ritu Sangrah, a lyric poem by **Kalidasa**, is much admired not only by the natives of India, but by almost all students of Sanskrit literature."

Ralph T H Griffith (1826-1906) in his translation of "Ritu Sangrah" says: "Sir William Jones speaks in rapturous terms of the beautiful and natural sketches with which it abounds," and, after expressing his own admiration, adds, "it is much to be regretted that it is impossible to translate the whole."

Lyric poetry was extensively cultivated in India. **Sir William Wilson Hunter** (1840-1900) says: "The Brahmins displayed a marvelous activity in theological as well as in lyric poetry."

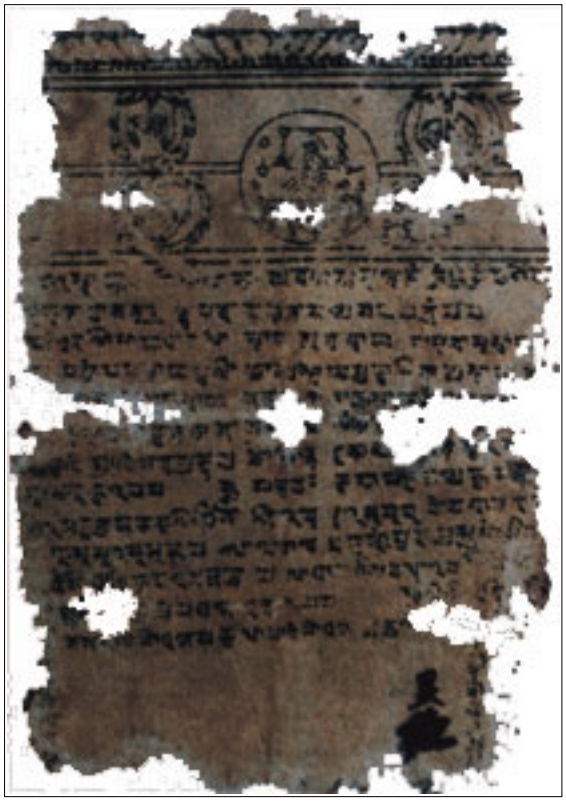
Special charm must attach to the lyric poetry of the Hindus, for, as Mrs. Manning remarks, "Nowhere is love expressed with greater force or pathos than in the poetry of the Hindus."

Megha Duta is an excellent example of purely descriptive poetry. Mrs. Manning says: “It is the most important of its kind, and is a favorite with the Europeans too.”

Horace Hyman Wilson (1786-1860) wrote: “The language (of Megh Duta) although remarkable for the richness of its compounds, is not disfigured by their extravagance, and the order of the sentences is in general the natural one. The metre combines melody and dignity in a very extraordinary manner, and will bear an advantageous comparison with the best specimens of uniform verse in the poetry of any language, living or dead.”

(source: **Hindu Superiority - By Har Bilas Sarda** p. 258-260).

Archibald Henry Sayce (1851-1940) British Orientalist says:



“ The Devanagri alphabet is a splendid monument of phonological accuracy, in the sciences of language.”

Sanskrit Text Oldest Example of Printing

CHINA, November 25, 2001: The exact year in which woodblock printing was invented is still very much debated in academic circles because no artifacts or documentary records related to the earliest printing have been discovered. **However, a sheet with mantras of the Dharani Sutra, in Sanskrit, printed in the early Tang and unearthed in the suburban district of Xi'an is the earliest extant printing relic.** A picture of the still readable sheet is shown at below. The Dharani Sutra is the teaching of Buddha on "Longevity, the extinction of offenses, and the protection of young children.

***

Sanskrit had a vast influence among the nations of antiquity. In his book on **Chinese Buddhism**, **Reverend Joseph Edkins** says that the list of first and last letters in Chinese dictionaries are prepared in the third century A.D. and improved very much in the 6th century A.D. under Liang dynasty and that the Hindus came at that time to China, prepared the model of Chinese first letters, arranged them under heads of 36 consonants and instructed them on the manner of pronunciation with regard to the scientific basis of sound. In a different place, he says that probably the Tibetans and Koreans got their alphabets from the Buddhists and learnt to arrange them in the order as found in Sanskrit. From an account of **Hueng Sang** published in the latest book, **2500 Years of Buddhism**, it is known that the Chinese traveler, on his return journey from India to China, carried with him 657 Sanskrit books on Buddhism on horse back load. This shows the influence of Sanskrit not only on the ancient Chinese culture and religion but also on the arrangement of their letters proving the depth and popularity of this rich treasure.

Conclusion:

Francois Gautier, correspondent in South Asia of Le Figaro, France's largest circulated newspaper says:

" Sanskrit is the mother of all languages, and it could become the unifying language of India, apart from English, which is spoken only, by a tiny minority. "Sanskrit ought still to have a future as the language of the learned and it will not be a good day for India when the ancient tongues cease entirely to be written or spoken", admonished 50 years ago Sri Aurobindo, India's great Sage and Seer.

A dead language, you say! Impossible to revive? But that's what they argued about Hebrew. And did not the Jewish people, when they got back their land in 1948, revive their "dead" language, so that it is spoken today by all Jewish people and has become alive again? The same thing ought to be done with Sanskrit. Let the scholars begin now to revive and modernize the Sanskrit language, it would be a sure sign of the dawning of the Renaissance of India. In a few years it should be taught as the second language in schools throughout the country, with the regional language as the first and English as the third. Then will India again have its own unifying language." (source: **http://www.pragna.org/Iss02412.html**).

Sanskrit has always inspired the hearts, mind and souls of wise people. The German scholar Max Muller, who did more than anyone to introduce Sanskrit to the West in the latter part of the 19th century, contended that without a knowledge of the language (Sanskrit), literature, art, religion and philosophy of India, a liberal education could hardly be complete - India being the intellectual and spiritual ancestor of the race, historically and through Sanskrit. Max Muller also pointed out that Sanskrit provides perfect examples of the unity and foundation it offers to the Celtic, Teutonic, Slavonic, Germanic and Anglo-Saxon languages, not to mention its influence on Asian languages. The transmission of Buddhism to Asia can be attributed largely to the appeal to Sanskrit. Sanskrit, the only language that was ever used over the whole of India and the one best expressive of her spirit and richness, is today on the way to extinction, its study discouraged in both North and South India.

Even in translation the works of Sanskrit evoked the supreme admiration of Western poets and philosophers like Emerson, Whitman, Thoreau, Melville, Goethe, Schlegel and Schopenhauer.

Sri Aurbindo, the sage from Pondicherry has said:

"Sanskrit ought still to have a future as a language of the learned and it will not be a good day for India when the ancient tongue, ceases entirely to be written or spoken."

The fact is that Sanskrit is more deeply interwoven into the fabric of the collective world consciousness than anyone perhaps knows. After many thousands of years, Sanskrit still lives with a vitality that can breathe life, restore unity and inspire peace on our tired and troubled planet. It is a sacred gift, an opportunity. The future could be very bright.

Articles:

Why Is The West Crazy About A 'Dead' Language?
Ajit Kumar Jha finds some of the biggest stars in academia teach Sanskrit
http://www.indian-express.com/flair/20010610/fla-1.shtml

Imagine going to Varanasi to study the tragedies of the Greek playwright Sophocles. Ludicrous? It seemed equally foolish to me when on my way to California some years ago, I met the daughter of a Marxist political economist from Calcutta, who was headed for Chicago, to pursue her doctoral degree in Sanskrit. The double irony of the situation befuddled me: even the Marxists were turning over-zealous to revive Sanskrit, and strangely one had to go to the West to do so!

Yet the irony has been in place for over two centuries now. **Even as we neglect our rich cultural heritage, it is the West that has revived interest in the East.** Notwithstanding Edward Said's powerful attack on the "Eurocentric" epistemology of Orientalism, and political correctness apart, half a century after Independence, it is actually the Occident that is busy rediscovering the genius of the Orient.

Ever since 1786, when Sir William Jones, in a paper presented to the Royal Asiatic Society, in Calcutta, said, "the wonderful structure" of the Sanskrit language, is "more perfect than the Greek, more copious than the Latin, and more exquisitely refined than either," the West has been busy learning from Sanskrit.

This Western passion for the oriental classics is not only limited to Peter Brook's brilliant dramatic rendering of the Sanskrit epic, *Mahabharata*, or to the more recent attempt by Lee Siegel to write a sensuously funny modern day *Kamasutra* in a fictionalised form, entitled *Love in a Dead Language*. There is a much more systematic tradition of Sanskrit learning of over two centuries. Not surprisingly to a question about why should one study Sanskrit today, and whether it has any future, **Professor Sheldon Pollock of the University of Chicago had the following answer: "It is indicative of the appalling quality of the public discourse on Sanskrit in India today that you even ask this question."**

While we battle each other on the streets on whether Sanskrit should be revived in the school curricula or not, top notch western universities have been busy churning one esoteric dissertation after another on Panini's *Ashtadhyay* and comparing Bhartihari's and Patanjali's grammatical logic.

There are essentially two traditions of teaching Sanskrit in the West today: one scholastic, as a classical subject taught in the universities; the other as a religious discourse in the various temples being built by the cash rich Indian diaspora. The scholastic tradition, which began a couple of centuries ago continues till today. The temple tradition is a post-1965 phenomena, the year President Lyndon Johnson liberalised immigration quotas. Today, the children of the first wave of professional Indian immigrants to the US—mainly doctors and engineers—have entered the university in large numbers. It is these alienated kids, desperate to discover their historical roots and cultural heritage, who are studying Sanskrit with a passion.

The British tradition

The first chair in Sanskrit in England, the Boden Chair, was set up at Oxford in 1831. Later chairs were founded in University College, London, Edinburgh, and Cambridge. The Boden chair continues till today in addition to two other faculty positions. Professor Richard Gombrich, the present occupant of the chair, is known worldwide for his extraordinary work on Theravada Buddhism.

According to Gombrich: "The reasons for studying Sanskrit today are the same as they ever were: that the vast array of Sanskrit texts preserves for us a valuable part of the cultural heritage of mankind, including much beautiful literature and many interesting, even fascinating, ideas."

Today Oxford offers three kinds of degrees in Sanskrit: the three-year BA, the two-year M.Phil in classical Indian religion, for which Sanskrit is taught intensively, and the D Phil. The majority of the undergraduates are usually British students, while the research students are mostly from overseas, including a few Buddhist monks and nuns from South-East Asia.

In an attempt to popularise Sanskrit, Gombrich, has become associated with a new publishing venture. In the style of the Loeb classical library of Latin and Greek, the series will produce readable translations of Sanskrit literary texts printed alongside the originals.

The chair of Sanskrit in Edinburgh was established by the endowment of John Muir. The university of Edinburgh offers either a full honours course in Sanskrit or a joint honours course with Latin, Greek or Linguistics. Unfortunately, the interest in Sanskrit in Britain arose largely through colonial involvement. This, Dr John Brockington, who today teaches Sanskrit in Edinburgh feels, "has been at once the strength and the weakness of Sanskrit studies in Britain". The end of British rule in 1947 dampened the interest in Sanskrit, for instance, the Edinburgh chair was disestablished in 1949.

The American tradition

The Sanskrit craze has, however, caught up in the US. Unlike Britain, and unlike its own past, it is totally demand driven.

But first, some background. The teaching of Sanskrit first began at Yale university

under professor Salisbury in the late 19th century. His student William Dwight Whitney became the pioneer in the development of American Sanskrit studies. This soon spread to Harvard, Berkeley, Chicago, Michigan, Pennsylvania and other campuses.

Today several American campuses offer Sanskrit along with modern Indian languages such as Hindi, Urdu, Punjabi and Tamil. Student unions sit on hunger strikes demanding more and more departments. It has happened at the University of Texas at Austin and in various California campuses.

Although Sanskrit began to be taught at the University of Michigan, as early as the 1890s as part of Oriental languages, today, it is attracting large undergraduate crowds. Until 1985, it was primarily a graduate subject attracting mainly foreign students. Not any more. Most second generation Indo-American kids majoring in engineering, medicine, and business studies read Sanskrit not as a specialised branch but to satisfy the four-term foreign language requirement.

The University of Chicago attracts almost 30 or more undergraduate students every year to study Sanskrit. There are five faculty members teaching Sanskrit. Ditto at Harvard University which has a full fledged department of Sanskrit. In the other US universities it is a part of the South Asian departments and very popular among the Indo-American kids.

However, the interest in Sanskrit persists even in those places where there is no demand. The last conference of the International Association of Sanskrit studies held at Turin, in Italy, according to Brockington was, an eye-opener. There were a number of Sanskrit scholars from the Eastern European countries, including Poland, Hungary, Croatia, Bulgaria, and Russia. Unlike the US, most of these countries hardly have much of an NRI population. They hardly have any temples. No community funding, no involvement of local populations. Yet, the zeal for Sanskrit continues.

While we in India today consider Sanskrit a dead language, the Westerners consider it as simply a fascinating language, a language in which the genius of the human civilization was perfected to its fullest.

***

While we battle each other on the streets on whether Sanskrit should be revived in the school curricula or not, top notch western universities have been busy churning one esoteric dissertation after another on Panini's *Ashtadhyay* and comparing Bhartihari's and Patanjali's grammatical logic.

***

The wonderful structure of Sanskrit is better than Latin.

Reviving Sanskrit Teaching

By Mohan Gupta
http://www.newsindia-times.com/20010622/viewpoint01.htm

The British tried to enforce cultural slavery on Bhartiyas by gradually diminishing the importance of Sanskrit study. The condition steadily deteriorated even after our independence and Sanskrit gradually effaced from the syllabus of studies. This neglect of Sanskrit is to such an extent that many people started saying that Sanskrit is a dead language. Believing what the Bharatiya people say, most of the world also started treating Sanskrit as a dead language. Attempts are also being made by pseudo-secularists to eliminate residual Sanskrit in all its forms not only from the curriculum of studies in Bharat but also from our lives. During British colonial rule Macaulay, who was entrusted by the British government to formulate a plan for education in Bharat, and who was himself ignorant of the values of Sanskrit, had the cheek to say, " A single shelf of a good European library is worth all the native literature of Bharat and Arabia." He wanted to introduce an education system that would be effective to Europeanize Bharat — in morals, in intellect, in taste, in opinions" so that Bharatiya shall remain Bharatiya "only in blood and color, but British in their behavior and thinking." The modern policy makers of education in Bharat are no thing but shameless offspring of Macaulay and are apish imitators of his policy. So we find all around us that English medium schools are mushrooming everywhere and the younger generations are being nurtured in an atmosphere of a peculiarly mixed up obnoxious culture.

Witness the arduous travails of the descendants of Macaulay together with the Left intelligentsia bearing fruit — a hell lot of schools and colleges enriching the future generation of Bharat with complete details the facts and foibles of British royalty and relieving them of the burden of bulky Puranas or encumbrance of the likes of Kalidasa, Tulsidas, Tukaram, Kabir and many other Bharatiya saints. This way they truly honor Macaulay's vow.

The greatest adversaries of the attempt to "Bharatiyakaran and spiritualised education" by Murli Manohar Joshi, are the descendants of these "Brown Sahibs", the secular politicians, the journalists, the top bureaucrats, in fact the whole westernized cream of Bharat. And what is even more paradoxical is that most of them are Hindus. It is they who upon getting independence, have denied Bharat its true identity and borrowed blindly from the British education system, without trying to adapt it to the unique Bharatiya mentality and psychology; and it is they who are refusing to accept "an Bharatiyakaran, nationalization and spiritualization" of Bharat's education system, which is totally western-oriented. And what Bharat is getting from this education is a youth, which apes the west.

We have reached a stage where, in the name of secularism, a determined effort is made to denigrate India's culture and national heritage and even to decry Sanskrit as Hindu and Brahminical language. Secularism is equated with anti-Hinduism; ergo, the teaching of Sanskrit would be tantamount to undermining secularism. Consider what The Hindu newspaper said on this subject: "The unique role claimed for Sanskrit in fostering cultural unity would be contested sharply not only in the context

of the Bharatiya historical experience but also in terms of deeply divided caste perceptions which would reject Sanskrit because of its perceived association with Brahmanical hegemony". What the writer says, in sum means, is that Sanskrit should be relegated to the ditch presumably along with the Vedas, Upanishads, Puranas, Aranyakas, not to mention the writings of Kalidasa and Bhavabhuti to attain secular nirvana. According to pseudo- secular people, the right place for our culture apparently is the dustbin.

As Sanskrit has not got its rightful place in Bharat, and many non-Hindi speaking states are not prepared to accept Hindi as the national language of Bharat, English language is having a sway on whole of Bharat. English is being taught from grade I in some states of Bharat like West Bengal, Punjab, Maharashtra and many more. If Sanskrit is not to be taught in schools, what else should be taught in its stead to prove our secularism: Arabic? Chinese? **And if Bharatiya students, studying in Bharat, are not to be taught the Vedas and the Upanishads on grounds that would be "communal" where are they to learn of their own heritage: at Harvard? in Chicago? Bonn where there are excellent centers of Sanskrit learning?**

Sanskrit is the one common national inheritance of Bharat. The south and the north, the west and the east have equally contributed to it. Sanskrit belongs to all Bhartiyas. No part of Bharat can claim it as its exclusive possession. All the three major Hindu philosophic concepts were formulated in Sanskrit by 'southern' - Madhva (dvaita), Sankara (advaita) and Ramanuja (vishishtadvaita).

The first thing that Bharatiya children should be taught is the greatness of their own culture. They should learn to revere the Vedas, they should be taught the genius of the Mahabharata and the Ramayana, they should be told that in this country everything has been done, that it was an unsurpassed civilisation, when the west was still mumbling its first words, the Bharatiya civilisation reached heights, which have been since unsurpassed civilization. They should be taught early that Bharat's greatness is her spirituality, her worldwide wisdom. Bharat's Dharma, her eternal quest for truth, should be drilled in the child from an early age. And from this firm base, everything then can be taught - from the most modern forms of mathematics, to the latest scientific technologies.

Sanskrit is not only the richest and most scientific language of the world. It is the highest repository of our Shastras — the Shruti, the Smriti, Puranas, Ramayana, Mahabharata etc. The wisdom of age-old civilization and culture of Bharat has been enshrined in Sanskrit and it establishes proper discipline in the life and elevates man to divine order. Sanskrit is eminently the storehouse of all the effulgent truths of our long enduring civilization.

Sir Monier-William made a lengthy and learned introduction to his monumental work: Sanskrit-English Dictionary. In his introduction he wrote, "By Sanskrit is meant the learned language of India - the language of its cultured inhabitants, the language of its religion, its literature and science - not by any means a dead language, but one still spoken and written by educated men by all parts of the country, from

Kashmir to Cape Comorin, from Bombay to Calcutta and Madras" Upanishads are regarded as the highest form of human intellect and discipline by the best thinkers of the world. If education aims to build up the character of students and to impart highest intellect to them, can there be any better language than Sanskrit to teach students.

In a landmark judgment delivered in October 1994 the Supreme Court of Bharat held that without learning Sanskrit it was not possible to decipher Bharatiya philosophy, culture and heritage. All the classics such as Vedas, Puranas and Upanishads, and the most enlightening literature of Kalidasa, Bhavabhuti, Banbhatta, Dandi etc. were in Sanskrit. The teachings of Sankracharya, Ramanuja, Madhvacharya, Nimbarka and Vallabhacharya would not have been possible without this language, said the judges of the apex court, laying special emphasis on the historical relevance of this ancient language.

Haunted by the ghost of secularism, many of our politicians are raising slogans against Sanskrit. But the learned judges of the Supreme Court, in their landmark judgment, have exploded the bogey of secularism and said in their verdict - "Secularism is neither anti-god, nor pro-god as it treats alike the devout, the agnostic and the atheist. We entertain no doubt in our minds that teaching Sanskrit alone as an elective subject can in no way be regarded as against secularism."

The rich treasures and high potentialities or capabilities of Sanskrit to cope with any situation need hardly be emphasized. This apart, it exerted a great unifying force on the entire subcontinent of Bharat over a very long period. It was Jawaharlal Nehru, who said, "Though the country was split up in the past into various political entities, the basic language Sanskrit and the thought it represented continued to keep and preserve Bharat as a whole."

Sardar K.M. Panikkar pointed out, "It is one common inheritance of Bharat. The unity of Bharat will collapse if it breaks away from Sanskrit and the Sanskritic traditions." Dr. Rajendra Prasad said, "Sanskrit provided perhaps the most important focal point from which emanated cultural and political unity." K.M. Munshi aptly pointed out that "without Sanskrit Bharat would be nothing but a bundle of linguistic groups."

Shrimat Upendramohan, founder of Shastra Dharma Prachar Sabha, in his book "Hindu Glory" had written, " The Sanskrit language is a marvel of marvels, an epitome of the people's genius, a picture of people's character, absolutely unique as a reflection of the perfect uniquity of the people of this land, of its social structure and of its Dharma. The vastness of the language, the copiousness of its lexicons, its fluidity or the capacity to embrace the existent and the non- existent equally marks out the Sanskrit language as the language of languages, the language of the Gods (Deva Bhasa), the language of mere mortals, with their restricted notions, limited wants and closed outlook." He had also lashed out strongly when a move was made to dethrone Sanskrit

from its glory and to deprive it of the status of a compulsory subject up to

matriculation as early as in 1936. Protesting strongly against this move, he made inflammatory arguments in his booklet - “Sanskrit Animus Begotten of Sin” - to prove that the: “The real objection to Sanskrit is that it is the greatest enemy of sin; that you can be brilliant master of Mathematics, Science, English, History etc. and yet be as sinful as your heart may desire. But Sanskrit with its inexorable Law of Karma, with its Hell and places of torment for sinners, who wish to live in the present and forget the future, who try to lull themselves in the belief that their own vicious Karma will not pursue them relentlessly in after-life, who hug to their fond bosom the disgraceful delusion that their sins will not be visited on their sinful heads.” He could see with his Divya Drishti (Divine Foresight) that Sanskrit was the sine-qua-non for Bharat’s life and culture and for the pursuit of her noble traditions.

Almost all the seats of power and authority as well as the commoners in Bharat are getting involved in corruption and crimes of all sorts. The police officers, highly placed administrators, the ministers and even the judges are reportedly involved in various crime and corruptions. What is the root cause behind this all-pervading corruption? Is it poverty? Surely not! It might be affluence, but surely not poverty. The charges are overwhelmingly against those who belong to the affluent and powerful sections of society. The financial scams that are sucking the country dry are far beyond the reach of the poor.

The Hindus as it was acclaimed by Col. Sleema, “never told a lie to save their reputation, property or even life.” The question that presents itself how such a deep-rooted faith, protecting the Bhartiyas through millenniums could die so fast almost suddenly, within a span of about fifty years after independence. The answer lies in English language and western education. The present education curricula in Bharat are un-Bharatiya, colonial, unrelated to our ground realities and needs, totally soul-less and devoid of ethical values. The colonial Macaulay system has produced Bhartiyas of slavish mentality. Self esteem and national pride which have been prevalent in Bharat since time immemorial, has been destroyed by the English education. It is because of British education system and worthy education ministers of Bharat that Bharat has the largest number of illiterates and will remain so as long as Macaulayites are at the helm of Bharatiya education affairs.

Macaulay had very little regard for Hindu culture, religion and education. The other major harmful effect of English education is that the pedophile people of western world rush to India for finding young boys and girls for their sexual pleasures as due to English language, pedophile people find the things much easy to manage in Bharat. They find their preys quite easy due to prevalent English language in Bharat.

Sayeed Naqwi wrote a few years back in **The illustrated Weekly of India**, **“May be if Sanskrit had been designated the official language of the country there would have been none of the rabid opposition to it as there is to Hindi, the country would have a unifying language and may be a national soul.”** The Commission headed by Radha Krishan and Kathori had strongly recommended the teaching of Sanskrit language in whole of Bharat. Sanskrit, which en- captures in it the eternal verities and soul entrancing truth and is rich with effulgent flow of

knowledge and wisdom, is the greatest builder of character. So, in these dark days of corruption and rampant crime, revival of Sanskrit is absolutely necessary.

It is stupid to argue that Sanskrit - the most scientific language evolved by man - could not have become the national link language because everyone would have to learn it. Only two percent of Jews could speak Hebrew when Israel was born. Now everyone, literally everyone, reads and write Hebrew. This is how nations are made great. As a people, we have denied ourselves a common Bharatiya language and have therefore lost our moorings and spirit. Till Bhartiyas quit their slavish mentality, they will not get respect anywhere in the world.

Let it be said in loud and clear terms: Present-day education is largely barren and soul- less. It calls to heaven for correction, and secularists are not the ones to fill in the lacunae. Those of us who are contemptuous of our past cannot be trusted to make amends for the future.

As regards teaching of Sanskrit which is a classical, not Hindu language, the point may be made that it will be hard to accommodate it within the three language formula, but can't a provision be made that instead of Hindi or English, students may be encouraged to learn Sanskrit which is the gateway to all our ancient writings? "Sanskrit ought still to have a future as the language of the learned and it will not be a good day for Bharat when the ancient tongues cease entirely to be written or spoken," admonished 50 years ago Sri Aurobindo, Bharat's great Sage and Seer. Let the scholars begin now to revive and modernize the Sanskrit language, it would be a sure sign of the dawning of the Renaissance of Bharat.

For maintaining the unity of Bharat and for finding its soul, Sanskrit must be made a compulsory subject from class III to X all over Bharat. There should not be any Bharatiya in the whole world, who either does not know Sanskrit or Hindi. It may indeed be said that one who knows Sanskrit is a better Bharatiya for he is in position to appreciate what every part of Bharat has contributed to it. Through Sanskrit we get something added to us from every part of Bharat. Knowledge of Sanskrit, however imperfect is a necessity and not a luxury.

Sanskrit should be declared the national language and a vigorous program put in place to explore its tremendous riches.

If human resources development minister Murli Manohar Joshi has his way, Sanskrit will become a compulsory language till the 12th standard. Joshi an ardent votary of Sanskrit has said, "We are discussing the possibility with the National Council of Education Research and Training (NCERT) and the Central Board of Education."

Joshi has been talking of restoring the past glory of Sanskrit ever since he took charge of the human resources development ministry and his statement came before an International Conference on the subject. Joshi said that some states has already given Sanskrit the attention it deserved. He claimed that Haryana had made the language compulsory till the 12th grade, but said some states have ignored it. "There are states like Rajasthan which are interested in promoting Sanskrit and others like

Kerala and West Bengal which have totally sidelined the language," he said.

At present, Sanskrit is not part of three-language formula adopted by the government since the 1960s. Schools usually teach the subject between class VI and class VIII. From the 9th standard, students are given the option of choosing between Hindi and Sanskrit.

However, it will not be easy to push through Sanskrit in higher classes. "According to the policy document, Sanskrit is not part of the three -language formula," said Arjun Dev, a former NCERT faculty member.

Joshi said it was now "well established that Sanskrit is the most highly acclaimed international language." But, unfortunately, some Marxist academics were dismissive about the subject, he said, when pointed out that a section of teachers in schools and universities saw no glory in popularizing a subject that has no functional value.

Sanskrit is not only one of the most magnificent and precious heritages of our country, it stands absolutely on its own merit as the greatest language of the world. In fact, it is the most perfect literary instrument developed by the human mind and it is amazingly rich, efflorescent, resourceful and capable of expressing any idea strongly, clearly and precisely.

Haunted by the ghost of secularism, many of our political and intellectual leaders dither to accord the rightful importance that Sanskrit deserves for its much wider use in every field. To be precise, Sanskrit, which is one of the greatest heritages of all Bhartiyas alike, does not claim to be the language of any particular religious group. It is common property of all Bhartiyas.

In a landmark judgment the supreme court of Bharat declared in 1994 that, "Sanskrit occupies a unique position as the mother of all Aryan languages and its pursuit is absolutely necessary for nurturing our cultural heritage." Exploding the bogey of secularism, which was raised against the introduction of Sanskrit studies, the learned judges appropriately said, "Secularism is neither anti-god or pro-god, as it treats alike the devout, the agnostic and the atheist. We entertain no doubts in our minds that teaching of Sanskrit alone as an elective subject can in no way be regarded as against secularism."

The strongest argument for retaining and promoting Sanskrit studies, however, is the indisputable fact that it carries with it a dignified sense of values, the eternal verities and soul entrancing truths and the highest wisdom, which are the greatest builders of character. All out revival and propagation of Sanskrit is, therefore absolutely necessary to keep in check the cankers of moral degeneration. As it is one of the most precious treasures and the common inheritance of all Bhartiyas, it is the duty of all Bhartiyas to protect, preserve and propagate Sanskrit and to re - establish it in its pristine glory.

Podium: Sanskrit in today's world

By Dr V. R. Panchamukhi

http://www.pragna.org/lss03303.html

The fact that the Sanskrit language, the rules of its grammar and the shabdabodh are of great utility in the development of computer language has been acknowledged by many computer experts in USA and Europe. Computer experts such as Dr Riq Briggs, Dr Vyas Housten and Dr David Lavin have written extensively bringing out the usefulness of the Sanskrit language in developing computer software. There are also many Indian experts and institutions, like the CDAC, which have been researching this subject of the use of Sanskrit in developing computer software. We can go to the extent of putting out a statement that if you want to learn a computer language then learn the Sanskrit language. However, this field has not received as much extensive support and development as it deserves.

The usefulness of Sanskrit literature for modern times can be demonstrated in two ways. Firstly, by unravelling the basic knowledge and wisdom that is contained in Sanskrit literature to the world, and by working out new theories and paradigms of knowledge that can be built on the basis of the principles laid down in Sanskrit literature.

Even though the knowledge of Ayurveda forms part of Sanskrit literature, there have not been many initiatives to demonstrate its validity to the modern world through modern means of validation and communication. The schism that exists between the traditional Ayurveda and the modern world, is responsible for the absence of pro-active initiatives for safeguarding the advantages of indigenous knowledge. The Ayurvedic world should establish R&D centres, adopt the modern approach of validation, pilot testing, etc. and complete the paper work for patenting their unique formulations.

For this purpose the institutional facilitation for preparing the traditional world to interact with the modern world and also facilitating patent registration, pilot testing and commercialisation need to be strengthened.

In order to eliminate the negative attitude towards Sanskrit from our midst, we must remove the fear that Sanskrit is a difficult language. In this context, the commendable work being done by a voluntary organisation called Sanskrit Bharati to conduct Sanskrit conversation classes deserves special mention. Such programmes should be conducted on an extensive basis in different parts of the country.

Here are five ways for bringing Sanskrit to the centre-stage of our cultural and intellectual pursuits. We should :

1. Encourage basic research on the linkages that exist between Sanskrit and science and launch innovative activities to bridge the gap between Sanskrit and the Modern World.

2. Encourage research and debate the application of Sanskrit in the development of computer software for language processing.

3. Produce documentaries and TV serials in simple Sanskrit for telecast.

4. Set up computer based networking among Sanskrit institutions and Sanskrit manuscript libraries for improving the communications among Sanskrit scholars and researchers. The Rashtriya Sanskrit Vidyapeeth, Tirupati, proposes to launch a SANSK-NET Software for this purpose.

5. Finally, we should change the teaching methodology and launch innovative schemes for teaching people Sanskrit conversation.

(Excerpt from a broadcast talk by Dr V. R. Panchamukhi, Chancellor of the Rashtriya

Sanskrit Vidyapeeth, Tirupati, courtesy The Hindustan Times, March 13, 1999)

Some of the most forward-looking engineering students in India will soon be learning the ancient language of Sanskrit. The decision by the **Indian Institute of Technology (IIT) in Delhi** to offer science courses based on Sanskrit teachings.

Ancient Indians are credited with having made amazing discoveries in astronomy, architecture, medicine and other fields. They had a unique method of calculation, which is now called Vedic Mathematics. (For more refer to chapter on **Hindu Culture**).

Most of the information of that age was recorded in Sanskrit -- a language that hasn't been widely used in a thousand years.

Our notion of science comes from (the) West, in the same way that our notion of education, politics, literature, et cetera, come from the West," said Wagish Shukla, a mathematics professor at IIT, Delhi, who is also a Sanskrit scholar**.**

"We have become an intellectual colony of the West under amnesia, regarding the knowledge society we were.

"The problem today is that inputs from Sanskrit are disenfranchised from our education. For instance, when a student wants to understand a particular issue, he or she is debarred from finding out what Vedanta or Nyaya or Mimamsa (ancient Indian knowledge bases) has to say about it."

Indians in Israel-led study on Sanskrit poetry

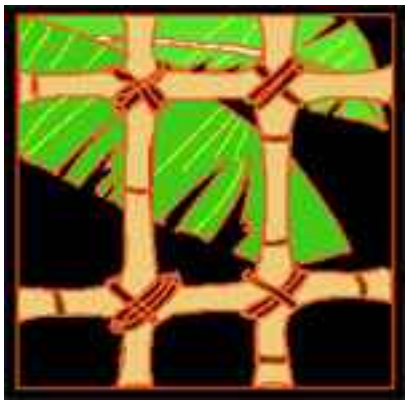
Jerusalem: **Two Indian experts are part of an ambitious Israel-led project to chart the literary evolution of two millennia of Sanskrit poetry, or 'kavya'.**

"Since the discovery of Indian poetry by Western scholars in the 18th century, several histories have been written, but the story of Sanskrit's poetic evolution remains largely untold," said H.V. Nagaraja Rao of the International Sanskrit Research Centre at Mysore University.

"We have only a very rudimentary idea of major thematic shifts and stylistic breakthroughs of the 'mahakavya' tradition that held sway in the golden era of Indian literature between the first and 12th centuries -- epitomised in the works of the famous fourth century Indian poet and playwright Kalidasa," Rao told IANS.

"Our aim is to map the crucial social milieu of historic moments when innovative literary fashions were created, or when poets deviated from their predecessors to break new paths in 'kavya'," he said.

Rao is a Sanskrit grammar expert and is currently a research fellow at the Hebrew



University's Institute for Advanced Studies in Jerusalem. Rao is one of the 14 renowned Sanskrit scholars taking issue with the notion that 'kavya' poetic forms did not change through the centuries.

Did You Know?

Ayurveda, a Sanskrit word means "The Science of Life"

Avurveda, a Sanskrit word meaning "The Science of Life", is a holistic health care which evolved on the Indian sub-continent some 4,000 years ago. Established by the same great sages who introduced the original system of meditation, yoga and astrology, Ayurveda surpasses all modern health care systems in it's range of therapeutic modalities. It uses a vast variety of natural approaches to health care including meditation, dietary recommendations, exercise, massage, allowing procedures and daily and seasonal regimens. Together they promote a state of physical and psychological well being by balancing the mind, body, behavior and environment. Ayurveda is the ancient Indian medical science, the origin of which can be traced back to the Vedas, which are the oldest available classics of the world. Vedas are the ancient books of knowledge, or science, from India.

Ayurveda is the only ancient independent scientific system of medicines. In the medieval period however, the system faced utter neglect at the hands of foreign rulers. Some authentic literature was destroyed in these turbulent times. Even then Ayurveda contributed to public health system due its safe and most effective herbal formulations and easy availability. The seers who initiated Ayurveda inducted in it sufficiency, soundness and sustenance, that is why it survived.

Maharshi Bharadwaja is an august name in the pantheon of Hindu Sages who recorded Indian civilization, in the spiritual, intellectual, and scientific fields in the hoary past. The rishis transmitted knowledge from mouth to mouth and from ear to ear, for long eras. Written transmission through birch-backs or palm leaves or home made paper, are from this side of a thousand years. The word “yantra” is derived from the root yam, to control, and has been freely used in ancient India for any contrivance. Mechanical skills had produced in ancient India many accessories for scientific activities, such as surgical instruments in medicine, the pakayantras or laboratory equipment in medicine, Rasayana, and the astronomical yantras described in Jyotisa works. These belong to a different category. In the Mahabharata we hear of the Matsya-yantra or the revolving wheel with a fish which Arjuna had to shoot in order to win Draupadi in the svayamvara.

More interesting references are made by Valmiki to yantras on the field of battle, the continuity of which tradition we see later in the Arthasastra of Kautilya. The fortifications include equipment in the form of yantras. In Ayodhya 100.53, in the Kaccita-sarga, while enquiring about measures of defense, Rama asks Bharata whether the fort is equipped with yantras. Lanka, as a city built by Maya, is naturally more full of the yantras. The city, personified as a lady, is called yantra-agara-stani, informing us of a special chamber filled with yantras. (Sundara 3. 18). The Arthasastra of Kautilya is one of the books of culture which throws a flood of light on the particular epochs in which they arose. This work of 300 B.C.E. being a treatise on statecraft, speaks of yantras in connection mainly with battles, but also with architecture to some extent. An early work, a theoretical treatise and a text of great reputation, the Arthasastra forms our most valuable document on the subject of yantras.

And, as early as the Bhagavad Gita, the machine became an apt simile for man being a tool in the hands of the Almighty that sits in man's heart and by His mystic power makes man not only move but also delude himself into the notion of his being a free or competent agent.

“To deny to Babylon, to Egypt and to India, their part in the development of science and scientific thinking is to defy the testimony of the ancients, supported by the discovery of the modern authorities. - **L. C. Karpinski**

“Thus we see that India’s marvels were not always false.” - **Lynn Thorndike**.

***

The following machines are to be made of a metal called Veera. An alloy formed by melting and fusing the three metals Kshwinka, Arjunika and Kanta (magnet), in three, five and nine parts respectively, is called Veeraloha or a metal namely Veera. When it undergoes shastraic processes, it cannot be destroyed by fire, air, water, electricity, cannon, gun-powder or the like. It will then be very strong, light, and of

golden color. The metal is specially meant for Machines.

Panchamukha Yantra

A machine of this name contains doors in east, south, west, north and top. Weighs 170 Ratals. Carries one thousand Ratals. By the help of electricity it can travel five Kroshas per hour. It is used as conveyance for men and in wars. Since the machine is conducted by the power of a spirit called Gaja it is named as Gajaakarshana Panchamukha Ratha.

Mrugaakasrshana Yantra

These are the machines drawn by such animals as oxen, asses, horses, camels, elephants and so on.

Chaturmukha Ratha Yantra

This machine has faces or openings on four sides. Weighs 120 Ratals. It can be conducted with any oil, preferably that of coconut shells, or with the help of electricity. Travels six Kroshas per hour. Used for traveling, wars, and transporting things.

Trimukha Ratha Yantra

This Machine weighs 116 Ratals. It has three doors, downwards, upwards and on one side. It can carry a weight of 600 Ratals. It is conducted with the help of oil extracted from knotted root of Simha-Krantha, and from that extracted out of the stalks of a kind of grass. If such oils are not available, electricity may be made use of. It is used for the purposes that the above machine, viz. Cahkra-mukha-Ratha Yantra is used.

Dwimukha Yantra

It weights 80 Ratals. Doors to east and west. Conducted by a wheel fitted with screws. Travels three Koshas per hour. Can carry a weight of three hundred Ratals. Used for the above purposes.

Ekamukha Ratha Yantra

This machine has only one door. Weighs 48 Ratals. Carries two hundred Ratals of weight. Travels with the help of oil extracted from the seeds of Kancha-Thoola or Sovlaalika or by electricity: speed 1 Keosha per hour. Used for the above purposes.

Simhaasya Ratha Yantra

This machine presents a front of a lion’s appearance. Possesses two doors. 75 Ratals in weight. Carries a weight of 50 Ratals. It can travel both on land and air. It has the quality of expanding and contracting. Used for the above purposes.

Vyaaghraasya Ratha Yantra

This is modeled after a tiger. Possesses wings. Weighs 64 Ratals. Carries 200 Ratals of weight. It travels in air expanding its wings with electric power, but contracting its wings with steam power. It is used for the above purposes.

Dolamukha Yantra

This is modeled after a litter. Contains two doors. Weights 50 Ratals. Carries 148 Ratals. Travels three Kroshas per hour. Conducted with the help of the electricity and an oil, viz Shilyusha extracted from wine.

Kurmamukha Ratha Yantra

This is modeled after a tortoise. Contains small doors. Weighs 32 Ratals. Used for only spying.

Ayah – Prasaarana Yantra

Out of those that are conducted by electricity this is one which travels on iron line spread on earth. It may be constructed to contain from 40 to 80 wheels. It resembles the railway train somewhat, weighs 4000 Ratals. Carries twenty-five thousand Ratals. Travels three Kroshas per hour with the power of electricity. It is used in transporting men and goods from place to place.

Panchamukee Yantra

This machine has five faces. Weighs 115 Ratals. Carries twelve thousand Ratals. Carries twelve thousand Ratals. Has another machine which enables the five doors to open or shut. Conducted with electricity. Speed four Kroshas per hour. Used for the above purposes.

Eka Chakra Yantra

This contains only one wheel. It is modeled after a trap. Weights 105 Ratals. Carries 800 Ratals. It is given motion and kept in motion by its wheels being worked by bellows. Travels three Kroshas per hour.

Trimukhi Yantram

This machine has three faces. Contains three compartments which can be separated. Weights one thousand Ratals. Travels on water. The three compartments are so arrayed that it can travel with the second compartment if the first is damaged, and if the second also gets damaged, the third compartment can safeguard the contents, by separating them as may be necessary. Should the topmost apartment be in a dangerous predicament, it can rise into heavens and travel in the air. Uses as above.

Jrumbhala Yantra

This machine has the door below. It is modeled after a shut umbrella. The covering is made of thick water-proof cloth which is manufactured out of the juice of the five trees or Pachavarga Kasheeree Vruksha. Weighs 42 Ratals. Carries 300 Ratals. It can expand into the shape of a tent by working a screw inside. So also it can contract into the former shape by working another screw. Appears like a flag. Used for secret wanderers like spying. With electric power or with the help of its wheels turned by bellows it can travel six Kroshas per hour.

Goodha Gamana Yantra

This machine can accommodate only three persons. Weighs half a maund. Appears like an ordinary tower. Contains five keys. Can travel on land as well as air. Its motion is almost invisble. Can travel eight Kroshas per hour with the power of an oil called Sinjurika. Used for secret travels.

Wyrajika Yantra

This machine is made of glasses of abhraka or mica. There are sixteen doors. Weights three Ratals. Carries five Ratals. Appears like a sparking light and as such none can know that it is a machine. Should anyone go near it, the sparkling light produced by turning an inner key will kill him. Can travel on water as well as on land. With the electric power of solar rays it can travel twelve Kroshas per hour. Used for journeys, in wars and in dispatching money.

Indranee Yantra

This machine is constructed with paper, manufactured out of grass belonging to Maunjavarga; the 3rd, 9th, 11th, 22nd, 30th and 42nd classes of grass are known as Pishangamunja, Pingala Munja, Rajjumnunja and son on. This machine cannot be destroyed by fire or water. It is exceedingly light and strong. It can travel 15 Kroshas per hour with the help of wind-worked wheels. Carries 100 Ratals.

Vishwaavasu Yantra

This machine has two doors. Weighs 148 Ratals. Carries three thousand Ratals. With the help of steam it travels two and a half Kroshas per hour. It can go both forward and backward. It can be expanded or contracted. Contains seven keys. Used for the above purposes.

Sourambhaka Yantra

This machine has three storeys. There are secret seats for 400 people to sit in each of the three storeys. The seats are not ordinarily visible. The storeys can alone be perceived. Weights 230 Ratals. Carries thirty-six thousand Ratals. It travels with the help of electricity or steam, or with the help of spirits of seventh kind of wine. Can go 32 Kroshas per hour. Useful in carrying men and things in warfare.

Sphotanee Yantram

This machine has only one door, weighs 50 Ratals. Carries 200 Ratals. Sails on water. Just like a bubble of water, sometimes it can rise above water and at times it can dive underneath water. Moves with the power of steam or of spirits of Kanajala Kshaara. Travels four Kroshas per hour. Used by marine spies.

Kamatha Yantram

This is modeled after a tortoise. Weights 500 Ratals. Carries eight thousand Ratals. Contains two doors. Travels under the surface of water. Used for the above purposes.

Parvathee Yantram

This is modeled after a lotus. Contains four doors. Weighs 69 Ratals. Carries 800 Ratals. A pole is fixed in the middle to contain keys inside to expand and contract the machine just like a lotus opens and shuts. With the help of the power of steam or electricity it cant travel 24 Kroshas per hour. Used in voyages to distant islands.

Thaaraamuckha Yantram

This contains a face of seven keys, sparkling like stars. Twelve doors. Weights two thousand Ratals. Carries twenty-five thousand Ratals. Out of the seven keys, if the first is pressed, a melodious music accompanied with every kind of musical instrument will be heard by those that are inside: if the second is pressed, dramatic scenery and action will be visible: by pressing the third, a stream of fresh water flows amidst the occupants, so that they may make use of water as they please: by pressing the fourth, plates with flowers, scents, plantains, camphor etc. will be ready before the occupants so that they may worship God: by pressing the fifth, plates of excellent food will be ready before them; while they are taking their dinner, the plates turn round through wires: by pressing the sixth: by pressing the seventh beds will be ready for all. Should the keys be kept as they were everything will vanish. With the help of steam or electricity it can travel four Kroshas per hour. Used for the above purposes.

Rohinee Yantram

This is modeled after a hollow bamboo and is of bamboo color. Weighs three thousand Ratals. Carries fifty thousand Ratals. Contains five hundred compartments in which gun-powder, bullets, weapons etc. can be preserved. Though fire breaks out nothing will be burnt or damaged, because the fire is suppressed by the nature of the metal with which it is composed. With the help of steam or electricity, it can run six kroshas per hour. It is used chiefly in wars.

Raakaasya Yantram

From the machine a glorious light will flow out just like moon-light once in three hours. This light illuminates a distance of sixty four Kroshas by which everything that lies in its range will be made clearly visible. Weights one ratal. In the machine there is a wheel turning to right round and round just like the Sun. Can travel on land, water and in air. Useful in finding out objects from afar off. With the help of spirits of sixteenth kind of wine it can travel four Kroshas per hour on land, eight kroshas on water and twelve Kroshas in air.

Chandramukha Yantram

This machine has a front like the moon's disk: it is dark in the middle and bright all round. Weighs 400 Ratals. Contains sixteen doors. Carries sixteen thousand ratals. Contains five storeys and sixty-eight cylinders. These cylinders are useful in filling the five kinds of smokes, the seven powers, thirty-two kinds of powders and forty-eight kinds of gas. When they are in those cylinders no harm is done to them. This travels in paths dug out inside the earth. Travels with the help of spirits of 13^{th} quality of wine. Speed sixteen kroshas per hour. Used in wars.

Anthaschakra Ratham

This is modeled after the crooked rod of a litter. This rod, resembling the two angularly bent rods of an oil mill, will be turning round and round always. There are thirty two screwed wheels. This machine must be fixed to the earth. It is used in transporting elephants, camels, horses, men, conveyances and son, or binging them near from a distance. This can be done by working at the screws inside. This must be fixed in the fitth circle of the warfield.

Panchanaala Yantram

This is fitted by joining five cylinders. There are distillery machines in each of these cylinders. These distilleries are used in manufacturing not only oils, spirits, etc. but also smokes, powders and so on. Weighs 230 Ratals. Travels three Kroshas per hour with the help of spirits of 9th class of wine.

Thanthreemukha Yantram

The front of this machine appears like a trap of wires. Inside the machine there is a magnetic wheel in the center. Behind this, there are exact representations of lions, tigers and other fierce animals all made of wires. In front there is a magnifying glass of 103 rd class. By working at the keys, these iron lions, tigers and so on can be made to roar and pounce upon people that come near it. By doing so, none can go near it. Weights 80 Ratals. Carries thousand Ratals. With the help of the powers of spirits of the third class wine, it can travel four kroshas per hour. Useful in wars.

Vegineee Yantram

This is modeled after an umbrella. It can run very fast by turning the screws at the junction of wheels. Can accommodate only three persons. Travels 8 kroshas per hour.

Shaktyudgama Yantram

This is a machine which spreads the electricity in sky. It has five storeys. Contains big glass vessels (containers) in each of them. In the first storey, the glass vessels will be filled with tar mixed with coal. In the second, the glass vessels will be filled with sea-foam or lather with the extract of tin. In the vessels of the third storey, sulpjur with the oil of the seeds of Visha mushti will be filled. Those of the 4th, will be filled with the five essences of oils of the Pranaksharas. The five balls along with mercury, are fitted in those of the fifth. Wires from these five vessels are united as per shastraic principles. The vessels of the first storey must be filled with electricity and through this the vessels of other storeys must be filled. Through this it can spread in the sky. The machine weighs 32 Ratals. Used in constructing airplanes.

Mandalaavartha Yantram

This is modeled after a spinning top. Contains six faces and sixty-four screws inside. Weighs 68 Ratals. Carries eight thousand Ratals. Like a top it turns round the armies and crowds of people, round and round. It can turn round thrice, a distance of two kroshas in an hour, with the help of electricity and spirit of eleventh of class of wine. Useful in wars and in mutinies of people.

Ghoshanee Yantram

This is modeled after an immense serpent. Contains three coverings and 24 faces. It is filled with electricity. Contains also 148 cylindrical apartments to stock poisonous gas. By working at the inner screws, it can produce a noise equal to 32 thunderbolts. Emits poisonous gas as it travels. The sound thus produced will be heard for a distance of 14 ¼ miles. People near it die of the mortal effects of the deafening noise and poisonous gas. Those who are beyond eight kroshas of it will swoon. Weighs 116 Ratals. Carries six thousand Ratals. Can travel six kroshas per hour, with the help of electricity and spirits of 13th kind of wine.

Ubhayamukha Yantram

This machine possesses the same symmetry on either side. Contains sixty-four small holes or doors on either side. Contains a fresh water stream inside. Above that stream, there flows another stream of tar. In the middle there are oils belonging to seven varieties. Contains 71 keys inside. By working at these keys, the poisonous gases, powers or anything of the kind that is injurious to lives, will be swept off in the range of twelve miles (roughly) around the machine and purifies the atmosphere. Weighs 48 Ratals. Carries 108 Ratals. Travels five Kroshas per hour with the help of electricity or spirits of 27th class of wine. Use for purifying atmosphere whenever and wherever necessary.

Thridala Yantram

This is modeled after a three-leafed Bilwa patra…. Having three compartments. The first is square, the second is triangular, and the third is a hexagon in shape. Each of these compartments has two doors. Each compartment is provided with Peshanee Yantras. A Peshanee Yantra is one which grinds grain such as wheat into powder. Always filled with flour. This machine is conducted by electricity.

Thrikuta Yantram

This machine has two towers, like the peaks of a mountain. Each of these towers is one hundred (bahu) or yards in height. Each of the towers contains 32 keys inside. There are cylinders at every key. Above the towers there are flags and wheels. In front there are instruments to measure the cold. Indicates the weather, wind, sun-light, rain, thunderbolt, fall of stars and other future phenomena.

Thripeetha Yantram

This machine contains three bases. In the first, there is a machine having three heads like the elephant's, but possessing two trunks in each head. In the second there is a three-headed instrument, each of the heads having two trunks of Vyali animal. In the third there is an instrument which has three heads, each of which has the appearance of a rhinoceros with tusks. They can be fitted together or separated as required. The first of these Yantras can stop a stream of water, suck up water of the stream and thus change the direction of the stream. The second can tear mountain asunder and thus create passage. The third can bore a hole in earth, suck up water from down below, and jet the same out through the tusks above its head. Weighs six thousand Ratals. Carries 80 Ratals. Travels and works by the help of steam, electricity and spirits of 23rd class of wine. This machine is used in constructing roads in water and bridges, and in piercing tunnels across mountains and rocks.

Vishwamukha Yantram

This is a very spacious machine. In it there are twelve cylinders containing magnifying glasses. These cylinders are very big and they are fitted that they can be turned into any direction as may be necessary. Weighs 1800 Ratals. Carries forty thousand Ratals. There are two stories in it, which can be separated or joined together with the help of keys. Travels twelve Yojanas with the help of spirits of 32nd quality, steam or electricity. The upper storey can be separated and can be soared into heavens. By fixing the cylinders to it in the sky an area of 24 Yojanas with forests, countries, seas, cities etc become clearly visible, and a picture/photo of the same can be obtained. Used in traveling and so on.

Ghantaakaara Yantram

This machine appears as though seven almirahs are fixed together. Various kinds of wires, the essence or dravaka of the 16th kind of magnet, and many other dravakas are filled in it. There are two bells of bell-metal or white brass in each of these almirahs, and they are so fitted as to produce a terribly alarming sound just like the alarm of a clock. By the waves produced news of the world at large can be learned. Used in gathering information and in pictures.

Vishthrithaasya Yantram

The machine contains a widely open mouth. Weighs 76 Ratals. Carries 120 Ratals. In front of this machine there are five keys appearing as turrets. In the first turret there is a vessel of Chandra Kantha stone of the sixth class. As soon as the moon rises, water oozes in this stone vessel and it is filled. The same water is used by the men in the machine to drink. The other turrets attract the powers of cloud, stars and so on. Travels three Yojanas per hour with the help of spirits of the 14th class or electricity. Used in traveling. Etc.

Kravyaada Yantram

This machine contains three faces. Weighs a hundred Ratals. Carries ten thousand Ratals. With the help of steam it can travel nine Yojanas per hour. Used in traveling and in carrying goods.

Shankhamukha Yantram

A machine containing a five faced boring instrument and resembling a conch shell is called Shankha mukha Yantram. There are keys to expand or contract the machine whenever or wherever necessary. Weighs a thousand Ratals. Used in constructing wells, digging, deep pits or boring holes in mines. It can dig 213 bahus or yards in an hour.

Used also for the purposes contained in the description.

Gomukha Yantram

This is modeled after the face of a cow. Weighs 80 Ratals. Carries 700 Ratals. There is a constant flow of water through this mouth. Travels two Yojanas per hour with the help of spirits of the 20th class. Used in supplying water.

Ambaraasya Yantram

This machine appears like sky for those who look at it. Weighs 180 Ratals. Carries 2400 Ratals. Used in transporting elephants, camels, and so on. Travels 3 Yojanas per hour with the help of steam and electricity.

Sumukha Yantram

This machine presents a beautiful face of a crab. Weights 118 Ratals. Carries 1150 Ratals. Can travel with the help of spirits of the 14th class, steam or electricity. Travels two Yojanas on land, four Yojanas in air, and three Yojanas in water, per hour. Used in traveling and transporting goods from place to place.

Thaaraamukha Yantram

The balls that are made out of the metal found where stars fall, are called Thaaraamanies. A machine which contains such balls is called Thaaraamukha Yantram. There are three big cylindrical pillars in it. There is another smaller machine inside this machine. The smaller machine contains some draavakas or acids, electricity, some glasses and so on. There are keys at the bottom of the three pillars, above named. By working the first key a brilliant light just like the rainbow will be produced. By working the second key a brilliancy light just like sun-light covered by clouds will be given out. By working the third key smoke will be issued out like dew. When this machine sails on sea, it can take the photos/pictures of all machines and animals that travel or stay both on and under the surface of the sea. Used in finding out objects that are both on and under the surface of the sea.

Manigarbha Yantram

This machine is round or circular in formation. Inside the machine there are balls called Souraka, Paavaka, and so on which attract the heat of solar rays. Weights 64 Ratals. Carries seventy thousand Ratals. Contains twelve faces to allow solar rays in. Travels three kroshas per hour with the help of the spirits of the third class. Used in traveling and attracting the heat of the sun-light.

Vahinee Yantram

This machine contains 16 keys and twelve metallic cylinders. Is 32 feet in height and 11 feet in circumference. Underneath there are 48 boring instruments. There are 96 wheels which throw off the mud dug. There are 22 keys which dig up rocks. There are twelve instruments sucking water up. This is a machine to be fixed in earth firmly. The water thus sucked up flows like streams. This machine can dig earth as far as 82 thousand feet deep. Used in digging earth and sucking water up.

Chakranga Yantram

This machine is modeled after a trap. There are wheels with stones throughout this machine. By turning one wheel plenty of wind blows out. By turning one wheel plenty of wind blows out. By turning another water flows down. In this way there are wheels by turning which fire, steam, poisonous gas, dew, power, colors and so on are issued. By the turning of the wheels it travels two kroshas per hour. Used in many ways.

Chaitraka Yantram

This machine is modeled after a scorpion. There are 24 joints inside. There is a key at every joint. Every key is numbered and colored differently. Music, melodious instruments, conversation, photos and many other wonders will be produced according to the definite key that is pressed. Those who go near it to enjoy these wonders will be not only photographed of their appearance but also of their mind. Used in Bhedopaya or in conquering enemies of deceit.

Chanchupata Yantram

This machine is modeled after a bird with its mouth open. Contains four wings. There are five keys to each of these wings. Wires are to be connected to earth from its open mouth. As long as these wires extend in earth, so long the earth will have acquired a peculiar power by which people, if standing in this area will be benumbed. By working the keys attached to the wings the people who stand in the infected area will faint, or the earth will crack and so on, according to the work allotted to be done by the keys.

Pingaaksha Yantram

This is modeled after a litter.

Throughout the body of this machine it is full of green eyes. There is a button in every one of these eyes. This is to be firmly fixed on the summit of a mountain. It is 60 ft. long and 14 ft. in circumference. This is to be fixed in a town or city when it is surrounded by enemies. From this machine keys are arranged and fixed through wires underneath the surface of the earth to the extent of twenty-four miles, around the place. Inside the machine buttons are arranged and numbered for all these keys outside. By pressing the first button it will act upon the particular key and the gates of the fort will be shut. By pressing another the moats will get filled with water. In this way, by pressing the other buttons wonderful phenomena such as tremendous fumes of fire, floods of water, cyclones etc. will be created according to the defined work of each key. This machine is used in defending a city or country against strong

enemies when offensive and defensive actions are at an end.

Puruhootha Yantram

This is modeled after a mrindanga, or musical instrument. It is 25 feet in height and as much in circumference. There is a machine called Shabda-sphota Yantra inside the machine. When the key is worked a tremendous noise bursts out equal to the simultaneous roar of 63 fierce lions. Used as per the nature of its work.

Ambareesga Yantram

This is modeled after an inverted earthen pot. 46 ft in height and 23 ft. in circumference. Contains keys resembling the feet of tortoise on all four sides. Travels in water 6 kroshas per hour with the help of Chakra Bhastrika. Used in finding the things on land under the surface of the seas and bringing them up.

Bhadraashwa Yantram

This is modeled after a horse. It possesses a tail of 38 ft. in length. Weighs 54 Ratals. It gallops like a horse with the help of spirits of 32nd class. Possesses three horses' speed. At the top of there are three-faced keys. When it is set to work by the key it goes on galloping just like a horse in a circular way. Circles a distance of twelve Yojanas per hour. While in gallops, brilliant sparks of light will come out and destroy all dew or fog covering that area and clear the atmosphere. Used in places and times of dew, where and when the dew obstructs the view.

Virinchi Yantram

This is like a globe in appearance. Around it there are 32 wires of 80 ft long and 40 ft in circumference, both in front and back of the machine. There are three keys to these wires. By working the first key, it becomes loaded with powder and bullets. By working the second it gets ready to the aim. By working the third it fires. It rends the mountains asunder to an extent of 24 feet per shot. Used in constructing tunnels in mountains and rocks.

Kuladhar Yantram

This is modeled after a crow. Contains three beaks like those of crows. Inside there is machinery of electricity and so on. At the top there are keys resembling small snuff boxes in which round buttons are inserted. When this machine is fixed on rocks and set to work it expels with the help of its beaks, slabs of stone as per desired dimensions. Cuts out 22 ft. stone in an hour. It is used in cutting stones.

Balabhadra Yantram

This is modeled after an inverted metal boiler. 64 feet long and 16 feet wide. On either side there are 16 ploughs 16 ft by 4 ft. wide, fixed. Each plough contains two wings. At the beginning and end of them there are turning screws. Inside there is

electricity or steam boiler. There are 24 keys above the machine. At the bottom of everyone of these keys are wheels. By the side there are 32 screws. As soon as they are pressed the machine goes on ploughing land. When the above 24 keys are set, the machine begins to run. Goes 3 Yojanas per hour. Ploughs an area of 3 Yojanas by 64 feet, per hour. The depth of the mud turned up in the land is 3 feet. Used in tilling the land.

Shaalmali Yantram

This machine is square in shape and white in color as of the flower of acaria Shireesha. At the top there are sixteen keys each intended for a definite work. By turning the first key, there appear a pair of hands the trunks of elephants and they can hold a weight of hundred Ratals. By working the second key that weight will be placed wherever necessary. The other keys are intended to carry up weights from deep water, and to arrange pieces of stone, timber or the like in or above water in constructing bridges or so. It can also bring down weights from a height of 200 feet.

Pushpak Yantram

This is crescent in formation. It is provided with many cradles suspended to it. There are 14 of them on each of the sideways and 8 in the middle, suspended. In those of the right hand side there are machines resembling pigs, while in those of the left wing there are sawing machines. In those of the middle there are screwed wheels suspended to chains. There are two wheels. This machine is to be in a place where timber is to be cut and sawn. If the first key of the upper wheel is turned, the above said pigs come down one by one. Bu working the second screw the pigs fall at the trunk of trees, beat them and cut them with tremendous noise and produce enormous quantity of smoke and fire. This fire spreads to the extent of 16 miles around, burns up all waste matter on land and clears the area. By the action of the fire on trees, the oil and so on will be extracted and stored up in bottles placed at the bottom of those trees. The heat of the fumes on the fire renders all the trees in that area soft like a plantain. The leaves of the trees fall down. By working the third key some more pigs come down and roam about that place exhaling tremendous breaths. Owing to this wind blown the ashes of that area will be swept off and the land cleared. In the same way, if the key on left side be turned, the saws from the cradles come down one by one. By turning the first screw of that wheel the saws will get themselves ready at the place. of the trees where they are to be sawn. By working the 3rd screw, the saws will go back to their cradles and from them pairs of hands like the trunks of elephants will come down. These pairs of hands will collect the pieces of timber that are sawn down. This machine weighs 180 Ratals. Can travel in forest with the help of steam power. It is a machine to be fixed to the earth. It can saw 3200 ratals of weight of timber per hour. Used in hewing and sawing timber in large quantities.

Ashtadla Yantram

This machine is modeled after a lotus containing 8 petals. Under each of these petals there will be an enclosure. In each of these enclosures. In each of these enclosures there will be the 8 things viz. smoke, electricity, water-vapor, air, Rushakam, Vishasaram, Manjusham and Katusaram which are described in Meghotpati Prakaranam. There is the key in the center of the lotus. In it there are eight screws for the 8 petals. By working any screw the things that are in the connected petal will go high above and form a cloud. By working the central key fumes like solar rays will be given out. As soon as the heat of these fumes acts upon those clouds formed before, they begin to rain. This machine is specialized to get rain.

Souryayana Yantram

This is like a pillar 116 feet high and 58 feet in circumference. At the top there is a sieve containing holes and made of glass of the 96th class called Somapa. From this sieve in this pillar there are twelve machines in order. Above the sieve there is a covering of 97th class of glass called Somasya Darpana. Above this covering there is a glass wheel called Kumudinee containing spokes made of 98th class of glass called Chandrika Darpana. In the twelve points of this machine there are twelve upper screws and twelve lower screws. Bu turning the first screw, the contents of the machine such as electricity, cold fluid, Shaitya Drava, Sudha Mushee, Soonruta, Pushkalee, Pranada, Dravinaamrutha, Sooraneee, Jambaalee, Lulita, Vaachaklavee, Gacyoosha, rise up in the definite proportions. Through the cylindrical tubes which are fixed to the wheels of the sieve these powers pass and touch the glass covering above. By turning the electric screw then, the wheel turns 1192 rounds in a minute. Then a power called Someeya of the lunar rays is attracted by this wheel and it gets down through the sieve. Thus the power fills in the bottle below in the form of gas. It must be kept air-tight. Its use is this. When such limbs as head, hands, feet, of a person are cut off, the limbs are fixed to the right place of the body and the body kept in a box. The body must be wrapped in a covering of the bark of a plant called Vaarshneeka Valkala. When to such a body the above Somadrava gas is injuncted 5 Rajanikas, the body is resuscitated. This must be done within five minutes after the injury is done. Used in setting the cut limbs right, or resuscitating the persons killed, in the above manner.

Did You Know?

Kaliyugi Arjuna in Modern India

The tradition of ancient Indian archery is kept alive even today by a handful of display archers in the country. In the early years of the current century a famous archer from South India, nicknamed **Kaliyugi Arjuna**, shot a number of tigers and other wild beasts with his bow and arrows. Possessed of a powerful physique and an uncanny aim, he did great things with his favorite weapon, and for some time taught archery to the students of the Prem Maha Vidyalaya, Brindaban.

He could shoot four arrows simultaneously from the same bow and hit four difficult and different targets all at once. He made people put up spectacle frames fitted with silver rupees instead of glasses, which he shot down with two arrows of such an impeccably calculated force as to displace the little discs without injuring the man. He smeared exceedingly sharp arrow-tips with chalk dust and shot them at the bare backs of students with a perfect delicacy of control, so that they left only chalk marks on their tender targets without even grazing them. But he could also shoot powerful shafts that ripped through copper and iron plates. He could easily support a football in mid air for more than five minutes with a continuous shower of arrows. **Imprisoned for seditious activities during the first world war, under the British Rule, he died in jail.**

We have seen many of these feats repeated by another archer not many years ago. As well as performing many of the exploits of Kaliyugi Arjuna he could easily hit four thin sticks set upright in the ground at a fair distance with as many arrows discharged together from the bow. And he could also hit his target with his back turned to it, only seeing its reflection in a mirror.

In antiquity, when almost every able-bodied man tried to learn the use of the bow, the standard of archery must doubtless have been high, with not a few outstanding masters of the great weapon.

Guest Book

Hindu Epics such as Mahabharata have often been described as myths. Dwaraka was submerged by the sea right after the death of Lord Krishna. This was regarded as a grandiose metaphor, part of a story filled with great myths. In the early eighties an important archaeological site was found in India, at Dwaraka, the site of the legendary city of Lord Krishna. Now, it is discovered that the whole coast of western India sank by nearly 40 feet around 1500 B.C. E. Why is that the rediscovery of Dwaraka has not attracted the same degree of attention in the West, as that of ancient Troy by Heinrich Schliemann?

The first clear historical record is dated 574 A.D. and occurs in the Palitana Plates of Samanta Simhaditya. This inscription refers to Dwaraka as the capital of the western coast of Saurashtra and still more important, states that Sri Krishna lived here. The establishment of one of the four of his pithas at Dwaraka by Sankaracharya attests to the great religious sanctity the place must have attained by the eighth century A.D.

Dr. S R Rao has written: "The discovery of the legendary city of Dwaraka which is said to have been founded by Sri Krishna, is an important landmark in the history of India. It has set to rest the doubts expressed by historians about the historicity of Mahabharata and the very existence of Dwaraka city. It has greatly narrowed the gap in Indian history by establishing the continuity of the Indian civilization from the Vedic Age to the present day."

Here is a report about the latest excavations done by Dr. S.R. Rao of the Marine Archaeology Unit of the National Institute of Oceanography of India. Following this report are a few articles and images.

The Towering personality of Lord Krishna

Sri Krishna is a towering personality and it is difficult to separate the human aspect of his life from the divine in Krishna concept. He is a grand mystery and everyone has tried to understand him in his own way, according to his spiritual light or vision. The Yogis considered him to be the absolute truth, the Gopis the highest object of love, the warriors as an ideal hero, Kamsa as an object of fear and Sisupala as an object of hate.

Whether one thinks of him as an object of love or hate, one attains him. Yudhishthira attained him through friendship and Narada by devotion. Krishna is the embodiment of intellectual and spiritual glory. No other single idea has so much influenced the course of India's religion, philosophy, art and literature as the life and personality of Krishna. As a child he was wonderful, as a youth he was physically most perfect and beautiful. as an intellectual he was the very embodiment of Vedic scholarship and his teachings in the Gita embody the immortal message of desire less action, knowledge and single-minded devotion. "As a fighter he was without rival, as a statesman most shrewd, as a social thinker very liberal, as a teacher the most eloquent, as a friend never failing, and as a householder the most idea." It is with his help that the Pandavas were able to overcome all opponents and win the battle of Mahabharata.

In the words of **Annie Wood Besant** (1847-1933) was an active socialist on the executive committee of the Fabian Society along with George Bernard Shaw. "He (Krishna) is so fundamentally the God, who is human in everything, who bends in human sympathy over the cradle of the babe, who sympathizes with the play of the youth, who is the friend of the lover, the blesser of the bridegroom and the bride, who smiles on the young mother when her first born lies in her arms, everywhere the God of love and human happiness; what wonder that his winsome grace has fascinated the hearts of men."

(source: **Discourses on Hindu Avataras - By Annie Wood Besant**).

Krishna-kanhiya
*(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India - By Colonel James Tod**).*

Sister Nivedita - **Margaret Noble** (1867-1911 wrote: "**The Grand Personality that towers over Kurukshetra** and enunciates the body of doctrines which all India knew....to be the core of **dharma** combines within himself the divinity of the Indian Shiva, the virility of the Greek Heracles, the simplicity of the Judian Christ, the tenderness of the Buddha, the calm, austerity and learning of any teacher of the Upanishads."

It is however, essential to note that the Mahabharata itself treats Krishna both as a God and as a man, so does its essential part of the Gita. (IX. II).

Megasthenes, the Greek ambassador in the court of Chandragupta Maurya (4th century B.C) makes the first reference to the deification of Vasudeva. He says that Heracles (who is closest to Krishna-Vasudeva) was held in high regard by the Sourasenoi (Surasenas) who possessed two large cities namely Methora (Mathura) and Cleisobora (Krishnapura, that is Vraja and Vrindavana). Apart from references by Megasthenes to the deification of Krishna-Vasudeva, Buddhist texts mention the existence of shrines dedicated to Vasudeva (Krishna) and Baladeva (Balarama).

Heliodorus, the son of Dia (Dion), a resident of Taxila had come to Besnagar as an envoy of the Greek king Antalikata (Antialkidas) to the court of Kasiputra Bhagabhadra during his 14th regnal year. Antialkidas is placed between 175-135 B.C. The Greek king Agathocles (2nd century B. C) was also devoted to the Bhagavata cult. The figures of Krishna and Balarama are

shown on his coins found in the excavations at Al-Khanuram in Afghanistan.

Stambha or the column had been erected in BC 113 by Heliodorus, a Greek ambassador to India, a devotee of Krishna/Vasudeva at Videsha. Heliodorus' Column publicly acknowledged in the most conspicuous way that Vasudeva, or Krishna, as the "God of gods."

1) Trini amutapadani‹[su] anuthitani 2) nayamti svaga damo chago apramado "Three immortal precepts (footsteps)... when practiced lead to heaven-self-restraint, charity, consciousness." From this **inscription** it is clear Heliodorus was a Vaisnava, a devotee of Visnu. He also had written on his column's inscription that "Three immortal precepts when practiced lead to heaven–self-restraint, charity, and conscientiousness." These three virtues appear in the exact same order in the great epic - **The Mahabharata**. (For more refer to **The Heliodorus Column - gosai.com**).

***

The column was ordered by Heliodurus, a Greek or Greek-named envoy of the Indo-Bactrian king, Antialkidas. He came to the court of King Kasiputra Bhagabhadra, the ruler of the Besnagar area, from Taxila. **To celebrate his conversion into Hinduism a pillar was erected which is dedicated to Lord Vishnu. Heliodorus calls himself a devotee of Krishna/Vasudeva, one of the names of Visnu.** Such offerings were common in fulfillment of religious vows (thus 'votive' offerings) at that time. This same column has survived to the present, and is one of the primary pieces of evidence used to prove the existence of Vasudeva-Krishna (Krishna-Balarama) worship in the pre-Christian era. On the column erected in Besnagar in central India near Vidisha, north of Madhyapradesh State, at 113 BC (sometimes also dated 140/150 BC) he calls himself a worshiper of Vasudeva (Vishnu). This is the first known record that other than Indian-born person became a follower of Vishnu (Vaishnava).

"This Garuda-column of Vasudeva (Visnu), the god of gods, was erected here by Heliodorus, a worshiper of Visnu, the son of Dion, and an inhabitant of Taxila, who came as Greek ambassador from the Great King Antialkidas to King Kasiputra Bhagabhadra, the savior, then reigning prosperously in the fourteenth year of his kingship." (Transliteration and translation of this ancient Brahmi inscription was published in the Journal of the Royal Asiatic Society (London: JRAS, Pub., 1909, pp. 1053-54.)

Dr. S. Radhakrishan wrote: "The Bhagavad Gita is "both metaphysics and ethics brahmavidya and yogasastra, the science of

reality and the art of union with reality. The truths of spirit can be apprehended only by those who prepare themselves for their reception by rigorous disciplines"

Dwaraka had found a place in the texts on grammar, for **Panini, the great grammarian**, refers to Cakragirti, which is identified with Cakratirtha at the mouth of the river Gomati where Dwaraka is situated. The durgavidhana and durganivesa prakaranas of the **Arthasastra of Kautilya** prescribe the layout of a city. The description of Dwaraka in the Mahabharata and Jnata-dharma-katha as large, well-fortified and prosperous due to sea trade confirms hat it was a port city.

Dwaraka – The Importance of Heritage

Dwaraka has a special importance as one of the major Hindu pilgrim place, known as the capital of **Lord Krishna's Kingdom.** It is also an important historical monument. The region of the west coast, where Krishna was to settle the Yadavas was full of flowering and fruit-bearing trees. Here grew the nagacampas, grapes, coconut trees and many others. It was the land of the hunter Ekalavya. Dronacarya had also lived here. Krishna decided to built a new city here and laid the foundation at an auspicious moment. He named the new city Dvaravati. Much later the **poet Magha** in his Sisupalavadha, sarga2, describes in slokas 31 onwards, the city of Dwaraka, sloka 33 can be translated:

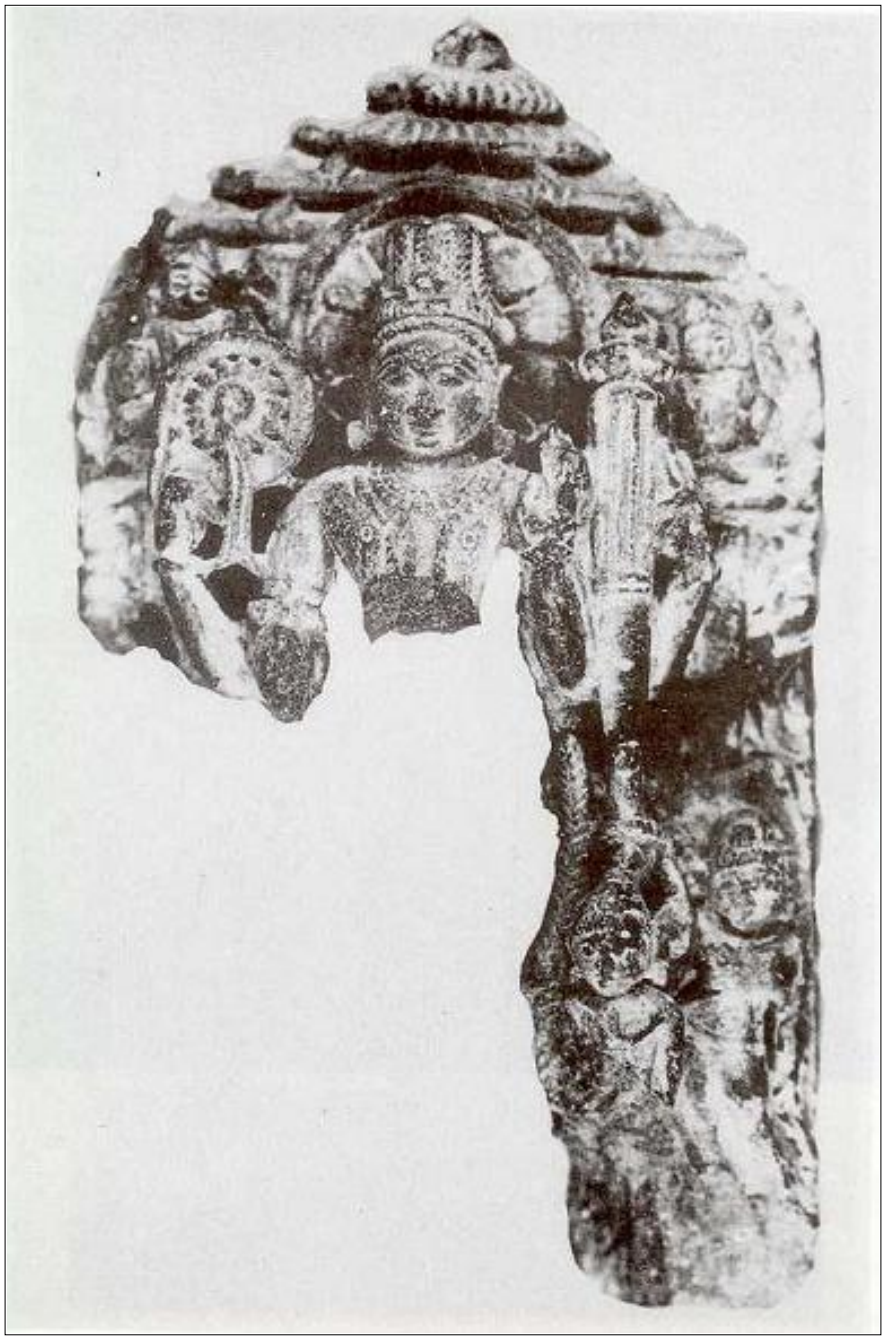
"The yellow glitter of the golden fort of the city in the sea throwing yellow light all round looked as if the flames of vadavagni came out tearing asunder the sea."

Literary texts like the **Mahabharata, Harivamsha, Sijupdlavadha and Puranas** contain traditions about foundation of Dwaraka, its planning and glory. Before the legendary city of Dwaraka was discovered some scholars were of the view that the Mahabharata being only a myth it would be futile to look for the remains of Dwaraka and that too in the sea. Others held that the Mahabharata battle was a family feud exaggerated into a war.

The Mahabharat war at Kurukshetra with Krishna as the charioteer to Arjuna.

Excavations done by Dr. S. R. Rao at Dwaraka prove that the descriptions as found in these texts are not to be discarded as fanciful but are to be treated as based on actualities as seen by their authors. **The architecture of the old Dwaraka of Shri Krishna is majestic and wonderful.** The great poet Premanand has in his "Sudama Charit" described its splendid beauty and majesty. Dwaraka is mentioned as Golden City in **Shrimad Bhagvad Gita, Skand Purana, Vishnu Purana and also in Harivansha and Mahabharat.**

Dwaraka on mainland which was one of the busiest ports of the Mahabharata Period met a sudden end due to the fury of the sea. After the Mahabharata War Krishna lived for 36 years at Dwaraka. At the end, the Vrshnis, Bhojas and Satvatas destroyed themselves in a fratricidal feud at Prabhasa but Krishna did not interfere to save them. The portends of destruction seen by Sri Krishna who advised immediate evacuation of Dwarakaare stated in Bhagavata Purana. Dwaraka abandoned by Hari (Krishna) was swallowed by the sea. The submergence took place immediately after Sri Krishna departed from the world.



Construction of Dwaraka

Interesting descriptions about its construction are found in **Puranas**.

"Fearing attack from Jarasangh and Kaalayvan on Mathura, Shri Krishna and Yadavas left Mathura and arrived at the coast of Saurashtra. They decided to build their capital in the coastal region and invoke the Vishwakarma the deity of construction. However, Vishwakarma says that the task can be completed only if Samudradev, the Lord of the sea provided some land. Shri Krishna worshipped Samudradev, who was pleased and gave them land measuring 12 yojans and the Lord vishwakarma build Dwaraka, a "city in gold".

This beautiful city was also known as Dwaramati, Dwarawati and Kushsthali. Another story says that at the time of the death of Shri Krishna, who was hit by the arrow of a hunter near Somnath at Bhalka Tirth, Dwaraka disappeared in the sea.

The information and material secured through underwater excavation off Dwaraka corroborates with the references to the City of Dwaraka, made in the Great Epic Mahabharata and various other Sanskrit literary works. In **Mahabharata,** there is a specific account about the submerging of Dwaraka, by the sea which reads thus:

Sculpture of Vishnu from onshore excavation, Dwaraka.

"The sea, which had been beating against the shores, suddenly broke the boundary that was imposed on it by nature. The sea rushed into the city. It coursed through the streets of the beautiful city. The sea covered up everything in the city. Even as they were all looking, Arjuna saw the beautiful buildings becoming submerged one by one. Arjuna took a last look at the mansion of Krishna. It was soon covered by the sea. In a matter of a few moments it was all over. The sea had now become as placid as a lake. There was no trace of the beautiful city which had been the favourite haunt of all the Pandavas. Dwaraka was just a name; just a memory."

The importance of the discovery of Dwaraka lies not merely in providing archaeological evidence needed for corroborating the traditional account of the submergence of Dwaraka but also indirectly fixing the date of the Mahabharata which is a landmark in Indian history. The Thermoluminiscence date of the pottery from Bet Dwaraka which is also connected with the Krishna legend is 3520 years Before Present. Identical pottery is found in the submerged city of Dwaraka. Thus the results have proved that the account in **Mahabharata** as to the existence of a beautiful capital city of Dwaraka of Sri Krishna was not a mere figment of imagination but it did exist.

Besides the sea-ports, there were renowned cities which were washed away by the rivers on whose banks they were situated. We may cite here the case of Hastinapura and Pataliputra, situated on the bank of the river Ganga and falling victims to flood-fury. The Mahabharata mentions that Hastinapura was washed away by the Ganga and consequently the Pandavas had to migrate to Kaugdmbi. Pataliputra which was the premier city of the land *(agranag-ara)* and the test of the excellence of all the

cities *(samasta-nagarf-nikasdyamand)* in the words of Dandin, the author of the *DaSakumaracharita,* later became the worst victim of inundation. The submerged parts of these cities are to be treated as protected monuments and great treasures of our ancient heritage. If Dwaraka excavations throw a flood of light on the history of the city which was associated with the life events of Krishna, the under-water excavations of Ayodhya situated on the bank of the river Sarayu might yield valuable information about the historicity of Rama, his age and contemporary urban status.

(**note:** Lord Krishna was born at midnight on Friday July 27, 3112 BCE. This date and time has been calculated by astronomers on the basis of the planetary positions on that day recorded by Sage Vyasa. Mahabharata War took place on November 22, 3067 BCE. The Bhagavad Gita was compiled around 500 BCE. - source: **The Hindu Mind - By Bansi Pandit**).

Marine archaeology is a new subject and a little-explored one, mainly due to the lack of funds, scientific and other necessary equipment and even trained divers, besides a dearth of qualified marine archaeologists.

A pioneer in this field is **Dr S R Rao**, formerly of the Archaeological Survey of India (ASI) and now with the National Institute of Oceanography in Goa. With all the existing limitations, he has done considerable work in the Bet Dwaraka region, where he found an entire submerged city, with rubble and masonry structures, several shell and pottery items and seals. The Mahabharata and Harivamsha describe Krishna,s capital Dwaraka and how it was submerged by the sea in great detail, a description that coincides in many ways with what the divers found. **Unfortunately, the doubting Thomases of our historical world, a school of Indian historians who regard Indian literature as, myth do not want to acknowledge this interpretation, in case it gives credence to the story of Krishna, whose capital was submerged by the sea.** It is ridiculous not to correlate archaeology and literature. Mythology is, the science of primitive man, his manner of explaining the universe. Records of natural phenomena and historical events ˜ invasions, migrations, etc. ˜ are stored as myths. If literature and archaeology had not been correlated, we would never have known the history of ancient Greece. **And how many people are aware of the fact that the only (ancient) temple for Matsya ˜ Vishnu's incarnation at the time of the great flood ˜ is to be found at Shankhodhara in Bet Dwaraka.**

Further Excavations of the Submerged City of Dwaraka - By S.R. Rao - Recent Advances in Marine Archaeology

(Proceedings of Second Indian Conference of Marine Archaelogy of Indian Ocean countries.Jan1990)
Published for the Society for Marine Archaeology National Inst. of Oceanography India. 1991

Since 1983 the Marine Archaeology Unit of the National Institute of Oceanography is engaged in the offshore exploration and excavation of the legendary city of Dvaraka in the coastal waters of Dwaraka in Gujarat. Brief accounts of the findings of the underwater search for the lost city have appeared in **Progress and Prospects of Marine Archaeology in India, 1987, Marine Archaeology of Indian Ocean Countries, 1988, 40 years of Research - A CSIR Overview, 1988 and Journal of Marine Archaeology, 1990.** The present paper deals with the more significant results of further excavations in 1988 and 1989 and discusses archaeological and literary evidence for the identification of the port city of Dvaraka of the protohistoric period. It also

draws attention to the scientific data available from the underwater excavations in the Arabian Sea and the Gulf of Kutch.

A brief account of the discovery of the submerged city of Dwaraka of Mahabarata fame and the salient features of the structures exposed as a result of underwater excavation con-ducted at Dwaraka and Bet Dwaraka by the Marine Archaeology Unit of the National Institute of Oceanography under the direction of the author from 1983 to 1987 appeared in 1988 (Rao, S.R. 1988, 47-53). Offshore exploration of the legen-dary city at Dwaraka was resumed in 1988 and continued through 1990, further seaward of the **Temple of Samudranardyana (Sea God)** at Dwaraka with a view to trace the plan and extent of the port-city and the purpose of the massive stone walls built on the banks of ancient Gomati. It was also necessary to ascertain whether its architectural features were in conformation with the description of the city of Dwaraka given in the epic Mahabharata. A second object was to obtain more corroborative evidence for reclamation referred to in the epic. Thirdly, the nick point where the ancient Gomati river joined the sea had to be determined. Lastly, the cause of submergence of the city was another problem that needed further investigation.

Onshore and offshore excavation in the island of Bet Dwaraka which, according to tradition, was the resort of Sri Krishna was resumed in November, 1987 and continued through 1988. The main objective was to trace the landward extension of the submerged protohistoric township near Balapur Bay where, in the intertidal zone a submerged wall had been traced in the earlier expedition (Rao, S. R. 1988, 49).

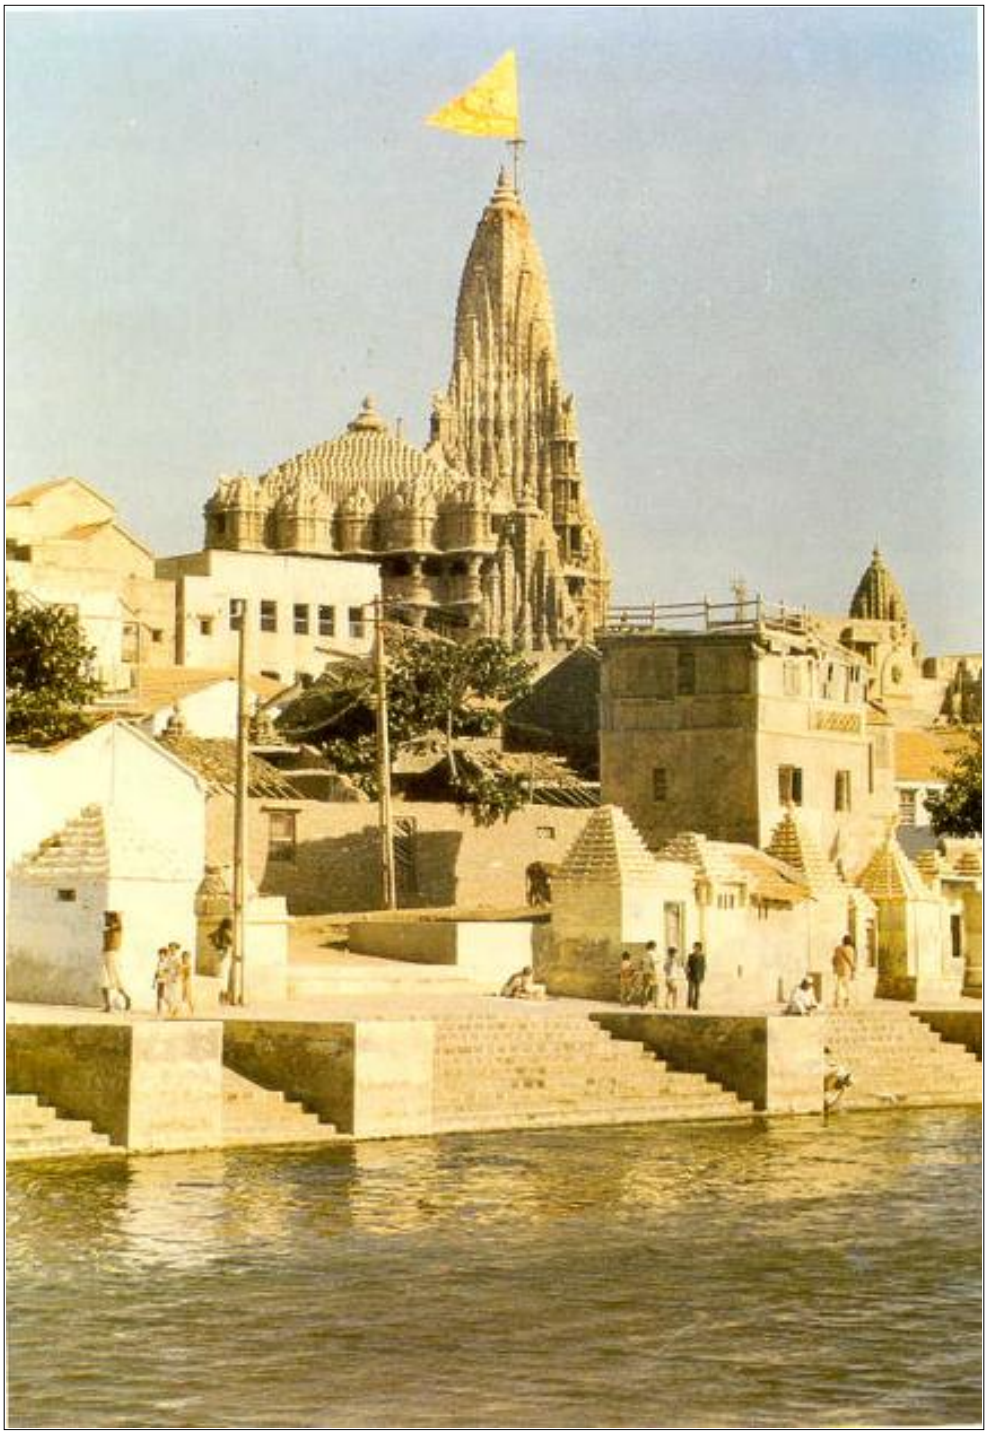
Marine Archaeological expedition at Bet Dwaraka

The trenches dug by the Public Works Department in the 'Talao' area near Balapur village for building an earthen embankment were examined, but no remains of any protohis-toric settlement came to light confirming thereby that there was no landward extension of'the ancient town. Most part of the ancient township was swallowed by the sea and the mud flats of Balapur extending over I km seaward had buried the ancient relics. One Trench (A) to the south of the Old Cus-tom House, and the other itrench (Al) in the intertidal zone at the toot of the Custom House mound were sunk to estab-lish the sequential relationship between the two sectors of habitation. (Fig. 1) The short duration of 3 or 4 hours at low tide when land was exposed near the shore, rendered excavation in ::Iavev deposit very difficult. Even so, a rubble foundation, 35 cm broad, and a few sherds of a large storage jar lying on the floor of the house were exposed in Trench (Al). Several worked columella of conch shell found lying in a line suggested that the house belonged to a shell-worker. Excava-tion had to be abandoned after digging to a depth of 20 cm because of high water table in lowest tide also. Trench Al was however extended on the west and the extension was marked XA1, but no structure came to light. Layer I of trench Al is surface humus, layer 2 consists of fine grained silty sand mixed with shingle and layer 2A, where shells and pottery are found, is darkish clay. No pottery was found in layers 2 and 2A of XA I.

A trench '2 x 2 m was laid above the rain gully in the Custori-. House mound to ascertain the cultural sequence. In all, 10 layers were distinguished. Layers I to 4 upto lm depth yielded Muslim glazed ware and Ted ware of early medieval period. In Layers 5 and 6 in 1-1.3m depth the Red Polished Ware assignable to the first five centuries of the Christian era was found. One sherd inscribed with the letter *sya* meaning I of in Brahmi characters of the lst-2nd century A.D. was recovered Layers 8-10 yielded a few sherds of the Lustrous Red Ware and coarse red ware of the post-Harappan phase. Natural soil could not be reached. A large number of shell bangles and a couple of worked columella were found in the medieval and early historic deposits. A bead of li3h bone is the only find from the post-Harappan deposit. It was decided to postpone to a later date the excavation of the intertidal zone and- the mound further north of the earthen embank-ment of the Talao where Late Harappan pottery has been found.

Massive stone protection wall-cum-pier in BDJ VIII

In the course of exploration of the near shore and intertidal zones south of Balapur Bay on 4th January, 1988 Mr Rajan, diver-archaeologist and Mr Sirsath, photographer discovered a massive rubble wall exposed in lowest low tide and the site has been designated as BDK Vill (Pi. 18-19). The wall remains submerged at high tide under a column of 2 in water above its top. Excavation was conducted on both the sides of the eastern arm of this structure on the 9th and 10th January in order to expose



to full extent the height of the structure and determine ' the nature and purpose of constructing such a large enclosure which is 558 m in its peripheral length. (Fig.2)

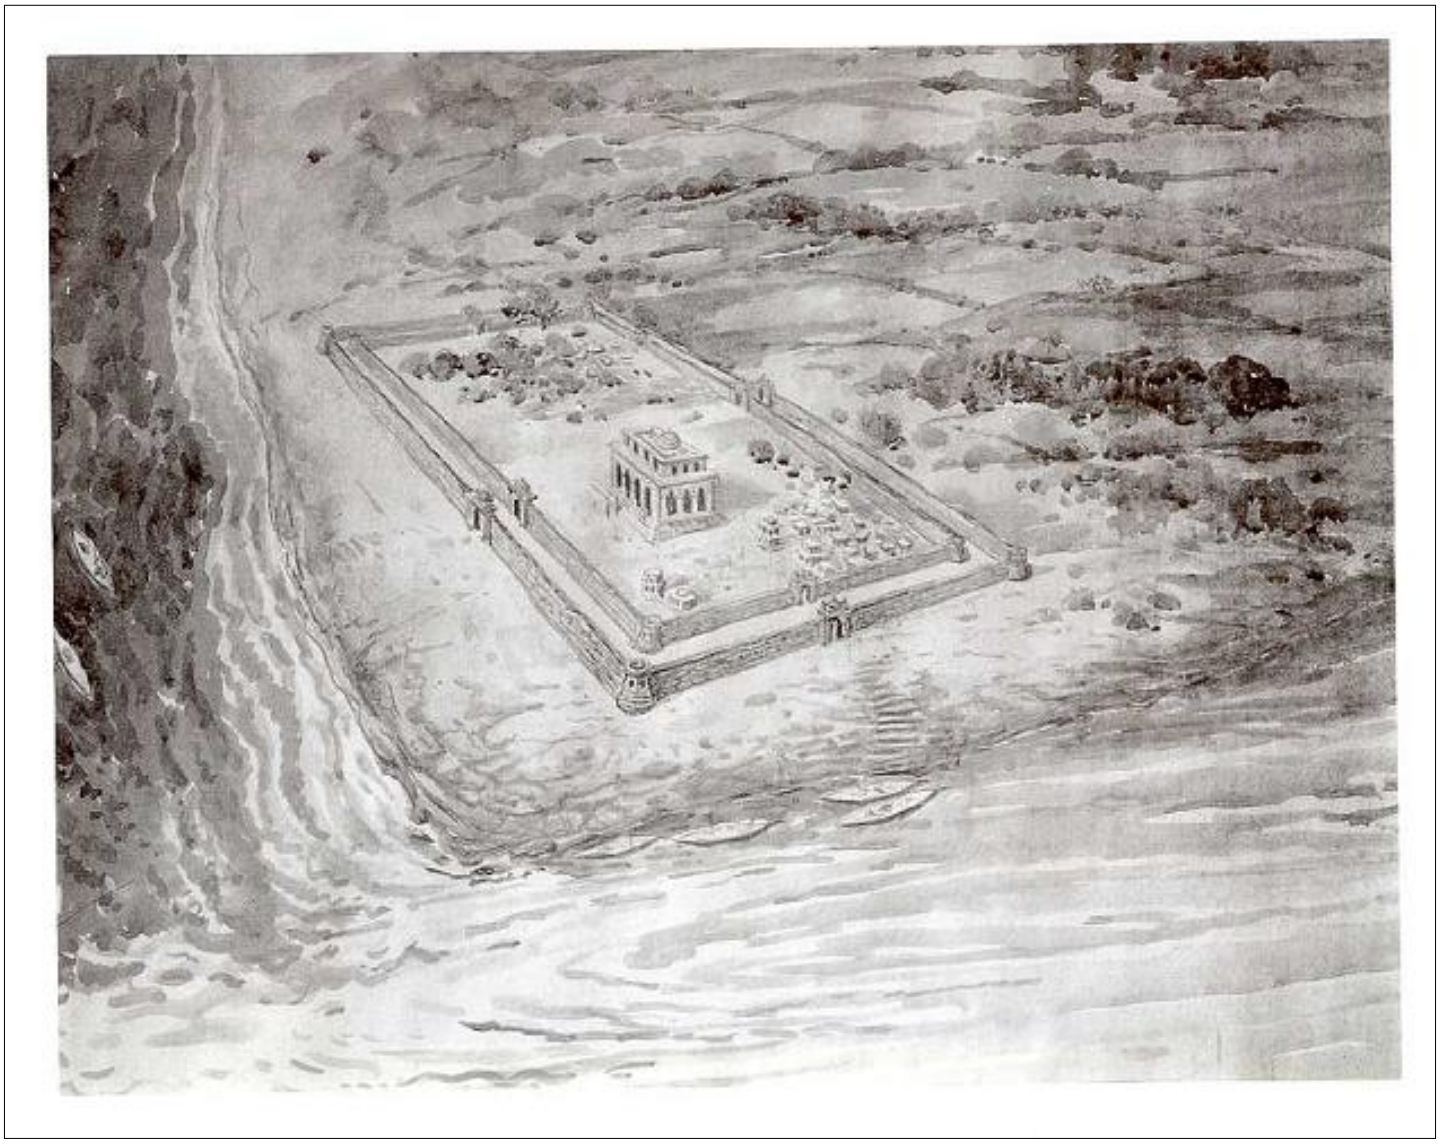
Trenches measuring 1 x 1.2 m were laid on its southern and northern faces. In all, 9 courses of dressed and undressed stones, of which 4 courses are covered by silty clay deposit were traced The wall was constructed on the bed rock. The stone masonry is heavily incrusted with barnacles and other sea organisms. It is very difficult to remove the incrustation with-out chiselling it. Originally the wall must have been atleast 2.5 to 3 m high. Presently it is only 1.5 m in height. The enclosure wall is an irregular hexagon on plan. An interesting feature of construction is the use of wedge-shaped blocks of stone for the shell, while the core is made up of rubble-filling. That the structure is man-made becomes apparent from the use of dressed stones closely laid and also from the box technique of construction. The thickness of the wall at the base is 2.5m while the extant tapering top is 1.5 to 2m thick. The pottery found in the trench is coarse grey ware but heavily rolled resulting in the disappearance of the slip and decoration if any. Only one sherd of the sturdy red ware of the post-Harap-pan phase was found in the extremely small trench. Provision-ally the structure is datable to 15th century B.C. on the basis of the sturdy red ware. Within the enclosure there must have been very important public buildings - may be warehouses and other structures relating to shipping, for, not far from here are two rock-cut stipways for launching boats. The massive protection wall could have also served as a pier.

Dwaraka

The Research Vessel *Vedhavati* arrived on 31st December at Dwaraka duly equipped with diving gear, echosounder, heavy compressor, airlift etc. For the next three days Sri. Srinivasa Bandodkar, Chief-diver-photographer and other divers and diver trainees searched for and cleared the sub-merged structures of the ancient city exposed in the earlier expeditions. They were found partly disturbed and partly covered by sediments and vegetation. Swells and currents had disturbed a few blocks of the top courses of walls. They were photographed and marked by fresh buoys. New areas beyond 500 m seaward of the Samudrandrayana temple were explored and the thick growth of vegetation on ancient build-ings were removed. On 3rd January a small stone structure was found 200 m north of buoy 35, and the overburden of 2-3 m thickness was airlifted before exposing the topmost course of dressed stones. Lying nearby is a partly damaged bastion which is semi-circular in plan (PI. 20). The dressed stones used in its construction are l ' -2 m long 0.3 m thick. A lunate-shaped dressed block appears to be the *chandrtdild* (moonstone of a temple).

Dwarakadish temple on the river Gomati, Dwaraka

Two stone walls, one each near buoys 40 and 41, were laid bare (PI. 21-24). The stones used in the construction are I to 2 m long, 0.5 to 0.7 m wide and 0.3 m thick. All structures near here arc gridded and their position is fixed by sextant. Excavation in layer 3 yielded a sherd of a miniature bowl with everted rim in Lustrous Red Ware of Rangpur III type. The slip has how-ever completely disappeared and the core of the fabric has a pitted surface due to wave action. The sea became choppy and the currents strong from 15th to 21st January and the boats were heavily rolling. In an attempt to reach the shore the crew of the dingy was thrown out by heavy breakers but there was no serious injury to anyone. Underwater explora-tion was suspended for 3 days and limited search was underta-ken next 3 days. In the solstice (14th January) arbital move-ments seem to be responsible for the abnormal roughness of the sea with waves breaking 3ni high near buoy 19 and causing considerable damage to ancient structures in the sea bed. Taking advantage of the lowest tide - 0.12 (Okha) on 21st January the sea bed of nearshore zone front Samudra-narayana Temple to the Light House was surveyed. Some well dressed architectural members including a semicircular moonstone *(chandrafila)* of a public building were exposed 30m seaward of Samudrandrayana indicating the existence of an earlier temple. Two rock-cut channels were also expo-sed to the north of Samudranar5yana. A few iron rings fixed in the wavecut bench at the foot of Samudrandrayana indicated that small boats could be ferried through the rock-cut channels from the sea and river channel and secured to mooring rings in the early centuries of the Christian era.



A pier-like structure was exposed on the left batik of the channel opposite buoy 35 and the construction suggests that it could be used as a jetty or quay on the river bank, for several triangular and prismatic stone anchors were found lying nearby. Further seaward a large area was searched manually and buoys 41 to 54 were placed to indicate the location of structures or anchors. On the left bank 3 anchors were found near buoy 53, one each near buoys 50 and 51 -and three more near buoy 55. Trench 15 was laid near buoy 53. Airlifting was done near buoy 54 for collecting samples. Layer 1 consisted of fine sand; layer 2 was slightly coarse sand, and layer 3 con-sisted of coral and shingle covering bed rock. The total thickness of sediment is I in. A slierd of a large sturdy jar and stein of a dish-on-stand were recovered from layer 3. Two bastions were exposed near buoy 59 on the right bank and Trench 12 was sunk here for obtaining stratigraphic evidence and pot-tery for determining tile age of the structures. Stone anchors found near buoys 45, 46, 47, 48 and 51 have been documented. A large single-holed semispherical stone base of a flag post (Fig. 3) was found *in situ* near buoy 48. It is 53 cm in diameter at the base and the height is 30 cm.

The larger triangular 3-lioled anchors are 63 to 95 cm in length, 43 to 50 cm broad at the base and 25 to 29 cm at the top (Fig. 4). The prismatic anchors are 1.2 to 2.3 m long, 33 cm broad at the base and are tapering at the top.

Excavation near buoy 35 yielded a copper *Iota* and a white marble statue with broken legs, but the rest of the body is missing. A pedestal of black stone with 4 pointed feet for em-bedding in the earth mty be an altar and it is doubtful if it was used as quern because there is no depression caused by rubbing Fartlier away near buoy 55 on the left bink a trench (15)was sunk and the sediments were removed through fanning action. It is here that a copper bell and brass parts of what looks like a miniature cliariot (PI. 26) were recovered.

The perforated arches might have supported a canopy of a wagon type chariot. As reverting was known to the Harap-pans it is no wonder if the metalsmith of protohistoric Dwaraka could also revet the bars and drive holes in the brass-like metal. The metal objects of the Dwaraka chariot are found to be made of brass. Unfortunately very little information is available on the antiquity of brass before 300 B.C. at Taxila and at Prakash in the late phase of NBP. The brass from Prakash is either copper-Zinc alloy (17.75% Zinc, remainder copper) or leaded brass (25.86% Zn, 8.34% Ph and remain-der copper). Lead was used in Lothal in 2000 B.C. as can be seen from two lead pieces one containing 91.42% and the other 99.54% pure. The sleeved axe of Lothal contains 96.27 copper, and 2.51% lead, while the grooved rod contains 57.75 copper, 9.02 tin and 3.31%. The advanced metal technol-ogy can be inferred from the use of iron stakes in Bet Dwaraka to which reference is made in the *Mahabharata.* Ancient Indian steel dates back to 600 B.C. at Rajghat (Bharadwaj 1984, 143), but iron technology was developed by 1500 B.C. at Dwaraka in Gujarat and at Gufkrol in Kashmir (A.K. Sharma in this volume).

The presence of several structural remains between buoys 51 and 55 and also between 51 and 53 necessitated gridding the entire area for purposes of preparing the site plan of the township. Further west near buoy 59 a stone pillar with a square base and cylindrical shaft was found in the seabed. It is indicative of the fact that a public building of religious or secular importance existed here. Two triangular anchors were found near buoy 58 and a single-holed anchor was traced near buoy 53.

Artist's view of ancient fortified Dwaraka in Kusasthali

In the absence of Mini Ranger III needed for very accurate fixing of positions, the sextafit was used and checked with the distances between structures measured manually. For instance, buoy 53 is about 1200 m from Samudrandrdyana and the bastion of inner gateway (str. 1) at buoy 35 is 200 m sea-ward of buoy 8 which itself is 200 m seaward of Samud-randrdyana. The bastion of the outer gateway is near buov 59. The position of buoys especially those marking bastions, gate-ways and protection walls had to be rechecked subsequently with the help of Mini Ranger III.

Two coils of steel wire lost by a boat in comparatively recent times were found near buoy 35. As they were heavily damaged their retrieval was not attempted. A large prismatic anchor 137 cm long was recovered from the station marked by buoy 46. Rajan took soundings at 50 m intervals along the banks of the Gomati channel and across it also for studying the gradient and width of the channel, but these had to be further checked with the echosounder readings at closer intervals.

Expedition 1989-90:

The main purpose of the expedition was to determine the limits of the submerged city and the nick point where the Gomati joined the sea 3500 years ago when Dwaraka was built. This could be achieved by echo-sounding, side scan sonar and shallow seismic profiling surveys Which could indicate anamolies and provide the bathymetric data. Simultaneously through optical and manual surveys the anamolies could be examined to distinguish man-made constructions from natural formations. It was also felt necessary to fix precisely the position of structures already discovered and determine the course of the ancient channel of Gomati river. The profiles would help to establish the shifting of the flow channel if any. The area covered in the course of the survey is 5 x 6 km upto 25 m depth so as to include a 'spit' referred to by Pathak (Pathak *et al* 1988, 58-62).

The MFV Sea Master and Sharda Devi were engaged for exploration and survey. A dingy with outboard engine ferried between the main boats and shore. At three locations namely A4, A5 and A3 along the right bank of submerged channel of Gomati anchors were found.

Southward of A5 a stone pillar and bastion were -located at the station P which is gridded. At 60' southwest of Dwdrkddhish-Samudran5r5yana transit line a bastion in situ (S4), a fallen bastion (S3) (PI. 24), a disturbed wall (PI. 25) and a large stone slab (S4) were found. Further south of S4 is another bastion (S2). These structures are in 7 m depth. Towards the west several anchors were discovered at stations A2, A8 and All, in 8m depth. Heavy growth of vegetation on the bastions and walls had to be cleared care-fully before photographing and plotting them. A very interesting feature of the masonry is the L-shaped joints in setting heavy dressed blocks of stone for constructing bastions in high energy zone (PI. 28). Even so a couple of bastions have collapsed, but others in deeper waters namely low energy zone are in situ. Three groups of structures at S2 were grid-ded. A spherical anchor with 2 holes is recorded at A12, about 70' NW of the grid. The following is the resume of anchors and structural remains found in the course of the present expedition:

Al fragmentary anchor

A2, A3, A8, A9, A10, All, A13 prismatic anchors
'A7 and A12 triangular anchors St, S3 wall
S2 bastion (fallen), S9 bastion in situ

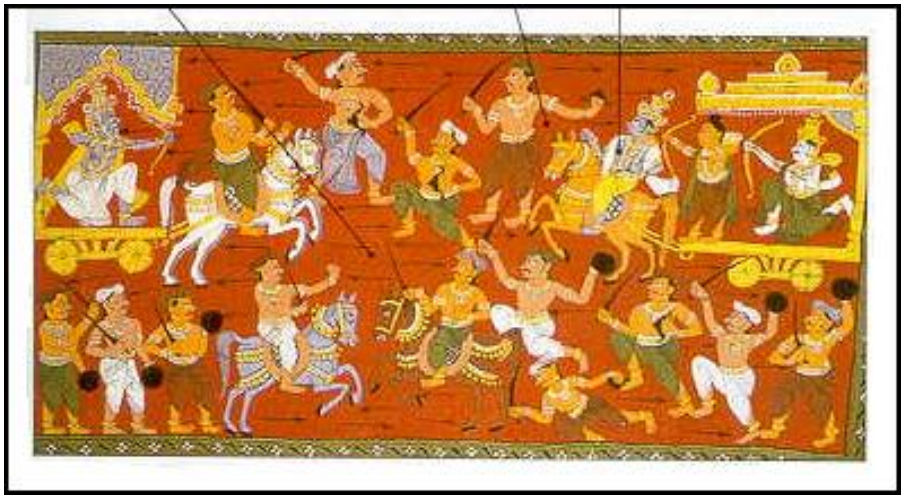
Others S4 to S8 and S10 to 13 are dislodged architectural members, mainly large dressed blocks. Two iron anchors were found -near A13. One of them is 1.5m long and has 5 arms.

Geophysical Survey - a summazy of the results of Geophysical survey carried out by Vora's team has been received. The salient points of observation and recommendations of the team are mentioned briefly below (Fig. 5).

High resolution Marine Geological and Geophysical Sur-veys carried out off Dwaraka for marine archaeological pur-pose was aimed at finding direct or indirect evidences of the existence of relics of sunken ships and submerged ports beyond the area already surveyed by MAU. Another objec-tive was to suggest places for diving based on the data collected.

The surveys were carried out in December 1989 in 2 to 22 m water depth over an area of 5 x 2 km by echosounding, side scan sonar and shallow seismic profiling (Fig. 5); scale adopted was 1:5000.

The survey area was divided into two parts, north and south for convenience. In the northern part from Rupen port to Dwaraka Light House, 45 lines perpen-dicular to the shore were surveyed while south of Dwaraka Light House 22 lines parallel to shore were surveyed. The results of the survey indicated extension of Gomati for about 1.5 km in NE-SW direction and its channel is about 400 m wide. Apart from this channel, other submerged drainage systems were also noticed. Other Geomorphic features present in the area include scarps, terraces and pinnacles. Sonographs collected from the area show large tonal variations through-out the area which includes furrows of various sizes and directions, and. at times ripples, boulders etc. The channels of Gomati as revealed by echograms are highly significant. The present channel along the Gomati Ghat was not the original course of the river 4000 years ago. It was to the south of temple of Samudranardyana and the channel was wider. The river seems to have joined the sea through more than one channel and the structures so far traced lie along the central channel. Nearshore, the submerged Gomati bed shows a deep wide symmetrical V-shaped channel, either side of which is at the same elevation. A small channel formation is seen to the south. Bending of contours in the area in more than 13 m water depth towards shore in southwest direction indicates a deposital phase, while in lesser contours there is a strong erosional activity. The result is that many structures built of smaller fractional blocks are destroyed in shallower waters, while those built of heavier blocks to serve as piers, wharf, protection walls and jetty are only partly destroyed and buried under I to 2 m thick sediment especially beyond 12 m water depth.



Though there are some anomalies present on the sea floor nothing more could be said about them until divers verified whether they were natural phenomena or man-made objects. Shallow seismic profiles showed no penetration in the area. However five locations were given to the diving team of MAU for direct inspection. At one such point a large iron anchor was found by diver archaeologists. Accurate position fixing of the five points with mini ranger had to be postponed to the next season as the sea became rough, but the position of some of the marker buoys, where structures were discovered by MAU was fixed with sextant. The map obtained from Dwaraka Municipality did not show accurately the present shore line and it is to be surveyed and redrawn for position fixing. On the left bank of Gomati the divers uncovered three arms of a large rectangular structure (Str. 5-6) and a corner bastion (Str 7) at buoys

68-69 and 70. Opposite the inner gate way on the right bank, the width of one of the submerged channels of. Gomati is 170 m. Further westward of structure 7, four 3-holed anchors were exposed.

On January 14, 1989 the wave cut bench and iron rings fixed in it were exposed a few metres seaward of SN at lowest low tide. A mooring pillar and a. fragmentary deity in black stone were recoverd from the rocky bed near the Light house.

On January 21, two rock cut channels meant for sluicing small boats were exposed to view between SN and Light House. The Iron rings and rock-cut channels belong to period 11, while the protection walls, and enclosures on either bank at buoy 35 and extending 500 m scawdfd belong to period 1. The farthest point of structural activity so far traced is about 1.2 km seaward of SN, but a plan of the city can be made out upto 800 m. A pier - like structure on the left bank where a plat-form which could be used for loading and unloading exists might have been the jetty for smaller boats. The terraced top of an escarpment nearly 1.5 km seaward of SN was the main anchorage for the ocean going vessels. That there existed a port-installation here is indicated by the collapsed building blocks lying scattered at the foot of the scarp but further examination of this scarp and another rock standing high further northwest will have to be made by divers for preparing the ancient limit of the port-town.

Discussion

Dwaraka was a city-state extending upto Bet Dwaraka (Sankhodhara) in the north and Okhamadhi in the south. Eastward it extended upto Pindara. The 30 to 40 meter-high hill on the eastern flank of Sankhodhara may be the Raivataka referred to in the *Mahabharata 2 . The general layout of the city of Dwaraka described in ancient texts agrees with that of the submerged city discovered by MAU. Four enclosures are laid bare; each one had one or two gateways (Fig. 6). The port Aramda (Arambhadvdra)* on way to Bet Dwaraka was the first gateway in the outer fortifications. The bastions flanking gateways of submerged Dwaraka resemble those of Kusinagara and Sravasti carved on the Gateways of Sanchi Stupa. The *prasada* referred to in the epic must be the high fort walls of Dwaraka, a part of which is extant. The epic says that flags were flying in the city of Dwaraka. This can be corroborated by the stone bases of flag posts found in the sea bed excavation. Umashankar Joshi is of the view that *antardvipa* in the region of Kugasthali referred to in the *Mahabharata* must be Bet Dwaraka (Sankhodhara). The *Bhagavata Purana* says that before leaving his mortal frame Sri Krsna put the ladies and children in boats and sent them to Sankhodhara. Hirananda Sastry also identified the *antardvipa of Mahabharata* with Bet Dwaraka.

The buildings built of smaller fraction stone blocks are razed to the ground leaving only small portions of the thick fort walls, bastions and protection walls (built with massive stones) which are too heavy to be moved by tides and cur-rents. From the structural remains in Dwaraka and Bet Dwaraka waters, it is possible to visualise that the city-ports were large and well planned. Every significant antiquity that corroborates a statement of the *Harivamsa* is the seal bearing the motif of a 3-headed animal representing the bull, unicorn and goat. The *HarivamSa* says that every citizen of Dwaraka had to carry a *mudra* as a mark of identifications The seal *(mudra)* found in the excavation belongs to 15th-16th century B.C.

Legend of Dwaraka - By T.R. Gopaalakrushnan NEW

Krishna- the protector of Mathura, the lord of Dwaraka and the reciter of the Bhagwad Gita on the battlefield of Kurukshetra-is one of the most enduring legends of India. Are Krishna and Dwar-aka actual historical entities? For a majority of Indians, the answer is an unequivocal yes. Some archaeologists and historians too are now willing to accept that the common man's faith does have a basis in fact.

The strongest archaeological support comes from the structures discovered under the sea-bed off the coast of Dwaraka in Gujarat by the pioneering team led by Dr S.R. Rao, one of India's most respected archaelogists. An emeritus scientist at the marine archaeology unit of the National Institute of Oceanography, Rao has excavated a large number of Harappan sites including the port city of Lothal in Gujarat. In his book The Lost City of Dwaraka (Aditya Prakashan, Rs 1500), published in 1999 he writes about his undersea finds: "The discovery is an important landmark in the history of India. It has set to rest the doubts expressed by historians about the historicity of Mahabharata and the very existence of Dwaraka city. It has greatly narrowed the gap in Indian history by establishing the continuity of the Indian civilisation from the Vedic Age to the present day."

But there are archaeological finds that do attest to Krishna as a historical figure.

For instance excavations in Bedsa (near Vidisha in Madhya Pradesh) have unearthed the remains of a temple of 300 BC in which Krishna (Vasudeva) and Balarama (Samkarshana) are identified from their flagstaff. Krishna's son Pradyumna, grandson, Aniruddha and another Yadava hero, Satyaki, have also been identified.

A more recent historical record, dated 574 AD, occurs in what are called the Palitana plates of Samanta Simhaditya. This inscription refers to Dwaraka as the capital of the western coast of Saurashtra and states that Krishna lived here.**No one has so influenced the course of India's religion, philosophy, art and literature as Krishna.** Traditional belief is that Krishna lived in Dwaraka at the end of the Dwapara Yuga. Dwaraka, in fact, is considered one of the seven holiest and most ancient Indian cities. The others are Ayodhya, Mathura, Haridwar, Varanasi, Kanchi and Ujjain, which together are known as Mokshada-that which leads to salvation.

According to Hindu historical tradition, Kali Yuga began with the death of Krishna more than 5,000 years ago. The Puranas are emphatic on the cultural degradation that set in after the Mahabharata war, which is seen as one of the most important turning points in ancient Indian history. Krishna, according to traditional belief, participated in that transition.

"Krishna very much existed in flesh, blood and bones," said Madhav Acharya, archaeologist at the Haryana archaeological department. "It is difficult, if not impossible, for a thing like the Mahabharata to be believed till today in the same spirit and faith unless there is some truth to the story. And that truth is the power struggle, and the main characters. One of them was Krishna. The power struggle is not a myth. If the heart of the story is to be believed as a historical event, then Krishna too should be seen as a historical character."

Underwater museum, in Dwaraka yet to surface
Friday January 8th 1999

India Abroad News Service BANGALORE - Nearly two decades after marine archeologists found the lost city of Dwaraka off the coast of Gujarat the state government continues to drag its feet on a proposal to establish the world's first underwater museum to view the remains of the city submerged in the Arabian Sea.

The proposal for the museum, submitted by the Marine Archeology Center of the National Institute of Oceanography (NIO) in Goa, involves laying a submarine acrylic tube through which visitors can view through glass windows the ruins of the city said to have been be ruled by Sri Krishna, 3,500 years ago.An alternative suggestion is to have acrylic wells, to be accessed through boats, from which the remains can be viewed. Another proposal that remains on paper is for setting up a marine archeology museum of Dwaraka antiquities found in the sea.

Discovered in 1981, the well-fortified township of Dwaraka extended more than half a mile from the shore and was built in six sectors along the banks of a river before it became submerged. The findings are of immense cultural and religious importance to India.

"The search for the lost city has been going on since 1930," S.R. Rao, former adviser to the NIO who is still actively involved in the excavations, told *India Abroad.* "It is only after marine archaeologists started exploring the seabed near modem Dwaraka from 1981 that the structural remains of the city were found."

Rao said that if a fraction of the funds spent on land archeology were made available for under-water archaeology, more light could be thrown on Dwaraka, which had much archeological signifi-cance because it was built during the second urbanization that occurred in India after the Indus Valley civilization in northwestern India. Dwaraka's existence disproves the belief held by Western archeologists that there was no urbanization in the Indian subcontinent from the period between 1700 B.C. (Indus Valley) and 550 B.C. (advent of Buddhism). As no information was available about that period,

they had labeled it the Dark Period.

Among the objects unearthed that proved Dwaraka's connection with the Mahabharata epic was a sea engraved with the image of a three-headed animal. The epic mentions such a seal given to the citizens of Dwaraka as a proof of identity when the city was threatened by King Jarasandha of the powerful Magadh kingdom (now Bihar). The foundation of boulders on which the city's walls were erected proves that the land was reclaimed from the sea about 3,600 years ago. The epic has references to such reclamation activity at Dwaraka. Seven islands mentioned in it were also discovered submerged in the Arabian Sea.

Pottery, which has been established by thermoluminiscence tests to be 3,528 years old and carrying inscriptions in late Indus Valley civilization script; iron stakes and triangular three-holed anchors discovered here find mention in the Mahabharata.

"The findings in Dwaraka and archeological evidence found compatible with the Mahabharata tradition remove the lingering doubt about the historicity of the Mahabharata," said Rao. 'We would say Krishna definitely existed." What is needed, he added, is the political will to reconstruct the cultural history of the Vedic and epic periods of northern India.

The maritime museums at sites of ' wrecks and submerged ports are absolutely essential, and portable antiquities should be conserved properly, lie emphasized. If the proposal to have a maritime museum is accepted by the Gujarat government, it would be the first of its kind in India, he pointed out. Recounting the start of exploration for Dwaraka, Rao said, "We carried out the original survey with just four scuba divers, while the operation called for the services of around 200 divers and other staff." But for the work to progress now, more equipment is needed, besides funds and time, he warned, adding:

"We need two barges, one mounted with a crate, and equipment such as an airlift. We need 30 or 40 divers and engineers. The work should go on for at least six months and cannot be halt-ed midway."

According to Rao, the project would need at least Rs. 20 million ($476,000).Funds would have to be provided by the Gujarat government and its tourism department Other possible sources are the federal Department of Ocean Development (DOD), which organizes big projects such as expeditions to Antartica, the Department of Science and Technology (DST) and the Council for Scientific and Industrial Research (CSIR), which have not contribute much, Rao said.

"The findings in Dwaraka and archeological evidence found compatible with the Mahabharata tradition remove the lingering doubt about the historicity of the Mahabharata. We would say that Krishna definitely existed" - S.R. Rao.

3. Dwaraka museum in Gujarat likely to throw light on Indus Valley civilization
Rediff on the Net

The proposed underwater museum at Dwaraka, the first of its kind in the world, and a marine archaeology museum will throw more light on the Indus Valley civilisation and enable researchers to peep into the history of the lost city of the Mahabharata era.

The Marine Archaeology Centre and the National Institute of Oceanography have jointly submitted a proposal with technical details for the preservation of the site to the Gujarat government. The Gujarat Government Tourism Corporation has held meetings with a foreign expert for promoting Dwaraka as a tourist destination, according to S R Rao, the president of the Society for Marine Archaeology.

The project envisages an estimated investment of over Rs 20 million. Unfortunately no follow-up action is forthcoming. The entire nation and even foreign countries are anxiously waiting for the preservation of the submerged city, which is not only of historical importance, but also of emotional interest since its founder was Lord Krishna, Rao said.

As per the proposal, marine acrylic tubes would be laid through which visitors could pass and view the remains of the historic city from windows. Acrylic walls could also be made which could be accessed by boats. Dwaraka, the submerged city in the Arabian Sea, off the Gujarat coast, is well connected with the other parts of the country. While most of Dwaraka is submerged in the Arabian Sea, tourist are attracted to the places which are not submerged -- Nageshwar Mahadev, Rukmani *mandir*, Shardapath and Dwarakashish temple. The mainland city was well-planned and boasted a good harbour. The full plan of the submerged city on the mainland has been ascertained and plotted on the basis of the individual structures discovered in six fortified sectors extending up to one km from the shore.

Dwaraka has been mentioned as golden city in the **Shrimad Bhagwat Gita, Skand Purana, Vishnu Purana** and also in ***Harivansh*** and **Mahabharata**. It is rated as the seven most ancient cities in the country. UNI

Dwarka remains may soon be protected as underwater world cultural heritage site
By Rajesh Kumar
http://www.indian-express.com/ie/daily/20000714/ina14051.html

NEW DELHI, JULY 13: Old shipwrecks -- like that of the Titanic -- which have been lying buried under the sea with their precious treasure along with the submerged city of Dwarka off the Gujarat coast, for centuries, could soon vie for the status of an underwater world cultural heritage site.

Over 200 experts from 84 countries, who gathered under the aegis of UNESCO in Paris recently to examine a draft convention on the issue, unanimously agreed that underwater cultural heritage was in urgent need of protection from destruction and pillaging.

Currently, structures or properties lying under water can not claim the status of cultural heritage. The absence of any protective mechanism has left them open to pillaging and destruction by treasure hunters and curious deep-sea divers. The experts agreed that the definition of cultural heritage needed to be expanded in order to protect underwater heritage as well.

The submerged city of Dwarka is believed to be an important site having both historical and cultural value for India. Legend has it that the remains -- the wall of a city is clearly visible while the rest is yet to be discovered -- are in fact, that of the ancient city of Dwarka mentioned in stories of Lord Krishna.

The Gujarat government and the Archaeological Survey of India (ASI) are currently toying with the idea of creating a museum and an underwater viewing gallery once the structures have been protected. After that, Dwarka could also stake the claim for the coveted underwater world heritage status, UNESCO's South-East Asia office here said.

Experts agreed that salvaging operations did tend to be a free for all. Robert Grenier, director of the International Committee on Underwater Cultural Heritage of the International Council On Monuments and Sites, said that while salvage action gave people freedom to look for things, it disregarded the aspect of preserving cultural heritage.

Several British and French ships laden with precious treasure that had sunk on their way across the Atlantic ocean during their voyages in the 18th century have been plundered by the sea pirates for valuables. In fact, some of the ships that were believed to be of immense historical and cultural value for future generations have been completely stripped off all their components by pirates for their antique value. ``With rapid advancement in technology, deep-sea diving and gaining access to heavy articles buried with the shipwrecks has become easy and affordable for pirates. In the absence of any effective protection, these properties of immense historical and cultural value are being looted and vandalised," an expert from Canada said.

The wrecks at Louisberg Park in Nova Scotia off the Canadian coast are held up as a fine example of how the under water cultural treasures can also be protected with help of legislation and political will, much like other structures of the same importance. The French Ministry of culture too has come out with a comprehensive background material on the underwater cultural heritage that needs protection. The document also cites relevant laws under which they can be protected and how.

Representatives of the United Nations Division of Ocean Affairs and Law of the Sea, the International Maritime Organisation, the International Seabed Authority and the World Underwater Federation, along with UNESCO, participated in the meeting.

Dwarika - The Eternal City
By Brinda Ramesh
http://www.tourindia.com/htm/homepage.htm May 2001

Dwarka has always been the most important pilgrimage centre on the western coast of India. Situated in Saurashtra, at a point where the Gomti river meets and Arabian sea, it has acquired multifarious names down the ages: Dwarka- the gateway to eternal happiness; Dwaravati, Swarnapuri - the city of gold, and Swarnadwarika, the golden gateway. The last

three names derive from the fact that Dwarka, being the western gateway of India through which trade entered the country, was always prosperous and wealthy.

Ancient economics apart, Dwarka was and still remains a place of tremendous religious importance to Hindus. Legend associates it with Lord Krishna, who spent his early childhood and youth in Mathura, but then he slew the mighty Kamsa. For this, he and his tribe of followers, the Yadavas, were attacked repeatedly by Kamsa's father-in-law Jarasandh. Tired of these repeated wars, Krishna migrated with his entire clan of Yadavas to Dwarka which was a much safer place.

In Dwarka, Krishna is supposed to have built a mighty kingdom on a site selected for him by Vishnu's learned 'vahan', Garud. The city he built is supposed to have extended over 104 kms. It was well fortified and surrounded by a moat, spanned by bridges, which were removed in the event of attack by an enemy. According to legend, the gods assisted Krishna in the construction of this magnificent city.

Archaeological excavations have unearthed artifacts that prove that modern Dwarka is the sixth settlement of the name on this site. The earlier cities have been, at various times, swallowed by the sea. The waves of the sea still lap the shores of this famous town, lending scenic beauty to this important pilgrimage destination.

The Dwarkadhish temple, dedicated to Lord Krishna, is the focal point of all pilgrimages. Parts of it date from the 12th-13th century and others from the 16th, but the *Jag Mandir*, its sanctum sanctorum, is supposed to be 2,500 years old. The hall in front is richly carved and supported by 60 massive pillars, each one hewn out of a single stone slab. Many of the sculptures date from the Maurya, Gupta and Chalukya periods. Some of the subjects are of Jaina and Buddhist origin. The temple is 157 feet high.

Another important pilgrimage site in the ancient city of Dwarka is Gomti ghat. The myth attached to the original temple says that it was built overnight at the instructions of Vajranabh, the great-grandson of Sri Krishna, by the divine craftsman Vishvakarma. Archaeologists are undecided about the date of construction of the temple that exists now, but it is generally believed that it was rebuilt in the 10th or 11th century A.D after the original temple was destroyed, probably during the Muslim invasions.

Most of the temples and pilgrimage spots around Dwarka are associated with Sri Krihsna and the Vaishnavite tradition. However, the temple of Somnath, which is not very far from this place, is dedicated to Siva as Nagnath or Nageshwar Mahadev, and enshrines one of the twelve 'Jyotirlingas' which according to the Puranas manifested themselves as columns of light in different parts of the country. The magnificent temple that stands there now is a replica of the original temple.

The 13th century Arab source refers to the glories of the temple thus: "Somnath - a celebrated city of India situated on the shore of the sea is washed by its waves. Among the wonders of that place was the temple in which was placed the idol called Somnat. This idol was in the middle of the temple, without anything to support it from below or to suspend it from above. It was held in the highest honour among the Hindus, and whoever beheld it floating in the air was struck with amazement..."

Dwarka also has the distinction of being one of the four seats or *matts* established by the Adi Shankaracharya in the 8th - 9th century A.D, The other three are Jyotirmath, Jagannath Puri and Sringeri. The *matt* in Dwarka, known as Sharda Peeth, carries out extensive research work in Sanskrit and is home to many renowned scholars.

This then is Dwarka, centre of religion, mythology, history and scholasticism, its shores everlastingly cleansed by the eternal seas.

Dwarka site pre-dates civilization

http://www.dailypioneer.com/secon2.asp?cat=\story6&d=FRONT_PAGE

An archaeological site, dating back to 7500 BC and older than hitherto oldest known human civilisations including those found in the Valley of Sumer, Harappa and Egypt, was discovered by a team of Indian marine archaeologists in the Gulf of Cambay off Gujarat coast.

"For India, it was the first time that such an important discovery was reported from near Dwaraka site, the off-shore region where underwater archeological exploration was in progress," Union Minister for Science and Technology Murli Manohar Joshi said at a crowded Press conference here on Wednesday.

The early civilisations known to mankind hitherto were in the Valley of Sumer around 3,500 BC, Egyptian Civilisation (3,000 BC) and Harappan (2,500 BC), explained Dr Joshi, adding that all the findings have been alongside a palaeolithic age river course traced upto nine km south of the Saurashtra coastline.

The antiquity of some of the artefacts, discovered by the National Institute of Ocean Technology (NIOT) which carried out a series of surveys in the area, from the site such as the wood log reflects a very ancient culture in the present Gulf of Cambay, which may have got submerged subsequently, Dr Joshi said.

Carbondating on the log, carried out by the Birbal Sahni Institute of Palaeobotany (BSIP) and the National Geophysical Research Institute (NGRI), suggested that it could belong to 7,500 BC and these settlements were probably the oldest neolithic sites discovered in the country, he said.

He said a multi-disciplinary team comprising of NIOT, National Institute of Oceanography, Archeological Survey of India, Physical Research Laboratory, Ahmedabad, BSIP, NGRI and specialists from universities were constituted to conduct further studies. The team would be provided with most modern equipment and infrastructure to carry out the studies, he said.

"Further investigation of this area was important as it might throw some light on the development of human civilisation, besides having a bearing on the Indian history," said Dr Joshi.

The recovery of remnants of wood logs by the NIOT was an indication of existence of a very ancient culture in the area which got subsequently submerged. The surveys had also revealed significant seismic activities and more studies were needed, Dr Joshi said.

Following the last year's discovery of indications of possible settlements, the NIOT scientists undertook a confirmatory survey in November using advanced marine underwater survey technologies with side scan sonar and sub-bottom profiler.

The materials collected at the site included artefacts, possible construction elements with holes and studs, pot shreds, beads, bones with significant signs of human activity in the area.

A detailed examination had revealed riverine conglomerates at a water depth of 30 to 40 m between 20 km west of Hazira near Surat.

Prof S N Rajguru, former Head of Department of Archaeology, Deccan College, Pune, who was also present, said the discovery could have been a coastline settlement when the sea level was low.

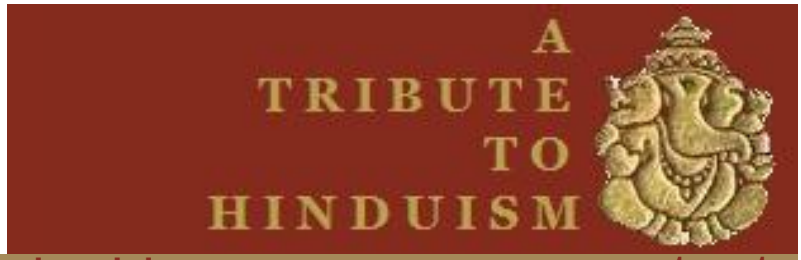
Did You Know?

Masters of the Sea

Despite recent concerns about possibly losing caste from crossing the sea, history reveals India was the foremost maritime nation 2,000 years ago (meanwhile Europeans were still figuring out the Mediterranean Sea). **India's maritime history predates the birth of western civilization. The world's first tidal dock is believed to have been built at Lothal around 2300 BC during the Harappan civilization, near the present day Mangrol harbour on the Gujarat coast.**

It had colonies in Cambodia, Java, Bali, Philippines, Sumatra, Japan, China, Arabia, Egypt and more. Through Persians and Arabs, India traded with the Roman Empire. The Sanskrit text, **Yukti Kalpa Taru**, explains how to build ships, such as the one depicted in the ajanta caves. It gives minute details about ship types, sizes and materials, including suitability of different types of wood. The treatise also elaborately explains how to decorate and furnish ships so they're comfortable for passengers.

In ancient times the Indians excelled in shipbuilding and even the English, who were attentive to everything which related to naval architecture, found early Indian models worth copying. **The Indian vessels united elegance and utility, and were models of fine workmanship.**



Sir John Malcolm wrote :

"Indian vessels "are so admirably adapted to the purpose for which they are required that, not withstanding their superior science, Europeans were unable, during an intercourse with India for two centuries, to suggest or at least to bring into successful practice one improvement. "

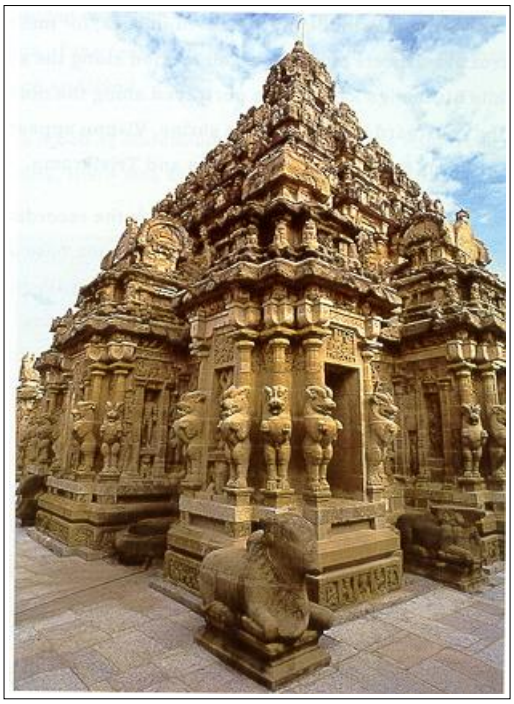
The cultural relations between India and China can be traced back to very early times. There are numerous references to China in Sanskrit tests, but their chronology is sketchy. The Mahabharata refers to China several times, including a reference to presents brought by the Chinese at the Rajasuya Yajna of the Pandavas; also, the Arthasastra and the Manusmriti mention China. According to French art historian, Rene Grousset, the name China comes from "an ancient" Sanskrit name for the regions to the east, and not, as often supposed, from the name of the state of Ch'in," the first dynasty established by Shih Huang Ti in 221 B.C. The Sanskrit name Cina for China could have been derived from the small state of that name in Chan-si in the northwest of China, which flourished in the fourth century B.C. Scholars have pointed out that the Chinese word for lion, shih, used long before the Chin dynasty, was derived from the Sanskrit word, simha, and that the Greek word for China, Tzinista, used by some later writers, appears to be derivative of the Sanskrit Chinasthana. According to Terence Duke, martial arts went from India to China. Fighting without weapons was a specialty of the ancient Kshatriya warriors of India. Both Arnold Toynbee and Sir L. Wooley speak of a ready made culture coming to China. That was the Vedic culture of India.

Until recently, India and China had coexisted peacefully for over two thousand years. This amicable relationship may have been nurtured by the close historical and religious ties of Buddhism, introduced to China by Indian monks at a very early stage of their respective histories, although there are fragmentary records of contacts anterior to the introduction of Buddhism.



Gerolamo Emilio Gerini (1860 -1913) has said: “During the three or four centuries, preceding the Christian era, we find Indu (Hindu) dynasties established by adventurers, claiming descent from the Kshatriya potentates of northern India, ruling in upper Burma, in Siam and Laos, in Yunnan and Tonkin, and even in most parts of southeastern China." The Chinese literature of the third century is full of geographic and mythological elements derived from India. "I see no reason to doubt," comments Arthur Waley in his book, The Way and its Power, "that the 'holy mountain-men' (*sheng-hsien*) described by Lieh Tzu are Indian rishi; and when we read in *Chuang Tzu* of certain Taoists who practiced movements very similar to the *asanas* of Hindu yoga, it is at least a possibility that some knowledge of the yoga technique which these *rishi* used had also drifted into China."

Bhaarat: Teacher of China

Hinduism and Buddhism, both have had profound effect on religious and cultural life of China. Chinese early religion was based on nature and had many things in common with Vedic Hinduism, with a pantheon of deities.

"Never before had China seen a religion so rich in imagery, so beautiful and captivating in ritualism and so bold in cosmological and metaphysical speculations. Like a poor beggar suddenly halting before a magnificent storehouse of precious stones of dazzling brilliancy and splendor, China was overwhelmed, baffled and overjoyed. She begged and borrowed freely from this munificent giver. The first borrowings were chiefly from the religious life of India, in which China's indebtedness to India can never be fully told."

(source: **India and World Civilization - By D. P. Singhal** p. 338).

The story of **Sun Hou Tzu, the Monkey King, and Hsuan Tsang.** It is a vicarious and humorous tale, an adventure story akin to the **Hindu epic of Ramayana**, and like Ramayana, a moral tale of the finer aspects of human endeavor which come to prevail over those of a less worthy nature. **The book ends with a dedication to India:** I dedicate this work to Buddha's pure land. May it repay the kindness of patron and preceptor, may it mitigate the sufferings of the lost and damned....'

(source: **Eastern Wisdom - By Michael Jordan** p -134-151).

Arnold Hermann Ludwig Heeren (1760-1842) an Egyptologist and author of **Historical researches into the politics, intercourse, and trade of the Carthaginians, Ethiopians, and Egyptians** observes that:

"the name China is of Hindu origin and came to us from India."

"**M. de Guigues** says that Magadha was known to the Chinese by the name Mo-kiato, and its capital was recognized by both its Hindu name Kusumpura, for which the Chinese wrote Kia-so-mo-pon-lo and Pataliputra, out of which they made Patoli-tse by translating putra, which means son in Sanskrit, into their own corresponding word, tse. Such translation of names has thrown a Veil of obscurity over many a name of Hindu origin. Hindu geography has suffered a great loss."

(source: **Journal of the Royal Asiatic Society** Volume. V).

Lin Yutang (1895-1976) author of **The Wisdom of China and India**:

"The contact with poets, forest saints and the best wits of the land, the glimpse into the first awakening of Ancient India's mind as it searched, at times childishly and naively, at times with a deep intuition, but at all times earnestly and passionately, for the spiritual truths and the meaning of existence - this experience must be highly stimulating to anyone, particularly because the Hindu culture is so different and therefore so much to offer." Not until we see the richness of the Hindu mind and its essential spirituality can we understand India...."

"India was China's teacher in religion and imaginative literature, and the world's teacher in trignometry, quandratic equations, grammar, phonetics, Arabian Nights, animal fables, chess, as well as in philosophy, and that she inspired Boccaccio, Goethe, Herder, Schopenhauer, Emerson, and probably also old Aesop."

(source: **The Wisdom of China and India - By Lin Yutang** p. 3-4).

Sir William Jones (1746-1794) came to India as a judge of the Supreme Court at Calcutta. He pioneered Sanskrit studies. His admiration for Indian thought and culture was almost limitless. **He says that the Chinese assert their Hindu origin."**

Amaury de Reincourt (1918 -) was born in Orleans, France. He received his B.A. from the Sorbonne and his M.A. from the University of Algiers. He is author of several books including **The American empire** and **The Soul of India**, he wrote: " The Chinese travelers' description of life in India... reveals great admiration from all concerned for the remarkable civilization displayed under their eyes."

"India sent missionaries, China sending back pilgrims. It is a striking fact that in all relations between the two civilizations, **the Chinese were always the recipient and the Indian the donor." "Indian influence prevailed over the Chinese, and for evident reasons: an undoubted cultural superiority owing to much greater philosophic and religious insight, and also to a far more flexible script."**

(source: **The Soul of India – by Amaury de Riencourt** p 141 and 161).

China (Cinaratha) in the Epic of Mahabharata

It is well known that in the **Mahabharata** the **Cinas** appear with the Kiratas among the armies of king **Bhagadatta of Pragjyotisa or Assam**. In the Sabhaparvan this king is described as surrounded by the Kiratas and the Cinas. In the Bhismaparvan, the corps of Bhagadatta, consisting of the Kirtas and the Cinas of yellow color, appeared like a forest of Karnikaras. It is significant that the Kiratas represented all the people living to the east of India in the estimation of the geographers of the Puranas. Even the dwellers of the islands of the Eastern Archipelago were treated as Kiratas in the Epics. The reference to their wealth of gold, silver, gems, sandal, aloewood, textiles and fabrics clearly demonstrates their association with the regions included in Suvarnadvipa. Thus, the connection of the Kiratas and Cinas is a sure indication of the fact that the Indians came to know of the Chinese through the eastern routes and considered them as an eastern people, having affinities to the Kiras, who were the Indo-Mongoloids, inhabiting the Tibeto-Burman regions and the Himalayan and East Indian territories, the word Kirata being a derivation from kiranti or kirati, the name of a group of people in eastern Nepal.

In early Indian literature China is invariably shown to be connected with India by a land-route across the country of the Kiratas in the mountainous regions of the north. In the Vanaparvan of the Mahabharata the

Pandava brothers are said to have crossed the country of the Cinas in course of their trek through the Himalayan territory north of Badri and reached the realm of the Kirata king Subahu. The Cinas are brought into intimate relationship with the Himalayan people (Haimavatas) in the Sabhaparvan also. The land of the Haimavatas is undoubtedly the Himavantappadesa of the Pali texts, which has been identified with Tibet or Nepal. In the Sasanavamsa this region is stated to be **Cinarattha**. Thus, it is clear that China was known to the Indians as lying across the Himalayas and was accordingly included in the Himalayan territories. In the **Nagarjunikonda** inscription of Virapurusdatta, China (Cina) is said to be lying in the Himalayas beyond Cilata or Kirata. These references to the proximity of China to the Himalayan regions, inhabited by the Kiratas, show that there were regular routes through the Tibeto-Burman territories, along which the Indians could reach China.

Some such land-route is implied in the remark of the Harsacarita of Banabhatta that Arjuna conquered the Hemakuta region after passing through Cina. Of course, the route across Central Asia is perhaps alluded to in the itinerary of Carudatta from the Indus Delta to China across the country of the Hunas and the Khasas, described in the Vasudevakindi, and there is probably a reference to the sea-route, passing through Vanga, Takkola and Suvarnadvipa, in the Milindapanho. But there is no doubt that in a large number of ancient Indian texts China is mentioned near the eastern Himalayan regions, through which regular routes, connecting this country with India, passed from fairly early times. It was along these routes that India came into contact with China for the first time and developed commercial relations with her, that are referred to by Chan K'ien in the second century B.C.

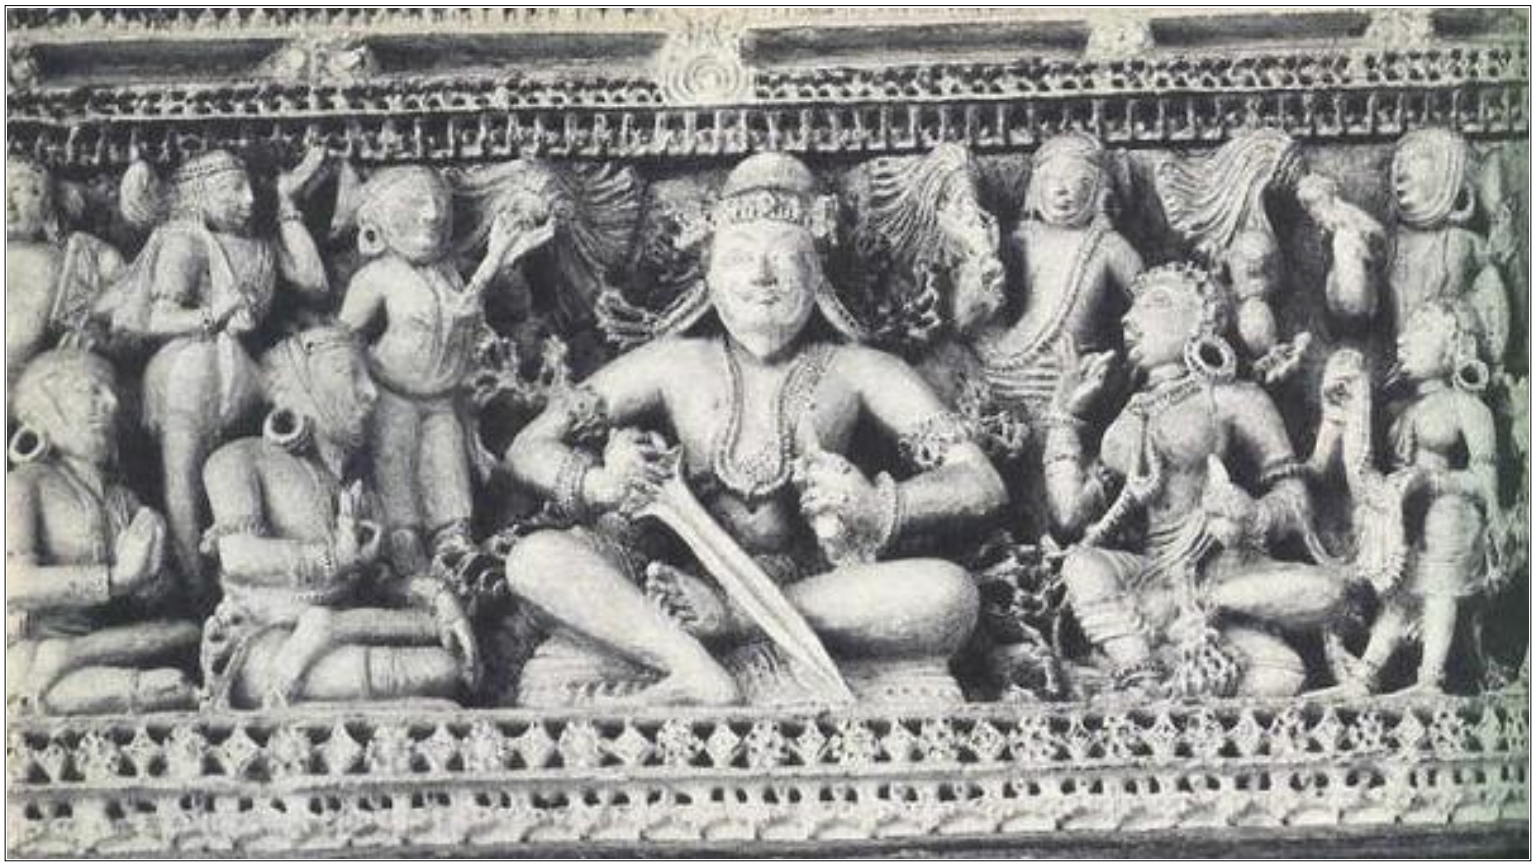
In Yunnan there is a large number of old pagodas. Some of them are the oldest and most beautiful in China. Their cornices and corner decoration, showing rows of pitchers (mangala ghata), betray unmistakable Indian influence. Many bricks of these pagodas bear Sanskrit inscriptions, containing Buddhist mantras and formulae in a script, which is identical with that current in Nalanda and Kamarupa in the 9th century. The beautiful bronze statue of Avalokitesvara from the pagoda of Ch'ung Sheng Ssu near Ta-li is an index to the high standard of culture and craftsmanship attained by the Buddhists of Yunan.

In earlier times, the people of the east, Magadha and Videha, were in contact with Yunan, as the traditions of Purvavideha show. The two names, Purvavideha and Gandhara, seem to represent these two successive eastern and western streams of Indian colonial and cultural expansion in this region.

Henry Rudolph Davies (1865 -) says that Besides Buddhism, Shaivism was also popular in Yunan as is manifest from the prevalence of the cult of Mahakala there. This ancient Indian colony in the south of China was the cradle of Sino-Indian cultural relationship for a long time.

It was an important outpost of Indian cultural expansion along the eastern land-routes, which **Colonel Gerolamo Emilio Gerini** (1860 -1913) author of **Researches on Ptolemy's geography of eastern Asia (further India and Indo-Malay archipelago** p. 122 -124 has described as follows:

"During the three or four centuries, preceding the Christian era, we find **Indu (Hindu) dynasties established by adventurers, claiming descent from the Kshatriya potentates of northern India, ruling in upper Burma, in Siam and Laos, in Yunnan and Tonkin, and even in most parts of southeastern China.** From the Brahmaputra and Manipur to the Tonkin Gulf we can trace a continuous string of petty states, ruled by those scion of the **Kshatriya race, using the Sanskrit or Pali language in official documents or inscriptions; building temples and other monuments after the Indu (Hindu) style and employing Brahmana priests for the propitiatory ceremonies,** connected with the court and state. Among such Indu (Hindu) monarchies (Theinni) in Burma, of Muang Hang, C'hieng Rung, Muang Khwan and Dasarna (Luang P'hrah Bang) in the Lau country; and of Agranagara (Hanoi) and Campa in Tonkin and Annan."



"The names of peoples and cities, **recorded by Ptolemy** in that region, however few and imperfectly preserved, are sufficiently significant to prove the presence of the Indu (Hindu) ruling and civilizing element in these countries, undoubtedly not so barbarous as the Chinese would make them appear."

"It is evident through the medium of those barbarians that **China received part of her civilization through India."**

Among these colonies Tagong and upper Pugan were called Mayura; Prome was Sriksetra; Sen-wi (Theinni) was

Sivirastra; Muang Hang, Chieng Rung and Muang Khwan were the three divisions of Ching Rung kingdom, which the prince of Yong, named Sunandakumara, united under Mahiyagananagara; Luang P'hrah Bang was Dasarna; Hanoi was Agranagara; Tagaung was Brahmadesa (P'o-;o-men), where a Sanskrit inscription, dated in Gupta era 108 – 426 A.D. refers to Hastinapura, situated in that country; and, of course, Yunana was Purvavideha or Gandhara. Thus, from Arakan, where the Mrohaung inscriptions attest the efflorescence of Indian culture, language and literature, to Yunnan, whose history we have traced above, Indian culture made a triumphant advance in ancient times.

(source: **Yün-nan; the link between India and the Yangtze – by Henry Rudolph Davies** Cambridge University press 1909 an **India and The World - By Buddha Prakash** p. 141-150).

India was known as T'ien-chu to the Chinese.

China, like Southeast Asia too, was colonized to some extent by the ancient Hindus. The religion and culture of China are undoubtedly of Hindu origin. According to the Hindu theory of emigration, Kshatriyas from India went and established colonies in China. India was known as T'ien-chu to the Chinese.

Colonel James Tod (1782-1835) author of **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India** has written:

"The genealogies of China and Tartary declare themselves to be the descendents of "Awar," son of the Hindu King "Pururawa."

According to the traditions noted in the Schuking, the ancestors of the Chinese, conducted by Fohe, come to the plains of China 2,900 years before Christ, from the high mountains Land which lies to the west of that country. This shows that the settlers into China were originally inhabitants of Kashmir, Ladakh, Little Tibet and the Punjab, which were parts of Ancient India.

Kakuzo Okakura, speaking of the missionary activity of Indian Buddhists in China, says that at one time in the single province of Lo-yang there were more than 3,000 Indian monks and 10,000 Indian families to impress their

national religion and art on Chinese soil.

(source: **The Ideals of the East With Special Reference to the Art of Japan - By Kakuzo Okakura** p. 113).

Hu Shih, (1891-1962), Chinese philosopher in Republican China. He was ambassador to the U.S. (1938-42) and chancellor of Peking University (1946-48). He said:

"India conquered and dominated China culturally for two thousand years without ever having to send a single soldier across her border."

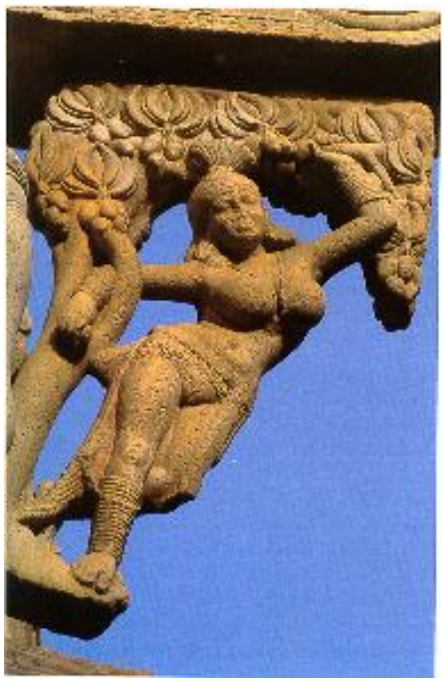
Court Bjornstjerna (1779-1847) author of **The Theogony of the Hindoos with their systems of Philosophy and Cosmogony** says: " what may be said with certainty is that the religion of China came from India."

Chinese authors, too, according to **Mountstuart Elphinstone** (1779-1859) noted, Indian ambassadors to the court of China.

The **Mahabharata** refers to China several times, including a reference to presents brought by the Chinese at the Rajasuya Yajna of the Pandavas; also, the **Arthasastra** and the **Manusmriti** mention China.

According to **Rene Grousset** (1885-1952) French art historian in his book **Rise and Splendour of Chinese Empire** ASIN 0520005252 p. 79:

"**the name China comes from "an ancient" Sanskrit name for the regions to the east, and not, as often supposed, from the name of the state of Ch'in," the first dynasty established by Shih Huang Ti in 221 B.C.**



Brahma - Chinese version
(source: Our Heritage and Its Significance - By S. R. Sharma)

The **Sanskrit** name Cina for China could have been derived from the small state of that name in Chan-si in the northwest of China, which flourished in the fourth century B.C. Scholars have pointed out that the Chinese word for lion, shih, used long before the Chin dynasty, was derived from the Sanskrit word, simha, and that the Greek word for China, Tzinista, used by some later writers, appears to be derivative of the Sanskrit Chinasthana. The Chinese literature of the third century is full of geographic and mythological elements derived from India.

" I see no reason to doubt," comments **Arthur Waley** in his book, **The Way and its Power**, "that the 'holy mountain-men' (*sheng-hsien*) described by Lieh Tzu are Indian rishi; and when we read in *Chuang Tzu* of certain Taoists who practiced movements very similar to the *asanas* of Hindu yoga, it is at least a possibility that some knowledge of the yoga technique which these *rishi* used had also drifted into China."

Both **Sir L. Wooley** and British historian **Arnold Toynbee** speak of an earlier ready-made culture coming to China. They were right. That was the Vedic Hindu culture from India with its Sanskrit language and sacred scripts. The contemporary astronomical expertise of the Chinese, as evidenced by their records of eclipses; the philosophy of the Chinese their statecraft, all point to a Vedic origin. That is why from the earliest times we find Chinese travelers visiting India very often to renew their educational and spiritual links.

Author **Kenneth Ch'en** has said:

"Neo-Confucianism was stimulated in its development by a number of Buddhist ideas. Certain features of Taoism, such as its canon and pantheon, was taken over from Buddhism. Works and phrases in the Chinese language owe their origin to terms introduced by Buddhism. Chinese language owe their origin to terms introduced by Buddhism, while in astronomical, calendrical, and medical studies the Chinese benefited from information introduced by Indian Buddhist monks. Finally, and most important of all, the religious life of the Chinese was affected profoundly by the doctrines and practices, pantheon and ceremonies brought in by the Indian religion."

(source: **Buddhism in China - By Kenneth Ch'en** ISBN 0691000158 p. 3).

How China was part of the Indian Vedic empire is explained by **Professor G. Phillips** on page 585 in the 1965 edition of the **Journal of the Royal Asiatic Society**. He remarks,

"The maritime intercourse of India and China dates from a much earlier period, from about 680 B.C. when the sea traders of the Indian Ocean whose chiefs were Hindus founded a colony called Lang-ga, after the Indian named Lanka of Ceylon, about the present gulf of Kias-Tehoa, where they arrived in vessels having prows shaped like the heads of birds or animals after the pattern specified in the **Yukti Kalpataru** (an ancient Sanskrit technological text) and exemplified in the ships and boats of old Indian arts."

Chinese historian Dr. Li-Chi also discovered an astonishing resemblance between the Chinese clay pottery and the pottery discovered at Mohenja daro on the Indian continent. **Yuag Xianji,** member of the Chinese People's Political Consultative Conference, speaking at the C. P. Ramaswamy Aiyar Foundation, Madras, March 27 1984 said,

" Recent discoveries of ruins of Hindu temples in Southeast China provided further evidence of Hinduism in China. Both Buddhism and Hinduism were patronized by the rulers. In the 6th century A.D. the royal family was Hindu for two generations. The following Tang dynasty (7th to the 9th century A.D.) also patronized both Hinduism and Buddhism because the latter was but a branch of Hinduism. Religious wars were unknown in ancient China. There was extensive maritime trade and religious exchanges between India and China at this period (Ad 1-600) and the massive expansion of Indian influence into southern China through Jih-nan and Chiao-chih, in what is now northern Vietnam.

Albert Etienne Terrien de Lacouperie, author of **Western Origins of Chinese Civilization** states that the maritime intercourse of India with China dates from about 680 B.C. when the sea traders of the Indian ocean" whose "Chiefs were Hindus" founded a colony, called Lang-ga, after the Indian name Lanka, about the present gulf of Kiaotchoa....And throughout this period the monopoly of the sea borne trade of China was in their hands."

In the second century A.D., Indians from the Sindhu during the time of Rudradaman, the Khshatrapa Satrap of Kattiawad, took presents by sea to China.

(source: **Milinda Panha - Vide** p. 127-327).

The sea route from India and China through the port of Tamraliptis was under the special protection of the Indian kings. When the Chinese pilgrim, **Hiuen-Tsiang**, wanted to return to China in A.D. 645, Bhashkarvarman the king of Kamrup (Assam) and a vassal of King Harsha, told him: "But I know not, if you prefer to go, by what route you propose to return; if you select the southern sea route, then I will send official attendants to accompany you." **Itsing** sailed from China for India in A.D. 671 and returned to China twenty-four years later by the sea route from Tamralipiti.

Through its compassionate Buddhas and Bodhisattvas, and its promise of salvation to all alike, its emphasis on piety, meditation, its attractive rituals and festivals, its universality and its tolerance, "the religious life of the Chinese has been enriched, deepened, broadened, and made more meaningful in terms of human sympathy, love, and compassion for all living creatures." **The doctrine of karma brought spiritual consolation to innumerable people. The concept of karma is to be found in all types of Chinese literature from poetry to popular tales.**

India never imposed her ideas or culture on any nation by military force, not even on the small countries in her neighborhood, and in the case of China, it would have been virtually impossible to do so since China has been the more powerful of the two. So the expansion of Indian culture into China is a monument to human understanding and cultural co-operation - the outcome of a voluntary quest for learning. While China almost completely suppressed other foreign religions, such as Zoranstrianism, Nestorian Christianity, and to some extent Manichaeanism, she could not uproot Buddhism. At times, Buddhism was persecuted, but for two thousand years it continued to Indianize Chinese life even after it had ceased to be a vital force in the homeland and long after it had lost its place as the dominant religion of China. In fact, Indianization became more powerful and effective after it was thought that Buddhism had been killed in China.

The introduction of Buddhism is one of the most important events in Chinese history, and since its inception it has been a major factor in Chinese civilization. **The Chinese have freely acknowledged their debt to India, often referring to her as the "Teacher of China," and Chinese Buddhists have pictured India as a Western Paradise, Sukhavati.** That Chinese philosophy blossomed afresh after the impact of Buddhism indicates both a response to and a borrowing of Indian ideas. The advent of Buddhism meant for many Chinese a new way of life, and for all Chinese, a means of reassessing their traditional beliefs. A new conception of the universe developed, and the entire Chinese way of life was slowly but surely altered. The change was so gradual and so universal that few people realized it was happening.

The Chinese Quietists practiced a form of self-hypnosis which has an indisputably close resemblance to Indian Yoga. The Chinese Taoist philosopher **Liu-An (Huai-nan-tzu)** who died in 122 B. C, makes use "of a cosmology in his book which is clearly of Buddhist inspiration."

The first mention of India to be found in Chinese records is in connection with the mission to Ta-hsia (Bacteriana) of a talented and courageous Chinese envoy, **Chang Chien** (Kien), about 138 B.C. Fourteen years later, having escaped after ten years as a captive of the Huns, he returned home and in his report to the Chinese Emperor he referred to the country of *Shen-tu* (India) to the southeast of the Yueh-chih (Jou-Chih) country. There are other traditional stories suggestive of earlier links, but Chang Chien's reference to Indian trade with the southwestern districts of China along the overland route corresponding to the modern Yunnan road indicates the existence of some sort of commercial

relations well before the second century B.C. **The find of Chinese coins at Mysore, dated 138 B.C. suggests maritime relations between India and China existed in the second century B.C.** Passages in a Chinese text vaguely refer to Chinese trade relations with countries in the China Sea and Indian Ocean, such as **Huang-che** (Kanchi or a place in the Ganges delta), as well as to the exchange of diplomatic missions.

Trade & Commerce

The chronicle 'Sung-chu' states that all the precious things of land and water came from India. Gems made of rhinoceros' horns and king-fishers' stones, serpent pearls and asbestos cloth, they are being innumerable varieties of these curiosities, were imported into China from India. According to the **Chin-hsi-yu-chiu-t'** u rare stone came to China from the countries of Chi-pin (Gandhara or Kashmir). Moreover, po-tie (a fine textile, probably muslin) was produced in India; and as early as A.D. 430 Indian po-tie was sent to China from Ho-lo-tan or Java. In A.D. 519, King Jayavarman of Fu-nan (Kamboja/Cambodia) offered saffron with storax and other aromatics to the Chinese court. Laufer also suggests that in the sixth century saffron was traded from India to Cambodia. In the **T'ang Annals**, India in her trade with Cambodia and the interior orient, "export to those countries diamonds, sandalwood and saffron." India was a good market for Chinese silk. **Kalidasa** mentions this silk fabric (Chinamsuka) as one of the most fashionable textiles among the richer sections of society. Silk and silk-products were also much demanded luxury articles even in the reign of Harshavardhana. The countries lying on the route from Kashgar (India) to China, were collectively called by historians and geographers as **'Ser-India',** first imbibed Indian culture and then developed into important trade centers.

(source: **Cultural Heritage of Ancient India - By Sachindra Kumar Maity** p.119-124). For more information refer to chapter on **Suvarnabhumi** and **Seafaring in Ancient India**).

There can be little dispute that trade was the main motivation for these early contacts. This is supported by finds of beads and pottery, in addition to specific references in historical texts. By the early centuries of the Christian era, Sino-Indian trade appears to have assumed considerable proportions. Chinese silk, **Chinamsuka,** and later porcelain were highly prized in India, and Indian textiles were sold in southwest China. **The similarity between the Chinese and Indian words for vermilion and bamboo, ch'in-tung and ki-chok, and sindura and kichaka, also indicates commercial links.** At least by the fifth century, India was exporting to China wootz steel (wootz from the Indian Kanarese word ukku), which was produced by fusing magnetic iron by carbonaceous matter.

With goods came ideas. It has often been contended that merchants were not likely to have been interested in philosophy or capable of the exchange of ideas. This is an erroneous belief which disregards historical evidence and, as **Arthur Waley** points out, is **"derived from a false analogy between East and West. It is quite true that Marco polo 'songeait surtout a son negoce'. But the same can hardly be said of Indian or Chinese merchants.** Buddhist legend, for example, teems with merchants reputedly capable of discussing metaphysical questions; and in China Lu Puwei, compiler of philosophical encyclopedia **Lu Shih Ch'un** Chiu, was himself a merchant. Legend even makes a merchant of Kuan Chung; which at any rate shows that philosophy and trade were not currently supposed to be incompatible."

India had contact with China from the early period through three routes. One was through the Central Asian region, the second was through Yunan and Burma. The third was by sea to the South Indian ports. The Arthasastra, the Mahabharata, and the Manu-Smriti show knowledge of China. Through all these routes trade and Hindu culture passed to China. Indian arts and sciences were carried to China along with Buddhism. Images,

rock-cut caves and the fresco paintings show distinctly Indian influence on the Chinese art. Indian astronomy, mathematics and medicine were spread in China by the scholars who visited it. Several Sanskrit works on these sciences were translated into Chinese.

Chushu-King, a Chinese monk started for India in 260 A.D. But he returned from Khotan. Fa-hien, the first Chinese pilgrim to India stayed here during the Gupta period for some years. Che-mong another monk accompanied by a few others spent 20 years (404-424) in the pilgrimage of India. Hieun Tsang and I-Tsing during the 7th century are well-known. On his return to China, Hiuen Tsang was given a great national welcome by his emperor and the people as well.

(source: **Ancient Indian History and Culture - By Chidambara Kulkarni** p.233 -234).

Land and Sea Routes

The art of shipbuilding and navigation in India and China at the time was sufficiently advanced for oceanic crossings. Indian ships operating between Indian and South-east Asian ports were large and well equipped to sail cross the Bay of Bengal. When the **Chinese Buddhist scholar, Fa-hsien,** returned from India, his ship carried a crew of more than two hundred persons and did not sail along the coasts but directly across the ocean. Such ships were larger than those Columbus used to negotiate the Atlantic a thousand years later. **Uttaraptha** was the Sanskrit name of the ancient highway which connected India with China, Russia and Persia (Iran).

The trade routes between China and India, by both land and sea, were long and perilous, often requiring considerably more than two years to negotiate. The overland routes were much older and more often used, but the sea routes gained popularity with progress in shipbuilding and seamanship. Formidable and frightening as the physiography of the land routes was, the traffic through the passes and along the circuitous routes around the mountains was fairly vigorous.

According to the work of mediaeval times, **Yukti Kalpataru,** which gives a fund of information about shipbuilding, **India built large vessels from 200 B.C. to the close of the sixteenth century.** A Chinese chronicler mentions ships of Southern Asia that could carry as many as one thousand persons, and were manned mainly by Malayan crews.

Long before the northwestern routes were opened about the second century B.C. and long before the development of these Indianized states, there were two other routes from India to China. One of these began at **Pataliputra** (modern Patna), passed through Assam (Kamarupa of old) and Upper Burma near Bhamo, and proceeded over the mountains and across the river valleys to Yunnanfu (Kunming), the main city of the southern province of China. The other route lay through Nepal and Tibet, was developed much later in the middle of the seventh century when Tibet had accepted Buddhism.

In addition to land routes, there was an important sea link between India and China through Southeast Asia. During the course of the first few centuries of the Christian era, a number of Indianized states had been founded all over Southeast Asia. Both cultures met in this region, and the Indianized states served as an intermediary stave for the further transmission of Indian culture and Buddhism to China.

Ancient Greek geographers knew of Southeast Asia and China (Thinae) were accessible by sea. Ptolemy mentions an important but unidentified Chinese port on the Tonkinese coast. Ports on the western coast of India were Bharukaccha (Broach); Surparka (Sopara); Kalyana; on the Bay of Bengal at the mouth of the Kaveripattam (Puhar); and at the mouth of the Ganges, Tamaralipti (Tamluk). At least two of these ports on the Bay of Bengal - Kaveripattam and Tamaralipti - were known to the Greek sailors as Khaberos and Tamalitis. At first Indian ships sailed to Tonkin (Kiao-Che) which was the

principal port of China, Tonkin being a Chinese protectorate. Later all foreign ships were required to sail to Canton in China proper. Canton became a prosperous port and from the seventh century onward the most important landing place for Buddhist monks arriving from India. Generally Chinese monks set out for the famous centers of learning in India, like the University of Taxila, and Nalanda.

India had census enumeration earlier than China, since such enumeration is mentioned in Kautilya's Arthasastra. China had its first census in 2 A.D.

Contributions

Mathematics:

The Chinese were familiar with Indian mathematics, and, in fact, continued to study it long after the period of intellectual intercourse between India and China had ceased."

(source: Cited in **Sarkar, Hindu Achievements in Exact Science**, p. 14).

Literature: The great literary activity of the Buddhist scholars naturally had a permanent influence on Chinese literature, one of the oldest in the world. In a recent study a Chinese scholar **Lai Ming**, says that a significant feature in the development of Chinese literature has been the "the immense influence of Buddhist literature on the development of every sphere of Chinese literature since the Eastern Chin period (317 A.D.)." The Buddhist sutras were written in combined prose and rhymed verse, a literary form unknown in China at the time. The Chinese language when pronounced in the Sanskrit polyphonic manner was likely to sound hurried and abrupt, and to chant the Sanskrit verses in monophthongal Chinese prolonged the verse so much the rhymes were lost. Hence, to make the Chinese sutras pleasant to listen to, the Chinese language had to be modified to accommodate Sanskrit sounds. Consequently, in 489, Yung Ming, **Prince of Ching Ling,** convened a conference of Buddhist monks at his capital to differentiate between, and define the tones of, the Chinese language for reading Buddhist sutras and for changing the verses. A new theory emerged called the Theory of Four Tones. The introduction into China of highly imaginative literature such as the Mahayana sutras and the Indian epics, like **Ramayana and Mahabharata**, infused into Chinese literature the quality of imagination which had been hitherto lacking. Taoist literature, such as the book Chuang-tzu, did perhaps show some quality of imaginative power, but on the whole Chinese literature, especially Confucianist, was narrow, formal, restricted, and unimaginative.

Mythology: The Chinese sense of realism was so intense that there was hardly any mythology in ancient China, and they have produced few fairy tales of their own. Most of their finest fairy tales were originally brought to China by Indian monks in the first millennium. The Buddhists used them to make their sermons more agreeable and lucid. The tales eventually spread throughout the country, assuming a Chinese

appearance conformable to their new environment. For example, the stories of Chinese plays such as *A Play of Thunder-Peak, A Dream of Butterfly,* and *A Record of Southern Trees* were of Buddhist origin.

Drama: Chinese drama assimilated Indian features in three stages. First, the story, characters, and technique were all borrowed from India; later, Indian technique gave way to Chinese; and finally, the story was modified and the characters became Chinese also. There are many dimensions to Chinese drama, and it is not easy to place them accurately in history. However, the twelfth century provides the first-known record of the performance of a play, a Buddhist miracle-play called Mu-lien Rescues his Mother based on an episode in the **Indian epic, the Mahabharata**. The subject matter of the Buddhist adaptation of the story, in which Maudgalyayana (Mu-lien in Chinese) rescues the mother from hell, occurs in a Tun-huang pien wen. Significantly, the play was first performed at the Northern Sung capital by professionals before a religious festival.

Amartya Sen Nobel Prize winner writes in the Times of India:

"It is not often realized "that even such a central term in Chinese culture as Mandarin is derived from a **Sanskrit word, namely Mantri** which went from India to China via Malaya."

Chinese translation - the first printed book in the world was the Chinese translation by Kumarajiva (a half Indian half Turkish scholar) of a Buddhist Sanskrit text, Vajrachchedikaprajnyaparamita

(source: **India, according to Amartya Sen - by M.V. Kamath Publication: Afternoon Despatch & Courier**)..

***

Grammar: Phrases and words coined by Buddhist scholars enriched the Chinese vocabulary by more than thirty-five thousand words. As the assimilation was spread over a long period of time, the Chinese accepted these words as a matter of course without even suspecting their foreign origin. Even today words of Buddhist origin are widely used in China from the folklore of peasants to the formal language of the intelligentsia. For example, *poli* for glass in the name of many precious and semi-precious stones is of **Sanskrit** origin. *Cha-na,* an instant, from *kshana*; *t'a,* pagoda, from *stupa*; *mo-li,* jasmine, from *mallika*, and terms for many trees and plants are amongst the many thousands of Chinese words of Indian origin. Indian grammar also undoubtedly stimulated Chinese philological study. Chinese script consists of numerous symbols, which in their earliest stage were chiefly pictographic and ideographic.

The word used in the old **Sanskrit** for the Chinese Emperor is **deva-putra,** which is an exact translation of ' **Son of Heaven.**'
I-tsing, a famous pilgrim, himself a fine scholar of Sanskrit, praises the language and says it is respected in far countries in the north and south. ..**'How much more then should people of the divine land (China), as well as the celestial store house (India), teach the real rules of the language.'**

Jawaharlal Nehru has commented:

"Sanskrit scholarship must have been fairly widespread in China. It is interesting to find that some Chinese scholars tried to introduce Sanskrit phonetics into the Chinese language. A well-known example of this is that of the monk Shon Wen, who lived at the time of the Tang dynasty. He tried to develop an alphabetical system along these lines in Chinese."

(source: **The Discovery of India - By Jawaharlal Nehru** p. 197-198).

Art: Indian art also reached China, mainly through Central Asia, although some works of Buddhist art came by sea. Monks and their retinues, and traders brought Buddha statues, models of Hindu temples, and other objects of art to China. **Fa-hsien** made drawings of images whilst at Tamralipiti. **Hsuan-tsang** returned with several golden and sandalwood figures of the Buddha; and **Hui-lun** with a model of the Nalanda Mahavihara. **Wang Huan-ts'e**, who went to India several times, collected many drawings of Buddhist images, including a copy of the Buddha image at Bodhgaya; this was deposited at the Imperial palace and served as a model of the image in Ko-ngai-see temple. The most famous icon of East Asian Buddhism know as the "Udayana" image was reported to have been brought by the first Indian missionaries in 67, although there are various legends associated with this image and many scholars believe it was brought by **Kumarajiva.** However, this influx of Indian art was incidental and intermittent, and was destined to be absorbed by Chinese art. This combination resulted in a Buddhist art of exceptional beauty.

One of the most famous caves - **Ch'ien-fo-tung, "Caves of the Thousand Buddhas,**" because there are supposed to be more than a thousand cave. So far, about five hundred caves have been discovered. These caves were painted throughout with murals, and were frequently furnished with numerous Buddha statues and sculptured scenes from the **Jatakas.**
Many other caves were initiated in the reign of **Toba Wei Emperor, T'ai Wu. Some also contain images of Hindu deities, such as Shiva on Nandi and Vishnu on Garuda.**

Images coming from India were considered holy, as suggested by Omura, in his History of Chinese Sculpture. This significantly underlines the depth of Chinese acceptance of Indian thought.

Music: The Chinese did not regard music as an art to be cultivated outside the temples and theatres. Buddhist monks who reached China brought the practice of chanting sacred texts during religious rites. Hence, Indian melody was introduced into Chinese music which had hitherto been rather static and restrained. **Indian music was so popular in China, that Emperor Kao-tsu (581-595) tried unsuccessfully to proscribe it by an Imperial decree. His successor Yang-ti was also very fond of Indian music.** In Chinese annals, references are found to visiting Indian musicians, who reached China from India, Kucha, Kashgar, Bokhara and Cambodia. Even **Joseph Needham**, the well-known advocate of Chinese cultural and scientific priority admits, "Indian music came through Kucha to China just before the Sui period and had a great vogue there in the hands of exponents such as Ts'ao Miao-ta of Brahminical origin." **By the end of the sixth century, Indian music had been given state recognition. During the T'ang period, Indian music was quite popular, especially the famous Rainbow Garment Dance melody.**

A contemporary Chinese poet, **Po Chu-yi,** wrote a poem in praise of Indian music. **"It is little wonder," an official publication of the Chinese Republic says, "that when a Chinese audience today hears Indian music, they feel that while possessing a piquant Indian flavor it has a remarkable affinity with Chinese music."**

Science: A major Buddhist influence on Chinese science was in scientific thought itself. Buddhist concepts, such as the infinity of space and time, and the plurality of worlds and of time-cycles or **Hindu Kalpas** (*chieh*) had a stimulating effect on Chinese inquiry, broadening the Chinese outlook and better equipping it to investigate scientific problems. For example, the **Hindu doctrine of pralayas**, or recurrent world catastrophes in which sea and land were turned upside down before another world was recreated to go through the four cycles- differentiation (ch'eng), stagnation (chu), destruction (juai), and emptiness (kung) - which was later adopted by Neoconfucianists, was responsible for the Chinese recognition of the true nature of fossils long before they were understood in Europe. Again, the Indian doctrine of Karma (tso-yeh), or metempsychosis, influenced Chinese scientific thought on the process of biological change involving both phylogeny and ontogeny. Buddhist iconography contained a biological element. Buddhism introduced a highly developed theory of logic, both formal and dialectical, and of epistemology.

Tantric Buddhism reached China in the eighth century and the greatest Chinese astronomer and mathematician of his time, **I-hsing** (682-727), was a Tantric Buddhist monk. While the work of Indian mathematicians was carried westward by the Arabs and transmitted to Europe, it was taken eastward by Indian Buddhist monks and professional mathematicians.

Astronomy: There is also some evidence that works on Indian astronomy were in circulation in China well before the T'ang period. In the annuals of the Sui dynasty, numerous Chinese translations of Indian mathematical and astronomical works are mentioned, such as Po-lo-men Suan fa (The Hindu Arithmetical rules) and Po-lo-men Suan King. These works have vanished, and it is impossible to assess the degree of their influence on Chinese sciences. However, there is definite evidence of Indian influence on Chinese astronomy and calendar studies during the T'ang dynasty. During this period, Indian astronomers were working at the Imperial Bureau of Astronomy which was charged with preparing accurate calendars. Yang Ching-fang, a pupil of Amoghavajra (Pu-k'ung), wrote in 764 that those who wished to know the positions of the five planets and predict what Hsiu (heavenly mansion) a planet would be traversing, should adopt the Indian calendrical methods. Five years earlier, Amoghavajra had translated an Indian astrological work, the Hsiu Yao Ching (Hsiu and Planet Sutra), into Chinese.

At the time there were three astronomical schools at Chang-an: Gautama (Chhuthan), Kasyapa (Chiayeh), and Kumara (Chumolo). In 684 one of the members of the Gautama school, Lo presented a calendar, Kuang-tse-li, which has been in use for three years, to the Empress Wu. Later, in 718, another member of the school, Hsi-ta (Siddhartha), presented to the Emperor a calendar, Chiu-che-li, which was almost a direct translation of an Indian calendar, **Navagraha Siddhanta of Varahamihira,** and which is still preserved in the T'ang period collection. It was in use for four years. In 729 Siddhartha compiled a treatise based on this calendar which is the greatest known collection of ancient Chinese astronomical writings. This was the first time that a zero symbol appeared in a Chinese text, but, even more important, this work also contained a table of sines, which were typically Indian. I-hsing (682-727) was associated with the Kumara school and was much influenced by Indian astronomy. Indian influence can also be seen in the nine planets he introduced into his calendar, Ta-yen-li. The nine planets included the sun, moon, five known planets, and two new planets, **Rahu and Ketu**, by which the Indian astronomers represented the ascending and descending nodes of the moon.

Chinese New Year

Dates from 2600 BC - A complete cycle takes 60 years, divided into 12 year elements. Each of these 12 years is named after an animal favored by the Buddha.

(source: **China welcomes the New Year** - BBC). Chinese 60 year cycle has strong resemblance to Tamil Calendar and Indian Hindu Calendars. For more refer to **The Tamil Calendar**).

Medicine

Chinese medicine, was influenced by Ayurveda, and similarities include the extensive use of natural herbs.

(source: **Balm from the East - By Jenny Hontz** - LA Times).

According to **Terence Duke** " Many Buddhists were familiar with the extensive knowledge of surgery common to Indian medicine and this aided them both in spreading the teachings and in their practice of diagnosis and therapy. Surgical technique was almost unknown within China prior to the arrival of Buddhism.." The renowned Buddhist teacher **Najarjuna** is said to have translated at least two traditional works dealing with healing and medicines in the first centuries of our era. A section of his Maha-Prajnaparamita Sutra is quoted by the Chinese monk I Tsing in his commentary upon the five winds (Chinese: Wu Fung; Japanese: Gofu). This description enables us to see that the breath **Hatha Yoga termed prana** is in fact forming only part of a wider system known in Buddhism."

(source: **The Boddhisattva Warriors: The Origin, Inner Philosophy, History and Symbolism of the Buddhist Martial Art Within India and China** p.139-145).

Evidence of Indian influence on Chinese medicine is even more definite. A number of Indian medical treatises are found in Chinese Buddhist collections: for example, the Ravanakumaratantra and Kasyapasamhita. From its very inception, Buddhism stressed the importance of health and the prevention and cure of mental and physical ailments. **Indian medical texts were widely known in Central Asia, where parts of the original texts on Ayur Veda have been found as well as numerous translations.**

The T'ang emperors patronized Indian thaumaturges (Tantric Yogis) who were believed to possess secret methods of rejuvenation. Wang Hsuan-chao, who returned to India after the death of King Harsha had been charged by the Chinese Emperor in 664 to bring back Indian medicines and physicians.

Considering that Indian medicine, especially operative surgery, was highly developed for the time, it is not surprising that the Chinese, like the Arabs, were captivated by Indian medical skills and drugs. Castration was performed by Chinese methods but other surgical techniques, such as laparotomy, trepanation, and removal of cataracts, as well as inoculation for smallpox, were influenced by Indian practices.

Acupuncture

In modern day acupuncture lore, there is recounted a legend that the discovery of the vital bodily points began within India as a result of combative research studies undertaken by the Indian ksatreya warriors in order to discover the vital (and deadly) points of the body which could be struck during hand-to-hand encounters. It is said that they experimented upon prisoners by piercing their bodies with the iron and stone

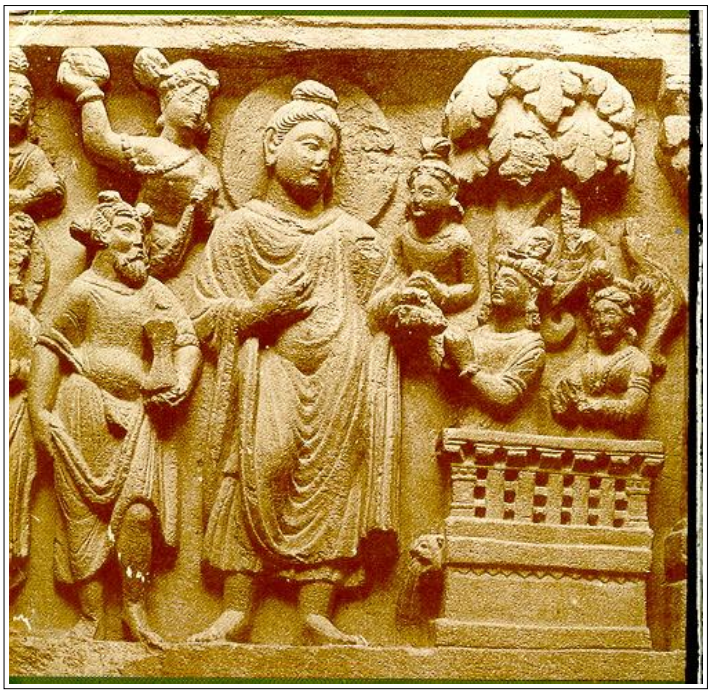
"needles' daggers called Suci daggers. common to their infantry and foot soldiers, in order to determine these points.

This Chinese legend reflects and complements the traditional Indian account of its origins, where it is said that in the aftermath of battles it was noticed that sometimes therapeutic effects arose from superficial arrow or dagger wounds incurred by the Khastriya in battle.

(source: **The Boddhisattva Warriors: The Origin, Inner Philosophy, History and Symbolism of the Buddhist Martial Art Within India and China** p.139-145).

The alternative form of medicine known as acupuncture is believed to have originated in China. **In Korean academics, students are correctly told that acupuncture originated in India.** An ancient Sanskrit text on acupuncture preserved in the Ceylonese National Museum at Columbo in Sri Lanka.

The custom of ancestor worship was an adoption of Indian custom. There is presence of Indian motifs in various Buddhist caves in China.



Martial Arts/Games

According to author **Terence Dukes**:

"Fighting without weapons was a specialty of the Ksatreya (caste of Ancient India)and foot soldier alike. For the Ksatreya it was simply part and parcel of their all around training, but for the lowly peasant it was essential. We read in the Vedas of men unable to afford armor who bound their heads with turbans called Usnisa to protect themselves from sword and axe blows. Fighting on foot for a Ksatreya was necessary in case he was unseated from his chariot or horse and found himself without weapons. Although the high ethical code of the Ksatreya forbid anyone but another Ksatreya from attacking him, doubtless such morals were not always observed, and when faced with an unscrupulous opponent, the Ksatreya needed to be able to defend himself, and developed, therefore, a very effective form of hand-to-hand combat that combined techniques of wrestling, throws, and hand strikes. Tactics and evasion were formulated that were later passed on to successive generations. This skill was called Vajramukhti, a name meaning "thunderbolt closed - or clasped - hands." The tile Vajramukti referred to the usage of the hands in a manner as powerful as the vajra maces of traditional warfare. Vajramukti was practiced in peacetime by means of regular physical training sessions and these utilized sequences of attack and defense technically termed in Sanskrit nata."

"Prior to and during the life of the Buddha various principles were embodied within the warrior caste known as the **Ksatreya** (Japanese: Setsuri). **This title - stemming from Sanskrit root Ksetr meaning "power," described an elite force of usually royal or noble-born warriors who were trained from infancy in a wide variety of military and martial arts, both armed and unarmed.**

In China, the Ksatreya were considered to have descended from the deity Ping Wang (Japanese: Byo O), the "Lord of those who keep things calm." Ksatreyas were like the Peace force - to keep kings and people in order. Military commanders were called Senani - a name reminiscent of the Japanese term Sensei which describes a similar status. The Japanese **samurai** also had similar traits to the Ksatreya. Their battle practices and techniques are often so close to that of the Ksatreya that we must assume the former came from India perhaps via China. The traditions of sacred Swords, of honorable self-sacrifice, and service to one's Lord are all found first in India.

"In ancient Hinduism, **nata** was acknowledged as a spiritual study and conferred as a ruling deity, **Nataraja, representing the awakening of wisdom through physical and mental concentration.** However, after the Muslim invasion of India and its brutal destruction of Buddhist and Hindu culture and religion, the Ksatreya art of nata was dispersed and many of its teachers slain. This indigenous martial arts, under the name of **Kalari or Kalaripayit** exists only in South India today. Originating at least 1,300 years ago, India's Kalaripayit is the oldest martial art taught today. It is also the most potentially violent, because students advance from unarmed combat to the use of swords, sharpened flexible metal lashes, and peculiar three-bladed daggers.

When Buddhism came to influence India (circa 500 B.c), the Deity **Nataraja** was converted to become one of the four protectors of Buddhism, and was renamed Nar (y)ayana Deva (Chinese: Na Lo Yen Tien). He is said to be a protector of the Eastern Hemisphere of the mandala."

Kalaripayattu, literally "the way of the battlefield," still survives in Kerala, where it is often dedicated to Mahakali. The Kalari grounds are usually situated near a temple, and the pupils, after having touched the feet of the master, salute the ancestors and bow down to the Goddess, begin the lesson. Kalari trainings have been codified for over 3000 years and nothing much has changed. The warming up is essential and demands great suppleness. Each movement is repeated several times, facing north, east, south and west, till perfect loosening is achieved. The young pupils pass on to the handling of weapons, starting with the "Silambam", a short stick made of extremely hard wood, which in the olden times could effectively deal with swords. The blows are hard and the parade must be fast and precise, to avoid being hit on the fingers! They continue with the swords, heavy, and dangerous, even though they are not sharpened any more, as they are used. Without guard or any kind of body protection; they whirl, jump and parry, in an impressive ballet. Young, fearless girls fight with enormous knives, bigger than their arms and the clash of irons is echoed in the ground. The session ends with the big canes, favorite weapons of the Buddhist traveler monks, which they used during their long journey towards China to scare away attackers.

The "Urimi" is the most extraordinary weapon of Kalari, unique in the world. This double-edged flexible sword which the old-time masters used to wrap around the waist to keep coiled in one hand, to suddenly whip at the opponent and inflict mortal blows, is hardly used today in trainings, for it is much too dangerous.

This indigenous martial arts, under the name of **Kalari or Kalaripayit** exists only in South India today. **Kalarippayat is said to be the world's original martial art.** Originating at least 1,300 years ago, India's Kalaripayit is the oldest martial art taught today. It is also the most potentially violent, because students advance from unarmed combat to the use of swords, sharpened flexible metal lashes, and peculiar three-bladed daggers. More than 2,000 years old, it was developed by warriors of the Cheras kingdom in Kerala. Training followed strict rituals and guidelines. The entrance to the 14 m-by-7 m arena, or kalari, faced east and had a bare earth floor. Fighters took Shiva and Shakti, the god and goddess of power, as their deities. From unarmed kicks and punches, kalarippayat warriors would graduate to sticks, swords, spears and daggers and study the marmas—the 107 vital spots on the human body where a blow can kill. Training was conducted in secret, the lethal warriors unleashed as a surprise weapon against the enemies of Cheras.

Father and founder of Zen Buddhism (called C'han in China), **Boddidharma**, a Brahmin born in Kacheepuram in Tamil Nadu, in 522 A.D. arrived at the courts of the Chinese Emperor Liang Nuti, of the 6th dynasty. He taught the Chinese monks Kalaripayattu, a very ancient Indian martial art, so that they could defend themselves against the frequent attacks of bandits. In time, the monks became famous all over China as experts in bare-handed fighting, later known as the Shaolin boxing art. The Shaolin temple which has been handed back a few years ago by the communist Government to the C'han Buddhist monks, inheritors of Boddhidharma's spiritual and martial teachings, by the present Chinese Government, is now open to visitors. On one of the walls, a fresco can be seen, showing Indian dark-skinned monks, teaching their lighter-skinned Chinese brothers the art of bare-handed fighting. On this painting are inscribed: "Tenjiku Naranokaku" which means: **"the fighting techniques to train the body (which come) from India…"**

(source: **A Western Journalist on India: a ferengi's columns - By Francois Gautier** Har-Anand Publications ISBN 8124107955 p. 155-158).

Yoga has had an enormous influence on all forms of Indian spirituality, including Hinduism, Buddhist, and Jain and later on the Sufi and Christian. The teaching of Buddhism which arose in India are similar to those of yoga: striving toward nirvana and renouncing the world. Indeed, some kind of meeting between yoga and early

Buddhism certainly took place, and one of the Buddhist schools is actually called Yogachara (practice of Yoga). **Indian Buddhism spread throughout Asia, some ideas from Yoga were carried into Tibet, Mongolia, China, and from there on into Japan. Indeed, Zen is a specific form of Yoga's dhyana or 'transcendental meditation' and the word Zen (like the Chinese tchan) is a simple phonetic development from Sanskrit dhyana.**

(For information on Yoga, refer to chapter on **Yoga and Hindu Philosophy**).

The famous **Shao-lin** style of boxing is also attributed to Indian influence. **Bodhidharma,** (8th century AD) who believed in a sound mind in a sound body, taught the monks in the Shao-lin temple this style of boxing for self-defense for rejuvenating the body after exacting meditation and mental concentration.

According to the History channel martial arts were introduced in China by an Indian named **Bodhidharma,** who taught it to the monks so that they could defend their monasteries. He was also said to have introduced the concept of **vital energy or chi ("prana" probably corresponds to this). This concept is the basis acupuncture.**

Chuan Fa, the Buddhist martial arts, preserved many Ksatreya techniques in their original forms. The monks to practiced Chuan Fa were often the sole preservers of the Ksatreya art of **Avasavidya**, called in Chinese Huo Ming or Hua Fa.

During the first millennium, Indian racing games reached China. The well-known expert on the history of Chinese games, **Karl Himly**, on the authority of a passage from the **Jun Tsun Su**, a work of the Sung period (960-1279), suggests that the Chinese game t'shu-p'u was invented in western India and spread to China in the time of the Wei dynasty (220-265). **T'shu'p'u** is, in fact, the Chinese adaptation of the **Indian chatus-pada** (modern chupur).

Chess was introduced from India, ca. 700. through the ancient trade route from Kashmir. The oldest and best of the native Chinese games, wei-ch'i, did not appear until 1000. Cubical dice (chu-p or yu-p'i), although found in ancient India and Egypt, are generally believed to have reached China from India, possibly quite early. **Arthur Waley** is of the opinion that the prominence of the number six in the Book of Changes was derived from the six sides of cubical dice. In China the first indisputable sources appeared only around 800 AD. **"The King of Kanauj had sent the game of chess to the court of Sasanian King Kusrau I Anshirvan** (531-579).

Education

The University of Nalanda built in the 4th century BCE was one of the greatest achievements of ancient India in the field of education. The Chinese scholar and traveler **Hiuen Tsang** (600-654 AD) stayed at the Nalanda University in the 7th century, and has left an elaborate description of the excellence, and purity of monastic life practiced here. **He found Indians "high-minded, upright and honorable.**

China received Mahayanic Buddhism and Sanskrit texts from the Central-Asian provinces of India in 67 A.D. After that China became Hinduized not only in theology and metaphysics, but in every department of thought and activity. Thousands of Hindus lived in Chinese cities, eg. at Changan in the N.W. and at Canton on the sea, as priests, teachers, merchants, physicians, sculptors and "interpreters." The name of Chinese tourists, students, philosophers, and translators, also, in India is legion. The Chinese founded their drama on Hindu precedents, imported musical instruments (stringed) from India, and introduced even some of the acrobatic feats, dances and sports prevalent among the Hindus.

During his Indian tour the great Itsing (634-712) mastered Hindu medicine at the University of Nalanda. Hindu mathematics and logic were cultivated among the intellectuals of China; Sanskrit treatises on painting and art criticism, eg. Sadamga (six limbs of painting) in Vatsayana's Kamasutra (erotics), Chitralaksana (marks of painting), etc. furnished the canons of the Chinese art during its greatest epoch (Tang and Sung Dynasties 600-1250); and the traditional Confucianism had to be reinterpreted, eg. by Chu-Hsi (1130-1200) in the light of the imported Hindu philosophy. **China became a part of "Greater India" in poetry, aesthetics, folk-festivals, morals, manners, and sentiments.** The "Augustan Age" of Chinese culture, the age of the mighty Tangs and brillant Sungs, was the direct outcome of the "holy alliance" for centuries between India and China.

Ling Yin Temple and India

Lin Yin Temple is home to the 19-metre-high Golden Buddha statue. Inscriptions found in the temple say the statue came flying from India.

Fei Lai Feng - Peak Flown From Afar (also named Ling Jiu Feng), stands next to Lin Yin Temple and is a must-see in Hangzhou, Zhejiang Province. There are many legends about the peak's name. **A well-known legend states that an Indian monk named Huili arrived in the valley 1,600 years ago and was surprised to see a peak so dissimilar from any other one in the valley. He believed that the peak had flown over from India because the shape, although unique in China, was common in India.** However, he did not know why the peak would have flown to this spot so far from his country.

Inscriptions found in the temple say the statue came flying from India. Big Wild Goose Pagoda - Dayanta - Sanskrit scriptures he had brought back from India.

Big Wild Goose Pagoda (Da Yan Ta - Dayanta) which was built in 652 AD in the Tang Dynasty. Xuanzang, a prominent Buddhist scholar of the time, planned to have a huge stone pagoda built to house the **Sanskrit Buddhist scriptures he had brought back from India**. It contains a large volume of Buddhist scriptures which were obtained from India by the eminent monk Xuanzang. **The pagoda was modeled after the one in India.** It was given the same name in memory of Xuan Zang in praise of Buddhism.

Bhaarat's influence on Japan

Hinduism and Buddhism went from India to China and Korea to Japan. Images of Ganesha and Vishnu have been found throughout Japan. Numerous Buddhist deities were introduced into Japan and many of these are still very popular.

According to **D. P. Singhal**, "some Hindu gods, who had been incorporated into the Buddhist pantheon, were amongst them. For example, **Indra,** originally, the god of thunder but now also the king of gods, is popular in Japan as **Taishaku** (literally the great King Sakra); **Ganesha** is worshipped as **Sho-ten or Shoden** (literally, holy god) in many Buddhist temples, and is believed to confer happiness upon his devotees. A sea-serpent worshipped by sailors is called Ryujin, a Chinese equivalent of the Indian naga. **Hariti and Dakini** are also

worshipped, the former as **Kishimo-jin**, and the latter by her original name. Bishamon is a Japanese equivalent of the Indian Vaisravana (**Kubera**), the god of wealth.

Brahma - Japan

Even Shinto adopted Indian gods, despite its desperate efforts after the Meiji Revolution to disengage itself from Buddhism. The Indian sea god **Varuna,** is worshipped in Tokyo as Sui-ten (water-god); the Indian goddess of learning, **Saraswati**, has become Benten (literally, goddess of speech), with many shrines dedicated to her along sea coasts and beside lakes and ponds. **Shiva** is well known to the Japanese as Daikoku (literally, god of darkness), which is a Chinese and Japanese equivalent of the Indian Mahakala, another name of Shiva. Daikoku is a popular god in Japan. At the Kotohira shrine on the island of Shikoku, sailors worship a god called **Kompera**, which is a corruption of the Sanskrit word for crocodile, Kumbhira. The divine architect mentioned in the Rig Veda, **Vishvakarma**, who designed and constructed the world, was regarded in ancient Japan as the god of carpenters, Bishukatsuma. The Indian **Yama**, the god of death, is the most dreaded god of Japan, under the name of **Emma-o**, the king of hell.

According to author **Donald A. Mackenzie**: "The Indian form of myth of the **Churning of the Milky Ocean** reached Japan. In a Japanese illustration of it the mountain rests on a tortoise, and the supreme god sits on the summit, grasping in one of his hands a water vase. The Japanese Shinto myth of creation, as related in the **Ko-ji-ki** and **Nihon-gi**, is likewise a churning myth. Twin deities, Izanagi, the god, and Izanami, the goddess, sand on "the floating bridge of heaven" and thrust into the ocean beneath the "Jewel Spear of Heaven". With this pestle they churn the primeval waters until they curdle and form land."

(source: **Myths of Pre-Columbian America** - **By Donald A. Mackenzie** ASIN 185958490X p.190-191).

The climbers wearing traditional white dress, who scale the sacred Mount Ontake as a religious observance, sometimes have inscribed on their robe Sanskrit **Siddham** characters of an ancient type. Sometimes they put on white Japanese scarfs (tenugui) which carry the Sanskrit character OM, the sacred syllable of the Hindus.

According to **Terence Dukes**, "The Gagaku dances of Japan contain many movements derived from the **Indian Nata** and the Chinese Chuan Fa."

(source: **The Boddhisattva Warriors: The Origin, Inner Philosophy, History and Symbolism of the Buddhist Martial Art Within India and China** p.206).

The cultivation of cotton in Japan is traced to an Indian who had drifted to the shore of Aichi Prefecture in 799. To commemorate the event, the Japanese named the village where the shipwrecked Indian had landed Tenjiku; Tenjiku was the Japanese name for India, and means Heaven.

The popular Japanese game of sunoroku or sugoroku (backgammon played at the royal of the Nara rulers and still popular in Japan is of Indian origin. In Japan the game is played as nard. Nard is generally regarded as an Iranian game, but the ninth century Arab scholar, **Al Yaqubi,** considered nard an Indian invention used to illustrate man's dependence on chance and destiny. According to Wei-Shu, sugoroku was brought to China in ancient times from Hu country, which at that time meant a country somewhere in the vicinity of India. Again, as Karl Himly has pointed out, the Hun Tsun, Sii, written during the Sung period (960-1279), states that t'shu-pu, another Chinese name for sugoruku, was invented in western India, that it was known in its original form as **chatushpada**, and that it reached China during the Wei period (220-265).

There is some Indian influence on Japanese art. A similarity between Shinto rituals and Hindu rituals (for example ringing the bell as one enters the temple). Narushima (Narasimha) Bishamondo is a famous temple in Japan.

(source: **India and World Civilization - By D. P. Singhal**). For more on Japan refer to chapter on **Suvarnabhumi**).

The influence of Indian thought and culture on Japan was very great. **Maurice Winternitz**, while reviewing **Geschichte der Japanischen Literature**, says:

"In view of so much Indian influence in Japanese literature, it is possible to assume that the 'Keuyogen' or double meaning of Japanese poetry may in any way be connected with that form of Alankara of the Indian Kavya, which is exactly in the same method."

The distinguished Japanese scholar, **Mr. J. Taka Kusu**, says: " But I should like to emphasize the fact that the influence of India, material and intellectual, must have been much greater in an earlier period than we at present consider to have been the case. There were, for instance, several Indians, whom the Kuroshiwo current, washing almost the whole southern coast, brought to the Japanese shore." He further says, " It cannot be denied that several Indians came to Japan, especially in view of so many Indians finding their way to China by sea."

He then relates how a Brahmin Bodhisen Bharadvaja, known generally as the "Brahmin Bishop" came with another priest from India via Champa (Cochin China) to Osaka, then to Nara, where they met another Indian ascetic and taught Sanskrit to the Japanese. "His monastery and tombstone, with a written eulogy, still exist in Nara. Just at the time a Japanese alphabet or syllables is said to have been invented. The fifty syllables, Gojuin, are arranged by a hand, evidently with a practical knowledge of Sanskrit method."

(source: **Journal of Royal Asiatic Society** for 1905, p. 872-873). The official record of Japan, Nihon-ki and Ruijukokushi describe how **cotton** was introduced in Japan by two Indians who reached Japan in July 799 and April 800 A.D.

(For more refer to Vide Dr. Taka Kusu's "What Japan owes to India" in the Journal of the Indo-Japanese Association for January, 1910). It is noteworthy that some of the scriptures of the Japanese priests preserved in the Horyuji Temple of Japan are written in Bengali characters of the eleventh century.

(source: Daito Shimaji's " India an Japan in Ancient Times," in the Journal of Indo-Japanese Association for January 1910).

Conclusion

In conclusion, it can be said that China was more influenced by India than India by China. Whilst Chinese monks came to acquire knowledge and take it back, the Indian monks went to China on specific religious missions to impart knowledge. There is hardly any evidence that the Chinese monks brought with them any work which was translated into an Indian language. **It seems that during this period of Sino-Indian contact, the psychological atmosphere was one in which India was naturally accepted as the giver and China as the taker.** Whilst the best in Indian thought was carefully studied and carried back to China, Chinese ideas filtered through India whether they represented the best of their culture or not.

According to **Jawaharlal Nehru** in his book "**The Discovery of India**"

"The most famous of the Chinese travelers to India was **Hsuang Tsang** who came in the seventh century when the great T'sang dynasty flourished in China and King Harshavardhana ruled over in North India. Hsuang-Tsang took a degree of Master of the Law at **Nalanda University** and finally became vice-principal of the university.

His book the **Si-Yu-Ki** or the Record of the Western Kingdom (meaning India), makes fascinating reading. He tells us of the system of the university where the five branches of knowledge were taught. 1. Grammar 2. Science of Arts and Crafts 3. Medicine 4. Logic and 5. Philosophy. **Hsuan-Tsang was particularly struck by the love of learning of the Indian people.** Many Indian classics have been preserved in Chinese translation relating not only to Buddhism but also to Hinduism, astronomy, mathematics, medicine, etc. There are supposed to be 8,00 such works in the Sung-pao collection in China. Tibet is also full of them. There used to be frequent co-operation between Indian, Chinese and Tibetan scholars. A notable instance of this co-operation, still extant, is a Sanskrit-Tibetan-Chinese dictionary of Buddhist technical terms. This dates from the ninth century and is named the **'Mahavyutpatti.'**

Soon after Hsuan-Tsang's death in China, yet another famous pilgrim made the journey to India - **I-tsing** (or Yi-tsing). He also studied at Nalanda University for a long time and carried back several hundred Sanskrit texts.

He refers to India as the West (Si-fang), but he tells us that it was known as **Aryadesha** - Arya means noble, and desha region - the noble region. It is so called because men of noble character appear there successively, and people all praise the land by that name. It is also called the **Madhyadesha** - the middle land, for it is in the center of a hundred myriads of countries.

(source: **The Discovery of India - By Jawaharlal Nehru** p. 193-194).

Yet Chinese culture had some influence on India. The gabled roofs of houses on the western coast of India show a Chinese influence, as do the temples and houses in the Himalayan regions. Some Chinese influence is noted on Gupta coins. The use of a certain kind of silk (china-msuka) in India, different kinds of fruits including pears (cinaraja-putra), peaches (cinani), and lichis, the technique of fishing in the backwaters, and the porcelain industry all owe something to Chinese influence. Indians also learned the art of papermaking from China.

Articles

India and China

By V. B. Metta
http://www.geocities.com/Athens/Academy/5185/2-2china.html

It is a curious fact that Chinese culture, though so distinctive, all-pervasive and compulsive, could not come to India, or if it did come, it could not leave any lasting marks behind it.

Archaeologists and scholars tell us that Chinese ideas and ideals came to India with the Kushan Kings of the North, who were Tartars, but the influence that that dynasty has left on India is almost negligible. We are also told that there is influence of Chinese art on the Ajanta paintings. But that is only a theory, since there is nothing characteristically Chinese about these frescoes. **The influence of India on China however is undeniable. It is not merely in religion that India influenced China, but in most subjects that go to make up national culture.**

The Chinese, always proud of their civilization, looked upon the outside world with contempt. They called the tribes living to their North "Hun slaves," and the tribes living to the North-West "barbarians," while the Japanese were denominated by them "Dwarf Pirates." **But their attitude towards India was different. India was known to them by a number of names, not one of which was contemptuous. She was called Hsin Tu, the Kingdom of the Hindus, or Ti Yu, the Western Land; to Buddhists she was Fu Kuo, the Land of the Buddhas.**

Pre-Buddhistic Influence

It is probable that there was contact between India and China even before the birth of Buddha; certain similarities of thought and belief between pre-Buddhist Indians and pre-Confucian Chinese go to strengthen that theory. **According to Hindus, the world sprang from the union of Purusha and Prakriti, the Male and Female Principles; the ancient Chinese writers thought the same—the Purusha and Prakriti of Indians being called Yang and Yin in China. There is also the worship of mountains in both countries; what the Himalayas have been to Hindus that Mount Tai has been to the Celestials.** I do not think that these are mere coincidences due to the similarity of all early beliefs. There was a good deal of action and reaction of early Asiatic

civilizations upon each other of which a proper history has yet to be written.

With the rise of Buddhism we are, historically speaking, on firmer ground. It is said that Asoka's missionaries had gone to China. There are however no records left of it. But we do know as a matter of historical fact that in 67 A.D., the Emperor Ming Ti received Kashyapamadanya from India, who bore with him presents of images and sculptures for the Chinese emperor. Since then the intercourse between the two countries continued uninterrupted till at least the eighth century. During that time it is estimated that between thirty to forty Indian scholars went to China, and some two hundred Chinese scholars came to India, who took back with them to their country Indian books, paintings, and statues.

The influence of India on China can be traced on Music, Architecture, Painting, Sculpture, Literature, Mythology, Philosophy and Science.

Influence of Hindu Music

We learn from Chinese writers that Indian music had displaced Chinese music in the seventh century in northern China; records of this music are said to be preserved in Japan. Although Chinese architecture is mainly wooden, still Indian architecture has succeeded in influencing it. There were certain temples built during the Tang Period in China which were the offspring of Indian and Chinese styles of architecture. Those temples are however in ruins now, and so they cannot be studied properly. But the Chinese pagoda fortunately still exists. It is called Chinese, though the country of its origin was Nepal. The Newars, a people living in the Valley of Nepal, evolved it by making certain alterations in the Hindu temple. Those alterations were: (1) They built the pagoda on a platform and not on the ground direct like the Hindu temple; (2) They tilted up the roof of their building, mainly because the rainfall in the country is very heavy. **Mr. Ernest Havell is of opinion that the pagoda was a modification of the stupa, while Mr. Sylvain Levi thinks that it represents an Indian style of architecture which has now disappeared.** When the pagoda went from Nepal to Tibet and from thence to China is not definitely known yet. The oldest pagoda in China is, I think, of the sixth century.

In **painting**, India influenced China considerably. From the East Chin dynasty to the Tang dynasty there was continuous intercourse between the two countries, and Indian paintings went to China in great numbers and influenced, if not actually displaced for a time Chinese painting in the North. This Indian School of Painting flourished in China till the rise to power of the Southern Sungs who favored the purely Chinese style of painting. I shall never forget the exquisite, ethereally delicate pictures painted on silk of this period which I saw at an exhibition at Messrs. Yamanaka's art galleries in New York in 1923. The manager of the galleries on seeing that I was an Indian, approached me, and pointing at the pictures in front of us, remarked with his inimitable Japanese smile, "They are all Indian really!" Then there are the wall paintings of the **Tun Huang Caves (the Caves of the Thousand Buddhas) which Sir Aurel Stein and others have recently excavated in Chinese Turkestan.**

A Chinese writer tells us that before the introduction of Buddhism there was no sculpture in three dimensions in China. But most of the early Chinese Buddhist sculpture was destroyed by an Emperor who was anti-Buddhist. There are, however, the rock sculptures and reliefs at Lo Yang and Lung Men of that period still left intact which show the influence of Indian sculpture on them. There are also sculptures to be found at Yung Kwang which closely resemble the Indo-Greek sculptures of Gandhara.

The **Sanskrit language** and literature have influenced China to a certain extent, since the Buddhist Scriptures had to be translated into Chinese. On account of the study of Sanskrit—which, by the way, is the language of the Mahayana Buddhism and not Pali as some people imagine—the Chinese were inspired to invent an alphabetical system. This alphabetical system which has now disappeared, was called *Ba-lamen Shu or Brahminical writing.* **Sakuntala**, the masterpiece of the great Indian dramatist **Kalidasa**, was translated into Chinese, and is said to have influenced the Chinese drama. In mythology, many Buddhist deities of India were adopted by the Chinese; for example, Kwan Yin, the Chinese Goddess of Mercy, was the Indian Tara. **It has**

been suggested that Lao Tze got his idea of Tao—the Way—from the Hindu Brahman, Universal Soul. It is likely that the Indian sciences of Astronomy and Medicine influenced the astronomical and medical sciences of the Chinese. There is very good scope for a competent scholar to make a full study of Indian influence on China and other Far-Eastern countries, and write a book on the subject.

British Imperialism and Christian Missionaries in China
(excerpts from Glimpses of World History - By Jawaharlal Nehru (1934) p. 445-449)

India had sent in the past many a good thing to China. Bt the Opium war with Britain was a beginning of a unsavory chapter in Chinese history.

This was the beginning of China's troubles with the imperialistic Powers of the West. Her isolation was at an end. She had to accept foreign trade; and she had to accept, in addition, Christian missionaries. **These missionaries played an important part in China as the vanguard of imperialism.** Many of China's subsequent troubles had something to do with missionaries. Their behavior was often insolent and exasperating, but they could not be tried by Chinese courts. Under the new treaty foreigners from the West were not subject to Chinese law or Chinese justice. They were tried by their own courts. This was called "extra-territoriality", and it still exists, and is much resented. The converts of the also claimed this special protection of 'extra-territoriality." They were in no way entitled to it; but that made no difference, as the great missionary, the representative of a powerful imperialist nation, was behind them. Thus village was sometimes set against village, and when, exasperated beyond measure, the villagers or others rose and attacked the missionary, and sometimes killed him, then the imperialist Power behind swooped down and took signal reparation. **Few occurrences have been so profitable to European Powers as the murders of their missionaries in China!** For they made each such murder the occasion for demanding and extorting further privileges.

It was also a convert to Christianity who started one of the most terrible and cruel rebellions in China. This is the **Taiping Rebellion,** started about 1850 by Hung Hsin-Chuan. This religious maniac had extraordinary success and went about with the war-cry **"Kill the idolaters"**, and vast numbers of people were killed. The rebellion devastated more than half China, and during a dozen years or so it is estimated that at least 20,000,000 people died on account of it. At first the missionaries blessed it and later repudiated Huang. To the Chinese government, the missionary did not come as a messenger of religion and good will. He was an agent of imperialism.

"First the missionary, then the gunboat, then the land-grabbing - this is the procession of events in the Chinese mind."

The foreign barbarians cared little what the Chinese thought of them. They felt secure in their gunboats and with their modern weapons of war.

"Whatever happens,
We have got
The Maxim gun,
And they have not!"

***

England waited in the wings as they vied for the key to absolute control of China. Western culture and beliefs moved slowly into the foreground in China, especially the Christian doctrine spread by missionaries which found itself at the center of the Taiping ideology.

The English, when told "Take away your opium, and your missionaries, and you will be welcome" chose to come with both and throw welcome to the wind. The fact that the English had the power in the first place to disregard the Emperor and his

ambassadors was a blow to Chinese esteem. Suddenly these little European nations from far away were threatening the traditions and tenements kept by China for thousands of years. For the next ten years, Hung joined Leang-afa as a street preacher. With several close friends, he founded the Society of God Worshippers and remained the head of that organization until the March of 1847, when **he returned to Canton to study with Isaachar T. Roberts. Roberts was an American Southern Baptist missionary, who adopted Hung as a special student and encouraged his ideas of rebellion.** Later, the missionary was to change his mind, calling Hung and his fellow revolutionists "coolie kings" who were "crazy and unfit to rule".

"In search of further guidance, Hong spent two months with an American Baptist missionary, the Reverend Issachar Jacox Roberts, receiving scriptural instruction. Leaving before he was ready for baptism – on which score the Reverend Mr. Roberts was quite right – Hong returned to his native place near Canton. There he and his followers, now calling themselves God Worshipers, made themselves socially unacceptable by **smashing idols** and Hong lost his position as schoolmaster."

Hindu-Chini bhai bhai
Jyoyti Malhotra
http://www.indian-express.com/ie20010521/nat19.html

New Delhi, May 20: China and India are expected to take a great leap forward in their relationship, with Beijing inviting the Shankaracharya of Kanchi, Sri Jayendra Saraswati, on a tour of China later in October this year.

The Shankaracharya is among a handful of major religious leaders worldwide who have ever been invited by officially atheist China, on a red carpet journey that will take him and his 15-member team across the old cities of Beijing, Shanghai and Hangzhou.

The Shankaracharya's trip is being described as a ''civilisational journey'', in the manner of the ancient travelers who travelled from India to the Middle Kingdom and back. But it is bound to add an interesting new dimension to modern-day contacts between Asia's giants, who at the best of times seem to regard each other as competitors.

Clearly, the Shankaracharya's trip from October 10 to 17 is also an attempt to break the gathering distrust between the two countries. The fact that the invitation comes from the China Association of International Friendly Contact (CAIFC) in Beijing — all ''autonomous'' and ''independent'' bodies in China are linked to the government — whose president is the former Chinese foreign minister Huang Hua, makes it even more significant.

Beijing, in fact, seems to be rolling out the red carpet with deliberate intent. Jayendra Saraswati will meet Li Peng, the second-most important leader in all China as well as Chinese Premier Zhu Rongji in Beijing, besides Buddhist and Taoist leaders (both groups are native to China) in Shanghai.

Significantly, during the week the Shankaracharya will visit, Beijing will also throw open the gates of the formerly forbidden city to Hindu devotees from the rest of the world, Kanchi sources said. The political importance of the

journey has not escaped New Delhi, although diplomats wished not to make comments.

For example, the Beijing-Shanghai-Hangzhou trip is the same route that was given to former US president Richard Nixon when he made his pathbreaking visit to China in 1972.

Analysts pointed out that Beijing has been ‘‘under siege’’ for some years now, with the banned Falun Gong sect gathering worshipers across the country and the West pressurizing China to allow more religious freedom.

By letting in Shankaracharya, the analysts added, the Chinese seem to be sending many messages at the same time. First, that the people of India must be engaged at many levels, not only political. Second, Hinduism is certainly no threat to sects like the Falun Gong. And third, as China opens up slowly, **‘‘Western nations, along with their cultural motifs, must back off.’’**

The Kanchi group, comprising of the pontiff’s close aides Venkateshwaran, Rajaram, M.D. Nalapat, Sundar and R. Sarathy, who visited Beijing in end-April to finalise details, said they were ‘‘very pleasantly surprised’’ at the extremely warm reception they received.

They said they were able to wrap up both major details as well as the finer points of the trip in a matter of weeks. **The Catholic Pope, they pointed out, has been trying to go to China or even Hong Kong for the last 17-odd years, but Beijing has steadfastly refused to give him a visa.**

On the other hand, the letter formally delivered by CAIFC emissaries to Kanchipuram a few days ago, is extremely warm in tone, inviting ‘‘Your Holiness’’ to visit China as ‘‘distinguished guests of the Chinese people as well as the goodwill ambassadors of **our great neighbor India with which China has a history of thousands (of) years of friendly exchanges’’.**

Interestingly, it is the small details that seemed to have warmed the cockles of the Shankaracharya camp. Such as the fact that the pontiff will be able to carry his personal cook with him along with the special rice that he eats. And though the vegetables will be provided by the Chinese side, water will come straight from a borewell in the earth and not from an impersonal tap in the wall.

Did You Know

Tea - (Chai), the national drink of the Anglo-Saxons, is an indirect Indian legacy to the Western civilization.

It is also a favored drink of the Chinese, Japanese, Russians and others. The original home of this shrub was in Assam, (Kamarupa of old) India, and from there in the third century A.D. it traveled to China and by the middle of the seventeenth century, it appeared in England. In the eighteenth century "tea gardens" began to appear in London and attracted especially women who preferred them to the stuffy tea houses in the congested city. Scholars too were attracted - Dr Samuel Johnson and Boswell lent distinction to these gardens.

Neither historical events nor cross-cultural currents can explain the unique parallels in the myths and imagery of ancient Egypt and India. Walafrid Strabo (c. 809–849) German scholar has said: "The lotus flower, sacred to Buddha and to Osiris, has five petals which symbolizes the four limbs and the head; the five senses; the five digits; and like the pyramid, the four parts of the compass and the zenith. Other esoteric meanings abound: for myths are seldom simple, and never irresponsible."

Indian contacts with the Western world date back to prehistoric times. Trade relations, preceded by the migration of peoples, inevitably developed into cultural relations. Evidence of Indian contact with the ancient civilizations to her west, however is certain. Knobbed pottery vases came to Sumer from India and so did cotton. In the Akkadian tongue, Indian cotton was expressed by ideographs meaning "vegetable cloth." Assurbanipal (668-626 B.C) cultivated Indian plants including the "wool-bearing trees" of India.

According to the Skandha Purana, Egypt (Africa) was known as Sancha-dvipa continent mentioned in Sir Willliams Jones' dissertation on Egypt. At Alexandria, in Egypt, Indian scholars were a common sight: they are mentioned both by Dio Chrysostom (c. 100 A.D.) and by Clement (c. 200 A.D.) Indirect contact between ancient India and Egypt through Mesopotamia is generally admitted, but evidence of a direct relationship between the two is at best fragmentary. Peter Von Bohlen (1796-1840) German Indologist, compared India with ancient Egypt. He thought there was a cultural connection between the two in ancient times. There are elements of folk art, language, and rural culture of Bengal which have an affinity with their Egyptian counterparts and which have not been explained satisfactorily in terms of Aryan, Mongolian, or Dravidian influences. There are similarities between place names in Bengal and Egypt and recently an Egyptian scholar, El Mansouri, has pointed out that in both Egypt and India the worship of cow, sun, snake, and river are common.

Recently, more definitive evidence suggesting contact between India and Egypt has become available. A terracotta mummy from Lothal vaguely resembles an Egyptian mummy and a similar terracotta mummy is found also at Mohenjodaro. In this context it is of interest to note that the Egyptian mummies are said to have been wrapped in Indian muslin. Characters similar to those on the Indus seals have also been found on tablets excavated from Easter Island.

Of all the Egyptian objects and motifs indicating some contact between India and Egypt during the Indus Valley period, "the cord pattern occurring in a copper tablet in the Indus Valley and on three Egyptian seals is the most striking link between the two countries. Gordon Childe has said, "In other words, in the third millennium B.C. India was already in a position to contribute to the building up of the cultural tradition that constitutes our spiritual heritage as she notoriously has done since the time of Alexander."

Introduction

Peter Von Bohlen (1796-1840) German Indologist, compared India with ancient Egypt. He thought there was a cultural connection between the two in ancient times.

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - **By Valentine Stache-Rosen**. p.15-16).

In his book, **Empire of the Soul: Some Journeys in India**, **Paul William Roberts,** states:

" Recent research and scholarship make it increasingly possible to believe that the Vedic era was the lost civilization whose legacy the Egyptians and the Indians inherited. There must have been one. There are too many similarities between hieroglyphic texts and Vedic ones, these in turn echoed in somewhat diluted form and a confused fashion by the authors of Babylonian texts and the Old Testament."

(source: **Empire of the Soul: Some Journeys in India - By Paul William Roberts** p. 300).

It is believed that the Dravidians from India went to Egypt and laid the foundation of its civilization there. the Egyptians themselves had the tradition that they originally came from the South, from a land called **Punt**, which an historian of the West, **Dr. H.R. Hall,** thought referred to some part of India.

The Indus Valley civilization is, according to Sir John Marshall who was in charge of the excavations, the oldest of all civilizations unearthed (c. 4000 B.C.) It is older than the Sumerian and it is believed by many that the latter was a branch of the former.

(source: **The Bhagvad Gita: A Scripture for the Future** - Translation and Commentary by **Sachindra K. Majumdar** p. 28).

Adolf Erman (1854-1937) author of **Life in ancient Egypt** and **A handbook of Egyptian religion**, says that the persons who were responsible for a highly developed Egyptian civilization were from **Punt**, an Asiatic country, a description of which is unveiled by this scholar from the old legends - a distant country washed by the great seas, full of valleys, incense, balsum, precious metals and stones; rich in animals, cheetahs, panthers, dog-headed apes and long tailed monkeys, winged creatures with strange feathers to fly up to the boughs of wonderful trees, especially the incense tree and the coconut trees.

Dr. Erman further says that analyzing the Egyptian legends makes it clear that from Punt the heavenly beings headed by Amen, Horus and Hather, passed into the Nile valley...To this same country belongs that idol of **Bes**, the ancient figure of the deity in the Land of Punt.

M A Murray author of **Legends of Ancient Egypt** rightly observes that as a race the Egyptians are more Asiatic than African. He cites the type 'P' as depicted by Hatshepsut's artists as his support.

(source: **The Aryan Hoax: That Dupes The Indians - By Paramesh Choudhary** p. 225).

Klaus K. Klostermaier, in his book **A Survey of Hinduism** p. 18 says:

"For several centuries a lively commerce developed between the ancient Mediterranean world and India, particularly the ports on the Western coast. The most famous of these ports was Sopara, not far from modern Bombay, which was recently renamed Mumbai. **Present day Cranganore in Kerala, identified with the ancient Muziris, claims to have had trade contacts with Ancient Egypt under Queen Hatsheput, who sent five ships to obtain spices, as well as with ancient Israel during King Soloman's reign.** Apparently, the contact did not break off after Egypt was conquered by Greece and later by Rome.

India - Yaksha (dwarf) image discovered in cave 2nd century BC. Egypt Bes. depicted as a deformed dwarf. 3rd century BC. (source: India and Egypt - edited by Saryu Doshi p. 70 - 71).

Max Muller had also observed that the mythology of Egyptians (and also that of the Greeks and Assyrians) is wholly founded on Vedic traditions. **Eusebius,** a Greek writer, has also recorded that the early Ethiopians emigrated from the river Indus and first settled in the vicinity of Egypt.

In an essay entitled **On Egypt from the Ancient Book of the Hindus** (Asiatic Researchers Vol. III, 1792), British **Lt. Colonel Wilford** gave abundant evidence proving that ancient Indians colonized and settled in Egypt. The British explorer **John Hanning Speke**, who in 1862 discovered the source of the Nile in Lake Victoria, acknowledged that the Egyptians themselves didn't have the slightest knowledge of where the Nile's source was. However, Lt. Colonel Wilford's description of the Hindus' intimate acquaintance with ancient Egypt led Speke to Ripon Falls, at the edge of Lake Victoria.

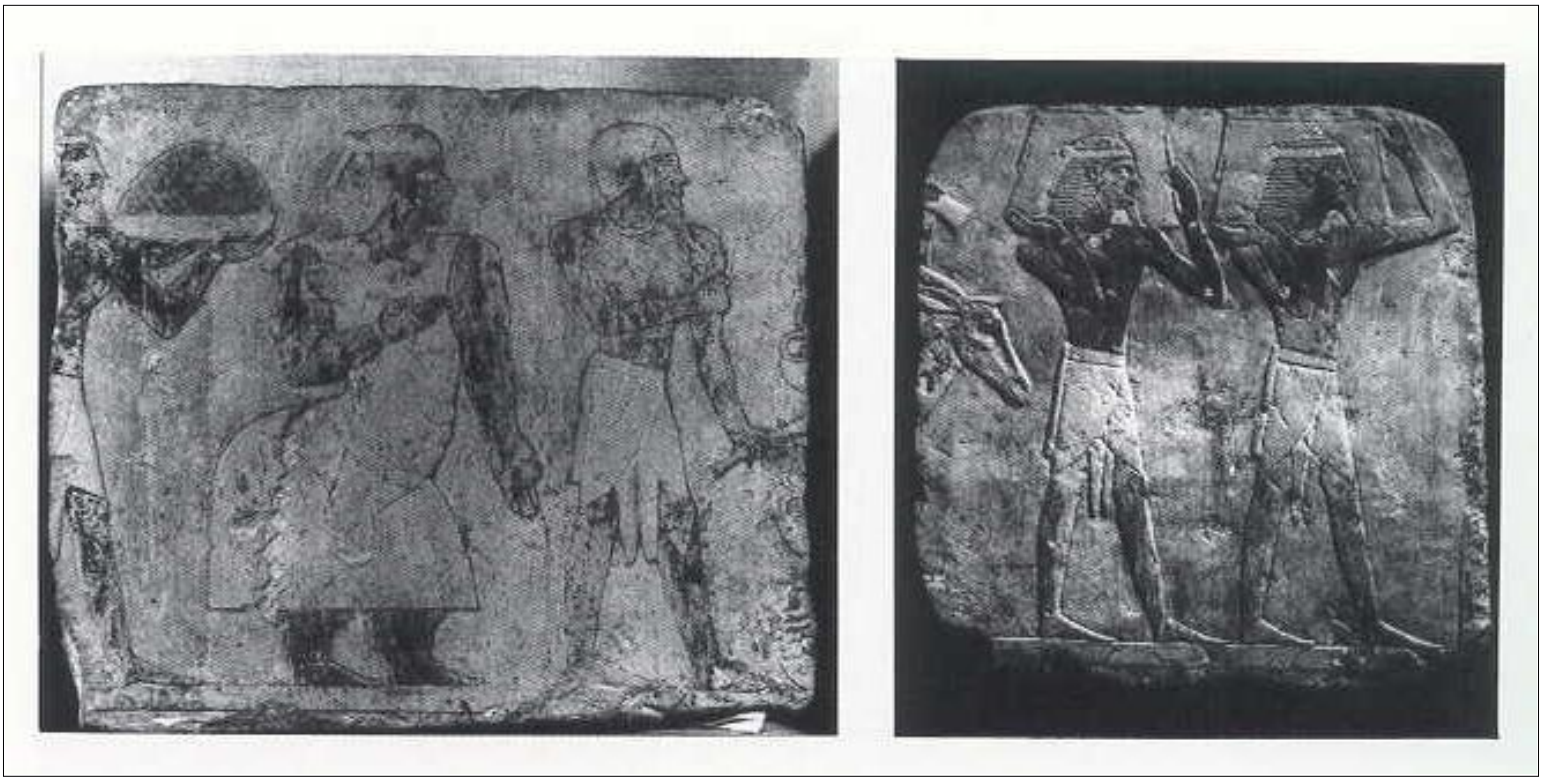
Louis Jacolliot (1837-1890), who worked in French India as a government official and was at one time President of the Court in Chandranagar, translated numerous Vedic hymns, the **Manusmriti**, and the Tamil work, **Kural.** This French savant and author of **La Bible Dans L'Inde** says:

"With such congruence before us, no one, I imagine, will appear to contest the purely Hindu origin of Egypt, unless to suggest that: "And who tells you that it was not Indian that copied Egypt? Any of you require that this affirmation shall be refuted by proofs leaving no room for even a shadow of doubt?

"To be quite logical, then deprive India of the Sanskrit, that language which formed all other; but show me in India a leaf of papyrus, a columnar inscription, a temple bas relief tending to prove Egyptian birth."

(source: **Hinduism in the Space Age - by E. Vedavyas** p.117).

Heinrich Karl Brugsch agrees with this view and writes in his **History of Egypt** that,



"We have a right to more than suspect that India, eight thousand years ago, sent a colony of emigrants who carried their arts and high civilization into what is now known as Egypt." The Egyptians came, according to their records, from a mysterious land (now known to lie on the shores of the Indian Ocean)."

Col. Henry Steel Olcott, a former president of the **Theosophical Society**, who explained in a March, 1881 edition of The Theosophist (page 123) that:

"We have a right to more than suspect that India, eight thousand years ago, sent a colony of emigrants who carried their arts and high civilization into what is now known to us as Egypt...This is what Bengsch Bey, the modern as well as the most trusted Egyptologer and antiquarian says on the origin of the old Egyptians. Regarding these as a branch of the Caucasian family having a close affinity with the Indo-Germanic races, he insists that they 'migrated from India before historic memory, and crossed that bridge of nations, the Isthus of Suez, to find a new fatherland on the banks of the Nile."

The Egyptians came, according to their own records, from a mysterious land...on the shore of the Indian Ocean, the sacred Punt; the original home of their gods...who followed thence after their people who had abandoned them to the valley of the Nile, led by Amon, Hor and Hathor. This region was the Egyptian 'Land of the Gods,' Pa-Nuter, in old Egyptian, or Holyland, and now proved beyond any doubt to have been quite a different place from the Holyland of Sinai. By the pictorial hieroglyphic inscription found on the walls of the temple of the Queen Haslitop at Der-el-babri, we see that this Punt can be no other than India. For many ages the Egyptians traded with their old homes, and the reference here made by them to the names of the Princes of Punt and its fauna and flora, especially the nonmenclature of various precious woods to be found but in India, leave us scarcely room for the smallest doubt that the old civilization of Egypt is the direct outcome of that the older India."

(source: **Theosophist for March 1881** p. 123).

A representation of the physical characteristics of Ita, wife of the chief of Punt - People of Punt carrying baskets of myrrh. (source: India and Egypt - edited by Saryu Doshi p. 32).

Edward Pococke (1604–1691) English Orientalist says: "At the mouths of the Indus dwell a seafaring people, active, ingenious, and enterprising as when, ages subsequent to this great movement.....these people coast along the shores of Mekran, traverse the mouth of the Persian Gulf, and again adhering to the sea-board of Oman, Hadramant, and Yeman (the Eastern Arabia), they sail up the Red Sea; and again ascending mighty stream that fertilizes a land of wonders, found the kingdom of Egypt, Nubia and Abyssinia. These are the same stock that, centuries subsequently to this colonization, spread the blessings of civilization over Hellas and her islands."

(source: **India in Greece - By Edward Pococke** p. 42).

Arnold Hermann Ludwig Heeren (1760-1842) an Egyptologist has observed: "It is perfectly agreeable to Hindu manners that colonies from India, i.e., Banian families should have passed over Africa, and carried with them their industry, and perhaps also their religious worship." "Whatever weight may be attached to Indian tradition and the express testimony of Eusebius confirming the report of migrations from the banks of the Indus into Egypt, there is certainly nothing improbable in the event itself, as a desire of gain would have formed a sufficient inducement."

(source: **Historical Researches - Heeran** p. 309).

Ethiopia, as is universally admitted now, was colonized by the Hindus. **Sir William Jones** says: "Ethiopia and Hindustan were

possessed or colonized by the same extraordinary race."

(source: **Asiatic Researches** - volume I p. 426).

Louis Jacolliot has written:

“Egypt received from India, by Manes or Manu, its social institutions and laws, which resulted in division of the people into four castes, and placing the priest in the first rank; in the second, kings; then traders and artisans; and last in the social scale, the proletaire – the menial almost a slave.”

Manu – Manes – Minos – Moses

A philosopher gives political and religious institutions to India and named Manu. The Egyptian legislator receives the name of Manes.

A Cretan visits Egypt to study the institutions with which he desired to endow his country, and history preserves his memory under the name of Minos.

Lastly, the liberation of the servile caste of He brews founds a new society and is named Moses.

Manu, Manes, Minos, Moses – these four names overshadow the entire ancient world, they appear at the cradles of four different peoples to play the same role.

Let us beware, the times of Brahminism, of Sacerdotalism, of Levitism, in India, in Egypt, in Judes, presents nothing to compare with the flames of Inquisition, the Vandois massacres, or St. Bartholomew’s resound with Te Deum of exultation.

(source: **Bible in India: Hindoo Origin of Hebrew and Christian Revelation** p 60 - 67 and 125).

Philostratus introduces the Brahman Iarchus by stating to his auditor that the Ethiopians were originally an Indian race compelled to leave India for the impurity contracted by slaying a certain monarch to whom they owed allegiance."

Two ancient civilizations, contemporaneous, both growing along the banks of rivers which flow down from mountains, through desert. Both rivers support crocodiles and both people worship river gods and crocodiles and worship cows and have a wonderfully developed cosmogony. Both have a form of caste system. Both have contributed immensely to world culture in almost every field. Surely they must have interacted despite the vast geographical distances involved. There is evidence to suggest contact between the two from around BCE 3000 with the findings of Indian muslin, cotton and dhania (coriander) in Egypt. After about the third century BCE, during the time of Ptolemy Euergetes an Indian sailor was found shipwrecked on the coast of the Red Sea. He was taken to Alexandria where, in exchange for hospitality, he agreed to show the Ptolemy's men a direct sea route to India across the Indian Ocean. Thus began a most profitable period of contact between these two nations. During Emperor Ashoka's reign ambassadors were exchanged. Contact continued until Egypt came under Roman Law. After a short hiatus renewed ventures were undertaken now bigger and powerful markets of Rome clamoring for goods. Although trade was the reason for exchange many ideas that influenced each other's art and iconography also passed back and forth. There is a large body of evidence which documents the close relationships between these two countries. There has always been evidence to suggest indirect means of contact between these two.

"It is testified by Herdotus, Plato, Salon, Pythagoras, and Philostratus that the religion of Egypt proceeded from India....It is testified by Neibuhr, Valentia, Champollian and Weddington that the temples of upper Egypt are of greater antiquity than those of lower Egypt...that consequently the religion of Egypt, according to the testimony of those monuments....came from India...The chronicles found in the temples of Abydos and Sais and which have been transmitted by Josephus, Julius Africanus, and Eusebius, all testify that the religious system of the Egyptians proceeded from India."

"We have Hindu chronologies (besides those of the Puranas concerning the Yuga) which go still further back in time than the Tables of the

Egyptian kings according to Manetho."

There was intimate relations between India and Egypt. It is pointed out that in the processions of Ptolemy Philadelphus (265-246 BCE) were to be seen Indian women, Indian hunting dogs, Indian cows, and Indian spices.

According to the **Jewish chronicles,** there was a sea voyage to the East in the time of **Soloman** (c. 800 BCE). and many articles were brought from there. The use of the Indian names for merchandise raises a strong presumption in favor of their Indian origin. **The word 'Sindhu' found in the library of Assurbanipal, is used in the sense of Indian cotton. The Hebrew Karpas is derived from the Sanskrit Karpassa.**

One of the Jataka stories makes a reference to a trading voyage to the kingdom of Baveru and scholars have interpreted it as the Indian form of Babylon. This points to trade between India and Babylon. The Boghz koi inscriptions of the 14th century BCE. contain the names of such deities as Mitra, Varuna, Indra etc. These names indicate that there was a very close contact between India and Western Asia before the 14th century BCE.

there are imported Indian iron, and steel, and Indian cotton cloth; the broad cloth called monache and that called sagmatogene, and girdles, and coats of skin and mallow-colored cloth, and a few muslins, and colored lac.

Gustav Oppert (1836-1908) born in Hamburg, Germany, he taught Sanskrit and comparative linguistics at the Presidency College, Madras for 21 years. He was the Telugu translator to the Government and Curator, Government Oriental Manuscript Library. He wrote a book **Die Gottheiten der Indier ("The Gods of the Indians")** in 1905. In his book Oppert discussed the chief gods of the Aryans and he compares Aditi with Egyptian Isis and the Babylonian Ea.

(source: **German Indologists: Biographies of Scholars in Indian Studies writing in German** - By Valentine Stache-Rosen. p.81-82).

We are not completely in the dark on the question of Indian influence on Greece. Speaking of ascetic practices in the West, **Professor Sir Flinders Petrie** (1853-1942) British archaeologist and Egyptologist, author of **Egypt and Israe**l (1911) observes:

"The presence of a large body of Indian troops in the Persian army in Greece in 480 B.C. shows how far west the Indian connections were carried; and the discovery of modeled heads of **Indians at Memphis,** of about the fifth century B.C. shows that Indians were living there for trade. Hence there is no difficulty in regarding India as the source of the entirely new ideal of asceticism in the West."

(source: **Eastern Religions & Western Thought - By S. Radhakrishnan** p. 150).

He feels that the doctrine of rebirth, favored by keeping all bodily senses in abeyance, and brought to pass by driving out the twelve inner torments by their antitheses, was accepted in Egypt under the Indian influence.

(source: **Religious Life in Egypt - By W. M Flinders Petrie** p. 211).

Friedrich Wilhelm, Freiherr von Bissing (1873-1956) wrote:

"The land of Punt in the Egyptian ethnological traditions has been identified by the scholars with the Malabar coast of Deccan. From this land ebony, and other rich woods, incense, balsam, precious metals, etc. used to be imported into Egypt."

(source: **Prehistoricsche Topfen aus Indien and Aegypten - By Friedrich Wilhelm, Freiherr von Bissing**. Chapter VIII).

The Egyptians similarly called their ancient land Puanit (land of Panis (poenis or traders) in Egyptian : Word corrupted to a meaningless Punt) and before that, Amenti. Puanit can be reached leading off the Red Sea (South-east direction) to India [specifically East India, since Egyptians had more in common culturally with East India , theologically similar cat headed goddess Shashti, ancient references to embalming and afterlife in the area and the unmistakable 'bengali' accent in Egyptian (v becomes b, a becomes o or u (Eg Vena becomes Benu)] and Amenti should be Indonesia. The polynesians both in Madagascar and in Fiji seem to trace their origins to Indonesia. Indonesia is also geographically central to almost all ancient temple-building cultures, barring Europe

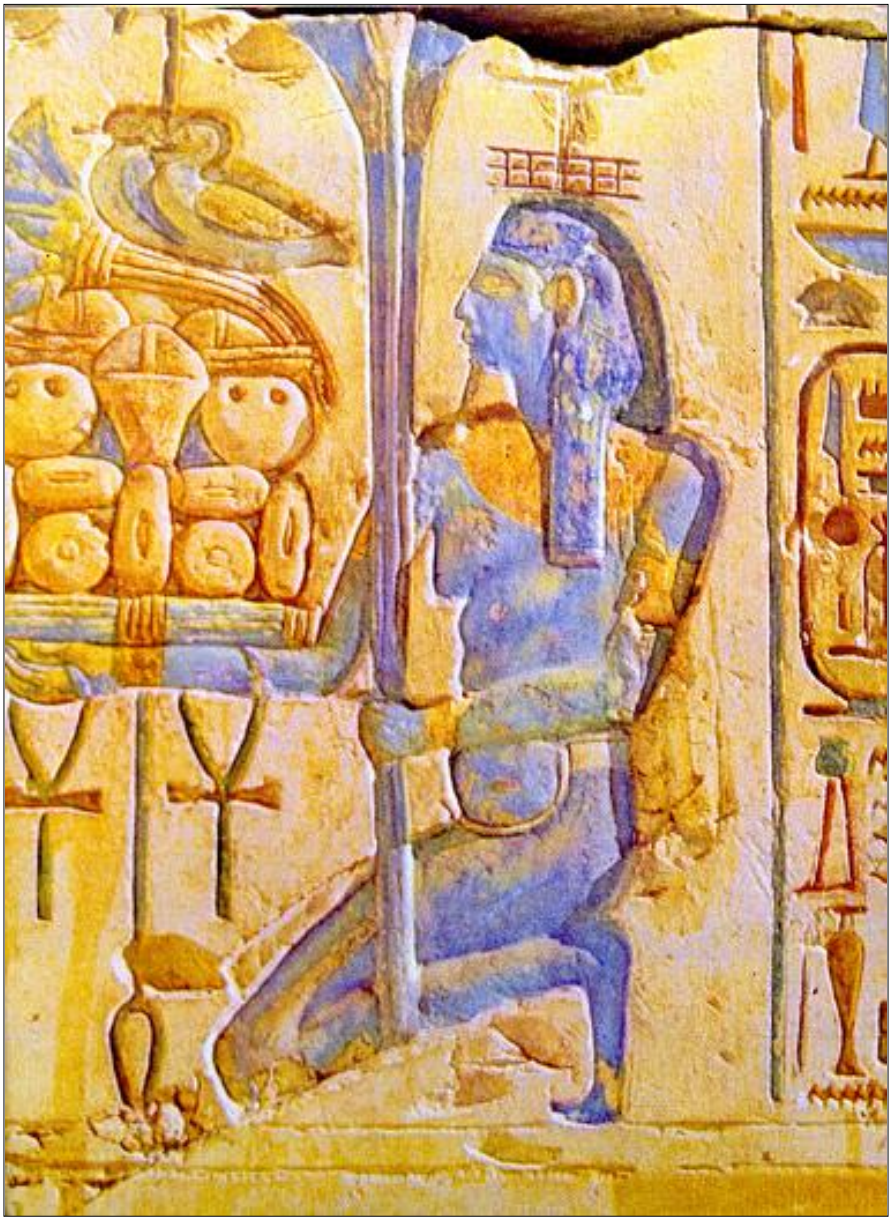
The Lotus and the River

The flower so prolific in the imagery of both India and Egypt, grows out of the waters and opens its petals to be warmed by the sun: to be fertilized. From the earliest imagery in stone at Sanchi, of the first century BC in India, the lotus is associated with Sri, the goddess of fertility, who is later invoked as Lakshmi, the goddess of wealth and abundance - being worshipped by Buddhists, Jains, and Hindus alike. The lotus is held in each hand by Surya, signifying the fertilizing powers of the sun as he travels through the universe.

In Egypt, the blue lotus appears in the earliest wall paintings of the VI Dynasty at the pyramids of Saqqara and in all funerary stelae. They are offered to the deceased, and held in the hand as thought they possess the power to revitalize them: to bring the deceased back to life. Carved out of blue lapis, along with the golden falcon and the sun that are the symbols of the god Horus, the **lotus** appears among the funerary treasures from the tomb of Tutankhamen.

The **lotus** then, becomes a leitmotiv, a symbol most apt since its links the waters with the sun, the earth to sky - signifying fertility and regeneration in both Egypt and India. For, it is the seed of the plant which spells out the cycle of birth-decay-death and rebirth that forms the essential pattern of belief in these two riverine and agricultural societies. In India and Egypt, the rivers Saraswati and Ganga and the Nile have brought sustenance to the land and nourished these civilizations which have survived five millennia. Both these rivers, the Ganga and the Nile, are personified and worshipped. They provide the dramatic backdrop against which myths and indeed created, to explain the topographic conditions of the land.



Lotus in full bloom. Railing pillar in stupa , Sanchi *Gajalakshmi seated on Lotus. Kalaghat painting*
(source: India and Egypt - edited by Saryu Doshi p. 4).

From its source in the Himalayas to the Bay of Bengal, the Ganga flows some two thousand five hundred kilometers, through the rich deltaic region which is known as Aryavarta, in the most densely populated area of India. Puranic myths recount the divine origins of Ganga, as she fell from heaven to earth in response to penance performed by the sage Bhagiratha: to bring the powers of water to an earth parched for over a thousand years. At the seventh century seaport of Mahabalipuram in south India, this epic theme is entirely carved out of a granite rock spanning almost fifty feet. A natural cleft in the rock allows the rain water to pour down in great torrents - as though this were the descent of a mighty river. Besides this cleft are carved the serpentine forms of the naga devatas (snake divinities), the sun and the moon, the gandharvas and kinnaras (celestial beings), the hunters and animals of the forest - all of them rejoicing in this great event where the divine rive is celebrated as

the savior of all mankind.

Here is a spectacular instance of the way in which myth is used to relate man to the environment. In this myth one senses an acute awareness of the ecological balance which needs to be maintained: of the vapors of the sea rising to the sky through heat, described in the myth as tapas, and then falling back to earth as the divine river, to flow down through the matted locks of Lord Shiva, on to the Himalayas, to flow back into the ocean.

River Goddess Ganga, Rameshvara Caves. Ellora. Hapi, god of the River Nile. Temple of Abydos, Egypt.
(source: India and Egypt - edited by Saryu Doshi p. 8 - 9).

As in India, so in Egypt, the river is personified in human form. A sandstone relief from the temple of Rameses II at Abydos depicts Hapi, god of the Nile, holding a pair of blue lotus stalks in his hands; suspended from the god's right arm is the ankh, the symbol of life. Unlike the Ganga, the blue god of the Nile is male, but with one female breast to symbolize his role as nourisher - releasing the waters each year to provide sustenance to mankind.

The main presiding deity of the Egyptian pantheon is Osiris, like Yama, god of the dead, whose story of life, death and regeneration has been transmitted to us in great detail by Plutarch.

Some extraordinary parallels with the Osirian myth are found among the myths and images of India. Lord Vishnu lied recumbent on the bed of the ocean asleep, as indeed Osiris lied prostate and dead on a bier.

The Hindi word for cow means also "ray of illumination," and in Egyptian lore a cow is sometimes depicted as the source of light in the sky.

***

The Puranas, Nile and Lake Amara

Significant also is the fact that **Lieutenant Speake**, when planning his **discovery of the source of the Nile**, secured his best information from a map reconstructed out of **Puranas**. (Journal, pp. 27, 77, 216; Wilford, in Asiatic Researches, III).

It traced the course of the river, the "Great Krishna," through **Cusha-dvipa**, **from a great lake in Chandristhan, "Country of**

the Moon," which it gave the correct position in relation to the Zanzibar islands. The name was from the native Unya-muezi, having the same meaning; and the map correctly mentioned another native name, Amara, applied to the district bordering Lake Victoria Nyanza.

"All our previous information," says Speake, "concerning the hydrography of these regions, originated with the ancient Hindus, who told it to the priests of the Nile; and all these busy Egyptian geographers, who disseminated their knowledge with a view to be famous for their long-sightedness, in solving the mystery which enshrouded the source of their holy river, were so many hypothetical humbugs. The Hindu traders had a firm basis to stand upon through their intercourse with the Abyssinians."

(source: **Periplus of the Erythrean Sea - W.H. Schoff** p. 229-230).

The Puranas have a remarkable connection with one of the most important discoveries of the 19th century. In 1858, **John Hanning Speke** (1827-1864) – Speke was commissioned in the British Indian Army in 1844 – made the discovery that Lake Victoria was the source of the River Nile in Africa. **Speke wrote that to some Indian Pundits (Hindu scholars) the Nile was known as Nila,** and also as Kaali. Nila means blue and Kaali means dark – both apt descriptions for the Nile near its source. These are mentioned in several Puranas including the Bhavishaya.

This went against the conventional wisdom, for Lake Victoria was unknown at the time. Sir Richard Burton, the leader of the Nile expedition, had identified Lake Tangyanika as the source. Speke, however, following upon the advice of a Benares (Varansi) Pundit, insisted that the real source was a much large lake that lay to the north. Following this advice Speke went on to discover Victoria. The Pundit had also told him that the real source were twin peaks as Somagiri, '**Soma' in Sanskrit stands for moon** and 'giri' means peak, and Somagiri therefore are none other than the fabled **Mountains of the Moon in Central Africa!** The Pundit must have known all this. He published his book **Journal of the Discovery of the Source of the Nile** in 1863.

(source: **Nostradamus and Beyond – N S Rajaram** p. 60 - 67).

Colonel Rigby now gave me a most interesting paper, with a map attached to it, about the Nile and the Mountains of the Moon. It was written by **Lieutenant Wilford**, from the **"Purans" of the Ancient Hindus**. As it exemplifies, to a certain extent, the supposition I formerly arrived at concerning the Mountains of the Moon being associated with the country of the Moon, I would fain draw the attention of the reader of my travels to the volume of the "Asiatic Researches" in which it was published. It is remarkable that the Hindus have christened the source of the Nile Amara, which is the name of a country at the north-east corner of the Victoria N'yanza. This, I think, shows clearly, that the ancient Hindus must have had some kind of communication with both the northern and southern ends of the Victoria N'yanza.

(source: **Journal of the Discovery of The Source of the Nile - http:/www.capitalnet.com/~jcbyers/Speke/nile-chap01.htm**).

Cultural Contacts with Egypt

All through the ages the peoples of India have had active intercourse with the other peoples of the world. Since the days of Mohenjo daro culture, the Hindus have never lived in an alleged "splendid isolation." It is generally assumed that internationalism or cosmopolitism is a very recent phenomenon in human affairs. As a matter of fact, however, culture has ever been international.

The dawn of human civilization finds the Hindus as captains of industry and entrepreneurs of commerce. **They were in touch with the Pharaohs of Egypt. The mummies of the Egyptians were wrapped in muslin which was imported from India.** Hindu trade gave to the land of the Nile ivory, gold, spices, tamarind-wood, sandal-wood, monkeys, and other characteristic Indian plants and animals. It is also believed that the textile craftsmen of Egypt dyed their cloth with Hindu indigo. Hindu ships brought the Indian commodities to the Arabian ports, or to the Land of Punt; and from there these were transported to Luxor, Karnak and Memphis.

Hindu commerce with the land of the Euphrates was more intimate and direct. As early as about 3000 B.C. the Hindus supplied the Chaldean city of Ur on the Euphrates with teak-wood. The Assyrians also, like the Egyptians, got their muslin from India. In fact, vegetable "wool", i.e. cotton, and wool producing plants have been some of the earliest gifts of Hindu merchants to the world. From the tenth to the sixth century B.C. the Assyro-Babylonian trade of the Hindus seems to have been very brisk. Hindus brought with them apes, elephants, cedar, teak, peacocks, tigers, rice, ivory, and other articles to Babylon, the Rome of Western Asia. It was through this Indo-Mesopotamian trade that the Athenians of the sixth century B.C. came to know of rice and peacocks.

(India) vanadevata's (wood spirit) hand issuing from tree trunk offering water. - (Egypt) deceased drinking water offered by tree divinity

(source: India and Egypt - edited by Saryu Doshi p. 69).

This expansion of Hindu activity influenced the literature of the time, e.g. the Vedas and Jatakas. A cylinder seal of about 2,000 B.C. bearing cuneiform inscriptions and images of Chaldean deities have been unearthed in Central India. In Southern India has been found a Babylonian sarcophagus.

Hindu trade with the Hebrews also was considerable. Soloman (1015 B.C), King of Judaea, was a great internationalist. In order to promote the trade of his land he set up a port at the head of the right arm of the Red Sea. He made his race the medium of intercourse between Phoenicians and Hindus. The port of Ophir (in Southern India) is famous in Hebrew literature for its trade in gold under Soloman. The Books of Genesis, Kings and Ezekiel indicate the nature and amount of Hindu contact with Asia Minor. It is held by Biblical scholars that the stones in the breast plate of the high priest may have come from India. The Hindus supplied also the demand of Syria for ivory and ebony. **The Hebrew word, tuki (peacock), is derived from Tamil (South Indian) tokei, and ahalin (aloe) from aghil.**

The Sun King and Dasharatha

Subhash Kak has observed: "A sad consequence of the racist historiography of the 19th century Indologists and their successors is the **neglect of India's interaction with Africa. Cyril A Hromnik's Indo-Africa : towards a new understanding of the history of sub-Saharan Africa** (1981) is the only book on the Indian contribution to the history of sub-Saharan Africa that I am aware of, but it is just an exploratory study.

The Sun King and Dasharatha - Two historical persons with Indic connections -- one from North Mesopotamia and the other from Egypt.

The Sun King Akhenaten of Egypt (ruled 1352-1336 BC according to the mainstream view) was the son-in-law to Dasharatha, the Mitanni king of North Syria, through the queen, Kiya. (The name **Dasharatha** is spelled Tushratta in the Hittite cuneiform script, which does not distinguish between 'd' and 't' very well. Some have suggested that the Sanskrit original is Tvesharatha, “having splendid chariots.”) Letters exchanged between Akhenaten and Dasharatha have been found in Amarna in Egypt and other evidence comes from the tombs of the period that have been discovered in excellent condition.

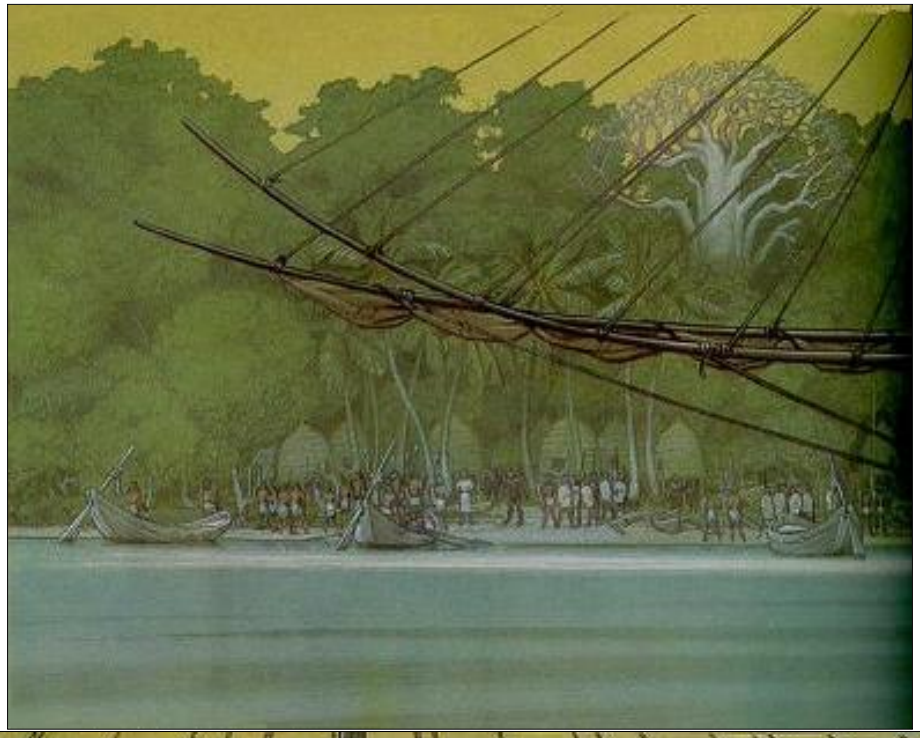
The **Mitanni, who worshiped Vedic gods,** belonged to an Indic kingdom that was connected by marriage across several generations to the Egyptian 18th dynasty to which Akhenaten belonged. The first Mitanni king was Sutarna I (“good sun”). He was followed by Paratarna I (“great sun”), **Parashukshatra (“ruler with axe”),** Saukshatra (“son of Sukshatra, the good ruler”), Paratarna II, Artatama or Ritadhama (“abiding in cosmic law”), Sutarna II, Dasharatha, and finally Mativaja (Matiwazza, “whose wealth is prayer”) during whose lifetime the Mitanni state appears to have become a vassal to Assyria.

But how could an Indic kingdom be so far from India, near Egypt? After catastrophic earthquakes dried up the Sarasvati river around 1900 BC, many groups of Indic people started moving West. We see Kassites, a somewhat shadowy aristocracy with Indic names and worshiping Surya and the Maruts, in Western Iran about 1800 BC. They captured power in Babylon in 1600 BC, which they were to rule for over 500 years.

The Mitanni ruled northern Mesopotamia (including Syria) for about 300 years, starting 1600 BC, out of their capital of Vasukhani. (For Mitanni names, I give standard Sanskrit spellings rather than the form that we find in inscriptions in the inadequate cuneiform script, such as Wassukkani for Vasukhani, “a mine of wealth.”) Their warriors were called *marya*, which is the proper Sanskrit term for it.

In a treaty between the Hittites and the Mitanni, **Indic deities Mitra, Varuna, Indra, and Nasatya (Ashvins) are invoked.** A text by a Mitannian named Kikkuli uses words such as aika (eka, one), tera (tri, three), panza (pancha, five), satta (sapta, seven), na (nava, nine), vartana (vartana, round). Another text has babru (babhru, brown), parita (palita, grey), and pinkara (pingala, red). Their chief festival was the celebration of *vishuva* (solstice) very much like in India. It is not only the kings who had Sanskrit names; a large number of other Sanskrit names have been unearthed in the records from the area.

The Vedic presence via the Mitanni in Egypt and the Near East occurs several centuries before the exodus of the Jews. This presence is sure to have left its mark in various customs, traditions, and beliefs. It may be that this encounter explains uncanny similarities in mythology and ritual, such as circumambulation around a rock or the use of a rosary of 108 beads.



(source: **The Sun King and Dasharatha - By Subhash Kak sulekha.com).**

***

India's Contact with the West

H. R. Hall writes in his book, **The Ancient History of the Near East** (London, 1913, p. 74): “There is no doubt that the Indus must have been one of the oldest centers of human civilization, and it seems natural to consider that the strange non-Semitic and non-Aryan people who came from the east to civilize the west was of Indian origin, particularly when we see to what point the Sumerians looked like Indians in appearance.”

The **Egyptians attributed an eastern origin to their culture, starting that they had come from the East by sea, from the land of “Punt”.** Maritime communications and trading from the mouths of the Indus to the south of Arabia and as far as the Egyptians coast – very important during the early period of Egypt – had always existed. The fact that the Egyptians had built a canal from the Nile to the Red Sea implies a considerable volume of trade toward the south and east. The center of sea trade between India and the Mediterranean appears to have been south of Arabia and Socotra (probably the Egyptian Pas-enka), the Greek Dioscorida, called Sukhadara dvipa (the Happy Isle) by the Indians.

By the pictorial hieroglyphic inscription found on the walls of the temple of the Queen Haslitop at Der-el-babri, we see that this Punt can be no other than India. "It is testified by Herdotus, Plato, Salon, Pythagoras, and Philostratus that the religion of Egypt proceeded from India. "The land of Punt in the Egyptian ethnological traditions has been identified by the scholars with the Malabar coast of Deccan. From this land ebony, and other rich woods, incense, balsam, precious metals, etc. used to be imported into Egypt."

***

The geographical sections of the Puranas (Ancient Chronicles of India) mentions Mecca among the holy places, under the name of Makheshvara, together with its black stone as an emblem of the god Shiva.

The Periplus of the Erythraean Sea, written in the first century tells of the founding of the city of Endaemon, or modern Aden: “In the early days of the city when the voyage was not yet made from India to Egypt, and when they did not dare to sail from Egypt to the ports across the ocean (those of India), but all came together at this place, it received the cargoes from both countries.” The Periplus indicates that Endaemon had been founded by Indian

merchants, the Minas, whom Strabo calls Minaeans. Pliny speaks of the Minaeans as the most ancient of trading peoples and mentions relations between the Minaeans and King Minos of Crete. The prophet Ezekiel relates that their trading expeditions reached as far as the Phoenician city of Tyre.

According to Sergi, “the Egyptians and all other Hamitic peoples came out of Asia,” while according to Haddon, “at the beginning of history, some Asians came to Egypt, first from the south, eventually bringing with them bronze and probably also the plough and wheat.”

In the seventh century, St. Isidore made a summary in his Encyclopedia of knowledge derived from ancient Greek and Latin authors, many of whose works have now disappeared. He also speaks of “Ethiopians” in his Etymologiarium (IX.2.128): “They came in ancient times from the River Indus, established themselves in Egypt between the Nile and the sea, towards the south, in the equatorial regions. They became three nations: the Hesperians to the west, the Garamantes in Tripolitania, and the Indians in the east. (The Hesperians” are the ancient inhabitants of Spain; “Garamantes” can be connected to Karama “city in Dravidian); and “the Indians” refers to the inhabitants of Ethiopia, who were also mistaken in ancient literature for the inhabitants of India.”

Between the 6th and the first millennium B.C.E., relations between India and the Near East are evident. Precious stones – amazonite – coming from Nilgiri in southern India have been found at Ur prior to the Jemder Nasr period (3000 B.C.E). Indian seals have been found in Bahrain and in Mesopotamia in pre-Sargonic levels (2500 B.C.E). Traces of Indian cotton have been found, and there are archaeological indications of sea trade with India in the Larsa period (2170 to 1950 B.C.E). **The beams of the Temple of the Moon, at Ur of the Chaldees, and those of the palace of Nebuchadnezzar (6th century B.C.E.) were of teak and cedarwood coming from Malabar in southern India.**

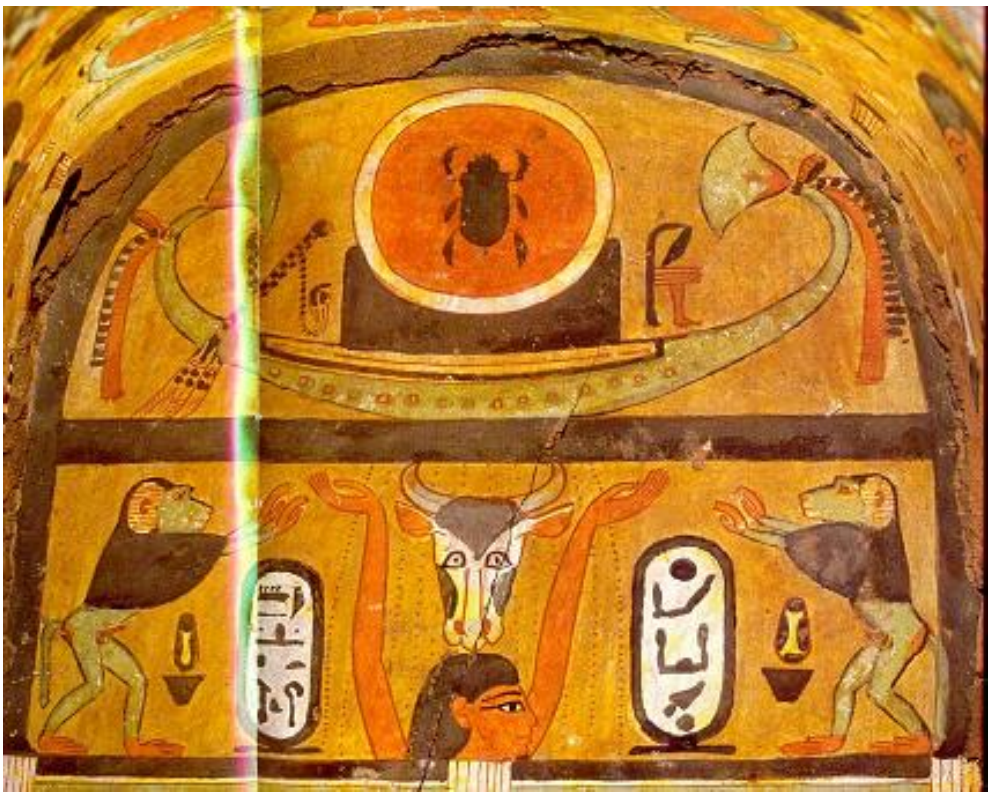
The Persian Connection

F. Max Muller speaks of the colonization of Persia by the Hindus. Discussing the word 'Arya', he says: "But it was more faithfully preserved by the Zoroastrians, who migrated from India to the North-west and whose religion has been preserved to us in the Zind Avesta, though in fragments only. He again says: "The Zoroastrians were a colony from Northern India."

(source: **Science of Language - By Max Mulle**r p. 242-253).



Arnold Hermann Ludwig Heeran says: "In point of fact that Zind is derived from the Sanskrit, and a passage to have descended from the Hindus of the second or warrior caste."

(source: **Historical researches into the politics, intercourse, and trade of the Carthaginians, Ethiopians, and Egyptians - By A. H. Heeren** Volume II p. 220).

Sir William Jones writes: "I was not a little surprised to find that out of words in Du Perron's Zind Dictionary, six or seven were pure Sanskrit."

(source: **Sir William Jones' Works** Volume I p. 82-82).

(India) A terracotta solar plaque illustrating solar boat (Egypt) - solar boat
(source: India and Egypt - edited by Saryu Doshi p. 80-81).

Mr Haug, in an interesting essay on the origin of Zoroastrian religion, compares it with Brahminism, and points out the originally-close connection between Brahminical and the Zoroastrian religions, customs and observances. After comparing names of divine beings, names and legends of heroes, sacrificial rites, religious observances, domestic rites, and cosmographical opinions that occur both in the Vedic and Avasta writings, he says: "In the Vedas as well as in the older portions of the Zind-Avesta (see the Gathas), there are sufficient traces to be discovered that the Zoroastrian religion arose out of a vital struggle against a certain form of Brahminical religion had assumed at a certain early period.

After contrasting the names of the Hindu gods and the Zoroastrian deities, he continues: "These facts throw some light upon the age which that great religious struggle took place, the consequence of which was the entire separation of the Ancient Iranians from the Brahmins and the foundation of the Zoroastrian religion. It must have occurred when Indra

was the chief god of Hinduism."

(source: **Essays on the Parsees - By Haug** p. 288).

It is not easy to acertain when the Hindu colonization of Persia took place. It is certain, however, that it took place before the Mahabharata.

Col James Tod writes: "Ujamada, by his wife, Nila, had five sons, who spread their branches on both sides of the Indus. Regarding three the Puranas are silent, which implies their migration to distant regions. Is it possible that they might be the origin of the Medes? These Medes are descendants of Yayat, third son of the patriarch, Menu and Madai, founder of the Medes, was of Japhet's line. Aia Mede, the patronymic of the branch of Bajaswa, is from Aja 'a goat'. The Assyrian Mede in Scripture is typified by the goat."

(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India** ISBN 8120612892 Volume I. p. 14).

Apart from the passage in Manu, (Manusmriti is much older than Mahabharata) describing the origin of the Ancient Persians, there is another argument to support it. Zoroaster, the Prophet of the Ancient Persians, was born from the emigrants from India had settled in Persia long enough to have become a separate nation. Vyasa held a grand religious discussion with Zoroaster at Balkh in Turkistan, and was therefore his contemporary. Zanthus of Lydia (B.C. 470), the earliest Greek writer, who mentions Zoroaster, says that he lived about six hundred years before the Trojan war (which took place about 1800 BC). Aristotle and Eudoxus place his era as much as six thousand years before Plato, others five thousand years before the Trojan War, (see Pliny: Historia Naturalis, XXX, 1-3). Berosus, the Babylonian historian, makes him a king of the Babylon between B.C. 2200 and BC 2000. It is, however, clear that the Hindu Colonization of Persia took place anterior to the Great War.

In the first chapter (Fargard) of the part which bears the name Vendidad of their sacred book (which is also their most ancient book), Hurmuzd of God tells Zapetman (Zoroaster)" "I have given to man an excellent and fertile country. Nobody is able to give such a one. This land lies to the east (of Persia) where the stars rise every evening." "when Jamshed (the leader of the emigrating nation), came from the highland in the east to the plain, there were neither domestic animals nor wild nor men."

Count Magnus Fredrik Ferdinand Bjornstjerna (1779-1847) author of the book, **The Theogony of the Hindoos with their systems of Philosophy and Cosmogony** says: "The country alluded to above from which the Persians are said to have come can be no other than then the north-west part of Ancient India - Afghanistan and Kashmir - being to the east of Persia, as well as highland compared to the Persian planes."

The Chaldeans were originally migrators from India. Count Bjornstjerna writes: "The Chaldeans, the Babylonians and the inhabitants of Colchis derived their civilization from India."

The Assyrians, too were of Hindu origin. Their first king was Bali Boal or Bel. This Boal or Bali was a great King of India in ancient times. He ruled from Cambodia to Greece. Professor Maurice says: "Bali...was the puissant sovereign of a mighty empire extending over the vast continent of India."

(source: **Hindu Raj in the World - By Krishan Lal Jain** p. 88-92).

The **code of Manu**, India's great law book, states that Dravidas, Yavanas (Greeks), Sakas (Scythians), **Pahlavas (Persians)**, Kambojas (Tibetans, Siamese, Burmese), and Sinas (Chinese), are sprung from Kshatriyas - the second highest caste who forgot their religion and went astray.

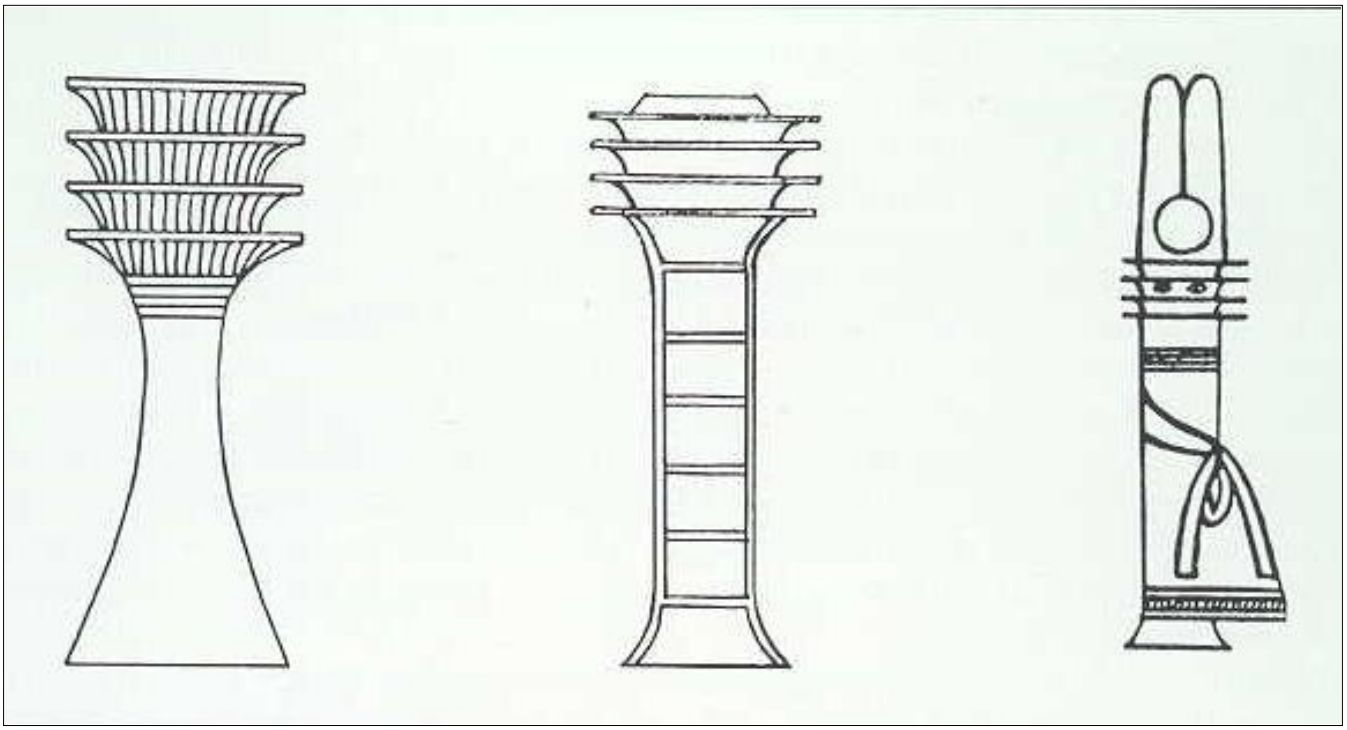
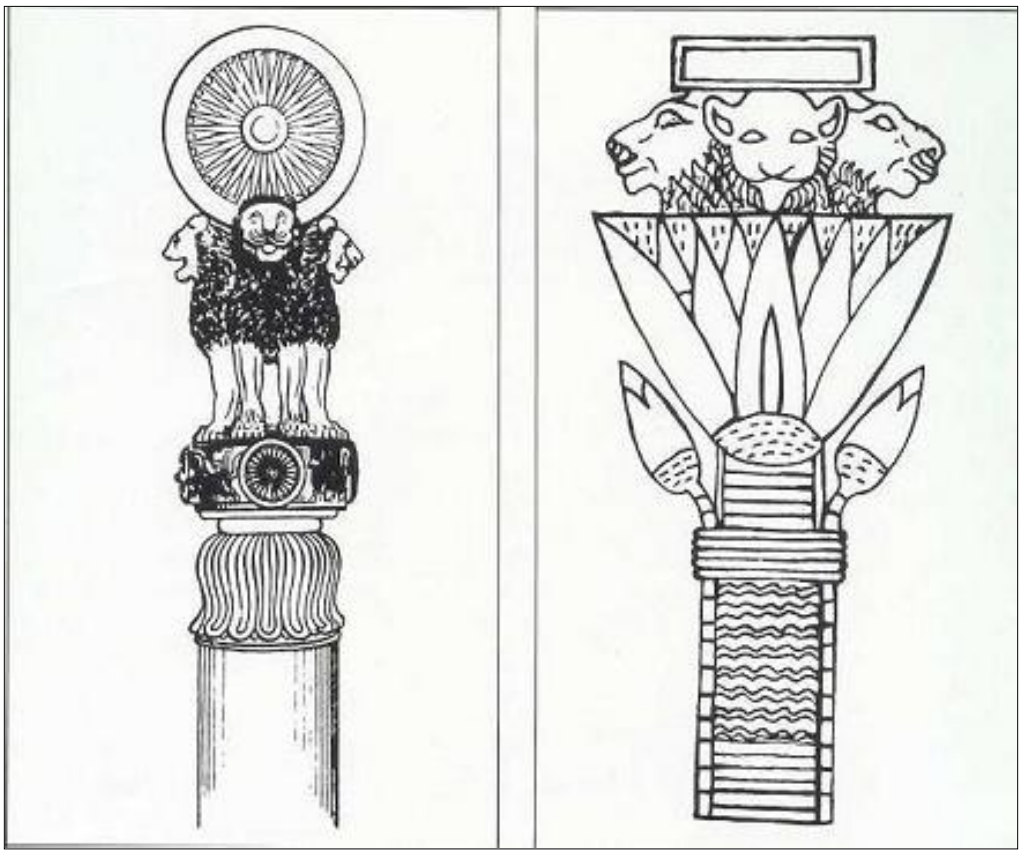
Links to Ancient Egypt



Difficult as it is to pin point exactly when communication between Egypt and India commenced, it is nevertheless intriguing to

note the remarkable parallels which go as far back as the second millennium BC, if not earlier, between the concept of the Egyptian maat and the Vedic rita - the divine order of nature or creation, as opposed to the chaos of falsehood. According to both the Egyptian and Indian traditions, it was the principal duty of the king to establish order in place of disorder or chaos. Other interesting points of similarity between the two ancient cultures were the deification of the forces of nature, faith in magical chants, deep-rooted mysticism, and an emphasis on symbolic expression.



There is a close proximity between Hindu mythology and Egyptian mythology and rituals. "The Book of Dead" and Garuda Purana are similar. Both are recited at the time of death. Their gods and goddesses are also similar.

The brightest evidence of India's direct relations with Egypt is, however, preserved in the Mauryan Emperor Ashok's thirteenth rock edict, inscribed in the early decades of the third century B. C. In it, **Emperor Ashoka** refers to his contacts with Ptolemy II Philadelphus of Egypt (285-246 BC), in connection with the expansion of his policy of the propagation of the Law of Righteousness (dharma). In the Ashokan records of Ptolemy II is referred to as Turamaya. There can be little doubts that official embassies were exchanged between the Mauryan court and that of Ptolemy II. Pliny names the Egyptian ambassador of Ptolemy II to India as Dionysius.

Forms of the Djed column - Egypt Pharaonic Age

Ashokan pillar with lion capital. India. Lotus pillar surmounted with lion heads Egypt. Pharanoic Age. (source: India and Egypt - edited by Saryu Doshi p. 66).

Ashoka, in his second rock edict, refers to the philanthropic activities undertaken by himself. He records that he had made arrangements for the medical treatment of men and animals in the territories of his own empire as well as in the region ruled by Antiochus Theos II of Syria (260-246 BC) and its neighboring kingdoms, which also included Egypt.

With the growth of India's links with the West, there was brisk communication in the area of trade with the Hellenistic world including Egypt, and it is believed that Indian traders reached the land of the Pharaohs. A Hellenistic writer, Agatharchides, the learned tutor of Ptolemy Soter II informs one about a colony of Indians on the island close to the mouth of the Red Sea, named Socotra, which in Sanskrit would be Sukhottara-dvipa (island of great joy). Socotra, must have functioned as one of many intermediary ports between Egypt and India.

Interestingly, it is stated that the Egyptian ruler Ptolemy IV, Philopator, lined a part of his yacht with Indian stones. The presence of Indians in Egypt in the third century BC has been attested by Athenaeus who observes that the processions of Ptolemy II Philadelphus also included women, cows, and hunting dogs from India.

(source: **India and Egypt: Influences and Interactions - edited by Saryu Doshi**).

Historians have long known that Egypt and India traded by land and sea during the Roman era, in part because of texts detailing the commercial exchange of luxury goods, including fabrics, spices and wine. Among their finds at the site near Egypt's border with Sudan: more than 16 pounds (7 kilograms) of black peppercorns, the largest stash of the prized Indian spice ever recovered from a Roman archaeological site.

Ships would sail between Berenike and India during the summer, when monsoon winds were strongest, Wendrich said. From Berenike, camel caravans probably carried the goods 240 miles (386 kilometers) west to the Nile, where they were shipped by boat to the Mediterranean port of Alexandria, she said. From there, they could have moved by ship through the rest of the Roman world. Mediterranean goods, including wine from the Greek island of Kos and fine tableware, moved in the opposite direction. This Indian cotton textile was excavated from a Roman trash dump in the ancient Egyptian town of Berenike. Local Ababda nomads dig in one of the streets in Berenike, which holds an array of artifacts that scientists say reveals an "impressive" sea trade between the Roman Empire and India.

India's cultural links with Africa since Ancient times
by Medha Vishwas Gadre

India had established contacts with Africa long before the discovery of Monsoon winds by hippalus in 43 a.D. There are references to the geography of Africa in Puranas. **Dr. S. Musafar Ali,** notes that Salmalidwipa is the tropical part of Africa bordering, the Indian Ocean in the West. It included Madagascar, the Zang of Arab and Persian geographers, the Harina of Puranas and the Sankhdwipa of some other writers. The Hindus have accurate knowledge of many East African localities. **Col. John Speke**, the discoverer of the source of Nile, by actual discovery of Kushadwipa has confirmed the Puranic Statement regarding the source of Nile.

According to the Arab geographers the term Zangistan from which the term Zanzibar or Zang Coast is derived, covers the whole of the eastern part of the Africa, known to the Muslims. **Zang is obviously equivalent to the Sanskrit word 'Sankh'.** The Arabs probably borrowed the name from Puranas. Sankha-Dwipa signifies the Island of Shells.

Kakasaheb Kalelkar maintains that the very fact that the Puranas mention Miair, the ancient Egypt, establishes that the region must have been known to our forefathers. The ancient Hindus knew of great sweet water Lake Victoria, which they called Amar (Immortal) and the mountain of the Moon Rwenzore near the source of the Nile. Nile was clearly a Sanskrit word and secondly the Hindus were familiar with the source of the river Nile. The region between the central lake and east of Africa (part of Tanzania) is referred to as 'Chandrastan' and river Nile as Krishna in the Puranas. **According to Col. John Speke, the ancient Hindus must have had some kind of communication with both the Northern and Southern ends of Victoria Nyanza.** An Egyptians scholar, **El Manswori**, has pointed out that both in India and Egypt, worship of cow, sun, snake and river was common. Indian gods Shiva, Vishnu, Brahman are linked to the solar of Egypt as the Ishwara to the Orisis, Nandi to Apis and Hanuman to Cynocephalus. Both in India and Egypt the lotus flower too was held sacred.

The goddess Plator was a cow, the god Neferterm, a lotus flower, the goddess Neith was honored in the form of shield on which two crossed arrow were nailed. Mostly, however, the Egyptian deities were represented in animal forms. The god Khnum was Ram. Horus a Falcon, Thoth an Ibis, Sebek a Crocodile, the goddess Nut as Bubastis a cat and goddess Buto a Serpent. The most famous of these sacred animals, was a sacred bull of Memphis, Apis whom the Egyptians conceived to be the servant of god Ptolah, Nandi, Shiva!

Brisk trade led to Indian settlement to Egypt and Egyptian colonies in India. That contact between India and Egypt had become closer the period is confirmed by Athenaeus, who says that Indian women, hunting dogs, cows and spices carried on camels, figured in the procession of Ptolemy. The saloon of Ptolemy yacht was lined with Indian Memphis may indicate that the existence of and Indian settlement and a ptolemic grave stone have been excavated bearing signs of the wheel and trident. The infant deity Horus is represented in Indian postures seated on lotus.

The ancient kingdom of Ethiopia which evolved around the capital Axum, developed a written language, Ge'ez providing 200 years of documentation. The Ethiopians were allowed to control trade in gold, incense, ivory and also products imported from Indian Ocean. The port of Adulis by the time of Periplus had become a meeting point for the maritime trade and served as an outlet for Axum, itself a great collecting center for ivory from various regions. Later Cosmos confirmed that there is a multitude of elephants with large tusks from Ethiopia. These tusks were sent by boat to India, Persia and the Land of Himyariteis. The Indian silk was highly prized in the region than traditional cotton. The Roman Emperor Justinian had tried to persuade the Ethiopians to directly purchase the silk from India and sell it to the Romans in order to break the monopoly of Persians, their enemy.

Lilias Homburger in his paper says, **Historical conclusions from a study of Indo African language**, **the first dynastic Egyptians came from Indus Valley, following the same traders who had preceded them.** The use of Cowrie was brought from Maldive Islands, near the Indian Coast. According to Mrs. Leakey, "Cowrie shells from Maldive Islands were found in an Iron Age settlement near Nakuru in the Kenya Highlands, establishing the

possibility of very old trade contacts between India and Africa." According to another authority "the Indian who traded with Egypt used Cowrie shells for money. This system dated as far as 28th B.C.

The importance of India's trade relations with Axumite Empire was brought to the light by the discovery of 103 Kushana Gold Coins around 230 A.D. contained the legends in Prakrit and Kharoshti script as well as Greek. The Brahmi and Kharoshti script probably had an influence on the Auximite script. Indian merchants with Brahmi and Kharoshti alphabet were moving about, in Ethiopia as well as Egypt from the early pre-Christian centuries with vowel signs, affixed to the Kharoshti and Brahmi consonants could in this way brought to the cognizance of the Ethiopians who must have learnt their system of vowels, indications from India, from which they were also influenced in other respects. They recite the vowels in approximately the same order as is customary in Sanskrit.

Masada and Ancient India

On the 15th of Xanthicus (roughly, April), AD 74, **Eleazer ben Yair,** the son of Judah the Galilean and leader of a Jewish community **besieged by invading Romans in their rock fortress of Masada**, rose to address his people. He had a simple message: There would be no surrender. They would all have to die, kill each other, with the last man killing himself.

Eleazer's listeners demurred. Sensing their fear, the charismatic leader rose again, to deliver a final exhortation. Eleazer's pulsating tour de force was not about Israel, the Jewish faith and the barbarians at the gate.

It was, the historian Josephus was to later record, an evocation of the Hindu rite of passage, of seeing death in the flesh as just another milestone on the soul's immortal journey. ''Are we not,'' Eleazer asked, ''ashamed to have lower notions than the Indians? And by our own cowardice?''

"We, therefore, who have been brought up in a discipline of our own, ought to become an example to others of our readiness to die. Yet, if we do stand in need of foreigners to support us in this matter, **let us regard those Indians** who profess the exercise of philosophy; for these good men do but unwillingly undergo the time of life, and look upon it as a necessary servitude, and **make haste to let their souls loose from their bodies;** nay, when no misfortune presses them to it, nor drives them upon it, **these have such a desire of a life of immortality, that they tell other men beforehand that they are about to depart; and nobody hinders them,** but every one thinks them happy men, and gives them letters to be carried to their familiar friends [that are dead], so firmly and certainly do they believe that souls converse with one another [in the other world]. So when these men have heard all such commands that were to be given them, they deliver their body to the fire; and, in order to their getting their soul a separation from the body in the greatest purity, they die in the midst of hymns of commendations made to them; for their dearest friends conduct them to their death more readily than do any of the rest of mankind conduct their fellow-citizens when they are going a very long journey, who at the same time weep on their own account, but look upon the others as happy persons, as so soon to be made partakers of the immortal order of beings. Are not we, therefore, ashamed to have lower notions than the Indians? and by our own cowardice to lay a base reproach upon the laws of our country, which are so much desired and imitated by all mankind?"

Conclusion

Sir William Jones says:

"Of the cursory observations on the Hindus, which it would require volumes to expand and illustrate, this is the result, that

they had an immemorial affinity with the old Persians, Ethiopians and Egyptians, the Phoenicians, Greeks, and Tuscans, the Scythians, or Goths, and Celts, the Chinese, Japanese, and Peruvians."

(source: **Asiatic Researches** - volume I p. 426).

The extensive maritime activities of India in the remotest time led to her earliest contacts with Egypt, Sumer, Babylon, Assyria, Judea and many other countries. There are strong indications showing that Egypt in remote antiquity derived her civilization from India. Those who went from India must have mixed themselves with the natives of the land and the indigenous culture absorbed, rejected or modified the impulse from India. Eusebius and Philostratus believe that Indians first colonized Abyssinia and gradually descended to Egypt watering her civilization. The earliest Ethiopian tradition says that they came from a land situated near the mouth of the Indus. While there can be little doubt that trade occupied a central position in the relations between India and Egypt through the ages, it must be remembered that commercial transactions brought in their wake intellectual and cultural exchanges.

Did You Know?

The Astronomical Code of the RgVeda

The Rigveda speaks of fire altars symbolizing the Vedic system of knowledge. The **fire altars built of bricks in elaborate designs,** are described in great detail in the **Taittirya Samhita, Satapatha Brahmana** and other early texts.

It is generally accepted that the geometric constructions of the fire altars represent the earliest Indian mathematics and geometry. There exists a scientific basis to the Vedic fire ritual.

Astronomy is central to the understanding of the Indian civilization, as it is to that of other ancient civilizations. That astronomy played a very central role in Vedic cultures is apparent from the innumerable references to naksatras and devas (heavenly bodies) in the earliest texts and the continuing cycle of ceremonies related to the calendar.

The nineteenth century Indologists were influenced by attitudes that were inimical to the spirit of free inquiry. **There were those who wished to fit the Vedic chronology within the straitjacket of biblical chronology** and this colored their interpretations. Most dismissed the idea of an underlying unity because such an idea had not yet arrived in physics, the governing metaphor being that of a mechanistic physics. Unfortunately, these notions soon got frozen and when science itself changed, there was no corresponding revolution in the academic Vedic exegesis.

The Astronomical Code presents a long forgotten code at the basis of the altars and the organization of the Vedic books. This discovery has the greatest implications for the understanding of ancient science and the chronology of the ancient world. Author Subhash Kak presents an astronomical key to unlock the secrets of the Rigveda. He shows why the Rigveda should be prior to 2000 BC and is perhaps much more older and how the earliest astronomy and mathematics arose in India.

He has discovered a long-lost astronomy of the Vedic texts which allows us to establish a chronology of that period with reasonable certainty. This chronology has the greatest significance in our understanding of ancient India and its civilization. It is generally accepted that the references to the Vedic gods Mitra, Varuna, Indra and the Nasatyas in the Hittite-Mitanni treaty of the second millennium B.C.E. refers to the Indo-Aryan rather than the Iranians. It appears that the Indic element was intrusive into South-western Asia starting about the beginning of the second millennium. If this intrusion was triggered by the collapse of the Harappan economy caused by the desiccation of the Saraswati river around 1900 B.C.E. then one can see how this intrusion was accompanied by a transmission of the astronomy of the fire altars and the planetary period values of the Rgveda. One might speculate that the Vedic astronomy was taken over by the Babylonians and it was built upon further during the flowering that took place there starting around 700 B.C. E.

The recognition of the central role of astronomy in the Vedic world view has great significance for the interpretation of the Vedic literature. In particular, many Rgvedic hymns turn out to have allusions to astronomical phenomena. Many hymns, considered paradoxical or unclear, can be understood within an astronomical framework. The astronomical references in the Vedic literature cannot be brushed aside any longer. These references can be helpful in constructing a chronology of the Vedic era.

(source: **Astronomical Code of the Rig Veda - By Subhash Kak** and **Astronomy and Its Role in Vedic Culture - By Subhash Kak** in **The Dawn of Indian Civilization** up to 600 BC - edited by **G. C Pande** p. 615 - 620).

Indian civilization is distinctive for its antiquity and continuity. Apart from its own vitality, the continuity of Indian civilization is largely due to its ability to adapt to alien ideas, harmonize contradictions and mould new thought patterns. Her constant contacts with the outside world also gave India the opportunity to contribute to other civilizations. Whilst other ancient civilizations have long ceased to exist, Indian civilization has continued to grow despite revolutionary changes. The ancient cultures of Egypt, Mesopotamia and Persia have not survived. But in India today, Hindus seek inspiration from concepts similar to those originally advanced by their ancestors.

Jawaharlal Nehru says in his book **The Discovery of India** " Till recently many European thinkers imagined that everything that was worthwhile had its origins in Greece or Rome. Sir Henry Maine has said somewhere that except the blind forces of nature, nothing moves in this world which is not originally Greek."

However, Indian contacts with the Western world date back to prehistoric times. Trade relations, preceded by the migration of peoples, inevitably developed into cultural relations. This view is not only amply supported by both philological and archaeological evidence, but by a vast body of corroborative literary evidence as well: Vedic literature and the Jatakas, Jewish chronicles, and the accounts of Greek historians all suggest contact between India and the West. Taxila was a great center of commerce and learning. "Crowds of eager scholars flowed to it for instruction in the three Vedas and in the eighteen branches of knowledge." Tradition affirms that the great epic, the Mahabharata, was first recited in the city." (An Advance History of India, R. C. Majumdar, H. C. Raychanduri p.64) Buddha is reputed to have studied in Taxila. Pythagorean and Platonic philosophy owe their origin to Indian thought and spirituality.

Alexander's raid, which was so significant to Western historians, seemed to have entirely escaped the attention of Sanskrit authors. From the Indian point of view, there was nothing to distinguish his raid in Indian history. Jawaharlal Nehru says, " From a military point of view his invasion, was a minor affair. It was more of a raid across the border, and not a very successful raid at that."

Indian Thought and the West

Dr. S. Radhakrishnan, has said,

"The Europeans are apt to imagine that before the great Greek thinkers, Socrates, Plato, and Aristotle, there was a crude confusion of thought, a sort of chaos without form and void. Such a view becomes almost a provincialism when we realize that systems of thought which influenced countless millions of human beings had been elaborated by people who never heard the names of the Greek thinkers."

(source: **Eastern Religions and Western Thought - By Dr. Sarvepalli Radhakrishnan** p. 350).

There has been too much inclination among Western writers to idealize the Greeks and their civilization, and they have tended to discover too much of the contemporary world in the Greek past. In fact almost everything was traced to ancient Greece. In all that concerned intellectual activity and even faith, modern civilization was considered to be an overgrown colony of Hellas. The obvious Greek failings, their shortcomings and the unhealthy features of their civilization, was rationalized and romanticized.

In the words of **Sir Charles Eliot**, who affirms that "**it is clearly absurd for Europe as a whole to pose as**

a qualified instructor in humanity and civilization. He writes: "If Europeans have any superiority over Asiatics it lies in practical science, finance and administration, not in philosophy, thought or art. Their gifts are authority and power to organize; in other respects their superiority is imaginary."

(source: **Hinduism and Buddhism - By Sir Charles Elliot** Curzon Press ISBN 0700706798 volume I (1920), pp. xcvi and xcviii)

Modern research, however, has marred this comforting image and is helping to put Greek culture into its proper historical perspective showing that, like any other culture, it inherited something from preceding civilizations, profited from the progress of its neighboring cultures (like India and Persia) and, in turn, bequeathed much to later generations.

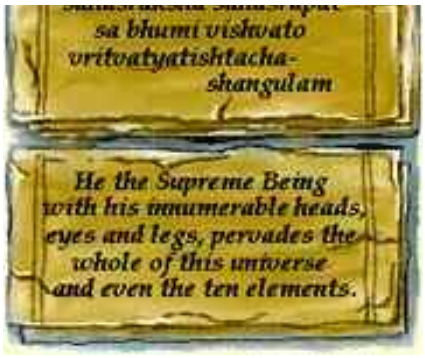
We are not completely in the dark on the question of Indian influence on Greece. Speaking of ascetic practices in the West, **Professor Sir Flinders Patrie** (1853-1942) British archaeologist and Egyptologist, author of **Egypt and Israe**l (1911) observes:

" The presence of a large body of Indian troops in the Persian army in Greece in 480 B.C. shows how far west the Indian connections were carried; and the discovery of modeled heads of **Indians at Memphis,** of about the fifth century B.C. shows that Indians were living there for trade. Hence there is no difficulty in regarding India as the source of the entirely new ideal of asceticism in the West."

(source: **Eastern Religions and Western Thought - By Dr. Sarvepalli Radhakrishnan** p. 150).

Gods of heaven

It is significant to note that although the Indians and Greeks (Yavanas) had come from the same Indo-European stock, they met as strangers in the sixth century B.C. Persian Empire. Soon, however, the cousins became associates in a a common cultural enterprise. Similarities in language, associated by similarities in religious beliefs, indicate that these two peoples must have either been in close contact at some early period or have had a common origin, even though neither had any recollection of those times.



For example, the gods of heaven (Varuna - Ouranos; Dyaus - Zeus) and the dawn (Ushas - Aurora) were common to the Greeks and Indians. The most prominent characteristics of the gods of both races was their power of regulating the order of nature and banishing evil. The Olympian religion of the Greeks and Vedic beliefs had a common background. The Greek concept of *logos* was very close to the vedic *Vac,* which corresponds to the Latin Vox.

Both Greeks and Romans habitually tried to understand the religions of India by trying to fit them as far as possible into Greco-Roman categories. Deities in particular were spoken of, not in Indian but in Greek terms and called by Greek names. Thus Shiva was identified as 'Dionysos', and Hare Krishna as ' Hercules'.

In a passage of the **Rig Veda**, Vac is praised as a divine being. Vac is omnipotent, moves amongst divine beings, and carries the great gods, Mitra, Varuna, Indra and Agni, within itself. The doctrine of Vac

teaches that "all gods live from Vac, also all demi-gods, animals and people. Vac is the eternal being, it is the first-born of the eternal law, mother of the Vedas and navel of immortality." Vedic Aryans attached such great importance to the spoken word that one who could not correctly pronounce Sanskrit was called *barbar* (meaning stammering).

The Greek *barbaroi* had the same meaning. The brisk intercourse between India and Greece is attested by the fact that a special rule was inserted in the great grammar of Panini to distinguish three feminine forms of yavana: a Greek woman was yavani, the curtain was yavanika, and the Greek script was yavanani. There is also a striking similarity between the social life described in the Homeric poems- the Illiad and Odyssey- and that found in the Vedas. Homeric gods, like the heroes who believed in them, often rode in the horse driven chariots. Horse-chariotry was a feature of the life of the Indo-European people. The Homeric idea of a language of the gods is also found in Sanskrit, Greek, Old Norse, and Hittite literatures. Some scholars, like **Fiske,** have even asserted that elements of the Trojan war story are to be found in the war between the bright deities, and the night demons as described in the Rig Veda. It is clear from Homer that even they used articles of Indian merchandise which were known by names of Indian origin, such as Kassiteros (Sanskrit, Kastira), elephas (Sanskrit, ibha), and ivory.

Alain Danielou (1907-1994), son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India, remarks that: "the Greeks were always speaking of India as the sacred territory of Dionysus and historians working under Alexander the Greek clearly mentions chronicles of the Puranas as sources of the myth of Dionysus." He quotes **Clement of Alexandria** who admitted that **"we the Greeks have stolen from the Barbarians their philosophy."**

Alexander's Insignificant Raid

Alexander is supposed to have invaded the Punjab in 326 B.C. Every schoolboy is taught and is expected to know, that he invaded India's Northwest. **Strangely, this event, so significant to Western historians, seemed to have entirely escaped the attention of Sanskrit authors.** Nowhere did **Sir William Jones,** (1746-1794),who came to India as a judge of the Supreme Court at Calcutta and pioneered Sanskrit studies, find any mention of Greeks or any sign of Greek influence.

(source: **India Discovered** - **By John Keay** p. 33).

British historian **Vincent A. Smith**, conservatively appraised the impact of Alexander's invasion as follows:

"The Greek influence never penetrated deeply (into the Indic civilization)...On the other hand, the West learned something from India in consequence of the communications opened up by Alexander's adventure. Our knowledge of the facts is so scanty and fragmentary that it is difficult to make any positive assertions with confidence, but it is safe to say that the influence of Buddhist ideas on Christian doctrine may be traced in the Gnostic forms of Christianity, if not elsewhere. The notions of Indian philosophy and religion which filtered into the Roman empire flowed through channels opened by Alexander."

(source: **In Search of The Cradle of Civilization: : New Light on Ancient India - By Georg Feuerstein, Subhash Kak & David Frawley** p. 252-253).

Even more than the Vedas and the Epics, Sindh figures very prominently in, of all places, the annals of Sikander that is Alexander. **British historians used to talk of Alexander as ``the world conqueror'' who ``came and saw and conquered'' every land he had visited.** He is still advertised in Indian text-books as the victor in his war with India's Porus (Puru).

However, the facts as recorded by Alexander's own Greek historians tell a very different tale. And **Marshal Zhukov**, the **famous Russian commander in World War II,** said at the Indian Military Academy, Dehra Dun, a few years back, that **India had defeated Alexander.**

Alexander fared badly enough with Porus in the Punjab. Indeed, Porus put him on the spot when he told him: ``To what purpose should we make war upon one another. if the design of your coming to

these parts be not to rob us of our water or our necessary food, which are the only things that wise men are indispensably obliged to fight for? As for other riches and possessions, as they are accounted in the eyes of the world, if I am better provided of them than you, I am ready to let you share with me; but if fortune has been more liberal to you than to me, I have no objection to be obliged to you." Alexander had no reply to the questions posed by Porus. Instead, with the obstinacy of a bully, he said: ``I shall contend and do battle with you so far that, howsoever obliging you are, you shall not have the better of me." But Porus did have the better of Alexander. In the fighting that ensued, the Greeks were so terrified of Indian prowess that they refused to proceed farther, in spite of Alexander's angry urgings and piteous lamentations. Writes Plutarch, the great Greek historian: ``This last combat with Porus took off the edge of the Macedonians' courage and stayed their further progress in India.... Alexander not only offered Porus to govern his own kingdom as satrap under himself but gave him also the additional territory of various independent tribes whom he had subdued." Porus emerged from his war with Alexander with his territory doubled and his gold stock augmented. So much for Alexander's ``victory" over Porus. However, what was to befall him in Sindh, was even worse. In his wars in Iran. Afghanistan, and north-west India, Alexander had made so many enemies that he did not dare return home by the same route he had come. He had, therefore, decided to travel via Sindh. But in Multan the Mallas gave him hell.

(source: **Alexander's Waterloo in Sindh** - By **K R Malkhani**).

According to Indian historian **Dr. R. C. Majumdar**, " The invasion of Alexander has been recorded in minute details by the greek historians who naturally felt elated at the progress of their hero over unknown lands and seas. **From the Indian point of view, there was nothing to distinguish his raid in Indian history.** It can hardly be called a great military success as the only military achievement to his credit were the conquest of petty tribes and States by installments. He never approached even within a measurable distance of what may be called the citadel of Indian military strength, and the exertions he had to make against Poros, the ruler of a small district between the Jhelum and the Chenab, do not certainly favor the hypothesis that he would have found it an easy task to subdue the mighty Nanda empire."

According to **Paul Masson-Oursel** and others, **"The importance of this Indian campaign of Alexander has been exaggerated. It had no decisive influence on the destinies of India, for its results were short-lived.**

H. G. Rawlinson, refers to the invasion, " had no immediate effect, and passed off like countless other invasions, leaving the country almost undisturbed."

Vincent A. Smith " India remained unchanged. She was never Hellenised. She continued to live her life of splendid isolation, and forgot the passing of the Macedonian storm. No Indian author, Hindu, Buddhist, or Jain, makes even the faintest illusion to Alexander or his deeds."

(Source: **Ancient India - By V. D. Mahajan** 1994. published by S. Chand & Company New Delhi. p. 265-268)

Jawaharlal Nehru in his book Discovery of India says, " From a military point of view his invasion, was a minor affair. It was more of a raid across the border, and not a very successful raid at that." He met with such stout resistance from a border chieftain that the contemplated advance into the heart of India had to be reconsidered. If a small ruler on the frontier could fight thus, what of the larger and more powerful kingdom further south? Probably this was the main reason why his army refused to march further and insisted on returning."

(source **Discovery of India** - **By Jawaharlal Nehru** p. 114-115)

Another myth is propagated by the Western historians that Alexander was noble and kind king, he had great respects for brave and courageous men, and so on. The truth is other-wise. **He was neither a noble man nor did he have a heart of gold. He had meted out very cruel and harsh treatment to his earlier enemies. Basus of Bactria fought tooth and nail with Alexander to defend the freedom of his motherland. When he was brought before Alexander as a prisoner,**

Alexander ordered his servants to whip him and then cut off his nose and ears. He then killed him. Many Persian generals were killed by him.

The murder of Kalasthenese, nephew of Aristotle, was committed by Alexander because he criticised Alexander for foolishly imitating the Persian emperors. Alexander also murdered his friend Clytus in anger. His father's trusted lieutenant Parmenian was also murdered by Alexander. The Indian soldiers who were returning from Masanga were most atrociously murdered by Alexander in the dead of night. These exploits do not prove Alexander's kindness and greatness, but only an ordinary emperor driven by the zeal of expanding his empire.

(Source: **Alexander, the Ordinary - By Prof. Dinesh Agarwal** **http://www.itihaas.com/ancient/1.html**)

The religious scripture of ancient Iranians was the Avesta. The Avesta available today is only a fraction of what existed thousands of years ago. **When Alexander captured Iran (Persia) in 326 B. C. after a bloody war, he destroyed each copy of the Avesta available.** After return of political stability Persian priests tried to salvage the Avesta and much had to be written from memory. Another cruel legacy of Alexander.

(source: **Vedic Physics - By Raja Ram Mohan Roy** p. 8)

Marshal Zhukov, the famous Russian commander in World War II, said at the Indian Military Academy, Dehra Dun, a few years back, that India had defeated Alexander

Indian Philosophy

By contrast, philosophical thought in India in the sixth century B.C. had become quite mature. It had reached a stage which could have been arrived at only after long and arduous philosophical quest. Jainism and Buddhism, the latter enormously influential in Indian and neighboring cultures, had emerged by this time. But even before their advent, the philosophical reflections of the early **Upanishads** (900-600 B.C.) had set forth the fundamental concepts of Hindu thought which have continued to dominate the Indian mind.

It is perhaps necessary to point out that there has often been a wide divergence between Indian and Western interpretations of Indian thought. Dr. Ananda K. Coomaraswamy once even declared that a true account to Hinduism may be given in a categorical denial of most of the interpretation that have been made by Westerners or Western-trained Indians.

The tradition of Indian philosophic thought is as complex as it is long. The complexities of Indian philosophy have arisen through centuries of deep reflection on the many aspects of human experience, and, in the search for some reality behind the external world, various methods have been restored to ranging from experimental to the purely speculative. It is the oldest philosophical tradition in the world is to be traced in the ancient Vedas. Although the religious and philosophical spirit of India emerges distinctly in the Rig Veda, the Upanishads are its most brilliant exposition, for the Vedic civilization was naturalistic and utilitarian, although it did not exclude the cosmological and religious speculation.

Older than Plato or Confucius, the Upanishads are the most ancient philosophical works and contain the mature wisdom of India's intellectual and spiritual attainment. They have inspired not only the orthodox system of Indian thought but also the so-called heterodox schools such as Buddhism. In profundity of thought and beauty of style, they have rarely been surpassed not only in Indian thought but in the Western and Chinese philosophical traditions as well.

The Upanishads have greatly influenced Indian culture throughout history and have also found enthusiastic admirers abroad. **Schopenhauer** was almost lyrical about them. **Max Muller** said: " The Upanishads are the .... sources of .....the Vedanta philosophy, a system in which human speculation seems to me to have

reached its very acme." The Upanishads are saturated with the spirit of inquiry, intellectual analysis, and a passion for seeking the truth.

India, is the home of philosophy. Certainly India is a country where philosophy has always been very popular and influential. An American scholar has stated that teachers of philosophy in India were as numerous as merchants in Babylonia. The sages have always been heroes of the Indians. If philosophy did emerge in India earlier than in Greece, and if the two countries were in close contact soon after this emergence, it is not unlikely that Indian thought had some influence on Greek philosophy.

Indian Inspiration of Pythagoras

The similarity between the theory of Thales, that water is the material cause of all things, and the Vedic idea of primeval waters as the origin of the universe, was first pointed out by **Richard Garbe**. The resemblances, too, between the teachings of Pythagoras (ca. 582-506 B.C.) and Indian philosophy are striking. It was **Sir William Jones**, the founder of comparative philology, who first pointed out the pointed out the similarities between Indian and Pythagorean beliefs. Later, other scholars such as **Colebrooke, Garbe,** and **Winternitz** also testified to the Indian inspiration of Pythagoras.

Professor H. G. Rawlinson writes: " It is more likely that Pythagoras was influenced by India than by Egypt. Almost all the theories, religions, philosophical and mathematical taught by the Pythagoreans, were known in India in the sixth century B.C., and the Pythagoreans, like the Jains and the Buddhists, refrained from the destruction of life and eating meat and regarded certain vegetables such as beans as taboo" "It seems that the so-called Pythagorean theorem of the quadrature of the hypotenuse was already known to the Indians in the older Vedic times, and thus before Pythagoras (ibid). (**Legacy of India** 1937, p. 5).

Professor Maurice Winternitz is of the same opinion: "As regards Pythagoras, it seems to me very probable that he became acquainted with Indian doctrines in Persia." (Visvabharati Quarterly Feb. 1937, p. 8).

It is also the view of **Sir William Jones** (Works, iii. 236), **Colebrooke** (Miscellaneous Essays, i. 436 ff.). **Schroeder** (**Pythagoras und die Inder**), **Garbe** (**Philosophy of Ancient India**, pp. 39 ff), **Hopkins** (**Religions of India**, p. 559 and 560) and **Macdonell** (**Sanskrit Literature**, p. 422).

(source: **Eastern Religions and Western Thought - By Dr. Sarvepalli Radhakrishnan** p. 143).

Ludwig von Schröder German philosopher, author of the book **Pythagoras und die Inder (Pythagoras and the Indians),** published in 1884, he argued that Pythagoras had been influenced by the Samkhya school of thought, the most prominent branch of the Indic philosophy next to Vedanta.

(source: **In Search of The Cradle of Civilization: : New Light on Ancient India - By Georg Feuerstein, Subhash Kak & David Frawley** p. 252).

" Nearly all the philosophical and mathematical doctrines attributed to Pythagoras are derived from India."

Orphic religion, Pythagorean philosophy, Neo-Platonism, Stoicism and several others not so well-known have been influenced by the Samkhya-Vedanta thought of India. In pre-Christian centuries Persia served as a middle ground between India, and Greece. It is known that Indian archers with their long bows, one

end of which was planted in the ground, fought in Darius's war against Greece. Brahmins and Buddhists were in Greece before Socrates. Later Alexandria became a great center of commerce and learning, where Buddhists and Brahmins congregated and where Neo-Platonism was born. **The great astronomical observatory at Ujjayini (now Ujjain) in central India was linked to Alexandria in Egypt.** The first Greek book about India was perhaps written by **Scylax,** a Greek sea-captain whom **Darius** commissioned to explore the course of the Indus about 510 B.C. (Herodotus, iv. 44).

Vitsaxis G. Vassilis, in his book **Plato and the Upanishads**, argues that exponents of literature, science, philosophy and religion traveled regularly between the two countries. He points to accounts by Eusebius and Aristoxenes, of the visits of Indian sages to Athens and their meetings with Greek philosophers. And reference to the visit of Indians to Athens is found in the fragment of Aristotle preserved in the writings of Diogenes Laertius who was also one of Pythagoras' biographers.

The essence of Socratic and Platonic philosophy has remained unintelligible in the West because of lack of insight into Indian thought. Plato's view of Reality is the same as that of the Upanishads. His method of attaining knowledge of the Good is that of Vedanta. In the Phaedo, Plato describes silent **meditation** as withdrawal of the senses from their objects and as stilling the processes of mind.

The Greek theoria of the Pythagoreans, of Socrates and Plato, from which the world 'theater' comes is the vision or darshana of the Upanishads. Plato mentions that philosophic wisdom can only be communicated directly from a teacher to disciple, like lighting one lamp by another. The Timaeus indicates after the manner of the Upanishads that the receiver of philosophic truth must be a fit person - fit by character and not by reason of intellect alone. Platonic thought is so un-Greek in the sense in which Greek thought is generally taken, namely, purely rationalism, that some philosopher, such as **Nietzsche**, have called it " un-Hellenic."

According to **Voltaire**, **"The Greeks, before the time of Pythagoras, traveled into India for instruction. The signs of the seven planets and of the seven metals are still almost all over the earth, such as the Indians invented: the Arabians were obliged to adopt their cyphers."**

(source: **The Philosophy of History**, p. 527).

Pythagoras was particularly influenced by Indian philosophy. **Professor R. G. Rawlinson** remarks that, **"almost all the theories, religious, philosophical, and mathematical, taught by the Pythagorians were known in India in the sixth century B.C."**

Even Aristotle, the great rationalist and empiricist, upheld so strongly by teachers of philosophy in the West, is not fully understood. Aristotle speaks of intellect in the same sense as do the Upanishads- intellect which is not thinking logically but which grasps truth immediately. The Indian term for intellect is buddhi, the purest understanding.

The thought of Plotinus is Hindu. **Eusebius** in his biography of Socrates, relates an incident recorded in the fourth century B.C. in which Socrates met a Brahmin in the agora or the market place. The Brahmin asked Socrates what he was doing. Socrates replied that he was questioning people in order to understand man. At this, the Brahmin laughed and asked how one could understand man without knowing God.

The Socrates conception of freedom and virtue is that of the Upanishads. Socrates defined virtue as knowledge. Virtue is character, the realization of the essence of man. Know thyself, which is exactly the same as the Upanisadic command, Atmanam biddhi. In the Gita, knowledge or wisdom is defined as character. Virtue, comes from the Vedic word vira (hero, man).

Greek philosophy began in Asia Minor and Greek writers refer to the travels of Pythagoras, and others, to the East to gain wisdom. According to his biographer **Iamblichus,**

"Pythagoras traveled widely, studying the esoteric teachings of the Egyptians, Assyrians, and even Brahmins." According to Gomprez, "It is not too much to assume that the curious Greek who was a contemporary of Buddha, and it may be of Zoraster, too, would have acquired a more or less exact knowledge of the East, in the age of intellectual fermentation, through the medium of Persia."

Pythagoras's theorem discovered in India in 800 BC according to renowned historian **Dick Teresi.** author and coauthor of several books about science and technology, including **The God Particle**. He is cofounder of **Omni** magazine and has written for Discover, The New York Times Magazine, and The Atlantic Monthly.

"Two thousand years before Pythagoras, **philosophers** in northern **India had understood that gravitation held the solar system together, and that therefore the sun, the most massive object, had to be at its center."**

"Our Western mathematical heritage and pride are critically dependent on the triumphs of ancient Greece. These accomplishments have been so greatly exaggerated that it often becomes difficult to sort out how much of modern math is derived from Greece and how much from...the Indians and so on.

"Our modern numerals 0 through 9 were developed in India. Mathematics existed long before the Greeks constructed their first right angle. On the other hand **George Cheverghese Joseph** (author of **The Crest of the Peacock: Non-European Roots of Mathematics**) points out that the **early Indian mathematics contained in the Sulbasutras (The Rules of the Cord) contain their own version of the Pythagorean theorem as well as procedure for obtaining the square root of 2 correct to five decimal places. The Sulbasutras reveal a rich geometric knowledge that preceded the Greeks."**

(source: **Lost Discoveries: The Ancient Roots of Modern Science - By Dick Teresi** p. 32). For more on Dick Teresi refer to chapter on **Quotes301_320**).

Vivekananda said that Samhkya was the basis of the philosophy of the whole world. " There is no philosophy in the world that was not indebted to Kapila. (Kapila is the founder of the Sankhya philosophy). Krishna says in the Gita that, among the perfected sages, he is Kapila. Pythagoras came to India and studied his philosophy and that was the beginning of the philosophy of the Greeks. Later it formed the Alexandrian school, and still later the Gnostic."

Panini, who speaks of the Greek script as **yavanani lipi.** The Prakrit equivalent of yavana, viz. yona, is used in the inscriptions of Ashoka to describe the Hellenic princes of Egypt, Cyrene, Macedonia, Epirus, and Syria.

"It is believed that the Dravidians from India went to Egypt and laid the foundation of its civilization there. the Egyptians themselves had the tradition that they originally came from the South, from a land called **Punt**, which an historian of the West, **Dr. H.R. Hall,** thought referred to some part of India.

The Indus Valley civilization is, according to Sir John Marshall who was in charge of the excavations, the oldest of all civilizations unearthed (c. 4000 B.C.) It is older than the Sumerian and it is believed by many that the latter was a branch of the former.

Some people called the Brahui who dwell in Baluchistan which is at present a part of Pakistan, still speak the Dravidian language. It is likely that their ancestors were the people who sailed across the narrow waters at the entrance of the Persian Gulf to Oman and then to Aden along the southern littoral of Arabia, crossing over to Africa at the narrow strait of Bab-el-Mandeb, near Somaliland and proceeding north along the Nile Valley."

(Source: **The Bhagvad Gita: A Scripture for the Future** - Translation and Commentary by Sachindra K. Majumdar p. 28).

"We hear of Arabian trade with Egypt as far back as 2743 B.C. probably as ancient as was the trade with India."

(source: **The Story of civilizations - Our Oriental Heritage** ISBN: 1567310125 1937 vol. 4 p. 157).

Klaus K. Klostermaier, in his book **A Survey of Hinduism** pg 18 says:

"For several centuries a lively commerce developed between the ancient Mediterranean world and India, particularly the ports on the Western coast. The most famous of these ports was Sopara, not far from modern Bombay, which was recently renamed Mumbai. **Present day Cranganore in Kerala, identified with the ancient Muziris, claims to have had trade contacts with Ancient Egypt under Queen Hatsheput, who sent five ships to obtain spices, as well as with ancient Israel during King Soloman's reign.** Apparently, the contact did not break off after Egypt was conquered by Greece and later by Rome.

According to **I .K. K. Menon**:

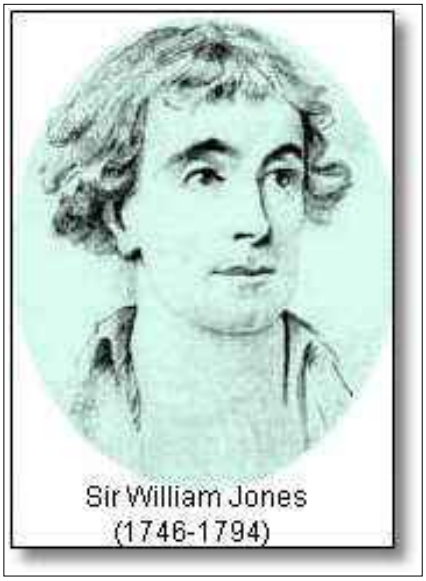
"there is evidence of a temple of Augustus near Muziris (Cranganore, Kerala) and a force of 1200 Roman soldiers stationed in the town for the protection of Roman commerce." Large hoards of Roman traders, who must have rounded the southern tip of India to reach that place."

(Note: The ancient Alexandrian port of Muziris, now Cranganore, Kerala is where the Romans built a temple to Augustus in the first century.)

Thus, both upon archaeological and historical grounds, India is the mother of civilizations. Material skill and spiritual ideas spread from the Indus valley to Nineveh and Babylon, to the entire Middle East, to the Nile Valley and thence to Greece and Rome.

Other Indic Influences:

American mathematician, **A. Seindenberg** has demonstrated that the **Sulbhasutras,** the ancient Vedic mathematics, have inspired all the mathematic sciences of the antique world from Babylonia to Egypt and Greece". "Arithmetic equations from the Sulbhasutras were used in the observation of the triangle by the Babylonians and the theory of contraries and of inexactitude in arithmetic methods, discovered by Hindus, inspired Pythagorean mathematics." writes Abraham Seidenberg.



In astronomy, too, Indus were precursors: **Jean-Claude Bailly** (1736–93) 18th century French astronomer and politician. His works on astronomy and on the history of science (notably the *Essai sur la théorie des satellites de Jupiter*) were distinguished both for scientific interest and literary elegance and earned him membership in the French Academy, the Academy of Sciences, and the Academy of Inscriptions. **Bailly** had already noticed that:

"the Hindu astronomic systems were much more ancient than those of the Greeks or even the Egyptians the movement of stars which was calculated by Hindus 4,500 years ago, does not differ even by a minute from the tables which we are using today." And he concludes: "The Hindu systems of astronomy are much more ancient than those of the Egyptians - even the Jews derived from the Hindus their knowledge." **There is also no doubt that the Greeks heavily borrowed from the "Indus."**

Alain Danileou (1907-1994), son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India, including **Virtue, Success, Pleasure, & Liberation : The Four Aims of Life in the Tradition of Ancient India.** He was perhaps the first European to boldly proclaim his Hinduness. He settled in India for fifteen years in the study of Sanskrit. He had a wide effect upon Europe's understanding of Hinduism. He has remarks that:

"the Greeks were always speaking of India as the sacred territory of Dionysus and historians working under Alexander the Great clearly mention chronicles of the Puranas as sources of the myth of Dionysus." Alain Danielou quotes **Clement of Alexandria** who admitted that **"we the Greeks have stolen from the Barbarians their philosophy."**

We know that the Greeks had translated the Bhagvad-gita and French philosopher and historian **Roger-Pol Droit** writes in his classic **"L'oubli de l'Inde (India forgotten)** "that there is absolutely not a shadow of a doubt that Greeks knew all about Indian philosophy."

William Jones (1746-1794) came to India as a judge of the Supreme Court at Calcutta. He pioneered Sanskrit studies. A linguist of British India, his admiration for Indian thought and culture was almost limitless. He noted that **"the analogies between Greek Pythagorean philosophy and the Sankhya school, are very obvious."**

(source: **Arise O' India - By Francois Gautier** ISBN 81-241-0518-9 Har-Anand Publications 2000. p. 21-22).

Jean-Paul Droit, French philosopher, and Le Monde journalist, recently wrote in his book "**The Forgetfulness of India,** that:

"The Greeks loved so much Indian philosophy that **Demetrios Galianos** had even translated the Bhagavad-Gita"

The Roman Empire - A Gangster State?

According to **Peter Beckman**, author of '**A History of Pi**: " While Alexandria had become the world capital of thinkers, Rome was becoming the capital of thugs. Rome was not the first state of organized gangsterdom nor was it the last; but it was the only one that managed to bamboozle posterity into an almost universal admiration. Few rational men admire the Huns, the Nazis or the Soviets; **but for centuries, schoolboys have been expected to read Julius Caesar's militaristic drivel.** They have been led to believe that the Romans had attained an advanced level in the sciences, the arts, law, architecture, engineering and everything else.

It is my opinion that the alleged Roman achievements are largely a myth; and I feel it is time for this myth to be debunked a little. **What the Romans excelled in was bullying, bludgeoning, butchering and blood bath.** They enslaved peoples whose cultural level was far above their own. They not only ruthlessly vandalized their countries, but they also looted them, stealing their art treasures, abducting their scientists and copying their technical know-how, which the Romans' barren society was rarely able to improve on.

Then there is Roman engineering: The Roman roads, acquaducts, the Coliseums. Warfare, alas, has always been beneficial to engineering. In a healthy society, engineering design gets smarter and smarter; in gangster states, it gets bigger and bigger.

The architecture of the Coliseums and other places of Roman entertainment are difficult to judge without recalling what purpose they served. It was here that gladiators fought to the death; that prisoners of war, convicts and Christians were devoured by a many as 5,000 wild beasts at a time; and that victims were crucified or burned alive for the entertainment of Roman civilization. **When the Roman screamed for ever more blood, artificial lakes were dug and naval battles as many as 19,000 gladiators were staged until the water turned red with blood. The only Roman emperors who did not throw Christians to the lions were the Christian emperors. They (Christians) threw the pagans to the lions with the same gusto and for the same crime - having a different religion.**

Romans were not primitive savages, but were sophisticated killers. The Roman contribution to sciences was mostly limited to butchering antiquity's greatest mathematicians, burning the Library of Alexandria. and it demonstrates an abysmal ignorance of sciences. **Pliny tells us that in India there is a species of men without mouths who subsist by smelling flowers.**

Yet most historians extol the achievements of Rome. "it accustomed the Western races to the idea of a world-state, and by pax romana....."

(source: **A History of Pi - by Peter Beckan** St. Martin's Press; ; 19th edition (August 1976) 0312381859 p. 55-59).

Did You Know

Iron with Mettle

Ancient India developed advanced metallurgical technology that made it possible to cast a remarkable iron pillar, dating to about 300 B.C.E. Still standing today in Delhi. This solid shaft of wrought iron is about 24 feet high and 16 inches in diameter. It has been exposed to weather and pollution since its erection, yet shows minimal corrosion, a technology lost to current ironmakers. Even with today's advances, only four foundries in the world could make this piece and none were able to keep it rust-free.

The earliest known metal expert (some 2,200 years ago) **Rishi Pantanjali**. His book **Loha Shastra,** "metal manual" describes in detail metal preparation.

The pillar is a solid shaft of iron sixteen inches in diameter and 23 feet high. What is most astounding about it is that it has never rusted even though it has been exposed to wind and rain for centuries! The pillar defies explanation, not only for not having rusted, but because it is apparently made of pure iron, which can only be produced today in tiny quantities by electrolysis! The technique used to cast such a gigantic, solid pillar is also a mystery, as it would be difficult to construct another of this size even today. The pillar stands as mute testimony to the highly advanced scientific knowledge that was known in antiquity, and not duplicated until recent times. Yet still, there is no satisfactory explanation as to why the pillar has never rusted!

(source: **Technology of the Gods: The Incredible Sciences of the Ancients - By David Hatcher Childress** p. 80)

The iron pillar near Qutub Minar at New Delhi is in the news, thanks to the research by Prof. R. Balasubramaniam of IIT, Kanpur and his team of metallurgists. **The pillar is said to be 1,600 years old.** A protective layer of `misawite' — a compound made up of iron, oxygen and hydrogen on the steel pillar, which is said to contain phosphorus -
is claimed as the reason for the non-corrosive existence.

Baffling Links to Ancient India: History is full of misnomers; one such term is the New World, as applied to the Americas. The landing of Columbus in 1492 undoubtedly created a new life on the continents, but it neither created nor discovered a new world. Many centuries ago Asian migrants had come to the western shore in substantial numbers.
What if the popular idea that Tibetans and American Indians have much in common in terms of their spiritual culture is largely a result of another historical scenario?

What if Hindus and Hopis, Advantins and Aztecs, Tibetan Monks and Mayans were part of one world culture - a spiritual one?

Baron Alexander von Humbolt (1769-1859), an eminent European scholar and anthropologist, was one of the first to postulate the Asiatic origin of the Indian civilizations of the Americas.

Dr. Robert Heine Geldern anthropologist, has written that: "Those who believe the ancient peoples of Asia were incapable of crossing the ocean have completely lost sight of what the literary sources tell us concerning their ships and their navigation. Many of the peoples of Southeastern Asia had adopted Indian Hindu-Buddhist civilizations. The influences of the Hindu-Buddhist culture of southeast Asia in Mexico and particularly, among the Maya, are incredibly strong, and they have already disturbed some Americanists who don't like to see them but cannot deny them." "Ships that could cross the Indian Ocean were able to cross the Pacific too. Moreover, these ships were really larger and probably more sea-worthy than those of Columbus and Magellan."

Swami B. V. Tripurari asks, "What mysterious psychological law would have caused Asians, and Americans to both use the umbrella as a sign of royalty, to invent the same games, imagine similar cosmologies, and attribute the same colors to the different directions?"

Introduction

World's leading anthropologists, **Robert Heine Geldern and Gordon F. Ekholm** have said:

"Ships of size that carried Fahien from India to China (through stormy China water) were certainly capable of proceeding all the way to Mexico and Peru by crossing the Pacific. One thousand years before the birth of Columbus Indian ships were far superior to any made in Europe up to the 18th century."

(source: **The Civilizations of Ancient America:** The Selected Papers of the XXIXth International Congress of Americanists - edited Sol Tax 1951).

Sir William Jones (1746-1794) judge of the Supreme Court at Calcutta and was one who pioneered Sanskrit studies. His admiration for Indian thought and culture was almost limitless. He has remarked:

"Rama is represented as a descendant from the sun, as the husband of Sita, and the son of a princess named Causelya. It is very remarkable that Peruvians, whose Incas boasted of the same descent, styled their greatest festival Rama-Sitva; whence we may take it that South America was peopled by the same race who imported into the farthest of parts of Asia the rites and the fabulous history of Rama."

(source: **Asiatic Researches** Volume I. p. 426).

"Those who arrived first on the subcontinent, later to be known as America, were groups of men driven by that mighty current that set out from India towards the East."

(source: **India: Mother of Us All - Edited by Chaman Lal - Official History of Mexico** p. 90).

Colonel James Tod has said: "It is ridiculous with all the knowledge now in our possession, to suppose that the Hindus always confined themselves within their gigantic barriers, the limits of modern India."

(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India - By James Tod** ISBN 8120612892 Volume II p. 218).

Ephraim George Squier (1821-1888) was United States Charge d'affaires to Central America in 1849 and author of **Peru; Incidents of Travel and Exploration in the Land of the Incas** and **The Serpent Symbol, and the Worship of the Reciprocal Principles of Nature in America**. Comparing the temples of India, Java and Mexico, he wrote nearly a hundred years ago:

"a proper examination of these monuments would disclose the fact that in their interior as well as their exterior form and obvious purposes, these buildings (temples in Palanque, Mexico) correspond with great exactness to those of Hindustan..."

Sir Stamford Raffles the British historian, and founder of Singapore as a British colony, expressed a similar view when he wrote:

"**the great temple of Borobudur in Java might readily be mistaken for a Central American temple**."

(source: **India: Mother of Us All - Edited by Chaman Lal** p. 91).

Wilhelm von Humboldt (1767- 1835) Prussian minister of education, a brilliant linguist and the founder of the science of general linguistics.

A century and half ago an eminent a scholar as Alexander Von Humboldt was convinced of the Asiatic origin of the American Indian high civilization. However, when, in the second half of the 19th century, evolutionist (or rather, pseudo-evolutionist) ideas captured the imagination of anthropologists, it seemed no longer necessary to have recourse to the supposition of real contacts in order to explain the similarities between New and Old world civilization.

These "evolutionist" ideas have long since been abandoned, but, curiously enough, the belief in the independent origin of American Indian civilizations was nevertheless retained. This lack of logic results in a truly paradoxical situation. No archaeologist today would attribute to prehistoric Europeans the independent invention of bronze casting, iron work, the wheel, weaving, pottery, writing and so many other cultural elements derived from the Near East. Thus what is not conceded to the inhabitants of the British Isles is willingly conceded to the American Indians.

Isn't our credulity being taxed too much when we are asked to believe that a whole series of complicated techniques, like casting by the lost wax method, the extraction of tin from cassiterite, the alloying copper and tin, the coloring of gold by chemical processes, weaving, tie-dying and batik were by a real miracle invented twice, once in the Old World and once in America?

And what mysterious law of psychology would have caused the peoples of America, as well as those of Asia, to invent the parasol and to use it as an emblem of rank and royalty, to invent the same game with rather complicated rules (pachisi in India and Southeast Asia, patolli in Mexico), to imagine similar cosmological systems, and to attribute certain colors to the different directions? After all, the south is not really red, the east not blue, etc, and the idea is singular enough to make us doubt that it was conceived more than once.

He remarks on the Mexican diety: "It presents some remarkable and apparently not accidental resemblances with the Hindu Ganesh."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 188).

Edward Pococke (1604–1691) English Orientalist has written:

"The Peruvians and their ancestors, the Indians, are in this point of view at once seen to be the same people."

(source: **India in Greece - By Edward Pococke** p. 174).

Robert Spence Hardy (1803-1868) says in his book, **Eastern Monachism**: "The ancient edifices of Chichen in Central America bear a striking resemblance to the topes of India."

(source: **Hindu Superiority - By Har Bilas Sarda** p. 187).

Ephraim George Squier (1821-1888) wrote: "The Buddhist temples of Southern India, and of the islands of the Indian Archipelago, as described to us by the learned members of the Asiatic Society and the numerous writers on the religious and antiquities of the Hindus, correspond with great exactness in all their essential and in many of their minor features with those of Central America."

(source: **The serpent symbol, and the worship of the reciprocal principles of nature in America - By Ephraim George Squier**)

Robert Heine-Geldern and Gordon F. Ekholm have written:

"Many of the peoples of Southeastern Asia had adopted Indian Hindu-Buddhist civilizations. And they seem to have continued these voyages to America....The influences of the Hindu-Buddhist culture of Southeast Asia in Mexico, and particularly, among the Maya, are incredibly strong, and they have already disturbed also some Americanists who don't like to see them but cannot deny them."

"The large number of highly specific correspondence in so many fields preclude any possibility of mere accidental coincidence. Nor would it help us to take refuge in any kind of explanation based on some alleged psychological laws...There is no explanation other that the assumption of cultural relationship. We must bow to the evidence of facts, even though this may mean a completely new start."

Prichard James Cowles "Aryavarta was the holy land of the Brahmans, the country lying between the Himalayas and Vindhya mountains, which was the ancient abode of the Hindoos...There the Hindoos had the seat of their early existence five and twenty centuries before the Christian era, and thence they appear gradually to have spread...."

(source: **The natural history of man; comprising inquiries into the modifying influence of - By Prichard James Cowles** p. 164).

****

The first Maya Empire had been founded in Guatemala at about the beginning of the Christian era. Before the fall of Rome the Mayas were charting accurately the synodical revolutions of Venus, and whilst Europe was still lingering in the Dark Ages the Maya civilization had reached a peak of greatness.

It is significant that the zenith of Maya civilization was reached at a time when **India had also attained an unparalleled cultural peak during the Gupta period,** and Indian cultural intercourse with Southeast Asia, the **Gupta period had begun more than a century before** the Mayan classical age in 320 and Buddhism and Hinduism had been well known in neighboring countries for centuries. **If there was contact between Mayan America and Indianized Southeast Asia, the simultaneous cultural advance would not appear surprising.** In marked contrast, this was the darkest period in Europe's history between the sack of Rome and the rise of Charlemagne.

The most important development of the ancient American or Asiomerican culture took place in the south of the United States, in Mexico, in Central America, and in Peru. The early history of Asiomericans is shrouded in mystery and controversy due to the absence of definitive documentary evidence, which was **destroyed by the European conquerors in their misguided religious zeal.**

(For holocaust inflicted against the Indians, please refer to a well written and thought provoking book **Conquest of Paradise: : Christopher Columbus and the Columbian Legacy - Kirkpatrick Sale** for more on Spanish greed and their lust for gold).

However, it appears that after the discovery of introduction of maize into Mexico, Asiomericans no longer had to wander about in search of food. Men in America, as in other parts of the world, settled down to cultivate food and culture, a by-product of agricultural life, inevitably followed.

Of the Asiomerican civilizations, the best known are the **Maya, the Toltec, the Aztec, and the Inca.** The Mayas were possibly the earliest people to found a civilization there; they moved form the Mexican plateau into Guatemala. They were later pushed out, presumably by the Toltecs, who, in turn were dislodged by the Aztecs.

Imprint of Hindu Culture

Ambassador Miles Poindexter states in his book, **The Ayar-Incas**:

"Aryan words and people came to America by the island chains of Polynesia. The very name of the boat in Mexico is a **South Indian (Tamil) word: Catamaran.**

(source: **The Ayar-Incas - By Miles Poindexter** published by Horace Liveright New York volume 1-2. 1930).

Hindu were mighty navigators and pioneers of cultures centuries before Columbus was born. **They established their cultural empires in Java, Balim Sumatra, Borneo, Philippines, Cambodia, Champa, Burma, Thailand and ruled there till the fourteenth century.** (please refer to chapter on Greater India or **Suvarnabhumi**).

The emigrant races of India took with them, wherever they went, (Southeast Asia or America) their system of measurement of time, their local gods, their customs, including games, dances and ceremonials. The belief in the four Hindu Yugas (epochs), the existence in America of the Hindu Gurukala scheme of education, the Hindu Panchayat System, the bazaar economy, the Soma Yagna (sacrifice), the worship of Indra, Trinity and Hindu gods and others.

Both the Hindus and Americans used similar items in their worship rituals. They both maintained the concept of **four Yuga cycles, or cosmological seasons,** extending over thousands of years, and conceived of twelve constellations with reference to the sun as indicated by the Incan sun calendar. Royal insignias, systems of government, and practice of religious dance and temple worship all showed remarkable similarities, pointing strongly to the idea that the Americas were strongly influenced by the Aryans. The theory is found in the Vedic literature of India. The ancient Puranas (literally, histories) and the Mahabharata make mention of the Americas as lands rich with gold and silver. Argentina, which means "related to silver", is thought to have been named after Arjuna (of silver hue).

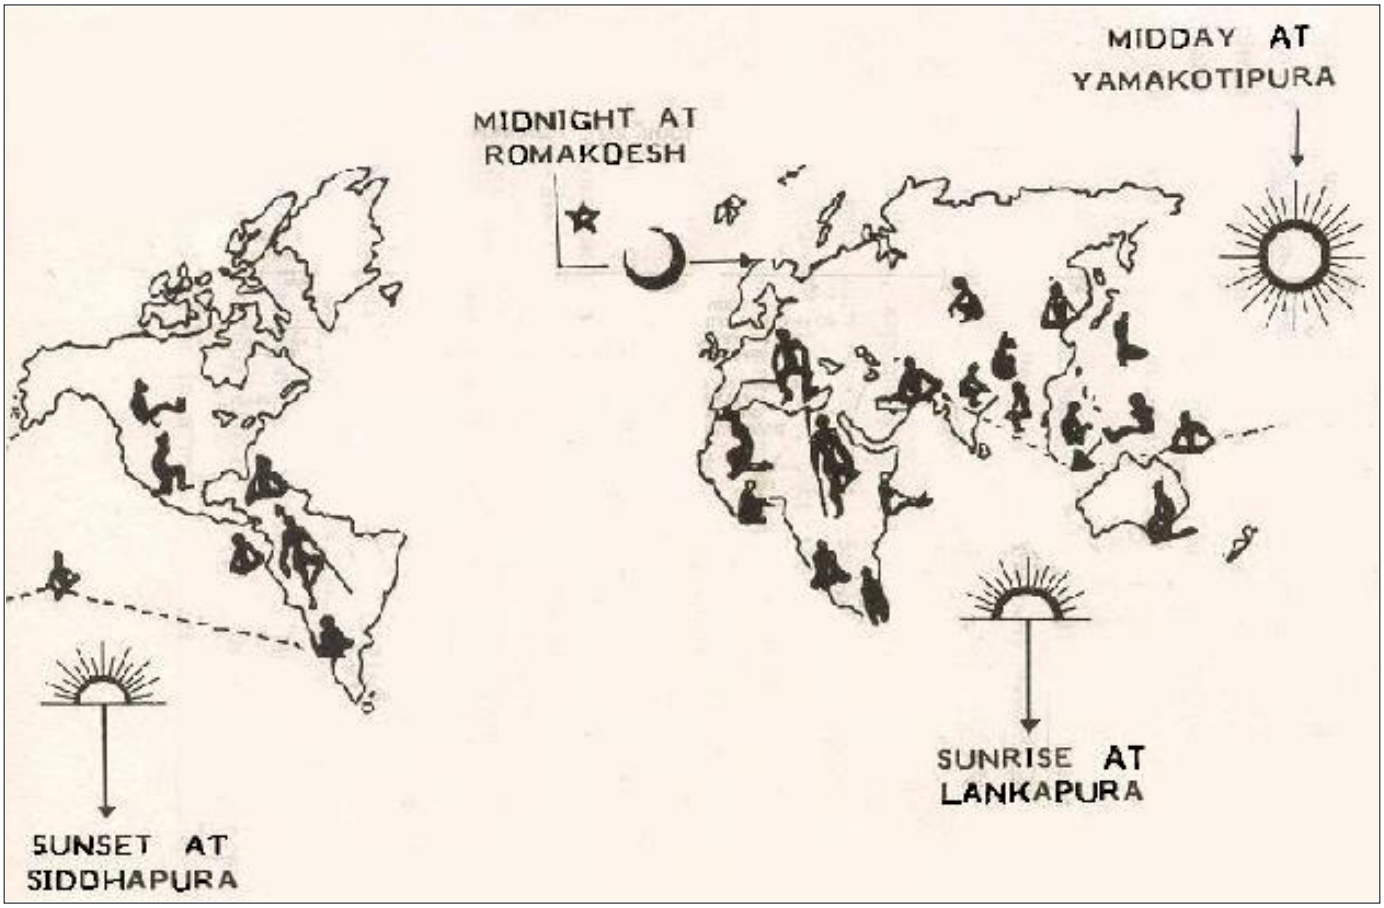
Ancient Indians called the Other Hemisphere Pataladesa

Dr. B. Chakravarti author of **The Indians And The Amerindians** has written:

It will be evident from a close study of the texts of Indian Astronomy that Latin America was known to ancient Indians, who called it **Pataladesa.** The **Surya Siddhanta, a textbook of Astronomy**, composed before 500 A.D. identifies and describes Pataldesa in very clear and definite terms in the chapter of geography (chapter xii).

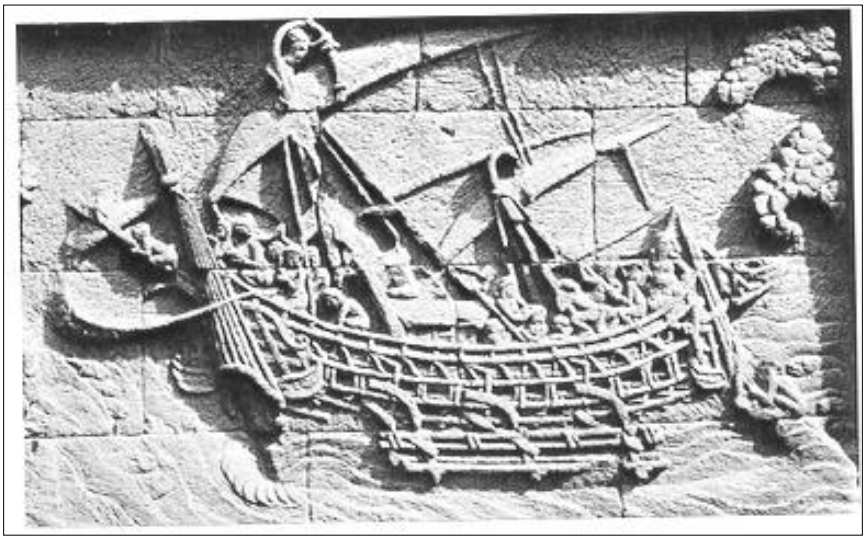
The Surya Siddhanta categorically says that the Devas and Asuras live on the earth. The Devas live in the northern hemisphere while the Asuras live in the Southern hemisphere and have a tradition of enmity against each other. It further says that the ocean which surrounds the poles of the earth has divided the planet into two great continents, viz. the continent of the Devas and the continent of the Asuras. The Brahmanas of India write the epithet Deva-Serman after their names thus describing themselves as the Devas.



When the Sun is in the northern hemisphere eg. in Aries, he appears first to the Devas, and again when the Sun is in the southern hemisphere, he appears first to the Asuras. When the Sun is on the Equator both the Devas and the Asuras find the Sun in the middle and the days and nights are equal. As the Sun proceeds to the northern hemisphere, the Devas experience summer because of the directness and intensity of the solar rays, the Asuras do not get the rays so directly then and its intensity is also less, the sun being in the northern hemisphere. Hence they experience winter during this time. This obviously indicates that Pataldesa was South America.

The Surya Siddhanta explains how the people living on opposite ends of the globe consider themselves, wrongly, as living on the upper and lower part of the globe, though there cannot really be an upper or lower part, of the globe, which moves in vaccuum.

Maya, the author of Surya Siddhanta, also mentions the four great cities situated on the opposite ends of the world, equidistant from one another. 1. Yamakotipura in Bhadrasvavarsa (Indonesia?) in the east, Lanka in Bharatvarsa (India) in the south and 3. Rome in Ketumalavarsa (Europe) in the west and Siddhapura in Kuruvarsa (America?) in the north.



The celebrated astronomer **Bhaskaracarya** mentions the time difference between the important cities situated in different parts of the world in his **Siddhanta Siromani** (Goladhyaya) thus:

" When the sun rises at Lanka, the time as at Yakakotipura to the east of Lanka, will be midday. Below the earth at Siddhapura, it will be twilight then, and at Romakadesa in Europe, the time will be midnight."

Accurate time difference of places around the world found in ancient Sanskrit texts (source: The Indians And The Amerindians - By Dr. B. Chakravarti p. 34-110).

From such location of places round the globe and the movement towards the east, it appears that many Indian merchants used to sail frequently and some even settled down in Indonesia and Indochina, who used to relay on to Polynesia and then further on to South or Middle America, may be not a single ship and in a single effort, but after stopovers at the important ports on the other islands-chain of which seems to have existed then and some of which submerged later because of tectonic movements. It seems that some contact with the cities mentioned by Bhaskaracharya might have existed till his time.

Ancient Indian ocean-going ship arriving at Java, from a frieze of the Borobodur stupa.

Dr. Robert Heine Geldern anthropologist, has written that:

"Those who believe the ancient peoples of Asia were incapable of crossing the ocean have completely lost sight of what the literary sources tell us concerning their ships and their navigation. Many of the peoples of Southeastern Asia had adopted Indian Hindu-Buddhist civilizations. The influences of the Hindu-Buddhist culture of southeast Asia in Mexico and particularly, among the Maya, are incredibly strong, and they have already disturbed some Americanists who don't like to see them but cannot deny them."

"Ships that could cross the Indian Ocean were able to cross the Pacific too. Moreover, these ships were really large. The Periplus of the Erythraean sea mentions the large ships of Southern India which engaged in trade with the countries of the East. A Chinese source of the third century A.D. describes vessels from Southern Asia which were 150 feet in length, and had four masts and were able to carry six to seven hundred men and one thousand metric tons of merchandise when the Buddhist Pilgrim Fahien returned from Sri Lanka to China, in 414 A.D."

Alexander von Humboldt, who spent fifty years doing research on Ancient America, said:

"It is surprising to find, toward the end of the fifteenth century, in a world that we call "New" the ancient institutions, the religious ideas, the forms of edifices which, in Asia appear to belong to the first dawn of civilization." -

Those Indian ships that carried Fahien the Chinese historian and scholar through stormy China waters could without difficulty proceed all the way to Mexico and other countries. A thousand years before the birth of Columbus Indian ships could carry hundreds of passengers.

Similarities

Hindu-Mexican Trinity

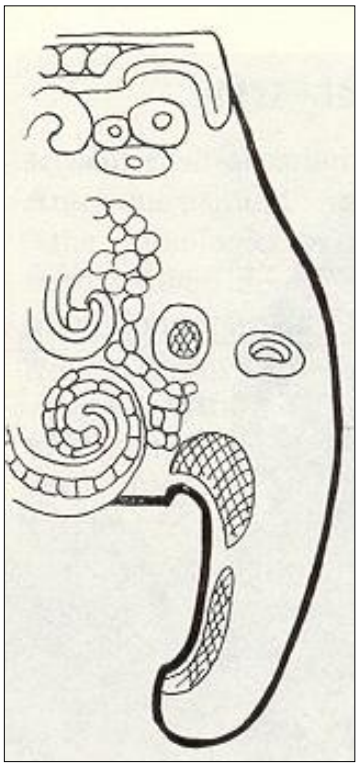
Scholars were also greatly impressed by the similarity between the Hindu Trinity - **Brahma-Visnu-Shiva** and the Mexican Trinity - **Ho-Huizilopochtli-Tlaloc** as well as the likeness between Indian temples and American pyramids.
The parallels between the Hindu Brahma-Vishnu-Shiva Trinity and the Mexican Ho-Huitzilopochtli-Tlaloc Trinity, and the resemblances between the attributes of certain Hindu deities and those of the Mayan pantheon are impressive.

According to **Donald A. Mackenzie** writes in his book, **Myths of Pre-Columbian America**:

"Tezcatlipoca, was like Hindu god Kubera, was a god of the north. The story of Yappan appears to be of Indian origin. The story of the temptation and fall of Yappan is too like that of the temptation and fall of his Indian prototype to be of spontaneous origin in the New World. The conclusion drawn from the evidence of the Yappan myth that Hindu cultural influences reached America is greatly strengthened when we find Acosta informing us that certain Mexican ascetics, who assisted the priests, "dressed in white robes and lived by begging." The wandering Brahmin and Buddhist pilgrims in India similarly begged their food."

Same Aryan name of God: When Cortes invaded the valley of Mexico he found that the Mexicans - through the chief motive of his great adventure was to destroy their religion and to substitute his own, had the same word for God that he himself had. His own (Spanish) was Dios, from Greek Theos, the Mexican, as Cortes converted it to writing, was Teotl (Devata or Deo in Sanskrit).

(source: **The Ayar-Incas - By Miles Poindexter** published by Horace Liveright New York volume 1-2. 1930).).



Churning of the Milky Ocean

The Indian myth of the **Churning of the Milky Ocean** reached America. In **Codex Cortes** there is a grotesque but recognizable Maya representation of the ocean churning. The tortoise, however, is on the summit of the mountain-pestle instead of being beneath it, and the other form of the serpent god appears above his avatar. Round the mountain-pestle is twisted a snake, called "a rope" by Seler. Two dark gods, like the Indian Asuras, hold one end of the snake-rope while the other end is grasped by the elephant headed god. To the rope is attached a symbol of the sun (Kin).'

(source: **Myths of Pre-Columbian America** - **By Donald A. Mackenzie** p. 191- 229).

The Indian Elephant in American Art

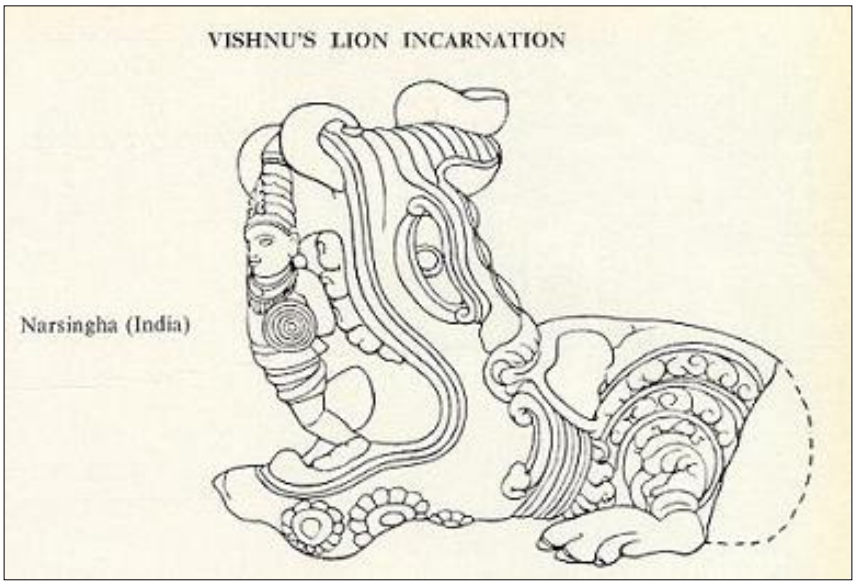
The American writer and explorer, Mr. John L. Stephens, who, accompanied Mr. Catherwood, an accomplished artist, visited the ruins of Maya civilization in Central America in the middle of last century, detected the elephant on a sculptural pillar at Copan, which he referred to as an "idol." A reproduction of one of the ornaments in question should leave no doubt as to the identity of the animal depicted by the ancient American sculptor. It is not only an elephant, but an **Indian elephant** (Elephas Indicus), a species found in India, Ceylon, Borneo and Sumatra. In India the elephant was tamed during the Vedic period. It was called at first by the Aryo-Indians "the beast having a hand". and ultimately simply Hastin "having a hand". An elephant keeper was called Hastipa. The Maya long nosed god is regarded by those who favor the hypothesis of direct or indirect Indian cultural influence in America as a form of the Indian elephant-headed god, Ganesha.

The Indian elephant in America
(source: Myths of Pre-Columbian America - By Donald A. Mackenzie)

Professor **Elliot Smith** comments: "If it has been possible for complicated games (like Pachissi) to make their way to the other side of the Pacific, the much simpler design of an elephant's head could also have been transferred from India or to the Far East to America."

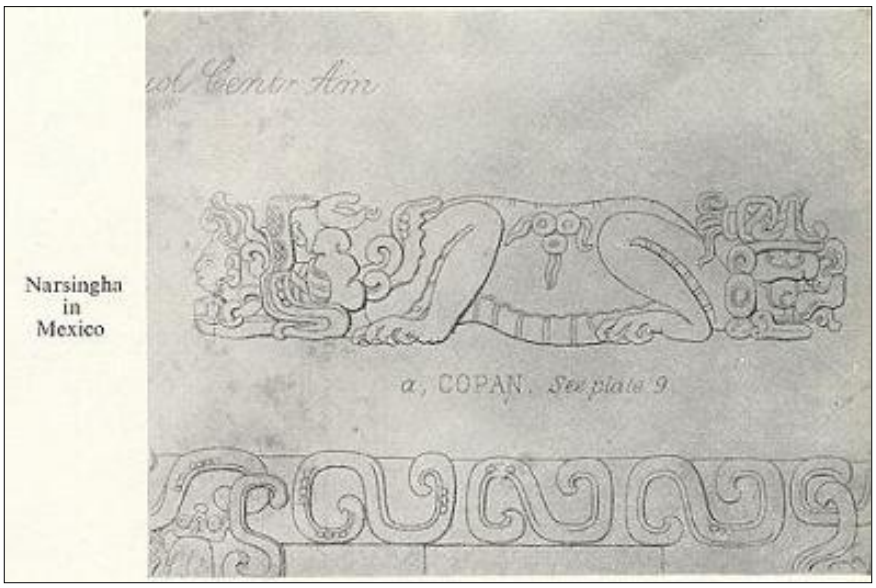
(source: **Myths of Pre-Columbian America** - **By Donald A. Mackenzie** p. 28-35).

Discussing the diffusion of Indian religions to Mexico, a recent scholar, **Paul Kirchhoff** from the University of Frankfurt, had even suggested that it is not simply a question of miscellaneous influences wandering from one country to the other, but that China, India, Java, and Mexico actually share a common system."



Kirchhoff has sought "to demonstrate that a calendaric classification of 28 Hindu gods and their animals into twelve groups, subdivided into four blocks, within each of which we find a sequence of gods and animals representing Creation, Destruction and Renovation, and which can be shown to have existed both in India and Java, must have been carried from the Old World to the New, since in Mexico we find calendaric lists of gods and animals that follow each other without interruption in the same order and with attributes and functions or meanings strikingly similar to those of the 12 Indian and Javanese groups of gods, showing the same four subdivisions."

Trilokinath, the Hindu ruler of the three worlds, was known to the Mexicans by the name, until the Spanish conquerors mistakenly changed the name into **Tloque Nahuaque**.



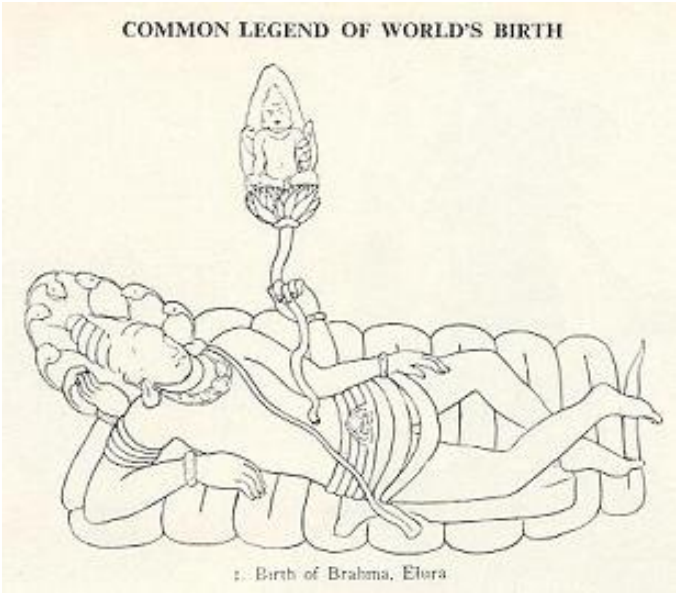
The God born from Lotus

Brahma, the supreme deity of the Hindus, was "born from a lotus which grew out of the navel of the god Vishnu whilst floating on the primordial waters." The Tibetan repeat "Om Mani Padme Hum" (O, Jewel in the heart of the Lotus, Have mercy on me). The lotus as the emblem of God was sacred in India. The Hindu goddess Maya, - "the cosmic illusion" the female energy, "mother of gods and men" - is sometimes represented as the sakti. This same "mother of the gods" was carried to America and appeared in the Maya theogony of Yucatan under the same name, - May, - in the same functions she performed in India. In Mexico, Maya was also called "the mother of the gods". Other names for her were "nourisher of the human race" "type of earth mother."

(source: **The Ayar-Incas - By Miles Poindexter** published by Horace Liveright New York volume 1-2. 1930 p. 133-135).

Narsingha - India

Narsingha - Mexico



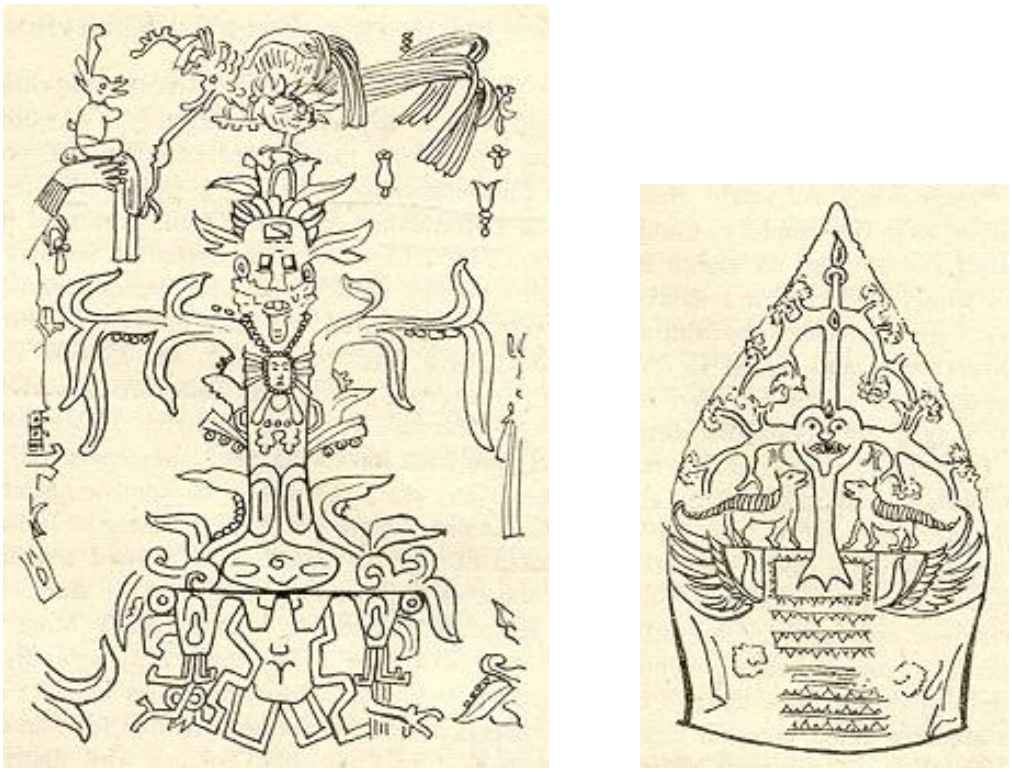
In a temple in Guatemala is a statue of an incarnation of Vishnu as Kurma, the tortoise. The sculpture is richly detailed and strongly suggests that it might have been wrought by Hindu hands. In Palenque Temple of the Sun in Mexico Surya occupies the place of honor.

Even Yama, the god of death of Hindu mythology, has found his way to Mexico and Peru, while typically Hindu lotus and chakras motifs adorn the temples. Maya and Aztec architectural styles are remarkably similar to those in India and South east Asia. In both areas the chief structures were pyramid shaped, with serpent balustrades and surmounted

It is not without reason that the Spanish author Lopez says in his book **Le Races Aryans de Peru**: **"Every page of Peruvian poetry bears the imprint of Ramayana and Mahabharata."**

Sir Edward B. Taylor also found the counterparts of the tortoise myth of India in ancient America. "The striking analogy between the tortoise myth of North America and India is by no means a matter of new observation; it was indeed noticed by Father Lafitan nearly a century and half ago. Three greatest features of the Asiatic stories are found among the North American Indians in their fullest and clearest development..."

(source: **Early History of Mankind - By E. B. Taylor**)



The Brahmananda or Egg of Brahma in India and The Egg and Serpent Legend in Mexico.

The Mexican doctrine of the World's Ages - the universe was destroyed four consecutive times - is reminiscent of the **Indian Yugas.** Even the reputed colors of these **Mythical four ages, white, yellow, red and black are identical** with and in the same order as one of the two versions of the Indian Yugas. In both myths the duration of the First Age is exactly the same, 4,800 divine years. The Mexican Trinity is associated with this doctrine as in the Hindu Trinity with the Yugas in India.

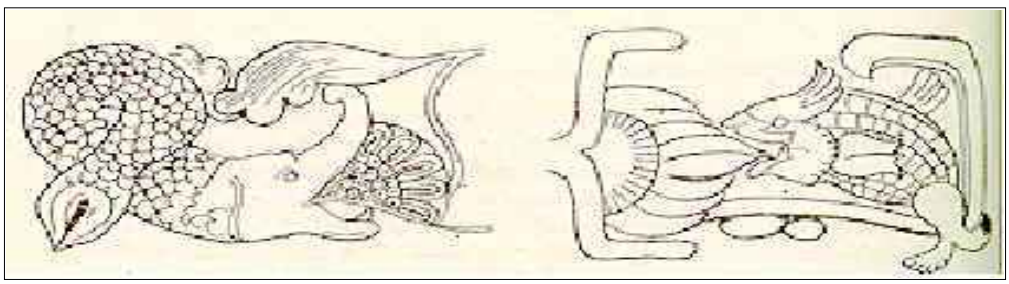
Donald A. Mackenzie writes in his book, **Myths of Pre-Columbian America**

"The doctrine of the World's Ages (from Hindu Yugas) was imported into Pre-Columbian America...the Mexican sequence is identical with the Hindus....The essential fact remains that they were derived from a common source...It would be ridiculous to assert that such a strange doctrine was of spontaneous origin in different parts of the Old and New Worlds." According to the Mayan calendar, which is extant, the time record of the mayas began on 6 August 613 B.C. It is an exact date based upon intricated astronomical calculations, and prolonged observations. To work out this kind of elaborate calendar must have taken well over two thousand years of studying stars, and the Asiomericans must have been remarkably shrewd observers.

The Tree of Heaven in shadow play figures from Java and so called "cross" from Palenque, Mexico.

Donald A. Mackenzie and other scholars, however, are of definite opinion that the ancient Mexicans and Peruvians were familiar with Indian mythology and cite in support close parallels in details. For instance, the history of the Mayan **elephant** symbol cannot be traced in the local tradition, whereas it was a prominent religious symbol in India. The African elephant has larger ears. It is the profile of the Indian elephant, its tusk and lower lip, the form of its ear, as well as its turbaned rider with his *ankus*, which is found in Meso-American models. Whilst the African elephant was of little religious significance, it had been tamed in India and associated with religious practices since the early days.

In Indian, Chinese and Japanese stories the Naga or dragon dwells in a pool beneath a tree. The tree grows on an island in a lake, or in the ocean. A lake island was associated with the American jewel goddess Chalchiuhtlicue.



Later, two English scholars **Channing Arnold and Fredrick J. Tabor Frost**, in their **The American Egypt,** made a detailed examination of the transpacific contacts, reinforcing the view of Buddhist influences on Central America. The most recent and by far the most systematic well-reasoned, and effective case has been advanced by the eminent archaeologist, **R. Heine-Geldern and Gordon Ekholm**, **who favor Indian and Southeast Asian cultural influences on ancient America through migration across the Pacific.**

Astrology

Baron Alexander Von Humboldt, whilst visiting Mexico, found similarities between Asian and Mexican astrology. He found that the systematic study of ancient American cultures and was convinced of the Asian origin of the American-Indian high civilization. He said:

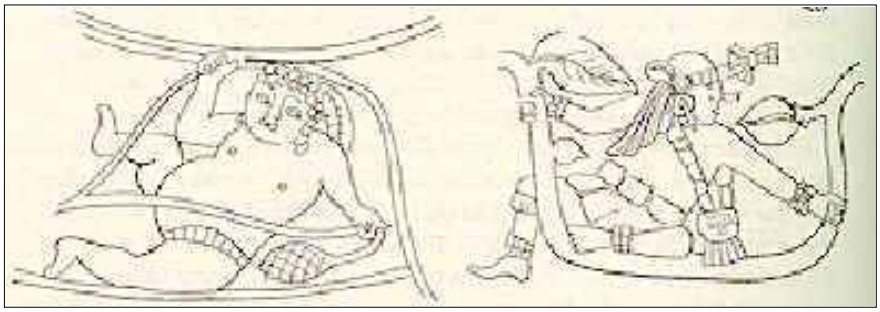
"if languages supply but feeble evidence of ancient communication between the two worlds, their communication is fully proved by the cosmogonies, the monuments, the hieroglyphical characters and the institutions of the people of America and Asia."

The lotus motif

(fig. **Makara from Amaravati and makara from Chichen Itza (Heine-Geldern and G.F. Ekholm**)
source: **India and World Civilization - By D. P. Singhal.** pg 58-59).

The **Makara motif**, a serpent head with upturned snout and with a human face in its mouth, from India, Java, Bali and Sumatra, is comparable to the Mexican Xiuhcoatl, the fire serpent on the Aztec Sun Stone.

All sorts of architectural elements are common to Mexico, Gautemala, India, Java and Indo-China, the most striking of which are the pyramids with receding stages, faced with cut stone, and with stairways leading to a sanctuary on top, also of stone; in many there are surprising common traits such as serpent columns and banisters, vaulted galleries and corbeled arches, attached columns, stone cut-out lattices, and Atlantean figures, which are typical of Punuc style of Yucatan. **The most striking and highly specialized of these traits is the lotus motif interpersed with seated human figures common to Chichen-Itza and Amaravati, southern India.** Amaravati is dated about the second century of our era, but it exercised a powerful influence over the Hindu-Buddhist art of Cambodia, Champa, and even modern Bali. It is significant that temple pyramids in Cambodia do not antedate the eighth century, and only become important in the ninth and tenth centuries, a time coinciding with the beginning of the Puncu period of Yucatan according to Heine-Geldern and Ekholm, 1951).



The buildings of Chichen Itza show certain influences from Southeast Asia; for example, the lotus motif occurs in the Mercado (covered market). The Mercado is strikingly reminiscent of the galleries so typical of the **Cambodian architecture** that eventually blossomed into the galleries of **Angkor Vat**. The lotus motif, interspersed with seated human figures, which has a deep symbolic meaning in **Hindu and Buddhist** mythologies and as such is an integral part of early Indian art, especially of **Amaravati**, is found at Chichen Itza as a border in the reliefs of the lower room of the Temple of Tigers. The similarity between the art of Amaravati and that of Chichen Itza is particularly noticeable in reclining figures holding on to the rhizome of the lotus.

(fig. **God on the lion throne from India, and Mayan jaguar throne -Heine-Geldern and G.F. Ekholm**)
source: **India and World Civilization - By D. P. Singhal** pg 58-59).

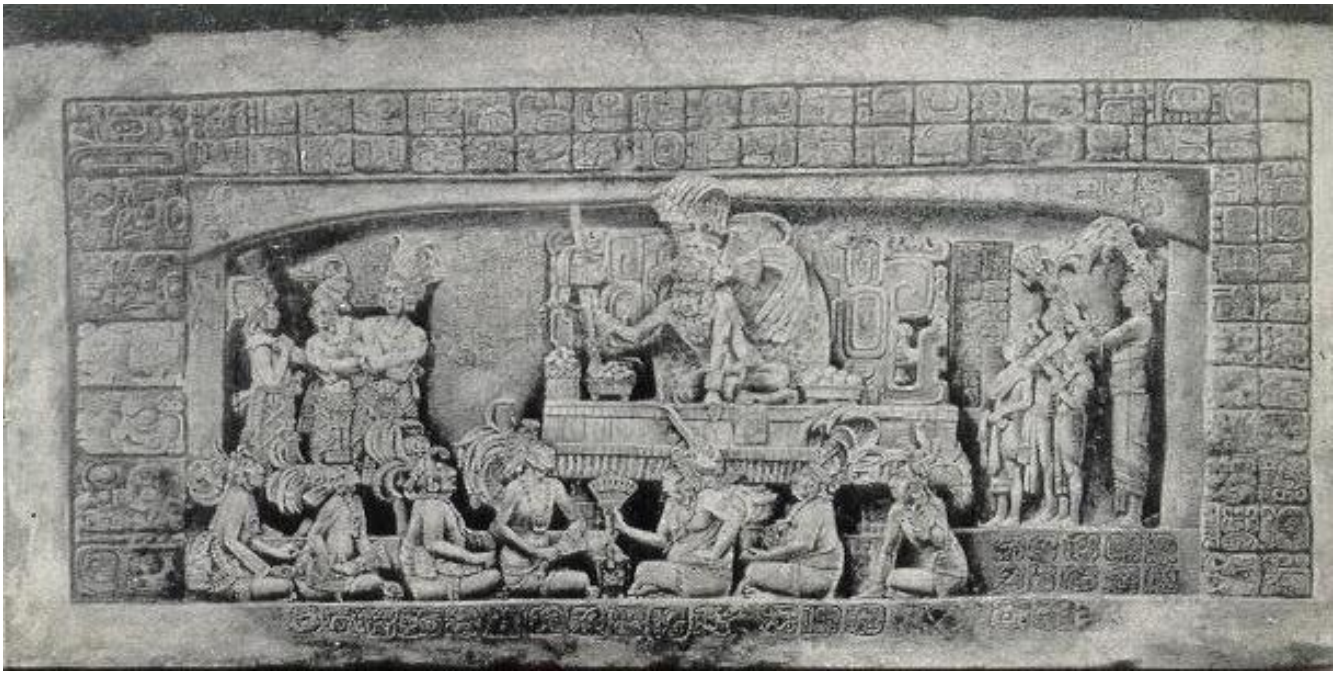
The Mexican Lion-throne and Lotus-throne remind one of Indian **Simhasana and Padmasana**. The parasol, a mark of royalty amongst the Mayas, the Aztecs, and the Incas, may be an adaptation of the royal Chatra in us in India and Indianized Asia from the earliest times.

A kind of caste system prevailed amongst the Incas of Peru. Peruvians worshipped an omnipotent and invisible Supreme being, Viracocha, creator and preserver of the world. Imprints of the Ramayana and the Mahabharata have been noticed on the poetry of Peru. The official history of Mexico officially admits that “those who arrived first on the continent later to be known as America were groups of men driven by the mighty current that set out from India”. **Lopez,** Spanish author of **The Aryan Races in Peru** writes : “Every page of Peruvian poetry bears the imprint of **Ramayana and Mahabharata**.”

(fig. **The Lotus-motif from Amaravati and lotus-motif from Chichen Itza - Heine-Geldern and G.F. Ekholm**)
source: **India and World Civilization - By D. P. Singhal.** pg 58-59).

In Indian art the lotus rhizome frequently protrudes from the mouths of makaras, sea monsterswith fish-like bodies and elephants-like trunks. At Chichen Itza, stylized figures of fish are found at both ends of the lotus plant, in the same position as the makaras in India.

"Such a combination of highly specific details cannot be accidental. It suggests the existence of some kind of relationship between Maya art and not only Buddhist art in general, but the school of Amaravati of the second century A.D. in particular."



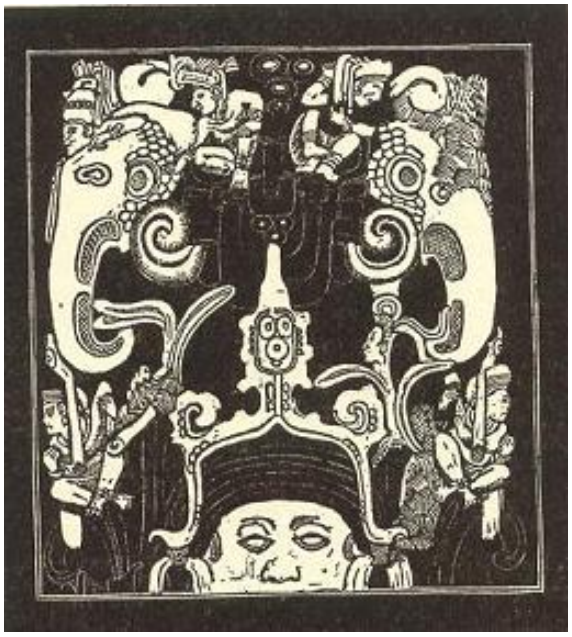
Ancient America was as rich in gods and temples as was India. The Asiomerican term for god, "teo," is close to the Sanskrit 'deva". **Ephraim George Squier** (1821-1888) was United States Charge d'affaires to Central America in 1849 also noted similarities in both major and minor features of Buddhist temples of South India and Mexico they were round and different colors were used on each of the four quarters.

In 1866, the French architect, **Eugene Viollet-le-Duc,** also noted striking resemblances between ancient Mexican architectural structures and those of South India.

From Borobudur - Suvarnabhumi (top two images)

From America - Gautemala

Use of Zero



The Mayas of Yucatan were the first people besides the Indians to use a zero sign and represent number values by the position of basic symbols. The similarity between the Indian zero and the Mayan zero is indeed striking. So far as the logical principle is concerned, the two are identical, but the expressions of the principle are dissimilar. Again, whilst the Indian system of notation was decimal, as was the European, the Mayan was vigesimal. Consequently, their 100 stood for 400, 1000 stood for 8000, 1234 for 8864. While the place of zero in the respective systems of the Indians and Mayans is different, the underlying principle and method are the same, and the common origin of the Mayan and Indian zeros appears to be undoubted. Disputes continue amongst scholars in the absence of conclusive evidence. As chronological evidence stands today, the Mayan zero appears to be anterior by several centuries to its Hindu counterpart.

Gene Matlock, author of **India Once Ruled the Americas!** states:

"The people of India have long known that their ancestors once sailed to and settled in the Americas. They called America 'Patala,' The Underworld,' not because they believed it to be underground, but because the other side of the globe appeared to be straight down."

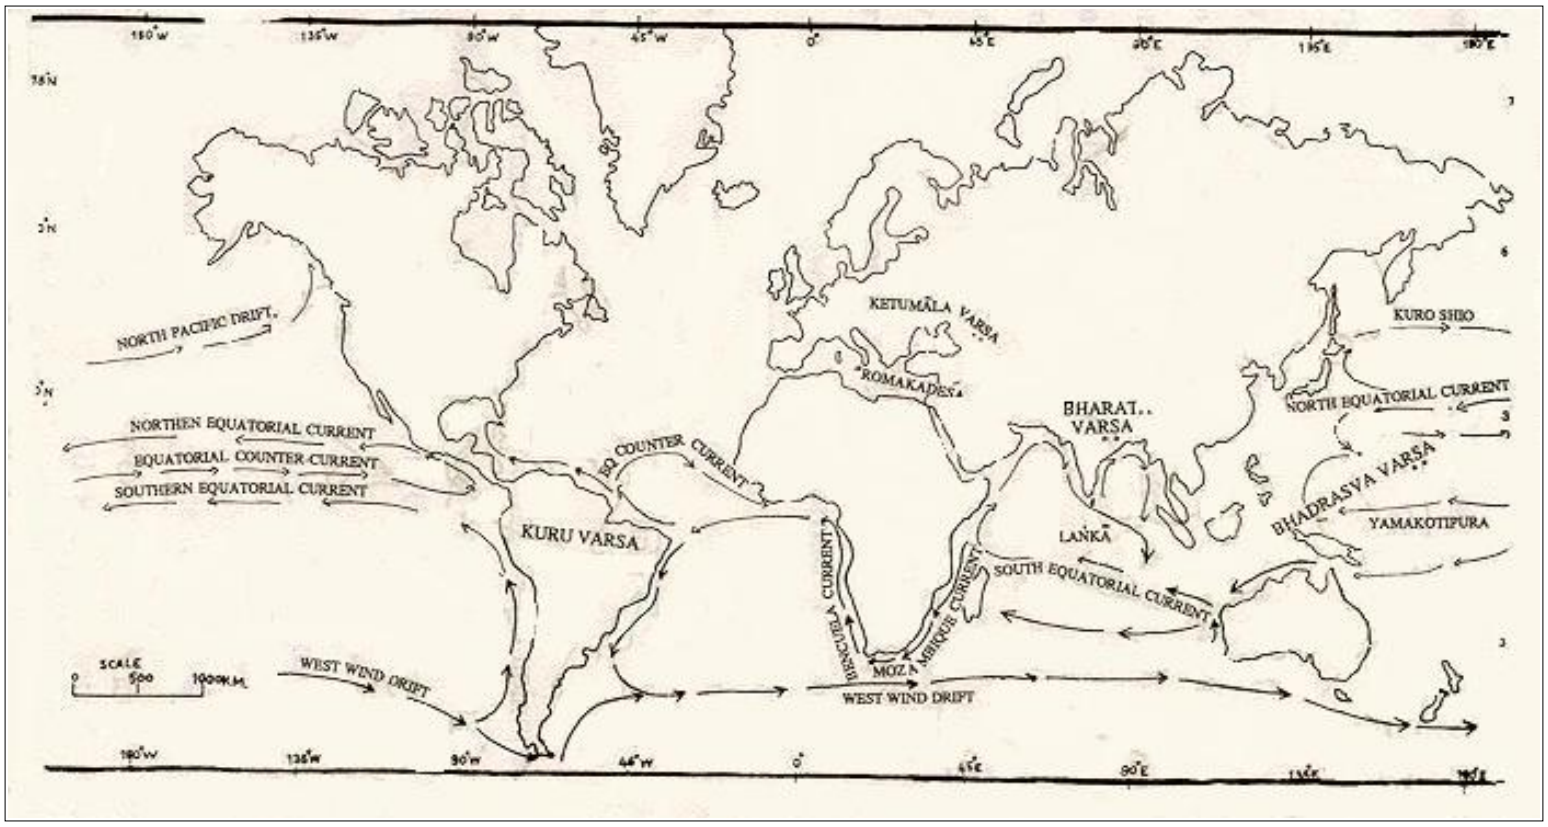
According to **Mrs. Zelia Nuttal**: "No country in the world can compare with India for the exposition of the pyramidal cross. the body of the great temple of Bidh Madhu (formerly the boast of the ancient city of Benares...demolished in the 7th century) was constructed in the figure of a colossal cross, with a lofty dome at the center, above which rose a massive structure of a pyramidal form. At the four extremities of the cross there were four other pyramids...A similar building existed at Mathura. By pyramidal towers placed crosswise, the Hindu also displayed the all-pervading sign of the cross. At the famous temple of Chidambaram, on the Coromandel coast, there were seven lofty walls, one within the other, round a central quadrangle, and as many pyramidal gateways in the midst of each side which forms the limbs of a vast cross."

(source: **Peabody Museum Papers**. volume II p. 161-162).

The top of Stella B at Copan
Dr. G. Elliot Smith says: the design is of an Indian elephant with its turbaned mahout, modeled by a sculptor who had never seen the animal but was copying from an imported design.
(source: The Ayar-Incas - Miles Poindexter)

Skilled Seafaring Men

The only plausible argument against cultural diffusion from southern Pacific is the distance involved. It is asserted that it would have been unlikely for a large number of people to have crossed the vast expanse of the Pacific without well-equipped boats and skillful voyagers. The argument, however, falls, upon close scrutiny. It would not be at all difficult for a large canoe or catarmaran to cross from Polynesia to South America even at the present time, and the ancient Asians were skilled and enterprising seafaring men.



However, Asian ability to cross the seas during this period is undoubted. The art of shipbuilding and navigation in India and China at the time was sufficiently advanced for oceanic crossings. Indian ships operating between Indian and South-east Asian ports were large and well equipped to sail cross the Bay of Bengal. When the **Chinese Buddhist scholar, Fa-hsien,** returned from India, his ship carried a crew of more than two hundred persons and did not sail along the coasts but directly across the ocean. Such ships were larger than those Columbus used to negotiate the Atlantic a thousand years later. According to the work of mediaeval times, **Yukti Kalpataru,** which gives a fund of information about shipbuilding, India built large vessels from 200 B.C. to the close of the sixteenth century. A Chinese chronicler mentions ships of Southern Asia that could carry as many as one thousand persons, and were manned mainly by Malayan crews. They used western winds and currents in the North Pacific to reach California, sailed south along the coast, and then returned to Asia with the help of the trade winds, taking a more southerly route, without however, touching the Polynesian islands. (Please refer to chapters on **Suvarnabhumi** and **War in Ancient India**).

In ancient times the Indians excelled in shipbuilding and even the English, who were attentive to everything which related to naval architecture, found early Indian models worth copying. The Indian vessels united elegance and utility, and were models of fine workmanship.

Sir John Malcolm wrote :

"Indian vessels "are so admirably adapted to the purpose for which they are required that, not withstanding their superior science, Europeans were unable, during an intercourse with India for two centuries, to suggest or at least to bring into successful practice one improvement. "

It was also known that in the third century a transport of horses, which would require large ships, reached Malaya and Indo-China.

The ancient sea routes from India to South America following the ocean current.

Games

Pachisi and Patolli

Games such as the pachisi of India and the Mexican patolli, the valador game, mirror of pyrite, betel and coco-chewing, with lime and tobacco, as well as gourd containers for the lime; shell money; birchbark shelters and canoes; and the identical containers of birchbark with curvilinear scraped design from Siberia; string crosses as prayers from Tibet, India, Assam, Mexico, and Peru; the custom of fishing with poison; shell fishooks; the use of agricultural terraces in Southeast Asia, Peru and Bolivia; and last, but not the least - the cultivation of cotton, practiced since early times in Asia. It has been claimed that even maize, that most typical of American cultivated plants, was in use in Asia before Columbus came to this continent.

The close relationship between the pachisi game of India and the patolli game of Mexico is illustrated here.

(source: Hindu America - By Chaman Lal)

(for interesting book please refer to **Hindu America: revealing the story of the romance of the Surya Vanshi Hindus and depicting the imprints of Hindu culture on the two Americas - By Chaman Lal** with foreword by **Dr. S. Radhakrishnan**. 3d ed. (LC History-America-E) 1966).

William MacLeod has called attention to the similarity between the **Mexican volador ritual and the Indian rite of hook-swinging.** In the volador, the performers usually, although not invariably, hang by their feet, and in India by their shoulders. We have found, however, an old description and illustration of hook-swinging in India in which the voluntary performers are attached by their feet as in the volador.

Another scholar, **Ramon Mena**, author of **Mexican Archaeology**, called the Nahuatl, Zapoteca, and Mayan languages "**of Hindu origin**." He went to say, "A deep mystery enfolds the tribes that inhabited the state of chiapas in the district named Palenque....their writing, and the anthropological type, as well as their personal adornments...their system and style of construction clearly indicate the remotest antiquity...(they) all speak of India and the Orient."

Still another scholar, **Ambassador Miles Poindexter**, a former ambassador of the United States to Mexico, in his two-volume 1930s treatise **The Ayar-Incas** called the Mayan civilization **"unquestionably Hindu."** He proposed that primitive Aryan words and people came to America by the island chains of Polynesia. The Mexican name for boat is a **South Indian Tamil word**, **Catamaran**, and Poindexter gives a long list of words of the Quichua languages and their analogous forms in Sanskrit. Similarities between the hymns of the Inca rulers of Peru and Vedic hymns have been pointed out. **A. L. Krober** has also found striking similarities between the structure of Indo-European and the Penutian language of some of the tribes along the northwestern coast of California. Recently, an Indian scholar, **B. C. Chhabra**,in his **Vestiges of Indian Culture in Hawaii** has noticed certain resemblances between the symbols found in the petroglyohs from the Hawaiian Islands and those on the Harappan seals. Some of the symbols in the petroglyphs are described as akin to early Brahmi script.

Indeed, the parallels between the arts and culture of India and those of ancient America are too numerous and close to be attributed to independent growth. A variety of art forms are common to Mexico, India, Java, and Indochina, the most striking of which are the Teocallis, the pyramids, with receding stages, faced with cut stone, and with stairways leading to a stone sanctuary on top. Many share surprisingly common features such as serpent columns and bannisters, vaulted galleries and corbeled arches, attached columns, stone cut-out lattices, and Atlantean figures; these are typical of the Puuc style of Yucatan. Heine-Geldern and Ekholm point out that temple pyramids in Cambodia did not become important until the ninth and tenth centuries, a time coinciding with the beginning of the Puuc period.

Language

Similarity between Quichua and Sankrit language:

Quichua	Sanskrit
akapana(clouds colored by sun)	aka (painting)
chani (price)	jani (produce)
chinkat (jaguar)	sinha (lion)
chirau (resplendent)	sura (to shine)
huakra (horn)	vakra (curved)
kakarpa (tent)	k'arpara (parasol)
mita (time)	mita (step passage of time)

muti (pounded corn)	mut (to pound)
nana (sister)	nanda (sister)
pakkni (to break)	pike (to break)
paksa (the moon)	paksa (the full moon)
pisi (small)	pis (to break into small piece)
pitata (bedroom)	pita (house, cottage)
simpa (cord)	samb (to tie)
soro (spiritual liqour)	sura (spiritual liquor)
sokta (six)	s'as (six)

(source: **The Ayar-Incas - By Miles Poindexter** p. 211-215).

Other similarities

Professor Raman Mena, Curator of the National Museum of Mexico:

"The (Maya) human types are like those of India. The irreproachable technique of their reliefs, the sumptuous head-dress and ostentatious on high, the system of construction, all speak of India and the Orient."

Note: The symbol of divinity - the sacred lotus on the scepter and the turban.

Hewitt author of **Primitive Traditional History**

"Hindu merchants brought to Mexico the eighteen months year of the Pandavas and the customs of trade guild and Indian bazaar."

In 1949, two scholars, **Gordon Ekholm** and **Chaman Lal,** systematically compared the Mayan, Aztec, Incan, and the North American Indian civilizations with the Hindu-oriented countries of Southeast Asia and with India herself. According to them, the emigrant culutes of India took with them India's system of time measurement, local gods, and customs. Ekholm and Lal found signs of Aryan civilization throughout the Americas in **art (lotus flowers with knotted stems and half-dragon/half fish motifs found commonly in paintings and carvings), architecture, calendars, astronomy, religious symbols,** and even **games** such as our **Parchessi and Mexican Patilli**, which have their origins in India's pachisi.

Similar routines of everyday life of Indians and Asiomericans have also been noted. For instance, betel-chewing with lime and coca-whew and tobacco, as well as the gourd-container for the lime are common to both people. The Peruvian substitute for tobacco, which was used for medicinal purposes, was a shrub, called cuca (coca). The leaves are first dried in the sun and then mixed with a little lime to constitute "a preparation for chewing much like the betel-leaf of the East." Vegetarianism is popular both in

India and Mexico. The Indian **roti or chappati** and the Mexican **tortilla,** similar in size and shape, are made in the same way. Both people have an unusual respect for corn, and share the custom of offering bits of food, before eating, to God in expression of their gratitude for the meal provided.

Cotton

It is certain that cotton was first used in the Indus Valley. But when South American cotton is studied scholars and scientist are thoroughly baffled. American cotton are tetraploid in chromosome constitution, and their chromosome complement is made up of the one set homologous with the complement of the diploid Asian cottons and one set homologous with the complement of the diploid species of America. After a series of painstaking experiments, experts have agreed that one parent of the American cotton undoubtedly came from Asia: **in other words, from the Indus Valley area.**

Links Proposed Between Ancient India and Central America's Mayans NEW

Hyderabad, INDIA, April 29, 2002: Recent studies suggests a link between Indus Valley and Mayans of Central America. The studies focused on the calendars of the two advanced civilizations. The Indus Valley inhabitants followed a calender based on the movements of Jupiter, and the Mayans followed one based on the Venus. In the Puranas, a secondary Hindu scripture, Jupiter, Brihaspati, was acknowledged to be the leader of the gods, while Venus, Shukra, was the leader of the asuras. **The texts further state that the devas and asuras lived on opposite sides of the Earth. Mexico and India are at opposite sides in longitude.** The correspondences were pointed out by **B. G. Siddarth**, director of the B. M. Birla Science Centre in Hyderabad. He also said the Hindu story of the churning of the ocean has been found in carvings in Mexico, as well Mayan representations of a tortoise carrying twelve pillars similar to Indian illustrations. Dr. Ganapati Sthapati of Chennai, a foremost expert on Vastu shatra, the ancient Hindu architecture, has visited the Mayan structures in Central America and found many similarities between the design and construction methods of the Mayans and that of the ancient Hindus.

Conclusion

D. A. Mackenzie, in his book **Myths of Pre-Columbian America** pg 70. says:

"It would be ridiculous to assert that such a strange doctrine was of spontaneous origin in different parts of the Old and New worlds."

Scholars who insist that pre-Columbian American religion and civilization was of independent origin are obliged to explain why the myths, beliefs, and practices of ancient America assumed such complex features at the very beginning, whilst in Asia they resulted from the fusions and movements of numerous peoples after a period of time much greater than that covered by American civilizations from beginning to the end.

Swami B. V. Tripurari states in his book, **Ancient Wisdom for Modern Ignorance -** "Who discovered America" pg 27.

Broadly speaking, cultural historians of Asiomerica are divided into two camps, "diffusionists" and "Isolationists". Diffusionists maintained that after this occurred civilized Asiatic people distributed themselves via the Pacific, thereby bringing civilization to the Americas. Isolationists insisted that after the nomadic tribes crossed the Bering Strait, a homogenous race of "Indians of the Americas' was formed, and the American tribes-people went about reinventing all culture, duplicating in two thousand years what originally took about six millenniums in the Old World!

By the same token, no archaeologist today would attribute to prehistory Europeans the independent invention of bronze casting, iron work, the wheel, weaving, pottery, writing, and so many other cultural elements that were derived from the Middle East.

What then would cause one to insist that what was not possible for the Europeans (duplicating culture independently) was possible for the American Indians??? Especially when at the same time we are taught that the Europeans were of superior stock?

The isolationist must also explain why the American race should have been the last to emerge from an uncivilized state and why, once they emerged, their progress should have been so phenomenally rapid.

Will Durant, eminent American historian, in his book **Story of Civilization: Our Oriental Heritage**, described **India as the most ancient civilization on earth** and he offered many examples of Indian culture throughout the world. He demonstrated that as early as the ninth century B.C. E. Indians were exploring the sea routes, reaching out and extending their cultural influences to Mesopotamia, Arabia, and Egypt.

Although modern-day historians and anthropologists might prefer to accept Egypt or Babylon as the most ancient civilization, due to various archaeological findings, their theories are by no means conclusive. The popular theory in the academic community that the Aryans invaded India has also been disproved. (refer to the chapter on **Aryan Invasion Theory**). Perhaps it is easier for modern people to accept ancient Egypt and Babylon, whose ancient civilizations have no living representation and thereby pose no threat or challenge to the status quo.

But India is alive and kicking. If we recognize with ancient India as the spiritual giant, we would have to reckon with her modern-day representations. No wonder the Vedic literature and spiritual ideology loomed as the greatest threat to the British Raj in India in their imperialistic conquest of India.

Emilio Estrada, Clifford Evans, and Betty J. Meggers, who have pointed out many striking similarities between Ecuadorian archaeological remains of the early Bahia and early Jama-Coaque cultures with relics of approximately the same period of Japan, India and SoutEast Asia, also support the feasibility of trans-pacific voyage.

The New Zealand pre historian, **S. Percy Smith**, tries to show in his **Hawaiki - the Original home of the Maori** that the ancient Polynesian wanderers left **India** as far back as the fourth century B.C. and were daring mariners who made, more often than not, adventurous voyages with the definite object of new settlements. A people who reached as far east as Easter Island could not have missed the great continent ahead of them.

From America - Gautemala

Panataran relief - Java

What was the motive that urged Indians and Asians to undertake long journeys to America?

It was probably **gold,** which initially attracted Indian adventurers and merchants to Southeast Asia. Southeast Asia was a region broadly referred to by ancient Indians as **Suvarnabhumi (Land of Gold) or Suvarnadvipa (the Island of Gold).** Arab writer **Al Biruni** testify that Indians called the whole Southeast region Suwarndib. Hellenistic geographers knew the area as the Golden Chersonese. The Chinese called it Kin-Lin; kin means gold. The mariners were probably looking for gold or were prospecting for precious metals, stones and pearls to cope with the demand in the centers of ancient civilizations.

This view is substantially reinforced by **W. J Perry** who was the first scholar to point out that the distribution of the pearling beds of the world and why, wherever pearls are found similar complex religious beliefs, myths, beliefs, and practices are also found. It is therefore significant that the mythology of the pre-Columbian American civilizations "was deeply impregnated by the religious beliefs and practices and habits of life that obtained amongst the treasure-seekers of the Old World. " Equally significant is the fact that the Mayas preferred to settle in that part of Central America which was unhealthy but rich in precious stones and gold. Like Indians Asiomericans accumulated stones and gold and made symbolic ornaments from them. Mexican temples and idols, as in India, were lavishly decorated with gold and precious stones.

That cultural influences reached pre-Columbian America from Asia there can now be very little doubt. The theory of American isolation breaks down completely when these facts are established.

According to **Professor Elliot Smith**:

"Monroe Doctrine' which demands that everything American belongs to America, and must have been wholly invented there."

(source: **Myths of Pre-Columbian America** - **By Donald A. Mackenzie** p.33).

Mons Leon Delbos has noted:

"The influence of the civilization worked out thousands of years ago in India is around and about us every day of our lives. It pervades every corner of the civilized world. Go to America and you find there, as in Europe, the influence of that civilization which come originally from the banks of the Ganges."

(source: **Hindu raj in the World - By Krishan Lal Jain** p.132).

In Conclusion, it may be said, that whatever the motive, transpacific traffic would seem to have gone on regularly for about two thousand years, from about the eighth century B.C. to the twelfth century.

In view of so many parallels in fundamental conceptions and detail, in mythology, ritual, iconography, architecture, religious beliefs, crowns, thrones, plants, together with the evidence of migration, it appears incredible that isolationists should continue to insist on the independent evolution of Asiomerican civilization.

European Conquest and Atrocities

The Mayans were the earliest people to have found a civilization there, they moved from the Mexican plateau into Gauatemala. They were later pushed out, by the Toltecs, who, in turn, dislodged by the Aztecs.

This was an era that saw the blossoming of a unified Central American civilization. The Toltecs were very prosperous. They were accomplished architects, carpenters and mechanics. The Aztecs also made some striking cultural advances. They developed a lake civilization based on the island in Lake Texcoco, where they built their remarkable city. Mexico-Tenochtitlan, which was surrounded by the colorful Chinampas, or floating gardens. The city was described by **Bernal de Diaz,** the companion of the Spanish commander Cortes, as a dreamland which inspired the Spanish invaders to lyrical adulation and **murderous plunder**. Diaz wrote that the Mexicans were like the Romans, and that there was nothing in Spain to match the royal palace of Montezuma.

Hernando Cortes is said to have **slaughtered,** in less than two hours, six thousand people who had gathered in a temple patio. Destruction of Aztec cities was so complete that almost everything lay in ruins.

The elite of the Asiomericans were put to death almost to the last man. After his entry into the conquered capital Tenochtitlan, *Cortes wrote that "you could not put down your foot without stepping on an Indian corpse."* In addition, his soldiery, a few years later in the Inca Empire, driven by lust for gold, melted down irreplaceable works of art by the ton to get the precious metal. Thus, the Aztecs civilization came to violent end.

Burning of Libraries and records:

If the history of pre-Columbian America, is obscure, it is because after the Spanish conquest, the first **Bishop of Mexico, Juan de Zumarraga,** *burned all the records of the Library of Texcoco in Tlateloco market square as "the work of the Devil," and religious fanatics destroyed temples and statues.* Zumarraga, gloating over his success, wrote to his superiors in 1531 that he alone had five hundred temples razed to the ground and twenty thousand idols destroyed.

Fray Diego de Landa, the second Bishop of Yucatan, following the pattern, reduced the Maya Library in Yucatan to ashes in 1562. Post-Columbus history of America for 300 years was the story of ruthless destruction and fanatics like Bishop Diego da Landa burnt a huge bonfire of valuable documents and nothing but the three codices of **'Chilam Balam'** could survive the holocaust....

He wrote **Relación de las cosas de Yucatán, A Narrative of the Things of Yucatan** in 1566, Therein the states,

"We found a large number of their books of these letters, and because they did not have anything in which there was not superstition and falsehoods of the devil, we burned them all, which they felt very sorry for and which caused them grief."

(source: **Proof Vedic Culture's Global Existence** - **By Stephen Knapp** p. 259).

Landa, in his religious zeal, ordered all their idols destroyed and all Mayan books to be burned; he was surprised at the distress this caused the Indians. His orders to destroy all icons and hieroglyphics obliterated the Mayan language forever, helping to undermine and destroy the civilization he so vividly described.

It was Landa that gave the orders for all the Mayans to bring all manuscripts to the public squares in Mani to be burned. All these books contained what would now be priceless information on astronomy, medicine, religion, and philosophy. **What Emperor Theodosious of Constantinople did to the library at Alexandria to save Christianity from the Greek and Oriental pagan knowledge deposited there, these priests did in Central America with similar motives but larger success.**

The burning of manuscripts continued for decades. Soldiers were encouraged to ransack palaces, public buildings, and private houses to find manuscripts. **Pablo Jose de Arriaga, the head of the Jesuit College in Peru,** in almost **unparalleled fanaticism**, caused the systematic and wholesale destruction of all state archives, customs records, royal and imperial archives, codes of laws, temple archives, and historical records. Less than a score of manuscripts escaped annihilation. These libraries contained records of ancient history, medicine, astronomy, science, religion, and philosophy.

The Spaniards destroyed whatever they could, but they could not, for instance, burn the great **Pyramid of the sun** and the remains of **Teotihuacan**, which speak of the splendid bygone civilization. This is one of the great crimes of world cultural history

No matter how much historians stretch their imagination, it will never be possible to reconstruct a picture of these advanced civilizations which would do them justice, and yet be held historically acceptable.

Beyond Mexico, the **ancient Andean or Peruvian civilization** also suffered an even worse fate at the hands of the Spainard's than did their neighbors in Central America. The Spanish assault on the **Incas, the Spanish avarice of gold, and barbarities perpetrated in the wake of victory, including the inhuman tortures publicly inflicted on the Inca King, Atahuallpa, are illustrations of savagery seldom surpassed in history.**

The Story of Betrayal

The Spaniards were mistaken by Asiomericans for their legendary white gods, who were to be made welcome and it they inflicted suffering it was to be accepted as a divine judgment. And by a tragic coincidence, the Spanish conquerors invaded Mexico at about the time, in 1519, as the Aztec priests and tradition had predicted the return of the white gods. The Aztecs even offered the Spanish conquistadores the vestments of Quetzalcoatl and other gods and considered performing human sacrifice to them in case they were fatigued after such a long journey. Through out the Incas Empire, the Spainiards were greeted as *Viracocha,* the Inca name of the great White God they had been waiting for. It is only when the Asiomericans were completely horrified and disillusioned by the brutalities and merciless killings, that they recognized their mistake.

The realization that the Spainard's were not gods, but *popolocas* (**barbarians**), however, came too late.

The European conquerors of South and Central America not only destroyed practically all the records and literature of Asiomerica, but created an utterly distorted images of the American past by taking some of its ugly features out of context and magnifying them out of proportion. For instance, the human sacrifice practiced by the Aztecs was repeatedly stressed without explaining its extenuating features, and without pointing out that human sacrifice had not been unknown to other peoples, such as in Europe and Rome. Taking their technique a step further they contrasted this picture with that of their own deeds in Asiomerica in which European misdemeanor, caprice, and criminality were soft-pedaled and civilized and human behavior emphasized.

Most people believe that Asiomericans were uncivilized hordes with an occasional freak of knowledge, who had contributed nothing of permanent value to civilization by 1492. Despite a good deal of information to the contrary, there is resistance to accepting a change in this image. Misconceptions multiply fast but die slowly.

The Mexican Indians and the Incas of Peru were primarily vegetarians. They were of high moral character and hospitable and generous as a habit. They practiced astrology, and mental telepathy was common among them. It was perhaps their peace-loving disposition that, like the Hindus, allowed them to be ruled by Europeans.

The Europeans, through book burning and bayonet, successfully, "converted" them, leaving very little trace of their noble civilization.

***

The Devastation of the Indies – by Bartholome de Las Casas - excerpts

"The Devastation of the Indies is an eyewitness account of the first modern genocide, a story of greed, hypocrisy, and cruelties so grotesque as to rival the worst of our own century. **Las Casas writes of men, women and children burned alive "thirteen at a time in memory of Our Redemeer and his twelve apostles."** He describes butcher shops that sold human flesh for dog food ("Give me a quarter of that rascal there," one customer says, "until I can kill some more of my own"). Slave ship captains navigate "without need of compass or charts," following instead the trail of floating corpses tossed overboard by the ship before them. Native kings are promised peace, then slaughtered. Whole families hang themselves in despair. Once fertile islands are tuned desert, the wealth of nations plundered, millions killed outright, whole people annihilated.

The papacy empowered the two crowns (Spanish and Portuguese) to conquer and even enslave pagans "inimical to the name of Christ."

The Spaniards killed more Indians here in twelve years by the sword, by fire, and enslavement than anywhere in the Indies. ....."

(source: **The Devastation of the Indies – by Bartholome de Las Casas**).

Articles:

Maya Civilization of Mexico.
Baffling Links with Ancient India
By Anand Sharma
http://www.indiagov.org/perspec/mar99/maya.htm

The archaeological remains of ancient Maya civilization of Mexico are lying scattered in the parts of Yucatan, Campeche, Tabasco and eastern half of Chiapas as well as in the territory of Quintana Roo of the republic of Mexico. Covering an area of about 125,000 square miles, its traces are to be found in the western section of Honduras Republic, Peten and adjacent highlands of Guatemala and practically in the whole of Honduras.

Admiral Christopher Columbus mistakenly called the New World inhabitants as Indians. Although he corrected himself subsequently, the natives of Americas continued to be called 'Indians'. During the course of his third journey, Columbus came into contact with 'Maya' people.

Many theories have been advanced by scholars to explain the origins of these American Indians and if there were any links between the ancient civilizations of the Old World and the New World. There are historians who believe that the American civilizations were purely native in origin and also those who maintain the theory of Asians crossing over through Bering Strait via Alaska and reaching the American continent some 12,000 - 15,000 years ago. However, the antiquity of American Indians remains shrouded in the veil of mystery. In spite of a great deal of investigations, explorations and deep study by scholars and innumerable historians during the last many centuries, what we know about pre-Columbus Americas is very little in comparison to what we do not know. To quote Glyn Daniel from his book 'The First Civilizations', "within 15 years, between 1519 to 1533, the Western world discovered and brutally destroyed three civilizations - the Aztecs of Mexico, Maya of Yuacatan and Guatemala and Inca of Peru."

The unique elaboration of the Mayan civilization has been a challenge to the imagination of explorers and students of history. The Mayans had attained the highest maturity in art, craft, sculpture and hieroglyphs. Innumerable theories exist about these ancient people. Their magnificent achievements in social, economic, political and religious fields, their calendar and hieroglyphic writings, reasons of the sudden collapse of their classic culture everywhere in Mesoamerica, the reality of 'Kulkulkan Quetzal-Coatl' myth are some of the riddles of Mexican history challenging modern research. The 'Maya' Indians spent thousands of years in building their

magnificent monuments and Mayapan, Palenque, Copan, Tikal, Kaminalijuyu and Piedras Negras were the centres where Mayan culture flourished in splendour. How and why these places were deserted in the past is still a mystery. Although modern scientists have achieved significant success in deciphering Maya calendar system, none has been able to decipher their hieroglyphic system of writing.

The possibility of links of these people with Old World civilizations and particularly with ancient India is not acceptable to many historians. However, there are those who hold a different view. **Eminent scholar-writers like Mackenzie, Hewitt, Tod, Pococke and Mrs. Nuttal have collected plenty of data to show that ancient American civilizations were influenced by Old World civilizations.** We have to remember that the post-Columbus history of America for 300 years was the story of ruthless destruction and fanatics like Bishop Diego da Landa burnt a huge bonfire of valuable documents and nothing but the three codices of 'Chilam Balam' could survive the holocaust.

There are two specific archaeological discoveries pertaining to 761 AD, about which most Mexican historians are silent, that attract our attention as possible links of Maya civilization to ancient India. The first one is a wall panel (Panel No. 3 of Temple 0-13, at Piedras Negras, Guatemala; reproduced as Plate 69, page 343 of 'The Ancient Maya' by S.G. Morley) belonging to the Later Classic Stage of Mexican history, associated with the peaking of Maya architecture and sculpture. Mexican historians have not given any interpretation of this panel. It appears that the scene depicted in the panel relates to the great Indian epic 'Ramayana'. It shows a king sitting on the throne and one maidservant with two children standing on the right side of the throne. A guard stands behind the three. On the other side of the king, three important personages are standing whereas the vassal chiefs and important feudatories are sitting in front of the throne. The king on the throne is believed to be Suryavanshi Ram with his three illustrious brothers standing by his side. The two little children are his two sons with a maid and a guard behind them. Amongst the three persons on the right, two are engaged in a discussion whereas the third one, apparently Lakshman, is standing with a bold, brave and confident demeanour which was characteristic of him. The above panel is a beautiful piece of sculpture and an evidence of great Mayan heritage, their artistic taste and superior creative ability and, above all, an archaeological evidence to prove India's link with Mexico in the 8th century at least. The artistic design and postures of the figures carved can be compared to those found at Ajanta and Ellora caves in India. This interpretation, however, remains only a plausible one till the hieroglyphics and frescoes surrounding the wall panel are deciphered.

Another archaeological discovery at the same place i.e. Piedras Negras, Guatemala, is a stone stela (No. 12, Plate No. 18, page 61 of 'The Ancient Maya' by S.G. Morley). A mythological scene has been carved in this stela, depicting the architectural and artistic maturity of the Maya people of the Classic Stage (594 - 889 AD). There is a beautiful image of a deity with eight hands (ashtabhuja). The art style is discernibly Indian as in no other religion of the world deities of this type were worshipped. It may be mentioned that the ruling dynasty of Mexico at the time of the conquest by Spaniards was 'Aztec' or Ashtak (Eight). The evidence in the form of such images leaves little doubt about the presence of Indian culture amongst the ancient Mexicans. The stela pertains to the period of more than eight centuries before Columbus set foot on the soil of the so-called New World.

The place where these pieces have been discovered - Piedras Negras - appears to be a distorted form of 'Priyadarsh Nagraj' in Sanskrit, as has been the case with so many words distorted by European pronunciation. These stone sculptures are adornments of a Mayan temple and depict some popular mythology prevalent amongst the people of the time. Both human sacrifice and idolatry were much in practice amongst Maya people. Morley has given a detailed and vivid account of Maya culture and society in his book 'The Ancient Maya', profusely quoting Bishop Diego de Landa.

Bishop Landa states that Maya people "…had a very great number of idols and temples which were magnificent in their own fashion and besides the community temples, the lords, priests and leading men also had oratories and idols in their houses where they made their prayers and offerings in private". Not only of gods but idols of even animals and insects were prepared by Maya people, who believed in immortality of soul and afterlife. This definitely smacks of an Indian connection.

More serious efforts to connect the ancient American civilizations with those of ancient India have to be made. The Trans-Pacific contacts of the people of south-east Asia with the people of ancient America have been established beyond doubt. It is also a well-proven fact of history that Indians of ancient times were great sea-farers. In pre-Mahabharata era as well as in the subsequent period, the kings of southern India possessed large fleets used for trade with the Arabian and European countries where Indian merchandise was much in demand. India's links with south-east Asia and other far-off islands of the Pacific Ocean are an established fact of history. The conquest of Malaya by Rajendra Chola, the story of Buddhagupta the Great Sailor (Mahanavik), the religious expeditions of Indians to preach the gospel of Buddhism in the distant lands of Cambodia, Annam, Bali, Java, Sumatra, Borneo, Japan, Korea, Mongolia and China are proofs of the impact of Indian culture.

A remarkable feature of the Indian culture has been that colonial domination was never identified with economic exploitation. The Buddhist Jatakas (folk tales) narrate many stories relating to maritime adventures and daring sea journeys which establish that such activities were an essential part of Indian life at that time.

The author is a historian settled in Vienna.

Master Builder Uncovers Striking similarities in Indian and Incan/Mayan Sacred Structures

Hinduism Today - June 1995
http://www.hinduismtoday.kauai.hi.us/htoday.html

Ancient Architects Employed Analogous Design Doctrines and Masonry Methods

"Sri V. Ganapati Sthapati," read Deva Rajan's fax to our Hawaii editorial office from Machu Picchu high in the rugged Andes Mountains of Peru, South America, "has just measured with tape, compass and a lay-out story pole, two ancient Incan structures at Machu Picchu: a temple and a residence. He has confirmed that the layout of these structures, locations for doors, windows, proportions of width to length, roof styles, degree of slopes for roofs, column sizes, wall thicknesses, etc., all conform completely to the principles and guidelines as prescribed in the Vastu Shastras of India. Residential layouts are identical to those found in Mohenjodaro. The temple layouts are identical to those that he is building today and that can be found all over India."

These startling discoveries came during a March, 1995, visit of the master builder to the ancient Incan and Mayan sites of South and Central America. Ganapati Sthapati is India's foremost traditional temple architect and perhaps the first true expert in sculpture and stone construction to personally examine these ancient buildings. To do so has been his dream since the 1960's.

Sthapati is the architect of the San Marga Iraivan Temple [see page 28] being built at Kauai Aadheenam, Hawaii, home of Hinduism Today. To fulfill this life-long ambition to visit the Mayan and Incan sites, our publisher, Satguru Sivaya Subramuniyaswami, arranged for California builders and architects Deva Rajan and Thamby Kumaran to accompany Sthapati on a three-week trip through South and Central America. "Like boys on holiday," they described their exciting trek of discovery which began 11,000 feet high in central Peru at the famed Incan site of Machu Picchu which remained hidden until 1911.

It is Sthapati's theory that Mayan, the creator of Indian architecture, originated from the Mayan people of Central America. In Indian history, Mayan appears several times, most significantly as the author of Mayamatam, "Concept of Mayan" which is a Vastu Shastra, a text on art, architecture and town planning. The traditional date for this work is 8,000bce. Mayan appears in the Ramayana (2000bce) and again in the Mahabharata (1400bce)-in the latter he designs a magnificent palace for the Pandava brothers. Mayan is also mentioned in Silappathikaram, an ancient Tamil scripture, and is author of Surya Siddhanta, one of the most ancient Hindu treatises on astronomy.

The fundamental principle of Mayan's architecture and town planning is the "module." Buildings and towns are to be laid out according to certain multiples of a standard unit. Floor plans, door locations and sizes, wall heights and roofs, all are determined by the modular plan. More specifically, Mayan advocated the use of an eight-by-eight square, for a total of 64 units, which is known as the Vastu Purusha Mandala. The on-site inspection by Sthapati was to determine if the Incan and Mayan structures did follow a modular plan and reflect the Vastu Purusha Mandala. He also intended to examine the stone working technology-his particular field of expertise.

Sthapati was born in 1927 into a family whose ancestors, members of the aboriginal tribe of Viswakarmas, built the great temple at Tanjore in the 10th century ce at the request of Raja Raja Chola. He learned the craft from his father, Sri M. Vaiydyanatha Sthapati and his uncle, Sri M. Sellakkannu Sthapati. He spent 27 years as head of the Government College of Architecture and Sculpture in Mahabalipuram, Tamil Nadu, and is responsible for India's significant resurgence in the ancient art of stone carving. After his retirement in 1988, he continued building temples and founded the Vastu Vedic Research Foundation to explore the ancient origins of the temple craftsmen. He is responsible for the construction of dozens of temples in India, plus others in Chicago, Washington D.C., Kentucky, Boston, Baltimore, San Francisco, and Hawaii in the USA as well as in the UK, Singapore, Fiji, Malaysia, Mauritius and the Seychelles.

Machu Picchu

The moment Sthapati approached an ancient Incan residential building at Machu Picchu on March 15th, he pointed at the wall and said, "That is a thickness of one kishku hasta"-33 inches, a standard measure in South India first promulgated by Mayan. He proceeded to measure the buildings in detail and discovered each was indeed built on a module-based plan [see photos and drawings to right], following the system of Mayan's eight-by-eight squares. The module method was followed within small fractions of an inch, according to Thamby Kumaran, who was taking the measurements. The buildings were oriented toward certain points of the compass, also a principle of Mayan, rather than randomly placed. Also the lengths of buildings were never more than twice their width, as Mayan stipulated.

From Machu Picchu the three adventurers traveled to Saqsayhuman, an Incan site dated from 400 bce to 1400 ce. Here are the famous stone walls made of rocks weighing up to 160 tons and fitted together so expertly that a knife blade cannot be put in any joint. "Nobody knows how these stones were put in place," offered their guide when they first arrived on the site. Sthapati politely differed, and pointed out the insets chiseled into the base of many stones, as well as small knobs left on their faces. "These are for the use of levers, the exact same system we continue to use in India to move large stones. Thirty to forty men can move these very large rocks with this method," he explained to the guide's astonishment.

He could see other details of the stone working were identical to what is practiced in India, such as the method of quarrying stones by splitting off slabs [photo page 14]. So too was the jointing and fitting of stones, the use of lime mortar, leveling with a plumb line and triangle, and the corbeling for the roofs. Corbeling is the method by which stones are drawn in layer by layer until they meet or nearly meet to allow a roof slab to be placed on top. Sthapati considers the similarity of this technology to that used in India to be very significant. The use of the horizontal lintel and the absence of the arch are additional noteworthy points of correspondence between the two traditions.

Land of the Mayans

From the high Andes the threesome flew to Mexico's Yucatan peninsula. They and forty-five thousand other Mayan aficionados arrived at Chichén Itzá in time for the summer equinox on March 21st. At the moment of sunset on the equinox, a shadow is cast by the steps of the Pyramid of the Castle [photo right and on page one, where the shadow can be seen] upon the side of the staircase to the top. The shadow creates the image of a serpent's body which joins a stone carving of a serpent's head at the bottom of the stair case. It is a stunning demonstration of Mayan astronomical and architectural precision.

Archeologists, tourists and New Agers all gathered for the event, each with their own agenda. Since the publication of The Mayan Factor-A Path Beyond Technology by José Arguëlles, the Mayans and their advanced calendar, astronomy, philosophy and architecture have enjoyed a wide following in the West. Sthapati too has found much of interest in Arguëlles' book.

Standard academia archeologists consider the New Age interest as bordering on superstition and refuse to even talk to anyone partial to Mayan mysticism. A recent book, Copan and Tikal, the Secrets of Two Cities, by Honduran author Ricardo Agurcia Fasquelle and archaeologist Juan Antonio Valdes of Guatemala, claim that the Mayan pyramids were actually castles for the wealthy and that what were once thought to be monuments to the Gods were in fact tributes to the dynasties of various kings. Not likely.

Native Mayan teachers such as Hunbatz Men, whom Sthapati met while in the Yucatan, are taking advantage of the interest to spark a revival of the original Mayan religion among the Mayans themselves. Since their brutal conquest and forced conversion to Catholicism by the Spaniards in the 16th century, Mayans have lived an oppressed and impoverished existence.

Amidst the crowds, Sthapati, Deva and Thamby again unsheathed their tape measures and closely examined the Pyramid of the Castle [see diagram right]. It too conformed to the Vastu Vedic principles of Mayan. The temple structure at the top was exactly 1/4th of the base. And the stepped pyramid design derived from a three-dimensional extension of the basic eight-by-eight grid system. The temple room at the top was also modular in design, with the wall thickness determining the size of doorways, location of columns, thickness of columns and the width and length of the structure.

Most interesting was the name of this structure-chilambalam, meaning a sacred space. It is Sthapati's theory that the Mayans worshiped the very concept of space, specifically a space made according to the modular system. This same idea is found in Hinduism in the sacred room in the center of the Chidambaram Siva Temple in South India, where space or akasha is worshiped-there is no idol. Chidambaram, Sthapati finds suspiciously like chilambalam, means "hall of consciousness." The concept of sacred space is at the center of the mystical shilpi tradition of India

The richly decorated Mayan buildings provided a feast for a sculptor's eye. There is a very common feature called a "mask" by the archeologists, but known to the Mayans as "Big Nose." A nearly identical face is a common feature of Hindu iconography, seen, for example, at the top of the arch placed behind a deity. "It is the very same thing in India," chuckled Sthapati, "we call it `Maha Nyasa'-Big Nose!" Several other details of the sculptures were similar or identical to India, such as the earrings, ear plugs, teeth, head dresses, even buckles around the waist. There are bas reliefs of priests sitting in lotus posture meditating.

From Chichén Itzá, they traveled on to Uxmal where they observed the snake and "bindu" designs on the wall faces [picture right]. They were astounded by the thousands of pyramids at Tikal and Uxacturn in Guatemala, all laid out to conform to a grid pattern and oriented in astronomically significant directions.

As in Mayan buildings, Indians have been using lime mortar for all of their stone and brick buildings. This can been seen in the monumental creations in Mahabalipuram and also in the stone temples of Tanjor and Gangai Konda Choleasuram in Tamil Nadu. The outer surfaces were plastered, embellishments worked out in lime mortar, then painted. This method was strongest among the Mayas at Tikal and Uaxactún, where all of the structures once had a plaster coating painted with many colors.

What is the Connection?

Sri Ganapati Sthapati postulates, after deep thought from his journey to the land of the Mayans and a lifetime study of South Indian architecture, that Mayan, the divine architect of Indian tradition, came from Central America. Ancient Tamil literature speaks of lands to the south of India 30,000 years ago, at the time of the first Tamil Sangam. According to scientists 160 million years ago India did lie physically close to Africa, South and Central America, but has since moved away as a result of continental drift. At that date, it would have been dinosaurs and not Mayans who wandered from the Americas to India, but perhaps the time frame for the continental drift is not correct. Architecture aside, there are significant similarities between Hinduism and the native religions of both Africa and the Americas.

There are other explanations. The simplest is boats. In 1970 the Norwegian Thor Hyerdal sailed a reed boat from Africa to the

Americas in 57 days using no modern equipment. The boat, Ra II, was built for him by the Aymaro Indians of Lake Titicaca, Peru, neighbors of the ancient Incans. The double-hulled catamarans of India are also capable of long sea voyages. Historians discount contact between ancient people, but many cultures, such as the ancient Hawaiians, had remarkable sea-faring skills.

Perhaps the coincidences of stone working are just that, coincidence -a favorite "explanation" of archeologists. Stone workers will discover the same techniques naturally, without need for outside help, they say, and can point to historical incidents of simultaneous discovery. But this explanation hardly accounts for the similarities in motifs and modular design.

Another explanation is mystical-that Mayan, who is a divine being in Indian histories, appeared to both peoples. He could have conveyed the knowledge through visions and dreams.

Sri Ganapati Sthapati is vigorously continuing his research and is open to suggestions from Hinduism Today readers. Any information you may have on the similarities of the two cultures may be shared with him by writing to:

Vastu Vedic Research Foundation, Plot A-1, H.I.G. Colony, 1st Main Road (New Beach Road), Thiruvalluvar Nagar, Thiruvanmiyur, Madras 600 041, India.

Sidebar: The Vastu Vedic Tradition
Text: V. Ganapati Sthapati spoke eloquently during our interviews of the deep mysticism of his tradition. Here is an excerpt from his paper, "Synthesis of Science and Spirituality in the Vastu Vedic Tradition of Art and Architecture."

The Vastu Shilpa tradition of Indian origin has made a scientific approach to the problems of spirit and spiritual realization. This scientific tradition of Va-stu perceives Shakti [energy] as all-pervasive and as the casual substance for all the manifestations of visual and aural phenomena in the universe. They have named their Shakti as Paravastu in Sanskrit and the universal objects as Vastu. The word Paravastu means the quintessence or the ultimate substance. This phenomenon of Vastu and Va-stu can be equated to gold turned into gold ornaments, the shilpi acting as the agent for the transformation. Further, this Vastu is recognized by the Vastu tradition as one dwelling in the inner space of individual beings as well as in the outside space, the universal being. The science says that it is space, because of its self-propelled vibration, that turns into forms-the vibration force acting as the working agency. To do this is its unquestionable nature. This agency is designated as Absolute Time, emerging out of space. This is analogous to the vibration of the instrument of the vina developing into sound space. Here, sound space turns into sound form, and this when set to rhythmic vibration turns into musical form.

There is also another space responsible for the sound space. It is called luminous space. This pervades the entire universe (cosmos). This is the ultimate space wherein lie the Absolute Time and Absolute Energy. This is filled with luminous substance (Vastu) consisting of Paramanus, the minute particles of space. This luminous space is supersensitive, capable of becoming conscious of itself and vibrating into objects that it becomes conscious of. This action is its intrinsic nature and responsible for the forms that occur in the inner space of individuals as well as in the outer space of the universe. The experience of this form, in terms of space, is Spiritual Vision. This phenomenon is nothing but abstract science held by the Vastu tradition.

The Vastu tradition designates the inner being as Shilpi and the inner manifest subtle form as Shilpa, and as such the whole inner and outer universes are filled with shilpas. The gross visual forms are projected outside from the inside, by the inner being. This is the transformation of the subtle inner form into the gross visual, through the fingers exactly in tune with the subtle in terms of time and space. That "the sculptor becomes the sculpture and the poet becomes the poem" is therefore a powerful Vaignanic statement of the Vastu Vedins, and it is of pure advaitic tone. The projected visual form has the touch of a lyric, depending upon the individual inner culture.

Sidebar: The Linguistic Similarities
Text: Chacla in Mayan refers to force centers of the body similar to the chakras of Hinduism. K'ultanlilni in Mayan refers to the power of God within man which is controlled by the breath, similar in meaning to kundalini. Mayan chilambalam refers to a sacred space, as does Tamil Chidambaram. Yok'hah in Mayan means "on top of truth," similar to yoga in Sanskrit.

Did You Know?

Chess originated in India

Sir William Jones wrote that chess had been known to Indians in antiquity as **Caturanga**, meaning the four wings of the army, which are described in the *Amarakosa* as elephants, horses, chariots, and infantry. One of the early Sanskrit texts, the **Bhavishya Purana,** contains a tale of a prince who lost all his possessions in a game of chess played with dice. Chess must indeed go deep into early Indian history, because it was associated with astronomical symbolism though out its growth.

According to **H. J. R. Murray**, who published his monumental study **A History of Chess** (Benjamin Prublisher. December 1985 ASIN 0936317019) in 1913, chess descended from an earlier Indian game called **Astapada**, played on a board containing 8 x 8 cells.

Chaturnaga was taken to Persia in the sixth century during the reign of Anushirvan (531-579) where it came to be known as *Chatrang,* whcih according to the Arabic phonetic system became *Shatranj.*
The earliest reference to chess in Persia is found in the Karnamak-i-Artakh Shatr-i-Papakan, written about 600. In the tenth century, the *poet Firdusi* related a traditional story in his epic poem, Shahnama of how chess came to Persia through an envoy of the King of Hind (India).

For more on Chess please refer to chapter on **Hindu Culture** and **War in Ancient India**).

Western scholars have underestimated India's achievement with regard to commerce, ship-building and navigation, and sea travel. The colonist bias against Indian culture is fully matched by the Indian 'Marxist historian' bias against culture.

India, situated at the central point of the ocean that washes on its coast on three sides, seemed destined very early for a maritime future. In the Rig Veda, a passage (I. 25.7) represents Varuna having a full knowledge of the sea routes, and another (L. 56.2) speaks of merchants going everywhere and frequenting every part of the sea for gain. The Ramayana refers to the Yavan Dvipa and Suvarna Dvipa (Java and Sumatra) and to the Lohta Sayara or the Red Sea. The drama Sakuntala, Ratnavali of King Harsha, Sisupalvadha of Magha, relates stories of sea voyages of merchants and others, and the fabulous literature of India is replete with stories of sea voyages by Hindus. Historian R. C. Majumdar states: "The representation of ship on a seal indicates maritime activity, and there is enough evidence to show that the peoples of the Sindhu valley carried on trade not only with other parts of India but also with Sumer and the centers of culture in Western Asia, and with Egypt and Crete."

There was a time in the past, when Indians were the masters of the sea borne trade of Europe, Asia and Africa. They built ships, navigated the sea, and held in their hands all the threads of international commerce, whether carried on overland or sea. In Sanskrit books we constantly read of merchants, traders and men engrossed in commercial pursuits. Manu Smriti, the oldest law book in the world, lays down laws to govern commercial disputes having references to sea borne traffic as well as inland and overland commerce. India, according to Chamber's Encyclopedia, "has been celebrated during many ages for its valuable natural productions, its beautiful manufactures and costly merchandise," was, says the Encyclopedia Britannica, "once the seat of commerce." Sir William Jones was of opinion that the Hindus must have been navigators in the age of Manu. Lord Elphinstone has written that "The Hindus navigated the ocean as early as the age of Manu's Code because we read in it of men well acquainted with sea voyages." Ms. Manning, author of Ancient and Mediaeval India writes: "The indirect evidence afforded by the presence of Indian products in other countries coincides with the direct testimony of Sanskrit literature to establish the fact that the ancient Hindus were a commercial people."

Indian traders would set sail from the port of Mahabalipuram, carrying with them cinnamon, pepper and their civilization to the shores of Java, Cambodia and Bali. Like the Western world, the Indian world stretches far beyond its border, though India has never used any violence to spread her influence. Noted historian, R. C. Majumdar observed: "The Indian colonies in the Far East must ever remain as the high watermark of maritime and colonial enterprise of the ancient Indians." It has been proved beyond doubt that the Indians of the past were not, stay-at-home people, but went out of their country for exploration, trade and conquest. Sir Aurel Stein (1862-1943) a Hungarian, whose valuable researches have added greatly to our knowledge of Greater India, remarks: "The vast extent of Indian cultural influences, from Central Asia in the North to tropical Indonesia in the South, and from the Borderlands of Persia to China and Japan, has shown that ancient India was a radiating center of a civilization, which by its religious thought, its art and literature, was destined to leave its deep mark on the races wholly diverse and scattered over the greater part of Asia."

Introduction

"Do Thou, Whose countenance is turned to all sides, send off our adversaries as if in a ship, to the opposite shore: do Thou convey us in a ship across the sea for our welfare."

- **Rig Veda**. 1., 97, 7 and 8

****

Professor A. L. Basham, who reduced India along with her culture to a Wonder land wrote in his book **Wonder That Was India** has observed that: "certain over-enthusiastic Indian scholars have perhaps made too much of the achievements of ancient Indian seafarers, which cannot compare with those of the Vikings or of some others early maritime peoples." **A careful examination indicates that Prof. Basham's assessment is a characteristic example of colonialist bias in Indian historiography.** What was the Viking achievement? It is clear that the Vikings, during the period A.D. 800 to A.D. 1200, migrated to all the corners of Europe, they did not influence the people they came in contact with. On the contrary, they lost their identity under the influence of the superior cultures of the lands they visited.

In comparison to this, both from the qualitative and quantitative viewpoints, what was the Indian achievement? With regard to their contact with Southeast Asia Professor **D. P. Singhal** remarks: "Indians came into contact with the countries of Southeast Asia principally for commercial reasons. But whatever they settled they introduced their culture and civilization. In turn, they were influenced by the indigenous culture, laying thus the foundation of a new culture in the region. Indian cultural contact with Southeast Asia covers a period of **more than thirteen hundred years**, and segments of Indian culture even reached eastwards of this region."

(source: **India and World Civilization - By D. P. Singhal** p.25).

Goddess Tara: Rescued sailors who were at risk of Shipwreck. She could change color according to her moods. When

she was calm, she was green or white in color, when angry, she could be blue, red or yellow.

Sir Aurel Stein (1862-1943) a Hungarian and author of several books including **Ra`jatarangini: a chronicle of the kings of Kashmir** and **Innermost Asia : detailed report of explorations in Central Asia, Kan-su, and Eastern Iran** carried out and described under the orders of H.M. Indian Government, whose valuable researches have added greatly to our knowledge of Greater India, remarks:

"The vast extent of Indian cultural influences, from Central Asia in the North to tropical Indonesia in the South, and from the Borderlands of Persia to China and Japan, has shown that ancient India was a radiating center of a civilization, which by its religious thought, its art and literature, was destined to leave its deep mark on the races wholly diverse and scattered over the greater part of Asia."

(source: **The Vision of India - By Sisir Kumar Mitra** p. 178 and **Main Currents of Indian Culture - By S. Natarajan** p. 50).

Indians of old were keenly alive to the expansion of dominions, acquisition of wealth, and the development of trade, industry and commerce. **The material prosperity they gained in these various ways was reflected in the luxury and elegance that characterized the society.** Some find allusion in the Old Testament to Indian trade with Syrian coast as far back as 1400 B.C. Archaeological evidence shows that as early as the eighth century B.C., there was a regular trade relation, both by land and sea, between India on the one hand and Mesopotamia, Arabia, Phoenica, and Egypt on the other. (For more information refer to chapter on **India and Egypt**). The Chinese literary texts refer to maritime and trade activity between India and China as far back as the seventh century B. C. Recent excavations in Philippines, Malay Peninsula, and Indonesia confirm of early and extensive trade which continued down to the historical period. **It was this naval supremacy that enabled Indians to colonize the islands in the Indian Archipelago.** Shortly, after, there grew up a regular traffic between India and China, both by land and sea. India also came in close contact with the Hellenic world. We learn from ancient authority that in the processions of Ptolemy Philadelphus (285-246 B.C.) were to be found Indian women, Indian hunting dogs, Indian cows, also Indian spices carried on camels, and that the yachts of the ruler of Egypt had a saloon lined with Indian stones. Everything indicates that there was a large volume of sea-trade between India and the western countries as far as African coast. From the coast the goods were carried by land to the Nile, and then down the river to Alexandria which was a great emporium in those days.

There was a mercantile colony of Indians in an island off the African coast in the first century A.D. The adventurous spirit of the Indians carried them even as far as the North Sea, while their caravans traveled from one end of Asia to the other.

(source: **Ancient India - By R. C. Majumdar** p. 210-216).

On journeys by sea there were **jalaniryamakas – guides who could predict the behavior of waters.** In the sea coast town of Shurparak, there was an arrangement to train persons with the help of Niryamak Sutras. According to these, those person who traveled together in a ship were called sanyatrika. In the Mahajanaka Jatak, there is a dialogue between a person swimming in the ocean and **Goddess Mani Mekhala** who was the presiding deity of sea-journeys.

“Who is this person, who in an ocean which knows no bound is trying to swim with his hands? On whose reliance are you doing this exercise?
“O Goddess, I believe that one should do the exercise as long as it is possible. So I am doing this exercise though I do not see the shore.”

In this way the dialogue continues with the swimmer continuing to gather courage hoping against hope. Mani Mekhala was the Goddess whose influence obtained from Kanya Kumari to the island of Katah. There was a huge temple dedicated to her in Puhara where the Kaveri joined the sea.

The Greater India with Islands
(source: The Indians And The Amerindians - By Dr. S. Chakravarti)

Comparing the achievements of the Indians and the Chinese in Southeast Asia. **T. V. Mahalingam** observes: "Though China also exercised a considerable influence over countries of Southeast Asia, Indian influence was more effective and durable for the Chinese always remained colonies of foreigners with little inclination to mix with the local population and in contrast to what the Hindus achieved, there is nowhere any trace of the taking-over of Chinese culture by the children of the soil."

His views have been upheld by **John F. Cady** who concluded that: "Indian cultural patterns in particular became widely disseminated during the early centuries A.D., while Chinese influence, although culturally less contagious, virtually dominated from Sung times (960 and later) the trade and politics of the eastern seas."

(source: **History of post-war Southeast Asia - By John F. Cady** 1964. p. VI).

Amaury de Riencourt wrote: "The brightest sun shining over Southeast Asia in the first centuries A.D. was Indian Civilization. Waves of Indian colonists, traders, soldiers, Brahmins and Buddhist beat upon one Southeast shore after another. Great military power based on superior technical knowledge, flourishing trade fostered by the remarkable increase in maritime exchanges between India and these areas, the vast cultural superiority of the Indians, everything conspired to heighten the impact of the Indian Civilization on the Southeast Asian. **Passenger ships plied regularly between the Ganges, Ceylon and Malaya in the middle of the first millennium A.D. Indian settlers from Gujarat and Kalinga colonized Java, for instance, while others set out for Burma or Cambodia.** Old Indian books – the Kathasagara, the Jatakas and others – refer to these wondorous regions that set the imagination of civilized Indians on fire, to Suvarnabhumi, the fabulous “Land of Gold.” On the whole, the Indianization of Southeast Asia proceeded peacefully. Local chiefs and petty chieftains were admitted into the caste structure as Ksatriyas through a ritual known as vratyastoma, performed by an Indian Brahmin. All over Southeast Asia tremendous ruins are strewn, testifying to the immense influence of Indian Civilization."

(source: **The Soul of India - By Amaury de Riencourt** p.158-162. For more on Greater India, refer to chapter on **Suvarnabhumi**).

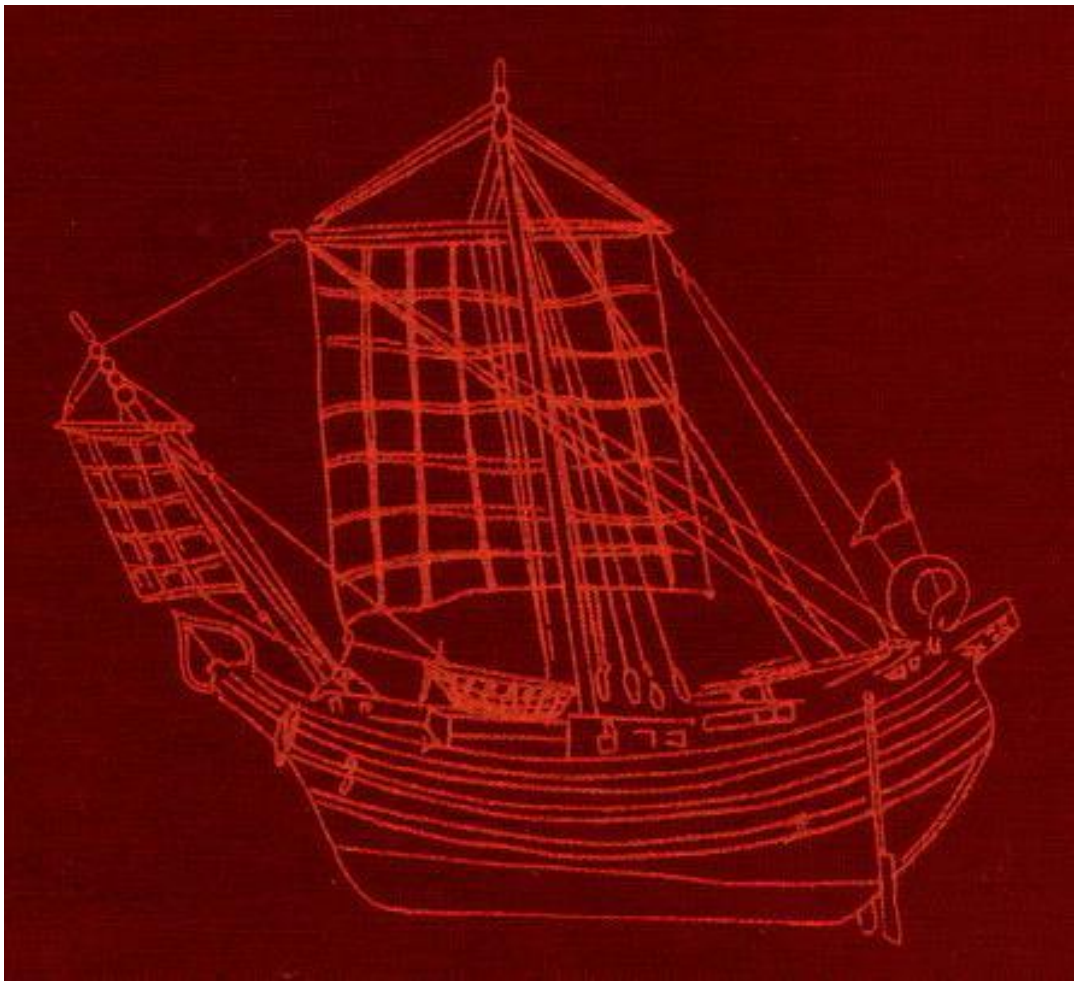
Allusions to Maritime Activity in Sanskrit Literature

All the universe rests within your nature, in the ocean,
in the heart, in all life. - Rig Veda IV. 58. 11

There are a number of terms in the Rig Veda that mean ocean or sea. **"Samudra" the main term in classical Sanskrit for the ocean,** is very common in the Rig Veda and this meaning for it makes sense in all passages. The symbolism of ships is as pervasive in the Vedas as that of the sea, which it tends to reinforce. The saving action of Agni, the sacred fire, is frequently compared to a ship that carries us across the river or sea.



As a ship across the river (or sea), Agni takes us across to safety (I. 97.8). Vedic culture was a maritime culture, the Vedic people lived by the sea for some time before the hymns of the Rig Veda were composed.

(source: **Gods, Sages, and Kings - By David Frawley** p. 43-64).

The Indians built ships, navigated the sea and monopolized the international trade both by sea route and land route. Indian literature furnishes evidence with innumerable references to sea voyages and sea-borne trade and the constant use of the ocean as the great highway of international intercourse and commerce.

Rig Veda

The oldest evidence on record is supplied by the Rig Veda, which contains several references to sea voyages undertaken for commercial purposes. One passage (I. 25.7) represents Varuna having a full knowledge of the sea routes, and another (I. 56.2) speaks of merchants, under the influence of greed, going sending ships to foreign countries. A third passage (I. 56.2)mentions merchants whose field of activity known no bounds, w ho go everywhere in pursuit of gain, and frequent every part of the sea. The fourth passage (VII. 88.3 and 4) alludes to a voyage undertaken by Vasishtha and Varuna in a ship skillfully fitted out, and their "undulating happily in the prosperous swing." The fifth, which is the most interesting passage (I. 116. 3), mentions a naval expedition on which Tugra the Rishi king sent his son Bhujyu against some of his enemies in the distant islands; Bhujyu, however, is ship wrecked by a storm, with all his followers, on the ocean, "where there is no support, no rest for the foot or the hand," from which he is rescued by the twin brethren, the Asvins, in their hundred-oared galley. The Panis in the Vedas and later classical literature were the merchant class who were the pioneers and who dared to set their course from unknown lands and succeeded in throwing bridges between many and diverse nations. The Phoenicians were no other than the Panis of the Rig Veda. They were called Phoeni in Latin which is very similar to the Sanskrit Pani.

Ships of 3rd century B.C. E.
(source: Foreign trade and Commerce in Ancient India - By Prakash Charan Prasad)

Among other passages may be mentioned that which invokes Agni thus: "do thou whose countenance is turned to all sides send off our adversaries as if in a ship to the opposite shores; do thou convey us in a ship across the sea for our welfare"; or that in which Agni is prayed to bestow a boat with oars."

The **Ramayana** also contains passages which indicate the intercourse between India and distant lands by the way of the sea. In the Kishkindha Kandam, Sugriva, the Lord of the Monkeys, in giving directions to monkey leaders for the quest of Sita, mentions, all possible places where Ravana could have concealed her. In one passage he asks them to go to the cities and mountains in the islands of the sea, in another the land of the Koshakarsa, is mentioned as the likely place of Sita's concealment, which is generally interpreted to be no other country than China (or the land where grows the worm which yields the threads of silken clothes); a third passage refers to the Yava and Dvipa and Suvarna Dvipa, which are usually identified with the islands of Java and Sumatra of the Malaya Archipelago; while the fourth passage alludes to the Lohita Sagara or the red sea. In Ayodhya Kandam there is even a passage which hints at preparation for a naval fight, thus indirectly indicating thorough knowledge and universal use of waterway. The Ramayana also mentions merchants who trafficked beyond the sea and were in the habit of bringing presents to the king.

In The **Mahabharata** the accounts of the Rajasuya sacrifice and the Digvijaya of Arjuna and Nakula mention various countries outside India with which she had intercourse. There is a passage in its Sabha Parva which states how Sahadeva, the youngest brother of the five Pandavas, went to the several islands in the sea and conquered the Mlechchha inhabitants thereof. the well known story of the churning of the ocean, in the Mahabharata, in the boldness of its conception is not without significance. In the Drona Parva there is a passage alluding to shipwrecked sailors who "are safe if they get to an island." In the same Parva there is another passage in which there is a reference to a "tempest-tossed and damaged vessel in a wide ocean." In the Karna Parva we find the soldiers of the Kauravas bewildered like the merchants "whose ships have come to grief in the midst of the unfathomable deep." There is another sholka in the same Parva which describes how the sons of Draupadi rescued their maternal uncles by supplying them with chariots, "as the shipwrecked merchants are rescued by means of boats." In the Santi Parva the salvation attained by means of Karna and true knowledge is compared to the gain which a merchant derives from sea-borne trade. But the most interesting passage in the Mahabharata is that which refers to the escape of the Pandava brothers from the destruction planned for them in a ship that was secretly and especially constructed for the purpose under the orders of the kind-hearted Vidura. The ship was a large size, provided with machinery and all kinds of weapons of war, and able to defy storms and waves.

But besides the epics, the vast mass of Sutra literature also is not without evidence pointing to the commercial connection of India with foreign countries by way of the sea. That these evidences are sufficiently convincing will probably be apparent from the following remarks of the well-known German authority, the late **Professor Buhler**: "References to sea voyages are also found in two of the most ancient Dharam Sutras.

Manu Smriti

In Sanskrit books we constantly read of merchants, traders and men engrossed in commercial pursuits. Manu Smriti, the oldest law book in the world, lays down laws to govern commercial disputes having references to sea borne traffic as well as inland and overland commerce. Manu (iii. 158) declares a Brahmin who has gone to sea to be unworthy of entertainment at a Shraddha. In chapter viii again of Manu's Code there is an interesting sloka laying down the law that the rate of interest on the money lent on bottomry (The lender of money for marine insurance) is to be fixed by men well acquainted with sea voyages or journeys by land. In the same chapter there is another passage which lays down the rule of fixing boat-hire in the case of a river journey and a sea voyage. But perhaps the most interesting passages in that important chapter are those which are found to lay down the rules regarding what may be called marine insurance. One them holds the sailors collectively responsible for the damage caused by their faults to the goods of passengers, and other absolves them from all responsibility if the damage is caused by an accident beyond human control.

Sir William Jones is of opinion that the Hindus **"must have been navigators in the age of Manu, because bottomry (The lender of money for marine insurance) is mentioned in it. In the Ramayana, the practice of bottomry is distinctly noticed. "**

(source: **The Journal of the Royal Asiatic Society for 1901**).

Lord Mountstuart Elphinstone has written: "The Hindus navigated the ocean as early as the sage of **Manu's Code**, because we read in it of men well acquainted with sea voyages."

(source: **History of India - By Mountstuart Elphinstone** London: John Murray Date of Publication: 1849 p. 166).

In **Yajnavalkya Samhita** there is a passage which indicates that the Hindus were in the habit of making adventurous sea voyages in pursuit of gain. The astronomical works also are full of passages that hint at the flourishing condition of

Indian shipping and shipbuilding and the development of sea-borne trade. Thus the **Brihat Samhita** has several passages of this kind having an indirect bearing on shipping and maritime commerce. One of these indicate the existence of shippers and sailors as a class whose health is said to be influenced by the moon. Another mentions the stellar influences affecting the fortunes of traders, physicians, shippers, and the like. The third, also, mentions a particular conjunction of stars similarly affecting merchants and sailors. The last one is that which recommends as the place for an auspicious sea-bath the seaport where there is a great flow of gold due to multitudes of merchantmen arriving in safety, after disposing of exports abroad, laden with treasure.

Puranas

The Puranas also furnish references to merchants engaged in sea-borne trade. The **Varaha Purana** mentions a childless merchant named Gokarna who embarked on a voyage for trading purposes but was overtaken by a storm on the sea and nearly shipwrecked. The same Purana contains a passage which relates how a merchant embarked on a voyage in a sea-going vessel in quest of pearls with people who knew all about them.

But besides the religious works like the Vedas, the Epics, and the Sutras and Puranas, the secular works of Sanskrit poets and writers are also full of references to the use of the sea as the highway of commerce, to voyages, and naval fights. Thus in **Kalidasa** **Raghuvamsa** (canto 4, sloka 36) we find the defeat by Raghu of a strong naval force with which the kings of Bengal attacked him, and his planting the pillars of victory on the isles formed in the midst of the river Ganges. The **Shakuntala** also relates the story of a merchant named Dhanavriddhi whose immense wealth devolved to the king of the former's perishing at sea and leaving no heirs behind him. In Sakuntala, we learn of the importance attached to commerce, where it is stated: "that a a merchant named Dhanvriddhi, who had extensive commerce had been lost at sea and had left a fortune of many millions." In Nala and Damyanti, too, we meet with similar incidents.

The **Sisupalavadha** of the poet Magha contains an interesting passage which mentions how Sri Krishna, while going from Dvaraka to Hastinapura, beholds merchants coming from foreign countries in ships laden with merchandise and again exporting abroad Indian goods.

The expansion of Indian culture and influence both towards Central Asia and the south-east towards the countries and islands of the Pacific is one of the momentous factors of the period immediately preceding the Christian era. From the first century A.D. a systematic policy of expansion led to the establishment of Hindu kingdoms in Annam, Cochin-China, and the islands of the Pacific. The Ramayana knew of Java and Sumatra. Communication by sea between the ports of south India and the islands of the Pacific was well established many centuries before the Christian era. The discovery and colonization of Sumatra, Java and Borneo were the results of oceanic navigation. **The allusions in the Ramayana to Java and Ptolemy's mention of Yava-dwipa in the first century A.D. clearly establish the fact that Java had come under Indian influence at least by the beginning of the Christian era.**

The reaction of this overseas activity on India was very considerable. An explanation of the immense wealth of the merchants who made such munificent endowments as witnessed by the inscriptions in the temples of the Satvahana

period lies in the great overseas trade. **Tamil literature of the first centuries, especially Silappadikaram and Manimekhalai also testify to this great overseas trade while in Kalidasa we have the allusion to ships laden with spices from distant lands lying in Kalinga ports.**

(source: **India Through The Ages - By K. M. Panikkar** Discovery Publishing House. Delhi 1985. p.84- 93).

Some passages in Rig Veda

"May Usha dawn today, the excitress of chariots which are harnessed at her coming, as those who are desirous of wealth send ships to sea."

"Do thou, Agni, whose countenance is turned to all sides, send off our adversaries, as if in a ship to the opposite shore. Do thou convey us in a ship across the sea for our welfare." (A remarkable prayer for safe conduct at sea).

The Hitopadesha describes a ship as a necessary requisite for a man to traverse the ocean, and a story is given of a certain merchant, "who, after having been twelve years on his voyage, at last returned home with a cargo of precious stones."

The Institutes of Manu include rules for the guidance of maritime commerce. Thus, the passage quoted above indicate a well developed and not a primitive trade.

Significant also is the fact that **Lieutenant Speake**, when planning his **discovery of the source of the Nile**, secured his best information from a map reconstructed out of **Puranas**. (Journal, pp. 27, 77, 216; Wilford, in Asiatic Researches, III). It traced the course of the river, the "Great Krishna," through Cusha-dvipa, from a great lake in Chandristhan, "Country of the Moon," which it gave the correct position in relation to the Zanzibar islands. The name was from the native Unya-muezi, having the same meaning; and the map correctly mentioned another native name, Amara, applied to the district bordering Lake Victoria Nyanza.

"All our previous information," says Speake, "concerning the hydrography of these regions, originated with the ancient Hindus, who told it to the priests of the Nile; and all these busy Egyptian geographers, who disseminated their knowledge with a view to be famous for their long-sightedness, in solving the mystery which enshrouded the source of their holy river, were so many hypothetical humbugs. The Hindu traders had a firm basis to stand upon through their intercourse with the Abyssinians."

(source: **Periplus of the Erythrean Sea - W.H. Schoff** p. 229-230. For more information refer to chapter on **India and Egypt**)

The Jatakas

Some very definite and convincing allusions to sea voyages and sea-borne trade are also contained in the vast body of Buddhist literature known as the Jatakas, which are generally taken to relate themselves to a period of one thousand years beginning from 500 B.C. E. The **Baveru Jataka** without doubt points to the existence of commercial intercourse between India and Babylon in pre-Ashokan days. The full significance of this important is thus expressed by the late **Professor Buhler**: "The now well-known Baveru-Jataka, to which Professor Minayef first drew attention, narrates that Hindu merchants exported peacocks to Baveru. The identification of Baveru with Babiru or Babylon is not doubtful," and considering the "age of the materials of the Jatakas, the story indicates that the Vanias of Western India undertook trading voyages to the shores of the Persian Gulf and its rivers in the 5th, perhaps even in the 6th century B.C. just as in our days. This trade very probably existed already in much earlier times, for the Jatakas contain several other stories, describing voyages to distant lands and perilous adventures by sea, in which the names of the very ancient Western ports of Surparaka-Supara and Bharukachcha-Broach are occasionally mentioned."

(source: source: **Indian Shipping: A History of the Sea-Borne Trade and Maritime Activity of the Indians From the Earliest Times - By R. K. Mookerjee** p. 437-54).

THE ROYAL PLEASURE-BOAT

From the Ajantā Painting.

Ms. Manning, author of Ancient and Mediaeval India Volume II, p. 353, writes: "The indirect evidence afforded by the presence of Indian products in other countries coincides with the direct testimony of Sanskrit literature to establish the fact that the ancient Hindus were a commercial people."

(source: **Ancient and Medieval India - By Mrs. Manning** Volume II p. 353).

Sudas is stated in the **Aitteriya Brahmana** to have completely conquered the whole world. This conquest was not political; it means exploration of the whole earth. Puruvara navigated the ocean and explored 13 islands.

(source: **Historical Researches - Heeran** Volume II p. 266.

Colonel James Tod says that one of the ancestors of Rama was Sagara also called the Sea-King whose sixty thousand sons were so many mariners.

(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India** ISBN 8120612892 Vol. II p. 602).

Sir William Jones wrote: " of this cursory observation on the Hindus which it would require volumes to expand and illustrate this is the result that they had an immemorial affinity with old Persians, Ethiopians, and Egyptians, Phoenicians, Greeks and Tuscans, the Scythians or Goth and Cilts, the Chinese, Japanese and Peruvians."

(source: **Asiatic Researches** Volume I p. 426). For more information refer to chapter on **India and Egypt**)

There are references in Buddhist Jataka tales to ships sailing from Bhrigukachcha to Baveru (Babylon); in the Pali book **Questions of Milinda**, a merchant is described as having sailed to Alexandria, Burma, Malaya and China. Another story of the 6th and 7th century tells of a merchant having sailed to the **"Island of Black Yavanas"** maybe Zanzibar.

(source: **Hinduism: Its Contribution to Science and Civilization - By Prabhakar Balvant Machwe** p. 129 - 130).

Professor **Max Duncker**, author of **History of Antiquity**, says, that ship-building was known in ancient India about 2000 B.C. It is thus clear that the Hindus navigated the ocean from the earliest times, and that they carried on trade on an extensive scale with all the important nations of the whole world.

A. M. T. Jackson writes: "The Buddhist Jatakas and some of the Sanskrit law books tell us that ships from Bhroach and Supara traded with Babylon (Baveru) from the 8th to the 6th century B.C."

(source: **Bombay City Gazetteer**, Vol. II, chapter IV, p.3).

Rev. J. Foulkes says: "The fact is now scarcely to be doubted that the rich Oriental merchandise of the days of King Hiram and King Soloman had its starting place in the seaports of the Deccan, and that with a very high degree of probability some of the most esteemed of the spices which was carried into Egypt by the Midianitish merchants of Genesis."

(source: **The Indian Antiquary**, Vol. VIII).

Arnold Hermann Ludwig Heeren (1760-1842) writes: **"The Hindus in their most ancient works of poetry are represented as a commercial people."**

Dr. Caldwell says: "It appears certain from notices contained in the Vedas that Aryans of the age of Solomon practiced foreign trade in ocean-going vessels."

In **G. Buhler's** opinion, **"prove the early existence of a complete navigation of the Indian Ocean, and of the trading voyages of Indians."**

(source: **Origin of the Indian Brahma Alphabet - By G. Buhler** 1898 p. 84).

Thus, Sanskrit literature in all its form - such as the Vedas, the Epics, the Sutras, the Puranas, poetry epic and dramatic romance etc. is replete with references to the maritime trade of India, which prove that the ocean was freely used by the Indians in ancient times as the great highway of international commerce. Further, the evidence from Sanskrit literature receive their confirmation again from the evidence furnished by the Buddhistic literature - the canonical books, and the Jatakas.

Sea Trade

Sir Charles Eliot (1862-1931), British diplomat and colonial administrator, in his book, **Hinduism and Buddhism** vol. I, p.12. says:

In Eastern Asia the influence of India has been notable in extent, strength and duration. **"Scant justice is done to India's position in the world by those European histories which recount the exploits of her invaders and leave the impression that her own people were a feeble dreamy folk, surrendered from the rest of mankind by their seas and mountain frontiers.** Such a picture takes no account of the intellectual conquests of the Hindus. Even their political conquests were not contemptible and were remarkable for the distance if not for the extent of the territory occupied. For there were Hindu kingdoms in Java and Camboja and settlements in Sumatra and even in Borneo, an island about as far from India as is Persia from Rome."

The West

Gordon Childe says: "The most startling feature of pre-historic Indian trade is that manufactured goods made in India were exported to Mesopotamia. At Eshunna, near Baghdad, typically Indian shell inlays and even pottery probably of the Indus manufacture have been found along with seals. After c. 1700 B. C. C. E. the traders of India lost commercial contact with the traders of Mesopotamia."

S. R. Rao says that the Indian traders first settled in Bahrein and used the circular seal. Later on the different sections of the Indian merchants colonized the different cities of Mesopotamia after the name of their race. The Chola colonized the land where the two rivers, the Tigris and Euphrates, approach most nearly and the banks touch the so called Median wall. They called their colony Cholades which later came to be known as Chaldea (i.e. the land of the Cholas) as a result of corrupt pronunciation. Similarly the Asuras of Vedic India colonized the city Asura after their name and later they established the Assyrian empire.

Archaeological evidence of the use of indigo in the cloths of the Egyptians mummies, Indian cedar in the palace of Nebuchandnzzar and Indian teak in the temple of the moon god at Ur shows the continuity of Indian commercial relations with the West. Rassam found a beam of Indian cedar in the palace of Nebuchadnezzar (604-562 B.C) at Birs Nimrud. In the second storey of the Temple of the Moon-God at ur rebuilt by Nebuchadnezzar and Nabonidus (555- 538 B.C.) Taylor found "two rough logs of wood apparently teak".

The ancient Egyptian traders sailed there boats not only on the Nile but also ventured into the Mediterranean and the Red Sea and even into the Indian Ocean, for they are said to have reached "God's land" or the land of **Punt (India)**. Similarly the Indian traders sailed their ships not only on the Indian Ocean and the Persian Gulf, they also ventured into the Red Sea and even into the Mediterranean and Aegean Sea. From the very beginning Indian traders had a very fair knowledge of all the ancient oceans and seas of the populated world. the Egyptians called India as "God's land" because India was in those days culturally very much developed. The priest of ancient Egypt required vast quantities of aromatic plants for burning as incense; frankincense, myrrh and lavender were also used for embalmment purpose. Herodotus has left us a sickening description of the great number of spices and scented ointments of which India was the center. Beauty products from India also attracted the women of Egypt. The cosmetic trade was entirely dependent on imports chiefly from India. The Pharaohs of the fifth and sixth dynasties made great efforts to develop trade relations with the land of Punt. Knemphotep made voyages to Punt eleven times under the captainship of Koui. This expedition was organized and financed by the celebrated Queen Halshepsut.

(source: **Foreign Trade and Commerce in Ancient India - By Prakash Charan Prasad** p. 36-43. For more information refer to chapter on **India and Egypt**)

Before trade with the Roman Empire, India carried on her trade chiefly with Egypt; whose king, Ptolemy Philadelphus (285-247 B.C.) with whom Ashoka the Great had intercourse, founded the city of Alexandria, that afterwards became the principal emporium of trade between the East and West.

M. A. Murray, the Egyptlogist says in his book, " The splendor that was Egypt" that the type of men of Punt as depicted by Halshepsut's artists suggests an Asiatic rather than an African race and the sweet smelling woods point to India as the land of their origin.

(source: **Art Culture of India and Egypt - By S. M. El Mansouri** p. 14).

This expedition really appears to have been a great commercial success. The queen proudly recorded on the walls of the temple of Deir-el-Bahri: "Our ships were filled with all marvelous things from **Punt (India)**; the scented wood of God's land, piles of resin, myrrh, green balsan trees, ebony, ivory, gold, cinnamon, incense, eye-coloring, monkeys, grey dogs and panther-skins." These objects indicate Indian goods exported to Egypt.

Alexander's passage of the Indus was effected by means of boats supplied by Indian craftsmen. A flotilla of boast was used in bridging the difficult river of Hydaspses. For purpose of the voyage of Nearchus down the rivers and to the Persian Gulf, all available country boats were impressed for the service, and a stupendous fleet was formed, numbering around 800 vessels, according to Arrian, and to the more reliable estimate of Ptolemy nearly 2,000 vessels which

accommodated 8,000 troops, several thousand horses, and vast quantities of supplies. It was indeed an extraordinary huge fleet, **built entirely of Indian wood and by the hands of Indian craftsmen. All this indicates that in the age of the Mauryas shipbuilding in India was a regular and flourishing industry of which the output was quite large.**

A book, called the **Periplus of the Erythraean Sea**, written by a Graceo-Egyptian sailor in the first century A.D., gives a very detailed and interesting account of Indian trade from the author's personal knowledge. He came to India and found the Indian coast studded with ports and harbors, carrying on brisk trade with foreign countries. The chief articles of export from India were spices, perfumes, medicinal herbs, pigments, pearls, precious stones like diamond, sapphire, turquoise and lapis lazuli, animal skins, cotton cloth, silk yarn, muslin, indigo, ivory, porcelain and tortoise shell; the chief imports were cloth, linen, perfume, medicinal herbs, glass vessels, silver, gold, copper, tin, lead, pigment, precious stones and coral.

Indian figurine buried in the Mount Vesuvius in Italy - eruption of 79 A.D. Ivory
(source: Indian Art - By Vidya Dehejia)

The value of Indian trade may be estimated from the well-known passage of Pliny, in which he recorded that India drained the Roman empire of fifty million sesterces every year. The wealth of early India is confirmed by the lament of Pliny the Elder in Historica Naturalis (Natural History), completed in 77 AD that all of Rome's coffers were being emptied into India to satisfy Roman demand for transulent Indian muslins. Pliny's statement is corroborated by the discovery, in India, of innumerable gold coins of the Roman emperors, which must have come here in course of trade. Most of the coins have been found. Most of these coins have been found in South India, and their evidence is corroborated by many passages in classic Tamil literature. We read of **'Yavanas of harsh speech'** with many wares; of foreign merchants thronging sea-port towns like Mamallapuram, Puhar, and Korkai; or busy customs officials, and those engaged in loading and unloading vessels in the harbor. The wealth of the Roman Empire reached India through the ports of Kalyan, Chaul, Broach, and Cambay in Western India. Tamralipti was an important port in Bengal. It carried on trade

with China, Lanka, Java and Sumatra. In the Andhra region, the ports were Kadura and Ghantasala, Kaveripattanam (Puhar) and Tondail were the ports of the Pandya region. The ports of Kottayam and Muziris were on the Malabar coast. There was a great maritime trade between India and Southeast Asia and China. **The rulers of India facilitated trade by building and maintaining lighthouses at the necessary points and by keeping sea routes free and safe from pirates.**

According to **Surjit Mansingh**: "India's trade with Europe, both by land and sea, was a constant fact of history from ancient times"

(source: **India: A Country Study** 1985).

The close connection between the early civilization of Ninevah and Babylon and the West Coast of India is borne out by indisputable evidence and this was possible only through the navigation of the Arabian sea. There is ample evidence of a flourishing trade between the Levant and the West Coast of India, as may be inferred from allusion in the Old Testament.

As stated by **Prof. K. A. Nilakanta Sastri** in Indian Antiquary, 1938 p. 27: "the evidence of South Indian connections with the West drawn from references in his (Solomna's) reign to Ophir and Thar Shih to ivory, apes and peacocks is seen to be only a link in a more or less continuous chain of data suggesting such connections for long ages before and after. The earliest Indian literature, the Vedas speak of sea voyage. One well-known mantra (Rig Veda 1, 97, 8) prays: "Do thou convey us in a ship across the sea for our welfare." Besides this, there are numerous allusions in the Rig Veda to sea voyages and to ships with a hundred oars.

(source: **India and the Indian Ocean - K. M. Panikkar** The MacMillan Company, 1945 p.23-24).

Indian seafarers did not absent themselves from the Middle East or the European mainland. From the Sanskrit name of Socotra (Island abode of bliss) and from certain Hindu-like divisions and customs among the people of East Arabia. **C. Lassen** suggested that the first sailors and colonizers on the Indian Ocean came from India. According to **Jeannie Auboyer** "merchant shipping was very active in India and had, even since Roman times, linked the Mediterranean world to China with great vessels (nava) of which the Indian king owned a fleet, though most of them belonged to wealthy individuals."

(source: **Daily Life in Ancient India - By Jeannie Auboyer** ISBN 8121506328 p. 75).

The achievements of Indian seafarers in the Far East and Southeast Asia have been acknowledged by a host of scholars. The late Professor **Buhler** says: "References to voyages are also found in two of the most ancient **Dharma Sutras**."

There was also an active trade between India and Greece. The mention of ivory by Homer and of several other Indian articles assign the trade a very ancient date. In addition to ivory, India also supplied indigo to Greece, whence the inhabitants derived their knowledge of its use. Homer knew tin by its Sanskrit name. Professor **Max Duncker** says that the Greeks used to wear silken garments which were imported from India, and which were called "Sindones, or "Tyrian robes." "Trade existed between the Indians and Sabaens on the coast of South Arabia before the 10th century B.C. the time when, according to the Europeans, Manu lived.

Of the producer of loom, silk was more largely imported from India into ancient Rome than either in Egypt or in Greece. "It so allured the Roman ladies, " says a writer, that it

sold its weight in gold."

(source: **Encyclopedia Britannica** Vol. XI p. 459). For more information refer to chapter on **India and Egypt**).

Testimony to the flourishing condition of the ship-building industry in India is available in the description of the return journey of Alexander from India via the sea route. According to estimates of Ptolemy nearly 2000 vessels which between them accommodated 8000 troops, several thousand horses, and vast quantities of supplies. This vivid description speaks not only of the ready resources and expertise of the Indian craftsmen but also of the tonnage of the seaworthy ships estimated at about 75 tons (or 3000 amphorea) by Pliny.

The most valuable of the exports of India was silk, which was under the Persian Empire is said to have exchanged by weight of gold.

(source: **Indian Shipping - By R. K. Mookerji** p. 83).

It is evident that "there was a very large consumption of Indian manufactures in Rome. This is confirmed by the elder Pliny, who complained that there was "no year in which India did not drain the Roman Empire of a hundred million sesterces (1,000,000 pounds)....so dearly do we pay for our luxury and our women." The annual drainage of gold from Rome and its provinces to India was estimated by him at 500 steria, equal to about Rs. 4,000,000. We are assured on undisputed authority that the Romans remitted annually to India a sum equivalent to 4,000,000 pounds to pay for their investments, and that in the reign of Ptolmeies, 125 sails of Indian shipping were at one time lying in the ports whence Egypt, Syria, and Rome itself were supplied with the products of India."

(Life in Western India (Guthrie), from **Colonel James Tod - Western India** p. 221. **Hindu Raj in the World - By K. L. Jain** p. 37).

Roman coins in large quantities are found in places in Southern India, whence beryl, pepper, pearls and minerals were exported to Rome. Some of these are described by Mr. Sewell. "These hoards," he says, "are the product of 55 separate discoveries, mostly in the Coimbatore and Madura districts."

(source: **Journal of Royal Asiatic Society for 1904**, Roman Coins).

There is extant, a Prakrit text on ship-building named Angavijja written in the Kushana period and edited in the Gupta period. This text enlists about a dozen names of different types of ships, such as Nava, Pota, Kotimba, Salika, Sarghad, Plava, Tappaka, Pindika, Kanda, Katha, Velu, Tumba, Kumba and Dati. Some of these varieties of ships such as Tappaka (Trappaga), Kotimba and Sarghad have also been mentioned in the **Periplus of the Erythrean Sea**. They are considered to be very large ships capable of sailing along the coast as well as in deep sea.

Mr. Momensen in his **Provinces of the Roman Empire** (Volume II p. 301), says: "Somewhat further to the south at Kananor numerous Roman gold coins of the Julio Claudian epochs have been found, formerly exchanged against the spices destined for the Roman kitchens."

Arabia being the nearest of the countries situated to the west of India, was the first to which the Indian commercial enterprises by sea were directed. The long-continued trade with Arabia dates from a very remote antiquity. "The labors of **Von Bohlen** (**Das Alte Indian**, Volume I, p. 42), confirming those of Heeran and in their turn confirmed by those of Lassen (Ind Alt. Vol II. p. 580), have established the existence of a maritime commerce between India and Arabia from the very earliest period of humanity. Lassen also says that the Egyptians wrapped their mummies in Indian Muslin.

Agarthchides of Cnidus, Ptolemaic Dynasty, President of the Alexandrain Library, who is mentioned with respect by Strabo, Pliny and Diodorus, and who lived upwards of 300 years before the time of Periplus, noticed the active commercial intercourse kept up between Yemen and Pattala - a seaport in Western India. Pattala in Sanskrit means a "commercial town" which circumstance if it is true, says Prof. Heeran, "would prove the extreme antiquity of the navigation carried on by the Indus. Agatharchides saw large ships coming from the Indus and Pattala.

The importance of trade was highly appreciated by the people of **Kalinga** - a kingdom on the Eastern seaboard of India. Inscriptions **"speak of navigation and ship commerce as forming part of the education of the princes of Kalinga."**

J. Takakusu writes: "That there was a communication or trade between India and China from 400 A.D. down to 800 A.D. is a proven fact. Not to speak of any doubtful records we read in the Chinese and Japanese books, Buddhist or otherwise, of Indian merchant ships appearing in the China Sea; we know definitely that Fahien (399-415 A.D) returned to China via Java by an Indian boat...at further in the Tang dynasty an eyewitness tells us that there were in 750 A.D. many Brahmin ships in the Canton River."

(source: **Journal of Royal Asiatic Society, Great Britain and Ireland**. October 1905 p. 872).

Historian **Vincent Smith** in his book Early History of India, writes" "Ancient Tamil literature and the Greek and Roman authors prove that in the first two centuries of the Christian era the ports on the Coromandel or Cholamandal coast enjoyed the benefits of active commerce with both East and West. The Chola fleets.....uncrossed the Indian ocean to the islands of the Malaya Archipelago."

(source: **Early History of India - By Vincent Smith** p. 415).

"The Hindus themselves were in the habit of constructing the vessels in which they navigated the coast of Coromandel, and also made voyages to the Ganges and the peninsula beyond it. These vessels bore different names according to the size." writes Prof. **Heeran**. There were commercial towns and ports on the Coromandel coast. Masulipatam, with its cloth manufactures, as well as the mercantile towns situated on the mouth of the Ganges, have already been noticed as existing in the time of **Periplus**. Even as late as the 17th century, French traveler **Tavernier** in 1666 A.D. said: "Masulipatam is the only place in the Bay of Bengal from which vessels sailed eastwards for Bengal, Arrakan, Pegu Siam, Sumatra, Cochin China and the Manilla and West to Hormuz, Makha and Madagascar."

(source: **Hindu Raj in the World - By K. L. Jain** p. 42).

***

The East

Southeast Asia has always been an integral part of the Indian consciousness is borne out by the fact that the countries of Southeast Asia so comprehensively embraced Hinduism and Buddhism in all its aspects. This spiritual and cultural affinity became an inseparable part of their ethos and way of life. Successive Indian kings and kingdoms from the first century AD and even before to the beginning of the 15th century, had regarded Southeast Asia

and the lands lying beyond as vital for their own strength, security and sustained development. This intricate and abiding web of relationships in turn contributed significantly to India's sense of security in an extended neighborhood in which India is neither seen as an alien power nor as a country with a colonial past.

Panel no. 4. Siva temple bas-relief. Prambanan, Indonesia
Archaeological Survey of India, New Delhi.

The advent of the British in India and the struggle for influence between European powers that ensued all over Southeast Asia, suspended the continuous interaction that had existed between India and the region. Southeast Asia itself was carved up into areas of influence by the major colonial powers, viz., the British, French, Dutch and Portuguese. India's cultural and commercial interaction with this region was therefore subordinated to the political and strategic considerations of the great powers. The relationship spanning nearly 2500 years was founded and nurtured on mutual interest and security in which both partners constantly enriched and reinforced each other.

In the opinion of Professor **Kakasu Okakura** author of **The Ideals of the East, with Special Reference to the Art of Japan:**

"Down to the days of the Mohammedan conquest went, by the ancient highways of the sea, **the intrepid mariners of the Bengal coast, founding their colonies in Ceylon, Java and Sumatra, and binding Cathay (China) and India fast in mutual intercourse."**

George Coedes, French historian and author of **Indianized State of South East Asia** considered that Indian colonization, intensive in the 2nd and 3rd centuries A.D. came to full fruition in 4th and 5th centuries. "I am convinced that such research will reveal numerous facts which will indicate a much deeper Indianization of the mass of the population than the sociologists will at present admit."

Indianization of Southeast Asia continued even during the early mediaeval times which is explained by French scholar, Orientalist who wrote on Eastern religion, literature, and history **Sylvain Levi** (1863-1935) who proposed that:

"India has produced its true masterpieces in foreign lands under foreign inspiration and that in architecture it is in distant Cambodia and Java that one must seek the two marvelous products of Indian genius, Angkor Wat and Borobudar."

T. W. Rhys Davids author of **Pali-English Dictionary** has observed that "Sea going merchants, availing themselves of the monsoons, were in the habit at beginning of the 7th century B.C. of trading from ports of the Southwest Coast of India to Babylon, then a great mercantile emporium."

(source: **Buddhist India - By T. W. Rhys- Davids** p. 116).

Reginald S. Le May (1885 -) author of **The culture of South-East Asia; the heritage of India** has observed:

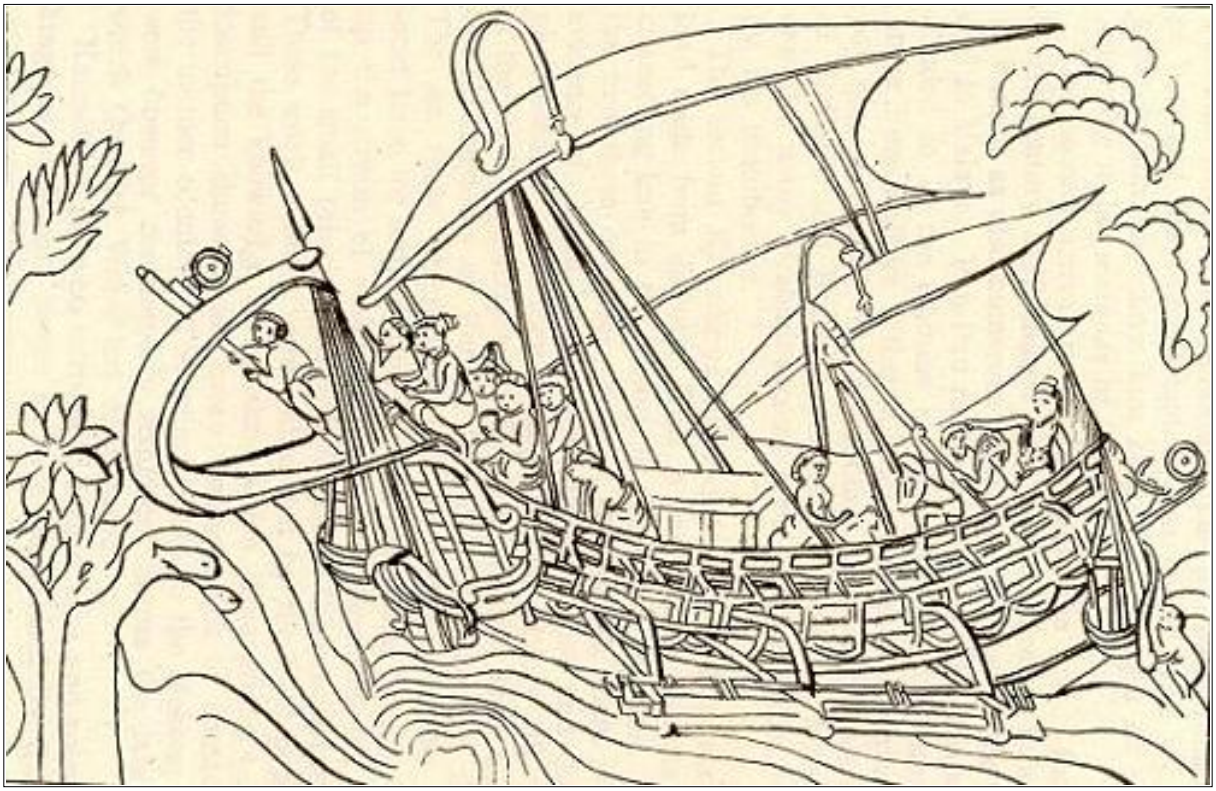
"India, indeed, began to exercise a profound cultural influence on her neighbors to the eastward - Burma, Siam, Malaya, Cambodia, Java and Sri Lanka all falling beneath her sway. And this, as far as one can may judge, almost entirely as a result of trading and peaceful penetration by missionaries, merchants and others, and not by force of arms." "The beginnings of Indian colonization overseas eastward go back a very long way in time and it is almost certain that the results seen today were, in the main, **not achieved by military expedition, but by peaceful trading and religious teaching - and thereby all the more permanent."**

Contrasting the Indian method with the Chinese he remarked:

"**Indian religious art and culture seem naturally to have exercised an extraordinary fascination over the indigenous peoples of all these territories**, no doubt, owing to the attractions offered by Hinduism and Buddhism, while Chinese art, not bearing any particular religious message, apparently made little impression, in spite of the fact that the Chinese, too, sailed to southern seas..."

(source: **India and The World - By Buddha Prakash** p. 7-8 Institute of Indic Studies Kurukshetra University 1964).

George Coedes (1886 -1969) author of **Ancient Hinduized states of the Far East**, has pointed out the enduring value of Hindu culture in Outer or Greater India:



"One is struck by the fundamental difference in the results achieved in the countries of the Far East, by the civilizing action of China and that of India. The reason of it lies in the radical difference in the methods of colonization, employed by the Chinese and by the Hindus. The Chinese proceeded with conquest and by annexation: the armies occupied the lands and the officials spread the Chinese civilization. **The Hindu penetration and infiltration seem to have almost always been peaceful and unaccompanied by those destructions, which disgrace the Mongol cavalcade or the Spanish conquest of America.** Far from being destroyed by the conquerors, the indigenous people have found in the Hindu society, transplanted and made supple, a frame, in which their own societies have been able to integrate and develop themselves." "The exchange of ambassadors between the two shores of the Bay of Bengal was done on a **footing of equality**, whereas China always required of the " barbarians of the south" the recognition of her suzerainty, which was expressed by the regular payment of tribute."

"The lands, militarily conquered by China, had to adopt or imitate her institutions, customs, religions, language and script. On the contrary, those, whom **India peacefully conquered, by the prestige of her culture,** have preserved the essence of their individual characters and have developed them, each according to its own genius."

(source: **Les états Hindouisés d'Indochine et d'Indonésie - By George Coedes** p. 64-66).

The control of the Indian seas belong predominantly to India till the thirteenth century A.D. In respect of the Arabian Sea this control meant only the freedom of navigation. There was no colonizing activity in that area, though Socotra, or Sukhadhara dwipa (the island of the blest) was discovered long before the Christian era and was probably

under the Indian occupation at that time. Indian communities existed in Alexandria and other Egyptian towns and there were also settlements on the coasts of the Persian Gulf. But generally speaking, the navigation of the Arabian Sea was only for the purpose of trade. In case of Bay of Bengal, it was different. The supremacy in that sea was naval and political, based on an extensive colonization of the islands and this supremacy ceased only with the breakdown of Chola power in the thirteenth century. The naval activity of the Hindus was controlled by organized corporations of which the most important were the **Manigramam Chetties** and the **Nanadesis**. Of the Manigramam Chetties who traded all over the world we have authentic records in grants and inscriptions. The Bhaskara Ravi Varman plate of the Kerala King grants certain special privileges to the Manigramam guild. This body was given charter...including "the sword of sovereign merchantship" and monopoly rights of trading. Other "merchant adventurers" known from records are the Nanadesis, the Valangai and the Elangai who are described in the inscription at Baligami in Mysore as bodies of **"brave men born to wander over many countries since beginning of the Krta Age** (the first of the Indian Cycle of Yugas) penetrating regions of the six continents by land and water routes, and dealing in various articles, such as horses and elephants, precious stones, perfumes and drugs either wholesale or in retail."

Indian adventurers sailing out to Colonize Java
(source: India Through the ages - By K. M. Panikkar)

The ships built by Hindu navigators at that time are described thus by **J. Hornell** stated to be an authority on Indian boat designs. They were "square rigged, two masted vessels, with raked stem and stern, both sharp, without bowsprit and rudder and steered by two quarter paddles." (Quoted in **Towards Angkor - By Q. Wales** p. 26). First the Mauryas and then the Andhras were the lords of the Eastern Seas. The Ambassador of the **Prince of Wu** reported that while he was in Khamboja (Cambodia) in about A.D. 250 he saw ships with seven sails which could stay at sea for four weeks at a time. Other reports mention ships mention ships which carried over 600 men and more than 1,000 tons of merchandise. From the Andhras the sovereignty of the eastern Seas passed to the Pallavas as may be inferred from the great influence which this dynasty exercised on the colonial kingdoms of Further India.

The Hindus had already in use a **magnetic compass** known as **Matsya Yantra** for determining direction. The work "Merchants Treasure" written at Cairo by Baylak al Kiljaki mentions the magnetic needle as being in use in the Indian Ocean. The route that **Fa-hien**, the celebrated Chinese monk, took to return home after his stay in India (412-413) is fully described by him. Leaving Tramralipti, the Orissa port, he took fourteen days to reach Sri Lanka. From there he embarked for Java and called at Nicobars (Nakka-varam), the island of the naked. From Nicobar the ship passed through the Straits of Malacca into the Pacific. **Oceanic travel was therefore well advanced in the fifth century and Indian mariners not merely crossed the Bay of Bengal at its widest point, but sailed far out into the Pacific.**

Further, the Hindus had developed great skill in building ocean-going ships of great strength and durability. The participation of Hindus in the navigational activities of the Red Sea is also borne out by the Oxyrhynchus Papyri, a second century farce in the Greek language in which the conversation between certain characters is in a language which some scholars have identified as being South Indian. Besides, there are extensive allusions to maritime affairs and to long voyages in early Tamil literature. **Tamil scholars have counted no less than 1,800 nautical words in that language.**

The numerous ports of India from Broach to Quilon became great markets of trade. A first century Tamil classic describes the port of Muziris. (Cragnore in Cochin) as being filled with ships. The ruins of a Roman temple have also been discovered in that area.

(source: **India and the Indian Ocean - K. M. Panikkar** The MacMillan Company, copyright 1945 p. 26-27).

Sir Stamford Raffles (1781-1826) the British Governor of Java, in his book, **History of Java**, II, p. 87, wrote:

"In the year 525 Saka era – 603 A.D., it being foretold to a king of Gujarat that his country would decay and go to ruin, he resolved to send his son to Java. **He embarked with about 5000 followers in 6 large and about 100 small vessels, and after a voyage of four months reached an island they supposed to be Java;** but finding themselves mistaken, re-embarked, and finally settled at Matarem, in the center of the island they were seeking….The prince then found that men alone were wanting to make a great and flourishing state. He accordingly applied to Gujarat for assistance, when his father, delighted at his success, sent him reinforcement of 2000 people…From this period Java was known and celebrated as a kingdom; an extensive commerce was carried on with Gujarat and other countries, and the bay of Matarem was filled with adventurers from all parts."

(source: **Periplus of the Erythrean Sea - W.H. Schoff** p. 245).

Yuktikalpataru gives a detailed classification of ships: They were two kinds: ordinary (Samanya) ships comprising those used in inland waters and special (visesa) meant for sea journeys. The largest of these called Manthara measured 120 cubits in length, 60 in breadth and 60 cubits in height. During the days of the composition of Yuktikalpataru, it appears that ship-building was highly advanced. **Bhoja has advised the builders of the sea-faring ships not to join the plants with iron, as, in the case, the magnetic iron in sea water could expose the ship to danger.** To avoid this risk, he suggests that planks of the bottoms should be held together with the help of substances other than iron.

According to **Marco Polo** an Indian ship could carry crews between 100 to 300. Out of regard for passenger convenience and comfort, the ships were well furnished and decorated. Gold, silver, copper and compound of all these substances were generally used for ornamentation and decoration.

(source: **India Through The Ages: History, Art Culture and Religion - By G. Kuppuram** p. 527-531).

The comparatively large size of the shipping on the Coromandel coast is indicated also by the Andhra coinage, on which a frequent symbol is a ship with two masts, apparently of considerable tonnage.

E. J. Rapson in his book, **Coins of the Andhra Dynasty** "Their maritime traffic, to which the ship type bears witness, is also attested by the large number of Roman coins which are found on the Cholamandalum coast."

The shipping of the Andhra and Pallava coins doubtless survives in the modern "masula boats" at Madras:

J H Furneaux wrote in his book, **Glimpses of India**, p. 254:

"These masula boats are flat-bottomed barges constructed of planks sewn together with rope of cocoanut fiber, caulked with oakum, are able to withstand better than far more solidly built craft the shock of being landed on the sandy beach from the crest of a something breaker."

Similar in a general way to the Andhra coin-symbol is the Gujarati ship carved in a bas-relief on the frieze on the Borobodor temple in Java. While dating from about 600 A.D. this vessel was probably not different from those of the 1st

century, while the short broad sail with double yards is identical with those of the Egyptian Punt Expedition of the 15th century B.C.

Kalidasa, in the Raghuvamsa, tells of a tour of conquest of India, made by Raghy, the great-great-grandfather of Rama; starting from Ayodhya he went eastward to the ocean, having conquered the Bangalis, who trusted in their ships."

The textile industry of both Trichinopoly and Tanjore has been famous from early times. There can be little doubt that some of the finest fabrics that reached the Roman world came from this kingdom of Chola. From this part of India, in the middle ages, came those gold-threaded embroideries which were to such demand in the Saracen markets.

Marco Polo called Chola "the kingdom of Maalabar called Soli, which is the best and noblest province in India, and where the best pearls are found."

(source: **Periplus of the Erythrean Sea - W.H. Schoff** p. 242- 250).

Reports **Auguste Toussaint** in his book, 'History of the Indian Ocean',

"The Mauryan emperor Chandragupta, who ruled from 321 to 297 B.C had even at that time, an actual Board of Admiralty, with a Superintendent of Ships at its head." References to it can be found in **Kautilya's Arthasastra**. From their voyages of conquest and trade, we can infer that although much later, the Pallavas, Pandyas and Cholas of South India must also have had an efficient naval organization. The merchants of Surat, who relied upon ships built by the Wadias of Bombay (who had not taken long to copy prevailing European designs) were particularly rich - one of them Virji Vora (who died in the beginning of the 18th century) left a fortune of 22 million gold francs. "According to certain travelers, Surat was then the most beautiful city of India. **One small detail will give an idea of the unparalleled luxury that prevailed there: certain streets were paved with porcelain.** Francois Martin in his Memoires calls it 'a real Babylon'.

(source: **History of the Indian Ocean- By Auguste Toussaint**).

Harihara (Simping, Java)

The waves of Indian migration before breaking on the shore of America submerged the islands of the Indian Archipelago or Suvarnabhumi.

Colonel James Tod wrote: "The isles of the Archipelago were colonized by the Suryas (Surya-Vamsa Kshatriyas), whole mythological and heroic history is sculptured in their edifices and maintained in their writings."

(source: **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India** ISBN 8120612892 Vol. II p. 218).

Sir Mountstuart Elphinstone says: "The histories of Java give a distinct account of a numerous body of Hindus from Kalinga who landed on their island, civilized the inhabitants and established an era still subsisting, the first year of which fell in the seventh year before Christ."

"These pilgrims sailed from the Ganges to Ceylon, from Ceylon to Java and from Java to China in ships manned by crews professing the Brahmmanical religion."

(source: **History of India - By Mountstuart Elphinstone** London: John Murray Date of Publication: 1849 p. 168-185).

Most of the sculptures show in splendid relief ships in full sail and scenes recalling the history of the colonization in Java by Indians in the earlier centuries of the Christian era. Of one of them **E. B. Havell** thus speaks in appreciation:

"The ship, magnificent in design and movement, is a masterpiece in itself. It tells more plainly than words the perils which the Prince of Gujarat and his companions encountered on the long and his companions encountered on the long and difficult voyages from the west coast of India. But these are over now. The sailors are hastening to furl the sails and bring the ship to anchor."

Big ships were built. They could carry anywhere upwards from 500 men on the high seas. The **Yuktialpataru** classifies ships according to their sizes and shapes. The **Rajavalliya** says that the ship in which King Sinhaba of Bengal sent Prince Vijaya, accommodated full 700 passengers, and the ship in which Vijaya's Pandyan bride was brought over to Lanka carried 800 passengers on board. The ship in which Buddha in the Supparaka Bodhisat incarnation made his voyages from Bharukachha (Broach) to the "sea of the seven gems," carried 700 merchants besides himself. The **Samuddha Vanija Jataka** mentions a ship which accommodated one thousand carpenters.

(source: **Manual of Buddhism - By Robert Spencer Hardy** p. 13 and **Hindu Raj in the World - By K. L. Lal** p. 28).

Oldest Hindu Temple in Siam

One of the most remarkable site in the center of Siam, is **Srideb (Crip-tep),** where statues of Hindu deities bearing Sanskrit inscriptions of the 5th to 6th century have been discovered. The art of Srideb is of excellent quality and provides a link between Indian art and the art of Indo-China. **Quaritch Wales** considered Srideb the oldest temple in Indo-China.

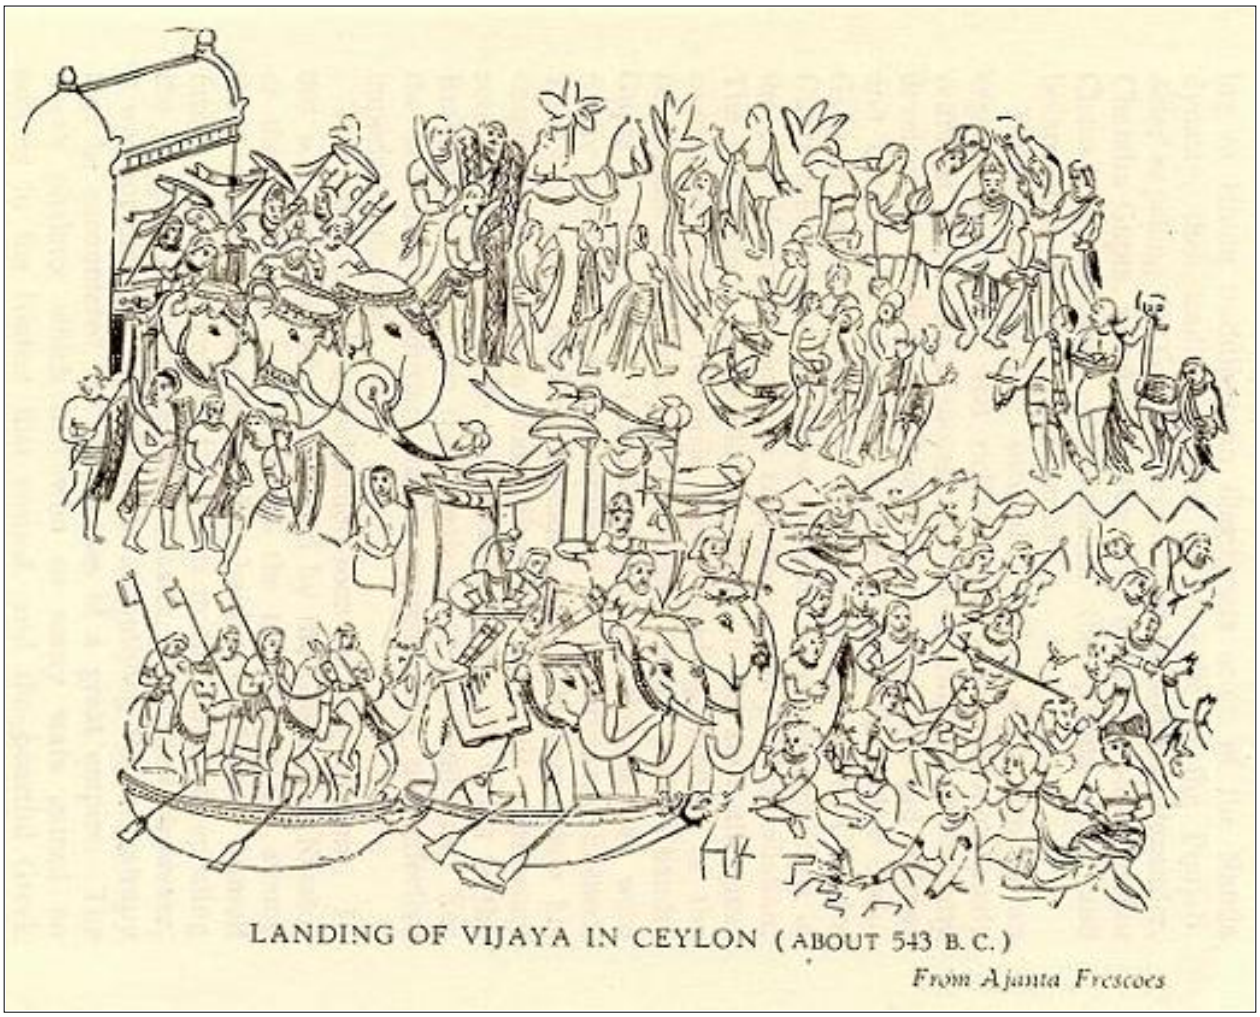
The author **R. K. Mookerji** of **Indian Shipping** says:

"For full thirty centuries India stood out as the very heart of the old world and maintained her position as one of the foremost maritime countries. She had colonies in Pegu, in Cambodia, in Java in Sumatra, in Borneo and even in the countries of the Farther East as far as Japan. She had trading settlements in Southern China, in the Malayan Peninsula, in Arabia and in all the chief cities of Persia and all over the East Coast of Africa. She cultivated trade relations not only with the countries of Asia, but with the whole of the then known world, including the countries under the dominion of the Roman Empire, and both the East and West became the theatre of Indian commercial activity and gave scope of her naval energy and throbbing international life." According to **R. Sewell**, "There was trade both by sea and overland with Western Asia, Greece, Rome and Egypt as well as China and the East."

(source: **Indian Shipping: A History of the Sea-Borne Trade and Maritime Activity of the Indians From the Earliest Times - By R. K. Mookerjee** p. 4 and **Hindu Raj in the World - By K. L. Jain** p. 25). For more information refer to chapter on **India and Egypt**).

Anthony Christie remarks that: **"although attempts have been made from time to time to minimize the extent of Indian influence upon Southeast Asia, the evidence for their importance is there for all to see and cannot be controverted."**

Alastair Lamb observes that "by the opening of the Christian era the civilization of India had begun to spread across the bay of Bengal into both island and mainland Southeast Asia; and by the fifth century A.D. Indianized states, that is to say, states organized along the traditional lines of Indian political theory and following the Hindu religion, had established themselves in many regions of Burma, Thailand, Indo-China, Malaysia, and Indonesia...The Indianization of Southeast Asia was a slow and gradual process. With a few exceptions, it was carried out by peaceful means and in consequence, as it developed, it did not build up a resistance to its further progress. Indian influence had no difficulty merging with indigenous cultures to create a series of distinct amalgams in which it is now virtually impossible to disentangle all the Indian from the non-Indian....it has now without a doubt guaranteed the Indian heritage a place in Southeast Asian civilization from which it cannot possibly be dislodged without the total destruction of the civilization."



(source: **Bias in Indian Historiogarphy - Edited By Devahuti** D. K. Publishers' Distribution. New Delhi. 1980. p. 93).

In the middle of the 18th century, **John Grose** noted that at Surat the Indian ship-building industry was very well established, indeed, “They built incomparably the best ships in the world for duration”, and of all sizes with a capacity of over a thousand tons. Their design appeared to him to be a “a bit clumsy” but their durability soundly impressed him. **They lasted “for a century”.**

Lord Grenville mentions, in this connection, a ship built in Surat which continued to navigate up the Red Sea from 1702 when it was first mentioned in Dutch letters as “the old ships” up to the year 1700.” Grenville also noted that ships of war and merchandise “not exceeding 500 tons” were being built” with facility, convenience and cheapness” at the ports of Coringa and Narsapore.

Dr. H. Scott sent samples of **dammer** to London, as this vegetable substance was used by the Indians to line the bottom of their ships; he thought it would be a good substitute “in this country for the materials which are brought from the northern nations for our navy…There can be no doubt that you would find dammer in this way an excellent substitute for pitch and tar and for many purposes much superior to them.”

source: **Decolonizing History: Technology and Culture in India, China and the West 1492 to the Present Day - By Claude Alvares** p. 68-69).

(source: India Through the ages - By K. M. Panikkar)

The largest ships carried 10,000 talents or 250 tons. Ajanta painting of a later date depict horses and elephants aboard the ship which carried **Prince Vijaya to Sri Lanka.**

Megasthenes informs us that there was a class of ship-builders among the artisans who were salaried public servants and not permitted to work for any private persons. The ships built by them in royal shipyards were, however, let out on hire both to those who undertook voyages and to professional merchants. The fact that shipping and sea-trade received adequate attention under the Mauryas is made clear by the reference to the Superintendent of Ships in the Arthasastras. The **Periplus of the Erythraean Sea**, a marine guidebook of 1st century A.D. by an anonymous Graeco-Egyptian takes note of several ports on the Indian coast. Beginning from the mouth of the Sindh, notice is taken of Barbaricum. Then follows Barygaza, ie. modern Broach. In Dachinabades two sea ports are mentioned namely, Supara and Calliena, both situated near Bombay (Mumbai). Muziris was the most important port of Kerala. It gained prominence after the discovery of the monsoons and was always crowded with a large number of Greek and Arab ships. Nelceynda was another port of Kerala located 500 stadia or 50 miles south of Muzaris. Near Kanya Kumari also there were two ports named Paralia and Balita. All these ports were well looked after either by the local or the imperial rulers of India. The ports served as the chief source of state revenue. (For more information refer to chapter on **India and Egypt**)

Chinese travelers like **Fa-hsien, Hsuang-tsang** and **I-tsing** invariably speak of Tamralipti, the main outlet for north Indians who wanted to travel to Southeast Asia via Lanka or by a more direct route. From the volume of exports and imports and the variety of goods exchanged it appears that considerable facilities were available at all the ports. **Light houses were provided, remains of some are extant. Late Sinhalese sources speak of an artificial harbor made during the time of Karikal Chola (1st century A. D)**.

According to the Divyavadana the desire to amass wealth without making a sea voyage is like an effort to fill a pitcher with a few drops.

The work also records that the captain of a ship reminded the passengers that there were more perils than pleasure in

seafaring. Many went out but few came back and that it was rare to sail six times successfully across the ocean. This narration points out the hazards of deep sea sailing but there is no scope for suggesting that the Indians hated the sea. The Jatakas, the Manimekhalai, Raghuvamsa, Tilakamanjari, Kathasaritsagara, etc. abound in tales of the sea as exciting as they are terrifying and point to the Indians familiarity with, and lure of the sea. The **Yuktikalapataru of Bhoja** (11 the century A.D.) affirms that the king who has boats, wins war, and the king who through ignorance does not keep boats, loses his prestige, vigor and treasury. This text also supplies details regarding the construction of ships. (For more please refer to chapter on **War in Ancient India**). The Jaina texts like the Gyatadharma Avasyaka-chou-ko-ta'an (1122 A.D.) mentions large ships from Kalinga that carried several hundred men and smaller ones which carried hundred or more men.

Marco Polo found Socotra a prey to multitudes of Hindu pirates who encamped there and sold off their booty. He speaks of Aden as a "port to which many ships of India come with their cargo." He also gives details regarding the size, form fittings and mode of repairing of Indian ships. **He remarks about the strength of Indian ships and says that they were built to last a hundred years.** Marco Polo saw ships so large as to require a crew of 300 men, and other ships that were manned by crews of 200 and 150 men. **Friar Odoric** (A.D. 1321) traveled in a ship owned by a Gujarati Rajput that carried a load of 700 people.

Historian **Vincent Smith** remarks: "This is a confirmation of the account we have of those large ships from the time of Agatharcides down to the 16th century, the ships of Gujarat which traversed the Indian ocean in all ages."

There is an even earlier mention of Rajput ships sailing between Sumena (Somnath) and China in Yule's Cathay. Abd-er-Razzak (A.D. 1442) informs us that "from Calicut vessels continually sailing for Mecca, which are for the most part laden with pepper. The inhabitants of Calicut are adventurous sailors, and pirates do not dare to attack the vessels of Calicut." **Nicolo Conti** (15th century) acknowledged that the "natives of India build some ships larger than ours." In 1510 Albuquerque met Hindu sailors and traders in Java and Malacca.

Indian land-lubbery was not synchronous with the coming of Islam, nor with the Middle Ages. The Bay of Bengal was a Chola lake in the 11th century. A ship built at an Indian dockyard is said to have been used in the Napoleonic wars. **In fact Indian navigational expertise and enthusiasm seems to have suffered in direct proportion to the British economic policies reducing India to the position of a mere supplier of raw materials.** People whose ships had trades with the Mediterranean world in the west, and with the lands of gold in the east now considered themselves heroic if they made it to England to land at Lincoln's Inn!

(source: **Bias in Indian Historiogarphy - Edited By Devahuti** D. K. Publishers' Distribution. New Delhi. 1980. p. 90-100).

***

Historian **Radha Kumud Mookerji**

"We now know that many ports on both Eastern and Western Coast had navigational and trade links with almost all Continents of the world. There are many natural and technological reasons for this. **Apart from Mathematics and Astronomy, India had excellent manufacturing skills in textile, metal works and paints. India had abundant supply of Timber. Indian - built ships were superior as they were built of Teak which resists the effect of salt water and weather for a very long time.** Lieut. Col. A Walker's paper "Considerations of the affairs of India" written in 1811 had excellent remarks on Bombay-built ships. He notes, "situated as she is between the forests of Malabar and Gujarat, she receives supplies of timber with every wind that blows." Further he says, "it is calculated that every ship in the Navy of Great Britain is renewed every twelve years. It is well known that teakwood built ships last fifty years and upwards. Many ships Bombay-built after running fourteen or fifteen years have been brought into the Navy and were considered as stronger as ever. The Sir Edward Hughes performed, I believe, eight voyages as an Indiaman before she was purchased for the Navy. No Europe-built Indiaman is capable of going more than six voyages with safety." He has also further noted that Bombay-built ships are at least one-fourth cheaper than those built in the docks of England.

(source: **Indian Shipping** - **A History of the Sea-Borne Trade and Marine Activity of The Indians From The Earliest Times** 1912).

***

Products Traded

Indian Exports

Food: Rice, Wheat, Sugar,
Spices: Turmeric, Pepper, Cinnamon, Nard, Spikenard, Costus, Bdellium, Aloes, Indigo, Lycioum, Sesame oil, Cotton, Silk
Animals: Lion, Tiger, Parrot, Hides and furs, skins, Horns and tails, wool, Ivory, Tortoise shells, Pearls, Lac, Log of Ebony, Teakwood, Blackwood, Sandalwood, Bhurja Leaves, Bamboo
Mineral: Diamond, Agate and Carnelian, Sapphire, Quartz, Crystal, Beryls, Lapislazuli, Garnet, Asbestos, Turquoise, Copper.

Indian Imports

Sesame, Flax and Linen, Parchment wine, gold, Horse, Peach and apricot, sweet clover, silver, tin, copper, lead, ruby, topaz, glass, corals, amber,

Teakwood

It is the best building timber as it can resist the action of water. Theophrastos mentions that ship builders built ships of this wood of India in the Persian Gulf. Town of Siraf on the Persian Gulf was entirely built of this wood and in 1811 teak was found in the walls of a Persian palace near Baghdad (7th century B.C.E.) The Susa inscription of Darius clearly mentions the import of teakwood in Persia. The Periplus states that large vessels were regularly sent from Barygaza loaded with timbers of teakwood to Oman. Realizing the export importance of teakwood Kautilya made provision for the Superintendent for forest produce.

(source: **Foreign Trade and Commerce in Ancient India - By Prakash Charan Prasad** p.203-212).

State patronage with the strength of the organized guilds greatly increased the prosperity of the country. Megasthenes records how prices were regulated by state-trading. The idea was that staple commodities were bought when they were cheap and released when the prices were high, just to bring the prices down. This was really a measure far ahead of its time. As historian **A. L. Basham** points out:

"It is striking that ancient Indian political theorists anticipated by over 2000 years the plans put forward by the Food and Agriculture Organization of the United Nations for maintaining a stable level of prices of staple commodities on a world-wide scale.

(source: **Ancient Indian History and Culture - By Chidambara Kulkarni** Orient Longman Ltd. 1974. p. 104).

Top of Page

Land Trade

The land trade of India extended to China, Turkistan, Persia, Babylon and sometimes also to Egypt, Greece and Rome. Historian **Vincent Smith** writes:

"The country in the north with which India traded was China." "The name China is of Hindu origin and comes to us from India."

(source: **Early History of India - By Vincent Smith** Vol. II, p. 574-575).

The author of Periplus, after describing the geographical position of China, says: "Silk was imported from that country, but the persons engaged in this trade were the Indians themselves." It may, however, be added, in the words of an English critic: "It is not improbable that silk was also indigenous in India even at a remote epoch."

(source: **Asiatic Researches** Volume II. p. 286. Also refer to Schlegel, Berlin Calendar p. 9 1829).

E. B. Havell (1861-1934) principal to the Madras College of Art in the 1890s, says: "From the sea ports of western and

eastern coasts India at this time also sent streams of colonists, priests and craftsman all over Southern Asia, Ceylon, Siam and far distant Cambodia. Through China and Korea Indian art entered Japan about the middle of the sixth century. About 603 A.D. Indian colonists from Gujarat brought Indian art in Java and at Borobudur in the 8th and 9th centuries. Indian sculpture achieved its greatest triumphs."

(source: **Ancient Indian Culture At A Glance - By Swami Tattwananda** p. 214).

Vishnu Belahan, Java

As regards the trade with central and northern Asia, we are told that "the Indians make expeditions for commercial purposes into the golden desert Ideste, desert of Cobi (Gobi) in armed companies of a thousand or two thousand men. But according to report, they do not return home for three or four years. The Takhti, Suleman, or the stone tower mentioned by Ptolemy and Ctesias was the starting point for Hindu merchants who went to China.

India traded with Europe by sea as well as by land. Foreign trade of a nation presupposes development of its internal trade. Specially is this true of a large country like India, with varied products, vast population and high civilization.

Professor Lassen of Paris considers it "remarkable that the Hindus themselves discovered the rich, luxurious character of India's products; many of them are produced in other countries, but remained unnoticed until sought for by foreigners, whereas the most ancient Hindus had a keen enjoyment in articles of state and luxury. Rajas and other rich people delighted in sagacious elephants, swift horses, splendid peacocks, golden decorations, exquisite perfumes, Pungent peppers, ivory, pearls, games etc. and consequently caravans were in continued requisition to carry down these innumerable other matters between the north and the south and the west and east of their vast and varied country. These caravans, it is conjectured, were met at border stations and about ports by western caravans or ships bound to or from Tyre and Egypt, or to or from the Persian Gulf and Red Sea."

(source: **Ancient and Mediaeval India - By** Vol. II. p. 348). Ind. Alterthumskunde. For more information refer to chapter on **India and Egypt**).

Professor Heeran remarks, "The internal trade of India could not have been inconsiderable, as it was in a certain degree prescribed by nature herself." Royal roads were constructed all over the country from east to west and from north to south, in addition to the numerable rivers, along the banks of which considerable commerce was carried on.

The Encyclopedia Britannica says:

"It (India) exported its most valuable produce, its diamonds, its silks, and its costly manufactures. The country which abounded in those expensive luxuries, was naturally reputed to be the seat of immense riches, and every romantic tale of its felicity and glory was readily believed. In the Middle Ages, an extensive commerce with India was still maintained through the ports of Egypt and the Red Sea; and its precious produce imported into Europe by the merchants of Venice, confirmed the popular opinion of its high refinement and its vast wealth."

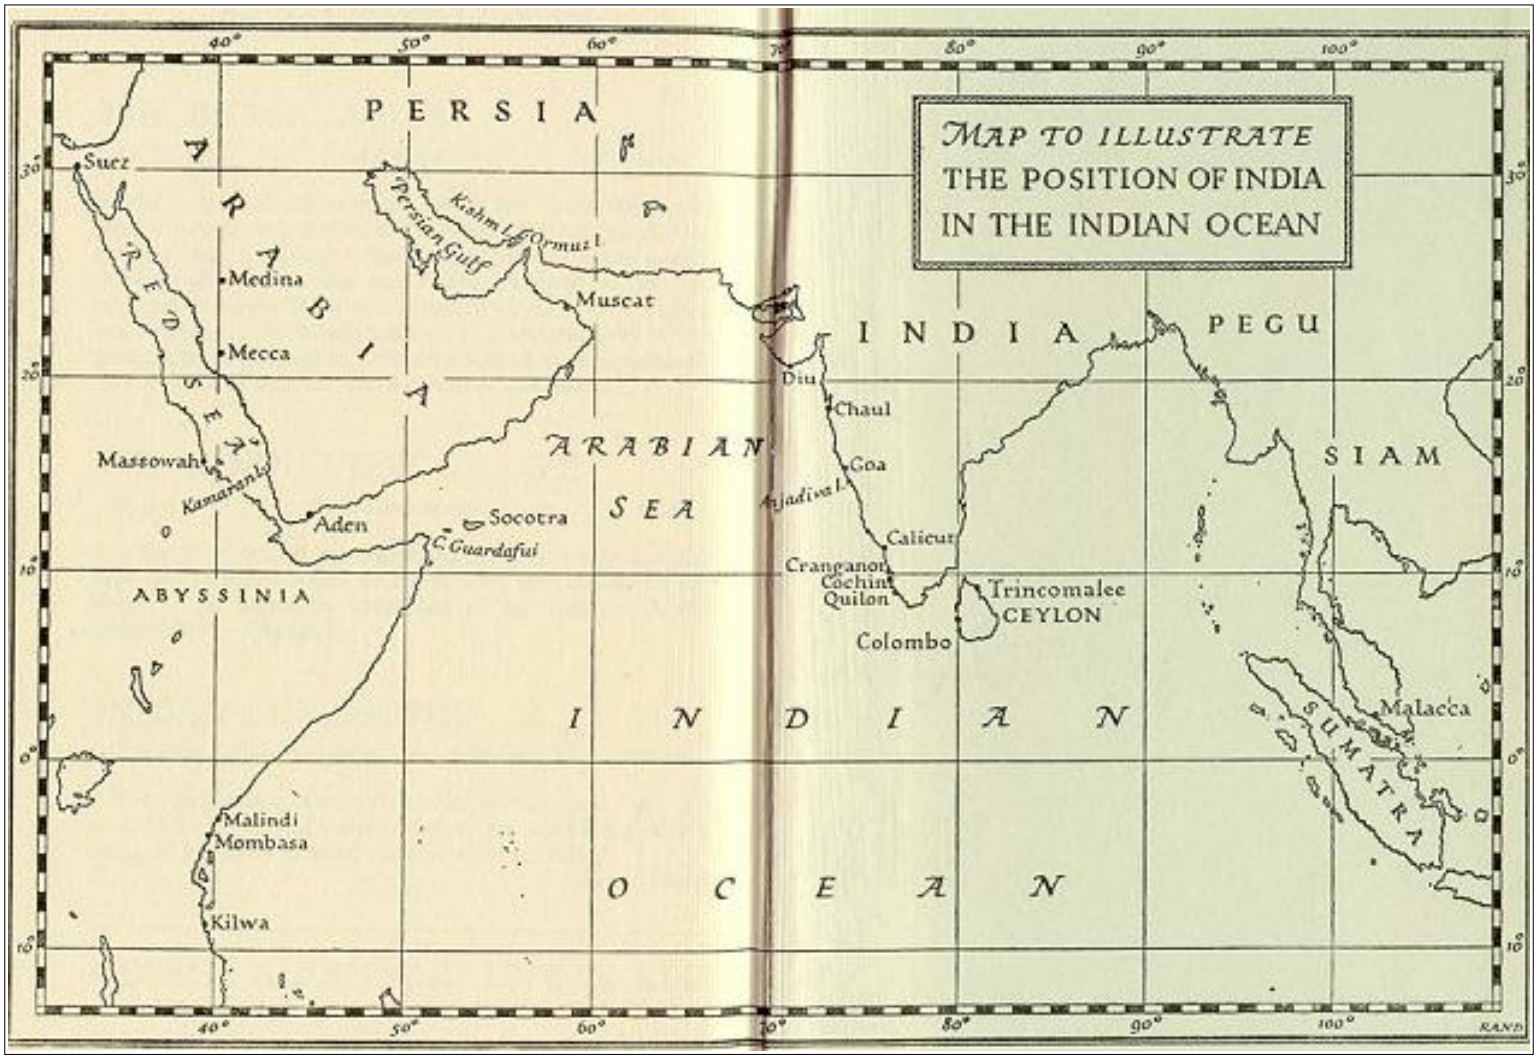
Foreign commerce on such a gigantic scale was one of the principle causes of the immense riches of ancient India.

Top of Page

The Hindu Period in The Indian Ocean: A Naval Power

The spread of Hindu thought was an intellectual conquest, not an exchange of ideas. The Far East counted for nothing in her internal history, doubtless because China was too distant and the other countries had no special culture of their own. **Still it is remarkable that whereas many Hindu missionaries preached Buddhism in China, the idea of making Confucianism known to India seems never to have entered the head of any Chinese.** There was never any question of colonizing or civilizing rude races.

Manu, the great lawgiver, provides in his Code, for shipping and port dues, while **Kautalya's Arthasastra**, an authoritative work on administration which was written in the fourth century B.C. lays down the functions of the Port Commissioner and Harbor Master. The Board of Shipping was one of the six departments of the Mauryan Emperors. At the head of it was a Minister who dealt with all matters relating to shipping, including the navigation of the oceans. There under him a staff of commissioners, harbor masters, etc. whose duty it was to look after ships in distress. As the Mauryan ports were mainly on the coast of the Bay of Bengal, this is conclusive evidence of the growth of trade and shipping in that sea as early as the fourth century B.C.



We have also evidence of regular maritime traffic by the Hindus in the South China seas before the Christian era. At the beginning of that period both Chinese records and the Greek geographer Ptolemy record the existence of Indian colonies in the present territory of South east Asia.

Sir Charles Elliot (1862-1931), British diplomat and colonial administrator, a famous scholar and linguist of Oxford, observed on his book **Hinduism and Buddhism** observes:

"This outgrowing of Indian influence, so long continued and so wide in extent, was naturally not the result of any one impulse. At no time can we see in India any passion of discovery, any fever of conquest such as possessed Europe when the New world and the route to the East round the Cape were discovered. India's expansion was slow, generally peaceful and attracted little attention at home. **The Hindus produced no Tamerlanes or Babers, but a series of expeditions, spread over long ages, but still not few in number, carried them to such distant goals as Java and**

Camboja.

We have also historical evidence of some of the continental powers using their naval power for purposes of conquest. Pulikesin II the Chalukya king who reigned in the first half of the seventh century led a naval expedition of considerable size. The Zamorin of Calicut gloried in the title of the Lord of the Mountain and the Ocean, and one of the first writs he issued after coronation was to permit the usual navigation of the sea. The Pandyas, Cholas and others also maintained powerful navies, while the Rulers of Malabar exercised naval sway over the seas of the Western coast.

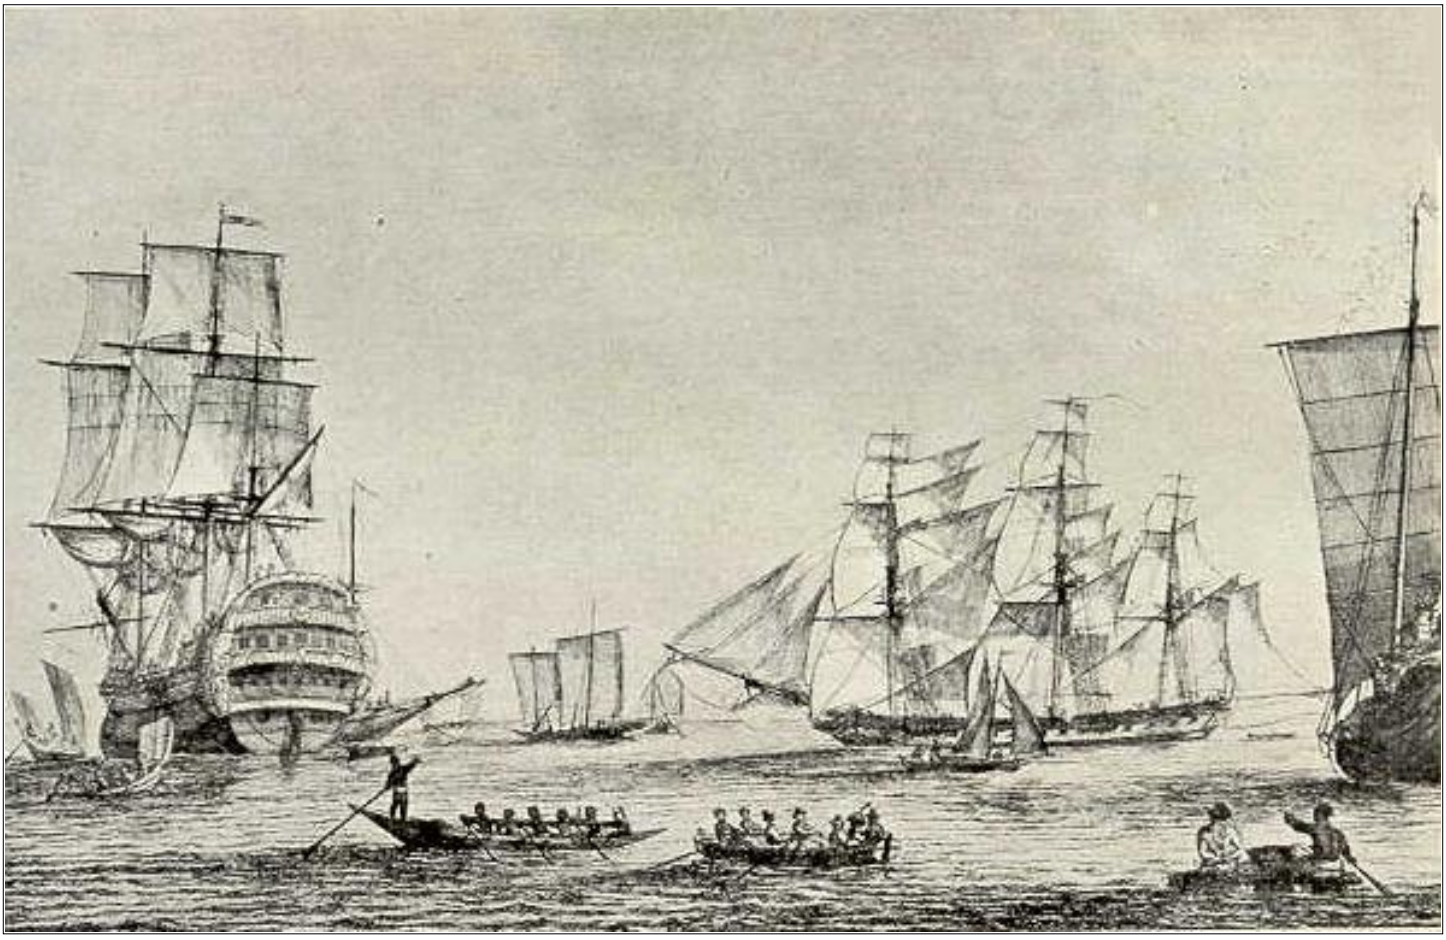
The Hindu Period in The Indian Ocean
(source: India and the Indian Ocean - By K. M. Panikkar)

From the fifth century to the tenth the command of the Malacca Straits was in the hands of a great Indian naval power, based on Sumatra known to history as the Sri Vijaya Empire. This State included much of Peninsular Malaya, Sumatra and the Western half of Java besides numerous island principalities. **I'Tsing** who resided for some years in that Kingdom says that the King possessed numerous ships which sailed regularly between India and Sri Vijaya as also between Sumatra and China.

The Sri Vijaya Kings maintained a powerful navy which swept the sea of pirates and corsairs. Their naval power, well attested by their continuous raids on the coasts of Champa and Annam, is recorded both in local inscriptions and in Chinese annals, (e.g Po Nagar Stelae inscription of King Satya Varman 784 A.D. and in Yang Tikuh inscription of Indra Varman I, dated 787). With the Straits of Malacca firmly under their control and with their authority extending over the far flung group of islands, the Sri Vijaya Kings were in a position to enforce their rule over the Indian waves. Further, they were also closely connected with the Indian Kingdoms of the Eastern side of the Bay of Bengal especially with the Kalinga monarchs of Orissa.

Till the end of the tenth century, that is, for a period of nearly 500 years, the Sri Vijaya Kings were the Lords of the Ocean. But in 1007 the Chola Emperor Rajendra fitted out a powerful navy and challenged the might of Sri Vijaya. he not only defeated the opposing navy, but captured Kedah and established the Chola power on the Malaya Peninsula.

This hundred year war was of great importance for it weakened the Sri Vijaya power. **Chau Ju Kua**, the Imperial Chinese Inspector of Foreign Trade, in his work entitled **Chu Fau Chi** written in 1225 states that Sri Vijaya was not merely a great emporium of trade, but controlled the Straits of Malacca and thus was able to dominate the sea trade to China with the west. All ships passing through the Straits had to call at the capital and the maritime administration kept a close watch on traffic through the lane.

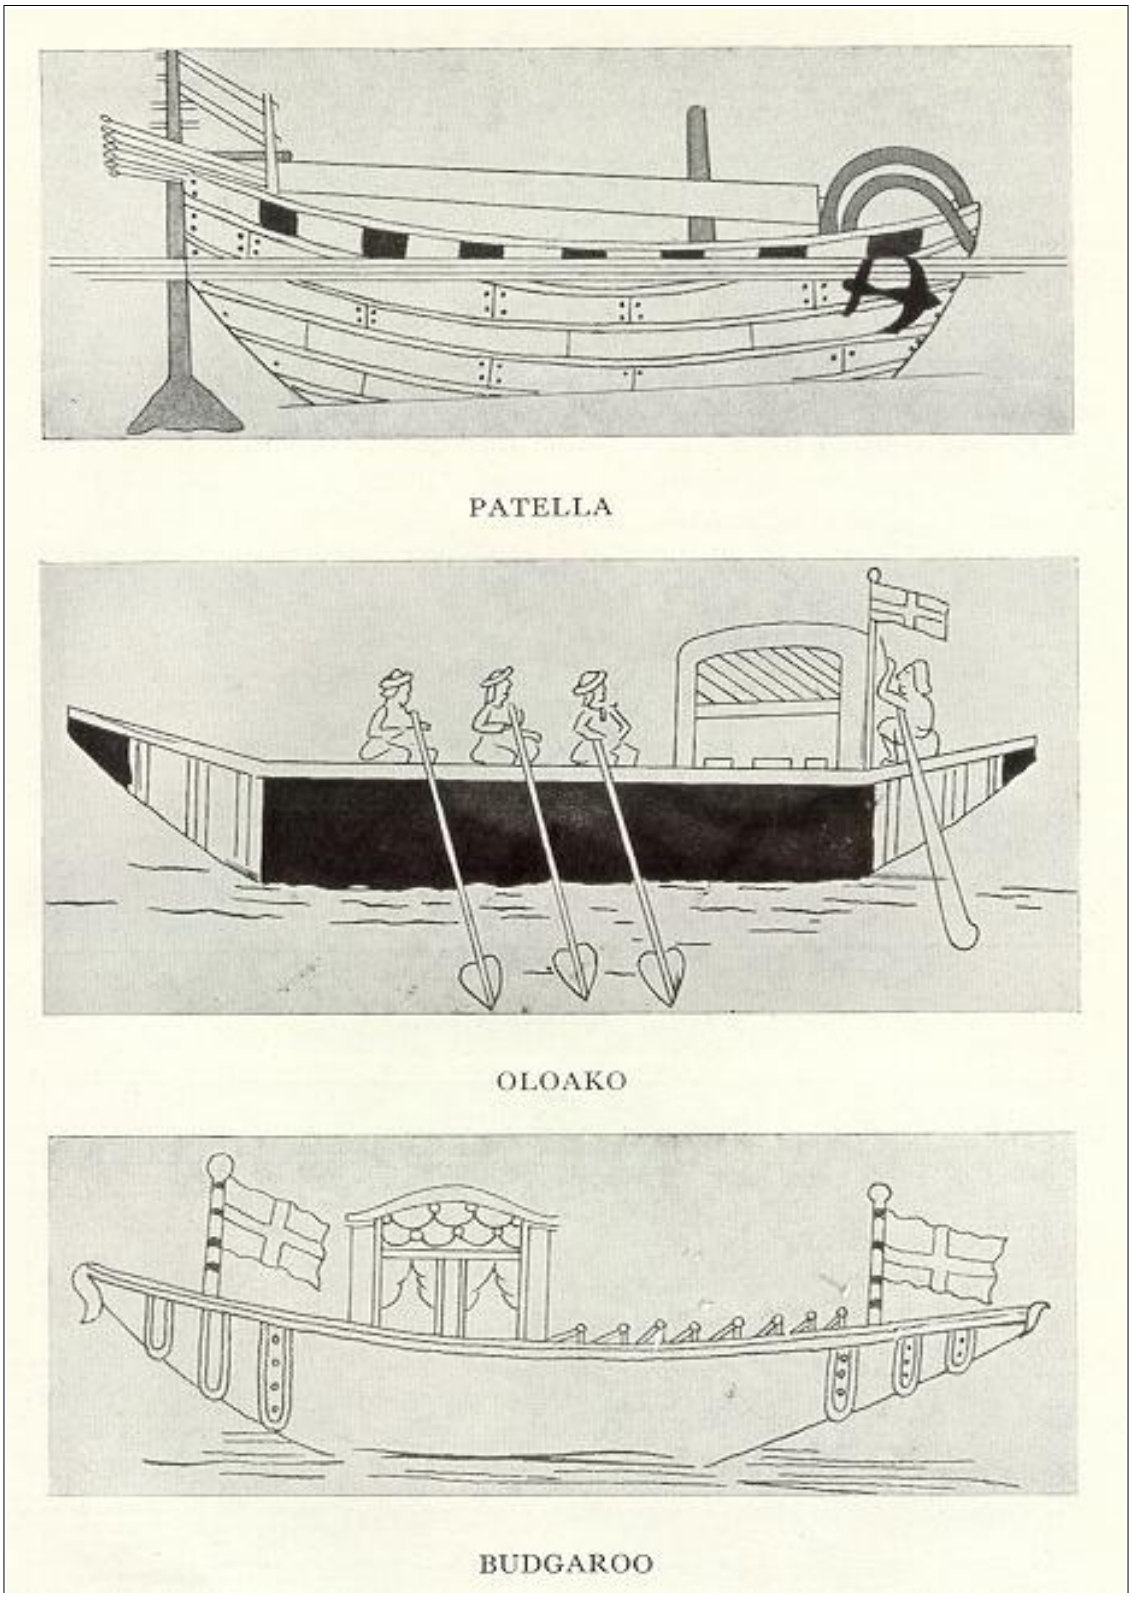


As regards to Sumatra, the Bombay Gazateer says: "The Hindu settlements of Sumatra was almost entirely from the east coast of India, and that Bengal, Orissa and Masulipatam had a large share in colonizing both Java and Cambodia cannot be doubted."

Charles Coleman wrote: "Mr. Anderson, in his account of his mission to the coast of that island (Sumatra) has, however, stated that he discovered at Jambi the remains of an ancient Hindu temple of considerable dimensions, and near the spot various mutilated figures, which would appear to clearly indicate the former existence of the worship of the Vedantic philosophy."

(source: **The Mythology of the Hindus** - with Notices of Various Mountain and Island Tribes, Inhabiting the Two Peninsulas of India and the Neighbouring Islands - **By Charles Coleman** p. 861).

Francois Balazar Solvyns (1760-1824) a French maritime painter, wrote a book titled "**Les Hindous**" (tome troisieme) in 1811. He lived in Calcutta from 1791-1803 and he remarked:



"In ancient times, the Indians excelled in the art of constructing vessels, and the present Hindus can in this respect still offer models to Europe-so much so that the English, attentive to everything which relates to naval architecture, have borrowed from the Hindus many improvement which they have adopted with success to their own shipping.... The Indian vessels unite elegance and utility and are models of patience and fine workmanship."

Indian Shipping: High Vessels - Pearl, fishers' Grabs and Catamarans - From "Les Hindous" French early 19th century work.

He has described some of the typical Indian vessels. A Pinnace or Yacht was a strongly masted ship, divided into two or three apartments, one for company, another for the beds, and a third as a cabinet, besides a place called varandah

forwards for the servants. Balesore, the principal entrance of the Hugli, is described as being frequented by different sort of vessels, and particularly by large ships from Bombay, Surat, and other parts of the western coast. The vessels from the Ganges were called Schooners, which were very well fitted out and "able to make a voyage to Europe." their pilots being very skilful. The Grab was a ship with three masts, a pointed prow, and a bowsprit, its crew consisting of a Nakhoda or captain and a few khelasses or sailors. The grabs were built at Bombay, their pointed prow signifying **Hindu construction**. The Bangles were the largest Indian boats, some of them carrying four thousand or five thousand maunds of rice. Brigs were ships that came from the coast of Coromandel and Malabar, bringing to Calcutta the produce of those countries. To the coast of Coromandel (Cholamandel) also belonged the Dhoni, with one mast, resembling a sloop. Its deck consisted of a few planks fastened on each side. It was badly rigged. Pattooas, lastly, were those ships that differed from other vessels by their being clincher-built; "the boards are one upon the other, fastened by little pieces of iron in the form of cramps. The yard is always without sail, and the sails are hoisted and lowered by blocks."

PATELLA

OLOAKO

BUDGAROO

Some 17th century ships

Surprisingly, many earlier western traders and travelers have expressed the same views. Madapollum was a flourishing shipping center. **Thomas Bowrey**, an English traveler who visited India during 1669-79, observes, "many English merchants and others have their ships and vessels yearly built (at Madapollum). Here is the best and well grown timber in sufficient plenty, the best iron upon the coast, any sort of ironwork is ingeniously performed by the natives, as spikes, bolts, anchors, and the like. Very expert master-builders there are several here, they build very well, and launch with as much discretion as I have seen in any part of the world. They have an excellent way of making shrouds, stays, or any other rigging for ships".

Alain Danielou (1907- 1994) son of French aristocracy, author of numerous books on philosophy, religion, history and arts of India has written:

"India's naval dockyards, which belonged to the state, were famous throughout history. The sailors were paid by the state, and the admiral of the fleet hired the ships and crew to tradesmen for transporting goods and passengers. When the British annexed the country much later on, they utilized the Indian dockyards - which were much better organized then those in the West - to build most of the ships for the British navy, for as long as ships were made of wood."

(source: **A Brief History of India - By Alain Danielou** p. 106).

During the same period a great impetus was given to Indian shipping and maritime enterprise by the great **Shivaji, the great Maratha leader**. Shivaji, who liberally patronized the shipbuilding industry but the beginnings of the Maratha navy were laid a little earlier. In 1640 Shahji Bhonsle was able to achieve a naval victory over the Portuguese off Reradanda. Shahji was helped in his expedition by **Tukoji,** whose son, the famous **Kanhoji Angray**, occupied such an important position in the Maratha navy of the times. Under Shivaji the growth of the Maratha was accompanied by the formation of a formidable fleet. Sivaji believed in the doctrine Jalaim jasya, valaim tasya and so proceeded to organize the Maratha navy on sound lines. In 1698 Kanhoji Angray succeeded to the command of the Maratha navy with the title of Dariya Saranga. Angray soon became a menace to the European traders along the west coast and in 1707 his ship attacked the frigate Bombay, which was blown up after a brief engagement. The career of Angray was one long series of naval exploits and achievements rare in the annals of Indian maritime activity but unfortunately **"dismissed in a few words by our Indian historians."**

(source: **Indian Shipping** - **A History of the Sea-Borne Trade and Marine Activity of The Indians From The Earliest Times** 1912 p. 183 -184).

The following account of **Orme**, describing the features of the Maratha ships and Angrey:

" The piracy which Angray exercised upon ships of all nations indifferently who did not purchase his passes, rendered him every day more and more powerful. His fleet consists of **grabs and gallivats**, vessels peculiar to the Malabar coast..."

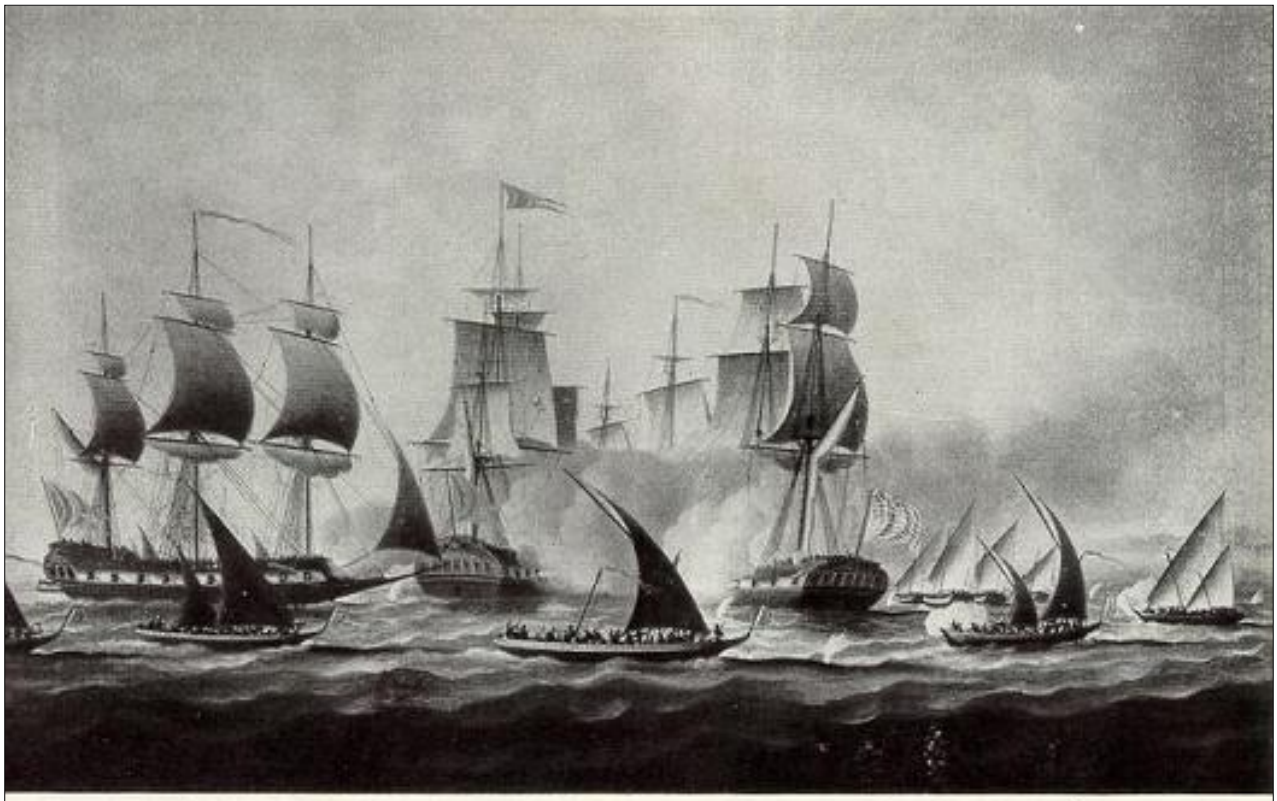
(source: **Bombay Gazetteer**, Volume I part ii p. 89).

In the days of the sailing ships and oaken vessels, the naval engineering of the Hindus was efficient and advanced enough to be drawn upon with confidence for European shipping. At Madapollum, for example, on the Madras coast, many English merchants used to have their vessels yearly built. The Hindu ship architects could ingeniously perform all sorts of iron works, e. g., spikes, bolts, anchors, etc. "Very expert master-builders there are several here," says the English traveler, **Thomas Bowrey** in his **Geographical Account of Countries Round the Bay of Bengal** (1669-1675); "they build very well, and launch with as much discretion as I have seen in any part of the world. They have an excellent way of making shrouds, stays, or any other riggings for ship."

Writing even as late as 1789, on the eve of the Industrial Revolution in Europe, Solvyns, the French traveler, could still recommend, in his Les Hindous (Vol. III, 1811), the Hindu method of uniting the planks are "not unworthy of the imitation of Europeans." He says, **"In ancient times the Hindus excelled in the art of constructing vessels, and the present Hindus can in this respect still offer models to Europe."**

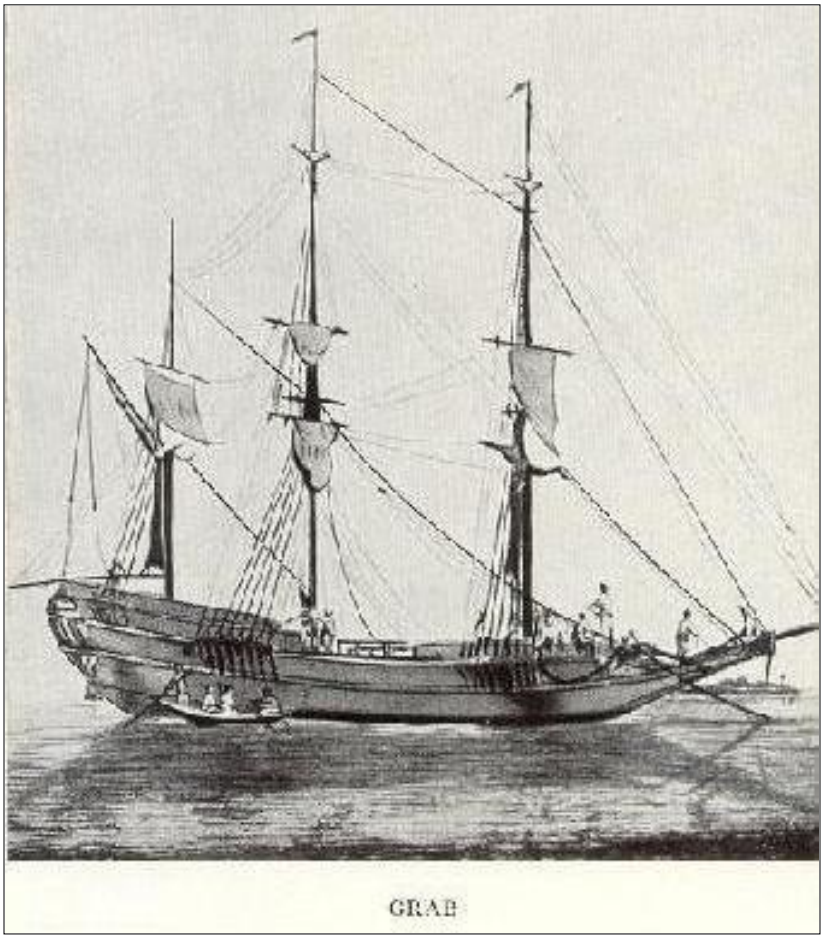
In the building of the boat the Hindus began by choosing a large piece of timber which they bent as they pleased. To the two ends of this they attached another piece thicker than it, and covered this simple frame with planks; "but they have a particular manner of joining these plants to each other, by flat cramps with two points which enter the boards to be joined, and use common nails only to join the plants to the knee. For the sides of the boat they have pieces of wood which out pass the planks. This method is as solid as it is simple."

The Portuguese "imitated" the pointed prow in their Indian ships. This was a characteristic feature of the grab, a Hindu ship with three masts. The industrial and material culture of Old India was thus sufficiently vital to influence contemporary Europe at the threshold of the 19th century civilization. The tradition is reported also by old American sea-captains that fishing boats like the sloop, yawl, cutter, etc. so common in the United States waters were modeled in the '"colonial period" on Hindu patterns.



(source: **Creative India - By Benoy Kumar Sarkar** p. 105).

Francois Balazar Solvyns (1760-1824) a French maritime painter, has made the following observation in his book, **"Les Hindous"**



Introducing the 40 or so sketches of boats and river vessels in use in Northern India in the 1790s, he observes, **"the English, attentive to everything which relates to naval architecture, have borrowed from the Hindoos many improvements which they have adapted with success to their own shipping."**

Commenting on Indian rowing an early eighteenth century observer remarked: "Their water-men row after a different manner from ours. They move the oar with their feet, and their hands serve instead of the hypomochlion, or roller on which it turns."

(source: **Indian Science and Technology in the Eighteenth Century: Some Contemporary European Accounts - By Dharampal** Impex India. p.LVII).

'MAHRATTA GRABS AND GALLIVATS ATTACKING AN ENGLISH SHIP'
From the picture in the possession of Major J.B. Paget

Mahartha Grab and Gallivat ships attacking an English ship
(source: History of Indian Shipping - By Radha Kumud Mukerjee).

Har Bilas Sarda author of **Hindu Superiority** (1906) wrote:

"They built ships, navigated the sea, and held in their hands all the threads of international commerce, whether carried on over land or by sea."

Colonel James Tod author of author of **Annals and Antiquities of Rajasthan: or the Central and Western Rajput States of India** ISBN 8120612892 says:

"The Hindus of remote ages possessed great naval power."

(source: **Hindu Culture and The Modern Age - By Dewan Bahadur K.S. Ramaswami Shastri** - Annamalai University 1956 p. 74-75).

From the teak forests, which were numerous along the western coasts, the Indians built their ships. **Bishop Reginald Heber** wrote in 1824, ships built by native artisans are notoriously as good as any which sail from London or Liverpool.

***

Retrospect

Dynasty after dynasty succeeded to the position of paramount power in the land, but the course of commerce ran smooth through all these changes. This is shown on the one hand, unmistakably by the books of Roman writers with their remarkably accurate details regarding Indian exports and imports, and harbors, and on the other hand, by the unimpeachable testimony of many finds of Roman coins both in Northern and Southern India.

A consideration of the kind of things which India sent abroad in exchange for the things she imported and a glance at the list of Indian exports and imports such as that given in that most interesting work on oriental commerce, the Periplus

of the Erythraean Sea, will reveal certain peculiar features regarding the economic system of ancient India, to which has been traced the proverbial **"wealth of Ind"** by many scholars. As remarked by Major J. B. Keith, in an article in the Asiatic Quarterly Review (July, 1910), "the old prosperity of India was based on the sound principle which is, that after clothing and feeding your own people, then of your surplus abundance give to to the stranger." The result was the development of an external trade to which we owe, on the one hand, the great cities like Baalbek and Palmyra in the desert, and, on the other hand, "those great monuments of art, which India was enabled to erect after clothing and feeding her own people." And of the many satrapies of Darius, India was the only one, which could afford to pay her to tribute in gold to him. Finally, we should not miss the point of Pliny's famous complaint about allowing India to find a market for her superfluous manufactured luxuries in Rome, and thereby suck out her wealth and drain her of gold.

It may be noted that it was India's wonderful achievement in applied chemistry more than her skill in handicraft that enabled India to command for more than a thousand years (from Pliny to Tavernier) the markets of the East as well as the West, and secured to her an easy and universally recognized pre-eminence among the nations of the world in exports and manufactures. Some of the Indian discoveries in chemical arts and manufactures are indicated as early as the 6th century A.D. by Varahamihira in the Brihat-Samhita.

Besides the trade with the West generally, there was also developed along with it a trade with the East. The West alone could not absorb the entire maritime activity of India, which found another vent in a regular traffic in the Eastern waters between Bengal and Ceylon, Kalinga, and China and Suvarnabhumi, and a complete navigation, in fact, of the Bay of Bengal and the Indian Ocean and laid the foundation of a Greater India.

***

"Almost from the dawn of her history, it has been the privilege of India to carry the torch of her unique ideals to distant lands and inspire them to noble adventures, both in the inner and outer fields of human activity. The culture of India has been like a sky-high tower of light shedding its lustre on the surrounding countries, even on those at the far ends of the earth, illuminating the mind of man, exalting his heart, ennobling his life and above all beckoning him on the realization of the highest spiritual destiny."

(source: **The Vision of India - By Sisir Kumar Mitra** ASIN 8124200068 p. 161).

Conclusion

Indian shipping has thus had a long and brilliant history covering a period of about five millennia from the very dawn of India's civilization in the Indus Valley. Both Hindu and Buddhistic texts are thus replete with references to the sea-borne trade of India that directly and indirectly demonstrate the existence of a national shipping and shipbuilding. It was one of the great national key industry of India. Indeed, all the evidence available clearly shows that for full thirty centuries India stood at the very heart of the commercial world, cultivating trade relations successively with the Phoenicians, Jews, Assyrians, Greeks, Egyptians, and Romans in ancient times, and Turks, Venetians, Portuguese, Dutch and English in modern times.

Professor Basham is not the only scholar to have underplayed India's achievements with regard to ship-building, navigation, and sea travel. The colonialist bias against Indian culture is fully matched by the Indian 'Marxist' bias against culture.

For example, **Marxist** historian, **B.S. Sharma's** oversimplification of facts for children plays havoc with the subject matter of history. He writes: "In early times the ancient Indians obtained some knowledge of navigation, and they contributed to the craft of ship-building. But since political powers had their seats of power far away from the coast and since there was no danger from the sea-side, the ancient Indian princes did *not* pay *any particular* attention to navigation." The italics clearly manifest Sharma's **negative treatment of India's accomplishments** whereas the obliteration of Pallavas and Cholas from his memory - important political power which were not far away from the coast - divulges his northern, perhaps Aryan and Brahmin bias.

There is enough evidence to prove that Indians maintained their maritime activity through out the ancient and mediaeval periods, naturally with variations in its extent and excellence, over such a long period of time. Both Basham and Marxist historians of India have presented untruth, and half truth as truth.

Non-Indian scholars, especially modern writers of secondary works, tend to play down India's importance in the evolution of South east Asian civilization. The eastward expansion of Hindu civilization has not yet been fully traced.

George Coedes French historian and author of **Indianized State of South East Asia** has said: "I am convinced that such research will reveal numerous facts which will indicate a much deeper Indianization of the mass of the population than the sociologists will at present admit."

Sylvain Levi French art Historian has shown how references in the Ramayana, Mahabharata, Mahaniddesa and Brihat-Katha that the products of Burma and Malaya Peninsula were known to Indian merchants and sailors and also some of its ports such as Suvarnakudya, Suvarnabhumi, Takkolam, Tamlin and Javam from at least first century A.D.

(source: **Ancient India - By V. D. Mahajan** p. 752-753).

That Indian traders and settlers repeatedly undertook journeys to Southeast Asia, despite the hazards and perils involved, speaks well for their physical prowess, courage, and determination, even if allowance for the pull of profit is made.

Historian **K. M. Panikkar**, who in his brilliant exposition, **India and the Indian Ocean**, speaks about the 'influence of the Indian Ocean on the shaping of Indian history.' For Panikkar, the geographical 'imperative' of the Indian Ocean – and indeed the Himalaya in the North – has conditioned and shaped the history and civilization of this subcontinent. 'The importance of geographical path on the development of history is only now receiving wide and general recognition,' he says.

Nand Kishore Kumar wonders:

"It will be hard to find a secondary source from any part of the world which will endorse Professor Basham's view. Indeed it is difficult to understand, how in view of incontrovertible primary evidence proving Indian maritime activity, extensive respect of space and time-span, intensive in terms of variety, tonnage and value, and altogether of far reaching consequences in material as well as ideational spheres, Professor Basham could have belittled that is when he found it worth a mention at all - this aspect of Indian civilization. **Is it because it is hurtful to the pride of a native of the British Isles which conquered the world through military strength but cannot compare with its erstwhile colony which for over a millennium dominated the world through civilized means?"**

(source: **Bias in Indian Historiogarphy - Edited By Devahuti** D. K. Publishers' Distribution. New Delhi. 1980. p. 90-100).

Dr. Vincent Smith has remarked, "India suffers today, in the estimation of the world, more through the world's ignorance of the achievements of the heroes of Indian history than through the absence or insignificance of such achievement."

(source: **Eminent Orientalists: Indian European American** - Asian Educational Services. p.314).

U.S. adopts Indian Catamaran technology

Washington May 28 2003: The United States adopted **ancient Indian catamaran-making technology to construct fast ships** which were used with dramatic effect in the Iraq war, says a media report.

Among the equipment the Americans used to win the Iraq war were 100-feet catamaran ships to ferry tanks and ammunition from Qatar to Kuwait.

The ships, built with technology adapted from ancient Tamil methods to make catamarans, can travel over

2,500 kms in less than 48 hours, twice the speed of the regular cargo ships, and carry enough equipment to support about 5,000 soldiers, the Wall Street Journal reported yesterday.

Having a shallow draft, the boats can unload in rudimentary ports, allowing troops to land closer to the fight. — PTI

Sailing down the seas of history

Charting the coastline from Mumbai to the very end of Gujarat, where India ends and Pakistan begins, the 1,000 nautical mile voyage that will end on February 11 is in preparation for another, more ambitious voyage. The sailors, calling themselves the Maritime Exploration and Research Group, is getting ready to follow the path of ancient Indian mariners from south India all the way to Indonesia.

Inspired by the Chola kings of the 11th century, who discovered the present-day Indonesian islands of Sumatra and Bali, the group is preparing to replicate the feat using traditional instruments and a boat resembling the vessels of yore.

Called the Simulation of Chola Navigation Techniques, the forthcoming expedition will attempt to cover the distance between Nagapatnam in southern India and the Indonesian islands."The expedition will aim to show that our ancient seafarers were in no way inferior to their Western counterparts," said B. Arunachalam, a researcher who is the moving spirit behind the expedition. The expedition has cost the team members nearly Rs.100,000 but they have received substantial assistance from the Indian Navy.

Did You Know?

Close resemblance of Easter Island and Indus Valley Script

The Hindu and Buddhist cultures in Indonesia gradually extended to Polynesia through tradesmen and preachers of Indonesia some of whom might have settled down in Polynesia and were called the Arii or the Aryans. Dr. E. S. Cragihill Handy describes the story of Polynesian culture as "a mere index to Indian history."

Author of the 'Ancient Voyagers in Polynesia' is of opinion that Polynesian ancestors came from the west through the waters between Buru and Yap to eastern New Guinea and the Melanesian island and thence to Polynesia by a slow succession of West-East voyage.

The hypothesis of Indian contact with the Polynesians is strengthened by the discovery of the Easter Island scripts which closely resemble the scripts of the Indus Valley civilization.

Easter Island script and Indus Valley scripts compared
(source: The Indians And The Amerindians - By Dr. S. Chakravarti)

William Ellis, the well-known missionary and author of Polynesian Researches, has commented on the coincidences in language, mythology, etc. of the Polynesians with those of the Hindus, the natives of Madagascar, and the Americans. Bishop Heber, an authority on the Hindus stated "that many things which he saw among the inhabitants of India reminded him of the plates in Cook's Voyages" Recently, an Indian scholar, B. C. Chhabra, in his Vestiges of Indian Culture in Hawaii, has noticed certain resemblances between the symbols found in the petroglyohs from the Hawaiian Islands and those on the Harappan seals. Some of the symbols in the petroglyphs are described as akin to early Brahmi script.

The Meitei word 'Atea' of Manipur which means 'All Powerful Sky God' is found in New Zealand and some other Polynesian island with out any change in sound or meaning. In Hawaii island, 'Atea' has become 'Wakea.'

(source: **The Indians And The Amerindians - By Dr. B. Chakravarti** Self-Employment Bureau Publication Calcutta p. 125-151).

Edward Tregear, former President of the Polynesian Society, is cited by William Churchill, "Polynesian Wandering" (Carnegie Institution, 1911), p. 20 as stating the generally accepted view of Polynesian scholars to be that the Polynesians came from India, or from central Asia through India.

(source: **The Ayar-Incas - By Miles Poindexter** published by Horace Liveright New York 1930 Volume II p. 260).

Characters similar to those on the Indus seals have also been found on tablets excavated from Easter Island. This discovery has presented a difficult problem for the pre-historian. It is not known if the two belong to a common source, if one provided the model for the other, or if the similarity is purely accidental due to in accuracies of drawing. If the Indus models traveled about 13,000 miles eastward, it seems strange that the characters should have remained unaltered, because figures generally do not remain identical during prolonged transmission. And, if the seals were actually made in the Indus Valley and taken to the Easter Island, what is the explanation for the difference in arrangement between the two groups of seals?

(source: **Indian and World Civilization - By D. P. Singhal** p. 4).

Updated - December 19, 2003

It is clear that the motives of Western scholarship in pursuing Indology were far from altruistic. Motivated western scholarship in India's religious, cultural and historical spheres has a checkered history. The pioneers in this field have been western Christian missionaries. It was Pope Honorius IV (1286-87 A.D.) who first encouraged the study of oriental languages as an aid to missionary work. Soon after, the Ecumenical Council of Vienna (1311-12 A.D.) decided that "the Holy Church should have an abundant number of Catholics well versed in the languages, especially in those of the infidels, so as to be able to instruct them in the sacred doctrine." In 1870, The First Vatican Council, Hindu beliefs were specifically selected for condemnation in the "five anathemas against pantheism" according to Jesuit John A. Hardon in the Church-authorized book, **The Catholic Catechism.**

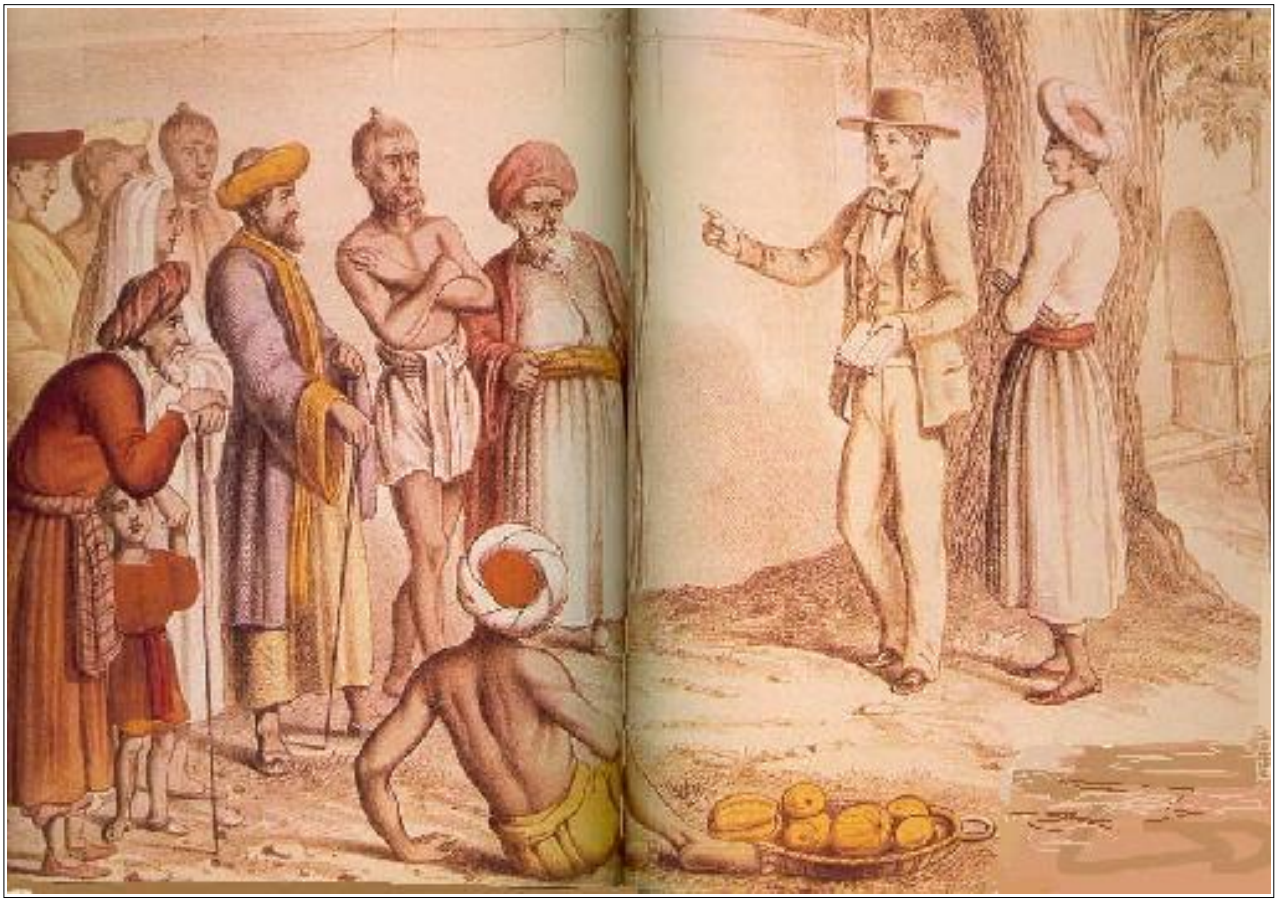
History of Indology:

The first Westerners to investigate the Vedic literatures were the British in the last half of the eighteenth century. It was the British Sanskritists and educators in India, during the 1700 and 1800's, who **first portrayed Vedic literature and culture as something barbaric, inferior, and recent. This cultural prejudice** was the result of deliberate undermining with the disguised intention of asserting the superiority of their own Christian-based values and outlook, as well as the perpetuation of colonial rule. India was the centerpiece of Britain's imperialistic exploits. **And many of the notable professors at the time had the audacity to consider themselves to be better authorities on their questionable translations of the Vedas then the Indian scholars.** Western Indology itself, has its roots in European colonialism and Christian missionary propaganda.

Pope Honorius IV encouraged the study of oriental languages as an aid to missionary work.

It was Indologist **W.W. Hunter** who said: **"Scholarship is warmed with the holy flame of Christian zeal."**



On November 7th, 1919, "The Daily Telegraph (London), wrote: "There is no Civilization known to the world except that of Christianity." All then who are not Christians are uncivilized." **Cardinal Bourne**, speaking about this time at Waterford, said:

" When you come to nations where Christianity had not penetrated, there was no civilization in our sense of the word except fragments which they had picked up from the Christian Civilized Nations."

(source: **Is India Civilized: Essays on Indian Culture - By Sir John Woodroffe** p.28).

Catholic Bishop of Plymouth wrote of the books "dignified" by the Sanskritists under the name "Sacred Books of the East" as being **"gibberish".**

At first the British government was careful not to force any change in religion upon the Indian people. This policy seemed judicious for ruling the several hundred million Indian citizens without precipitating rebellion. It can be easily summed up in the words of a tea-dealer **Mr. Twinning,** "As long as we continue to govern India in the mild, tolerant spirit of Christianity, we may govern it with ease; but if ever the fatal day should arrive, when religious innovation shall set her foot in that country, indignation will spread from one end of the Hindustan to the other, and the arms of fifty millions of people will drive us from that portion of the globe, with as much ease as the sand of the desert is scattered by the wind". Another point of view in support of that policy was by Montgomery. "Christianity had nothing to teach Hinduism, and no missionary ever made a really good Christian convert in India. He was more anxious to save the 30,000 of his country-men in India than to save the souls of all the Hindu by making them Christians at so dreadful a price".

A British Protestant missionary expounds on Christian doctrine to the natives.
(source: What Life Was Like In The Jewel In The Crouwn - Time Life).

Despite facing such resistance in the beginning, missionaries won the battle in 1813 resulting in full right to visit and preach their religion in India. The Christian population in India in 1893 was around 600,000 but today it has grown up to 24 million, an increase of 4000% in 106 years!

However, soon, "the company manifested a laudable zeal for extending, as far as its means went, the knowledge of the Gospel to the pagan tribes among whom its factories were placed." The British showed very little interest in Hindu scriptures in the beginning. Doubtless this was in part a reflection of the usual British attitude to India during most of the period of the Raj: that **India as a whole was a profitable nuisance.**

Lord Cornwallis, a contemporary of William Jones, made his famous and bold announcement in "Every native of Hindostan, I verily believe, is corrupt."

The missionaries in India were always supporters of colonialism; they encouraged it and their whole structure was based on **"the good of Western civilized world being brought to the Pagans."** The Christian missionaries had no sympathy for Hinduism which, in their view, was **"at best, work of human folly and at worst the outcome of a diabolic inspiration."**

(source: **Ancient India - By V. D. Mahajan** p. 1).

Preacher, **William Archer**, wrote in his book, **India and the Future**:

"The plain truth concerning the mass of the [Indian] population — and the poorer classes alone — is that they are not civilized people."

Reverend A. H. Bowman wrote that Hinduism was a:

"…great philosophy which lives on unchanged whilst other systems are dead, which as yet unsuplanted has its stronghold in Vedanta, the last and the most subtle and powerful foe of Christianity."

In the word of **Charles Grant** (1746-1823), **Chairman of the East India Company**:

"We cannot avoid recognizing in the people of Hindustan a race of men lamentably degenerate and base...governed by malevolent and licentious passions...and sunk in misery by their vices.."

Charles Grant, who exercised a tremendous influence in the Evangelical circles, published his Observations as early as 1797 in which he attacked almost every aspect of Indian society and religion, determined the "true place" of Indians "in the moral scale" by describing them as morally depraved, "lacking in truth, honesty and good faith"and "in every way different" from the British, enriched the ideological armoury of the Christian missionaries, and provided a justification as well as an agenda for the British rule.

(source: **Aryans and British India - By Thomas R. Trautmann** p.103).

In 1792, Charles Grant who for his over zeal for the conversion of the Hindus was known as the only Christian chairman of the East India Company wrote his infamous tract, Observations on the State among the Asiatic Subjects of Great Britain, particularly with respect to morals and means of improving them, written chiefly in the year 1792. In its pages, **Grant had advanced the theory that all problems of India and of the English of India could be reasonably traced and satisfactorily solved if the Hindus of India were converted to Christianity.**

Grant had been an active member of the **Clapham Sect** known also in the British Parliament by the name of **Evangelical Party** which had William Wilberforce as its leader.

Grant argued: "We proceed, the, to observe, that it is perfectly in the power of the country (England) by degrees, to impart to the Hindoos our language, afterwards, through that medium, to make them acquainted with our easy literary compositions, upon a variety of subjects; and, let not the idea hastily excite derision, progressively with the simple elements of our art, philosophy and (Christian dogma and tenets) religion. These acquisitions will silently undermine, and at length subvert the fabric of error (Hinduism); and all the objections that may be apprehended against such a change, are it is confidently believed, capable of solid answer."

(source: **The Hindu - By Krishna Vallabh Paliwal and Brahm Datt Bharti** p. 1-2).

"Aryan," a word that today evokes images of racial hatred and atrocity, was first used by Europeans to suggest bonds of kinship, as Thomas Trautmann shows in his far-reaching history of British Orientalism and the ethnology of India. When the historical relationship uniting Sanskrit with the languages of Europe was discovered, it seemed clear that Indians and Britons belonged to the same family. Thus the Indo-European or Aryan idea, based on the principle of linguistic kinship, dominated British ethnological inquiry. In the nineteenth century, however, an emergent biological "race science" attacked the authority of the Orientalists. **The spectacle of a dark- skinned people who were evidently civilized challenged Victorian ideas,** and race science responded to the enigma of India by redefining the Aryan concept in narrowly "white" racial terms. By the end of the nineteenth century, race science and Orientalism reached a deep and lasting consensus in regard to India, which Trautmann calls "the racial theory of Indian civilization," and which he undermines with his powerful analysis of colonial ethnology in India.)

As Thomas Trautmann puts it, " **Evangelical influence drove British policy down a path that tended to minimize and denigrate the accomplishments of Indian civilization and to position itself as the negation of the (earlier) British Indomania" that was nourished by belief in Indian wisdom."**

(source: **The Invasion That Never Was - By Michel Danino and Sujata Nahar** p. 23-24).

The Evangelicals, horrified by the idea that Christians could take the idolatry and improprieties of a pagan culture seriously, seeing in India an unlimited field for missionary activity, and insisting that it was part of a Christian government's duty to promote this.

In 1790, **Dr. Claudius Bucchanan**, a missionary attached to the East India Company, arrived in Bengal. He was convinced that God had given the Company dominion over India for the specific purpose of India's christianization. "No Christian nation," he wrote, "ever possessed such an extensive field for the propagation of the Christian faith, as that afforded to us by our influence over the hundred million natives of Hindoostan. No other nation ever possessed such facilities for the extension the faith as we have in the government of a passive people, who yield submissively to our mild sway, reverence our principles, and acknowledge our dominion to be a blessing. Why should it be thought incredible that Providence hath been pleased, in a course of years to subjugate this Eastern empire to the most civilized nation in the world, for this very purpose."

His conviction was fully shared by **William Wilberfore** who proclaimed in the British Parliament in June 1813, "Our religion is sublime, pure and beneficent. Theirs is mean, licentious, and cruel."

(source: **History of Hindu-Christian Encounters - By Sita Ram Goel** South Asia Books July 1990 ISBN 9990049173 p.33).

Not long after his arrival, Claudius Bucchanan went further:

"Neither truth, nor honesty, honor, gratitude, nor charity, is to be found in the breast of a Hindoo." What a comment to make about a nation that gave the world the Vedas and the Upanishads, at a time when Europeans were still living in their caves!

Bucchanan traveled to Puri in Orissa and witnessed the annual *Ratha-yatra* (or as Bucchanan called it, 'The horrors of Juggernaut'). His description of Jagannatha – 'The Indian Moloch', has been recorded by the historian George Gogerly as- "…a frightful visage painted black, with a distended mouth of bloody horror." Perhaps, by seeing the face of Lord Jagannatha, the British hallucinated and saw a projection of their own international destiny of bloodshed and carnage. In any case, from the time the British observed the 'terrifying' sight of the Lord on **His gigantic chariot, the word 'juggernaut' entered the English language and became synonymous with any great force that crushes everything in its path.**

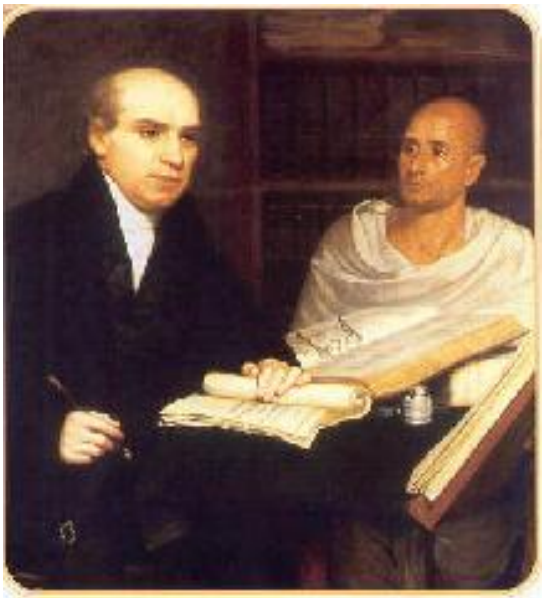
Gogerly went on to write –

"The whole history of this famous god (Krsna) is one of lust, robbery, deceit and murder…the history of the whole hierarchy of Hindooism is one of shameful iniquity, too vile to be described."

To most 18th century Englishmen, religion meant Christianity. Naturally racism played its part also. This attitude of Europeans toward Indians was due to a sense of superiority - a cherished conviction which was shared by every Englishman in India, from the highest to the lowest. Upon his arrival in 1810, the **Gov. General marquis of Hastings** wrote in his diary on October 2, 1813:

"the Hindoo appears a being merely limited to mere animal functions, and even in them indifferent.....with no higher intellect than a dog or an elephant or a monkey, might be supposed capable of attaining.."

(source: **The History and Culture of Indian People - By R. C. Majumdar** volume X, 2nd edition, Bombay, 1981, p. 338).



William Carey (1761-1834)

Without governmental sanction or license, the Christian evangelists came to India and proselytized to undermine the "superstitions of the country". The history of western (missionary) scholarship in Oriental Studies in India can be traced to William Carey, the pioneer of modern missionary enterprise in India. Carey was an English oriental scholar and founder of the Baptist Missionary Society. From 1801 onward, as Professor of Oriental Languages, he composed numerous philosophical works, consisting of 'grammars and dictionaries in the Mahratti, Sanskrit, Punjabi, Telugu, Bengali and Bhatanta dialects. From the Serampor press, there issued in his life time, over 200,000 Bibles and portions in nearly 40 different languages and dialects, Carey himself undertaking most of the literary work.' (Encyclopedia Britannica, 1950, Vol. 4, p. 860). Carey and his colleagues experimented with what came to be known as Church Sanskrit. **He wanted to train a group of 'Christian Pandits' who would probe "these mysterious sacred nothings" and expose them as worthless.** He was distressed that this "golden casket (of Sanskrit) exquisitely wrought" had remained "filled with nothing but pebbles and trash." He was determined to fill it with "riches - beyond all price", that is the doctrine of Christianity

(source: **Richard Fox Young, Resistant Hinduism,** Vienna, 1981, p. 34).

Carey a cobbler by profession, had published a book, **An Enquiry into the Obligations of Christians to use means for the Conversion of the Heathens**, in 1792 while he was still in England.

Baptist William Carey learned to speak and read classical Indian languages with the help of Pandit Mrityunjay.

In the 19th century, Christian theologians were highly critical of Hinduism. **William Archer** wrote in his book, India and the Future, "The plain truth concerning the mass of the [Indian] population — and the poorer classes alone — is that they are not civilized people." However, these uncivilized people proved unenthusiastic about missionary promises that conversion would mean prosperity, wealth and education. **Reverend A.H. Bowman** wrote that Hinduism was a "great philosophy

which lives on unchanged whilst other systems are dead, which as yet un supplanted has its stronghold in Vedanta, the last and the most subtle and powerful foe of Christianity."

Alexander Duff (1806-1878) a prominent missionary, founded the Scots College, in Calcutta, which he envisioned as a "headquarters for a great campaign against Hinduism." Duff sought to convert the natives by enrolling them in English-run schools and colleges, and he placed emphasis on learning Christianity through the English language. He wrote,

" While we rejoice that true literature and science are to be substituted in place of what is demonstrably false, we cannot but lament that no provision has been made for substituting the only true religion-Christianity - in place of the false religion which our literature and science will inevitably demolish… Of all the systems of false religion ever fabricated by the perverse ingenuity of fallen man, Hinduism is surely the most stupendous."

(source: **The History and Culture of Indian People - By R. C. Majumdar** volume X, 2nd edition, Bombay, 1981, p. 155).

Duff received remarkable success in his educational and missionary activities amongst the higher classes in Calcutta. The number of students in the mission schools was four times higher than that in government schools. It is an axiomatic truth that the aim of missionaries like Duff was not so much education than conversion. They were obliged to use the excuse of education in order to meet he needs of the converted population, and more importantly, to train up Indian assistants to help them in their proselytizing. Duff remained unsatisfied with converting Indians belonging to low-castes and orphans – his chosen target was the higher castes, specifically the brahmanas, in order to accelerate the demise of Hinduism.

"India was the chief seat of Satan's earthly dominion"

John Muir (1810-1882) had come to Calcutta in 1828 as a civil servant of the East India Company. He was, for some time, a student of William Carey. He published his first draft of his **Matapariksha** in 1839. It drew three rejoinders from Hindu pandits, Somnatha, whose real name was Subaji Bapu, a Maharastrian scholar, Harachandra Tarkapanchanana and Nilakanth Gore.

In his publication, Muir asserted that miracles mentioned in Hindu scriptures were false and 'merely ornamental in that religion instead of being at its very center as in Christianity. This way of arguing is pompously called Evidential Apologetics in Christian theology. At one point, however, Muir was deliberately dishonest. **He criticized the cosmography of the Puranas as erroneous. Surely he must have known what Galileo and Copernicus had done to the cosmography of the Bible and how they had suffered persecution at the hands of the Church.**

(source: **History of Hindu-Christian Encounters - By Sita Ram Goel** p. 78 . **The Shadow of the Cross - By Sisir Kumar Das** 1974 p. 51-78).

Sir Charles Trevelyan, an officer, with the East India Company asserted in a widely circulated tract:

"The multitudes who flock to our schools ... cannot return under the dominion of the Brahmins. The spell has been for ever broken. Hinduism is not a religion that will bear examination... It gives away at once before the light of European sciences."

"Educated in the same way, interested in the same objects, engaged in the same pursuits with ourselves, they become more English than Hindus...The young men brought up in our

seminaries, turn with contempt from the barbarous despotisms, under which their ancestors groaned....Instead of regarding us with dislike, they court our society...the summit of their ambition is, to resemble us."

(source: **Christianity's Scramble for India and The Failure of the Secularist Elite - By N S Rajaram** p. 70).

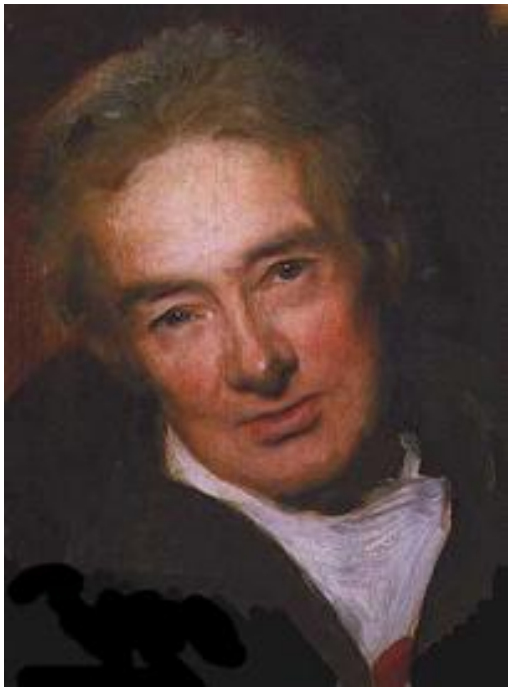
The Crown of Hinduism, by the Scottish missionary, **J N Farquhar**, who worked in India in the cause of his brand of Christianity during the period 1891 to 1923. What this book tries to project is that while there may well be some good points in Hinduism, ultimately the true salvation can only be achieved through Jesus Christ, who is the crown of Hinduism.

Richard Temple, another high officer, said in a 1883 speech to a London missionary society intended to generate donations to missions: " India presents the greatest of all fields of missionary exertion... India is a country which of all others we are bound to enlighten with external truth...But what is most important to you friends of missions, is this - that there is a large population of aborigines, a people who are outside caste....If they are attached, as they rapidly may be, to Christianity, they will form a nucleus round which British power and influence may gather. He addressed a mission in New York in the most explicit terms: "Thus India is like a mighty bastion which is being battered by heavy artillery. We have given blow after blow, and thud after thud, and the effect is not at first very remarkable; but at last with a crash the mighty structure will come toppling down, and it is our hope that someday the heathen religions of India will in like manner succumb."

According to **Kate Teltscher** in her book **India Inscribed: European and British Writing on India 1600-1800.** p. 94, 22

"One **Professor McKenzie**, of Bombay found the ethics of India defective, illogical and anti-social, lacking any philosophical foundation, nullified by abhorrent ideas of asceticism and ritual and altogether inferior to the 'higher spirituality' of Europe. He devoted most of his book '**Hindu Ethics**' to upholding this thesis and came to the conclusion that Vedic philosophical ideas, 'when logically applied leave no room for ethics'; and that they prevent the development of a strenuous moral life."

All efforts were made by the missionaries to portray Hinduism as backwards, illogical, debauched and perverse. As one preacher exclaimed,



'The curse of India is the Hindoo religion. More than two hundred million people believe a monkey mixture of mythology that is strangling the nation.' 'He who yearns for God in India soon loses his head as well as his heart.'

The missionaries opposed the government's efforts to take a neutral stand towards Indian culture and worked with more zeal for the complete conversion of the natives. Thus India became an arena for religious adventure.

"Hinduism was often perceived as the enemy to be conquered by Christian forces. Efforts were made to depict Hinduism as poetry, fiction or mythology. Hinduism was a manifest work of Satan, provides Christianity with devils to destroy; an element lacking in 18th century Europe with the decline in witch-craft prosecution. The devil is defeated through conversion. Proof of God's victory is provided by the accounts of multiple baptisms that regularly appear in the Lettres edifiantes. In one day, Father Bouchet baptizes 500 hundred converts. Such scenes, where a single missionary saves huge numbers of pagan souls from damnation, emphasize the thrilling drama of conversion. They present the reader with an exciting image of heroic enterprise and a flattering representation of Western influence over Indians. **Efforts were made to show Hinduism as strangely illogical and perverted. Thus, India was turned into an**

arena for religious adventure. In the words of Edward Said's Orientalism, produces an unshakeable assumption of European superiority, with the East always functioning as the West's negative foil."

(source: **India Inscribed: European and British Writing on India 1600-1800 - By Kate Teltscher** p. 94, 22).

William Wilberforce (1759-1833) British politician declared: "The people of India are today enslaved by, they today groan under the yoke of "a monstrous and absurd superstitions of their native faith." The evils of that faith, he noted were "inveterate", not jut long-lasting but inherent. He talked of the "dark and degrading superstitions," the inhuman cruelties of Hinduism, of its "mean, licentious, and cruel" nature. On the testimony of many like-minded persons, Wilberforce said **Indians to be mean and petty, to be liars and thieves, widow-burners, and murderers of infants.**

In 1813, Wilbeforce spoke to the **House of Commons on behalf of the missionaries toiling in India**: "On the principle, we might have anticipated the moral condition of the Hindoos, by ascertaining the character of their deities....**Their divinities are absolute monsters of lust, injustice, wickedness, and cruelty. In short, their religious system is one grand abomination."**

He maintained, quoting the Directors of the East India Company, that these traits of character flowed directly from “the nature of their superstitions and the degraded character of their deities, as well as the almost entire want of moral instructions.” Further, “I scarcely need to remark that in its superstitious rites, there has commonly been found to be a natural alliance between obscenity and cruelty, and of the Hindoo superstitions it may be truly affirmed, that they are scarcely less bloody that lascivious” .

Wilberforce went on to say that “we might have anticipated the moral condition of the Hindoos, by ascertaining the character of their deities.” The perpetrator of a crime “found precedent in one of its national gods … in the adventures of the countless rabble of Hindoo deities, you may find every possible variety of every practicable crime. … Every vice has its patron … their divinities are absolute monsters of lust, injustice, wickedness and cruelty. In short, their religious system is one grand abomination.”

Some years later, in 1853, **Reverend J. Tucker** addressed the Select Committee on Indian Territories, citing **the progress made in native conversions through missionary schools,** and through “cordial support and assistance to missionary proceedings” of civil and military government individuals. He was particularly proud to present a letter written by the **Tinnevelly Congregation of Indian Protestant Christians.** It read in part:

"To Her Most Gracious Majesty Victoria,
By the Grace of God,
Queen by the Grace of God,
Queen of Great Britain and Defender of the Faith

We, **native Christians** … have embraced the Christian religion in number of 40,000 persons, presume to approach the feet of your Gracious Majesty, with all humility and reverence, presenting this humble memorial.

We desire to acknowledge in your Majesty's presence that we, your humble subjects, and all our fellow-countrymen, placed by the providence of Almighty God under the just and merciful rule of the English Government, enjoy a happiness unknown to our forefathers in the inestimable blessings of peace. … by the gratitude we feel, we humbly acknowledge it to be our delightful duty, heartily and incessantly, to beseech Almighty God, the King of Kings, to "endure our Gracious Queen plenteously with heavenly gifts, to grant her health and wealth long to live, to strengthen her … and finally, after this life, attain everlasting joy and felicity."

Incalculable are the benefits that have accrued … we who are Christians are bound to be especially grateful for having received … the privilege of ourselves learning the true religion and its sacred doctrines, and of securing it for our sons and daughters … (emphasis added).

… Our countrymen (seeing) the vast number of boys and girls, children of Christian, Heathen, Mohammedan and Roman-catholic parents, learning gratuitously both in Tamul and English, at the expense of English missions, repeat their ancient proverbs, and say, "Instruction is indeed the opening of sightless eyeballs"…

***

Another leading missionary, a Baptist, **William Carey** (1761-1834), smuggled himself into India and propagandized **against the Vedic culture** so zealously that the British government in Bengal curbed him as a political danger. The missionaries actively denounced the Vedic literatures as "absurdities" meant for the "amusement of children". How close was the nexus between the 'neutral' British rulers and Christian missionaries? "It is not only our duty," declared **Lord Palmerston, the Prime Minister**, "but in our own interest to promote the diffusion of Christianity as far as possible throughout the length and breadth of India."

"Every additional Christian," declared **Lord Halifax, the Secretary of the State**, "is an additional bond of union with this country and an additional source of strength to the Empire." "They are doing for India," as **Lord Reay** introducing a deputation of Indian Christians to the Prince of Wales, said "more than all those civilians, soldiers, judges and governors whom your Highness has met;" "They are the most potent force in India," declared **Sir MacWorth Young**.

And so the effort to civilize India, to secure it for the British Empire, to gather it up as the rich harvest for the Church proceeded as a joint endeavor: the civil servants helped by many devices, including among these their "religious neutrality": :the soldiers of the Cross" reinforced each other's efforts; and the scholars helped working to "undermine" and "encircle" and thereby prepare the way for "the **soldiers of the Cross**" to finally storm" the strong fortress of Brahminism".

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p.109-132).

In fact, the façade of neutrality was a convenient strategy. As **Reverend Tucker** told the Select Committee on Indian Territories, in 1853, "I should be sorry to see the Government departing from its present position of strict neutrality. If the Government openly announces Christianity to be a part of the education it imparts, Christianity will immediately lose the high vantage point it now occupies." (*ibid, p. 120*).

Sir William Muir (1819- 1905) a representative of the mighty British Empire, wrote various articles in the **Calcutta Review**, put it bluntly: "From all the varieties of heathen religions Christianity has nothing to fear for they are but passive exhibitions of gross darkness which must vanish before the light of the Gospel."

In 1845 he said, "**the Hindu, sickened by idolatry** (Islam's and Christianity's common name for Hinduism), turns to the other two religions which surround him, and inquires into their respective claims.. we must be ready at hand to meet him with the proofs of our most holy faith...the comparison of the two religions, Christianity and Islam, cannot fail to be of essential service, under God's blessings, to lead to practical results."

(source: **Hindu View of Christianity and Islam - By Ram Swarup** Publisher: Voice of India p. 16-55).

While in India Baptist Christian missionaries used their time in collecting materials derogatory to Hinduism. **Dr. R. C. Majumdar**, author of **The History and Culture of the Indian People**, writes:

" A number of people including William Wilberforce, sought to refute these arguments by painting in black colors the horrible customs of the Hindus such as sati, infanticide, throwing the children into the Ganga, religious suicides, and above all idolatry. Vivid descriptions were given of the massacre of the innocent resulting from the car procession of Lord Jagannath at Puri, and the Baptists put down the number of annual victims at not less than 120,000. When challenged they had to admit that they did not actually count the dead bodies but arrived at the figure by an ingenious calculation."

(source: **The History and Culture of Indian People - By R. C. Majumdar** volume X, 2nd edition, Bombay, 1981, p. 152-153).

Bishop Heber's (1783- 1826) **Hymn**

From Greenland's icy mountains, from India's coral strand;
Where Afric's sunny fountains roll down their golden sand:
From many an ancient river, from many a palmy plain,
They call us to deliver their land from error's chain.

What though the spicy breezes blow soft o'er Ceylon's isle;
Though every prospect pleases, and only man is vile?
In vain with lavish kindness the gifts of God are strown;
The heathen in his blindness bows down to wood and stone.

Shall we, whose souls are lighted with wisdom from on high,
Shall we to those benighted the lamp of life deny?
Salvation! O salvation! The joyful sound proclaim,
Till earth's remotest nation has learned Messiah's Name.

Waft, waft, ye winds, His story, and you, ye waters, roll
Till, like a sea of glory, it spreads from pole to pole:
Till o'er our ransomed nature the Lamb for sinners slain,
Redeemer, King, Creator, in bliss returns to reign.

The hymn was published in the *Evangelical Magazine* in July 1821. It is considered one of the finest missionary hymns in the English language. It is one of the many specimens of

contempt which Christians have shown for Hindus. The hymn was included in the official hymns of the Anglican Church in England and elsewhere.

Gandhi had chided the Christian missionaries for misrepresenting Hinduism.

"You, the missionaries," he said, "come to India thinking that you come to a land of heathens, of idolators, of men who do not know God. One of the greatest Christian divines, **Bishop Reginald Heber, wrote the two lines which have always left a sting with me**: 'Where every prospect pleases, and man alone is vile.' I wish he had not written them. My own experience in my travels through out India has been to the contrary. I have gone from one end of the country to the other, without any prejudice, in a relentless search for truth, and I am not able to say that here in this fair land, watered by the great Ganga, the Brahmaputra, and the Jamuna, man is vile. He is not vile. He is as much a seeker after truth as you and I are, possibly more so...."

He further commented: "I have read several missionary publications and they are able to see only the dark side and paint it darker still. The famous hymn of Bishop Heber's - 'Greenland's icy mountains' - **is a clear libel on Indian humanity.** I was favored with some literature even in the Yervada prison by well-meaning missionaries, which seemed to be written as if merely to belittle Hinduism."

(source: **The Collected Works of Mahatma Gandhi** Volume 27 New Delhi 1968 p.214- 436).

Christian missionaries were attacking the Puranas for containing passages which they considered obscene. **Swami Vivekananda** had studied the Bible and knew that it contained a lot which was far worse. "The Chinese,' he wrote, "are the disciples of Confucius, and the Buddha, and their morality is quite strict and refined. The Christian missionaries translated the Bible into Chinese tongue. Now in the Bible there are some passages so obscene as to put to shame some of the Puranas of the Hindus. Reading those indecorous passages, the Chinamen were so exasperated against Christianity that they made a point of never allowing the Bible to be circulated in their country...They raised a cry, saying: "Oh, horror! This religion has come to us to ruin our young boys, by giving them the Bible to read...."

(source: **The Complete Works of Swami Vivekananda** Calcutta, 1985 Volume V. p. 503).

The First Scholars:

Such are the settings in which the first Indologists first appeared.

Sir William Jones, the first British to master Sanskrit and study the Vedas, drew fire from the eminent British historian **James Mill,** author of **History of India**, for his "hypothesis of a high state of civilization". Typically, Mill believed that the:

"The people of India were never advanced and that they had no right to a claim a glorious past. And that it was a historical fantasy...."

James Mill, father of John Stuart, had published his history of India in 1818. Though Mill spoke no Indian languages, indeed had never been to India, his damning indictment of Indian society and religion had become the standard work -

required reading for all who would serve in India.

At any rate, by translating the Vedas for the Western reader and thus evincing the ancient Vedic genius, the scholars increased India's prestige in the West.

Sir William Jones (1746-1794), **Charles Wilkins** (1749-1836) and **Thomas Colebrooke** (1765-1837) are considered the fathers of Indology. Sir Jones was appointed a judge of the Supreme Court in Calcutta. He translated a number of Sanskrit works into English and his works into the investigations into languages mark him as one of the most brilliant minds of the 18th century. Yet he was not prone to invective against another's religion, particularly the Vedas, which he admired. He described the Bhagavata Purana as “a motley story”. He speculated that the Bhagavad Gita came from the Christian Gospels, which had been brought to India and "repeated to the Hindus, who ingrafted them on the old fable of Kesava, (a name for Krishna). Of course, this theory has been discredited since records of Krishna worship predates Christ by centuries.

According to **Thomas R. Trautmann**, author of **Aryans and British India**, **"neither Jones nor any of the British Orientalists had any doubt as to the present superiority of European civilization to that of India".**

" The Aryan idea was a unifying idea in the initial phase of British expansion it ceased to be so later when the British stranglehold on India tended to be strong and the emphasis on affinities between Britons and Indians would more hinder than facilitate the consolidation of the British power in India. The heart of the matter, therefore, remains that British imperialism spoke in different voices at different times, though its goal was always the same, i.e., to devise new mechanisms of control and administration of the Indian colony in consonance with the policies of the home government. In 1861 John Crawfurd went to the extent of saying : "I am not prepared to admit the claim of a common descent between Hindu, Greek, and Teuton, for that would amount to allowing that there was no difference in the faculties of the people that produced Homer and Shakespeare and those that have produced nothing better than the authors of the Mahabharat and Ramayana; no difference between the home-keeping **Hindus who never made a foreign conquest of any kind, and the nations who discovered, conquered, and peopled a new world"(p.181). His contempt for Indians and their civilisation was accompanied by his belief in "the dangers of intermarriage between races widely apart on the scale of civilization"(p.181). For him, Trautmann points out, "philology is bad for racial hygiene"(p.181)."**

(source: **Aryans and British India - By Thomas R. Trautmann** http://www.indolink.com/Book/aryans.html).

H. H. Wilson (1786-1860), described as the greatest Sanskrit scholar of his time", became the Boden Professor of Sanskrit at Oxford in 1833. Wilson felt that the Christian culture should simply replace the Vedic culture, and he believed that full knowledge of the Indian tradition would help effect that conversion. He felt hopeful that by inspired, diligent effort the "specious" system of Vedic thought would be "shown to be fallacious and false by the Ithuriel spear of Christian truth. He also was ready to award a prize of two hundred pounds.. "for the best refutation of the Hindu religious system."

The famous French Missionary, **Abbé Dubois,** wrote a whole chapter on Hindu temples in his book, "Hindu Manners, Customs and Ceremonies." Coming to Hindu idols he says "Hindu imagination is such that it cannot be excited except by what is monstrous and extravagant" (p.607). Abbé Dubois' book has run through a dozen of reprints in England and remains the best primer for the average western traveler to India to this day.

Abbé Dubois influenced **James Stuart Mill's** malicious **History of British India** which was written in six volumes in 1818. The volumes were compulsory reading for candidates wishing to

appear for the I.C.S. exams. Mill's history has in fact mesmerized the best Hindu minds.

To illustrate, James Mill's tripartite periodization of Indian history into 'Hindu', 'Muslim' and 'British' epitomized in his infamous **The History of British India** **was not an innocent exercise.** It is well known that throughout Indian history the frontiers of the religion(s) of ruler(s) did not overlap with those of the people. If at all the defining criterion of Mill was the ruler's religion, the logic of such a formulation demanded that the third period should have been designated as 'Christian'. It is now recognized that **Mill's periodization stemmed from the imperialist objective of fomenting a religious divide in India** (no wonder Mill's History was one of the prescribed texts at the Haileybury College, where the prospective English officers received their training before coming to India).

(source: **Aesthetic deceptions - By K. M. Shrimali - hindustantimes.com** The writer is Professor of History, Delhi University).

Mill comments on the Hindu's pretensions to a remote antiquity as an example of the boastful and turgid vanity of the oriental nations...

He has nothing positive to comment on the Hindu manners. 'the vices of falsehood, indeed, they carry to a height almost unexampled among the other races of men. "the languid and slothful habits of the Hindus."

The level of Hindu fine arts was lower than " the height of even of the Egyptians, much less of the Greeks and Romans. " This is the first major racist elaboration of the ancient Indian history and culture in Western Indology, and all that we note here is that Mill's contempt for ancient India extends to the other Asian civilizations as well as that much of Mill's framework has survived in the colonial and post-colonial Indology.

(source: **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarti** p. 92-94).

Another renowned pioneer Indologist was **Fredrich Max Muller** (1823-1900). He is best known for his series Sacred Books of the East. Muller speaking at the Christians Missions in **Westminster Abbey in 1873** he **declared that Hinduism was dying or dead** because it belonged to a stratum of thought which was long buried beneath the foot of modern man. He continued: " The worship of Shiva, Vishnu, and other popular deities was of the same and in many cases of a more degraded and savage character than the worship of Jupiter, Apollo or Minerva. 'A religion', he said ' may linger on for a long time, it may be accepted my large masses of the people, because it is there, and there is nothing better. But when a religion has ceased to produce defenders of the faith, prophets, champions, martyrs, it has ceased to live, in the true sense of the word; and in that sense the old orthodox Brahmanism has ceased to live for more than a thousand years."

(source: **Hinduism: a religion to live by** **- Nirad C. Chaudhari** Oxford University Press February 1997 ISBN 0195640136 p. 116 -117).

In 1876, Muller wrote to a friend, **" India is much riper for Christianity than Rome or Greece were at the time of Saint Paul."**

(source: **Vedic Literature: The Tradition Speaks for Itself - By Satsvarupa dasa Goswami** Bhaktivedanta Book Trust ISBN 0912776889 June 1985 p. 178).

" The rotten tree for some time had artificial supports ...but if the English man comes to see that the tree must fall...he will mind no sacrifice either of blood or of land...I would like to lay down my life, or at least lend my hand to bring about this struggle"

(source: **Life and letters of the Rt. Hon. Fredrich Max Muller,** Vol. I, pp. 190-92.).

" I do not claim for the ancient Indian literature any more that I should willingly concede to the fables and traditions and songs of savage nations . I simply say that in the Veda we have a nearer approach to a beginning, and an intelligent beginning, than in the wild invocations of the Hottentotes and Bushmen, "

(source: **The Hindu world, an encyclopedic survey of Hinduism' - By George Benjamin Walker**, New York: Praeger, 1968. 2v.)

Max Muller wrote: **"This edition of mine and the translation of the Veda will hereafter tell to a great extent... the fate of India, and on the growth of millions of souls in that country. It is the root of their religion, and to show them what the root is, I feel sure, the only way of uprooting all that has sprung from it during the last 3000 years."**

(source: **The Life and Letters of the Rt. Hon. Fredrich Max Muller,** edited by his wife. Longmans, London, 1902, Volume I, p. 328) **Vedic Aryans and the Origins of Civilization - By N. S. Rajaram & David Frawley** p. 10).

" The rotten tree for some time had artificial supports...but if the English man comes to see that the tree must fall...he will mind no sacrifice either of blood or of land...I would like to lay down my life, or at least lend my hand to bring about this struggle"

(source: **The Life and Letters of the Rt. Hon. Fredrich Max Muller,** edited by his wife. Longmans, London, 1902, Volume I, pp. 190-92).

In another letter, Mueller wrote to his son:

"Would you say that any one sacred book is superior to all others in the world?...I say the New Testament, after that, I should place the Koran, which in its moral teachings, is hardly more than a later edition of the New Testament. Then would follow according to my opinion the Old Testament, the Southern Buddhist Tripitaka, the Tao-te-king of Lao-tze, the Kings of Confucius, the Veda and the Avesta."

(source: **Life and letters of Max Mueller** Vol. II, Ch. XXXII., page 339).

In an audacious letter to **N. K. Majumdar**, Mueller wrote:

'Tell me some of your chief difficulties that prevent you and your countrymen from openly following Christ, and when I write to you I shall do my best to explain how I and many who agree with me have met them and solved them...From my point of view, India, at least the best part of it, is already converted to Christianity. You want no persuasion to become a follower of Christ. Then make up your mind to work for yourself. Unite your flock - to hold them together and prevent them from straying. The bridge has been built for you by those who came before you. STEP BOLDLY FORWARD, it will break under you, and you will find many friends to welcome you on the other shore and among them none more delighted that you old friend and fellow labourer."

(source: **Western Indologists: A Study in Motives - P B Dutt** http://www.philosophy.ru/library/asiatica/indica/authors/motives.html).

Mueller harshly criticised the view of the German scholar, **Dr. Spiegel**, who claimed that the Biblical theory of the creation of the world is borrowed from the ancient religion of the Persians or Iranians. Stung by this statement Max Mueller writes:

'A writer like Dr. Spiegel should know that he can expect no money; nay, he should himself wish for no mercy, but invite the heaviest artillery against the floating battery which he has launched in the troubled waters of Biblical criticism.'

Dr. Spiegel was not the only target of Mueller's bigotry. In 1926 the French scholar **Louis Jacolliot**, Chief Judge in Chandranagar, wrote a book called **La Bible dans l'Inde**. **Within that book, Jacolliot theorized that all the main philosophies of the western world originated from India, which he glorified thus:**

'Land of ancient India! Cradle of Humanity. hail! Hail revered motherland whom centuries of brutal invasions have not yet buried under the dust of oblivion. Hail, Fatherland of faith, of love, of poetry and of science, may we hail a revival of thy past in our Western future.'

Mueller said while reviewing Louis Jacolliot's book that, 'The author seems to have been taken in by the Brahmins of India.'

Another revealing incident of Mueller's glaring ignorance was when a *brahmana* came from India to meet the famous Sanskrit scholar. When he came face to face with Mueller and spoke to him in chaste Sanskrit, Mueller admitted that he couldn't understand what the gentleman was saying!

No wonder **Arthur Schopenhauer** acerbically said, **"I cannot resist a certain suspicion that our Sanskrit scholars do not understand their texts any better than the higher class of school boys their Greek and Latin."**

Swami Dayananda Saraswati, the founder of the Arya Samaja, was so disgusted with the level of Mueller's knowledge of Sanskrit that he likened him to a "toddler learning to walk". He wrote:

"Prof. Max Mueller has been able to scribble out something by the help of the so called 'tikas' or paraphrases of the Vedas current in India."

(source: **Satyartha Prakash** Third Edition p. 278). Note: Swami Dayanand Saraswati commented very negatively on Max Mueller's knowledge of Sanskrit by saying that his depth of understanding is like a Aak plant among the trees (Indian Sanskrit scholars).

It was Max Mueller who said: "I do not shrink from saying that their religion (Hinduism) is dying or dead. And why? Because it cannot stand the light of day. The worship of Siva, Vishnu and other popular deities is of the same, nay, in many cases of a more degraded and savage character than the worship of Jupiter, Apollo and Minerva. It belongs to a stratum of thought which is long buried beneath our feet…"

(source: **In the matter of conversions…- By M V Kamath indiainfo.com**).

***

All this from the man (Max Muller) who has Bhavans named after him all over India. Muller's purpose was to uproot Hinduism!!

Muller concluded : "But the ancient religion of India is doomed,"

"and if Christianity does not step in, whose fault will it be?"

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p. 139).

Exposing the roots of another culture so as to support everything that has flowed from it for 3,000 years, and this seen as God's work. Not quite the motive and belief we would associate with an objective scholar like Max Muller!

The credit of consolidating of the Aryan concept in the second half of the 19th century goes more to Max Mullller than to anybody else. It was he who sold the idea quite aggressively to the Western audience of his time. It was also something which was eagerly lapped up by his 'native' audience, although he himself was never ready for the rough and tumble of the Indian dust. In Max Muller's parlance " a native writer" exclaimed in **Indian Mirror**, Calcutta, of 20 September, 1874: "we were niggers at one time. We now become brethren."

(source: **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarti** p. 92-94).

Theordore Goldstucker (1821-1872) born in Germany, professor of Sanskrit at London's University College wrote the Dictionary of Indian Biography. He regarded the people of India as being burdened by Vedic religion, which had only brought them worldwide "contempt and ridicule." Thus, he proposed to reeducated them with European values. In his book, **Inspired Writings of Hinduism,** Goldstucker assailed the validity of Vedic literature. His aim was to demonstrate to the new generation of Vedic followers that he had scholastically annihilated their scripture and that they should show their appreciation by adopting European values and improving their character.

Successor to Wilson in **Oxford's Boden Chair** was **Sir Monier-Williams**(1819-1899) **who was a Christian of warm Evangelical convictions.** He said:

"For what purpose then has this enormous territory been committed to England? Not to be the 'corpus vile' of political, social, or military experiments; not for benefit of our commerce, or the increase of our wealth - but that every man, woman and child, from Cape Comorin to the Himalaya mountains, may be elevated, enlightened Christianized."

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p. 152)

In 1869 **Dr. Franz Lorinser** published a new translation and commentary on the Bhagavad Gita, **Die Bhagavad-Gita: Uebersetzt und erlautert**.

Lorinser believed that the Gita, which the world already regarded as **'one of the fairest flowers of heathen world', actually owed its ' purest and most greatly praised teachings' to the New Testament!**

Historian **Arthur D.Innes** writes:

"The educators had hardly concealed their expectations that with Western knowledge the sacred fairy tales of the East would be dissolved and the basis of popularly cherished creeds would be swept away.

Richard Temple said:

"Hinduism is gradually breaking up, like the clouds before the rising sun…. it is being dissipated like the mist, before the science of the 19th century."

W. J Wilkins in his **Daily Life and Work in India** p. 252 was another Christian missionary who worked in India to gather harvest of converts for Christ. He said: "If this faith in the Divine origin of these books (the Vedas) could be destroyed, they could then reasonably hope the people would

listen with unprejudiced minds to their statements respecting Christianity…"

Rev. J Fr. Stacker another Christian zealot in his book, **Arsenal for the Christian Soldier in India** p. 493 had this to say: "The Hindu religion resembles the Christian just as a counterfeit coin resembles a true one."

(source: **The Hindu - By Krishna Vallabh Paliwal and Brahm Datt Bharti** p. 98-99).

Sir W. M. Williams, a Sanskritist with great missionary sympathies, prophesied, "When the walls of the mighty fortress of Brahminism are encircled, undermined and finally stormed by the soldiers of the Cross, the victory of Christianity must be signal and complete."

Sir Charles Edward Trevelyan (1807- 1886) was the brother-in-law of Thomas Macaulay and author of **Christianity and Hinduism Contrasted**. 1882. He addressed the Literary and Philosophical Society of Newcastle-on-Tyne. He states:

"...as the Christian religion is the only one capable of correcting the disorder caused by the passions of mankind, and of gradually leading on the world to a state of perfection, it must be of divine origin, and we are bound to promote its universal diffusion in obedience to its founder, Jesus Christ. It this is true as a general proposition, we are under a special obligation to **our magnificent Indian Empire,** and the facilities for the task are in proportion to the obligation;" their special loathing in this context for Hinduism; their premise, their hope, indeed their expectation that Christianity would soon prevail; their calculation that it was enough for Government to spread western lore and learning for Hinduism to be destroyed - The grammar and spelling books suffice to destroy the Hindu religion."

"Although India has yet to become Christian, a higher standard of morality has been established, and the spirit of Christianity is becoming diffused throughout the society. Christian knowledge is spreading in every direction in advance of openly professed conversions, and it has become a common thing to meet with natives who know more of the Bible than most Christians.

He wrote in 1838: "Familiarly acquainted with us by means of our literature, the Indian youth almost ceases to regard us as foreigners. **They speak of our great men as we do. Educated in the same way, interested in the same objects, engaged in the same pursuits with ourselves, they become more English than Hindus..."**

He delivered this to the Baptist Missionary Society in London in April 1888:

"..That every British is spreading the truth of Christianity that Providence has placed the Empire at the disposal of Britain; that Buddhism and Hinduism are dying and dead; that the tribals ought to be made the special focus of the exertions of the missionaries."

(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p 80-92).

****

Lord Thomas Babbington Macaulay (1800-59) is best known for introducing English education in India. Macaulay was the first Law Member of the Governor-General's Legislature.

He wrote in his **notorious 1835 Minute** that Hinduism was based on **" a literature admitted to be of small intrinsic value ...(one) that inculcates the most serious errors on the most important subjects ... hardly reconcilable with reason, with morality...fruitful of monstrous superstitions. " Hindus had therefore been fed for millennia with a "false history, false astronomy, false medicine ...in company of a false religion."**

"A war of Bengalees against English men was like a war of sheep against wolves, of men against demons."

Dismissing with incredible arrogance the profound

Baron Macaulay (1800-1859): The life-long bachelor was a skilled politician and author

speculation and beautiful language of the Sanskrit classics, he said, " I doubt whether the Sanskrit literature be as valuable as that of our Saxon and Norman progenitors."

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 194)).

Macaulay advised in 1835 the creation of an Indian elite through Western style education, making them **`Indian in blood and color, but English in taste, in opinion, in morals, in intellect.'**

The policy was frankly one of Westernizing India.

Though not a missionary himself, he sincerely believed that Christianity held the key to the problems of administering India. In a letter to his father in 1836, **Macaulay** exulted, "...It is my belief that if our plans of education are followed up, there will not be a single idolater among the respectable classes in Bengal thirty years hence. And this will be effected without any efforts to proselytize, without the smallest interference with religious liberty, by natural operation of knowledge and reflection. I heartily rejoice in the project."

" I have never found one among them who could deny that a single shelf of a good European library was worth the whole native literature of India and Arabia. The intrinsic superiority of the Western literature is, indeed, fully admitted by those members of the Committee who support the Oriental plan of education." The superiority of the Europeans becomes absolutely immeasurable." The question now before us is simply whether, when it is in our power to teach this language, we shall teach languages in which, by universal confession, there are no books on any subject which deserve to be compared to our own; whether, when we can teach European science, we shall teach systems which, by universal confession, whenever they differ from those of Europe, differ for the worse; and whether, when we can patronize sound Philosophy and true History, we shall countenance, at the public expense, medical doctrines, which would disgrace an English farrier,--Astronomy, which would move laughter in girls at an English boarding school,--History, abounding with kings thirty feet high, and reigns thirty thousand years long,--and Geography, made up of seas of treacle and seas of butter." " I would at once stop the printing of Arabic and Sanscrit books, I would abolish the Madrassa and the Sanscrit college at Calcutta. Benares is the great seat of Brahmanical learning."

(source: **http://www.tc.umn.edu/~raley/research/english/macaulay.html**)
Please read the following article: **Haunted by Macaulay's ghost - By Francois Gautier**)

***"*To the literature of Britain . . . which has exercised an influence wider than that of our commerce and mightier than that of our arms . . .before the light of which impious and cruel superstitions are fast taking flight on the Banks of the Ganges!"**

(source: http://members.tripod.com/~INDIA_RESOURCE/britishedu.htm).

He remarked that Indians were: "lesser breeds without the law" and summed up the opinion of many. In 1885 he wrote of the "monstrous superstitions" of India and summarily condemned ancient Sanskrit texts as "less valuable than what may be found in the most paltry abridgements used at preparatory schools in England."

(source: **Oriental Enlightenment: The encounter between Asian and Western thought - By J. J. Clarke** p.73)

He wrote to his father in 1836:

"It is my firm belief that if our plans of education are followed up, there will not be a single idolator among the respectable classes in Bengal, thirty years hence."

Macaulay's object was to undermine the social and religious institutions of India. **The Indian Daily News**, for instance, wrote in its leader on March 29, 1909: "Lord Macaulay's triumph over the Oriental School, headed by Dr. Wilson, was really the triumph of a deliberate intention to undermine the religious and social life of India."

Macaulay looked upon India much in the same way as a landlord looks upon his serfs. He wrote: **"We know that India cannot have a free government. But she may have the next best thing - a firm and impartial despotism."**

He had no heart, no sympathy for the longings and ambitions of educated India, nor had he ever tried to understand them. His idea was to bind India with the fetters of legislation, albeit the chain might be gilded. In his famous speech of the 10th July, 1838, Macaulay said: "I believe that no country ever stood so much in need of a code of laws as India; and I believe also there never was a country in which the want might so easily be supplied...It is a work which especially belongs to a Government like that of India, to an enlightened and paternal despotism."

(source: **Rise Of The Christian Power In India - By Major Baman Das Basu** (1867-1930) Calcutta R. Chatterjee 1931 p. 802-807).

The question in Macaulay's mind was not just of perpetuating British imperial control over India: his aim was to rescue Indians from Hinduism, he was certain about the superiority of Christianity and about the boons that would follow as it spread in India. For he declared four years later in his essay, "Gladstone on Church and State," the heathenism of India is "more cruel, more licentious, more fruitful of absurd right, and pernicious laws" than that of any other part of the world. The people of India, he declared in "The Gates of Somnath", are idolators, blindly attached to doctrines and rites which, considered meekly with reference to the temporal interests of mankind, are in the highest degree pernicious."...Hence to condone Brahminical idolatry and to discountenance Christianity is to "commit high treason against humanity and civilization."

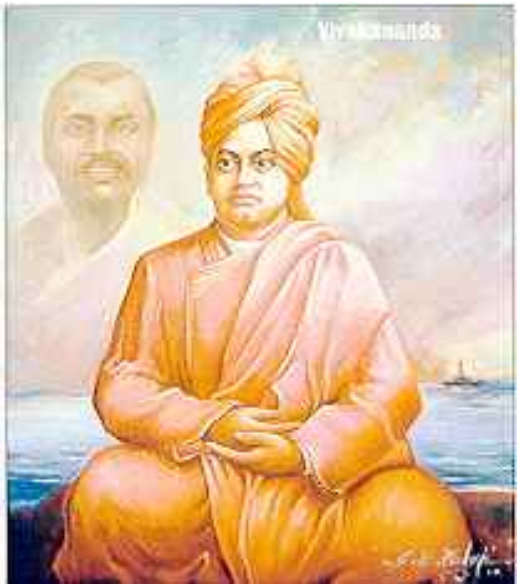
(source: **Missionaries in India: Continuities, Changes, Dilemmas - By Arun Shourie** ASA Publications ASIN 8190019945 p.64).

Bishop James M. Thoburn (1836-1922) wrote in his book, The Christian Conquest of India in 1906, about the Millions Waiting to be converted in the British Empire:

"In her most palmy days Rome ruled over only one hundred and twenty million people, while in India today nearly three hundred million souls are subject, more or less directly, to the rule

of the King-Emperor. China alone among the great kingdoms and empires of the world can compare with India in population at the beginning of this new century, and this splendid realm has opened all her gates and doors to the Christian missionary. Instead of the wretched little vessels in which Paul coasted around the Mediterranean ports, the Indian missionary has floating palaces to convey him at sea, while palatial cars await him when he wished to travel by land. God has opened his pathway to even the most remote tribes, while a sympathetic and enlightened government protects him from hostile persecution, or even the menace of danger. The original commission to evangelize the nations still stands, while God, who rules over all nations, sets an open door before his servants who are willing to enter and evangelize the waiting millions."

"The time is auspicious, and the missionaries of India should not lose a day or an hour in sounding the trumpet for a great forward movement. As Paul, the ideal missionary for all lands and all times, aimed first at Greece and next for Rome, so should the missionaries of our modern day aim for all the great centers of population, commerce, and political rule in the empire. This does not mean that outlying and distant places are to be negated, but only that the great centers of power and influence should be quickly seized and strongly held. A wide and firm grasp is needed. **The word should be passed all along the line that India is to be won for Christ, and that the greatest movement ever attempted in the history of Christianity is now at hand. Nothing in all modern history, nothing since the day of Pentecost, has been equal to the present opportunity.**



The old may rejoice that they have lived to see this day, but the young may rejoice still more in the hope of seeing a day when a million souls will be found inquiring the way to Zion in North India, a million in West India, a million more in Burma, and still a million more in South India. A million? Why not ten million? **Why not the Christian Conquest of India?**

(source: **The Christian Conquest of India - By Bishop James M. Thoburn** Publisher: Jennings And Graham Date of Publication: 1906 p. 244-245).

***

As the British became more sure of their position in India and developed a sense of mission, there grew up a contempt for Indian culture. This was partly due to cultural arrogance on the part of the British, who dismissed Indian literature as pagan rubbish and Indian science as primitive nonsense. Macaulay disposed of 'the whole native literature of India' as 'medical doctrines which would disgrace an English farrier – Astronomy, which would move laughter in girls at an English boarding school – History, abounding with kings thirty feet high, and reigns thirty thousand years long – and Geography, made up of seas of treacle and seas of butter.'

(source: **British India - By Michael Edwardes** p. 305-306).

Swami Vivekananda was to shatter Macaulay's dream and hope. The key point here is Macaulay's belief that 'that knowledge and reflection' on the part of the Hindus would cause them to turn to Christianity. His plan was to turn the strength of the educated Hindus against them, to use their commitment to scholarship to uproot their own tradition. To this end, he wanted someone willing and able to interpret Hindu Scriptures in such a way that the newly educated Hindu elite would see for itself the difference between their scriptures and the New Testament and choose the latter. It is a measure of Macaulay's seriousness that he persisted with his hare-brained scheme until he found just the man for it. The man was Friedrich Maximillian Mueller (1823-1900) who was to be touted as the foremost Indologist, Scholar Extraordinaire (by Nirad Chaudhury) and Vedemaharishi Mokshamula Bhatta (of Oxford).

Swami Vivekananda pointed out more than a century ago: **" The histories of our country written by English [and other Western] writers cannot but be weakening to our minds, for they talk only of our downfall. How can foreigners, who understand very little of our manners and customs, or religion and philosophy, write faithful and unbiased histories of India? Naturally, many false notions and wrong inferences have found their way into them. It is for Indians to write Indian history."**

As Swami Vivekananda pointed out, the goal of the British was to weaken the Indian spirit, particularly the Hindu spirit, because the nationalist movement in India was mainly a Hindu movement. Most of the distortion in Indian history had already been done for them by the British, and then by their successors during the Congress rule.

(Please refer to **Eminent Historians - By Arun Shourie** Harper-Collins, New Delhi ISBN 8190019988).

Swami Vivekanada responded to a concerted attack on Hinduism:

"We who had come from the east have sat here day after day and have been told in a patronizing way that we ought to accept Christianity because Christian nations are the most prosperous. **We look about us and we see England the most prosperous Christian nation in the world, with her foot upon the neck of 250,000,000 Asiatics.** We look back into history and see that the prosperity of Christian Europe begin with Spain. Spain's prosperity began with the invasion of Mexico. Christianity wins its prosperity by cutting the throats of its fellow men. At such a price the Hindoo will not have prosperity."

"When someone suggested to him that Christianity was a saving power, he opened his great dark eyes upon him and said: **"If Christianity is a saving power in itself, why has it not saved the Ethiopians, the Abyssinians?"**

(source: **Hinduism for Our Times - By Arvind Sharma** Oxford Univ Pr June 1996 ISBN 0195637496 p. 72-73).

"On metaphysical lines, he wrote "no nation on earth can hold a candle to the Hindus' and curiously all the fellows that come over here from Christian lands have that one antiquated foolishness of an argument that because the Christians are powerful and rich and Hindus are not, so Christianity must be better than Hinduism. To which the Hindus very aptly retort that, that is the very reason why Hinduism is a religion and Christianity is not..."

(source: **The Complete Works of Swami Vivekananda** Calcutta, 1985 Volume VI. p. 390-391 and **History of Hindu-Christian Encounters - By Sita Ram Goel** South Asia Books July 1990 ISBN 9990049173 p. 90).

***

No Hindu Culture

So far as Europeans were concerned, it was fashionable for a time to deny the mere existence of such a thing as an Indian culture. Here are two representative quotations to illustrate this point:

Says **Sir Henry Norman**, in his book on the Far East: "Asia - always excepting Japan - has never been civilized and never will be unless a great change comes which this age is not likely to see otherwise than at the **mouth of the cannon and the point of the bayonet."**

William Archer, who in his day was considered a dramatic critic of some standing, author of gave expression to the following judgment on India:

"Barbarian, barbarism, barbarious, I am sorry to harp on these words. But they express the essence of the situation...The plain truth concerning the mass of Indian population - and not the poor classes alone - is that they are not civilized people."

Naturally they could have no culture. Of minor poets like Robert Nicholls, or **imperialist propagandists like Katherine Mayo**, or the general run of Christian missionaries who could see nothing good in India. I need not say anything; for their views do not deserve consideration.

(source: **Essential Features of Indian Culture - By K. M. Panikkar** Bharatiya Vidya Bhavan. Mumbai.1964 p. 23-24).

***

Bishop Caldwell on Dravidian Grammar:

' The idea of the Dravidian migrations from the north was first put forth by Bishop (who else). Caldwell, insisted that the Dravidians had 'invaded' India long before the Aryans. As this theory had no basis in tradition, history or even archeology, it has tried to draw linguistic support from 'Dravidian-speaking Brahuis in Baluchistan and in Central and East India'.

"It is not only our duty," declared **Lord Palmerston, the Prime Minister**, " but in our own interest to promote the diffusion of Christianity as far as possible throughout the length and breadth of India"; " Every additional Christian," declared **Lord Halifax, the Secretary of State**," is an additional bond of union with this country and an additional source of strength to the Empire."

Rev William Ward, an English missionary who wrote a four-volume polemic which characterized Hindu faith as "a fabric of superstition" concocted by Brahmins, and as "the most complete system of absolute oppression that perhaps ever existed". (How would Christians feel if the compliment is returned by saying that nothing could excel superstition and oppression as the concepts of *virgin birth, resurrection and slavery in the Bible,* the pillars of faith that are central to Christianity?).

Barthelemy de Saint Hilare, the Education Minister of the French Government of 1883, declared that:

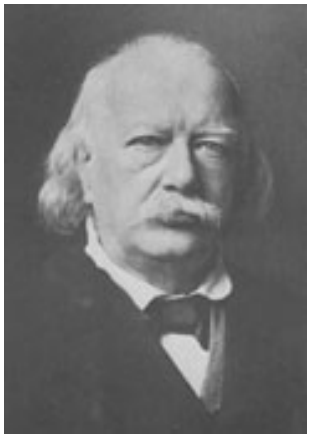
"**the Hindu system of thought is hideous, without any intellectual rigor and coherence and cannot be compared with those of ancient Greece or modern Europe."**

(source: **Arise O' India - By Francois Gautier** Har Anand publisher ISBN: 81-241-0518-9 p. 26).

John P. Jones in 1915 said:

"Schools for Non-Christians are especially established with a view to reaching and affecting the non-Christian community. They represent the leaven of Christianity in India. They are pre-eminently an evangelistic agency. ... I fearlessly maintain that more conversions take place, and more accessions are made, through these schools than through any other agency..."

Moriz Winternitz



Unfortunately, not all scholars appreciated the timeless wisdom of the Vedas and Upanisads. **Some scholars were so convinced of the superiority of Christianity and western philosophy that they had no qualms in shamelessly expressing their feelings publicly.**

In 1925 The Professor of Indian Studies at the German University of Prague, **Moriz Winternitz** (1863-1937), denounced Schopenhauer for his admiration of the **Upanisads** with the following words -

'Yet I believe, it is a wild exaggeration when Schopenhauer says that the teaching of the Upanishads represents 'the fruit of the highest human knowledge and wisdom' and contains 'almost superhuman conceptions the originators of which can hardly be regarded as mere mortals...'

On the subject of the *Vedas*, Winternitz had this to say -**'It is true, the authors of these hymns rise but extremely seldom to the exalted flights and deep fervor of, say, religious poetry of the Hebrews.'**

Weber, Boehtlingk, Kuhn and Goldstucker:

1. The famous German indologist **Albrecht Weber** (1825-1901) was a notorious racist whose German nationalistic tendencies were thinly veiled as works on Indian philosophy and culture.

When **Humbolt** lauded praise upon the **Bhagavad-gita**, Weber became disgusted. His immediate response was to speculate that the *Mahabharata* and *Gita* were influenced by Christian theology -

'The peculiar colouring of the Krishna sect, which pervades the whole book, is noteworthy: Christian legendry matter and other Western influences are unmistakably present...'

Two Sanskrit scholars, Franz Lorinser and E. Washburn Hopkin, were quick to support Weber's postulation. However, their theory lacked any hard evidence and was considered so ludicrous that most scholars in European universities rejected it, despite their Christian leanings. Nevertheless, the propagation of this eroneous hypothesis played its mischief and was mainly responsible for the hesitation of the Western scholars to assign to the *Mahabharata* a date, earlier than that of the Christian era.

In Chapter 4 of his book **Krishnacharita**, the famous Bengali writer, **Bankim Chandra Chattopadhyaya**, spoke about Weber as follows –

'The celebrated Weber was no doubt a scholar but I am inclined to think that it was an unfortunate moment for India when he began the study of Sanskrit. The descendants of the German savages of yesterday could not reconcile themselves to the ancient glory of India. It was therefore, their earnest effort to prove that the civilization of India was comparatively of recent origin. They could not persuade themselves to believe that the Mahabharata was composed centuries before Christ was born'.

2. Weber and his collegue **Otto Boehtlingk** prepared the famous Sanskrit dictionary called the **'Sanskrit Worterbuch'**. Prof. Ernst Kuhn was also one of their assistants. Being mainly based on speculative and incorrect principles of philology, the work was unreliable and misleading. The dictionary was subject to severe criticism by **Theodore Goldstucker** (1821-1872), who was professor of Sanskrit at the University College in London. Weber was so disturbed by Goldstucker's criticism that he resorted to abusing the Professor with the coarsest words possible. He added that the views of Goldstucker on his *Worterbuch* showed 'a perfect derangement of his mental faculties', since he was not willing to dismiss the authority of the Vedic scholars so easily. Replying to their undignified attacks, Goldstucker exposed the 'scholarship' of the likes of Roth, Boehtlingk, Weber and Kuhn and wrote:

'It will, of course, be my duty to show, at the earliest opportunity, that Dr. Boehtlingk is incapable of understanding even easy rules of Panini, much less those of Katyayana and still less is he capable of making use of them in the understanding of Classical texts. The errors in his department of the Dictionary are so numerous... that it will fill every serious Sanskritist with dismay, when he calculates the mischievous influence which they must exercise on the study of Sanskrit philology'.

He further remarked: '....that questions which ought to have been decided with the very utmost circumspection and which could not be decided without very laborious research have been trifled with in the Worterbuch in the most unwarranted manner…When I see that the most distinguished and most learned Hindu scholars and divines - the most valuable and sometimes the only source of all our knowledge of ancient India - are scorned in theory, mutilated in print, and, as a consequence, set aside in the interpretation of Vaidik texts; ...when a clique of Sanskritists of this description vapours about giving us the sense of the Veda as it existed at the commencement of Hindu antiquity; ...when I consider that those whose words apparently derive weight and influence from the professional position they hold...then I hold that it would be a want of courage and a dereliction of duty, if I did not make a stand against these Saturnalia of Sanskrit Philology.'

3. Referring to **Prof. Kuhn, Goldstucker** was positively venomous –'(Professor Kuhn) was 'an individual whose sole connection with Sanskrit studies consisted in handing Sanskrit books to those who could read them, a literary naught, wholly unknown, but assuming the airs of a quantity, because it had figures before it that prompted it on, a personage who, according to his own friends, was perfectly ignorant of Sanskrit'.

However, we should not make the mistake that Herr Goldstucker was championing the cause of the Vedic literatures. **Goldstucker's skirmish with his fellow indologists was purely on an academic basis. Goldstucker was of the opinion that the people of India were burdened by Vedic religion which had simply brought them world-wide 'contempt and ridicule'. He thus proposed to re-educate the Indians with Western values.** He wrote:

'The means for combating that enemy is as simple as it is irresitable: a proper instruction of the growing generation of its ancient literature.'

In his book, **'Inspired Writings of Hinduism'** Goldstucker a**ttacked the validity of the Vedas, stating that his aim was to inspire the new generation of Indians that their religious superstitions were backwards. This could only be achieved by scholastically destroying their sastras. The only recourse for the new generation would be to adopt European values in order to improve their character.**

(source: **Inspired Writings of Hinduism - By Theodore Goldstucker** p.115).

British historians - like Stirling, Hunter, Beams and Toynbee were in the British administrative services. They were eager to give the impression that foreign rule was a blessing for India. They present a dark picture of the Maratha administration. They depict the feudatory rajas as barbarians. There were many dark sides to British administration. There were corrupt and inefficient officers. There were judges who were deeply involved in unjust dealings. These facts have been kept hidden from the public eye.

***

According to author **Paul William Roberts**, "Conversion has largely failed in India because Christianity offers nothing that is not already available somewhere in the many forms of Hinduism. Hinduism never rejected the teachings of Jesus. Those who have converted either agreed with a gun pressed at their skulls as in Goa, or because it provided an escape from caste tyranny, as well as a guaranteed professional advancement. Through its Vedic legacy, Hinduism respects all faiths. It clearly states that God is one, but has many forms. The Christian message must sound preposterous: that God is indeed one, but has only one recognized form, his son. The "savages" of India were sophisticated - so sophisticated that the imperialist mixture of church and state in Europe could not grasp such sophistication.

"The sheer power of Hinduism terrified the Christian soldiers."

The British were more cunning at the game than the Portuguese, careful to show respect for Indian religions. Yet they sneered at the pagans behind their back, educated the Indian elite in British-run schools, or at Eton and Cambridge - which, if it did not guarantee conversion to Christianity, resulted in lapsed Hinduism, agnosticism, or an intellectual humanism.
In India, Anglo indoctrination produced a generation of "brown sahibs" who looked down on the religion of the masses, the opium of the people. Such is the power of colonization that a whole generation must pass before the paralyzing spell wears off."

(source: **Empire of the Soul: Some journeys in India - By Paul William Roberts** p. 323-325).

Many Christian researchers have documented the cause of the antipathy of the missionaries towards the Brahmins. **Elizabeth Susan Alexander** wrote,

"For the missionaries Brahmans (sic) had been in the forefront of the staunch Hindu opposition to missionary endeavours in Madras Presidency. They had also been the vanguard of the Indian nationalist movement that had taken alarmingly extremist turns."

(source: **The Attitudes of British Protestant Missionaries Towards Nationalism in India,** Konark Publishers, Delhi, 1994, p 67.)

As the great **Dr. Ananda Coomaraswamy,** late curator at Boston Museum of Fine Arts, a distinguished student of Indian history and culture, and author of several books, and unmatched in his understanding of Indian culture, language, religion and philosophy. Ananda Coomaraswamy, had this to say regarding the Macaulayite higher education:

"A single generation of English education suffices to break the threads of tradition and create a nondescript and superficial being deprived of all roots — an intellectual pariah who does not belong to the East or the West, to the past or the future. Of all Indian problems the educational is the most difficult and the most tragic."

(source: **The Dance of Shiva - By Dr. Ananda K Coomaraswamy** p. 127).

******

(**Note**: The tragic consequences was that the convert now found himself cut off from his ancient roots, attached to a foreign godhead and a foreign culture, and taught to despise and revile everything that for millennia had been an object of worship for his ancestors - including his own country. **This proves how the so called "just and merciful rule" of the British was indeed barbaric tyranny.** The burning of ancient books on Ayurveda in Kerala, so as to impose the European system of medicine on the natives, the cutting of weavers' thumbs in Bengal with a view of crippling the production of superior Indian cloth and ensuring the sale of British products, the ruthless, often bloody, extortion of revenue from the peasants for decades on end, even in the midst of the worst famines, the whipping, hangings and tortures that awaited those who opposed the Empire - these are only a few among the unending examples of the "providential character" of the British rule. But they took place too far from the "civilized" world to attract any notice. The Britons like the relief of high-sounding speeches in London's salons, adorned with a few pagan objects d'art purloined from India.

(Source: **Readings in Vedic Literature: The Tradition Speaks for Itself - By Satsvarupa dasa Goswami** p. 173-181).

Since Independence, there has been a growing conviction that education should teach Indian values. One of India' leading experts on education, **Dr. Humayun Kabir,** former Minister of Science and Cultural Relations of the centrall government, had warned:

" The divorce of modern education from the Indian context is still a fact which threatens danger to the country's life....danger in ....the weaning away of the literate classes from the culture of the country....**The new literates no longer derive their strength from the age-long traditions of the land. Their outlook is Western or more frequently pseudo-Western. Cut off from their moorings, they are unstable, loud and factional."**

(source: **India: A World in Transition - By Beatrice Pitney Lamb** p. 191-192).

Prof. **Perceival Spear** of Cambridge University has said: “It was possible for a man to admire the West and to revere the East and to have European authority for both opinions.” **What arrogance!** The “unique” has to be replaced by “Universals” in the plural. We have to be the children of the horizons, or as the Atharvaveda (16.3.6) says, *Samudro Asmi Vidharmana,* “the Unbounded Ocean am I.”

(source: **Theo-Diversity and Humane Values - By Prof. Lokesh Chandra**).

The Indological scholars of the present day have inherited the pioneer's bias and thought; today's bias is not "evangelist" but "empiricist," it slants just the same.

Dilip K. Chakrabarti in his book, **Colonial Indology: Sociopolitics of the Ancient Indian Past - By Dilip K. Chakrabarty** thus summarized the situation:

"The model of the Indian past...was foisted on Indians by the hegemonic books written by Western Indologists concerned with language, literature and philosophy who were and perhaps have always been paternalistic at their best and racists at their worst.."

Thoughts of Modern Indian Scholars

But truth can never remain hidden for long. Now some modern Indian scholars of have also begun to see to some extent, though not thoroughly, through the thin veneer of European scholarship.

Prof. Rangacharya writes:

" Incalculable mischief has been done by almost all the English and American scholars in assuming arbitrarily the earliest dates for Egypt or Mesopotamia - dates going back to B.C. 5000 at least - and the latest possible dates for Ancient India on the ground that India borrowed from them."

(source: **History of Pre-Musulman India**, Vol. II, Vedic India, Part I. 1937 A.D., p. 145.)

Nilakantha Shastri, the Head of History Department of Madras University, although a supporter of many untenable Western theories, had to write:

'What is this but a critique of Indian society and Indian history in the light of the nineteenth century prepossessions of Europe? This criticism was started by the English administration and European missionaries and has been nearly focused by the vast erudition of Lassen; the unfulfilled aspirations of Germany in the early nineteenth century, doubtless had their share in shaping the line of Lassen's thought."

(source: **All India Oriental Conference**, December 1941, Part II., p. 64, printed in 1946.)

C. R. Krishnamacharlu, Ex-Epigraphist to the Government of India, having realised the ulterior motives of European writers, has expressed his views more strongly. He writes: '

"These authors, coming as they do from nations of recent growth, and writing this history with motives other than cultural, which in some cases are apparently racial and prejudicial to the correct elucidation of the past history of India, cannot acquire testimony for historic veracity of cultural sympathy."

(source: '**The Cradle of Indian History**', p. 3, Adyar Library, Madras, 19).

Prof. R. Subba Rao, M.A., L. T., in his Presidential Address, (Sectional), Sixteenth Session of Indian History Congress, Waltair, (29th December, 1953.) writes:

"Unfortunately, the historicity of Puranas and their testimony has been perverted by certain Western scholars who stated rather dogmatically that the historical age cannot go back beyond 2000 B.C., and that there is no need for fixing the Mahabharata war earlier than 1400 B.C. They accused the Brahmins of having raised their antiquity and questioned the authenticity of the Hindu astronomical works."

(source: **J.A.H.R.S.**, Vol. XX, p. 187). (source: **Vedic Knowledge Online**).

For those who came from the West to convert India into Christianity or to rule over India, the British in particular, saw India with a different eye. They saw nothing good in this country. Why? Because they wanted to justify conversions or British rule over India. Thus, **they did the greatest damage to the image of this country.**

A word on missionaries: they claim they brought "light" to this country. **Rabindranath Tagore** says: **they started fires.**

(source: **Image & image-makers of MEA - M. S. N. Menon** TribuneIndia 12/22/2001).

Women in the Age of Imperialism NEW

"Until the females are raised by education as to hold their proper rank in society and until their hearts are brought under the influence of Christianity, there is little hope that the people of India will rise from idolatry and sin to the dignity and happiness of a Christian people."

– **American Mission Report**, Jaffna (1839-9-10).

Women believed, according to Hunter, that "Christianity was responsible for the elevated status of Western women" and that "in preaching the gospel they were only sharing what they had received in such bounty." This means that American women missionaries were moved to action by both **"the heinousness of heathen womanhood and gratitude for their own Christian womanhood."** Many had noted that such attitude were a kind of **"Imperial feminism"**

In both America and Britain, there, was a whole cult of missionary work, highlighting the "romance of missions." Women who were "doers" could fight oppressive conditions at home and boldly venture abroad to expose the "wrongs of women." Magazines, popular novels and poetry on women's work among "heathen" women abounded; there were journals like "The Heathen Women's Friend," "Helping Hand" and books such as Life and Light for Heathen Women were published by the Women's Board of Missions. Popular novelists also latched on to the theme of missionary adventure, introducing a new genre of daring missionary heroines in exotic settings fraught with dangers of various kinds. Emma Southworth (in Fair Play, 1868) created a character, Britomarte Conyers, whose main desire is to leave America and save other women. "Oh my sisters! My sisters!" she exclaims, "as Christ died to save the whole human race, so I would die for you."

In Britain, Priscilla Chapman wrote a book, Hindoo Female Education (1839), alerting her readers to **"the poor idolatrous females in bondage"** and wrote of "the necessity of an avowed Christian direction to the efforts which may affect the elevation of the Hindoo females from their present degradation to the proper level." And in 1878, Isabel Hart (of the

Baltimore Women's Foreign Missionary Society) described heathen women as "degraded, secluded and helpless" and reminded American women of their "responsibility and duty" to support missionary work.

Helen Montgomery writing of Western Women in Eastern Lands (1910) said: "Christianity was the most tremendous engine of democracy ever forged" and was "destined to break in pieces all castes, privileges, and oppression."

But missionaries had to also face the realities of rising nationalism in India and Sri Lanka. But the **tradition of the white man's and white woman's Christian burden** continued the belief, among many, that "premature independence for India would be….an abdication of the ordained exercise of Christian rule." A conservative member of parliament who opposed political reforms for India, which were being discussed in the early 1930s, wrote:

"…the whole ideal of British laws, justice, and administration….exactly interpret the Ten Commandements…our idea of government is the nearest approach to Christianity, and to exchange it for government which may lean towards…the worship of Shiva or Kali is…a "spiritual abdication."

"The holy church – now alas steering its malignant way through the Indian Ocean." - **W. B. Yeats** (around 1905), letter to Florence Farr.

Technology and Culture in India NEW

The reversal of the European image of Asia seems to have occurred, however, in a gradual period between 1780 and 1830, by which time the foundations of the industrial revolution in England had already been laid. **Voltaire** noticed a bit of it. **Having once considered India as "famous for its laws and sciences",** he felt it necessary to denounce the increasing preoccupations of Europeans in India with the amassing of "immense fortunes", and this led him to remark that "if the Indians had remained unknown to the Tartars and to us, they would have been the happiest people in the world."

By 1830, the British had acquired, in what was to become a completely European century, a flattering notion of the nature of their own civilization, and a thoroughgoing contempt for every other.

In India, itself, this new attitude found expression in the famous Minute of **Lord Macaulay** (1800-59) on the 2nd of February, 1835:

I have never found one amongst them (the Orientalists) who could deny that a single shelf of a good European library was worth the whole native literature of India and Arabia….It is, I believe, no exaggeration to say that all the historical information which has been collected from all the books written in the Sanskrit language is less valuable than what may be found in the most paltry abridgement used at preparatory schools in England. In every branch of physical or moral philosophy the relative position of the two nations is nearly the same.

The next influential person on our list, **Karl Marx** (1818 - 1883), had his own theories about the role of the British industrial civilization in India. “England” he wrote, “has to fulfill a double mission in India: one destructive, the other regenerating – the annihilation of old Asiatic society, and the laying of the material foundations of Western society in Asia. He went on to emphasize how the British were breaking up the village community, uprooting handicraft industry, and establishing private property in land, which he termed “the great desideratum of Indian society”. Industrial life would wreck the caste system: “Modern industry, resulting from the railway system, will dissolve the hereditary divisions of labor, upon which rest the Indian castes, those decisive, impediments to Indian progress and Indian power.”

Here again, the remarkable fact is that a hundred years later, **Peter F Drucker** (1909 -) (the godfather of the global corporation) would still be theorizing along similar lines. In one of his not so well known books, **The Landmarks of Tomorrow**, he urged his readers to face “the new reality of the collapse of the East, that is, of non-Western culture and civilization, to the point where no viable society anywhere can be built except on Western foundations”. He based his pontification on the perception that: Every single one of the new countries in the world today – including those that have not yet shaken off colonial status – sees its goal in its transformation into a Western state, economy and society, and sees the means to achieve this goal in the theories, institutions, sciences, technologies and tools the West has developed.

And certainly no accurate description of non-Western human experience could ever have been possible with minds convinced, for example, that Western philosophy was the nearest approach to metaphysical truth ever attained by mankind, that the Christian religion contained truth incumbent upon all men everywhere to believe.

As **Dr. Joseph Needham** (1900-1995) put it, even European painting and sculpture had become “absolute” painting and sculpture, that “which artists of all cultures must have been trying unsuccessfully to attain”. European music was music, all other music, anthropology. **The study of white men, even, was a separate science called sociology: anthropology was for the rest.**

If Macaulay was one of the first to set out to prescribe how best, in his case Indians, might save their withered souls, he was also the virtual founder of a movement that would carry on his tradition to the present day.

Conclusion

Macaulayism

Indian Marxism is only a passing phase in a much larger trend known as Macaulayism, named after the British administrator designed to create a class of people in Indian in skin color but British in every other respect. **"Macaulayites" are those Indians who have interiorized the colonial ideology of the "White Man's Burden" (as Rudyard Kipling called it in a famous poem): the Europeans had to come and liberate the natives, "half devil and half child", from their native culture, which consisted only of ignorance, superstition and the concomitant social evils;**

and after this liberation from themselves, these Indians became a kind of honorary Whites.

Macaulay's policy was implemented and became a resounding success. The pre-Macaulayan vernacular system of education was destroyed, even though British surveys had found it more effective and more democratic than the then-existing education system in Britain. The rivalling educationist party, the so-called Orientalists, had proposed a Sanskrit-based system of education, in which Indian graduates would not have been estranged from their mother civilization as they became through an English education....."

This is the continuance of, in a series the culmination of the Macaulay-Missionary technique. **The British calculated that to subjugate India and hold it, they must undermine the essence of the people: this was Hinduism, and everything which flowed from it. Hence the doggedness with which they set about to undermine the faith and regard of the people for five entities:**

- the gods and goddesses the Hindus revered;
- the temples and idols in which they were enshrined;
- the texts they held sacred;
- the language in which those texts and everything sacred in that tradition was enshrined and which was even in mid-19th century the lingua franca - that is, Sanskrit;
- and the group way of life - the Brahmins. The other component of the same exercise was to prop up the parts - the non-Hindus, the regional languages, the castes and groups which they calculated would be the most accessible to Missionaries and the Empire.

As **Ashish Nandy**, a Christian critic of old and new forms of colonialism, has observed: **"Schooling is the chosen instrument of alienation. The brightest children are snatched away from familiar surroundings to be introduced in schools based on Western model. When they leave, they speak the language of the colonizer and can no longer communicate with their own people."**

Persons no less than **Mahatma Gandhi, Swami Vivekanada, Rabindranath Tagore** etc have called for a change in the teaching of history.

Mahatma Gandhi said “I find daily proof of the increasing and continuing wrong being done to the millions by our false **deindianising of education**. These graduates who are my valued associates flounder when they have to give expression to their innermost thoughts. They are strangers in their own homes. What is worse, even the swaraj for which we are struggling may become foreign in character when we finally get it.” His words were indeed prophetic

In spite of Islamic Onslaught and British Imperialism, our children should read what the **West Bengal's leftist government** is teaching kids. Refer to an extract from the, textbook for Class V**. “Islam and Christianity are the only religions which treated man with honor and equality..."**

Today the **Marxists** are in the same business of conversion. For their outlandish dreams to be realized it was just as essential that the people lose faith in, and regard for, that they cut themselves off from their roots. While our eminent historians try to belittle the achievements of Indian art and architecture in the ancient period - by insinuating that it was derived from other countries, by seeing in it only reflection of the life of the privileged classes - **Soviet historians** talk of the high standards the Indians attained in these spheres. They talk of high originality..."

The Early American Indologists

source:
http://www.gosai.com/chaitanya/saranagati/html/nmj_articles/east_west/east_west_5.html

The American Oriental Society, founded in 1842 though the study of Sanskrit itself, did not start in American universities until some years later. The first American Sanskrit scholar of any repute was Edward Elbridge Salisbury (1814-1901) who taught at Yale (Elihu Yale was himself ultimately connected with India and had profound respect for Vedic philosophy). Another early Sanskritist, Fitzedward Hall (1825-1901) was in the Harvard class of 1846 but left college to search for a runaway brother in-of all places-India, where he continued his studies of Indian languages and even became tutor and professor of Sanskrit at Banaras. He was the first American scholar to edit a Sanskrit text-the Vishnu Purana.

One of Salisbury's students at Yale, William Dwight Whitney (1827-1901) went on to become a distinguished Sanskritist in his own right having studied in Berlin under such distinguished German scholars as Bopp and Weber. Whitney became a full professor of Sanskrit language and literature at Yale in 1854, wrote his classic Sanskrit Grammar (1879) and was the doyen of Indologists of his period. Whitney was succeeded in the Chair of Sanskrit Studies of Yale by Edward Washburn Hopkins (1857-1932). Hopkins was an excellent scholar but made his name principally as an exponent of India's religions. His book The Religions of India (1895) was for many years one of the principal works on the subject available in America and his Origins and Evolution of Religion published in 1923, sold well.

With Yale leading the way, Harvard caught up and beginning with James Bradstreet Greenough (1833-1900), had a succession of great Sanskrit teachers, the most distinguished among them was Charles Rockwell Lanman who taught for over forty years, publishing such works as Sanskrit Reader and Beginnings of Hindu Pantheism. But his greatest contribution was planning and editing of the Harvard Oriental Series. In his time he was responsible for influencing such students of his who were later to achieve literary renown as T. S. Eliot, Paul Elmer More and Irving Babbitt. The tradition of American Indologists has been nobly kept up by those who followed: to mention only a few names, A. V. William Jackson, Franklin Edgerton, W. Norman Brown, and Joseph Campbell.

1.Western Response to Modern India

Excerpts from **India and World Civilization- By D. P. Singhal** pp- 268.

The growing influence of Indian thought in recent years has indeed frightened some Western religious writers, such as Hendrick Kraemmer (World Cultures and World Religions), who have designated it as the "Eastern invasion of the West". Perhaps excessive anxiety to defend the Western Christian traditions may have led Kraemer to over-rate Indian influence. But there are many European scholars who have denounced Indian thought in unmistakable terms. Whether response or resistance, admiration or denunciation, all are equally indicative of impact and stimulus.

In a limited way the migration of Indian labor to other countries provided yet another link between India and the outside world. Indian settlers began to move to other countries in 1830, mainly to work on British plantations. This made abolition of slavery commercially possible a few years later, when the notorious indenture system was introduced in the British Empire. According to estimate, twenty-eight million Indians migrated to various countries between 1834 and 1932.

An important social survey, carried out in Britain about some years ago, produced some surprising results. A quarter of all those who professed belief in an after-life- an eighth of the population-did not believe that this after-life would be eternal; eleven percent of the believers actually declared their faith in transmigration. This was "perhaps the most surprising single piece of information to be derived from this research". Belief in transmigration is a typically Indian doctrine and is contrary to the creeds of Europe and Western Asia.

Politically and intellectually it was inevitable that there should have been some reaction in Europe against an invasion of Indian learning. Reaction against alien ideas appears to be a common human irrationality. Certainly, the nature of political relationships and nationalistic pride understandably played a significant role. European nations generally were more receptive to Indian ideas during the early period of their relationship which was based on relative equality. But as European political, technological and economic supremacy over Asia came to be recognized, an attitude of superiority crept into the European – and particularly the British- outlook. The influence of political relationships on cultural intercourse is further illustrated by the fact that, once the British became overlords of India, Indian learning drew more sympathetic and imaginative understanding form other European countries than it did from the British.

The discovery of Indian thought by European scholars in the eighteenth and nineteenth centuries led to an outburst of admiration and enthusiasm, mainly because they felt that Indian thought filled a need in their European culture. Neither Christianity nor the classical cultures of Greece and Rome were considered satisfactory any more and the European intelligentsia sought to apply the new knowledge, brought in increasingly by Indologists, to their own spiritual preoccupations.

It is significant that, with notable exceptions, India appears to have been most attractive to those Europeans who did not visit the country personally. In other words, Indian thought made a better impact on the European mind than did contemporary Indians.

Of all the European nations, **Germany**'s response to India was most enthusiastic and open hearted. Perhaps the similarity between the German and the Indian mind, in the sense that both are given to contemplation, abstract speculation, and pantheism, and both have a tendency towards formlessness, inwardness, and transcendentalism, contributed toward German understanding of Indian literature. **Leopold von Schroeder** says: "The Indians are the nation of romanticists of antiquity." The Germans are the romanticists of modern times". Sentimentality and feeling for nature are common to both German and Indian poetry, whereas they are foreign, for instance to Hebrew or Greek poetry. Another similarity is illustrated , by the Indian tendency to work scientific systems, India was the nation of scholars of antiquity, in the same way as the Germans are the nation of scholars of the modern times.

The **French** were not amongst the first Europeans to come into contact with India. But as soon, as French travelers, who are known for their literary taste, visited India and reported on their travels, French literary circles responded enthusiastically.

The British response to Indian learning was most mixed. Whilst India remained a trying political problem, she was a symbol of British power and achievement, as well as a major source of her economic wealth. Individual thinkers studied India closely and whilst some were fascinated, others were repelled. Often the political expedience-for instance the need to justify domination of India to the British public-British administrators were compelled to interpret Indian culture as degenerate and decadent.

Another barrier between Indian and British cultural co-operation was the Englishmen working in India. The early administrators were indifferent to anything except trade and profits; the later ones, after 1830, suffered from a sense of cultural inferiority, which compounded with political superiority, manifested itself in self-righteousness, prejudices, and arrogance. They often came to India for only a few years, invariably lived an exclusive life, and returned home to condemn Indian culture and traditions with gusto.

Their callous indifference to Indian art is well reflected by the fact that the liberal William Bentinck, who initiated social reforms in India, seriously considered the possibility of dismantling the Taj Mahal and selling the marble to meet the shortage of money in the Company's treasury. He was prevented because "the test auction of materials from the Agra palace proved unsatisfactory."

Fed on Macaulay, Mutiny, and Kipling, the English, no wonder, did not appreciate India.

2. Indian Response to Modern Europe

Excerpts from **"India and World Civilization" - By D. P.Singhal** - Chapter VII pp- 273.

Whilst Europe sought ancient Indian learning, India focused her attention on modern European knowledge. In this cultural encounter, initiative remained for the most part with Europe, for she was a young developing society with an inquisitive mind and the material resources to obtain easy access to what she fancied. In contrast, Indians even if they knew what they needed, could not get at it at will.

Western tradition is a highly generalized, extremely vague, and ill-defined concept that is often stretched to include or exclude anything at will to suit the purpose in hand. It is not a unitary system of thought, nor has it an unbroken historical continuity. There are deep controversies as to its exact nature and value, and it is a complex of diverse, even contradictory, ideologies and traditions. For instance, it is equally proud of the imprints of early Greek and Christian traditions which were relentlessly opposed to each other.

Even a casual investigation reveals the inherent contradictions of Western traditions. Western tradition is often characterized as one of material progress and scientific advancement, yet Christian mystical thought is superbly well developed, and until recently science was positively denounced in the Christian West. In most

respects scientific inquiry was much more highly developed in the Hellenistic period than it was in mediaeval Europe. In fact, exactly why Hellenistic science declined needs an explanation. Again, it is repeatedly pointed out that Western tradition stems from the enlargement of individual liberties, and that individual liberty is the essence of Western civilization. Some Western scholars go even much farther and assert that the West has regarded " a denial of freedom as a denial of the value of the individual and therefore as a sin against the soul of man."

Yet it is not possible to completely ignore the Western institutions of slavery, feudalism, colonialism, and imperialism and racism. Western liberalism, of which the West can be justly proud , was born in the seventeenth century as a reaction against the violence and hatred that had prevailed during the almost unbelievably atrocious religious wars. But even since then, liberalism has not remained unchallenged in the West. Indeed, totalitarianism and suppression of freedom of thought and person appear to be the unbroken trend of a Western tradition that can claim most of the famous despots of world history, including Alexander, Julius Ceasar, Nero, Napoleon, Hitler, and Mussolini. This fact is even more startling when these dictators and conquerors are contrasted with the prophets of non-violence and peace, such as Gautama Buddha, Asoka, and Mahatma Gandhi, who were all born in Asia. Even the divine rights of kings, found far more serious advocates amongst Western monarchs- the Greek Alexander, the Roman Ceasars, Russians Czars, French Bourbons, and British Stuarts. It is true that the Western world has continuously fought for liberty, but this only serves to illustrate the existence of anti-freedom forces and a totalitarian current in Western tradition.

Again, it cannot be claimed, as it is often done, that the rise of Christianity did much to improve the position of the individual, for religious persecution has been a common feature of Western Christianity. The once persecuted Christians, having gained power, themselves became persecutors. The terrible struggles between Church and State were not fought for individual, or even religious freedom; the Church sought to compel the secular powers to serve its own purposes. Any individual who did not subscribe to the Church's belief was at once denounced as a heretic. Crusades and religious wars of extermination were often as bloody as Hitler's slaughter of the Jews and Gypsies.

The Church even persecuted the mediaeval minstrels and Gypsies because they loved freedom.

Christianity, which is in practice a unique combination of beliefs and clergy, whilst owing its religion to Jesus and his early Asian disciples, is, in strict ecclesiastical hierarchy, an essential Western movement. Whatever may have been the value of the Church in religious practice, it has inhibited freedom of thought and individual liberty by relentlessly enforcing its presuppositions as eternal truths. It is the Church which sets moral standards for the individual and prescribes his belief. The organization of the Church is unparalleled in history. No federation of states has been as comprehensive and universal in taking hold of the minds of people, and no monarch or dictator has been given the complete and willing obedience of such a wide and vast body of peoples, as has the Church.
The Islamic Caliphate and the Buddhist monasticism were, in this respect, no way comparable to the Christian Church.

Communism, with all its scientific reason, humanism, and economic equality, is essentially a totalitarian doctrine, negating individual liberty, and is a typical, almost, exclusive Western concept. Communism stresses the primary of reason, but like a missionary religion, it has a sense of its own infallibility and an obligation to world-wide expansion. Its greatest exponents have mainly been Western or Western-trained.

Even the British thought, which was more directly and closely linked with India than that of other European countries, had its own inner conflicts and contradictions in respect to India, ranging from

Edmund Burke's liberalism and John Stuart Mill's utilitarianism to John Bright's radicalism.

Burke desired India to stay Indian; in fact, he was rather anxious to reform the disreputable English trustees in India. He strongly condemned the facile and much used aspersion of "Oriental Despotism" and warned his countrymen against passing judgment upon a people, for ages civilized and cultivated, who formed their own laws and institutions prior to "our insect origins of yesterday." The Utilitarians and Evangelicals, on the contrary, saw little good in Indian society and desired to Westernize it completely by denying individual liberty to the Indian. The Utilitarians, whilst not denying the abstract right to liberty, could see no alternative to a benevolent British despotism in India, conducted from London. India exposed Utilitarianism's paradox between its principle of liberty and that of authority. The Evangelicals' viewpoint was religious; they believed that only through Christianity could temporal welfare and spiritual salvation be achieved. Hence, they looked upon the British conquest of India as a divine act to redeem themselves from their depraved system of superstition. Thus they sought the rapid conversion of the peoples of India to Christian ways, as interpreted by Western clergy. If Utilitarianism provided a justification and a practical basis for British imperial rule in India, Evangelicalism gave it a sense of urgency and intense zeal.

Whilst the 17th century marked the zenith of India's mediaeval glory, the 18th century was a spectacle of corruption, misery, and chaos. The glory of the Mughals had vanished, life had become insecure, the nobility was deceitful and oppressive, and intellectual curiosity had given way to superstitious beliefs. The country was in a state of military and political helplessness. In this atmosphere, literature, art and culture could barely survive. The malaise of India was aggravated in full measure by the East India Company with its indiscriminate exploitation, corruption and bribery.

In contrast, Europe was robust and vigorous. This was the Age of Enlightenment, and Europeans were going through a process of rebirth during which religion was detached from state, alchemy from science, theology from philosophy, and divinity from art. The impact of Western culture on India was that of a dynamic society on a static one. It is a cruel irony of history, that whilst two major revolutions – the French and the American-upholding the human rights to liberty and equality were taking place in the West, India was in the throes of losing her own freedom to Western mercantile imperialism.

" The British domination of India has been described as a "political and economic misfortune."

In 1937, a distinguished British civil servant, **G. T. Garratt, declared that the period of Indo-British civilization of the 150 years had been most disappointing, and "in some ways the most sterile in Indian history."**

Haunted by Macaulay's ghost
By Francois Gautier -Publication: Organiser
Date: November 29, 1998
http://www.hvk.org/hvk/articles/articles/1298/0023.html

As a foreign journalist, one cannot understand all the excessive noise made about the Education Agenda of Murli Manohar Joshi: What is wrong in trying to "Indianise, nationalise and spiritualise" education in India? Joshi's critics-and there have been many-have called it "a hidden Hindu agenda". So what?

With 800 million souls, Hindus constitute the majority of this country. Why should Hindus then be ashamed of a "Hindu education"? Traditionally and historically, Hinduism has always been the most tolerant of all religions, allowing persecuted minorities from all over the world, whether the Jerusalem Jews, the Parsis from Persia, Christians from Syria, or even Arab merchants, to settle in India over the centuries and practice their religion in peace. Unfortunately, the same cannot be said of India's invader, be they Muslims, who ruthlessly tried for 10 centuries to stamp out this most peaceful of all religions; or the Christians missionaries, who used every means at their disposal to convert Hindus to the “true” religion (and are still trying today).

But Hinduism, never tried to convert anybody, never sent its armies or missionaries to neighbouring countries, to impose its religion and ways of life-not even by non-violence means, as the Buddhists did all over Asia. It should also be said that Hinduism is much more than a religion, it's a way of life, a universal spiritual outlook, which has allowed numerous sects, branches, philosophies, to develop within its fold, as long as they were faithful to the central truth of Hinduism: Dharma. It even recognises the truth and validity of other creeds-and it's perfectly normal for a Hindu to have pictures of Guru Govind, Christ, Buddha and Krishna in their homes. For are they not avatars? And is that not true secularism (and not the .opportunistic secularism of India’s politicians, which has divided India along caste and religious lines)?

Then why should Hindus not be proud of Hinduism? It has not only shaped the psyches of Hindus, but also of Indian Christians, Jains, Parsis, even Muslims, who are like no other Muslims in the world. And why should Indians be ashamed of their own civilisation whose greatness was foremost Hindu? Why should they refuse to have their children read the Vedas, which constitute one of the great Mountains of spiritual wisdom, or the Bhagavad Gita, which contains all the secrets of eternal life? Or the Ramayana and the Mahabharata, which teach the great values of human nature: courage, selflessness, spiritual endeavour, love of one’s wife and neighbours. ...

Are the French ashamed of their Greeco-Roman inheritance? Not at all! On the contrary they even think that civilization started with the Greeks. Would you call the Germans or the Italians “nationalists" because they have Christian Democrats Parties? Christianity is the founding stone of Western civilisation and nobody dares deny it. Clinton goes to the mass and swears on the Bible and none finds anything to say. We French are brought-up
listening to the values of Homer's Iliad, or Corneille's Le Cid. It is true that in France there has been a separation of the State and the Church; but that is because at one time the Church misused its enormous political power and grabbed enormous amounts of lands and gold. But no such thing ever happened in India. The Brahmins never interfered in politics and today they are often a neglected lot.

When they took over India, the British set about establishing an intermediary race of Indians, whom they could entrust with their work at the middle level echelons and who could one day be convenient instruments to rule by proxy or semi-proxy. The tool to shape these "British clones" was Education. In the words of Macaulay, the 'Pope' of British schooling in India: "We must at present do our best to form a class, who may be interpreters between us and the millions we govern; a class of persons, Indians in blood and colour, but English in taste, in opinions in morals and in intellects". Macaulay had very little regard for Hindu culture

and education: "All the historical information which can be collected from all the books which have been written in the Sanskrit language, is less valuable than what may be found in the most paltry abridgement used at preparatory schools in England".

It seems today that India's Marxist and Muslim intelligentsia could not agree more with Macaulay or with Charles Grant. For the dream of Macaulay has come true: Nowadays, the greatest adversaries of the "Indianised and spiritualised education" of Joshi, are the descendants of these "**Brown Sahibs'** the "secular" politicians, the journalists, the top bureaucrats, in fact the whole Westernised cream of India. And what is even more paradoxical, is that most of them are Hindus. It is they who upon getting independence, have denied India its true identity and borrowed blindly from the British education system, without trying to adapt it to the unique Indian mentality and psychology; and it is they who are refusing to accept "an Indianisation, nationalisation and spiritualisation" of India's education system, which is totally western-oriented. And what India is getting from this education is a youth which apes the West.

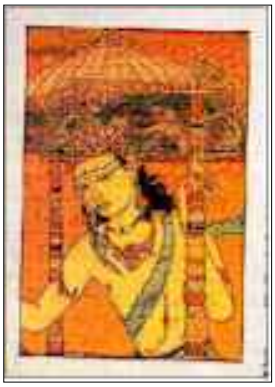
But then, what does makes Indian unique? Take the proposal of Joshi to make Sanskrit compulsory in school. Great idea! Sanskrit is the mother of all languages, and it could become the unifying language of India, apart from. English, which is spoken only, by a tiny minority. "Sanskrit. ought still to have a future as the language of the learned and it will not be a good day for India when the ancient tongues cease entirely to be written or spoken", admonished 50 years ago Sri Aurobindo, India's great Sage and Seer.

A dead language, you say! Impossible to revive? But that's what they argued about Hebrew. And did not the Jewish people, when they got back their land in 1948, revive their "dead" language, so that it is spoken today by all Jewish people and has become alive again? The same thing ought to be done with Sanskrit. Let the scholars begin now to revive and modernize the Sanskrit language, it would be a sure sign of the dawning of the Renaissance of India. In a few years it should be taught as the second language in schools throughout the country, with the regional language as the first and English as the third. Then will India again have its own unifying language.

The Ministers walked out when the Saraswati Vandanam was played. But why should anyone object to Saraswati, the Goddess of Learning who bestowed so much grace on India. In 1939, a disciple told Sri Aurobindo that: "there are some people who object to singing of Vande Mataram as a national song; Sri Aurobindo had replied; "in that case Hindus should give up their culture". But the disciple had continued: "the argument is that the song speaks of Hindu- gods, like Durga and that it is offensive to Muslims". Said Sri Aurobindo: "but it is not a religious song, it is a national song and the Durga spoken of is India as the Mother. Why should not the Muslims accept it? In the Indian concept of nationality, the Hindu view should be naturally there. If it cannot find a place, the Hindus may as well be asked to give-up their culture. The Hindus don't object to "Allah-Ho-Akbar".

It is then obvious that Education in India has to be. totally revamped. The kind of Westernised education which is standard in India, does have its place, because India wants to be on par with the rest of the world, and Indian youth should be able to deal confidently with the West: do business, talk, and relate to a universal world culture. But nevertheless, the first thing that Indian children should be taught is the greatness of their own culture. They should learn to revere the Vedas, they should be taught the genius of the Mahabharata and the Ramayana, they should be told that in this country everything has been done, that it was an unsurpassed civilisation, when the West was still mumbling its first words, that Indian civilisation reached heights, which have been since unsurpassed. But they should be taught early that India's greatness is her spirituality her world-wide wisdom. India’s new education has to be spiritualised, it has to be an inner education, which teaches to look at things from the inner prism, not through the western artificial looking glass.

India's Dharma, her eternal quest for truth, should be drilled in the child from an early age. And from this firm base, everything then can be taught - from the most modem forms of mathematics, to



the latest scientific technologies.

Did You Know?

Much of Modern Medicine can be traced to the Hindu surgeon, Sushruta, circa 600 BCE.

Best known for plastic surgery, his other notable achievements include cosmetic surgery, treatises on medical ethics, definitions, for 121 surgical implements, control of infection through antiseptics, use of drugs, to control bleeding, toxicology, psychiatry, midwifery, cataract operations and classifications of burns. And if all this weren't enough, Sushruta was among the first to prescribe surgical anesthesia - which in his day was a healthy dose of strong wine!

For more on medicine, please refer to chapter on **Hindu Culture**).

In ancient India, women occupied a very important position, in fact a superior position to, men. It is a culture whose only words for strength and power are feminine -"Shakti" means "power" and "strength." All male power comes from the feminine. Literary evidence suggests that kings and towns were destroyed because a single woman was wronged by the state. For example, Valmiki's Ramayana teaches us that Ravana and his entire clan was wiped out because he abducted Sita. Veda Vyasa's Mahabharatha teaches us that all the Kauravas were killed because they humiliated Draupadi in public. Elango Adigal's Sillapathigaram teaches us Madurai, the capital of the Pandyas was burnt because Pandyan Nedunchezhiyan mistakenly killed her husband on theft charges.

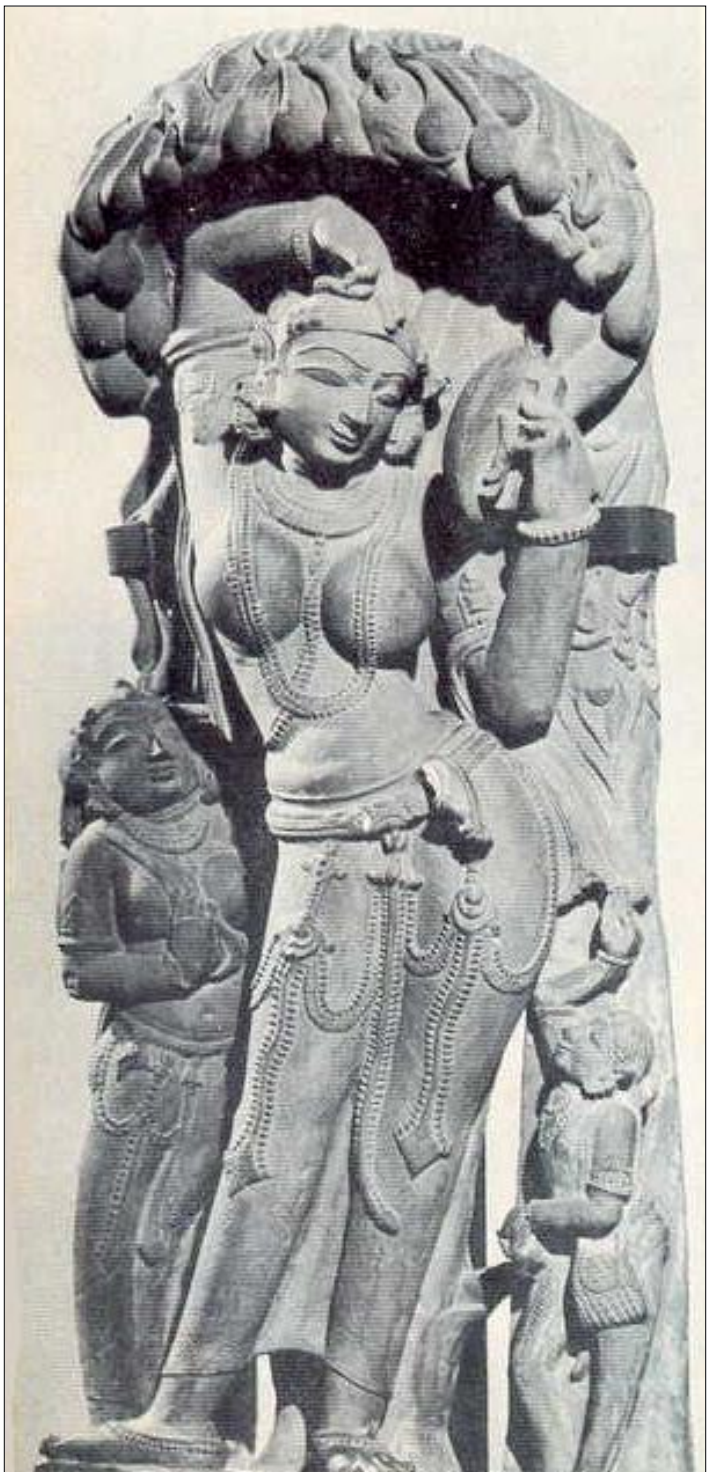
In Vedic times women and men were equal as far as education and religion was concerned. Women participated in the public sacrifices alongside men. One text mentions a female rishi Visvara. Some Vedic hymns, are attributed to women such as Apala, the daughter of Atri, Ghosa, the daughter of Kaksivant or Indrani, the wife of Indra. Apparently in early Vedic times women also received the sacred thread and could study the Vedas. The Haritasmrti mentions a class of women called brahmavadinis who remained unmarried and spent their lives in study and ritual. Panini's distinction between arcarya (a lady teacher) and acaryani (a teacher's wife), and upadhyaya (a woman preceptor) and upadhyayani (a preceptor's wife) indicates that women at that time could not only be students but also teachers of sacred lore. He mentions the names of several noteworthy women scholars of the past such as Kathi, Kalapi, and Bahvici. The Upanishads refer to several women philosophers, who disputed with their male colleagues such as Vacaknavi, who challenged Yajnavalkya. The Rig Veda also refers to women engaged in warfare. One queen Bispala is mentioned, and even as late a witness as Megasthenes (fifth century B.C. E.) mentions heavily armed women guards protecting Chandragupta's palace.

Louis Jaccoliot, the celebrated French author of the **Bible in India: Hindoo Origin of Hebrew and Christian Revelation** said: "India of the Vedas entertained a respect for women amounting to worship; a fact which we seem little to suspect in Europe when we accuse the extreme East of having denied the dignity of woman, and of having only made her an instrument of pleasure and of passive obedience." He also said: "What! here is a civilization, which you cannot deny to be older than your own, which places the woman on a level with the man and gives her an equal place in the family and in society."

Introduction
Sati, the much-highlighted face of Hinduism
Dowry Murder: The Imperial Origins of a Cultural Crime
Women as Purohita - priests
Famous Women of Ancient and Modern India

***

Introduction



Recent incidents of sati and rash of "dowry murders" have made headlines not only in India, but all around the world, and have focused attention to women's issues in India. **In the wake of the discussion it emerged that Indian women's problems are not only problems of Hindu women or problems caused by traditional Hinduism.** Media paints India as a dangerous place. But if statistics can be trusted, a study by Hindus Against the Abuse of Women presented at the Second International Conference on Bride Burning and Dowry Deaths in India **puts USA in the lead of familial femicide. It says USA murders of women committed by "intimate relations" are 15 per year per million population.** The rate in Pakistan is 6.44 per million. India's is 6.25 per million. The study says excessive need for control and greed may be the underlying causes, not cultural or religious factors. India recently passed a law making husbands and in-laws guilty until proven otherwise if a bride dies within the first year of marriage. Since then, the rate of women killed by intimate relations dropped by more than 50%. Tiny Switzerland is home to a mere 7.2 million people. It is extremely rich, modern, industrialised and democratic with excellent health care and a 100 per cent literacy rate. So why has this proud nation with its fiercely democratic traditions failed to curb violence against women? **Which is why the statistics for wife beating are about the same in the developed and the developing world**. It is fallacious to think that there is a link between democracy, prosperity, education levels and domestic violence," counters Elizabeth Rod-Grangé, a Swiss sociologist and activist with Solidarité Femme, a women's rights

group that runs shelters for battered women in Geneva. According to the report, one in every three women suffers violence in her lifetime. The statistics in Europe are as appalling as anywhere else. In France, six women die each month at the hands of men who profess to love them. **In Britain, one woman is killed by a partner every three days, one woman in four experiences domestic violence and attacks on partners account for a quarter of all violent crime. Despite media campaigns and shocking statistics, domestic violence continues to be one of Europe's most under-reported crimes.**

***

Hindu religion has been occasionally criticized as encouraging inequality between men and women, towards the detriment of Hindu women. **This inaccurate presumption again arises when people combine social and religious issues.**

10th century Nayika standing underneath a tree attended by her companions, while she put the finishing touches to her toilet. In her left hand she holds a mirror, while adjusting her coiffure with her right.

***

"India's femininity and sexual ambiguity, is the very antithesis of Western virility."

According to **Guy Sorman**, visiting scholar at Hoover Institution at Stanford and the leader of new liberalism in France, writes: **idea of feminism and ecology came from the 1968 movement, from the meeting between India and the West.** He says: **"There is hardly anything in European thought to predispose the West to reject virility, the respect for authority, the mastery over nature.** India too has a warrior (khastriya) tradition of virility as exemplified in the **Mahabharata**, only it is secondary. First, comes the veneration of thousands of goddesses - for the Indians, India is above all **Mother India.**

India's femininity and sexual ambiguity, is the very antithesis of Western virility."

(source: **The Genius of India - By Guy Sorman** (**'Le Genie de l'Inde**') Macmillan India Ltd. 2001. ISBN 0333 93600 0 p. 197).

Testifying to the quiet continuance of an ancient tradition, Abanindranath Tagore painted his famous watercolor Mother India in 1906, as a beautiful, ascetic goddess clad in pale saffron. This dreamy image became the artistic icon for the Indian nation during the struggle for independence. Bankim Chandra's unforgettable song Vande Mataram inspired countless patriots to their martyrdom and still stirs, in everybody's heart devotion to the motherland visualized as Devi.

(source: **Devi in Indian Arts - By Utpal K. Banerjee** Tour India April 2001).

Recently Chicago radio and TV talk-show, **Tony Brown** has made remarks like "A woman in the India is never free." (refer to **Hindu-bashing Chicago Radio and TV talk show airs**). Perhaps Mr. Brown should read 200 verses in the Bible that denigrate women **Insults to women in the Bible**. According to Ed Viswanathan author of **Am I a Hindu?**: " It is pertinent to remember that St. Paul wrote in the Bible, women cannot be leaders and cannot talk in church. That is why Catholics will never have a woman priest. This country (USA) will take very many years for a woman or a black to become president, where as India already had a women prime minister." (source: **India Tribune - By Ed Viswanathan**).

Helen Ellerbe (researcher, writer, and public speaker) has observed that: "Christian philosopher, **Boethius**, who wrote in **The Consolation of Philosophy**, "Woman is a temple built upon a sewer." The 13th century **St. Thomas Aquinas** suggested that God had made a mistake in creating woman: Lutherans at Wittenberg debated whether women were really human beings at all. Orthodox Christians held women responsible for all sin. As the Bible's Apocrypha states: "Of woman came the beginning of sin/ And thanks to her, we all must die." The witch hunts were an eruption of orthodox Christianity's vilification of women, "the weaker vessel" in St. Peter's words. The second century **St Clement of Alexandria** wrote: "Every woman should be filled with shame by the thought that she is a woman." The Church father **Tertullian** also explained why women deserve their status as despised and inferior human beings."

(source: **The Dark Side of Christian History - By Helen Ellerbe** Morningstar Books July 1995 ISBN 0964487349 p. 115).

Francois Gautier (1950 -) Paris-born has lived in India for 30 years, is a political analyst for Le Figaro, one of France's largest circulation newspaper, remarks: "Countries such as France or the United States, who are often preaching India on "women's rights" never had a woman as their top leader (President), whereas India had Indira Gandhi ruling with an iron hand for nearly twenty years; and proportionately they have less MP's than India, which is considering earmarking 33 % of seats in Parliament for women, a revolution in human history!" Thus in India - and it is true that it is often a paradox, as women, because of later Muslim influences, have often been relegated to the background - **the feminine concept is a symbol of dynamic realization.** She is the eternal Mother, who is all Wisdom, all Compassion, all Force, Beauty and Perfection. It is in this way that since the dawn of times, Hindus have venerated the feminine element under its different manifestations. Mahalaxshmi, Mahakali, Mahasaraswati, Maheshwari - and even India is feminine: **"Mother India."**

(source: **Arise O' India - By Francois Gautier** Har Anand publisher ISBN: 81-241-0518-9 p.11-13). For more on Francois Gautier refer to chapter **Quotes221_250**).

***

Will Durant (1885-1981) American historian says:

"Women enjoyed far greater freedom in the Vedic period than in later India. She had more to say in the choice of her mate than the forms of marriage might suggest. She appeared freely at feasts and dances, and joined with men in religious sacrifice. She could study, and like Gargi, engage in philosophical disputation. If she was left a widow there were no restrictions upon her remarriage."

(source: **Story of Civilization: Our Oriental Heritage - By Will Durant** MJF Books.1935 p. 401). For more on Will Durant refer to chapter **Quotes1_20** and **Hindu Art**).

In religious matters, Hindus have elevated women to the level of divinity. One of the things most misconstrued about India and Hinduism is that it's a male-dominated society and religion. It is not.

It is a culture whose only words for strength and power are feminine -- "shakti" means "power" and ``strength." All male power comes from the feminine. The Trimurti (Brahma, Vishnu, Shiva) are all powerless without their female counterparts.

Devi, in the words of **Romain Rolland**, French Nobel laureate, professor of the history of music at the Sorbonne and thinker, is **the Great Goddess**, the invisible, the immanent, who gathers to her golden arms the multiform, multicolored - Unity. This echoes the sixth century Devi-Mahatraya prayer to her: By you this universe is borne, by you this world is created. By you it is protected, O Devi: By you it is consumed at the end. You are the Supreme Knowledge, as well as ignorance, intellect and contemplation...

Indian Historian **Romesh C Dutt** writes:

"Women were held in higher respect in India than in other ancient countries, and the Epics and old literature of India assign a higher position to them than the epics and literature of ancient Greece. Hindu women enjoyed some rights of property from the Vedic Age, took a share in social and religious rites, and were sometimes distinguished by their learning. The absolute seclusion of women in India was unknown in ancient times."

(source: **The Civilization of India - By R. C. Dutt** p 21-22).

India of the Vedas entertained a respect for women amounting to worship

***

Louis Jaccoliot (1837-1890) who worked in French India as a government official and was at one time President of the Court in Chandranagar, translated numerous Vedic hymns and the celebrated author of the **Bible in India: Hindoo Origin of Hebrew and Christian Revelation** said:

"India of the Vedas entertained a respect for women amounting to worship; a fact which we seem little to suspect in Europe when we accuse the extreme East of having denied the dignity of woman, and of having only made her an instrument of pleasure and of passive obedience." He also said: "What! here is a civilization, which you cannot deny to be older than your own, which places the woman on a level with the man and gives her an equal place in the family and in society."

(source: **India And Her People - By Swami Abhedananda** - p. 253).

Professor H. H. Wilson says: "And it may be confidently asserted that in no nation of antiquity were women held in so much esteem as amongst the Hindus."

In Ancient India, however, they not only possessed equality of opportunities with men, but enjoyed certain rights and privileges not claimed by the male sex. The chivalrous treatment of women by Hindus is well known to all who know anything of Hindu society.

"Strike not even with a blossom a wife guilty of a hundred faults," says a Hindu sage, "a sentiment so delicate," says

Colonel James Tod "that Rignald-de-Born, the prince of troubadors, never uttered any more refined."

(source: **Hindu Superiority - By Har Bilas Sarda** Publisher: Scottish Mission Industries. 1917 p. 93).

Louis Jacolliot (1837-1890) who worked in French India as a government official and was at one time President of the Court in Chandranagar, translated numerous Vedic hymns and the celebrated author of the **Bible in India** has observed:

"Besides, what antiquity wholly overlooked, but what we cannot too much admire in India, is its respect for women, almost amounting to worship. This extract from Manu (shloka 55) will not be read without surprise:

“Women should be nurtured with every, tenderness and attention by their fathers, their brothers, their husband, and their brother-in-law, if they desire great prosperity.”

“Where women live in affliction, the family soon becomes extinct, but when they are loved and respected, and cherished with tenderness, the family grows and prospers in all circumstances.”

"This veneration of women produced in India an epoch of adventurous chivalry during which we find the heroes of Hindoo poems accomplishing high deeds, which reduce all the exploits of Amadis, knights of the Round Table, and the Paladins of the Middle Ages, to mere child’s play.”

(source: **Bible in India: Hindoo Origin of Hebrew and Christian Revelation - By Louis Jacolliot** p - 40-41 Panini Office Bahadurganj. Allahabad 1916). For more on Louis Jacolliot refer to chapter **Qutoes61_80**).

The history of the most of the known civilizations show that the further back we go into antiquity, the more unsatisfactory is found to be the general position of women. **Hindu civilization is unique in this respect,** for here we find a surprising exception to the general rule. The further back we go, the more satisfactory is found to be the position of women in more spheres than one; and the field of education is most noteworthy among them. There is ample and convincing evidence to show that women were regarded as perfectly eligible for the privilege of studying the Vedic literature and performing the sacrifices enjoined in it down to about 200 B.C. **This need not surprise us, for some of the hymns of the Rig Veda are the compositions of rishnis or poetesses.** Some twenty different hymns were composed by poetesses. Visvara, Sikaata, Nivavari, Ghosha, Romasa, Lopamudra, Apala and Urvasi are the names of some of them. Man could perform the Vedic sacrifices only if he had his wife by his side.

(source: **Education in Ancient India - By A. S. Altekar** p. 207-209 Nand Kishore & Bros. Varanasi.1965).

Knowledge, intelligence, rhythm and harmony are all essential ingredients for any creative activity. These aspects are personified in Saraswati, the Goddess of Learning, Music and Fine Arts. Without the grace of Saraswati, or **Saraswati-Kataksham**, as it is called, Brahma cannot do a worthwhile job as the Creator. Any maintenance activity needs plenty of resources, mainly fiscal resources. So Lakshmi, the Goddess of Wealth, is an essential companion to Vishnu.

Shiva, as Destroyer, needs plenty of power and energy. This is what Parvati, or Durga or Shakthi as she is called, provides. It is only the Hindu tradition, which provides, even at the conceptual level, this picture of the male and female principles working together, hand in hand, as equal partners in the universe. This concept is carried further to its logical climax in the form of **Ardhanaareeswara**, formed by the fusion of Shiva and Shakthi in one body, each occupying one half of the body, denoting that one is incomplete without the other.

Just three shlokas which are commonly recited during daily prayers are enough to show the status of the three Goddesses. A shloka on Saraswati contains the following line: Yaa Brahma Achyuta Sankara Prabhrudibihi Devaissadaa Poojithaa, which means, 'Saraswati who is always worshipped by Brahma, Vishnu, Shiva and other Gods'.

And Shakti is the fundamental strength of the feminine that infuses all life and is viewed as a goddess. Shakti is the divine feminine power found in everything.

In Hinduism, all power, shakti, is female. So, the female represents the totality of the power, and the male is imaged as the agent of the female. Also, in Hinduism, the sun is female and the moon is male; he is born of her, dies into her, and is born of her again every month. Shiva, this great power, is the moon god. Parvati, his consort, is the sun power. And although the worship in the masculine-oriented action systems in India is directly to Shiva, it's to the goddess Kali, that the worship finally goes.

So that, actually, in India, Kali is the great divinity. .....the Hindu goddess Kali...is shown standing on the prostrate form of the god Shiva, her spouse. She brandishes the sword of death, i.e., spiritual discipline. The blood-dripping human head tells the devotee that "he that loseth his life for her sake shall find it." The gestures of "fear not" and "bestowing boon" teach that she protects her children, that the pairs of opposites of the universal agony are not what they seem, and that for one centered in eternity the phantasmagoria of temporal "goods" and "evil" is but a reflex of the mind-as the goddess, herself, though apparently trampling down the god, is actually his blissful dream.

The Goddess
gives birth to forms
and kills forms.

The Vedic pantheon includes a substantial number of female goddesses. There are beautiful hymns to Usha, the dawn, imagined as an alluring young woman:

Usha, the dawn, is often invoked, and is the subject of some of the most beautiful hymns that are to be found in the lyrical poetry of any ancient nation.

Beautous daughter of the sky!
Hold they ruddy light on high,
Grant us wealth and grant us day,
Bring us food and morning's ray.
White-robed goddess of the morning sky,
Bring us light, let night's deep shadows fly.

This light, most radiant of lights, has come; this gracious one who illumines all things is born. As night is removed by the rising sun, so is this the birthplace of the dawn....We behold her, daughter of the sky, youthful, robed in white, driving forth the darkness. Princess of limitless treasure, shine down upon us throughout the day." - Rig Veda I. 113.

"We gaze upon her as she comes
The shining daughter of the sky
The mighty darkness she uncovers,
And light she makes, the pleasant one that we see."

" Dawn on us with prosperity, O Usha, daughter of the sky,
Dawn with great glory, goodness, lady of the light, dawn thou with riches, bounteous one....
O Usha, graciously answer our songs of praise with bounty and
with brilliant light.....grant us a dwelling wide and free from foes....."

Usha! (Dawn) Hail, Beautous daughter of the sky!
*(source: **The Splendour That Was 'Ind' - By K T Shah**).*

Of the hymns to other deities, the hymns to those to Usha, the Dawn, are especially beautiful. Some of the loveliest nature poetry of this period is dedicated to her, depicted as a young maiden who comes to mankind in the special characteristics of the dawn. Dawn bring a feeling of hope and refreshment, of entering into the activity of the universe.

Hindus hold rivers in great reverence. The rivers are female divinities, food and life bestowing mothers. As such, they are prominent among the popular divinities represented in the works of art of the classical period. The most holy of rivers, the best known and most honored, is the Ganga or Ganges. She is personified as Goddess Ganga. The river rises from an ice bed, 13,800 feet above the sea level in the Garhwal Himalayas.

One of the most important of all Vedic hymns, the so-called Devisukta, is addressed to Vak (speech, revelation), the goddess who is described as the companion of all the other gods, as the instrument that makes ritual efficacious: "I am the queen, the gatherer-up of treasures..." It is not unimportant, that Earth (prithvi) is considered female, the goddess who bears the mountains and who brings forth vegetation.

Education for girls was regarded as quite important. While Brahmin girls were taught Vedic wisdom, girls of the Ksatriya community were taught the use of the bow and arrow. The Barhut sculptures represent skilful horsewomen in the army. Patanjali mentions the spearbearers (saktikis). Megasthenes speaks of Chandragupta's bodyguard of Amazonian women. Kautilya mentions women archers (striganaih dhanvibhih). In houses as well as in the forest Universities of India, boys and girls were educated together. Atreyi studied under Valmiki along with Lava and Kusa, the sons of Rama. Fine arts like music, dancing and painting was specially encouraged in the case of girls.

Girls had upanayana performed for them and carried out the sandhya rites. A young daughter who has observed brahmacarya should be married to a bridegroom who is learned like her." (**Yajur Veda** VIII.1). **Seclusion of women was unknown in the Vedic times. Young girls led free lives and had a decisive voice in the selection of their husbands.** On festive occasions and at tournaments (samana) girls appeared in all their gaiety. Women had a share in the property of the father, and they were sometimes allowed to remain unmarried, with their parents and brothers. The Atharva Veda refers to daughters remaining with their parents until the end of their lives. A part of the ancestral property is given to them as dowry, which becomes their own property, and is called **stridhana** in later writings. "Home is not what is made of wood and stone; but where a wife is, there is the home." (sanskrit: na grham kasthapasanair dayita yatra tad grham - **Nitimanjari,** 68)

(source: **Religion and Society – By S. Radhakrishnan** ASIN 8172231636 p. 140-149).

It is significant to note that only Hindus worship God in the form of Divine Mother. In Hinduism the deities for knowledge, learning and material wealth are female and not male. The past social inconsistencies and injustices that did not arise from Hindu scriptures, but from humans who failed to correctly incorporate the teachings of the scriptures, such as the Upanishads and the Bhagavad Gita, into their social philosophy.

This concept of the spiritual equality of souls naturally influenced the status of women on an individual and social level.

"Where women are honored there the gods are pleased; but where they are not honored no sacred rite yields rewards," declares **Manu Smriti (III.56)** a text on social conduct.

"Women must be honored and adorned by their fathers**,** brothers**,** husbands and brothers-in-law**,** who desire their own welfare." **(Manu Smriti III, 55)**

" Where the female relations live in grief**,** the family soon wholly perishes**;** but that family where they are not unhappy ever prospers." **(Manu Smriti III, 57).**

"The houses on which female relations**,** not being duly honored**,** pronounce a curse**,** perish completely as if destroyed by magic." **(Manu Smriti III, 58)**

" Hence men who seek their own welfare**,** should always honor women on holidays and festivals with gifts of ornaments**,** clothes**,** and dainty food." **(Manu Smriti III, 59)**

In an old Shakta hymn it is said - **Striyah devah, Striyah pranah "Women are Devas, women are life itself."**

(source: **Bharata Shakti - By Sir John Woodroffe** p. 95).

"If a husband dies, a wife may marry another husband.

"If a husband deserts his wife, she may marry another." (Manu, chapter IX, verse 77).

(source: **Hindu Superiority - By Har Bilas Sarda** p. 95).

In the Vedas, she is invited into the family 'as a river enters the sea' and 'to rule there along with her husband, as a queen, over the other members of the family. (source: **Atharva Veda** xiv. i. 43-44).

Sir Monier Monier-Williams (1860-1888) Indologist and head of the Oxford's Boden Chair, wrote: "Indian wives often possess greater influence than wives of Europeans." He is not a true Hindu who does not regard a woman's body as sacred as the temple of God. He is an outcast who touches a woman's body with irreverence, hatred or anger."

"A woman's body," says Manu the law giver, "must not be struck hard, **even with a flower, because it is sacred."** It is for this reason that the Hindus do not allow capital punishment for women.

The **idea of equality** was most forcibly expressed in the **Rig Veda** (Book 5, hymn 61. verse 8). The commentator explains this passage thus: "The wife and husband, being the equal halves of one substance, are equal in every respect; therefore both should join and take equal parts in all work, religious and secular." No other Scripture of the world have ever given to the woman such equality with the man as the Vedas of the Hindus. The Old Testament, the Zend-Avesta and others, have made woman the scapegoat for all the crimes committed by man. The Old Testament, in describing the creation of woman and the fall of man, has established the idea that woman was created for man's pleasure; consequently her duty was to obey him implicitly. It makes her an instrument in the hands of Satan for the temptation and fall of the holy man with whom she was first enjoying the felicity of paradise.

The 126th hymn of the first book of the Rig Veda was revealed by a Hindu woman whose name was Romasha; the 179 hymn of the same book was by Lopamudra, another inspired Hindu

woman. There are a dozen name of woman revealers of the Vedic wisdom, such as Visvavara, Shashvati, Gargi, Maitreyi, Apala, Ghosha, and Aditi, who instructed Indra, one of the Devas, in the higher knowledge of Brahman, the Universal Spirit. Everyone of them lived the ideal life of spirituality, being untouched by the things of the world. They are called in Sanskrit Brahmavadinis, the speakers and revealers of Brahman.

When Sankaracharya, the great commentator of the Vedanta, was discussing this philosophy with another philosopher, a Hindu lady, well versed in all the Scriptures, was requested to act as umpire. It is the special injuction of the Vedas that no married man shall perform any religious rite, ceremony, or sacrifice without being joined in by his wife; the wife is considered a partaker and partner in the spiritual life of her husband; she is called, in Sanskrit, Sahadharmini, "spiritual helpmate." This idea is very old, as old as the Hindu nation.

In the whole religious history of the world a second Sita will not be found. Her life was unique. She is worshipped as an Incarnation of God. India is the only country where prevails a belief that God incarnates in the form of a woman as well as in that of a man. In the Mahabharata we read the account of Sulabha, the great woman Yogi, who came to the court of King Janaka and showed wonderful powers and wisdom, which she had acquired through the practice of Yoga. This shows that women were allowed to practice Yoga. As in religion, Hindu woman of ancient times enjoyed equal rights and privileges with men, so in secular matters she had equal share and equal power with them. From the Vedic age women in India have had the same right to possess property as men; they could go to the courts of justice, plead their own cases, and ask for the protection of the law. Those who have read the famous Hindu drama called Shakuntala, know that Shakuntala pleaded her own case and claimed her rights in the court of King Dushyanata. Similar instance are mentioned in the 10th book of the Rig Veda. As early as 2000 B.C. Hindu women were allowed to go to the battle fields to fight against enemies. Sarama, one of the most powerful women of her day, was sent by her husband in search of robbers. She discovered their hiding place and then destroyed them.

(source: **India And Her People - By Swami Abhedananda** - p. 255-267).

Women must be honored and adorned by their father, brothers, husbands, and brother-in-law who desire great good fortune. Where women, verily are honored, there the gods rejoice; where, however, they are not honored, there all sacred rites prove fruitless. Where the female relations live in grief -- that family soon perishes completely; where, however, they do not suffer from any grievance -- that family always prospers. ..

Her father protects her in childhood, her husband protects her in youth, her sons protect her in old age. The father who does not give away his daughter in marriage at the proper time is censurable; censurable is the husband who does not approach his wife in due season; and after the husband is dead, the son, verily is censurable, who does not protect his mother. Even against the slightest provocations should women be particularly guarded; for unguarded they would bring grief to both the families.

Regarding this as the highest dharma of all four castes, husbands, though weak, must strive to protect their wives. His own offspring, character, family, self, and dharma does one protect when he protects his wife scrupulously. . . The husband should engage his wife in the collection and expenditure of his wealth, in cleanliness, in dharma, in cooking food for the family, and in looking after the necessities of the household. . . .

Women destined to bear children, enjoying great good fortune, deserving of worship, the resplendent lights of homes on the one hand and divinities of good luck who reside in the houses on the other -- between these there is no difference whatsoever.

Motherhood is considered the greatest glory of Hindu women. The **Taittiriya Upanishad** teaches, **"Matridevo bhava" - "Let your mother be god to you."**

Hindu tradition recognizes mother and motherhood as even superior to heaven. The epic **Mahabharata** says, "While a father is superior to ten Brahmin priests well-versed in the Vedas, a mother is superior to ten such fathers, or the entire world."

Hinduism offers some intriguing and unique examples of strong women in the form of Goddesses. Two thousand years ago **Saint Tiruvalluvar** observed: "What does a man lack if his wife is worthy? And what does he possess if she is lacking worth?" There is more respect in the East for women and for their role in society.

To instill such high ideals in humankind, Indian ancestors created a plethora of goddesses who enjoyed equal status with their husbands. The concept of *Ardhanareeshwarar*, where God is depicted as half-man and half-woman, is a concrete example to support this argument. In many philosophical texts God is referred to a *Tat*, meaning *It* and that God is beyond gender. And, one would find a comparable Goddess for each God. Further, we know for a fact that ancient India was permissive; women could have multiple husbands, **widows could remarry,** divorce was permitted for incompatibility or when estranged.

The article, Vedic Sociology by **Dr. B. G. Sudha** in the Chinmaya Mission publication **Our Vedic Heritage** throws considerable light on this aspect. To quote Dr. Sudha:

"There are a number of women who are considered as the seers of *mantras*, like Saraswati, Goshaa, Vishvavaaraa, Apaalaa, Urvashi, Indrani, and so on. It is said that Dhrutavati, the daughter of Rishi Shandilya, spent her whole life in the study of the Vedas. Likewise, another girl, Srutavati, the daughter of Sage Bharadvaja, also devoted her life to the study of the Vedas.

The names of Gargi and Maitreyi are too well known as great scholars of Vedic lore… We have statements like, "This hymn must be recited by the wife," in the *Sroutasutras*, which clearly endorse the eligibility of women to the study of the *Vedas*. The *Ramayana* describes the performance of Sandhya and Havana by Kausalya and Seetha. The wife was a regular participant in the sacrificial offerings of the husband. (**Rig Veda** I-122-2; 131-3; III-53-4-6; X-86-10 etc). **Gobhila Gruhya Sutras** state that the wife should be educated to be able to take part in sacrifices. (*Gobhila Gr. S.* I-3)."

Yagnavalkya with Gargi and Maitreyi

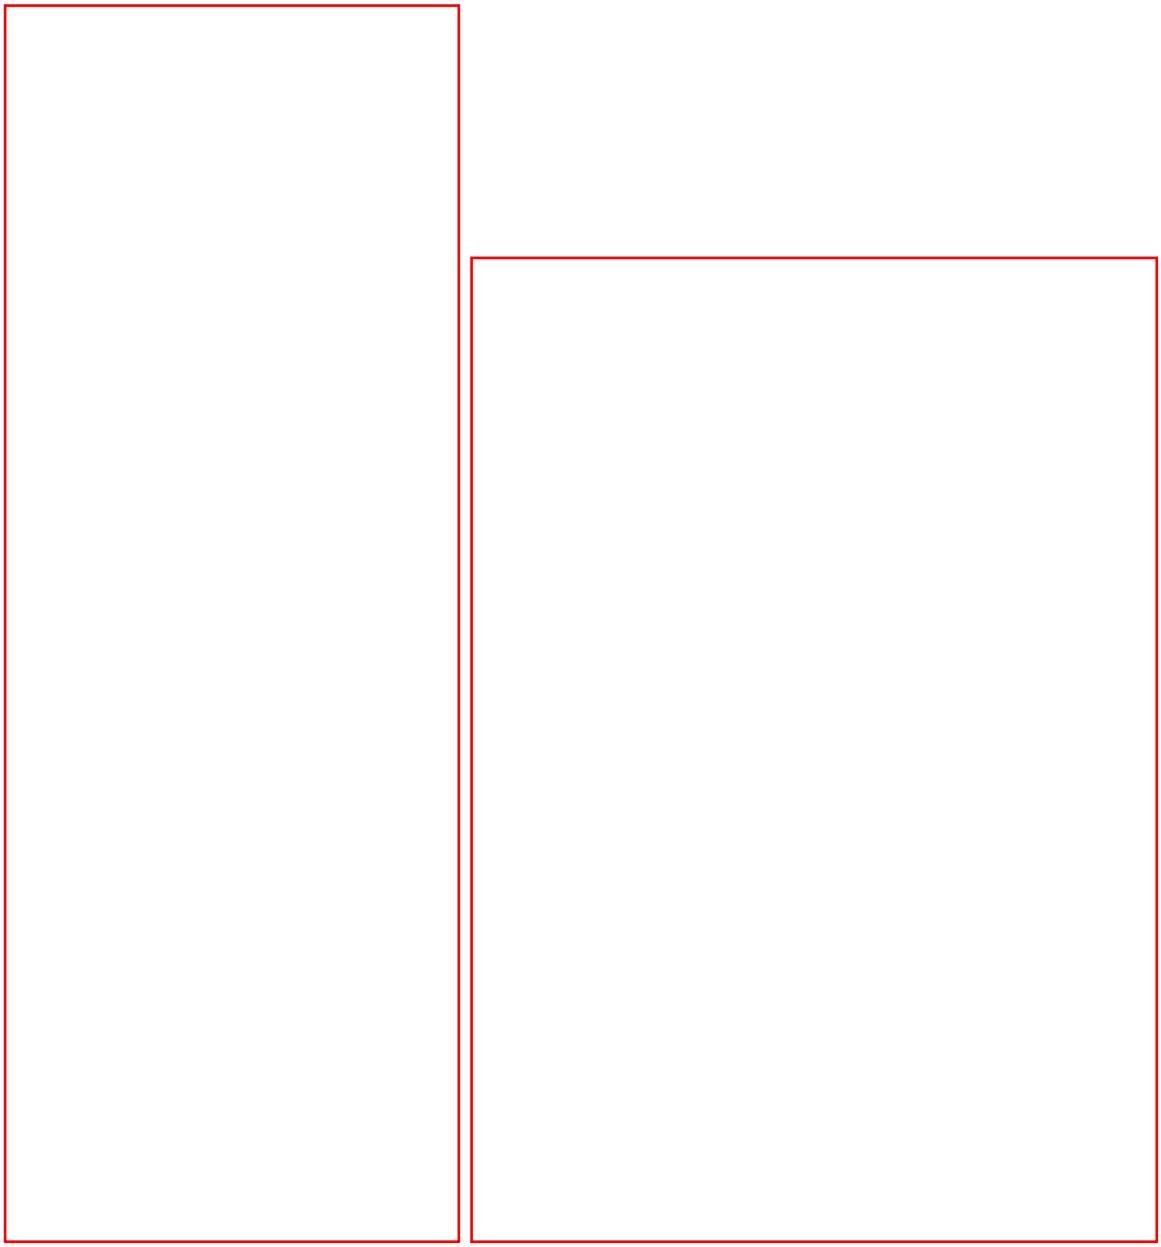
Woman in the role of wife occupies a position of pre-eminence in ancient Hindu tradition. The Hindus from the Vedic times believed in dual worship, Radha with Lord Krishna and Sita with Lord Rama. In this dual worship, the names of Radha and Sita get precedence over the names of their companions Krishna and Rama. This happens to be true of Goddess Saraswati and her husband Lord Brahma. Lord Shiva appears united in a single body with Shakti, his spouse; he at the right side and she at the left, in a manifestation known as *Ardhnarishwar*, the half-man, half-woman incarnation of God. Each of the three principal Gods — Brahma the Creator, Vishnu the Protector and Shiva the Destroyer — in the Hindu pantheon, is accompanied by a Shakti, which is both his female double and his power of manifestation.

The **Rig Veda** too places woman on a high pedestal of sublimity: **Yatr nariyastu poojayante ramante tatr devah**, where woman is worshipped, Gods preside there.

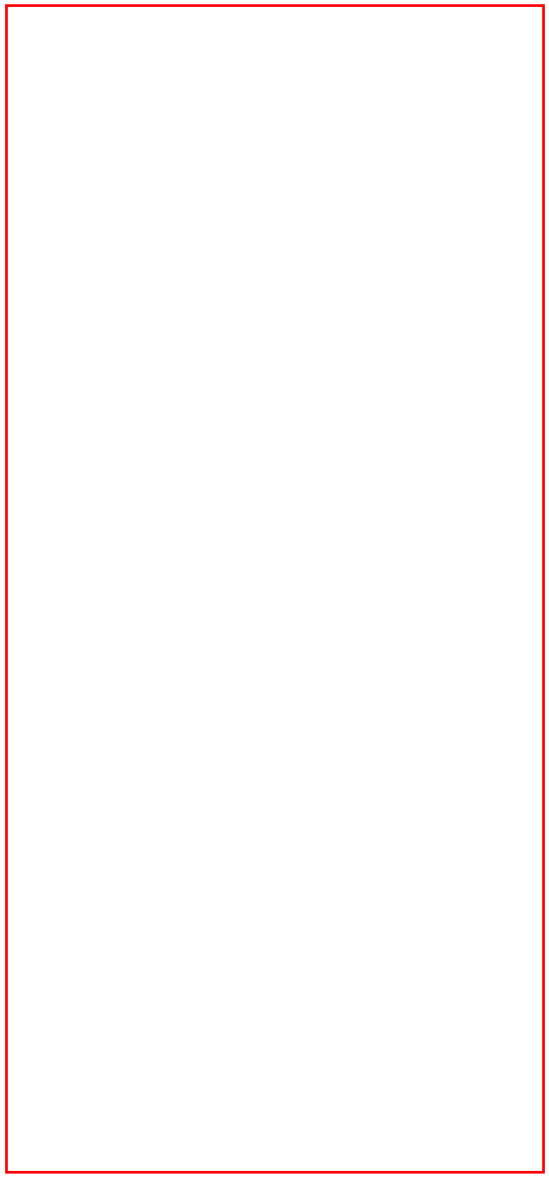
Women, who once enjoyed an honored position and are found in the Upanishads conversing freely with men upon the highest philosophical topics, had become virtual slaves in the joint family. With the expansion of Vedic religion in Northern India and possibly also under the impacts of threats from the outside, a definition of the place of women in the Aryan society took place, which amounted to increasing restriction of their independence and a clear preponderance of patriarchal rule. What has been described so far as "Vedic law for women" was largely the tradition followed in North India, the Aryavarta, the Hindu heartland, South India, and to some extent also Bengal and Assam, preserved elements of pre-Vedic matriarchy. In certain South Indian castes the line of inheritance is from mother to (eldest) daughter, and marriage is a "visiting" relationship. Naturally, women were more independence and free in every respect.

Ladies did not lead a secluded life like that of their descendants in later times. Several hymns of the Rig Veda were composed by female Rishis (sages). Young ladies of the time had a voice in their marriage. "the woman who is of gentle birth and of graceful form," so runs a verse in the Rig Veda, "selects among many of her loved one as her husband." Numerous case of Svayamvara, that is, of ladies selecting their own husbands, are mentioned in the Mahabharata and other works. There is sufficient evidence to show, that **widow marriage was allowed**, and that the right of Sati was unknown in the Vedic period.

"Rise up woman," so runs a text of the **Rig Veda** (X, 18.8) "thou art lying by one whose life is gone, come to the world of the living, away from thy husband, and become the wife of him who holds thy hand and is willing to marry thee."



(source: **Civilization Through The Ages - By P. N. Bose** p. 126-127).



Similar views are echoed by **Radha Kumud Mukherjee** in his article **Women In Ancient India** from the book **Women Of India** (Publications Division, Ministry of Information and Broadcasting, Government of India, New Delhi-110001, 1990). He says:

"Every hymn of the **Rigveda** is attributed to a rishi. Though the majority of these hymns were the work of male rishis, the Rigveda contains hymns which were revealed by women seers also. The latter were called **rishikas and brahmavadinis...** "

The **brahmavadinis** were products of educational discipline of *brahmacharya*, for which women were also eligible. The *Rigveda* (v, 7, 9) refers to young maidens completing their education as **brahmacharinis** and then gaining husbands… Rig Veda. iii (55, 16) mentions unmarried learned and young daughters who should be married to learned bridegrooms.

(For more on women's education refer to chapter on **Education in Ancient India**).

Indian Women - Paintings by Rao Bahadur M V Dhurandhar

It is, therefore, no wonder that the wife enjoyed with her husband full religious rights and regularly participated in religious ceremonies with him. In fact, the performance of such ceremonies would be invalid without the wife joining her husband as his full partner… Some grammatical passages show that women had other careers open to them apart from a mere literary career.

The great grammarian, **Patanjali,** author of that monumental masterpiece known as **Mahabhashya**, uses the formation **sakthiki** to indicate a female bearer of a spear [iv, 1, 15(6)]. In this connection, we are reminded of the Amazonian bodyguard of armed women employed in his palace by the Emperor Chandragupta Maurya, as described by Megasthenes, the Greek Ambassador to his Court. Similarly, Kautilya in his *Arthasastra*, which is also taken to be a document of Mauryan history, refers to women soldiers armed with bows and arrows… Buddhism kept up the traditions of Brahmanical religion in according to womanhood an honoured place in social life. Women were made eligible for admission to what was known as the *Bhikshuni-Sangha*, the Order of Nuns, which opened to them avenues of culture and social service and ample opportunities for public life.

(source: **Women in the Hindu Tradition By S. G. V. Mani**
http://www.sulekha.com/articledesc.asp?cid=111278).

Padmini Sengupta has written in her book, **Everyday Life in Ancient India**:

"The position of women in ancient India was free and emancipated, and women were well educated and respected members of society. A wife shared all her husband's privileges and was his companion and help-mate in his activities." The position of women was far better than in other countries of ancient times. How else could it be in a culture which placed the Mother before the Father in priority for reverence? **Matr devo bhava** - was the first Upanisadic exhortation to the young. So far as

we know, Hinduism is the only religion whose symbolism places the Feminine on a par with the Masculine in the profound concept of Siva-Sakti culminating in the image of Ardharnari-Isvara. The Hindu has honored his country as his Motherland - Bharat Mata and his nationalism has grown up from the seed Mantra - Vande Mataram.

Anti-native reporting in media and dowry deaths

Koenraad Elst writes: "This anti-native and pro-westernizing bias is quite systematically present in India reporting. It generally takes the form of gross misrepresentation of Indian culture. For example, time and again those correspondents write to the homefront that there are "still" many dowry deaths. Now everybody knows that dowry deaths typically occur in the westernized circles. (the dowries concerned are seldom the traditional jewels, but mostly videomachines, fridge etc). they are not a traditional phenomenon that "still" exists, but are a typical case of perverting and poisoning of a native custom by the invasion of Western consumerism"

(source: **Ayodhya and After - By Koenraad Elst** Voice of India Issues Before Hindu Society SKU: INBK2650 p. 82).

Dowry-deaths in India are of high interest in the West **whereas spousal-killings in America are not given the same emphasis**, despite that fact that statistically the percentage of American women victims of spousal killings are at least as high as the percentage of Indian women victimized by dowry-deaths. The language of 'dowry-deaths' is so India-specific, to begin with, that it precludes the equivalent American phenomenon to be within range of the radar. Once thus framed, the issue of dowry-deaths then gets measured, studied at various levels of scholarship, and gets a life of its own. America's equivalent problems get exempted from examination, especially as the scholars place themselves on a platform above the glass ceiling.

(source: **Is There an American Caste System? - Rajiv Malhotra** - sulekha.com).

Conclusion

In ancient India, Hindu women did not veil their faces and they enjoyed considerable amount of freedom in society. But repeated attacks on Hindu India by foreigners through centuries changed the situation. (For more on foreign invasions, please refer to chapter **History of Hinduism**).

During such aggressions, and also when India was under foreign occupation, the honor and chastity of women often became the casualties. There have been numerous cases when Hindu women killed themselves rather than yield to indignities inflicted by the aggressors. As a result, Hindu society, became more protective about its women. The freedom of women was curtailed. To protect themselves Hindu women started to cover their faces with veils and started to stay home. Their participation in social events was greatly restricted.

(source: **The Essentials of Hinduism: A Comprehensive Overview of the World's Oldest Religion - By Swami Bhaskarananda** p. 52-53).

"The killing of men and enslaving of women and children was standard practice in Islamic conquests. Thus when Mohammed bin Qasim conquered the lower Indus basin in AD 721, he entered Multan and, according to the Chach-Nama, "6,000 warriors were put to death, and all their relations and dependents were taken as slaves." **This is why Rajput women took to immolating themselves en masse to save their honor in the face of the imminent entry of victorious Muslim armies**, eg. 8,000 women immolated themselves during Akbar's capture of Chittorgarh in 1568 (whereas this most enlightend among Muslim rulers also killed 30,000 non-combattants).

Sati, the much-highlighted face of Hinduism (excerpts)

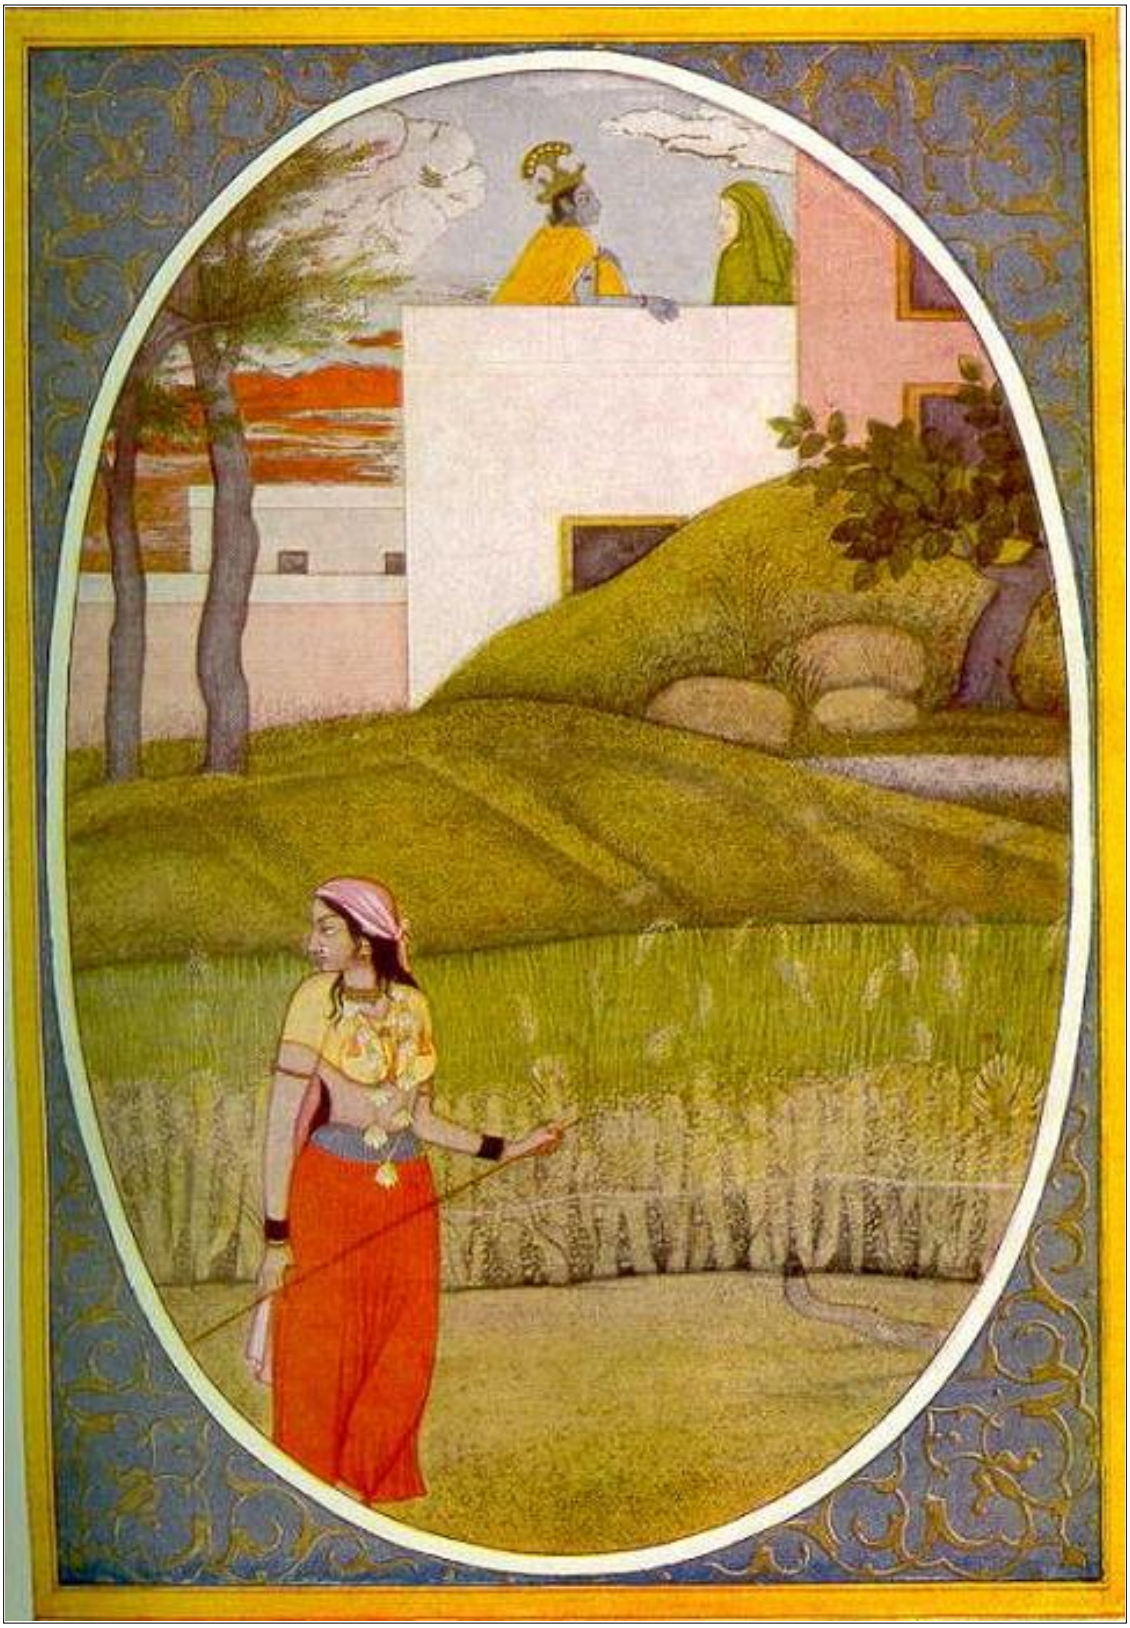
By Koenraad Elst

Secularist make the predictable allegation that Hinduism as represented by Manu is anti-woman. Actually on reading this text one would realize that neither dowry (dahe) nor self-immolation of widows (sati) figure in it. Fredrick Nietzsche praised Manu's affection for woman.

Compare study of Indo-European cultures suggests that the incidence of sati is inversely proportional to the status of women: from very common among the Celts ("massively!" says Bernard Sergent in his book - Les Indo-Europeens), where women were rather independent, to a mere epic memory among the Greeks, where women were men's property and not considered to have much 'honor' to uphold by means of heroics.

Ashish Nandy, an Indian Christian, and author of the book **Sati, The Blessing and The Curse**, recommends **Ananda Coomaraswamy** spirited defence of sati: "to shallow, pompous progressives and feminists who believe that one ought only to immolate oneself for secular causes like revolution and nationalism, not for old fashioned religious or cultural causes."

Nandy informs us: "The last "large-scale epidemic of sati" (in Westernizing Bengal of the early 19th century, where new **British inheritance laws** turned a surviving daughter-in-law into a pecuniary rival) was a "logical culmination of rational, secular cost-calculation against the background in traditional values….if anything, modern values, not traditional ones, were to blame." Indeed, "the epidemic was a feature of exactly the part of the society – the Westernizing, culturally uprooted, urban and semi-urban Indians – that was most dismissive towards the rest of society as a bastion of superstition and activism."



This is even more true of the dowry murder plague, a typically modern, consumerist phenomenon, historically unconnected to sati.

The Christian scholar, **J. N. Farquhar** wrote in his book **Modern Religious Movements** in 1914, that **"the evil seems to be largely a result of the progress of Western education."** He adds an example of a girl in Calcutta who committed suicide "to release her father from the impasse." The first dowry deaths in the 19th century were indeed suicides by daughters who tried to spare their fathers the huge debts, and this was in the most anglicized communities.

However, the **Indo-Anglican elite** has achieved complete success in passing on its self-interested version of the facts to the outside world, as is evident in numerous anti-Hindu allegations made in passing in articles…"

Ashish Nandy finds it "remarkable how, since the Deorala event, there has been a revival of efforts by Anglophone, psychologically uprooted Indians – exactly the sector that produced the last epidemic of sati in eastern India – to vend sati as primarily a stigma of Hinduism, not as one of the by-products of the entry of modern values in India." The commotion about the Deorala sati was just one expression of the colonial mind-set of the ruling class: "At one time,

most such efforts were closely associated with attempts to justify the British rule in India. Now, as a cultural projection of a new form of internal colonialism, these efforts are primarily **associated with the rootless, Westernized Indian haute bourgeoisie who control the media, either directly or through the state."**

Village beauty - N C Mehta's book - Studies in Indian Painting.

The abysmally negative image which Hinduism has acquired has a lot to do with Nandy's following observation:

“Colonialism has to try to discredit the cultures of the colonized to validate the colonial or quasi-colonial social relationships that it itself has created. Culture can be resistance, and those seeking hegemony in the realm of political economy cannot afford to leave that area alone. The self-declared social engineers in the Third World and their support base within the tertiary sector of that world know this fully.”

No Hindu revivalist could have said it better. ...

(source: **Decolonising The Hindu Mind - Ideological Development of Hindu Revivalism - By Koenraad Elst** Publisher: Rupa ISBN: 81-7167-519-0 p.513-518). For more on Koenraad Elst refer to chapter **Quotes201_220**).

****

Asymmetric depiction of Hinduism in US academia/texts books

Madhu Kishwar (editor of **Manushi**, one of India's foremost feminist journals) writes of the practice of widow burning

“There is absolutely no evidence that any of our vast array of religious texts sanctified such murders as sati.”

(source: **Deadly Laws and Zealous Reformers: The Conflicting Interpretations and Politics of Sati - By Madhu Kishwar**,)

As **Yvette Rosser** has said: Defining Hindu practices through a discussion of sati is no more accurate than defining Christianity by delving at length into the "Burning Times" in Medieval Europe when as many as nine million women, and even children, were burned at the stake as witches through the encouragement and official approval of the Christian Church. The burning of women does not define Christianity any more than the burning of widows defines Hinduism – both are long discarded practices of the past."

(source: **The Clandestine Curriculum in the Classroom** -**By Yvette C. Rosser** - Education About Asia, Vol. 6:3 (Winter 2001).
(source: **Women and Hinduism in U.S. Textbooks - by Dave Freedholm - sulekha.com**).

****

Self burning of widows was not sanctioned by the Vedic religion, but was due to other causes. Some say that, when the Mohmmadens conquered India, **they treated the widows of the soldiers so brutally that the women preferred death,** and voluntarily sought it. It is often said that the "Christian government" has suppressed Suttee; but the truth is, that the initiatives in this direction was taken by the noble Hindu, Rajah Ram Mohan Roy, who was, however, obliged to secure the aid of the British Government in enforcing the ideas, because India was a subject nation. The educated classed among the Hindus had strongly protested against this inhuman custom, but as it could not be done without the official help, appeal was made to the then Viceroy, Lord Bentincik, a law against Suttee was passed.

Sir Monier Monier-Williams (1860-1888) Indologist and head of the Oxford's Boden Chair says:

"Perhaps the most important point to which Raja Ram Mohan Roy awakened was **the absence of all Vedic sanction for the self-immolation of widows** (Suttee). It was principally his vehement denunciation of this practice, and the agitation against it set on foot by him, which ultimately led to the abolition of Sati throughout British India in 1819."

(source: **India And Her People - By Swami Abhedananda** - p. 280).

The eighth richa (X 18.8) specifically commands a Hindu widow to return alive to her home. **H. H. Wilson** translates: "Rise woman, and go to the world of living beings; come, this man near whom you sleep is lifeless; you have enjoyed this state of being the wife of your husband, the suitor who took you by the hand." Here again, it is confirmed that X 18.8 actually commands a Hindu widow to return to the world of living beings. Also, this very richa confers upon her full right on the house of her deceased husband (apne putradi aur ghar).

Those who misinterpret the Rigveda to say that it sanctions sati do this mischief by misspelling the last word of richa X 18. 7 as "yomiagne." The last word of this richa is actually "yomiagre." Thus, there is no richa in Rigveda calling for widow burning. Veda, Ramayana and Gita are the three supreme scriptures of Hindus.

All others (like Brahmanas, Upanishads, Puranas, Dharmashastras, Sutras, etc.) are just commentaries, explanatory notes or stories written by individuals. As commentaries written on the Constitution of India cannot override the articles of the Constitution of India, similarly, commentaries or explanations on Vedas by individuals cannot supersede richas of Vedas or the Ramayana or Gita. In the Ramayana, everyone knows that after the death of King Dasharatha, his wives were never asked to step into the pyre of Dasharatha. Rather, they lived in family with full honour and Ram always bowed his head before his widowed mothers with full respect. In the Mahabharata, Kunti, mother of the Pandavas did not commit sati. Thus, there is no command in the Ramayana or in Gita to commit sati.

Over the centuries, relatives have been murdering relatives for property. This will continue in the coming centuries too. Greed is human nature. **If greedy people incite a widow to commit suicide on the pyre of her husband, let us not say or believe that widow burning is sanctified by the Rigveda or by Hinduism.** Richa X 18.3 commands a Hindu widow to separate from the dead and richa X 10.8 commands her to return alive to her children and her home. For their own empowerment, Hindu women should to remember the seven richas viz (II 17.7), (III 31.2) (X 18.3) (X l8.8) (X 40.2) and X 40.8) to assert and claim their status and rights.

Dowry Murder: The Imperial Origins of a Cultural Crime - How British colonialism created the economic and social climate in India that give rise to various social ills.

James Peggs (1739-1850) a man of cloth and a missionary, wrote:

"The doctrines of the Hindoo religion have been singularly careful to protect the female sex and infants from violence; and its is unlawful to put a woman to death for any offense whatever...."Let all the four castes of Brahmin, Khetry (Khatri, the diminutive of Kshatriya) Bys (Vaishya), and Sooder (Shudra), know that the killing of a woman is the greatest of crimes."

***

The Hindu custom of dowry has long been blamed for the murder of wives and female infants in India. In this highly provocative book, Veena Oldenburg argues that these killings are neither about dowry nor reflective of an Indian culture or caste system that encourages violence against women. Rather, such killings can be traced directly to the influences of the British colonial era.

In the Pre-Colonial period, dowry was an institution managed by women, for women, to enable them to establish their status and have recourse in an emergency. As a consequence of the massive economic and societal upheaval brought on by British rule, women's entitlements to the precious resources obtained from land were erased and their control of the system diminished, ultimately resulting in a devaluing of their very lives.

Taking us on a journey into the colonial Punjab, she skillfully follows the paper trail left by British bureaucrats to indict them for interpreting these crimes against women as the inherent defects of Hindu caste culture. **The British, publicized their "civilizing mission" and blamed the caste system in order to cover up the devastation their own agrarian policies had wrought on the Indian countryside.**

An East India Company officer made the earliest causal link between the dowry system and violence against girls in 1789, when he discovered female infanticide. The finding added powerfully to the company's description of the exotic "cruel" and "barbaric" culture encountered in the process of its conquest of this strange land. On the backs of such discoveries rode the moral imperative of imperialism – its famous "civilizing mission." **This served as the most compelling justification, both to the company itself and to a critical public in England, for the conquest, pillage, and domination of Indian peoples and the destruction of their local cultures.** It was in this context too, that Hindu women's apparently degraded position in an allegedly rigid caste system became a central preoccupation of colonial rulers and the subject of endless debates, reform rhetoric, and legislation.

In 1813 the "civilizing mission" received an additional fillip when the British Parliament passed the India Act of 1813 to admit missionaries, who had hitherto been excluded from tinkering with the most exquisite brand of heathenism in the wild Indian empire because of their politically volatile denunciation of Hindu beliefs and practices. Christian missionaries added greatly to the self-righteousness bombast of this mission. **James Peggs**, a man of the cloth, made an exhaustive, **lurid, and cliche-laden** compendium on the entire gamut of "Hindoo social evils." His text was cobbled from pertinent Parliament Papers and it first appeared in 1826 as Suttee Cry to Britain, followed by a thicker version with female infanticide added on and tellingly called **India's Cries to British Humanity**. In 1832 this pamphlet was fattened from 110 pages to 518, and renamed Cries of Agony: An Historical Account of Suttee, Infanticide, Ghat Murders, and Slavery in India. The Coventry School for the Abolition of Human Sacrifice in India published an abridgement of the original pamphlet and distributed free copies. It remains in print to this day! It was a great victory for **William Wilberforce** and fellow Evangelicals in England to expand their operations to the Indian theatre. The prime target for reform was the generally hapless "Hindoo woman."

These masterly representation of a distant and dangerous world plagued with "Hindoo barbarities, as they were increasingly called (**despite the failure to find them sanctioned in any "Hindoo" texts**) rendered India the ideal site for continued and expanding colonial control.

Dowry And Dowry Demands: What's And How's - By Beloo Mehra

For a while, we also goofed around with the idea of doing what the African-American feminist author **Bell Hooks** refers to as an **"oppositional gaze" by coming up with suggestions for 'informative' documentaries that Indian cable TV networks could produce on the various societal problems in the west.** One member wrote:

"Why peep into other people's lives when your own is an unmitigated mess? Is it because you feel that you can get away with it because no one will be peeping into your own house? In my opinion, there is something indecent about 60 minutes poking their nose into someone else's business when they should have been more concerned about the 100 or more date rapes that would have happened just over the duration of this one single show."

One member suggested that such "internationalization of internal debates is highly uni-dimensional and is equal to pathologizing India."

As horrible as a dowry-related crime is, it is no different from any other domestic violence against women, which is a universal social problem. So, while I do not deny the existence of dowry-related crime, I argue that a whole body of academic literature focusing on studying this problem in isolation from the issue of the universal problem of domestic violence has a very high potential of making it a problem closely linked with Indian culture, which is not only bad scholarship but also very dangerous. **One possible rationale for organizing such "international" conferences and producing such journalistic reports like the one on CBS** (**For Love Of Money - By Christiane Amanpour**) **could be that, by focusing on issues such as violence against "third world women", the western media outlets and these academics help push the issue of violence against women in the west in the background.** This only makes the situation worse for victims of violence in their own countries.

In her book **Dislocating Cultures**, **Uma Narayan** writes:

"Most Americans that I have talked to about dowry-murder know that many **US women are killed by their partners as a result of domestic violence. Given that many members of the US public know that domestic violence has fatal forms, why is it that they make no connection between the "foreign" phenomenon of dowry-murder and the "familiar" phenomenon of domestic violence?**

A friend who participated in my search for the numbers of US women annually killed by their partners commented that she was surprised at the difference between the "disappearing dead women" in US accounts of domestic violence and the "spectacular visibility" of women murdered over dowry in India" (p. 89).

Gandhiji, Vivekananda etc. reacted sharply against external criticism but both stood firmly for internal change."

Women as Purohita - priests

The concept of a female priest is not a new one.

Nutan Vimal Motilal is also a practising priest and points out that women priests were written about in the sacred Vedic texts.

Hindu temples have also requisitioned women.

"They were more honest, sincere and the clarity with which they performed the ceremony was also refreshing," he says.

Both Sunitee Gadgil, who has been practising for 10 years, and Nutan Vimal Motilal, who has been practising for two, say they have never had a negative experience.

With an increasing number of men of religion taking up other more lucrative vocations, women are now stepping into the gap to actually outnumber male priests in Maharashtra.

Dr. V L. Manjul, a research scholar and chief librarian at Pune's Bhandarkar Oriental Re. search Institute, says "between 1986 and '96, about 6,000 women have been trained as purohits (priests) and today, lady purohits outnumber male ones."

In the Vedic period, says Dr. Manjul, "we come across female scholars like **Ghosha, Lopamudra, Romasha and Indrani. In the Upanishadic period, names of women philosophers like Sulabha, Maitreyi, Gargi are encountered."**

This tradition is exemplified in a verse from "Bhihadaranyakopanishad," which reads "atha ya icched duhita me pandita jayeta," (a well-to-do Political instability and successive foreign invasions further made it difficult for women to take up formal learning, which made it impossible for her to undertake Vedic studies and conduct Vedic rites.

Famous Women of Ancient and Modern India

Gargi	Mirabai	Rani Avantibai	Bhagini Nivedita
Sita	Durgavati	Jalkari Bai	Mother Mirra
Savitri	Ahilya Bai Holkar	Shakuntala Devi	
Draupadi	Kittur Rani Chennamma	Sarojini Naidu	
Akka Mahadevi	Rani of Jhansi	Sarada Devi	

1. Gargi

Gargi, the wise and learned daughter of *Rishi* (sage) *Vachaknu*, was known as *Brahmavadini* because of her having the knowledge of *Brahma-vidya*. She participated in a debate with the knower of *Brahma*, *Yajnavalkya* in the *Yajnasala* (place for sacrifices) of *King Janaka*. We get in the *Brhadaranyaka Upanisad* a dialogue between *Gargi* and *Yajnavalkya*. Thus it is evident that in ancient India, women used to obtain knowledge of many sciences and disciplines. They also used to participate in public functions and take part in intellectual debates. There used to be no ban of any sort in the field of knowledge, this is established very clearly from the account of Gargi's life.

A wife of Yajnavalkya, plays a major role in a section of the Brhadaranyaka Upanishad, is the first Indian woman philosopher. One of the most interesting discussions of this absolute principle is given in the form of a dialogue between Gargi, and her husband Yajnavalkya, a great sage. Although in the preceding dialogues Gargi has been warned not to ask too many questions, lest her head fall off, she persisted, and was rewarded with answers to her questions.

Yajnavalkya said: "Ask, Gargi"

She said: "That, O Yajnakvalkya, which is above the sky, that which is beneath the earth, that which is between these two, sky and earth, that which people call the past and the present and the future - across what is that woven, warp and woof?"

2. Sita

Sita in the Valmiki Ramayana is not exactly representative for Vedic *stridaharma.*

To begin with, she chooses her own husband in a competitive *svayamvara,* only the strongest and the smartest prince will do.

Again, after Kaikeyi's intervention, when Rama goes into forest exile, she insists on accompanying him. Sita's strength and self-possession are apparent. She is dutiful, indeed, but she has to argue her case in order to do what she knows is right. She is not an obedient servant to a godlike husband; she has a will of her own and her relationship to Rama is governed by love for him, rather than obedience to his orders.

She shows her determination and independence throughout the years in the forest; her insistences that Rama get the gold-spotted deer and her command that Laksmana come to his rescue, eventually leads to her abduction by Ravana. She shows self-control and she doesn't give in to Ravanna's will. On being freed, she defends herself whole-heartedly against Rama's accusations. She is far from passive. It is in the context of this "dwelling in another man's house" that Vedic regulations for women are invoked and popular sentiment demands an ordeal to prove her purity.

This strength of character has not gone unnoticed by Indian women, who have found much in her to applaud. Despite being commonly held up as a paragon of the submissiveness, obedience, and loyalty that many men would like to see in their wives, women have often taken other lessons from her behavior. To many Hindu women, she is a great heroine, not just a goddess. Sita is a unique ideal of fidelity and chastity. She had to undergo unbearable trial and tribulations throughout her life but with the power of her unshakable fidelity and dedication to her husband she bore all the difficulties of life with fortitude and she, along with her husband, smilingly enjoyed the hardships of life in jungle. The *rakshas* king *Ravana* failed to lower her morale or weaken her moral strength.

It was through the ordeal of fire that *Sita* proved and established her virtue and stainlessness of her character. With the injury of the time of exile (*Vanavasa*) when *Sri Rama* as the king, in order to satisfy some of his subjects, banished Sita, she remained in the hermitage of *Rishi Valmiki*.

The very fact that Rama and Sita are always mentioned in one breath endows Sita with equality: whatever status Rama occupies, this will also be Sita's. If he is king, she will be queen, if he is god, she will become his goddess. However, she is queen and goddess on her own merit, not because of Rama's grace.

3. Savitri

She, who is mentioned among the great chaste and faithful godly women, took *Satyavan* as her husband knowing fully well that he would not live long. When only four days of his age were remaining she undertook a vow to defeat death.
On the fourth day *Satyavan* died with *Yamaraja* (The god of death) walking away with his vitality. Savitri walked pursuing Yamaraja. As they were walking one behind the other, on the way there occured a ' question-answer ' between them. Yamaraja was very much impressed by the gentle behaviour of Savitri, her wisdom, her one pointed devotion (dedication) to her husband. Getting pleased he asked Savitri to ask for boons. Savitri asked for such boons which helped not only to obtain for her the well-being of both her father's and her husband's families but Yamaraja had also to return the vitality of Satyavana. Savitri with the power of her chastity and fidelity protected her good fortune.

4. Draupadi

Draupadi was a very impressive and brilliant and strong personality (character) in Mahabharata.

The daughter of Drupada, the king of Panchala (Punjab), came to Hastinapur as a daughter-in-law of the Kuru-clan on being won by Arjuna, at her Swayamvara, by piercing with arrow the eye of a moving fish on a high pole, looking into the fish's image in a cauldron of oil below. **She was never ready to compromise on either her rights as a daughter-in-law or even on the rights of the Pandavas and remained ever ready to fight back or avenge high-handedness and injustice meted out to her and them.** Draupadi had absolute faith in Sri Krishna. She was also dear to Sri Krishna equal to his real sister. Draupadi was put through much suffering and disgrace in life.

Dussasana tried to remove her clothes and as such made an attempt to violate her modesty in full view of the assembly.

During the days of the banishment to jungle of the Pandavas, Jayadratha made an attempt to abduct her and during the period of their dwelling secretly, Keechaka wanted to outrage her modesty. After the duration of their stay in the jungle was over, Draupadi, with a view to fulfill her vow (promise to herself to tie her untied hair after washing them with the blood of *Dussasana*) and to punish all those who had disgraced her and perpetrated offence against her, blazed the fire of revenge burning in her heart into the hearts and minds of Pandayas. The refulgence (glow) of Draupadi's lustrous prototype of womanhood shall always be a source of inspiration for the women of India.

5. Akka Mahadevi also known as Akka (elder sister) Mahadevi. She was a

12th century religious poet, much like Meera. She devoted her life to the worship of Lord Shiva.

Born in Udutadi, this young Veerashaiva saint achieved Aikya or Oneness with the Divine within a short twenty years of age. Her outpourings are contained in over 315 vachanas and in a small text for advanced sadhakas called Yoganga Trividhi. She came on the scene when the reformist movement of Veerashaivism had just begun to impact, particularly the lower rungs of the society, with its remarkable empowerment techniques. Right from her childhood unlike other young girls she chose the Beautiful Lord, Pure white as the Jasmine, Chennamallikarjuna, as her playmate.Her friends chose to play with dolls instead. She was never content in fulfilling the restricted role of a girl in the house. It was more interesting to hear the glories of the Lord. The urge to go beyond the average practice of Shaiva sampradaya was compelling. The limitations placed on women, in the pursuit of spirituality and otherwise, was unacceptable to her.

6. Mira Bai (1498-c. 1546).

Drenched in the color of love to Sri Krishna, Mira was a well known devotee of God in the 47th century Kali Yugabda (calculation of time in terms of cycles of ages — Yugas) i.e. in the 16th century A.D. Entire Bharat, particularly the area where Hindi is the language that is spoken and read, has been resounding with the verses sung by Mira in her love for Krishna. In the case of Mira, the daughter of Ratna Singh Rathaur, attachment with the devotion to Krishna had touched her heart even in her early childhood. She was married to the son of Maharana, named Bhojaraja, but her heart and mind were already in the grip of her devotion to Krishna.

She used to be always absorbed (engrossed) in devotion to God. In the midst of saints, in temples, she sang her own devotional compositions (songs) and danced filled with emotion. After the untimely death of Bhojaraja, his brother Vikramajit wanted Mira to turn her back to the path of devotion and face towards the life of ordinary people. Her going to temples, singing and dancing there, appeared to him to be against tradition and discipline of his family. For not renouncing her obstinacy of love to Krishna Mira was subjected to great deal of infliction of. pain and suffering. But Mira on the contrary, laughingly submitted herself to these inflictions and bore them with fortitude but there did not occur any change in the one pointed ness of her divine love and devotion. The refrain of her life's song was : ' Mine is the preserver of cows who upholds mountain and no one else '. Her songs in the propensity of emotions are unmatched.

7. Durgavati

Durgavati was that brave woman of India during the 47th century of Kaliyugas i.e. 16th century A.D. who fought with the alien invaders with utmost courage and heroic bravery and in the end, thinking that lest her living body may even be unpurified by a touch of the aliens she with her own sword brought forth a situation of self-sacrificing through which she got the ' going of the brave (Viragati) '.

After the death of king Dalpatishah of Gadha Mandala there came the hazard of a crisis over the state. The Mughal ruler Akbar sent a big army to capture the state of Gadha (fort) Mandala. Mounting on an elephant, Maharani Durgavati fought with utmost bravery along with providing a constant encouragement and inspiration to her army. Unfortunately because of internal disunity and her army being too small in comparison with the invaders, self-defense did not succeed. Among the brave women who resisted, retaliated and acted towards containing the Mughal thirst for empire-building Maharani Durgavati occupies a high place.

8. Ahilya Bai Holkar

After the death of Malhar Rao Holkar (1694-1766), founder of the Holkar dynasty, as his son had died before him (killed by a cannon ball), he was succeeded by his daughter-in-law **Ahilya Bai Holkar**. She ruled from 1767 to 1795 with great skill and understanding. She governed the state from a palace fort at Maheshwar on the northern bank of the Narmada river.

Sir John Malcolm, in his memoirs of Central India described her as a

"female without vanity... excercising in the more active and able manner, despotic power with sweet humanity..."

Though Ahilyabai never stayed in Indore, it is in her reign that Indore grew up into a city. Indore was an island of prosperity in a sea of voilence. Her rule became proverbial for justice and wisdom. She was the rare Indian royalty to be deified in her life time. She contributed a lot to the heritage of India by establishing several religious edifices remarkable in architecture. The *Kashi Vishweswar* temple at Varanasi being notable among them. Her unique pan-indian look is reflected in the fact that she built *Dharmashalas* at Badrinath in the north and Rameshwaram in the south, established *Anna Chhatras* at Dwarka in the west, Jagannathpuri in the east, and at Omkareshwar and Ujjain in central India. She also establishes charitable institutions at Gaya, Varanasi, Ayodhya, Prayag (Allahabad), Haridwar and Pandharpur. She was at heart a queen of whole India rather than that of the Holkar kingdom. She died at Maheshwar where a large mousoleum stands in her memory.

9. Kittur Rani Chennamma (1778 - 1829)

Chennamma received training in horse riding , sword fighting and archery in her young age. She was married to Raja Mullasarja of Kittur, a princely state of Belgaum in Karnataka. Her husband died in 1816. Her only son died in 1824. Chennamma adopted Shivalingappa as her son and made him heir to the throne. The British did not accept this and ordered the expulsion of Shivalingappa. The Rani defied the order. A great battle ensued. The Rani fought the British with great courage and skill. She could not, however, hold out for long. She was taken captive and lodged in Bailhongal Fort where she died on 21-02-1829.

10. Queen of Jhansi - Lakshmi Bai (1830 -1858)

Lakshmi Bai, the Rani of a principality called Jhansi in northern India, led an uprising against a takeover of her homeland by the British. She became a heroine and a symbol of resistance to the British rule.

Lakshmi Bai was born around 1830 into a wealthy, high-caste Brahmin family. **She was named Manukarnika, which is one of the names of the holy river Ganges. As a young woman, she learned to read, write and debate. She also learned to ride horses and use weapons while playing with her adopted brothers.** She accepted the name Lakshmi Bai when she married Gangadhar Rao, the maharajah of Jhansi and became the Rani (short for maharani, the wife of maharajah) of Jhansi.

Gangadhar Rao was between forty and fifty years of age at the time of their wedding. This was his second marriage. His first wife died without producing an heir. The new Rani of Jhansi gave birth to a son, but he died when he was three months old. Subsequently, Damodar Rao, Gangadhar's relative, became their adopted son. In 1853, Gangadhar Rao died.

The Governor-General of India, the Marquess of Dalhousie, announced that since Gangadhar Rao left no heir, the state of Jhansi would be annexed by the British Government. The British rejected the claim that Damodar Rao was the legal heir. According to Hindu law, little Damodar Rao was Gangadhar's heir and successor. In the Hindu religion, a surviving son, either biological or adopted, had an obligation to perform certain sacrifices after his father's death to prevent his father from being condemned to punishment or hell. The refusal of the British to acknowledge the legitimacy of Rajah's adopted son caused a

serious consternation in the local population. Rani appealed her case to London, but that appeal was turned down.

Not wishing to give up her kingdom, Lakshmi Bai assembled a volunteer army of 14,000 rebels and ordered that defenses of the city itself be strengthened. Jhansi was attacked by the British in March 1858. Shelling of Jhansi was fierce and the British were determined not to allow any rebels to escape while Rani was determined not to surrender. The British noted that the Indian soldiers fighting them showed more vigor than they ever had while following British orders. Women were also seen working the batteries and carrying ammunition, food and water to the soldiers. Rani, herself, was seen constantly active in the defense of the city. Jhansi, however, fell to the British forces after a two week siege. A priest from Bombay who witnessed the British victory, said that what followed were four days of fire, pillage, murder and looting without distinction. He said it was difficult to breathe due to strong smell of burning flesh. British historians, on the other hand, suggested that while four to five thousand people died in battle, the civilians were spared.

The Rani managed to escape on horseback under the cover of darkness and within twenty-four hours rode over one hundred miles to the fortress of Kalpi. Several other Indian rulers joined the rebel forces there. It is believed that the Rani was influential in convincing the others to go on the offensive and seize the fortress of Gwalior. This maneuver was successful and helped rally the rebel forces together.

It wasn't long, however, before the British forces determined to win Gwalior back. A fierce battle ensued. Rani was in charge of the eastern side of defense, however she lost her life on the second day of fighting. The British won back Gwalior. Rani's body was given a ceremonial cremation and burial by the faithful servants. **Sir Hugh Rose,** the commander of the British force, wrote later, "The Ranee was remarkable for her bravery, cleverness and perseverance; her generosity to her Subordinates was unbounded. These qualities, combined with her rank, rendered her the most dangerous of all the rebel leaders." A popular Indian ballad said:

How valiantly like a man fought she,
The Rani of Jhansi
On every parapet a gun she set
Raining fire of hell,
How well like a man fought the Rani of Jhansi
How valiantly and well!

"Bundeli har boli mein suni yehi kahani thi...
Khoob laDi mardaani woh toh Jhansi Wali Rani thi...."

(for more information refer to site on **Jhansi Ki Rani**).

J. Lang, who was the only Britisher who saw her face to face, left the following description of her: "She was a woman of about the middle size, rather stout but not too stout. Her face must have been very handsome when she was younger, and even now it had many charms... The expression also was very good and very intelligent. The eyes were particularly fine and the nose very delicately shaped... Her dress was a plain white muslin, so fine in texture and drawn about her in such a way and so tightly that the outline of her figure was plainly discernible, and a remarkably fine figure she had."

"Bundelay harbolon ke munh hamne suni kahani thi/khuh lari mardani woh to Jhansi wali Rain thi" sings the ballad narrating the valiant struggle of one of the most famous characters of India in recent history. When Rani Lakshmi Bai rose against the British in I857 AD she immortalized Jhansi. She has since become a heroine of the Indian independence movement, a sort of central Indian Joan of Arc.

Long before Bal Gangadhar Tilak said "Swaraj hamara janm huk hai," Jhansi Lakshmi Bai said "Azadshahi hamara huk hai."

11. Rani Avantibai

When Vikramaditya Singh, the ruler of Ramgarh State died leaving behind his wife Avantibai and no heir to the throne, the British put the state under court administration. Avantibai vowed to win back her land from the British. She raised an army of four thousand men and led it herself against the British in 1857. A fierce battle ensured and Avantibai fought most valiantly but could not hold out for long against the superior strength of the British army. When her defeat become imminent she killed herself with her own sword and became a martyr on 20-03-1858.

12 Jalkari Bai

The folklore of Bundelkhand (part of Jhansi State then) are full of heroic exploits of Jalkari Bai. She was a village girl and hailed from a very poor family. It is said that she had an encounter with a tiger while she was collecting firewood in the jungle and she killed the tiger single handed with her axe. She had a striking resemblance to Rani Laxmibai of Jhansi and because of this Rani took interest in her and inducted her into the women's wing of the army.
